İnsanın öğrenme ve problem çözme becerisi gibi bilişsel işlevlerini taklit etmeye dayalı bilgisayar sistemi olan yapay zekânın eğitimdeki yerinin ve öğrenmeyi kolaylaştırıcı etkisinin bilinmesi önemlidir. Projede yapay zekâ ile masalların olağanüstülük içeren değerler dünyasına ulaşmaya çalışmak ve öğrenci çalışmalarıyla karşılaştırmak amaçlanmıştır. Sözlü kültürün önemli bir parçası olan masallar, ulusal ve evrensel değerlerin öğretilmesinde de etkili metinlerdir. Türkiye Yüzyılı Maarif Modeli'nin erdemli bireyler yetiştirme amacı doğrultusunda bireyin yaşantısı boyunca edindiği değerlerin önemli olduğundan yola çıkılarak hazırlanan projede; seçilen 3 masaldaki değerler, 2024-2025 eğitim öğretim yılı birinci döneminde kurumumuz BYF2(Bireysel Yetenekleri Fark Ettirme) Programında öğrenim gören (6. Sınıf) 10 öğrenci tarafından tespit edilip Maarif Modeli'nde yer alan erdem-değer-eylem çerçevesi ile eşleştirilerek tablolar oluşturulmuş, masallardaki değerlerin yapay zekâ tarafından da tespit edilmesiyle karşılaştırma olanağı sunulmuştur. Öğrenciler grup çalışması halinde her masal için bir resim olmak üzere üç resim yapmış, bu resimler de yine içerik analizine tabi tutularak değerlendirilmiş, ardından yapay zekâ programları (DALL E, Sider) yoluyla da resme dönüştürülerek değerlendirilmiştir. Çalışmada incelenen masallarda öğrenciler ve yapay zekâ aracı tarafından tespit edilen yıllık plandaki “Olağanüstülük İçeren Metinler” temasında belirlenen değerlerle örtüştüğü görülmüştür. Öğrencilerin masallarda anlatılan olayları ve soyut ifadeleri bütünüyle canlandırdığı; yapay zekâ programlarının ise daha çok masaldaki somut ifadeleri görsele aktardığı, soyut ifadeleri aktarmada zorlandığı tespit edilmiştir. Öğrencilerin ve yapay zekânın oluşturduğu görsellerde değerlere ilişkin ifadelerden çok masalda anlatılan olayların canlandırıldığı görülmüştür. Çalışma hikâye, şiir, fıkra gibi başka edebî türlerle de yapılabilir. Bu çalışmanın farklı zamanlarda, farklı yapay zekâ araçları ile yapılmasıyla farklı sonuçlar elde edilecektir.

Anahtar kelimeler: Masal, değerler, yapay zekâ, eğitim

Journey to the Values in the Fairytale World with Artificial Intelligence

Abstract

It is important to know the place of artificial intelligence, which is a computer system based on imitating human cognitive functions such as learning and problem solving skills, in education and its facilitating effect on learning. In the project, it was aimed to try to reach the world of extraordinary values of fairy tales with artificial intelligence and to compare them with student works. Tales, which are an important part of oral culture, are also effective texts in teaching national and universal values. In the project prepared based on the fact that the values acquired by the individual throughout his/her life are important in line with the aim of raising virtuous individuals of the Education Model of the Turkish Century; the values in the selected 3 fairy tales were determined by 10 students (6th grade) studying in the BYF2 (Individual Talents Realization) Program of our institution in the first semester of the 2024-2025 academic year, and tables were created by matching them with the virtue-value-action framework in the Education Model, and the values in the fairy tales were also detected by artificial intelligence and a comparison was offered. The students made three pictures, one picture for each fairy tale as a group work, and these pictures were evaluated by subjecting them to content analysis, and then they were evaluated by converting them into pictures through artificial intelligence programs (DALL E, Sider. In the fairy tales analyzed in the study, it was seen that the values determined by the students and the artificial intelligence tool overlapped with the values determined in the theme of “Texts Containing Extraordinariness” in the annual plan. It was determined that the students completely portrayed the events and abstract expressions described in the fairy tales, while the artificial intelligence programs mostly transferred the concrete expressions in the fairy tales to the visuals and had difficulty in transferring abstract expressions. In the visuals created by the students and artificial intelligence, it was seen that the events described in the fairy tale were animated rather than the expressions related to values. The study can be conducted with other literary genres such as stories, poems and jokes. Different results will be obtained by conducting this study at different times with different artificial intelligence tools.

Keywords: Fairiy tales, values, artificial intelligence, education

Giriş

Yapay zekâ son yıllarda pek çok alanda karşımıza çıkmaktadır. Eğitim öğretim de yapay zekâ kullanımının yaygın olduğu alanlardan birisidir. Bu nedenle yapay zekânın eğitimdeki yerinin doğru tespit edilmesi ve öğrenmeyi kolaylaştırıcı yanlarının göz ardı edilmemesi önemlidir. Milli Eğitim Bakanlığı Yenilik ve Eğitim Teknolojileri Genel Müdürlüğü tarafından yayınlanan “Eğitimde Kullanılan Yapay Zekâ Araçları: Öğretmen El Kitabı”nda günümüzde yapay zekâ gibi yenilikçi teknolojilerin öğretmenlerin sınıflarında ve öğrencilerin öğrenme süreçlerinde önemli bir rol oynamaya başladığı belirtilmiş, kitabın bu doğrultuda öğretmenlere rehberlik etmek amacıyla hazırlandığı ifade edilmiştir (Ankara, 2024). “Yapay zekâ, bilgisayar sisteminin öğrenme ve sorun çözme gibi insan benzeri bilişsel işlevleri taklit edebilme becerisidir”(Denizli İl MEM 2024). Yapay zekâ ismi 1956 yılında Dartmouth Konferansı’nda ortaya atılmıştır. Bu konferans aynı zamanda yapay zekâ alanında yapılan ilk konferans olarak da kabul edilir. 1957’de IBM mühendisi ve matematikçisi Alex Bernstein’in tarihin ilk tam bilgisayar satranç programını yazarak yapay zekâ programlarının ilk somut örneğini ortaya koymuştur. 1997’de satranç programının dünya şampiyonu Gasparov’u yenmesi yapay zekânın zaferi olarak görülmüştür. 1970’li yıllarda bilgiye dayalı sistemlerin gelişmesinde ilk adımlar atılmış, 80’lerde yapay zekâ endüstri haline gelmeye başlamış, 1987 yılında ise bilim haline gelmiştir. 1990’lı yılların sonunda internetin yaygınlaşması ile birçok yapay zekâ programının daha geniş kitlelere ulaşması mümkün olmuştur. 2000’li yıllarda robot oyuncakların piyasaya sürülmesi ve pek çok elektronik cihazda yapay zekâ programlarının kullanılması ile yapay zekâ yaşamın pek çok alanında görünür hale gelmiştir. (Pirim,2006). Günümüzde ise gündelik hayatın bir parçası gibi görülmektedir. Çalışmada masallardaki değerlerin öğrenciler tarafından tespit edilip Maarif Modeli’nde yer alan erdem-değer-eylem çerçevesi ile eşleştirilmesinin yanı sıra bu değerlerin yapay zekâ tarafından da tespit edilmesiyle karşılaştırma olanağı sunulmaktadır.

TDK Sözlük’te (2024) masal; “Genellikle halkın yarattığı, hayale dayanan, sözlü gelenekte yaşayan, çoğunlukla insanlar, hayvanlar ile cadı, cin, dev, peri vb. varlıkların başından geçen olağanüstü olayları anlatan edebî tür” olarak tanımlanmaktadır. “Kamus-u Osmaniye’de “masal” kelimesinin “mesel”in değiştirilmiş şekli olduğu söylenir. Bu, son derece önemli bir noktadır. Çünkü mesel, “halk dilinde meşhur olan adap ve öğütleri anlatan söz” demektir. Burada şunu da ekleyelim: Mesel, misal yani örnek, benzer gibi anlamlarıyla da önemli bir şey ifade eder ki Mustafa Nihat Özön’ün sözlüğüne baktığımızda masalı “Kendisinden ziyade altındaki mana yani kasdedilen manası önemli olan dokunaklı, etkili ve

terbiye ve ahlak için yararlı hikâye” olarak görmemiz gerekir. Yine Ferit Develioğlu’nun sözlüğünde “dokunaklı ve manalı söz, terbiye ve ahlaka faydalı, yararlı olan hikâye” şeklinde tanımlanır” (Özçelik, 2014). Masal, çocuğun edebiyatla ilk tanışıklığıdır. Edebiyat da tüm çeşitleriyle masalla başlar masalla sona erer. Masallar, bir yandan hayal gücünü geliştirirken diğer yandan çocuğu dolaylı olarak hayata hazırlar. Sözlü kültürün ürünlerinden biri olan masallar dil gelişimi ve dil zenginliğinin yeni nesle aktarımı açısından da önemlidir. İnsani değerlerin öğretilmesi, yaratıcılığı geliştirme kazanımlarına da hizmet eder.

İnsanî değerler erdem olarak nitelendirilir. Erdem; “Ahlâkın övdüğü iyi olma, alçak gönüllülük, yiğitlik, doğruluk vb. niteliklerin genel adı; fazilet” tir (TDK Sözlük, 2024). Türkiye Yüzyılı Maarif Modeli’nde (2024), erdemli bireyler yetiştirmek önemli amaçlardan biridir. Bu amaç erdem-değer-eylem çerçevesi biçiminde verilmiş ve bireyin yaşantısı boyunca edindiği değerler aracılığıyla erdemli olduğu ayrıca eylemleri yoluyla bu değerleri ve erdemli kişiliğini gösterebildiği vurgulanmıştır. T.C. Milli Eğitim Bakanlığı Bilim ve Sanat Merkezleri Türk Dili ve Edebiyatı Dersi Çerçeve Öğretim Programı’nda (2024), değerlerin “programın diğer öğelerinden, becerilerden ve alan içeriğinden ayrı bir şekilde değil programa kaynaşık olarak” işlenmesinin gereği üzerinde durulmuştur. Programda erdem-değer-eylem çerçevesi “Erdem-değer-eylem çerçevesinde çatı değerler etrafında kümelenen bir değer çerçevesi sunulmaktadır. Çatı değerler, diğer bütün değerler ile yoğun kesişim noktaları olan değer yapılarını ifade etmektedir. Modelde saygı, sorumluluk ve adalet; çatı değerler olarak yer almaktadır. Kişisel hayat açısından önemli olan tasarruf, sabır, mahremiyet, mütevazılık, sağlıklı yaşam ve çalışkanlık değerleri insan; sevgi, dostluk, özgürlük, dürüstlük, vatanseverlik, yardımseverlik ve aile bütünlüğü değerleri aile ve sosyal çevre; temizlik, duyarlılık, estetik ve merhamet değerleri ise fiziksel çevre alanlarında yer almaktadır. Değerlerin ilgili olduğu alana karar verilirken daha çok katkı sağladığı alan dikkate alınmıştır. Erdem-değer-eylem çerçevesi; eğitim öğretimde mutlaka yer alması gereken değerleri içermesi açısından sade, değer alanları ve değerlerin birbirleriyle ilişkileri açısından tutarlı, kolay uygulanabilir olması açısından da kullanılabilir olarak tasarlanmıştır.” ifadeleriyle sunulmuştur.

Proje çalışmasında Bilim ve Sanat Merkezi BYF2(Bireysel Yetenekleri Fark Ettirme Programı 2) Türk Dili ve Edebiyatı dersi planı esas alınmıştır. Bu plan Türkiye Yüzyılı Maarif Modeli kapsamında hazırlanan Bilim ve Sanat Merkezleri Türk Dili ve Edebiyatı Dersi Çerçeve Öğretim Programı’na ve Millî Eğitim Bakanlığı Eğitim Öğretim Çalışmalarının Planlı Yürütülmesine İlişkin Yönerge’ye (2024) göre hazırlanmıştır. BYF2 temaları arasında yer alan “Olağanüstülük İçeren Metinler” temasında masal türü de yer almaktadır. Programda bu temada

15 öğrenme çıktısı bulunmaktadır. Çalışmada TDEBYF.4.5. Olağanüstülük içeren metinlerde anlam oluşturabilme, TDEBYF.4.3. Olağanüstülük içeren metinlerde çözümleme yapabilme öğrenme çıktıları ile bunlara ait süreç bileşenleri sırasında programa kaynaşık olarak işlenmesi önerilen erdem ve değerler dikkate alınmıştır. Bu değerler yıllık planda; D1. Adalet, D3. Çalışkanlık, D6. Dürüstlük, D7. Estetik, D14. Saygı, D16. Sorumluluk, D19. Vatanseverlik biçiminde yer almaktadır. Çalışmada bu doğrultuda 3 masal seçilmiştir. Masal seçiminde ayrıca Türk ve dünya masallarının da örneklendirilmesine dikkat edilmiş; bu amaçla da çalışmada incelenmek üzere 1 Türk masalı, 1 La Fontaine(Jeon dö la Fonten) masalı ve 1 Ezop masalı olmak üzere 3 masal belirlenmiştir:

Türk masalı Naki Tezel tarafından derlenen ve Türk Masalları adlı eserde yer alan “Akıllı Evlat” masalıdır. Naki Tezel, 1915-1980 yılları arasında yaşayan Türk halk bilimci ve masal derleyicisidir. Köroğlu, Keloğlu ve İstanbul masallarının yanı sıra bilmece ve atasözü derleme çalışmaları da bulunmaktadır. Akıllı Evlat metni, Tezel’in Türk Masalları adlı kitapta derlediği 54 masaldan biridir. Masalda mirasını paylaşdırmak isteyen bir babanın üç oğluna birer kese altın vererek oradan ayrılmasını ve 3 yıl boyunca bu altınlarla bir iş yapmalarını isteyerek bir teste tabi tutması anlatılmaktadır (Tezel, 2014).

La Fontaine’e ait olan masal “Çocuk ve Ayna” masalıdır. Jean de La Fontaine, 1621-1695 yılları arasında yaşamış Fransız şair ve yazardır. Daha çok masal ve fablları ile tanınmaktadır. Çocuk ve Ayna masalında kendinden başkasını sevmeyen; en iyi ve en güzel insanın kendisi olduğunu düşünen bir çocuğun sudaki aksini görerek gerçeği görmesi anlatılmaktadır(Masal.org, 2024).

Milattan önce 6.yüzyılda yaşadığı düşünülen Ezop, fabllarıyla tanınan Eski Yunan sanatçısıdır. Kahramanları genellikle hayvanlar olan masallarında yaşama ilişkin öğütler ve dersler verir. Projede incelenen metinlerden biri olan “Dil” masalında dünyada en tatlı ve güzel şeyin dil olduğunu ancak doğru kullanılmazsa en kötü ve acı şeyin de dil olabileceğini anlatır(Masal.org, 2024).

Araştırmanın problem durumu: Masal yoluyla değerlerin aktarılması ve yapay zekâ ile masalların olağanüstülük içeren değerler dünyasına ulaşmak mümkündür.

Araştırmanın soruları:

1. Masallar millî ve manevi değerlerin genç kuşaklara aktarılmasında etkili metinler midir?
2. Masallar öğrencilerin hayal güçlerinin gelişmesine ve olayları canlandırıp resmedebilme becerilerine katkı sağlar mı?
3. Yapay zekâ ile masallardaki değerler tespit edilebilir mi?
4. Yapay zekâ ile masalların olağanüstülük barındıran dünyası ve mecazlardan oluşan anlatımı algılanıp resmedilebilir mi?

Araştırmanın hipotezleri:

H₁ Masallar millî ve manevi değerlerin genç kuşaklara aktarılmasında kullanılabilecek etkili metinlerdir.

H₂ Masallar öğrencilerin olayları canlandırıp resmetme becerisini kullanmalarına olanak sunarak hayal güçlerinin gelişimine katkı sağlar.

H₃ Masallardaki değerler yapay zekâ tarafından da tespit edilebilir.

H₄ Yapay zekâ ile masalların olağanüstülük barındıran dünyası ve mecazlardan oluşan anlatımı algılanıp resmedilebilir.

Yöntem

Proje fikri, proje takvimi ve planı, yapılacak etkinlikler proje öğrencisi tarafından danışman öğretmen gözetiminde belirlenmiş ve oluşturulmuştur. Projenin hedef kitlesi 2024-2025 eğitim öğretim yılı birinci döneminde kurumumuz BYF2 Programında öğrenim gören (6. Sınıf) 10 öğrencidir. Proje fikri özgündür. Öğrenci merkezli bir projedir. Çalışmada öğrencilerin masallardaki değerler ilişkin farkındalık geliştirmelerine yönelik içerik analizi tekniği kullanılmıştır. Nitel araştırma yöntemlerinden biri olan içerik analizi, sosyal bilimler alanında sıklıkla kullanılan en önemli tekniklerden biridir. Belirli kurallara dayalı kodlamalarla bir metnin bazı sözcüklerinin daha küçük içerik kategorileri ile özetlendiği sistematik, yinelenebilir bir teknik olarak tanımlanır. İçerik analizi metin ya da metinlerden oluşan bir kümenin içindeki belli kelimelerin veya kavramların varlığını belirlemeye yönelik yapılır. Araştırmacılar bu kelime ve kavramların varlığını, anlamlarını ve ilişkilerini belirler ve analiz ederek metinlerdeki mesajla ilişkin çıkarımlarda bulunurlar. İçerik analizi, metinlerin

düzenlenerek, sınıflandırılarak, karşılaştırılarak; metinlerden teorik sonuçlar çıkarılması olarak da nitelendirilmektedir (Büyüköztürk, Ş.; Kılıç Çakmak, E.; Akgün, Ö.E.; Karadeniz, Ş.; Demirel, D., 2024).

Öğrencilere proje fikrinden bahsedilmiş, hazırlanan ve Ek1’de sunulan 3 masal metni verilmiş, T.C. Milli Eğitim Bakanlığı Bilim ve Sanat Merkezleri Türk Dili ve Edebiyatı Dersi Çerçeve Öğretim Programı’nda yer alan erdem-değer-eylem çerçevesi hakkında bilgilendirme yapılmıştır. Masalları programda yer alan çatı değerler üzerinden değerlendirmesi ve bulduğu değerleri yazması istenmiştir. Projeye katılımın gönüllülüğe dayandığı özellikle belirtilmiştir. Öğrencilerin bulduğu değerler proje öğrencisi ve danışman öğretmen tarafından ayrı ayrı içerik analizine tabi tutulmuş ve elde edilen veriler karşılaştırılmış ve aynı veriler elde edildiği görülünce tablo haline getirilmiştir. Masallardaki değerlerin daha sonra Google’a ait yapay zekâ programı Gemini ile de tespit edilmesi sağlanmış, elde edilen veriler analiz edilerek tablo haline getirilmiş; öğrencilerin bulduğu değerler ile kıyaslanmıştır. Öğrenciler grup çalışması halinde her masal için bir resim olmak üzere üç resim yapmış, bu resimler de yine içerik analizine tabi tutularak değerlendirilmiştir. Masallar yapay zekâ programları (DALL E, Sider) yoluyla da resme dönüştürülmüş ve değerlendirilmiştir. Masallar farklı yapay zekâ programlarıyla resme dönüştürülmeye çalışılmış, en iyi sonuç alınan yapay zekâ programı tarafından oluşturulan resim seçilerek değerlendirmeye tabi tutulmuştur.

Bulgular

1. Akıllı Evlat Masalı

Naki Tezel tarafından derlenen “Akıllı Evlat” masalı ile ilgili çalışma öncesi proje öğrencisi ve danışman öğretmen tarafından yapılan değerlendirmede tespit edilen değerler; özgüven, adalet, kardeşlik, sevgi, özdenetim, eşitlik, saygı, sabır, alçakgönüllülük, cesaret, empati, yardımseverlik, sorumluluk, vatanseverlik, güven, merhamet, birlik beraberliktir.

Tablo 1: Akıllı Evlat masalında öğrencilerin bulduğu değerlere yönelik oluşturulan tema ve kodların frekans tablosu

Adalet	Adalet	2
	Eşitlik	5
	Uzlaşma	4
	Anlaşmazlık	2
Tema(Maarif Modeli Değerler)	KOD	f
Çalışkanlık	Faydalı olmak	1
	İleri görüşlülük	3
	Merak	2
	_____ Açgözlülük	2

Dürüstlük	Güven	2
Sevgi	Sevgi	10
	Kardeşlik	2
	Hasret	3
Saygı	Kibarlık	2
	Saygı	6
	Yardıms severlik	6
	İyilikseverlik	2
Sorumluluk	Liderlik	3

Tablo 1’de görüldüğü gibi Akıllı Evlat masalında öğrenciler tarafından 17 kod belirlenmiş, bu kodlar Maarif Modeli Erdem-Değer-Eylem Çerçevesi’ne göre adalet, çalışkanlık, dürüstlük, sevgi, saygı, sorumluluk olmak üzere 6 tema altında toplanmıştır.

Yapay zekâ programı Gemini tarafından yapılan incelemede ise Akıllı Evlat masalında akıl ve bilgelik, iyilik ve yardıms severlik, sorumluluk, adalet, cömertlik, aile birliği, kardeşlik, çalışkanlık değerleri tespit edilmiştir.

Görsel 1: Akıllı Evlat masalının öğrenciler tarafından yapılan görseli

Görsel 1’de görüldüğü gibi öğrenciler Akıllı Evlat masalının görselini oluştururken masaldaki mirası keseden saçılan altınlarla; üç kardeşin bu mirası elde etmek için üç yıl boyunca yaptıkları işleri ise deve kervanı, köprü, paraları koruyan yiğitler simgeleriyle anlatmıştır.

Görsel 2: Akıllı Evlat masalının yapay zekâ tarafından yapılan görseli

Görsel 2’de görüldüğü gibi yapay zekâ programı DALL E tarafından yapılan görselde Akıllı Evlat masalı deve kervanı, bir baba ile çocukları, köprü, şato, ırmak, dağ, orman simgeleriyle anlatılmıştır. Şato masalda geçmemektedir ancak yapay zekâ zenginlik kavramını şato ile simgelemiştir. Yapay zekâ programı tarafından masal metninde geçen “iyilik, zenginlik, anlaşmazlık” gibi bazı soyut ifadeler ve “yüzlerinden kan damlıyor” gibi mecazlar, tekerleme bölümündeki olağandışı ifadeler anlaşılamamış bu nedenle resimler birkaç denemenin ardından seçilerek oluşturulmuştur.

2. Çocuk ve Ayna Masalı

La Fontaine’e ait “Çocuk ve Ayna” masalı ile ilgili çalışma öncesi proje öğrencisi ve danışman öğretmen tarafından yapılan değerlendirmede tespit edilen değerler; alçakgönüllülük, özdenetim, özgüven, sevgi, doğruluk dürüstlük, sorumluluktur.

Tablo 2: Çocuk ve Ayna masalında öğrencilerin bulduğu değerlere yönelik oluşturulan tema ve kodların frekans tablosu

Tema(Maarif Modeli Değerler)	KOD	f
Mütevazılık	Bencilik	4
	Kabullenmek	6
	Kibirlik	5
	Kendini bilmemek	1
	Özgüven	2
	Özdenetim	6
	Açık fikirlilik	1

	Açgözlülük	6
Çalışkanlık	Cesaret	3
	İnat	4
Dürüstlük	Dürüstlük	5
	Gerçekçilik	1
Sevgi	Sevgi	4
	Anlayışlı olmak	3
Saygı	Saygı	3
Sorumluluk	Sorumluluk	2
Sabır	Sabır	2

Tablo 2’de görüldüğü gibi Çocuk ve Ayna masalında öğrenciler tarafından 17 kod belirlenmiş, bu kodlar Maarif Modeli Erdem-Değer-Eylem Çerçevesi’ne göre mütevazılık, çalışkanlık, dürüstlük, sevgi, saygı, sorumluluk, sabır olmak üzere 7 tema altında toplanmıştır.

Yapay zekâ programı Gemini tarafından yapılan incelemede ise Çocuk ve Ayna masalında özgüven, dürüstlük, mütevazılık, gerçekçilik, kendini tanıma değerleri tespit edilmiştir.

Görsel 3: Çocuk ve Ayna masalının öğrenciler tarafından yapılan görseli

Görsel 3’te görüldüğü gibi Çocuk ve Ayna masalının görselini oluştururken öğrenciler kafalarının yerinde çeşitli ebat ve biçimlerde ayna bulunan 9 çocuk çizmiştir.

Görsel 4: Çocuk ve Ayna masalının yapay zekâ tarafından yapılan görseli

Görsel 4’te görüldüğü gibi yapay zekâ programı DALL E tarafından yapılan görselde Çocuk ve Ayna masalı çocuk, aynalar, su birikintisi, kırsal bir alan ve merdiven simgeleriyle anlatılmıştır. Metinde merdiven geçmemesine rağmen ormandaki su kenarında bir merdiven resmedilmiştir. Yapay zekâ programı tarafından masal metninde geçen “kusur, hata, iyi insan” gibi bazı soyut ifadeler ve “hatayı kendinde aramak” gibi mecazlar anlaşılamamış bu nedenle resimler birkaç denemenin ardından seçilerek oluşturulmuştur.

Dil Masalı

Ezop’a ait “Dil” masalı ile ilgili çalışma öncesi proje öğrencisi ve danışman öğretmen tarafından yapılan değerlendirmede tespit edilen değerler; çalışkanlık, sabır, güven, doğruluk, özgürlük, dostluk, sorumluluk, özdenetimdir.

Tablo 3: Dil masalında öğrencilerin bulduğu değerlere yönelik oluşturulan tema ve kodların frekans tablosu

Tema(Maarif Modeli Değerler)	KOD	f
Mütevazılık	Özdenetim	4
	Kibirlilik	1
Çalışkanlık	Açgözlülük	2
	İleri görüşlülük	1
Dürüstlük	Dürüstlük	10
	Güven	6
Sevgi	Sevgi	5
Saygı	Saygı	10
	Saygısızlık	2
	Paylaşıcılık	1
	İyilikseverlik	6
	Hoşgörü	5
Sorumluluk	Sorumluluk	9
Adalet	Eşitlik	1

	Uzlaşma	5
Dostluk	Dostluk	4
Sabır	Sabır	4

Tablo 3’de görüldüğü gibi Dil masalında öğrenciler tarafından 17 kod belirlenmiş, bu kodlar Maarif Modeli Erdem-Değer-Eylem Çerçevesi’ne göre mütevazılık, çalışkanlık, dürüstlük, sevgi, saygı, sorumluluk, adalet, dostluk, sabır olmak üzere 9 tema altında toplanmıştır.

Yapay zekâ programı Gemini tarafından yapılan incelemede ise Dil masalında sorumluluk, özdenetim, saygı, adalet, sözün gücü, bilgelik ve akıl, iletişimin önemi değerleri tespit edilmiştir.

Görsel 5: Dil masalının öğrenciler tarafından yapılan görseli

Görsel 5’te görüldüğü gibi Dil masalının görselini oluştururken öğrenciler bir kadın ve bir erkek figürünün iletişimde olumsuz sözcükler(berbat, yapamazsın, sen hiçsin, hayır, saçma, olmaz, istemem) kullanması biçiminde bir ifade tarzı seçmiştir. Resimde masalda geçen “Dil dünyada var olan en güzel, en tatlı şeydir. Bütün bilimlerin anahtarı dildir. İnsanlar onunla anlaşılır; sevgimizi, düşmanlığımızı dilimizle anlatırız. O olmasaydı halimiz kim bilir nice olurdu!..” düşüncesine uygun olumlu ifadeler yer almamıştır.

Görsel 6: Dil masalının yapay zekâ programı tarafından yapılan görseli

Görsel 6’te görüldüğü gibi yapay zekâ programı Sider tarafından yapılan görselde Dil masalı bir yemek masası, çeşitli yemekler ve masa etrafında farklı tip ve karakterlerde insanlar ile resmedilmiştir. Yapay zekâ programı tarafından masal metninde geçen “sevgi, düşmanlık, anlaşmazlık, marifet” gibi bazı soyut ifadeler ve “dili belasına çekmek, diline sahip olmak, oyuna gelmek, aklını kaçırmak” gibi mecazlar anlaşılamamış bu nedenle resimler birkaç denemenin ardından seçilerek oluşturulmuştur.

Sonuç ve Tartışma

Çalışmada incelenen masalarda öğrenciler ve yapay zekâ aracı tarafından tespit edilen değerler, BYF2 Türk Dili ve Edebiyatı yıllık planı “Olağanüstülük İçeren Metinler” temasında belirlenen değerlerle örtüşmektedir(2024). Bu tespit, masalların millî ve manevi değerlerin gelecek kuşaklara aktarılmasında etkili metinler olduğu tezini desteklemektedir.

Öğrencilerin çizdiği resimlerde masal metnlerinde anlatılan olaylar bütünüyle canlandırılmış, metinlerdeki soyut ifadeler de hayal gücü yardımıyla somutlaştırılarak kâğıda aktarılmıştır. Yapay zekâ araçları ile çizilen resimlerde daha çok masaldaki somut ifadeler görsele aktarılmış, soyut ifadelerin algılanamadığı için metnin görsele çevrilmesi için birden çok deneme yapılmak zorunda kalınmıştır. Hem öğrencilerin hem de yapay zekânın oluşturduğu görsellerde değerlere ilişkin sembollerden ziyade masalda anlatılan olayların canlandırılması esas alınmıştır.

Akıllı Evlat masasında öğrenciler tarafından belirlenen 17 kod içinde en fazla frekansa sahip olan değer sevgi temasına aittir. En az öğrenci tarafından bulunan değer çalışkanlık teması içinde yer alan faydalı olmak değeridir. Öğrencilerin bulduğu değerler ile yapay zeka

programının tespit ettiği değerler uyushmaktadır. Naki Tezel'in Türk Masalları Adlı Kitabının Değerler Açısından Analizi adlı çalışmada Karagöz tarafından tespit edilen değerlerle de örtüşmektedir. Karagöz'ün çalışmasında bu masalda tespit edilen değerler "başarı, öz yönelim, iyilikseverlik, geleneksellik, uyma" biçiminde yer almaktadır(Karagöz, 2017).

Öğrenciler Akıllı Evlat masalını resmederken masalı bir bütün olarak görselleştirmiş, masaldaki 3 evladın 3 yıl boyunca yaptıkları işlerin tamamını sembolize eden görseller eklemişlerdir. Yapay zekâ programında yapılan resimde ise masalda geçen "deve kervanı, bir baba ile çocukları, köprü, ırmak, dağ, orman" gibi somut kavramlar yer almaktadır. Masalda geçen "zenginlik" kavramı gibi soyut ifadeleri ise şato görseli ile karşılanmıştır.

Çocuk ve Ayna masalında öğrenciler tarafından belirlenen 17 kod içinde en fazla frekansa sahip değerler mütevazılık ve çalışkanlık temalarında yer almaktadır. Gerçekçilik ve kendini bilmemek değerleri ise en az öğrenci tarafından tespit edilmiştir. Öğrencilerin bulduğu değerler ile yapay zekâ programının tespit ettiği değerler genel olarak uyushmaktadır ancak yapay zekâ programının tespit ettiği değerler arasında sevgi ve saygı değerleri yer almamaktadır.

Öğrenciler Çocuk ve Ayna masalını resmederken sadece kafası çeşitli modellerde ayna olan insan figürleri kullanmıştır. Bu görseller masalın sonunda geçen ve masalın ana düşüncesini oluşturan "Aynalar bizim kusurlarımızı her zaman olduğu gibi gösterir." ifadesine işaret etmektedir. Yapay zekâ programı ise masalda geçen orman, dere, çocuk, ayna gibi somut unsurları da kullanarak bir görsel oluşturmuştur.

Dil masalında öğrenciler tarafından belirlenen 17 kod içinde en fazla frekansa sahip dürüstlük ve saygı en fazla frekansa sahiptir. Eşitlik, ileri görüşlülük ve kibirlilik değerleri ise en az öğrenci tarafından tespit edilmiştir. Öğrencilerin bulduğu değerler ile yapay zekâ programının tespit ettiği değerler genel olarak uyushmaktadır ancak yapay zekâ sözün gücü, iletişimin önemi, bilgelik ve akıl değerlerini de tespit etmiştir.

Öğrenciler Dil masalını resmederken bir kadın ve erkeğin iletişiminde sadece olumsuz ifadeler yönelmişlerdir. Resimde olumlu ifadeler yer almamıştır. Yapay zekâ tarafından yapılan resimde ise bir yemek masası ve etrafında insanlar gibi somut unsurlara yer verilmiştir.

Öz-Şefkat: Türkiye’de Yapılan Çalışmalar Üzerine Sistematiik Bir Derleme

Öykü Sena Öz

İzmir Demokrasi Üniversitesi, Sosyal Bilimler Enstitüsü, e-posta: senaoyk2015@gmail.com,
ORCID No: 0009-0006-1088-0883, Türkiye

Doç. Dr. Esra Asıcı

İzmir Demokrasi Üniversitesi, Eğitim Fakültesi, Eğitim Bilimleri Bölümü,
e-posta: esra.asici@idu.edu.tr, ORCID No: 0000-0003-0872-9042, Türkiye

Özet

Şefkat meydana gelen sorunları ve olayları sevecenlikle ve anlayışla karşılayabilme derecesidir. Öz-şefkat ise kişinin bu anlayış ve sevecenliği kendi problemlerine, yaşamında karşısına çıkan sorun ve olaylara yansıtabilme düzeyidir. Bir diğer ifade ile öz-şefkat; bireyin iyi oluşuna hizmet eden bir kavramdır. Bu çalışmada Türkiye’de yapılmış, öz-şefkat kavramına odaklanan çalışmaların sistematiik olarak incelenmesi hedeflenmiştir. Bu amaç doğrultusunda “öz-şefkat” anahtar kelimesi kullanılarak TR Dizin veri tabanında taramalar gerçekleştirilmiştir. Yapılan tarama sonucunda 2020 ve 2024 yılları arasında yayınlanmış olan 77 çalışmaya ulaşılmıştır. Ayrıntılı inceleme sonucunda dahil etme ölçütlerini karşılayan 14 araştırma makalesi sistematiik derleme kapsamına alınmıştır. Seçilen 14 çalışma; yazıldığı yıl ve alan, örneklem, kullanılan ölçme araçları, kullanılan analiz teknikleri, bulguları ve sonuçları açısından detaylı olarak incelenmiştir. Bulgular bireylerin öz şefkat düzeylerini etkileyen değişkenlerin yanı sıra bireylerin öz-şefkat düzeyinin etkilediği değişkenleri de ortaya koymuştur. Sonuçlar öz-şefkat düzeyi yüksek olan bireylerin olumlu ve olumsuz özellikleri karşısında denge sağlayabildikleri, yeni bir ortama girdiklerinde uyum süreçlerini daha kolay yönetebildikleri, depresyon, anksiyete, kaygı gibi olumsuz sonuçları olabilecek ruhsal süreçlerde koruyucu bir faktör olabildiği ve iyi oluşa katkı sağladığı yönündedir. Ayrıca çocukluk çağı travmaları ile öz-şefkat arasında negatif yönlü bir ilişkinin olduğu; kadınlarla yapılan bir çalışmada ise öz şefkat düzeyi arttıkça mutluluğun da arttığı belirlenmiştir. Sonuç olarak, kişinin kendini sevmesiyle ilgili olan öz-şefkatin, özellikle de psikolojik iyi oluşun artırılması bakımından yardımcı rolünün yadsınamaz düzeyde olduğu saptanmıştır. Öz şefkat kişinin iyi oluşuna sağladığı dikkate alındığında öz-şefkat ile ilgili yapılan çalışmaların çeşitlendirilmesi önemlidir. Bu bağlamda, öz-şefkat üzerine yapılan bu sistematiik derleme çalışmasının farklı araştırmaların sonuçlarını bir arada görmek ve konuyla ilgili henüz ele alınmamış noktaları ortaya koyarak eksiklikleri belirlemek açısından alana katkı sağlayacağı düşünülmektedir.

Anahtar Kelimeler: Şefkat, öz-şefkat, iyi oluş, sistematiik gözden geçirme

Self-Compassion: A Systematic Review of Studies Conducted in Turkey

Abstract

Compassion is defined as the extent to which individuals can approach problems and life events with kindness and understanding. Self-compassion refers to the ability to extend this same kindness and understanding toward oneself in the face of personal difficulties and life challenges. In this context, self-compassion is considered a concept that supports individual well-being. The present study aimed to systematically review the research conducted in Turkey that focuses on self-compassion. For this purpose, a search was conducted in the TR Index database using the keyword “self-compassion.” As a result, 77 studies published between 2020 and 2024 were identified. Following a detailed evaluation based on predetermined inclusion criteria, 14 research articles were included in the systematic review. These 14 studies were examined in detail in terms of publication year and discipline, sample characteristics, measurement tools used, data analysis techniques, major findings, and overall results. The findings revealed both the variables that influence self-compassion and those that are influenced by it. The results indicated that individuals with high levels of self-compassion are better able to maintain emotional balance in the face of both positive and negative experiences, adapt more easily to new environments, and that self-compassion functions as a protective factor against psychological issues such as depression, anxiety, and worry. Additionally, it was found that self-compassion contributes positively to psychological well-being. A negative correlation was observed between childhood trauma and self-compassion; furthermore, a study focusing on women revealed that higher levels of self-compassion were associated with increased happiness. In conclusion, self-compassion, which involves cultivating a loving and accepting attitude toward oneself, plays a significant role in promoting psychological well-being. Given its positive contributions to mental health, there is a need to further expand the scope and diversity of research on self-compassion. This systematic review is expected to contribute to the existing literature by providing a comprehensive synthesis of current findings and highlighting areas for future research.

Keywords: Compassion, self-compassion, well-being, systematic review

Giriş

Şefkat kişilerin acıları ve sorunları karşısında sevecenlik ve anlayışla yaklaşabilmesi ile ilişkilendirilen bir kavramdır (Condon ve Barrett,2013). Öz şefkat ise kişinin kendi acıları ve problemlerine karşı anlayışla ve nezaketle yaklaşabilmesi anlamına gelmektedir (Yıldırım, 2018). Öz şefkatin kökeni, bilgece yaşama arayışında olan ve bunu sevgi, şefkat ve empati

çerçevesinde yürüten Budizm felsefesinin temellerine dayanır. (Wallace ve Shapiro, 2006). Öz şefkat temelinde 3 ana bileşenden oluşmaktadır. Bunlar; öz sevecenlik, ortak paylaşımların bilincinde olma ve farkındalıktır. Öz sevecenlik kişinin olumsuzluklar, başarısızlıklar ve yaşamdaki acılar karşısında kendine anlayışlı ve sevecen yaklaşabilmesi ile ilişkili bir bileşendir. Ortak paylaşımların bilincinde olma, kişinin yaşamdaki olayları insanlığın ortak deneyimleri olarak görebilmesidir. Yaşamda yer alan acı ve zor durumların tüm insanlar tarafından deneyimlenebilecek süreçler olarak görülebilmesi ile ilişkili bir bileşendir. Üçüncü ve son bileşen olan farkındalık ise kişinin yaşanan duygu ve deneyimleri iyi ya da kötü gibi sıfatlarla nitelendirmeden yaşanmasına izin vermek ve bu süreçte dengede kalabilmek ile ilişkili bir kavramdır (Neff, 2003).

İnsanın olumlu ve iyi olduğu duruma karşılık gelen birçok kavram vardır. İyi oluş kavramı da bunlardan biridir. Psikolojik iyi oluş, öznel iyi oluş, psikolojik sağlamlık, psikolojik esneklik, yaşam doyumu birbirleriyle ilişki içinde olan kavramlardır (Özen, 2010). İyi oluş ile öz şefkat kavramları arasında pozitif yönde bir ilişkinin varlığı söz konusudur. Literatürde buna dair birçok araştırma söz konusudur. Öz şefkat düzeyi yüksek olan kişilerin iyi oluşları da pozitif yönde etkilenmektedir (Homan,2016; Neff ve McGehee, 2010; Neff, Kirkpatrick ve Rude, 2007).

Kişinin kendini sevmesiyle ilgili olan öz- şefkatin, özellikle de psikolojik iyi oluşun artırılması bakımından yardımcı rolü dikkate alındığında; öz- şefkat ile ilgili yapılan çalışmaların çeşitlendirilmesi önemlidir. Bu bağlamda, araştırmada TR Dizin veri tabanında taranan son 4 yılda yayınlanmış olan öz-şefkat konusunu ele alan çalışmaların sistematik olarak derlenmesi amaçlanmıştır. Öz- şefkat üzerine yapılan bu sistematik derleme çalışmasının farklı araştırmaların sonuçlarını bir arada görmek ve konuyla ilgili henüz ele alınmamış noktaları ortaya koymak açısından önemli olduğu düşünülmektedir.

Yöntem

Öz şefkat ile ilgili TR Dizin veri tabanında son 4 yılda yayınlanmış olan araştırmaların yapılandırılmasından sonuçlandırılmasına kadar incelenmesini amaçlayan bu çalışmada sistematik derleme yöntemi kullanılmıştır. Sistematik derleme, bir araştırma sorusuna cevap almak amacıyla belirli sınırlar çerçevesinde konu ile ilgili yayınların incelenerek belirli sentezlerden geçirilip bir araya getirilme çalışmasıdır (Yılmaz, 2021).

Bu amaç doğrultusunda 12 Şubat 2025 tarihinde ilgili anahtar kelime olan “öz şefkat” terimiyle TR Dizin veri tabanında taramalar gerçekleştirilmiştir. 2021-2022-2023-2024 yıllarında yayınlanmış olan 77 araştırma makalesine ulaşılmıştır. Veri tabanı aracılığıyla

ulaşılan makaleler çalışma alanı, yayın yılı, örneklem grubu, araştırma yöntemi ve ele alınan değişkenler açısından ayrıntılı olarak incelenmiştir. Dahil edilme ölçütleri TR Dizin veri tabanında yer alan çalışmalar, yayın dili Türkçe olan çalışmalar, erişime açık olan çalışmalar, makale formatında olan çalışmalar, sosyal alanda yazılmış olan çalışmalar ve belirlenen yıllar içerisinde yazılmış olan çalışmalarken; dışlama ölçütleri ise TR Dizin veri tabanında yer almayan çalışmalar, yayın dili Türkçe olmayan çalışmalar, makale formatının dışında yer alan çalışmalar, sosyal alanda yazılmış olmayan çalışmalar ve belirlenen yılların dışında yazılmış olan çalışmalar olarak belirlenmiştir. Dahil edilme ve dışlama ölçütlerine karşılayan ve öz şefkati konu alan 14 araştırma sistematik derlemeye dahil edilmiştir.

Şekil 1. Literatür tarama sürecine ilişkin PRISMA akış şeması

Bulgular

Çalışmaya dahil edilen araştırmalar içeriklerine göre bulgular kullanılan ölçme araçları, iyi oluş, benlik, ruh sağlığı, travmatik yaşantılar, bağlanma, tükenmişlik, affetme, stresle başa çıkma, umut ve çalışma ortamı olmak üzere 11 ana başlıkta toplanmıştır.

Kullanılan Ölçme Araçlarına Dair Bulgular

İncelenen çalışmaların tamamında toplam 6 farklı ölçme aracı kullanıldığı tespit edilmiştir. Çalışmaların 4 tanesinde Yıldırım ve Sarı'nın (2008) geliştirmiş olduğu Öz Şefkat Ölçeği Kısa Formu, 3 tanesinde Raes vd. (2011) geliştirmiş oldukları Öz Şefkat Ölçeği Kısa Formu, 3 tanesinde araştırmacıların oluşturduğu anket ve görüşme soruları, 2 tanesinde Akın vd. (2007) geliştirmiş oldukları Öz Duyarlılık Ölçeği, 1 tanesinde Deniz vd. (2008) geliştirdikleri Öz Şefkat Ölçeği ve 1 tanesinde de Neff (2003)'in geliştirmiş olduğu Öz Anlayış Ölçeği kullanılmıştır.

Öz Şefkat ve Benlikle İlgili Değişkenler Arasındaki İlişkiye Dair Bulgular

İncelenen çalışmaların biri (Tekin ve Kul, 2023) öz şefkat ile kendini sabotaj ve benlik saygısı değişkenleri arasındaki ilişkilere odaklanmıştır. Çalışma bulgularında öz şefkatin; kendini sabotaj ile arasında negatif yönlü anlamlı düzeyde ilişki olduğu saptanırken benlik saygısı ile arasında pozitif yönlü anlamlı düzeyde ilişki olduğu saptanmıştır. Ek olarak, öz şefkatin benlik saygısı ile kendini sabotaj arasındaki ilişkide aracılık rolü olduğu tespit edilmiştir.

Öz Şefkat ve Ruhsal Belirtiler Arasındaki İlişkiye Dair Bulgular

İncelenen bir araştırmada (Dinçbaş vd., 2023) öz-şefkat ile ruhsal belirtiler arasındaki ilişkilere odaklanılmıştır. Öz şefkat ile depresif belirtiler, anksiyete ve stres arasında negatif yönde ilişkiler olduğu saptanmıştır. Bir diğer çalışmada (Andiç ve Batıgün, 2019) ise öz şefkat ile internet bağımlılığı arasındaki ilişkiye odaklanılmıştır. Bu çalışmada öz-şefkat ile internet bağımlılığı arasında negatif yönde anlamlı bir ilişki olduğu sonucuna ulaşılmıştır.

Öz Şefkat ve Travmatik Yaşantılar Arasındaki İlişkiye Dair Bulgular

İncelenen bir çalışma (Kıraç, 2022) bireylerin öz-şefkat gelişimini etkileyen bir unsur olarak çocukluk çağı travmalarına odaklanmıştır. Çalışma bulgularında çocukluk çağı travmalarının düşük öz şefkat düzeyini yordadığı görülmüştür.

Öz Şefkat ve İyi Oluş Arasındaki İlişkiye Dair Bulgular

Bazı çalışmalar öz-şefkat ile iyi oluş arasındaki ilişkilere odaklanmıştır. İncelenen üç çalışmada (Topkaya vd., 2022; Karataş ve Uzun, 2021; Tunca, 2022) öz-şefkatin, iyi oluş ve

mutluluğun pozitif yönde anlamlı bir yordayıcısı olduğu ortaya konmuştur.

Öz Şefkat ve Umut Arasındaki İlişkiye Dair Bulgular

Okul psikolojik danışmanlarıyla gerçekleştirilen bir çalışmada umut ve öz şefkat düzeyleri arasında anlamlı ilişkiler tespit edildiği görülmektedir. Buna göre; öz şefkat umudu pozitif yönde doğrudan ve anlamlı bir şekilde yordamaktadır (Dönmez ve Sarı,2021).

Öz Şefkat ve Stresle Başa Çıkma Arasındaki İlişkiye Dair Bulgular

Yapılan bir çalışma (Ekşi vd., 2022) öz-şefkat ile stresle başa çıkma tarzları arasındaki ilişkilere odaklanmıştır. Bulgular öz-şefkatin stresle başa çıkma tarzlarının anlamlı bir yordayıcısı olduğunu göstermiştir. Stresle başa çıkma tarzlarının alt boyutlarından: Kendine güvenli yaklaşım, iyimser yaklaşım, sosyal destek arama boyutu öz şefkati pozitif yönde; çaresiz yaklaşım boyutu ve boyun eğici yaklaşım boyutu ise öz şefkati negatif yönde etkilemektedir. Yani öz şefkat arttıkça çaresiz yaklaşım ve boyun eğici yaklaşım azalmaktadır.

Öz Şefkat ve Bağlanma Arasındaki İlişkiye Dair Bulgular

Yapılan bir çalışmanın (Sumbas ve Öztürk, 2021) sonucunda; bireylerin öz şefkat düzeyleri ile obsesif bağlanma ve korkulu bağlanma düzeyleri arasında düşük düzeyde, negatif yönlü ve anlamlı ilişkiler olduğu tespit edilmiştir.

Öz Şefkat ve Tükenmişlik Arasındaki İlişkiye Dair Bulgular

İncelenen iki çalışmada öz-şefkat ile tükenmişlik arasındaki ilişkilere odaklanılmıştır. Polatçı ve Baygın'ın (2022) çalışması bireylerin öz-şefkat düzeylerinin tükenmişlik düzeylerini negatif yönde yordadığını göstermiştir. Dönmez ve Sarı'nın (2021) çalışmasında ise okul psikolojik danışmanlarının tükenmişlik ve öz şefkat düzeyleri arasında anlamlı ilişki olduğu; öz şefkatin tükenmişliği negatif yönde doğrudan ve anlamlı bir şekilde yordadığı görülmektedir.

Öz Şefkat ve Tükenmişlik Arasındaki İlişkiye Dair Bulgular

Ergenlerle gerçekleştirilen bir çalışmada (Karataş ve Uzun, 2021) öz şefkat ile affetme eğilimi arasındaki ilişkilere odaklanılmıştır. Öz şefkatin, ergenlerin kendilerini, başkalarını ve durumları affetme eğilimlerinin hepsini olumlu yönde yordadığı sonucuna ulaşılmıştır.

Öz Şefkat ve Çalışma Ortamı Arasındaki İlişkiye Dair Bulgular

Bir çalışma (Üçok, 2022) kapsamında anket çalışması yapılmıştır. Anket sonuçlarında hoşgörü, uzlaş, iş birliği ve birliktelik duygusuyla şekillenen çalışma ortamında çalışan kişilerin, öz şefkat duygularına verecekleri tepkilerin olumlu yönde olacağı şeklindedir.

Tartışma ve Sonuç

Bu çalışmada TR Dizin veri tabanında yer alan öz şefkat konusu ile ilgili 2021 – 2024 yılları arasında yayınlanmış olan çalışmalar sistematik bir şekilde incelenmiştir. Yapılan detaylı incelemede, birçok alanda öz şefkatin önemli etkisinin olduğu sonucuna ulaşılmıştır. Öz şefkat bazı çalışmalarda sonuç değişkeni olarak ele alınırken; bazılarında ise bağımsız/yordayıcı değişken olarak ele alındığı belirlenmiştir. İncelenen 14 çalışma sonucunda öz şefkat kavramı ile iyi oluş, benlik, ruh sağlığı, travmatik yaşantılar, bağlanma, tükenmişlik, affetme, stresle başa çıkma, umut ve çalışma ortamı arasındaki ilişkiler ortaya konmuştur.

Yapılan çalışmaların çoğu göstermektedir ki öz şefkat düzeyi yüksek olan bireyler yaşamlarındaki zorluklara karşı daha anlayışlı daha kabullenici bir tavır sergileyebilmektedir. Bunun sebebi öz şefkatin kişide olumlu bir etkisinin olması kişinin kendine karşı nazik, farkındalık sahibi ve durumların kendi özelinde değil tüm insanlığın ortak paylaşımı olduğunun bilincinde olmaları olabilir.

Tüm sonuçlar bir arada değerlendirildiğinde; çocukluk çağındaki olumsuz deneyimlerin bireyin öz-şefkat gelişimini engellediğini, öz-şefkat düzeyi gelişmemiş kişilerin stresle etkili olarak başa çıkmadıkları için ruhsal bozukluklara karşı daha savunmasız oldukları düşünülebilir. Diğer taraftan öz-şefkat düzeyi gelişmiş bireyler stresli yaşantılarla daha etkili başa çıkma kapasitesine sahip olduklarından olumlu ruhsal deneyimler yaşamaları ve iyi oluşlarını koruma olasılıkları artmaktadır.

Bulgular aşağıdaki sonuçlara işaret etmektedir:

Öz-şefkat arttıkça bireylerin kendini sabotaj eğilimleri (kişinin yetenek ve becerilerine sahip olmasına rağmen, işleri tamamlamak konusunda kendine olan şüphe ve korkunun etkisiyle işleri erteleyip yıkıcı davranışlara yol açması durumu) azalmaktadır.

Öz-şefkat arttıkça bireylerin benlik saygısı artmakta; bir diğer deyişle kendilerine karşı daha olumlu bir benlik algısına sahip olabilmektedirler.

Öz-şefkatin artması; daha yüksek iyi oluş, mutluluk, umut ve affedicilik gibi olumlu sonuçlar ortaya çıkarmaktadır.

Diğer taraftan öz-şefkatin azalması depresyon, anksiyete, stres, tükenmişlik, internet bağımlılığı gibi bir takım olumsuz sonuçlar ortaya çıkarmaktadır.

Çocukluk çağındaki olumsuz travmatik deneyimler ve sahip olunan bağlanma stilleri bireyin öz-şefkat gelişimini etkileyen unsurlar olarak karşımıza çıkmaktadır.

Bu bağlamda psikolojinin temelleri ve eğitimi okul öncesinden başlamak üzere psikolojik danışmanlar tarafından okullarda atılır. Öğrencilere bu eğitimi okullarda öncelikli olarak ruh sağlığı hizmeti veren psikolojik danışmanlar verir. Bu yüzden okullarda yapılacak öz-şefkate katkı sağlayan çalışmaların çeşitlendirilmesi ve alan yazına katılması önemlidir.

İncelemiş olduğumuz çalışmaların büyük çoğunluğu ergenler ile genç yetişkinlik dönemi örneklemi ele alan çalışmalardan oluşmaktadır. Bu bakımdan özel gruplar ve diğer yaş grupları ile yapılacak olan çalışmaların alan yazına zenginlik katacağı düşünülmektedir. Öz-şefkatin iyi oluşa sağladığı katkı dikkate alındığında; öz-şefkati geliştirmeye yönelik psikoeğitim programların hazırlanarak uygulanmasının da faydalı olacağı düşünülmektedir.

Özet

Türkçe öğretimi, sadece dilin öğretilmesiyle sınırlı değildir. Hedef öğrencilere farklı kültürel bağlamları anlamalarını ve değerlendirmelerini sağlayarak bir köprü oluşturur. Kültür ve halk edebiyatı unsurları bir dilin içinde bulunduğu toplumun değerlerini, normlarını, geleneklerini ve yaşam tarzlarını kapsayan derin ve karmaşık bir kavramdır. Ders kitapları, öğrencilere bu kültürel içeriği sunarak dil öğrenme sürecini zenginleştirir ve daha etkili iletişim kurmalarına yardımcı olur. Yabancı dil olarak Türkçe öğretimi alanında hazırlanan setlerde ve kitaplarda farklı bir yaklaşımla öğretim teknikleri ve yöntemleri kullanılmaktadır. Bu farklılıkların yanı sıra yabancı dil olarak Türkçe öğretiminde ortak olan nokta, sadece dil bilgisi kurallarını ve iletişim becerilerini öğretmekle kalmaz, aynı zamanda Türk kültürünü de öğrencilere aktarmayı hedefler. Bu çalışmanın amacı, yabancılara Türkçe öğretimi alanında hazırlanmış Van Yüzüncü Yıl Üniversitesi ve Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Ders Kitapları setlerindeki okuma- dinleme metinlerinde geçen kalıp sözlerin (atasözleri, deyimler, kısa dualar-alkışlar, dilekler, gündelik sözler, tekerlemeler, ölçünlü sözler) tespit etmek ve Türk kültürüne ve Türk dili alanına sundukları katkıyı belirlemektir. Araştırmanın örneklemini “Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Öğretim Seti (A1, A2, B1, B1, C1-C2)” ve Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe (A1, A2, B1, B2, C1)” oluşturmaktadır. Araştırmada, nitel analiz tekniklerinden biri olan “doküman analizi” tekniği kullanılmıştır. Elde edilen veriler, betimsel olarak incelenmiş, tablolastırılmış ve yorumlanmıştır. Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Öğretim Seti’nde yer alan okuma metinleri incelendiğinde, 83 alkış-dilek, 450 deyim, 8 atasözü, 7 tekerleme, tespit edilmiştir. Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Öğretim Seti’nde yer alan okuma-dinleme metinleri incelendiğinde, 292 alkış-dilek, 523 deyim, 5 atasözü, 1 tekerleme ve 336 günlük ifade tespit edilmiştir. Bu metinlerde ölçünlü söz ve kargış-beddua örneklerine rastlanmamıştır.

Anahtar kelimeler: Yabancı dil, Türkçe öğretimi, Yabancılar İçin Türkçe Öğretim Seti, Kalıp sözler

Processing of Formulaic Words in the Sets Prepared in the Field of Teaching Turkish as a Foreign Language

Abstract

Teaching Turkish is not limited to teaching the language alone. It creates a bridge by enabling target students to understand and evaluate different cultural contexts. Culture and folk literature elements are a deep and complex concept that encompasses the values, norms, traditions and lifestyles of the society in which a language is located. Textbooks enrich the language learning process by providing students with this cultural content and help them communicate more effectively

In the sets and books prepared in the field of teaching Turkish as a foreign language, different approaches are used in teaching techniques and methods. In addition to these differences, the common point in teaching Turkish as a foreign language is not only teaching grammar rules and communication skills, but also aims to transfer Turkish culture to students. The aim of this study is to determine the formulaic words (proverbs, idioms, short prayers-applauses, wishes, daily words, tongue twisters, standard words) in the reading-listening texts in the sets of Van Yuzuncu Yil University and New Istanbul Turkish Course Books for International Students prepared in the field of teaching Turkish to foreigners and to determine their contribution to Turkish culture and the field of Turkish language

The sample of the study consists of “Van Yuzuncu Yil University Turkish for Foreigners Teaching Set (A1, A2, B1, B1, C1-C2)” and New Istanbul Turkish for International Students (A1, A2, B1, B2, C1)”. The “document analysis” technique, which is one of the qualitative analysis techniques, was used in the study. The obtained data were examined descriptively, tabulated and interpreted. When the reading texts in the Van Yuzuncu Yil University Turkish for Foreigners Teaching Set were examined, 83 applause-wishes, 450 idioms, 8 proverbs, 7 tongue twisters were identified. When the reading-listening texts in the New Istanbul Turkish for International Students Teaching Set were examined, 292 applause-wishes, 523 idioms, 5 proverbs, 1 tongue twister and 336 colloquial expressions were identified. No standard words or curse-impostor examples were encountered in these texts.

Keywords: Foreign language, Turkish teaching, Turkish for Foreigners Teaching Set, Formulaic Words

Giriş

İnsanı diğer canlılardan ayıran en temel özelliklerden biri, dil yetisine sahip olmasıdır. Dil; kültürün ve medeniyetin gelişiminden, günlük hayatta karşılaşılan sorunların anlaşılması ve çözümüne kadar pek çok alanda hayati bir iletişim aracıdır. Özbay (2006) ve Aksan (2015), dilin önemini şu şekilde belirtmektedir: “Duyguların, sanatın, olayların ve keşiflerin aktarımı dil sayesinde mümkün olur. Suçların aydınlatılması, yargılama süreçleri ve adaletin sağlanması da dilin varlığına bağlıdır. Kısacası dil, hem düşüncüyü ifade etmede hem de toplumsal işleyişi sürdürebilmeye vazgeçilmez bir araçtır.” Bu tanımlamalardan da görüldüğü üzere dil, insan hayatında önemli bir yer tutmakta ve pek çok işlevi yerine getirmektedir. Bu işlevler bireylerin, toplumların ve kültürel yapıların gelişimine önemli ölçüde katkıda bulunmaktadır.

Kültür, insanların bilgi, görgü, inanç, maddi-manevi değerleri ve davranışlarının tamamını içermektedir. “Dil, sadece iletişim aracı olmanın ötesinde düşüncüyü oluşturan ve kültürü biçimlendiren etkin bir araçtır. Bir toplumun kültüründe bulunan unsurlar o toplumun dilinde de kendini gösterir” (Kıran ve Kıran, 2013: 57). Bir dilde var olan sözcükler, kavramlar, kalıplaşmış ifadeler; o topluluğun dünya görüşünü ve kültürel özelliklerini yansıtmaktadır. Anonim Türk halk edebiyatı ürünleri kültürün birer taşıyıcısıdır. “Anonim Türk halk edebiyatı; bilinmeyen bir düzenleyiciye veya söyleyiciye sahip olan, halkın geleneksel kültürünü, düşünce dünyasını, değerlerini ve yaşantısını yansıtan eserleri ifade eder” (Sakaoğlu ve Alptekin, 2006). Anonim Türk halk edebiyatı içerisinde yer alan kalıp sözleri ise ‘atasözleri, deyimler, kısa dualar-alkışlar, dilekler, gündelik sözler, tekerlemeler, ölçünlü sözler’ oluşturmaktadır.

Türkiye’de özellikle son yıllarda yabancıların sayısında artış yaşanmakla birlikte Bayyurt (2011: 16)’e göre, Türkçeyi yabancı dil olarak öğrenmeyi hedefleyenler genellikle Türkiye’ye gelerek günlük ihtiyaçlarını karşılamak, Türklerle iletişim kurmak, eğitim almak, Türkçe televizyon izlemek ve gazete okumak gibi amaçlarla öğrenmektedirler. Yabancı dil öğretimi derslerinde ise öğrenciler, doğrudan veya dolaylı olarak hedef kültürle karşılaşmaktadırlar. Bu nedenlerden dolayı Türkçenin yabancılar için öğretimi, Türk kültürü ile ilgili bilgiler içermelidir ve bu bilgiler doğrudan ve açık bir şekilde aktarılmalıdır.

Dil ve kültür arasında sıkı bir ilişki olduğundan, dil ile kültür birbirinden bağımsız düşünülmemelidir. Türkçeyi yabancı dil olarak öğretirken, yaklaşımımız sadece günlük iletişim ve dilin kurallarını öğretmek olmamalıdır. Ertuğrul (2015)’a göre hedef dilin doğru ve etkili bir biçimde kullanılabilmesi için hedef kültürün de öğretilmesi gerekmektedir.

Türkçenin yabancılar için öğretimi sürecinde en sık başvuru alan materyaller genellikle ders

kitaplarıdır. Yabancı bir dilin öğretiminde, kültürel öğelerin aktarımı ders kitaplarının içerdiği konular ve metinler aracılığıyla gerçekleşir. Özellikle ders kitaplarında bulunan okuma ve dinleme metinleri, kültürün aktarımında kritik bir rol oynar ve bu nedenle ayrı bir öneme sahiptir.

Türkçenin yabancı dil olarak öğretiminde kullanılan ders kitaplarının kalitesinin denetlenmesi önemli bir konudur ve dikkate alınması gerekmektedir. “Çünkü ders kitapları, Türkçenin yabancı dil olarak öğretilmesinde bir öğretim programı olmadığı için program görevi üstlenmektedir” (Yılmaz ve Esen, 2016: 85). Kültür, bir dilin içinde bulunduğu toplumun değerleri, normları, gelenekleri ve yaşam tarzını kapsayan derin ve karmaşık bir kavramdır. Ders kitapları, öğrencilere bu kültürel içeriği sunarak dil öğrenme sürecini zenginleştirir ve daha etkili iletişim kurmalarına yardımcı olur.

Yabancı dil olarak Türkçe öğretimi alanında hazırlanan setlerde ve kitaplarda farklı bir yaklaşımla öğretim teknikleri ve yöntemleri kullanılmaktadır. Bu farklılıkların yanı sıra yabancı dil olarak Türkçe öğretiminde ortak olan nokta, sadece dil bilgisi kurallarını ve iletişim becerilerini öğretmekle kalmaz, aynı zamanda Türk kültürünü de öğrencilere aktarmayı hedefler.

Bu çalışmanın amacı, yabancılarla Türkçe öğretimi alanında hazırlanmış Van Yüzüncü Yıl Üniversitesi ve Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Ders Kitapları setlerindeki okuma-dinleme metinlerinde geçen kalıp sözleri (atasözleri, deyimler, kısa dualar-alkışlar, dilekler, gündelik sözler, tekerlemeler, ölçünlü sözler) tespit etmek ve Türk kültürüne ve Türk dili alanına sundukları katkıyı belirlemektir.

Biçer (2012)’e göre geçmişte de bugün olduğu gibi Türkçe, etkileşimde bulunan milletler tarafından öğretilmektedir. Dil öğretimi, iletişim amacıyla başladığı için genellikle yazı dilinden ziyade konuşma diline öncelik verilmektedir. 1950 yılından sonra da üniversitelerde yabancı dil olarak Türkçe öğretimi ön plana alınmıştır.

Türkçenin yabancı dil olarak öğretimi uzun bir geçmişe sahip olmasına rağmen kurumsal ve sistemli bir Türkçe öğretimi yakın zamana kadar gerçekleşmemiştir. “Sonraki yıllarda kurulan Türkçe Öğretim Merkezleri (TÖMER), bu alandaki çalışmaları sistematik hale getirerek ve kurumsallaştırarak önemli bir rol üstlenmiştir” (Biçer, 2017: 212). Günümüzde Türkçe öğretimi, üniversitelerden özel ve resmi kurumlara kadar farklı kuruluşların Türkçe öğretim merkezleri veya birimleri aracılığıyla yürütülmektedir.

Memiş (2021)’e göre, yabancılarla Türkçe öğretimindeki güncel sorunlara odaklanan

çalışmasında, araştırmalarda en çok üzerinde durulan konunun ders kitapları olduğunu tespit etmiştir. Bu sebeple Türkçenin yabancı dil olarak öğretiminde, temel kaynak olan ders kitaplarında bulunan kültürel unsurların ayrıntılı bir şekilde incelenmesi ve varsa eksiklerin giderilmesi için yapılan çalışmalara katkıda bulunulmalıdır.

Benzer çalışmalardan biri olan Özkan (2017) makalesinde, “Yabancı Dil Olarak Türkçe Öğretimi Ders Kitaplarında Kültür Öğeleri Olarak Atasözleri ve Deyimler” başlığı altında toplam üç setteki atasözü ve deyimleri incelemiştir. Araştırma sonucunda Gazi Üniversitesi Eğitim Seti’nde 34 atasözü ve 362 deyim, Yedi İklim Setinde 64 atasözü ve 686 deyim, Yeni Hitit Seti’nde 34 atasözü ve 363 deyim tespit edilmiştir.

Benzer bir başka çalışma ise Çakır’ın (2020) de yayınlanan, “Yabancı Dil Olarak Türkçe Öğretimi Alanında Hazırlanan Yedi iklim Kitap Setinin Anonim Türk Halk Edebiyatı Unsurları Açısından İncelenmesi” adlı makalesidir. Bu çalışmasında Çakır, yalnızca bir setteki anonim Türk halk edebiyatı unsurlarını incelemiştir. Yedi İklim setindeki 343 okuma metni incelendiğinde, 252 alkış-dilek, 686 deyim, 13 atasözü, 3 mâni, 5 fıkra, 1 halk hikâyesi ve 1 efsane tespit edilmiştir.

Bizim çalışmamızda ise okuma-dinleme metinlerinde yer alan kalıp sözlerin tamamı tespit edilmeye çalışmış ve iki sette yer alan unsurlar karşılaştırılarak yorumlanmıştır.

Yöntem

Araştırmanın örneklemini “Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Öğretim Seti (B1 ve B2 seviyesi)” ve Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Öğretim Seti (B1 ve B2 seviyesi)” oluşturmaktadır. Bu setlerde yer alan 136 okuma-dinleme metni ve kalıp sözlerle (atasözleri, deyimler, kısa dualar-alkışlar, dilekler, gündelik sözler, tekerlemeler, ölçünlü sözler) sınırlandırılmıştır.

Araştırmada, nitel analiz tekniklerinden biri olan “doküman analizi” tekniği kullanılmıştır. Elde edilen veriler, betimsel olarak incelenmiş, tablolastırılmış ve yorumlanmıştır.

Çalışmanın amacına uygun şekilde veri taraması yapılması, doğru ve güvenilir sonuçlar elde etmek için gereklidir. Veri toplama teknikleri incelendiğinde, örnekleme yer alan okuma ve dinleme metinlerindeki kalıp sözlerin belirlenmesinde nitel analiz yöntemlerinden belge taraması tekniğinin kullanılması uygun görülmüştür. Nitel araştırmalarda, çoğunlukla üç temel veri toplama yöntemi olan gözlem, mülakat ve doküman analizi (belge taraması) kullanılmaktadır (Sak, Sak, Şendil ve Nas, 2021). Belge taraması, doküman analizi olarak da bilinmekte olup, bu yöntemde belgeler incelenerek araştırma konusu hakkında kapsamlı ve ayrıntılı bilgiler elde edilir.

Bulgular

Bulgular, Taşka, Z., Canatak, M., vd. (2019) da hazırladığı Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Ders Kitapları (B1, B2); Bölükbaş, F., Keskin, F., vd. (2023) te hazırladığı Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Ders Kitapları (B1, B2) kitapları taranarak elde edilmiş, tablolaştırılmış ve yorumlanmıştır.

1. Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Ders Kitabı B1- B2 Seviyesinde Geçen Kalıp Sözlər

Kitabın B1 ve B2 seviyelerinde toplam 53 okuma metni incelenmiştir. İnceleme sonucunda elde edilen bulgular metinlerden alınan örnek cümlelerle şu şekilde verilmiştir:

1.1. Atasözleri:

Metin: İlginç Haberler

Vakitsiz öten horozun başını keserler: “Atalarımız vakitsiz öten horozun başı kesilir demiş ama Balıkesir’deki çilli horoz bırakın ötmeyi konuştu.” (B1, s.25)

1.2. Tekerlemeler:

Metin: Çocuk Oyunları

“Birdir bir, İkidir iki, olur tilki... Üçtür üç, yapması güç... Dörttür dört, kuş gibi öt... Beştir beş, aldım bir eş... Altıdır altı, yaptım kahvaltı... Yedim yedi, elim sırtına değdi... Sekizim seksek... Dokuzum durak.” (B1, s.45)

1.3. Deyimler:

Üne kavuşmak: “Üne kavuştuktan sonra ismini Giovanni olarak değiştirir.” (B1, s.5)

İmza atmak: “Uçan Merkür adlı çalışması başta olmak üzere pek çok esere imza atmıştır.” (B1, s.5)

İlham almak: “Çalışmaları için konu seçimi yaparken çevresinden ilham almıştır.” (B1, s.8)

(bir işte) yer almak: “Son grupta yer alan dramatik sanatlar, yani tiyatro, sinema, opera, gölge oyunu veya müzikal oyunlar belirli bir olayın eylemleştirilip sergilenmesidir.” (B1, s.10)

Dönüm noktası: “Onun için dönüm noktası olan bu yarışma sonrasında Say’ın Amerika’da üç yıl süren konser serisi başlar.” (B1,s.15)

Yerini almak: “Resim, alet ya da dumanın yerini yazılı iletişim araçlarından posta yöntemi almıştır.” (B1, s.17)

Göz açıp kapayıncaya kadar (Kitapta göz açıp kama hızında olarak geçiyor.): “Giderek küçülen telefon cebimize girmiş oda büyüklüğündeki bilgisayarlar dizüstümüze oturmuş ve artık dünyanın bir ucundan öteki bir ucuna iletişim göz açıp kapama hızından bile az süreye inmiştir.” (B1, s.17)

... hâline gelmek: “Ticari maksatla da kullanılan bu platform, gençlerin kopamadığı bir yer hâline gelmiştir.” (B1, s.21)

Hakkını aramak: “Hakkını arayan kedi olur mu demeyin.” (B1, s.25)

Dile kolay: “İki buçuk yaşında ve 35 kilo... Dile kolay.” (B1, s.25)

Örnek almak: “Örnek aldığı Mahatma Gandhi gibi şiddet içermeyen gösterileri ve barışçıl tutumu 1964 yılında ona Nobel Barış Ödülünü getirir.” (B1, s.57)

Dile getirmek: “Yaşamın aksayan yönlerini, yanlış veya erdemsiz davranışları; hayvanları konuşturarak dile getirir.” (B2, s.1)

Zemin hazırlamak: “Dönemin sanatçıları romantik akıma zemin hazırlamıştır.” (B2, s.7)

(bir şeye) hayat vermek: “Kendisini mutlu bir ırk yaratma amacıyla cansız maddelere hayat verebilmeye adar.” (B2, s.9)

(bir şeyden) söz etmek: “Besmele ile başlayan eserde Dede Korkut adlı bir şahıstan söz edilir.” (B2, s.17)

Akla gelmek: “Evliya Çelebi adı anılınca hemen Seyahatname akla gelir.” (B2, s.20)

Hayata gözlerini yummak (kapamak): “Şair, romancı, düşünür, deneme yazarı, gazeteci, senarist ve eleştirmen olan Attila İlhan 2005 yılında hayata gözlerini yumar.” (B2, s.28)

Üne kavuşmak: “Orhan Pamuk 1985’te yayımlanan tarihsel romanı Beyaz Kale ile yurt dışında da büyük bir üne kavuşur.” (B2, s.31)

Karşı çıkmak: “Varlıklı ve eğitilmiş ailesi onun kötü hastane şartlarında çalışmasına karşı çıkmışlardır.” (B2, s.47)

Maruz kalmak: “Onu başarıya götüren, tüm dünyaya adını duyuran laboratuvar çalışmaları sırasında aşırı radyasyona maruz kaldı.” (B2, s.50)

Hayata geçirmek: “Katı politikaları hayata geçiren Thatcher ‘Demir Leydi’ lakabıyla tanınır.” (B2, s.52)

Akla gelmek: “Amerika denilince birçoğumuzun aklına ilk Özgürlük Anıtı gelir.” (B2, s.65)

İlham almak: “Anıtın yapımında Roma tanrıçası Libertas’tan ilham alınmıştır.” (B2, s.65)

Karar vermek: “Fransız Devrimi’nin 100. yılını kutlamak amacıyla yapılmasına karar verilmiştir.” (B2, s.67).

Tablo 1: Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Öğretim Setinde Geçen Kalıp Sözlerin Dağılımı ve Yorumlanması

Kalıp Sözler	B1(f)	B2(f)	TOPLAM
Alkışlar-Dualar	-	-	0
Deyimler	65	98	163
Atasözleri	1	-	1
Tekerlemeler	1	-	1
Ölçünlü Sözler	-	-	0
Gündelik Sözler	-	-	0
GENEL TOPLAM	67	98	165

Tablo 1.’de görüldüğü üzere Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Öğretim Ders Kitaplarının okuma metinlerinde; 163 deyim, 1 atasözü ve 1 tekerleme örneğine yer verilmiştir. Setin B2 seviyesinde daha çok deyimlere yer verilirken B1 seviyesinde atasözü ve tekerleme örneklerine daha çok yer verilmiştir. Kalıp sözlerden alkış-dua, ölçünlü söz ve gündelik söze yer verilmediği görülmektedir.

Kitabın bu seviyelerinde daha çok öğretici metinlerin yer aldığı görülmektedir. Bu öğretici metinler; şehirler, ünlü bilim insanları, edebiyatçılar, sanatçılar, sporcular... vb. ile ilgilidir. Bu metinler bilgi içerikli olduğu ve karşılıklı diyaloglara yer verilmediği için alkış ve dileklere de yer verilmediği söylenilebilir.

Atasözleri; nesilden nesle aktarılır, toplumun değerlerini, inançlarını ve yaşam tarzını yansıtır ve öğüt verirler. Dil öğretiminde, dört temel dil becerisinin yanında kültürel unsurlara da yer verilmesi gerektiği göz önünde bulundurulursa bu seviyelerin atasözleri açısından zengin olmadığı görülmektedir.

Bu sette 1 tekerlemeye yer verilmiştir. Tekerlemeler genellikle oyunların, masalların, halk hikâyelerinin, bilmecelerin ve ninniler gibi kültürel unsurların içinde bulunmaktadır. Tekerlemeler, kelimeleri doğru telaffuz edilmesine katkı sağlar ve dil becerilerini geliştirmeye yardımcı olmaktadır. Bundan dolayı dil öğretiminde tekerlemelerden yararlanılmalıdır.

2.Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Ders Kitabı B1-B2 Seviyesinde Geçen Kalıp Sözler

Kitabın B1 ve B2 seviyelerinde toplam 83 okuma metni incelenmiştir. İnceleme sonucunda elde edilen bulgular metinlerden alınan örnek cümlelerle aşağıdaki gibi verilmiştir.

2.1. Alkış-Dilekler:

Kitabın B1 seviyesinde ‘merhaba, görüşmek üzere, hoş bulduk, hoş geldiniz, hoşça kal, lütfen, affedersiniz, görüşürüz, hayırdır, iyi günler, iyi yolculuklar, iyiyim, kendinize iyi bakın, sağ ol, sağlıklıyla kalın, teşekkür ederim/ teşekkür ederiz’ olmak üzere 16 farklı alkış-dilek toplamda 42 defa kullanılmıştır.

B2 seviyelerindeki okuma-dinleme metinlerinde ise ‘iyi yolculuklar, yolunuz açık olsun, teşekkür ederim, merhaba/merhabalar, hoş geldiniz’ olmak üzere 5 farklı alkış-dilek toplamda 17 defa kullanılmıştır.

2.2. Atasözleri:

1. Metin: Çalışma Koşulları

Aç ayı oynamaz: “Biliyorsun aç ayı oynamaz.” (B1, s.31)

2. Metin: Yoğurdun Steve Jobs’u

Her yiğidin bir yoğurt yiyişi vardır: “Ee, ne demişler: ‘Her yiğidin ayrı bir yoğurt yiyişi vardır.’” (B1, s.34)

3. Metin: Pişmanlıklarınızdan Kurtulun

Kötü komşu insanı(adamı) hacet(mal) sahibi yapar: “Hani bir söz vardır: Kötü komşu insanı mal sahibi yapar.” (B1, s.96)

4. Metin: Her Şerde Bir Hayır Vardır

Her işte bir hayır vardır: “Bütün bu kötü olaylar beni hayatımda bugünkü konumuma getirdi. Her şerde bir hayır vardır.” (B1, s.102)

2.3. Deyimler:

Uygun bulmak (Kitapta uygun olmak olarak geçiyor): “Bir oda bir salon ya da iki oda bir salon benim için uygun olabilir.” (B1, s.9)

Gözünün önünden gitmemek (Kitapta gözünün önünde olmak olarak geçiyor): “Garsonun o bakışı hala gözümün önünde.” (B1, s.17)

Sıcak bakmak: “Türk arkadaşlarım hiçbir zaman bu fikre sıcak bakmadılar.” (B1, s.17)

Uygun bulmak (Kitapta uygun olmak olarak geçiyor): “İş yerinin yakın olmasını, mesai saatlerinin uygun olmasını ve nazik patronlarının olmasını herkes ister.” (B1, s.29)

Zirveye çıkmak (Kitapta zirveye ulaşmak olarak geçiyor): “Ama Elon Musk korkmadı ve sıfırdan başlayarak zirveye ulaşmayı başardı.” (B1, s.31)

Aklına getirmek: “Dergilerin ve gazetelerin ekonomi sayfalarındaki başarı öykülerini aklınıza getirin.” (B1, s.34)

Dönüm noktası: “O çöp kutusu hayatımın dönüm noktasıdır bu yüzden.” (B1, s.34)

Neden olmak: “Araştırmalara göre özellikle yalnız insanların bir süre sonra beyin sağlığı bozuluyor ve bu durum birçok hastalığa neden oluyor.” (B1, s.49)

Temas kurmak: “Bununla birlikte bulaşıcı hastalık dönemlerinde insanlarla yakın temas kurmaktan kaçınmalıyız.” (B1, s.51)

(bir kimseye, bir şeye) ihtiyaç duymak: “Bir yerde uzun süre kaldıkları zaman hareket etme ihtiyacı duyarlar.” (B1, s.75)

(bir şeyin) muhasebesini yapmak: “Yani bu haftayı vicdan muhasebesi yapmaya ayıralım.” (B1, s.96)

Anlamına gelmek: “Kendi ülkenizdeki beden dili hareketleri farklı bir ülkede farklı bir anlama gelebilir.” (B1, s.110)

Göz atmak: “Gelin, dünyadaki ve Türkiye’deki bazı festivallere göz atalım.” (B1, s.120)

Bir çuval inciri berbat etmek: “Eğer bir Japon sizi evine davet ettiyse bu sizin için büyük bir onurdur ama sakın ayakkabılarınızla içeri girmeyin, bir çuval inciri berbat edersiniz.” (B1, s.126)

Zarar vermek: “Aziz Jean da kimsenin Meryem Ana’ya zarar vermemesi için onu bu küçük evde gizlemiş.” (B2, s.19)

Esir düşmek: “Bu gezilerden sonra ticarete başladı fakat bir savaş sonucu esir düştü.” (B2, s.26)

İcat etmek: “Ama bugünkü haline en yakın ilk elektronik bilgisayar İkinci Dünya Savaşı zamanında icat edilmiştir.” (B2, s.30)

İlgi görmek: “Sosyal paylaşım sitelerindeki eğlenceli videolar, komik fotoğraflar, bu video ve fotoğrafların altındaki yorumlar büyük ilgi görüyor.” (B2, s.37)

Damga vurmak: “İspanyol paça pantolonlar da 70’li yıllara damgasını vuran bir diğer kıyafettir.” (B2, s.55)

Ayak uydurmak: “Tarihten günümüze beslenme zamanla yaşamın değişimine ayak uyduruyor.” (B2, s.60)

(bir kimseye, bir şeye) ihtiyaç duymak: “Hatta belki hızla değişen ve yenilenen dünyada günün birinde her öğün için küçük bir hap içerek vücudumuzun ihtiyaç duyduğu tüm besinleri alacağız.” (B2, s.60)

Cezasını çekmek: “Suçunuz ne ise cezasını çekersiniz.” (B2, s.77)

Geri çevirmek: “Mahkeme bunu gerekçe göstererek John’un talebini geri çevirdi.” (B2, s.82)

(bir yere) yolu düşmek: “Günlerden bir gün peri padişahının yolu buraya düşmüş.” (B2, s.96)

Ömür sürmek: “Şah Cihan, eşinin yokluğuna alışıp alışamayacağı korkusuyla ömrünü sürdürdü.” (B2, s.101)

... hâline gelmek: “Üstelik medeniyetler için yeni bir sembol hâline geldi.” (s.128)

Yer almak: “Fakat yine de para 4000 yıl önce olduğu gibi ticaretin ve insan hayatında yer alıyor.” (s.128).

2.4. Günlük İfadeler:

Bu sette, her ünitenin sonunda o üniteyle ilişkili olarak “Günlük İfadeler” başlığı altında “Günlük Hayatta Kullanılan Kalıp İfadeler” verilmiştir. B1 seviyesinde 49, B2 seviyesinde 62 gündelik söze yer verilmiştir. Bunlardan bazıları: gözün aydın, sıkma canını, rahatla biraz, kafana takma, canın sağ olsun, haline şükret, söz veriyorum, özür dilerim, kusura bakma, şeref verdiniz, size doyum olmaz, cebinde akrep var, sudan ucuz, para pul olmuş, beleş, paha biçilmez, yazıklar olsun...

Tablo 2: Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Öğretim Setinde Geçen Kalıp Sözlerin Dağılımı ve Yorumlanması

Kalıp Sözler	B1(f)	B2(f)	TOPLAM
Alkışlar-Dilekler	42	17	59
Deyimler	119	154	273

Atasözleri	4	-	4
Tekerlemeler	-	-	0
Ölçünlü Sözler	-	-	0
Gündelik Sözler	49	62	111
GENEL TOPLAM	214	233	447

Tablo 2.'de görüldüğü üzere Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Öğretim Ders Kitaplarının okuma-dinleme metinlerinde; 59 alkış-dua, 273 deyim, 4 atasözü ve 111 gündelik söz örneğine yer verilmiştir. Setin B1 seviyesinde daha fazla alkış-dilek ve atasözü örneklerine, toplamda 214 kalıp söze yer verilirken B2 seviyesinde 154 deyim, 62 gündelik söz ve 17 alkış-dilek örneği olmak üzere toplamda 233 kalıp söze yer verilmiştir. Kalıp sözlerden ölçünlü söz ve tekerlemeye yer verilmediği görülmektedir.

Samimi ve doğal bir iletişimin başlangıcı olan “merhaba” ile iletişimde nezaketin bir göstergesi olarak dile getirilen “teşekkür ederim/iz” alkış ve dileklerinin sayısal olarak daha fazla kullanıldığı tespit edilmiştir. Bu sette de atasözlerine çok az yer verildiği dikkat çekmektedir. Atasözleri öğüt veren sözlerdir ve nesilden nesle aktarıldığı için kültürel özellikler taşımaktadır. Bundan dolayı öğrencilere kültürü tanıtmak için daha fazla kullanılabilirler.

Tekerlemelerin belirgin bir özelliği, kelimelerin doğru telaffuz edilmesine yardımcı olmalarıdır. Özellikle dil öğrenimi sürecinde, öğrencilerin doğru telaffuzları öğrenmelerine ve geliştirmelerine katkı sağlamaktadır. Bundan dolayı bu öğretim setinde tekerleme örneklerine de yer verilmelidir.

Tartışma ve Sonuç

Bu çalışmada, yabancı dil olarak Türkçe öğretimi ve eğitimi alanında hazırlanan kitap setlerinde yer alan kalıp sözlerin işlenişi üzerine bir inceleme yapılmıştır. Araştırmada, nitel analiz tekniklerinden biri olan ‘doküman analizi’ tekniği kullanılmış ve elde edilen veriler, betimsel olarak incelenmiş, tablolastırılmış ve yorumlanmıştır.

Araştırmanın sonucunda elde edilen sonuçlar şu şekilde sıralanmıştır:

Van Yüzüncü Yıl Üniversitesi Türkçe Öğretim setinde B1-22 ve B2-31, olmak üzere toplam 53 okuma metni incelenmiştir. Bu sette okuma, yazma, konuşma etkinliklerine ve metinlerine yer verilirken hiçbir seviyede dinleme metnine yer verilmediği göze çarpmaktadır.

53 okuma metni incelendiğinde; 163 deyim, 1 atasözü ve 1 tekerleme olmak üzere 3 farklı kalıp söze yer verildiği tespit edilmiştir. Bu sette dinleme metinlerine hiç yer verilmediği göze çarpmaktadır.

Yeni İstanbul setindeki 83 okuma-dinleme metni incelendiğinde; 59 alkış-dua, 273 deyim, 4 atasözü, 111 gündelik söz saptanmıştır. Tekerleme ve ölçünlü söze hiç yer verilmemiştir.

Van Yüzüncü Yıl Yabancılar İçin Türkçe Öğretim setinde okuma metinleri üniteler içerisinde “Okuma/Anlama”, ünite sonunda ise “Okuma Parçası” başlığı altında verilmiştir. Yeni İstanbul Uluslararası Öğrenciler İçin Türkçe Öğretim setinde ise bu metinler “Okuma” ve “Dinleme” başlıkları altında yer almaktadır.

Her iki sette yer alan metinlerde dinleme metinleri de dâhil olmak üzere metnin içeriğiyle uyumlu görsellere yer verilmiştir. Görseller, metinde belirli bir konuyu veya kavramı vurgulayarak okuyucunun dikkatini çekebilir ve anlamı daha net hale getirebilir.

İki sette toplamda Yeni İstanbul setinde diğer sete göre daha fazla kalıp tespit edilmiştir. Aynı zamanda diğer sete oranlar bu sette daha fazla atasözü, deyim, alkış-dilek ve gündelik söze yer verilmiştir. Van Yüzüncü yıl setinde ise diğer sete göre daha fazla tekerleme örneğine rastlanmıştır.

Atasözleri ve deyimler kalıplaşmış sözler olduklarından onları oluşturan sözcüklerin yerine eş veya yakın anlamlıları getirilemez veya söz dizimi bozulmaz. Kitap setlerinde bu kurala aykırı kullanımlar tespit edilmiştir. Van Yüzüncü Yıl Üniversitesi Yabancılar İçin Türkçe Ders Kitabı B1 seviyesinde “göz açıp kapayıncaya kadar” deyiminin bir okuma metninde “göz açıp kapama hızında” şeklinde aynı anlamda kullanıldığı tespit edilmiştir. Yeni İstanbul setinde ise B1seviyesinde yer alan deyimlerden “uygun bulmak, rahatına bakmak ve gözünün önünden gitmemek” deyimini orijinal hallerinde kullanılmamıştır. Metinlerde “uygun olmak, rahatını düşünmek ve gözünün önünde olmak” şekilleriyle kullanılmıştır.

Sonuç olarak yabancılar Türkçe öğretimi alanında hazırlanan bu setlerde, Türk kültürünün bir parçası olan alkış-dilek, atasözü, deyim, tekerleme, gündelik söz gibi kalıp sözlere yer verilse de bunlardan ölçünlü sözlere hiç rastlanmamıştır.

Kültürümüzü ve dilimizi yansıtan kalıp sözler, Türk kültürünün derinliklerini keşfetme ve anlam fırsatı sunmaktadır. Bu unsurlar, kültürün yanında kelime dağarcığını ve Türk dilinin kurallarını öğrencilere öğretmede de etkili araçlardır. Kalıp sözlerin daha kapsamlı bir şekilde

ders kitaplarına dâhil edilmesi, yabancılara Türkçe öğretiminde ve kültür aktarımında kalıcılığı ve hedef dilin daha etkili bir şekilde öğrenimini sağlayacağı kanaatindeyiz.

Özet

Ergenlik dönemi; bireyin benliğini keşfettiği, aileden ayrışarak sosyal çevresiyle daha yoğun bağlar kurduğu ve duygusal yaşantısında önemli dönüşümlerin yaşandığı bir dönemdir. Bu dönemde öznel iyi oluş (subjective well-being) ve duygusal özerklik (emotional autonomy), ergenlerin psikososyal uyumları ve yaşam doyumları açısından kritik öneme sahiptir. Ergenlikte bu kavramlar, arkadaşlık kalitesi, akademik başarı, aile ilişkileri ve dijital yaşam gibi çeşitli faktörlerden etkilenmektedir. Özellikle duygusal istikrarın gelişmekte olduğu bu dönemde, bireylerin stresle baş etme becerileri ve öz yeterlilik algıları öznel iyi oluş düzeyini belirlemektedir. Öznel iyi oluş ve duygusal özerklik, karşılıklı olarak birbirini besleyen iki gelişimsel olgudur. Duygusal özerkliğe sahip ergenler, yaşamlarında daha fazla kontrol algısı ve özgüven hissederek daha yüksek yaşam doyumunu bildirmektedir. Ayrıca, ergenin duygusal özerkliğine saygı gösteren bir aile ortamı, bireyin duygularını tanıma ve düzenleme becerilerini geliştirerek öznel iyi oluşunu desteklemektedir. Bu çalışmanın amacı, ergenlik döneminde öznel iyi oluş ve duygusal özerklik kavramlarını güncel literatür çerçevesinde incelemek; bu iki kavram arasındaki ilişkiyi anlamaya yönelik bulguları derlemek ve bu doğrultuda uygulayıcılara öneriler sunmaktır.

Ergenlik döneminde öznel iyi oluşun desteklenmesi için aile, okul ve toplum düzeyinde duygusal özerkliği teşvik eden yaklaşımlara ihtiyaç vardır. Aile içi iletişimin açık, saygılı ve destekleyici olması; okullarda bireylerin duygusal farkındalıklarını artıran sosyal-duygusal öğrenme programlarının uygulanması önerilmektedir. Ayrıca, ergenlerin kendi kararlarını alabilecekleri kontrollü özgürlük ortamları yaratılması, hem psikolojik dayanıklılık hem de yaşam doyumunu açısından olumlu sonuçlar doğurmaktadır.

Anahtar Sözcükler: Ergenlik, öznel iyilik, duygusal özerklik, psikolojik iyi oluş

Subjective Well-Being and Emotional Autonomy in Adolescents: A Review in Light of Developmental Findings

Abstract

Adolescence is a period when the individual discovers his/her self, separates from the family and establishes more intense ties with his/her social environment, and experiences important transformations in his/her emotional life. During this period, subjective well-being and emotional autonomy are of critical importance in terms of adolescents' psychosocial adaptation and life satisfaction. During adolescence, these concepts are affected by various factors such as friendship quality, academic success, family relationships, and digital life. Especially in this period when emotional stability is developing, individuals' skills in coping with stress and their perception of self-efficacy determine the level of subjective well-being. Subjective well-being and emotional autonomy are two developmental phenomena that mutually feed each other. Adolescents with emotional autonomy report higher life satisfaction by feeling more control and self-confidence in their lives. In addition, a family environment that respects the adolescent's emotional autonomy supports the individual's subjective well-being by developing his/her skills in recognizing and regulating his/her emotions. The aim of this study is to examine the concepts of subjective well-being and emotional autonomy in adolescence within the framework of current literature; The aim is to compile the findings to understand the relationship between these two concepts and to offer recommendations to practitioners in this direction.

In order to support subjective well-being during adolescence, approaches that encourage emotional autonomy at the family, school and society levels are needed. It is recommended that communication within the family be open, respectful and supportive; and that social-emotional learning programs that increase individuals' emotional awareness be implemented in schools. In addition, creating controlled freedom environments where adolescents can make their own decisions produces positive results in terms of both psychological resilience and life satisfaction.

Keywords: Adolescence, subjective well-being, emotional autonomy, psychological well-being

Giriş

Yaşamın önemli eşiklerinden biri olan ergenlik, bireyin çok çeşitli gelişimsel değişimleri aynı anda deneyimlediği dinamik bir süreçtir. Bu süreçte birey; zihinsel, bedensel, duygusal, sosyal ve psikolojik alanlarda belirgin dönüşümler geçirir ve çocukluktan yetişkinliğe geçiş

yapar. Ergenler bu dönemde, çevreleriyle daha sağlıklı ve olgun ilişkiler kurma, kimliklerini yapılandırma, duygusal anlamda bağımsızlaşma ve geleceklerine dair hedefler belirleme gibi gelişimsel sorumluluklarla karşı karşıya kalırlar (Canbay, 2010). Öznel iyi oluş, bireyin geçmiş deneyimlerine ve mevcut yaşam koşullarına yönelik olumlu bilişsel değerlendirmelerini, kişisel gelişim çabalarını, yaşamın anlam ve değerine ilişkin farkındalığını, sağlıklı sosyal ilişkiler kurabilme yetisini ve çevresel kaynakları etkin kullanma kapasitesini içeren çok boyutlu bir yapıdır (Ryff, 1989). Psikolojik açıdan iyi durumda olan ve ruhsal açıdan dengeli bir gelişim sergileyen ergenler, öz farkındalık geliştirir; benlik değerlendirmelerinde kendi içsel ölçütlerini esas alır, kişisel değerlerini korur, bu değerlere uygun biçimde kararlar alır ve belirledikleri hedeflere ulaşmak adına aktif çaba gösterirler (Akın, 2009).

Ergenlik döneminde bireyin kazandığı ve ileriki yaşamında önemli rol oynayan temel gelişimsel unsurlardan biri de özerklik becerisidir. Özerklik, çoğunlukla bireyin ailesinden ayrılarak kendi hayatını yönetebilme yetisi olarak tanımlansa da (Çelik, 2015), bu ayrışma, fiziksel bir uzaklaşmadan çok, bireyin karar verme süreçlerine etkin şekilde katılması ve aldığı kararların sorumluluğunu üstlenmesiyle ilgilidir (Toepfer, 2001). Özdemir ve Çok (2011), ergen bireylerin bu dönemde, hayatlarına yön veren kararları kendilerinin almak istediklerini ve bu nedenle bağımsızlık arayışına girdiklerini belirtmektedir. Bu süreçte ortaya çıkan bu eğilim genel olarak "özerklik" kavramı ile ifade edilmektedir. Bu derlemenin amacı, ergenlerde öznel iyi oluş ve duygusal özerklik kavramlarını literatür çerçevesinde incelemek, aralarındaki ilişkiyi değerlendirmek ve uygulayıcılar için öneriler sunmaktır.

Öznel İyi Oluş (ÖİÖ) Kavramı ve Etkileyen Faktörler

Öznel iyi oluş (ÖİÖ), psikolojinin temel araştırma konularından biri olmasının yanı sıra, pozitif psikoloji yaklaşımının da merkezinde yer alan önemli bir kavramdır (Ok, 2016). ÖİÖ; yaşam memnuniyeti düzeyi, bireyin yoğun biçimde olumlu duygular yaşaması ve olumsuz duyguları daha az hissetmesiyle yakından ilişkilidir. (Diener, 1984). Bu durum, bireyin günlük yaşantısında pozitif duygulara sıkça yer vermesi ve negatif duygu durumlarını nadiren deneyimlemesi şeklinde tanımlanabilir (Osmanoğlu ve Kaya, 2013).

Öznel iyi oluş (ÖİÖ), üç temel bileşene dayalı olarak açıklanan çok boyutlu bir kavramdır. Bu bileşenlerden ilki, bireyin kendisini nasıl algıladığı ve yaşamını nasıl değerlendirdiğiyle ilişkilidir. Bu değerlendirme süreci; okul, aile, iş gibi bireyin içinde bulunduğu çeşitli yaşam alanlarını kapsamaktadır. İkinci bileşen, bireyin kendisine fayda sağlayan, gelişimini destekleyen ve ona mutluluk katan olumlu yaşantıları içermektedir. Üçüncü bileşen ise, bireyin yaşamına ilişkin genel doyum düzeyine dair öznel değerlendirmeleridir. Bu bağlamda, Diener

ve çalışma arkadaşları (1999), öznel iyi oluşu; bireyin yaşamdan duyduğu doyumun yanı sıra olumlu ve olumsuz duyguların deneyimlenme sıklığı ve yoğunluğu temelinde üç ana bileşenle açıklamıştır. Aynı zamanda, yaşamın farklı alanlarından alınan doyumunu da bu yapıya dâhil ederek kavramı daha bütüncül bir çerçevede ele almışlardır.

ÖİÖ'nün duygusal boyutu, bireyin deneyimlediği olumlu ve olumsuz duygulara; bilişsel boyutu ise yaşamdan aldığı genel doyuma dayanmaktadır (Diener, 1984; Diener et al., 1999). Duygusal boyutta, olumlu duygular (örneğin neşe, sevgi, gurur) bireyin psikolojik iyi oluşunu desteklerken; olumsuz duygular (örneğin kaygı, stres, üzüntü) bu durumu olumsuz etkileyebilmektedir. Bilişsel boyutta yer alan yaşam doyumunu ise, bireyin hem kendi hayatına hem de başkalarının yaşamlarına ilişkin genel değerlendirmesini içermektedir. Özetle birey, yoğun şekilde olumlu duygular yaşayıp olumsuz duygulardan uzaklaştığında ve anlamlı, tatmin edici aktivitelerle meşgul olduğunda, daha yüksek düzeyde öznel iyi oluş deneyimlemesi mümkündür (Diener, 2000).

Öznel iyi oluşu şekillendiren temel etkenlerden biri bireyin kişilik özellikleridir. Özellikle dışadönüklük ya da nevroitiklik gibi kişilik boyutları, bireyin yaşamında karşılaştığı olaylara verdiği duygusal tepkileri belirleyerek, öznel iyi oluş düzeyini doğrudan etkilemektedir (Biswas-Diener, Diener and Tamir, 2004). Bu bağlamda, dışadönük bireyler genellikle daha fazla olumlu duygu yaşarken; nevroitik bireyler olumsuz duygulara daha yatkın oldukları için daha düşük öznel iyi oluş düzeylerine sahiptir. Kişilik özelliklerinin yanı sıra genetik etmenlerin de öznel iyi oluş üzerinde belirli bir etkisi olduğu literatürde belirtilmektedir. Ancak bu etkinin ne düzeyde olduğu ve hangi koşullarda daha belirginleştiği konusunda araştırmalar arasında farklı görüşler bulunmaktadır (Diener, Suh, Lucas and Smith, 1999). Öznel iyi oluşu etkileyen önemli faktörlerden bir diğeri sosyal ilişkilerdir. Bireyin kurduğu nitelikli arkadaşlık ilişkileri, aile desteği ve romantik ilişkilerdeki olumlu etkileşimler, öznel iyi oluş düzeyini artırıcı bir rol oynamaktadır (Biswas-Diener, Diener and Tamir, 2004). Sosyal ilişkilerin, bireyin duygusal ihtiyaçlarını karşılaması ve aidiyet duygusunu güçlendirmesi yoluyla, psikolojik iyi oluş üzerinde doğrudan etkili olduğu ifade edilmektedir. Bayer'in (2017) yürüttüğü çalışmada da sosyal desteğin artmasının bireylerin öznel iyi oluşunu anlamlı biçimde yükselttiği bulunmuştur. Bu bulgu, sosyal bağların bireyin yaşam doyumunu ve pozitif duygulanımı üzerindeki güçlendirici etkisini ortaya koymaktadır. Sağlık durumu, bireyin öznel iyi oluşunu büyük ölçüde etkileyen bir unsur olmakla birlikte, bu ilişkinin yönü ve gücü çeşitli araştırmalarla tartışılmaktadır. Sağlık sorunlarının bireyin günlük işlevselliğini olumsuz etkileyecek düzeye ulaşması durumunda, bu durumun mutsuzluğa yol açtığı belirtilmektedir.

Ancak, fiziksel olarak sağlıklı olmak, her zaman yüksek düzeyde bir mutluluğun garantisi olarak görülmemektedir (Biswas-Diener, Diener and Tamir, 2004). Bu durum, sağlığın mutluluğun ön koşullarından biri olduğunu ancak yalnız başına mutluluğu sağlamadığını ortaya koyar. Maddi durum ve gelir düzeyi, öznel iyi oluşla ilişkili değişkenlerden biri olarak ele alınmaktadır. Ancak literatürde, bireyin temel gereksinimleri karşılandıktan sonra gelirdeki artışın, öznel iyi oluş düzeyinde anlamlı bir artışa yol açmadığı yönünde bulgular yer almaktadır (Biswas-Diener, Diener and Tamir, 2004). Bu durum, ekonomik refahın belli bir eşik değerinin üzerinde, mutluluğu artırma etkisinin sınırlı hale geldiğini göstermektedir. Dolayısıyla, parasal kaynaklar bireyin temel yaşam kalitesini sağlama açısından önemli olsa da uzun vadeli mutluluk ve psikolojik iyi oluş açısından yeterli olmamaktadır.

Duygusal Özerklik (DÖ) Kavramı

Toepfer (2001), duygusal özerklik kavramını operasyonel olarak, çocuk ile ebeveyn arasındaki çocuksu bağın ortadan kalkması süreciyle ilişkilendirmiştir. Bu durum, ebeveyn-çocuk ilişkisinin tamamen sona ermesi anlamına gelmemekte; aksine, bireyin ebeveynlerine duyduğu güven duygusunu koruyarak, onlardan fiziksel ya da duygusal olarak tamamen kopma eğilimi göstermemesi şeklinde tanımlanmaktadır. Ergenlik dönemi, bireyin gelişimsel olarak yetişkinliğe geçiş sürecine girdiği, kimlik oluşumunun hızlandığı ve bağımsızlık ihtiyacının arttığı bir dönemdir. Bu süreçte ergenin, aileden tümüyle ayrılmaksızın; sadece bağımlılık ilişkisine dayanan çocuksu bağları aşarak, daha özerk bir birey olma yönünde ilerlemesi beklenmektedir. Dolayısıyla duygusal özerklik, bireyin kendi kararlarını alma kapasitesini geliştirirken aynı zamanda ailesiyle olan bağlarını yapıcı ve destekleyici bir şekilde sürdürebilmesi anlamına gelir.

Ergenlik döneminde özerklik gelişimi, gençlerin bireyselleşme sürecinde karşılaştıkları temel gelişimsel görevlerden biridir. Ancak bu süreç, bireyin yalnızca kendi kararlarını almasıyla sınırlı kalmayıp, aynı zamanda çevresel sınırlarla, özellikle de aile içi kurallarla etkileşim hâlinde şekillenmektedir (Kaur et al., 2020). Ergenlerin duygusal özerklik kazanmaya başlamalarıyla birlikte, ebeveynleriyle kurdukları ilişkilerde mesafelenme, ilgi ve destek ihtiyaçlarının daha az karşılandığı hissi ve aileden yardım alma konusunda isteksizlik gibi durumlar gözlenmektedir (Ryan and Lynch, 1989). Bu bağlamda duygusal özerklik, bireyin hem benliğini hem de ebeveynlerini ayrı bireyler olarak kavrayabilmesini içeren bir farkındalık sürecidir (Blos, 1979). Ergenlikte duygusal özerkliğin sağlıklı biçimde gelişebilmesi, büyük ölçüde ebeveyn tutumlarına bağlıdır. Otoriter ya da aşırı denetleyici ebeveyn yaklaşımları, bireyin bağımsızlık geliştirme sürecini engelleyebilirken; destekleyici, kabul edici ve anlayışlı

ebeveyn tutumları, hem özerklik hem de güvenli bağlanmanın eş zamanlı olarak gelişmesine olanak tanımaktadır (Çoban, 2013).

Ergenlerde Öznel İyi Oluş ve Duygusal Özerklik Arasındaki İlişki

Duygusal özerkliğin öznel iyi oluşla olan ilişkisi çift yönlüdür. Bir yandan duygusal özerkliğin artması, bireyin kendi yaşamıyla ilgili daha anlamlı ve doyurucu kararlar almasına olanak tanıyarak yaşam doyumunu artırır; diğer yandan yüksek öznel iyi oluş, bireylerin çevresel stres faktörlerine karşı duyarlılığını azaltır ve özerk davranış sergilemelerini teşvik eder. Bu bağlamda, duygusal özerklik; ergenin benlik farkındalığını artıran, kişisel hedefler belirlemesini ve bu hedeflere ulaşma konusunda motivasyon geliştirmesini sağlayan bir unsur olarak öznel iyi oluşun hem belirleyicisi hem de sonucu olarak değerlendirilebilir (Steinberg & Silverberg, 1986; Soenens & Vansteenkiste, 2005). Ancak bu ilişkinin sağlıklı şekilde kurulabilmesi büyük ölçüde ebeveyn-ergen ilişkisinin niteliğine bağlıdır. Ebeveynlerin olumlu tutumları, ergenin özerklik kazanmasını desteklerken, aynı zamanda onun psikolojik açıdan güvenli bir ortamda olduğunu hissetmesini kolaylaştırır. Böyle destekleyici bir çevrede yetişen ergenler, duygusal açıdan istikrarlı, sosyal ilişkilerinde başarılı ve ruhsal sağlıkları güçlü bireyler olarak gelişirler. Aksine, otoriter veya aşırı kontrolcü ebeveyn tutumları, ergenin bağımsızlık çabalarını kısıtlayarak duygusal özerklik ve öznel iyi oluş üzerinde negatif etkiler oluşturabilir (Çoban, 2013; Soenens et al., 2007).

Sonuç olarak, ergenlerde öznel iyi oluşun desteklenebilmesi ve sürdürülebilmesi için duygusal özerkliğin gelişimi kritik bir role sahiptir. Ergenin, hem kendi kararlarını alabilme becerisini geliştirmesi hem de duygusal anlamda bağımsız bir birey olarak kabul edilmesi, psikolojik iyi oluşunu güçlendiren temel etkenler arasındadır.

Sonuç ve Öneriler

Ergenlik dönemi, bireyin kimliğini inşa ettiği, özerklik ihtiyacının arttığı ve psikolojik iyi oluşun biçimlendiği karmaşık bir gelişim sürecidir. Bu süreçte duygusal özerklik, ergenin kendini ebeveynlerinden psikolojik olarak ayırıştırarak, kendi değerlerine, düşüncelerine ve duygularına uygun kararlar alma becerisidir. Duygusal özerkliğin gelişimi, bireyin içsel motivasyonunu artırmakta, benlik algısını güçlendirmekte ve stresle başa çıkma kapasitesini desteklemektedir. Öte yandan, öznel iyi oluş, kişinin hayattan duyduğu memnuniyeti, olumlu duyguların sıklığını ve olumsuz duyguların azlığını ifade eden bir yapı olarak, ergenin psikolojik sağlığı bakımından büyük bir önem taşır. Bu iki kavram arasında doğrudan ve karşılıklı bir ilişki bulunmaktadır. Ergenin duygusal olarak özerkleşmesi, öznel iyi oluş

düzeyini artırmakta; bununla birlikte öznel iyi oluş düzeyi yüksek olan kişiler, duygusal anlamda daha bağımsız davranışlar sergileyebilmektedir. Dolayısıyla, duygusal özerkliği destekleyici bir aile ortamı ve okul iklimi, ergenin psikolojik sağlamlığını artıran, sosyal ilişkilerini güçlendiren ve geleceğe yönelik olumlu beklentiler geliştirmesini sağlayan temel bir çerçeve sunmaktadır.

Bu bağlamda şu önerilerde bulunulabilir:

1. Ebeveyn eğitimi programları ile ailelerin, ergenlerin özerklik ihtiyaçlarını tanımaları ve destekleyici, demokratik tutumlar geliştirmeleri sağlanmalıdır. Ebeveynin aşırı kontrolcü veya aşırı izin verici tutumları yerine, sınırlar içinde özgürlük sunan anlayışlar teşvik edilmelidir.
2. Okul psikolojik danışmanları, ergenlerin duygusal özerklik gelişimini destekleyici bireysel ya da grup çalışmaları yürütebilir. Ayrıca öğrencilere yönelik öz farkındalık, stres yönetimi ve karar verme becerilerine dair yapılandırılmış müdahaleler uygulanabilir.
3. Ergenlere yönelik sosyal-duygusal öğrenme programları, bireyin benlik saygısını, yaşam doyumunu ve kişilerarası ilişkilerini güçlendirerek öznel iyi oluşunu artırabilir.
4. Politika yapıcılar ve eğitimciler, gençlerin psikolojik iyi oluşunu güçlendirmek için okul temelli önleyici ruh sağlığı programlarını desteklemeli; duygusal gelişimi destekleyen müfredat uygulamalarına yer vermelidir.
5. Farklı sosyo-kültürel bağlamlarda duygusal özerklik ve öznel iyi oluş arasındaki bağlantıyı araştıran daha çok sayıda ampirik çalışmanın yapılması gerektiği, araştırmacılar tarafından göz önünde bulundurulmalıdır.

Sonuç olarak, ergenlik döneminde sağlıklı bir psikososyal gelişim için duygusal özerkliğin teşvik edilmesi ve öznel iyi oluşun desteklenmesi gerekmektedir. Bu iki kavram birlikte ele alındığında, gençlerin sağlıklı, doyumlu ve işlevsel bir yaşam sürmelerine katkı sağlayacak bütüncül bir yaklaşım oluşturulabilir.

Özet

Bu çalışmanın amacı, dezavantajlı ilkokul öğrencilerinin duygu düzenleme durumlarının, duygusal ve psikolojik iyi oluşları ile bazı sosyo-demografik değişkenler arasında anlamlı farklılıklar olup olmadığını incelemektir. Çalışmada çocukların duygu düzenleme durumları ve duygusal-psikolojik iyi oluşları; öğrencilerin yaşı, cinsiyeti, sosyoekonomik durumu, anne-babanın hayatta olup olmaması, anne-babanın birlikte olup olmaması, anne-babanın eğitim düzeyi, anne-babanın çalışma durumu, akademik başarı durumu, kardeş sayısı, doğum sırası ve anne-babanın tutumu ile karşılaştırılmıştır. Çalışmada, Liddle ve Carter tarafından 2015 yılında geliştirilen ve Akın, Yılmaz, Özen, Raba ve Özhan tarafından Türkçe'ye uyarlanan "Çocuklar İçin Duygusal ve Psikolojik İyi Oluş Stirling Ölçekleri (SCDPIÖ), Rydell ve arkadaşları tarafından geliştirilen ve Harmancı ve Aytar (2022) tarafından Türkçe'ye uyarlanan "Çocuklar İçin Duygu Düzenleme Ölçeği (ECRRS)" ve araştırmacı tarafından geliştirilen "kişisel bilgi formu" kullanılmıştır. Araştırmanın örneklemini, 2023-2024 eğitim öğretim yılında dezavantajlı öğrencilerin öğrenim gördüğü Kuzey Kıbrıs Türk Cumhuriyeti Lefkoşa ilçesinde Milli Eğitim Bakanlığı'na bağlı devlet okullarının ilköğretim kademesinde öğrenim gören 301 ilkokul öğrencisi oluşturmaktadır. Çalışmada, öğrencilerin sosyo-demografik özelliklerine göre ölçek puanlarının karşılaştırılması amacıyla iki grupta karşılaştırmalarda bağımsız örneklem "t" testi, ikiden fazla gruptan oluşan karşılaştırmalarda ise ANOVA uygulanmıştır. Daha ileri analizler için Tukey testi kullanılmıştır. Çalışma sonucunda Duygu Düzenleme ile cinsiyet, kardeş sayısı, yaş grubu, ekonomik durum, ebeveyn eğitim durumu, çocuklarda akademik başarı; duygusal ve psikolojik iyi oluş ile cinsiyet, ekonomik durum, akademik başarı ve ebeveyn eğitim durumu arasında anlamlı farklılıklar bulunmuştur.

Anahtar kelimeler: Duygu düzenleme, duygusal ve psikolojik iyi oluş, dezavantajlı öğrenciler, ilkokul öğrencileri

Investigation of Elementary School Students' Emotion Regulation and Emotional and Psychological Well-Being Levels in Terms of Some Socio-Demographic Variables

Abstract

The aim of this study is to examine whether there are significant differences between the emotional and psychological well-being of disadvantaged primary school students and some socio-demographic variables. In the study, the emotion regulation status and emotional and psychological well-being of children were compared with the students' age, gender, socio-economic status, whether the parents are alive, whether the parents are together, the education level of the parents, the employment status of the parents, the academic success status, the number of siblings, the birth order and the attitude of the parents. In the study, the "Stirling Scales of Emotional and Psychological Well-being for Children (SCDPİÖ)" developed by Liddle and Carter in 2015 and adapted to Turkish by Akin, Yılmaz, Özen, Raba and Özhan, the "Emotion Regulation Scale for Children (ECRRS)" developed by Rydell et al. and adapted to Turkish by Harmancı and Aytar (2022), and the "personal information form" developed by the researcher were used. The research sample consisted of 301 primary school students studying in the primary education level of public schools affiliated to the Ministry of National Education of the Turkish Republic of Northern Cyprus in the district of Lefkoşa, where disadvantaged students study, in the 2023-2024 academic year. In the study, in order to compare the scale scores according to the socio-demographic characteristics of the students, the independent sample "t" test was applied in two-group comparisons, and ANOVA was applied in comparisons consisting of more than two groups. Tukey test was used for further analysis. As a result of the study, significant differences were found between Emotion Regulation and gender fear sub-dimension, economic status, academic success for children; and between emotional and psychological well-being and gender, economic status, academic success, and educational status of parents.

Keywords: emotion regulation, emotional and psychological well-being, disadvantaged students, primary school students

Giriş

Değişen dünya, son yıllarda küresel olarak önceki dönemlere kıyasla en hızlı ve fazla

bilinmezlik içeren en büyük değişimlerinin birinden geçmektedir (Selçuk, 2023). Sosyal-ekonomik olarak dezavantajlı geçmişe sahip çocuklar, daha avantajlı akranlarına kıyasla, tüm refah alanlarında sıklıkla daha fazla zorlanmaktadırlar (Ackerman vd.,2002). Sosyal ekonomik olarak dezavantajlı çocukların, gelişimi ve uyumunda hem duygu düzenlemesinin hem de psikolojik iyi oluşun bu açıdan önemi göz önüne alındığında, bu yapılar arasındaki ilişkileri değerlendirmek önemlidir (Selçuk vd., 2022).Yaşanan olumsuzluklara rağmen iyi performans göstermemizi sağlayan öz düzenleme yeteneği duygularımızı, düşüncelerimizi ve davranışlarımızı kontrol etmemizi sağlar ve özellikle yoksullaşma ve çatışma gibi olumsuz koşullar altında yaşayan çocuklarda sosyal ve duygusal becerilerin gelişmesinde ve psikolojik iyilik halinde önemli bir rol oynar (Kara ve Selçuk, 2021; Sümer-Büyükabacı vd., 2021). Duygusal iyi oluş, genellikle pozitif ruh sağlığının temel bir bileşeni olarak kabul edilir (Westerhof ve Keyes, 2010). DSÖ, ruh sağlığını “Bireyin kendi yeteneklerinin farkında olduğu, yaşamın normal stresleriyle başa çıkabildiği, üretken ve verimli bir şekilde çalışabildiği ve topluma katkıda bulunabildiği bir iyilik hali” olarak tanımlar (2018).

Duygusal iyi oluş, genel iyi oluşumuzun, mutluluğumuzun ve güvenimizin önemli bir unsurudur ve iyi bir yaşam kalitesi için gereklidir (Morgan vd., 2007). Psikolojik iyi oluş, duygu düzenleme, duygu düzenleme ile ilgili süreçleri tanımlamak için kullanılan terimdir. Duyguları etkili bir şekilde düzenlemek, duygusal ve psikolojik iyi oluş için önemlidir. Bu düzenlemenin psikolojik iyi oluş düzeylerini arttırması muhtemeldir (Boekaerts, 2011). Denham'ın (2007) çalışmasına göre, duygularını etkin şekilde yönetebilen çocuklar, okul öncesi dönemden ilkökul sonuna kadar olan süreçte akranları ve yetişkinler tarafından sosyal açıdan daha yetkin olarak görülmektedirler. Psikolojik iyi oluş, ruh sağlığının temel bir özelliğidir ve hedonik (zevk, mutluluk) ve eudaimonik (anlam, tatmin) mutlulukların yanı sıra dayanıklılık (sorunlarla başa çıkma, duygu düzenleme, sağlıklı problem çözme) olarak tanımlanabilir (Tang vd., 2019). Çocukların duygu düzenleme süreçlerinde ortaya çıkan bireysel farklılıkların, çevresel deneyimler yoluyla geliştirilen başa çıkma stratejileri olarak görülebileceğini ileri sürmektedirler (Wisner vd., 2004). Bir duygu düzenleme stratejisi olarak tanınan zihinsel değişim, bir olayın duygusal anlamını yeniden değerlendirme sürecini içerir (Gross ve John, 2003).

İlkokulun üst sınıflarına geldiklerinde çocuklar aynı zamanda değerlendirme ve uyum sağlama becerileri kazanma talebiyle karşı karşıyadırlar (Amawidyati ve Utami, 2020). Duygusal gelişim süreci, kişinin kendisini anlama ve yeni zorluklara nasıl uyum sağladığında psikolojik iyi oluşun şekillenmesinde önemli bir rol oynar, ebeveynlerin ve çocukların psikolojik iyi oluşu üzerinde derin bir etkisi olması muhtemeldir (Gassman vd., 2020). Okul ortamındaki sosyal

etkileşimler ve sosyal destek, duygusal gelişim ve uyum becerilerinin boyutları da bu yaşta çocukların psikolojik iyi oluşlarını anlamada önemlidir. Duyguları sağlıklı bir şekilde anlamak ve yönetmek için destekleyici bir ortam, çocukların bu zorlukların üstesinden gelmesine ve olumlu psikolojik iyi oluş geliştirmelerine yardımcı olabilir (Alfawaz,2021).

Harrod ve Scheer (2005), sosyo-ekonomik faktörlerin duygusal gelişime etkisini incelerken sosyo-ekonomik özelliklerin, cinsiyet gibi, ebeveynlerin eğitim seviyesi ve aile geliri ile duygusal zekâ arasında olumlu bir ilişki olduğunu gösterdiklerini bulmuşlardır. Sexton (2007), kırsal kesimdeki ilkököl çocuklarının benlik algılarının ve ders dışı etkinliklere katılımın birbirleriyle nasıl ilişkili olduğunu ve öğrencilerin başarılarını nelerin etkilediğine dair içgörüler sunar.Siaw (2009), sınıfta duygusal iyi oluşun duygusal gelişim üzerinde büyük etkisi olan kaynaklar ve sonuçlar karşılaştırılarak kentsel ve kırsal okullarda eğitimdeki farklılıkları incelemiştir.Young (2013),araştırmasında duygusal refahı etkileyen sosyo-ekonomik unsurların altını çizmektedir.Kennewell vd., (2022) düşük sosyo ekonomik geçmişe sahip öğrencilerin, yüksek sosyo ekonomik duruma sahip öğrencilere göre haftada daha az gün spor, ödev, okuma ve müzik etkinliklerine katıldıklarını; arkadaşlarıyla daha fazla vakit geçirdiklerini, daha fazla TV izleyip video oyunları oynadıklarını ve sosyal medyayı daha fazla kullandıklarını tespit etmişlerdir.

İlkokul çocuklarında psikolojik iyi oluşa ilişkin literatür incelendiğinde, psikolojik iyi oluşlarının karmaşık psikososyal ve çevresel faktörlerden etkilendiği anlaşılmaktadır. Okuldaki sosyal etkileşimler, aileden ve akranlardan gelen sosyal destek, duygusal gelişim ve uyum becerileri, bu yaşta çocukların psikolojik iyilik hallerinin şekillenmesinde temel unsurlardır. Bu faktörler arasındaki dinamik ilişkilerin daha iyi anlaşılması, eğitimcilere, ebeveynlere ve ruh sağlığı uzmanlarına uygun strateji ve müdahalelerin tasarlanması konusunda önemli bilgiler sağlayacaktır. Bu araştırmanın sonuçları, duygu düzenleme durumlarının ve psikolojik duygusal iyi oluşlarının iyileştirilmesine nasıl katkıda bulunabileceğine ve akademik sonuçların iyileştirilmesinde potansiyel alt faydalara sahip olabileceğine dair bilgi sunabilir.

Araştırmanın Amacı

Araştırmanın amacı, ilkököl öğrencilerinde duygu düzenleme durumlarının duygusal ve psikolojik iyi olma halinin okul, cinsiyet, yaş, ailenin sosyo ekonomik düzeyi, sınıfı, kardeş sayısı, derslerdeki başarı durumunu algılayışı, ebeveyn sağ/ölü olma durumu, ebeveyn evlilik durumu, ebeveyn eğitim, algıladığı anne baba tutumları açısından anlamlı farklılık gösterip göstermediğini incelemektir.

Araştırmanın Alt Amaçları

- İlkokul öğrencilerinin duygu düzenleme durumları düzeyi nedir?
- İlkokul öğrencilerinin duygusal ve psikolojik iyi oluş düzeyi nedir?
- İlkokul öğrencilerinin cinsiyete göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin yaşa göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin sınıfına göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin ailenin sosyo -ekonomik durumuna göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin anne-babanın medeni durumuna göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin anne-babanın eğitim durumuna göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin derslerdeki akademik başarı durumunu algılayışına göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin kardeş sayısına göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?
- İlkokul öğrencilerinin algıladığı aile yaklaşım tutumuna göre, duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş arasında anlamlı bir farklılık var mıdır?

Yöntem

Araştırma için kabul edilen modelleme yöntemine göre ilkök öğrencilerinin cinsiyet, yaş, sınıf düzeyi, anne baba tutumları, ekonomik düzeyleri ve anne baba eğitim düzeyleri gibi demografik değişkenler bağımsız değişken, öğrencilerin duygu düzenleme durumları ve duygusal ve psikolojik iyi oluşları ise bağımlı değişken olarak düşünülmüştür.

Araştırmanın Evreni ve Örneklemi

Araştırmanın evreni, 2023-2024 Eğitim-Öğretim yılında, Kuzey Kıbrıs Türk Cumhuriyeti Millî Eğitim Bakanlığına bağlı devlet okullarının ilköğretim kademesindeki Lefkoşa ilçesinde öğrenim gören ilkök öğrencileri oluşturmaktadır. Örneklem grubu ise Lefkoşa’da bulunan dezavantajlı öğrencilerin öğrenim gördüğü 3 ilkökulda öğrenim gören 3.4.

ve 5.sınıf öğrencilerinden oluşmaktadır.

Basit ve seçkisiz yöntemle oluşturulan örneklem grubu 157 (%52,16) kız ve 144 (%47,84) erkek öğrenci olmak üzere toplam 301 öğrenciden oluşmaktadır. Basit rastgele örnekleme yöntemi, araştırmacının uygun sayıdaki katılımcıya kolay şekilde ulaşmasını sağlar (Büyüköztürk vd., 2009). Araştırmada, çocukların duygu düzenleme düzeyleri ve duygusal- psikolojik iyi oluş düzeylerine ilişkin veriler çocuklara yüz yüze uygulanan ölçeklerle toplanmıştır.

Veri Toplama Araçları

Yapılan araştırmada, çocukların duygu düzenleme düzeylerini ölçmek için Rydell vd., tarafından geliştirilen ve Harmancı ve Aytar (2022) tarafından Türkçeye uyarlanmış “Çocuklar için Duygu Düzenleme Ölçeği (ÇDDÖ)”, ile çocukların duygusal ve psikolojik iyi oluş düzeylerini ölçmek için 8, ve Carter’ın, 2015 yılında geliştirdiği ve Akın, Yılmaz, Özen, Raba ve Özhan tarafından Türkçeye uyarlanmış “Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği (SCDPIÖ)” ve araştırmacı tarafından hazırlanmış olan “Kişisel Bilgi Formu” kullanılmıştır.

Kişisel Bilgi Formu

Araştırma grubundaki ilkokullarda öğrenim gören çocuklara yönelik oluşturulan kişisel bilgi formu çocuklara ilişkin bilgileri doldurmaları için veri toplama amaçlı hazırlanmıştır. 12 sorudan oluşmaktadır. Çocuklara ait bilgiler, okul adı, cinsiyeti, yaşı, sınıfı, anne baba ekonomik durumu, kardeş sayısı, doğum sırası, akademik başarı düzeyi, anne – baba medeni durumu, anne – baba eğitim düzeyi, çalışma durumu ve aile tutumlarına cevap arayan sorular yer almaktadır.

Çocuklar için Duygu Düzenleme Ölçeği: Çocukların duygu düzenleme düzeylerini ölçmek için kullanılan toplam 29 maddeden oluşan, “Çocuklar için Duygu Düzenleme Ölçeği” dört alt boyuttan oluşmaktadır. Bunlar Öfke toplam 9 madde, Heyecan toplam 5 madde, Korku toplam 8 madde ve Üzüntü toplam 7 maddeden oluşur.. Ölçeğin Türkçe uyarlama çalışması Harmancı ve Aytar (2022) tarafından yapılmıştır. Çalışmanın boyutlara ilişkin Cronbach Alpha değerleri orijinalinde, öfke alt boyutu için .77, heyecan alt boyutu için .57, korku alt boyutu için .61 ve üzünlük alt boyutu için .71 olarak bulunmuştur. Orijinal Cronbach Alpha değeri ise tamamına yönelik.85’tir.

Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği: Çalışmada kullanılan Duygusal ve Psikolojik İyi Oluş Ölçeğini; 2015 yılında Liddle ve Carter geliştirmiş olup tek boyutlu bir ölçektir. Ölçeğin Türkçeye uyarlama çalışmasını Akın, Yılmaz, Özen, Raba ve

Özhan 2016 yılında yapmışlardır. 12 maddeden oluşan bu ölçek, 5’li likert tipi derecelendirmeli bir ölçektir. Yükselen puanlar çocukların duygusal ve psikolojik iyi oluş düzeyinin yükseldiğini göstermektedir. Ölçeğin Cronbach alfa değeri ise .85 olarak bulunmuştur.

Verilerin Analizi

Çalışmanın sonunda araştırmadan elde edilen veriler, istatistiksel olarak analizi için Statistical Package for Social Sciences (SPSS) 27.0 yazılımı kullanılarak analiz edilmiştir. Araştırmaya katılan öğrencilerin demografik özelliklerine göre dağılımı frekans analiziyle belirlenmiş, “Çocuklar için Duygu Düzenleme Ölçeği” ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının belirlenmesi için tanımlayıcı istatistikler verilmiştir. Araştırma sorularının test edilmesi için veriler normal dağılıma uyduğundan dolayı parametrik testler kullanılmıştır. Öğrencilerin demografik özelliklerine göre ölçek puanlarının karşılaştırılmaları için iki grup arasındaki karşılaştırmalarda bağımsız örneklem t testi, ikiden fazla gruptan oluşan karşılaştırmalarda ise ANOVA uygulanmıştır. İleri analizler içinse Tukey testi kullanılmıştır.

Bulgular

İlkokul Öğrencilerinin Kişisel Bilgilerine Ait Bulgular.

Öğrencilerin Cinsiyet, Yaş, Sınıf Düzeyi, Ders Başarı Durumu na Ait Bulgular.

Tablo 1. Öğrencilerin Yaş, Cinsiyet, Sınıf Düzeyi, Ders Başarı Durumu

Değişkenler	Gruplar	N	%
Cinsiyet	Kız	157	52,16
	Erkek	144	47,84
Yaş Aralığı	9 yaş ve altı	114	37,87
	10 yaş	127	42,19
	11 yaş ve üstü	60	19,93
Sınıf	3. Sınıf	76	25,25
	4. Sınıf	95	31,56
	5. Sınıf	130	43,19
Akademik Başarı Durumu	Kötü	32	10,63
	İyi	152	50,50
	Çok iyi	117	38,87

Araştırma grubunun kişisel özelliklerine bakıldığı zaman 157’si kız (%52,16), 144’ü (%47,84) erkek öğrencilerden oluşmaktadır. Yaş aralığına bakıldığı zaman 114’ü (%37,87) 9

yaş ve altı, 127'si (%42,19) 10 yaş, 60'ı (%19,93) ise 11 yaş ve üstü gruplarından oluşmaktadır. Öğrencilerin 76'sı (%25,25) 3.Sınıf, 95'i (%31,56) 4.Sınıf, 130'u (%43,19) 5.Sınıf öğrencilerinden oluşmaktadır. Akademik başarı durumuna göre 32'si (%10,63) kötü, 152'si (%50,50) iyi, 117'si (%38,87) çok iyi grubundadırlar.

Öğrencilerin Aile Ekonomik Durumu, Kardeş Sayısı, Doğum Sırası ve Aile Tutumuna Ait Bulgular.

Tablo 2. Öğrencilerin Aile Ekonomik Durumu, Kardeş Sayısı, Doğum Sırası ve Aile Tutumu

Değişkenler	Gruplar	N	%
Ailenin Ekonomik Durumu	Düşük	99	32,89
	Orta	171	56,81
	Yüksek	31	10,30
Kardeş Sayısı	Tek çocuk	10	3,32
	İki kardeş	94	31,23
	Üç kardeş	114	37,87
	Dört kardeş	53	17,61
	Beş ve üzeri	30	9,97
Aile Tutumu	Otoriter	80	24,25
	Aşırı koruyucu	81	26,91
	Demokratik	83	26,91
	Hoşgörülü	57	18,94
Anne Eğitim Düzeyi	Okur-yazar değil	37	12,29
	Okur-yazar	56	18,60
	İlkokul	83	27,57
	Ortaokul	42	13,95
	Lise	41	13,62
	Üniversite	42	13,95
Baba Eğitim Düzeyi	Okur-yazar değil	21	6,98
	Okur-yazar	49	16,28
	İlkokul	87	28,90
	Ortaokul	51	16,94
	Lise	47	15,61
	Üniversite	46	15,28

Katılımcıların demografik bilgileri incelendiği zaman 99'unun (%32,89) ekonomik durumu düşük, 171'inin (%56,1) orta ve 31'inin (%10,30) yüksek çıkmıştır. 10'u (%3,32) tek çocuk, 94'ü (%31,23) iki kardeş, 114'ü (%37,87) üç kardeş, 53'ü (%17,61) dört kardeş ve 30'ü

(%9,97) beş ve üzeri kardeş olarak belirtmişlerdir. Katılımcıların aile tutumuna göre dağılımı ise 80'i (%24,25) Otoriter, 81'i (%26,91) Aşırı koruyucu, 83'ü (%26,91) Demokratik, 57'si (%18,94) Hoşgörülü olarak çıkmıştır. Katılımcıların anne eğitim düzeyine bakıldığı zaman %12,29'unun annesinin okur-yazar olmadığı, %18,60'ının okur-yazar, %27,57'sinin ilkokul, %13,95'inin ortaokul, %13,62'sinin lise ve %13,95'inin üniversite mezunu olduğu, baba eğitim düzeyine bakıldığı zaman %6,98'inin okur yazar olmadığı, %16,28'inin babasının okur-yazar, %28,90'ının ilkokul, %16,94'ünün ortaokul, %15,61'inin lise ve %15,28'inin üniversite mezunu olduğunu ifade etmişlerdir.

Öğrencilerin Çocuklar için Duygu Düzenleme Ölçeği ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği Puanları Ölçeklerine İlişkin Bulgular

Tablo 3. Kullanılan Ölçeklere Ait Tanımlayıcı İstatistik

Ölçekler	n	$\bar{x}$	s	Min	Max
Öfke	301	25,68	4,28	12	36
Heyecan	301	13,18	2,62	6	20

* $p < 0,05$ (t testi)

Araştırmaya dahil olan öğrencilerin cinsiyetine göre Çocuklar için Duygu Düzenleme Ölçeği genelinden ve ölçekteki öfke, heyecan ve üzüntüden aldıkları puanların arasında istatistiksel olarak anlamlı fark göstermediği tespit edilmiştir ($p > 0,05$). Öğrencilerin cinsiyetine göre ölçekteki korkudan aldıkları puanların arasında istatistiksel olarak anlamlı fark gösterdiği saptanmıştır ($p < 0,05$). Erkek öğrencilerin korku puanları kız öğrencilere göre yüksek olduğu belirlenmiştir. Araştırmaya katılan öğrencilerin cinsiyetine göre Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının arasında istatistiksel olarak anlamlı fark gösterdiği saptanmıştır ($p < 0,05$). Erkek katılımcıların Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının kızlara göre yüksek olduğu belirlenmiştir.

Öğrencilerin, Çocuklar için Duygu Düzenleme ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluşa İlişkin Yaş Grupları Arasındaki Farkın Anlamlılık Durumuna Ait Bulgular

* $p < 0,05$, ** $p < 0,01$ (ANOVA)

Tablo 13.'de öğrencilerin akademik başarı durumuna göre Çocuklar için Duygu Düzenleme Ölçeği ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının karşılaştırılmasına ilişkin ANOVA sonuçları verilmiştir. Öğrencilerin akademik başarı durumuna göre Çocuklar için Duygu Düzenleme Ölçeği genelinden ve ölçekteki öfke ve heyecan alt boyutundan aldıkları puanların arasında istatistiksel olarak anlamlı farklılık gösterdiği tespit edilmiştir ($p < 0,05$). Başarı durumu kötü olanların öfke puanları çok iyi olanlara göre düşüktür. Başarı durumu iyi olanların heyecan puanları çok iyi olanlara göre düşük bulunmuştur. Başarı durumu çok iyi olan öğrencilerin Çocuklar için Duygu Düzenleme Ölçeği genelinden aldıkları puanlar başarı durumu kötü ve iyi olanlara göre yüksektir. Araştırmaya katılan öğrencilerin akademik başarı durumuna göre Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının arasındaki farkın istatistiksel olarak anlamlı olduğu görülmüştür ($p < 0,05$). Başarı durumu çok iyi olan öğrencilerin Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının başarı durumu kötü ve iyi olanlara göre yüksek olduğu tespit edilmiştir.

Öğrencilerin, Çocuklar için Duygu Düzenleme ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluşları ile Anne Baba Tutumu Arasındaki Farkın Anlamlılık Durumuna Ait Bulgular

(ANOVA)

Tablo 14.'de araştırmaya dahil olan öğrencilerin aile tutumuna göre Çocuklar için Duygu Düzenleme Ölçeği ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının karşılaştırılmasına dair ANOVA sonuçları verilmiş olup, öğrencilerin aile tutumuna göre Çocuklar için Duygu Düzenleme Ölçeği ve Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının arasında fark olmadığı saptanmıştır ($p>0,05$).

Sonuç, Tartışma ve Öneriler

Bu bölümde araştırma kapsamında toplanan verilerden elde edilen bulguların tartışılması ve sonuçlandırılması ile öneriler kısmından bahsedilecektir.

Sonuçlar ve Tartışma

Cinsiyet değişkenine göre ilkokul öğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluşları arasında farklılık bulgularına yönelik tartışma.

Yapılan araştırmada ilkokul öğrencilerinin duygu düzenleme durumları düzeylerinin genelinden ve ölçekteki öfke, heyecan ve üzüntüden aldıkları puanların arasında cinsiyete göre anlamlı bir düzeyde farklılık görülmezken, korkudan aldıkları puanlar anlamlı bir fark göstermektedir. Bu araştırmada erkek öğrencilerin duygu düzenleme durumu korku puanları, kız öğrencilere oranla daha yüksek çıkmıştır.

Literatür incelendiğinde, Aktürk (2015) çocukların duygu düzenleme puanlarının cinsiyet değişkenine göre anlamlı düzeyde farklılaştığını tespit etmiştir. Erkek çocuklarının duygu düzenleme puanlarının kızlardan anlamlı düzeyde yüksek olduğu görülmektedir. Yaman (2018), yaptığı çalışmada çocuğun cinsiyeti ve duygu düzenleme becerileri arasında istatistiksel olarak anlamlı bir farklılık bulmamıştır. Daha önce yapılan çalışmaların bazılarında, çocuğun cinsiyeti ve duygu düzenleme becerisi arasında anlamlı ilişkiler bulunmuştur (Morris vd., 2002; Ecirli ve Ogelman, 2015). Bir başka çalışmada Kurbet (2010), kız çocuklarının duygu düzenleme puanlarının erkek çocukların puanlarına göre daha yüksek olduğu tespit edilmiştir. Bizim araştırmamızda ise anlamlı farklılık dezavantajlı erkek çocuklarının korku duygusunu düzenleme becerisinin yüksek olduğunu göstermektedir. Genel olarak araştırma sonuçlarına bakıldığında cinsiyet değişkenine göre duygu düzenleme durumlarının anlamlı farklar gösterdiği görülmektedir. Bu durum araştırma sonuçlarının birbiriyle tutarlı olduğunun göstergesi olarak düşünülebilir.

Duygusal ve psikolojik iyi oluş değişkeni cinsiyet faktörüne göre anlamlı bir şekilde farklılık göstermektedir. Erkek katılımcıların Stirling Çocuklar için Duygusal ve Psikolojik İyi Oluş Ölçeği puanlarının kızlara göre yüksek olduğu belirlenmiştir. Başaran, Erol ve Yılmaz (2020) yapmış olduğu çalışmada, kız ve erkek öğrencilerin psikolojik iyi oluşları arasında anlamlı bir farklılık olmadığını tespit etmiştir. Ay Taş (2022) yaptığı çalışmada da çocuklarda benzer şekilde duygusal psikolojik iyi oluşun cinsiyete göre anlamlı farklılık olduğunu tespit etmiştir. Cinsiyetin psikolojik iyi oluş düzeyi ile ilişkisini inceleyen bazı araştırmalarda örneğin, 1995 yılında yapılan Cooper ve diğerlerinin yaptığı çalışmada benzer olarak cinsiyet değişkeninin psikolojik iyi oluşu etkilemediği görülürken, bazı psikolojik iyi oluş düzeyi çalışmalarında (Cenkseven ve Akbaş, 2007; Gediksiz, 2013; Gündoğdu ve Yavuzer, 2012) kızların psikolojik refahlarının erkeklerden daha fazla olduğu sonuçlarını saptadıkları tespit edilmiştir. Bu tespitler, ulaştığımız sonuçla cinsiyet olarak zıtlık olduğunu göstermektedir. Yaptığımız

araştırmada, erkek öğrencilerin kızlara göre daha yüksek psikolojik iyi oluşa sahip olduğu görülmektedir.

Yaş grubu değişkenine göre ilkokul öğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş düzeyleri arasında farklılık bulgularına yönelik tartışma.

Dezavantajlı ilkokul öğrencileri ile yapılan çalışmada, duygu düzenleme durumları düzeylerinin genelinden ve ölçekteki öfke, heyecan ve korkudan aldıkları puanlar yaş grubuna göre anlamlı bir farklılık göstermemektedir. Ölçeğin üzüntü boyutundan aldıkları puanlarda çocukların yaş grubuna göre anlamlı fark olduğu saptanmıştır. 10 yaşındaki öğrencilerin üzüntü puanları 11 yaş ve üstü öğrencilere göre düşük bulunmuştur. İlgar (2017) 5 yaş çocuklar ile 6 yaş çocukların arasında yaş grubuna göre duygu düzenleme açısından bir farklılık olmadığı sonucuna ulaşmıştır. Yapılan araştırmalarda, yaş farklarının fazla olmaması sebebiyle sonuç bu şekilde çıkmış olabilir. Dağlı ve Dağlıoğlu (2021) çocukların duygu düzenleme becerilerini yaş grubuna göre incelediğinde yaş grubunun duygu düzenleme durumlarında anlamlı bir farklılık yaratmadığını tespit etmişlerdir. Bunun sebebi olarak ailelerin çocuklara karşı olan tutum ve yaklaşımının, yaş grubu fark etmemesi olarak düşünülebilir. Bununla birlikte çocukların duygu düzenleme becerilerinden üzüntü alt boyut puanlarının 10 yaş grubu çocuklarda 11 yaşa göre düşük çıktığını araştırmamız göstermektedir. Bu durumda 11 yaş ve üstü grubu çocuklar, 10 yaş grubu çocuklara göre üzüntü duygusunu olumlu yönde düzenleyebilmektedir. Çocuklar, belirli durumlara karşı olan duygusal tepkilerini düzenlemeyi öğrenebilirler, duygu düzenleme zamana bağlı gelişebilir.

Yapılan araştırmada duygusal ve psikolojik iyi oluş düzeyi yaş grubuna göre anlamlı bir farklılık göstermemektedir. Başaran, Erol ve Yılmaz (2020) çalışmalarında öğrencilerin yaş etkenlerinin psikolojik iyi oluş üzerinde etkili olmadığını belirtmişlerdir. Diğer taraftan, Mayr ve Ulich (2009) yaş değişkeninin duygusal iyi oluşta farklılıklar ortaya koyduğunu saptamıştır. İyi oluştan elde edilen yüksek puanların büyük yaş grubu lehine olduğu bulunmuştur. Tura (2019) ve Oymak, (2017), tarafından farklı yaş gruplarına yapılan araştırmalarda, psikolojik iyi oluş hali ile yaş değişkeni arasında bir ilişki saptanmamıştır.

Sınıf değişkenine göre ilkokul öğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluşları arasında farklılık bulgularına yönelik tartışma.

Yapılan araştırmada ilkokul öğrencilerinin sınıf değişkeni düzeyine göre duygu düzenleme durumları düzeylerinde anlamlı bir farklılık görülmemiştir. Literatür incelendiği zaman sınıf düzeyine göre duygu düzenleme durumunu araştıran az çalışmaya rastlanmıştır.

Gülgez (2018) yaptığı araştırmada benzer bir şekilde, çocukların öfke, üzüntü ve neşe gibi duygu düzenleme durumlarının sınıf düzeylerine göre anlamlı farklılık göstermediğini tespit etmiştir. Demireğen ve Şener (2021) sınıf düzeyine göre duygu düzenleme durumlarının anlamlı bir şekilde farklılaştığını tespit etmiştir. Ergenlik döneminde duygu düzenleme becerilerinin sınıf değişkeni düzeyine göre farklılaşmasına yönelik 12. Sınıftakilerin duygu düzenleme becerilerinin 10. sınıf öğrencilerine göre anlamlı olarak daha fazla yüksek olduğu görülmektedir. Bu tespitte, ergenlik dönemindeki duygusal gelişime bağlı olarak değerlendirilebilir. Duygusal ve psikolojik iyi oluş düzeyinde sınıf düzeyine göre anlamlı bir farklılık olmadığını göstermektedir. Mazzucato ve Cebotari (2015) çalışmalarında benzer şekilde anlamlı bir fark bulmamışlardır. Ay Taş (2022) ergenlerin duygusal ve psikolojik iyi oluş düzeylerinin sınıf düzeyi değişkeni açısından anlamlı farklılık göstermediğini saptamıştır.

Ekonomik gelir değişkenine göre ilköğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş düzeylerinin farklılık bulgularına yönelik tartışma.

Araştırma sonucuna göre öğrencilerin duygu düzenleme durumları, ekonomik durumuna göre anlamlı farklılık göstermektedir. Çocukların duygu düzenlemelerinin genelinden ve heyecan, korku ve üzüntü alt boyutları puanları ile arasında anlamlı farklılıklar görülmektedir. Bu araştırmada geliri orta olan öğrencilerin heyecan alt boyut puanları, geliri düşük ve yüksek olanlardan fazladır. Geliri düşük olan öğrencilerin duygu düzenleme durumlarının genelinden, korkudan ve üzüntüden aldıkları puanlar geliri orta ve yüksek olanlara göre düşük çıkmıştır. Aktürk (2015)'ün araştırma sonuçlarında çocukların duygu düzenleme durumlarının, gelir düzeyi değişkenine göre anlamlı bir şekilde farklılaşmadığı görülmektedir. Demireğen ve Şener (2021) sosyo-ekonomik düzeyin ergenlik dönemindeki öğrencilerde duygusal düzenleme becerilerine etki eden etmenlerden olduğunu tespit etmiştir. Uz Baş (2003), Larsson ve Frisk (1999) araştırma sonuçlarında, genel sosyo ekonomik düzeyin çocuğun duygu düzenleme durumları ile pozitif yönlü ilişkili olduğunu saptamışlardır. Sosyo ekonomik düzeylerinin daha düşük olduğu düşünülen çocukların duygu düzenleme durumlarının olumsuz olarak farklılaşması artan yaşam stresi ve ekonomik kaygıların neden olduğu ihmalkâr davranışlar, şiddete dayalı disiplin uygulamaları, tutarsız davranışlar nedeniyle (Downey ve Coyne, 1990) daha az duygu düzenlemelerine neden olduğu şeklinde düşünülebilir. Sosyo ekonomik düzeyindeki artışın çocuklara daha fazla ve nitelikli olanaklar sunulmasına olanak sağladığı bilinmektedir (Parke ve Buriel, 2006).

Öğrencilerin ekonomik durumuna göre duygusal ve psikolojik iyi oluş düzeylerinde anlamlı farklılıklar olduğu görülmektedir. Geliri düşük olan öğrencilerin duygusal ve psikolojik iyi oluş

düzeylerinin geliri orta ve yüksek olanlara göre daha düşük olduğu belirlenmiştir. Moe (2012), psikolojik iyi oluş düzeylerine etki eden değişkenlerin araştırılmak istediği çalışmada, gelirlerin arttıkça, psikolojik iyi oluş seviyelerinin de olumlu düzeyde yükseldiğini tespit etmiştir. Rogers ve DeBoer (2001) çalışmalarında, ekonomik durumdaki artışların psikolojik iyi oluşları önemli ölçüde artırdığı sonucuna ulaşmışlardır. Literatür incelendiğinde genellikle ekonomik durum arttıkça psikolojik iyi oluşun yükseldiği benzer sonuçlara ulaşılmıştır. Yaptığımız çalışmada da ekonomik durumu yüksek olanların psikolojik iyi oluşlarının olumlu düzeyde arttığı saptanmıştır. Yapılan bazı çalışmalarda da farklı sonuçlar çıkmıştır. Diener ve Sandvik (1993), yaptıkları çalışmada gelir durumundaki artışın psikolojik dayanıklılıkta bir artışa neden olmadığını, düşük sosyoekonomik seviyedeki bireyler arasında da dayanıklılığın belirgin olduğunu tespit etmiştir. Schmerse (2020), okul öncesi dönem çocukları ile yaptığı çalışmada etkilerin ekonomik düzeylere göre farklılaştığı ve en düşük sosyo ekonomik düzeyine sahip çocukların lehine olduğunu tespit etmiştir. İşgör (2017), çalışmasında psikolojik iyi oluş ve sosyoekonomik düzey arasında anlamlı bir fark olduğunu tespit etmiştir. Düşük ekonomik düzeyin, yüksek ekonomik düzeye oranla iyi oluş puanlarının daha yüksek olduğunu saptamıştır. Çelik (2016), araştırmasında psikolojik iyi oluş ve gelir düzeyi arasında anlamlı bir fark olmadığını tespit etmiştir. Yapılan araştırmalar incelendiğinde düşük gelirli çocukların daha çok duygu düzenleme, akademik ve davranışsal yönden etkilendiği belirlenmiştir (Rouse ve Fantuzzo, 2009). İncelenen çalışmaların bazılarında bulguların bir kısmı psikolojik iyi oluşun ekonomik düzeye göre farklılaşmadığını gösterirken, bazı araştırmalar ise farklılaştığını göstermektedir.

Kardeş sayıları değişkenine göre ilköğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş düzeylerinin farklılık bulgularına yönelik tartışma.

Yapılan çalışmada öğrencilerin kardeş sayısına göre duygu düzenleme düzeylerinin genelinden ve öfke, korku ve üzüntüden alt boyutları arasında anlamlı fark olmadığı tespit edilmiştir. Öğrencilerin kardeş sayısına göre heyecan alt boyutunda anlamlı fark olduğu belirlenmiştir. Tek çocuk olan öğrencilerin heyecan alt boyutu duygu düzenleme durumları puanlarının dört kardeş olanlara göre daha fazla olduğu saptanmıştır. Tek çocuk olanların duygu düzenleme durumlarından heyecan alt boyutu olumlu olarak daha yüksek çıkmıştır. İlgar (2017) tarafından yapılan araştırma, çocukların kardeş sayısının azalmasıyla duygu düzenleme yeteneklerinde bir artış gözlemlendiğini belirlemiştir. Bununla birlikte, Arı ve Seçer (2004) kardeş sayısı ve duygu düzenleme yetenekleri arasında anlamlı bir ilişki bulunmadığını ortaya koymuştur. Öte yandan, Filiz (2011), az kardeş sayısına sahip çocukların, çok kardeşli

çocuklara kıyasla daha yüksek benlik saygısına sahip olduğunu ve bu çocukların duygu düzenleme becerilerinin daha gelişmiş olduğunu tespit etmiştir.

Yapılan araştırmada ilkokul öğrencilerinin kardeş sayısının duygusal ve psikolojik iyi oluşları üzerinde anlamlı bir fark yapmadığı saptanmıştır. Başaran, Erol ve Yılmaz (2020) yaptıkları araştırmada benzer olarak kardeş sayısı değişkeninin psikolojik iyi oluşa anlamlı bir etki yapmadığını saptamışlardır. Bazı çalışmalar incelendiğinde (Atarbay, 2017; Açıkgoz, 2016), kardeş sayısına göre psikolojik dayanıklılıkta anlamlı bir ilişki olmadığı görülmektedir. Yapılan bu çalışmaların sonuçları bulgumuzu desteklemektedir. Literatür incelendiğinde Atarbay (2017), Açıkgoz (2016) çalışmalarında kardeş sayısı ile psikolojik iyi oluş arasında anlamlı bir ilişki olmadığı görülmektedir. Erata ve Özbey (2020) tarafından yapılan bir araştırmada okul öncesi dönem çocuklarının duygusal iyi oluş ve psikolojik sağlamlık düzeylerinin kardeş sayısına bağlı olarak önemli ölçüde değişmediğini saptamışlardır. Bu bulgular da araştırmada ulaşılan sonuçları desteklemektedir. Farklı sonuçlara ilişkin araştırmalardan 2018 yılında Aydın ve Egemberdiyeva ile 2014 yılında Kılıç'ın yaptıkları araştırmalarda kardeş sayısının psikolojik dayanıklılığı etkilediğini saptanmıştır. Zoul (2022) tarafından yapılan başka bir araştırmada, çocukların psikolojik iyi oluşları ve kardeş sayısı faktörünün önemli bir etkiye sahip olduğu görülmektedir.

Akademik Başarı Durumu değişkenine göre ilkokul öğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş düzeylerinin farklılık bulgularına yönelik tartışma.

Araştırma grubunda, öğrencilerin akademik başarı durumuna göre duygu düzenleme durumlarının geneli, ayrıca öfke ve heyecan alt boyutları arasında anlamlı fark olduğu tespit edilmiştir. Başarı durumu kötü olan öğrencilerin öfke puanları çok iyi olan öğrencilere göre düşüktür. Başarı durumu iyi olan öğrencilerin heyecan puanları çok iyi olan öğrencilere göre düşük bulunmuştur. Başarı durumu çok iyi olan öğrencilerin duygu düzenleme durumlarının geneli başarı durumu kötü ve iyi olanlara göre yüksektir. Graziano vd., (2007), duygu düzenlemenin çocukların akademik başarıları üzerindeki etkisi ile ilgili çalışmalarında duygu düzenlemenin çocukların akademik, dil ve matematik başarılarında olumlu etkisi olduğu sonucuna varmışlardır. Çocuklarda duygu düzenleme becerilerinin gelişimi onların akademik başarıları açısından oldukça önemlidir. Bu beceriler yaşa ve deneyimlere göre değişir ve gelişirler (Bronson, 2000). Literatür incelendiğinde yapılan çalışmalarda duygusal becerileri düşük olan çocukların, genellikle daha saldırgan davranışlar sergiledikleri ve bu nedenle davranışlarda problem yaşadıkları (Arı ve Yaban, 2016); öte yandan, Graziano'nun (2007) araştırması, yüksek duygusal becerilere sahip çocukların akademik olarak daha başarılı

olduklarını ortaya koymaktadır. , bu çalışmaların geliştirilmesinin çocuklar için çok önemli olmaya devam edeceğini göstermektedir. Duygu düzenleme becerilerinin çocukların akademik başarıları üzerindeki etkisinin saptanması bu becerileri geliştirici çalışmaların, çocukların duygusal tepkilerini yönetmelerine yardımcı olduğu ve bu nedenle öneminin artmasına devam edeceğini düşündürmektedir.

İlkokul Öğrencilerinin akademik başarı durumuna göre duygusal ve psikolojik iyi oluş düzeylerinde anlamlı fark olduğu tespit edilmiştir. Başarı durumu çok iyi olan çocukların duygusal ve psikolojik iyi oluş düzeyi başarı durumu kötü ve iyi olanlara göre yüksek olduğu tespit edilmiştir. Murray-Harvey (2010), psikolojik iyi oluşun, olumlu psikolojik özelliklerin, akademik başarıya etkisini ortaya koymuştur. Chu, Saucier ve Hafner (2010) çalışmalarında psikolojik sağlamlıkla, akademik başarı arasında pozitif bir korelasyon olduğunu ortaya çıkardı. Çocuk ve ergenlerin psikolojik iyi oluşları yükseldiğinde daha iyi akademik performans göstermektedir (Bru, Murberg ve Stephens, 2001; Natvig, Albreksten, Anderssen ve Qvarnstrom, 1999; Wentzel, 1998). Gizir (2007) araştırmasında, psikolojik sağlamlıkla, akademik başarı arasındaki pozitif ilişkinin varlığını saptamıştır. Hafilia ve Priyambodo, (2022)'ya göre psikolojik iyi oluşu iyi olan öğrenciler okulda başarıya ulaşabilirler. Farklı olarak Kındıroğlu 2018 yılında yaptığı çalışmada psikolojik iyi oluşla algılanan akademik başarı arasında anlamlı düzeyde farklılık tespit etmemiştir. Ay Taş (2022), çalışmasında ergenlerin duygusal ve psikolojik iyi oluş düzeylerinin okul başarısı değişkenleri açısından anlamlı farklılık göstermediğini saptamıştır.

Anne – baba eğitim düzeyi değişkenine göre ilkokul öğrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluş düzeylerinin farklılık bulgularına yönelik tartışma.

Çocukların duygu düzenleme durumları anne ve baba eğitim düzeyine göre anlamlı farklılık göstermektedir. Öğrencilerin anne eğitim düzeyine göre korku alt boyutu puanında anlamlı fark olduğu belirlenmiştir. Annesi okur-yazar olmayan öğrencilerin korku alt boyutu duygu düzenleme durumu, annesi ortaokul mezunu olan öğrencilere göre daha düşük bulunmuştur. Anne eğitim durumu düşük olan çocukların korku duygusunu düzenleme becerilerinin de olumsuz yönde düştüğü görülmüştür. Farklı olarak Aktürk (2015), çocukların duygu düzenleme becerilerinin, anne ve baba eğitim düzeyi değişkenine göre anlamlı düzeyde farklılaşmadığını tespit etmiştir. Benzer olarak; Kurbet (2010), araştırmasında çocukların duygu düzenleme puanlarının anne eğitim düzeyi ile farklılık olmadığını göstermektedir. Anne eğitim düzeyinin düşük olmasının duygu düzenleme becerisi durumları yönünden dezavantajlı

bir durum olduđu Kapçı vd.,(2009) arařtırmalarında saptamıřtır. Gülgez (2018) anne eđitim düzeyi ile ilgili bulgularında, eđitim düzeyi yüksek annelerin çocuklarının duygu düzenlemelerinin anne eđitim düzeyi daha düşük çocuklara göre daha yeterli olduđunu göstermektedir. Vardi ve Demiriz (2021)'in, yaptıđı arařtırma sonuçlarına göre anne öğrenim düzeyinin çocukların duygu düzenleme durumlarında anlamlı düzeyde farklılıđa yol açtıđı görölmüřtür. Anne eđitim düzeyi çocukların duygu düzenlemelerini etkileyen bir faktör olduđu, bunun nedeni olarak da anne eđitim düzeyi arttıkça çocukların gelişimine yönelik yayınlara, eđitimsel, uzmanlara ulaşmaları da artabildiđi söylenebilir. Yüksek eđitim düzeyine sahip anneler, çocuklarının öğrenme süreçlerine karřı hassas ve olumlu bir katkı sunarak yaklařabilmektedirler. Bu anneler, çocuklarıyla daha nitelikli bir řekilde vakit geçirmeyi önemseyip ve çocuklarını kabul edici bir tutumla yaklařabilmektedirler (Argun, 2005).

Yapılan arařtırmada ilkokul öđrencilerinin anne ve baba eđitim durumuna göre duygusal ve psikolojik iyi oluř düzeylerinde anlamlı düzeyde bir farklılık tespit edilmiřtir. Çocukların baba eđitim düzeyine göre duygusal ve psikolojik iyi oluřlarında farklılık görölmektedir. Babası okur-yazar olmayan öđrencilerin duygusal ve psikolojik iyi oluř düzeyleri diđer öđrencilere göre daha düşük bulunmuřtur. Güngör (2023)'ün alıřmasında psikolojik iyi oluř puanlarının çocukların baba eđitim durumuna göre anlamlı farklılık gösterdiđi tespit edilmiřtir. Babaların eđitim düzeyleri arttıkça çocukların iyi oluřlarının yükseldiđi görölmektedir. Smith ve Werner (2001), anne babanın düşük eđitim düzeyinin psikolojik iyi oluř için bir dezavantaj olduđunu belirtmiřtir. Prince-Embury (2009), çocukların ailelerinin eđitim seviyeleri ile psikolojik sađamlıklarını incelediđinde, anne babası eđitim düzeyi yüksek çocukların daha etkili bir řekilde desteklendiklerini ve yetenekli bireyler olarak yetiřtiđini saptamıřtır. Condly (2006), annenin eđitim seviyesi ile çocukların psikolojik iyi oluřu arasında belirgin bir faktör olduđunu ve eđitim düzeyi yüksek annelerin çocuklarının daha sađlam bir psikolojik iyi oluřa sahip olduklarını saptamıřtır. Erdem (2017) alıřmasında, babaların eđitim düzeyi ile çocukların psikolojik sađamlıđı arasında olumlu bir iliřki tespit etmiř, arařtırmamıza benzer bir sonuç olarak babanın eđitim düzeyi yükseldikçe, çocuđun psikolojik sađamlıđı ve iyi oluřu da yükseldiđi görölmüřtür. Bu durumda anne baba eđitim düzeyi çocukların duygusal ve psikolojik iyi oluřuna etki eden bir faktör olarak düşünölebilir.

Algılanan Aile tutumu deđiřkenine göre ilkokul öđrencilerinin duygu düzenleme durumları ile duygusal ve psikolojik iyi oluř düzeylerinin farklılık bulgularına yönelik tartıřma.

İlkokul öđrencilerinin duygu düzenleme durumlarının algılanan aile tutumuna göre anlamlı düzeyde farklılık göstermediđi görölmüřtür. Arařtırmalara göre, ilkokul ađı

çocuklarının duygu düzenleme yetenekleri genel olarak aile tutumlarıyla ilgisiz gibi görünmektedir (Kurbet, 2010). Bununla birlikte, anne tutumlarının çocukların duygu düzenleme becerileri üzerinde belirgin bir etkisi olduğunu gösteren çalışmalar bulunmaktadır. Örneğin, 2020 yılında Bilge ile Sezgin ile 2010 yılında Yağmurlu ile Altan tarafından yapılan araştırmalarda, annelerin yaklaşımlarının çocukların duygu düzenleme yetenekleriyle pozitif bir bağlantı içerdiğini belirtmişlerdir. Yaman (2018), farklı aile tutumlarının çocukların duygu düzenleme becerileri üzerindeki etkisini incelemiş ve demokratik yönetim tarzının bu yetenekleri güçlendirdiğini, otoriter tutumların ise zarar verdiğini tespit etmiştir. Jabeen ve Anil-ul-Haque (2013) ise demokratik ebeveyn tutumlarının ergenlerin duygu düzenleme kabiliyetleri üzerinde olumlu bir etkiye sahip olduğunu bulmuşlardır. Yapılan araştırmada, duygusal ve psikolojik iyi oluş durumu ilköğrencilerinin aile tutumuna göre anlamlı farklılık göstermemektedir. Demirci ve Şar (2017) araştırmalarında, psikolojik iyi oluş, kendini bilme ve algılanan ebeveyn tutumları arasındaki ilişkiyi incelemişler, algılanan aile tutumlarına göre psikolojik iyi oluş düzeyleri arasında farklılık tespit etmişlerdir. Araştırmalarında en yüksek psikolojik iyi oluş düzeyine sahip öğrencilerin demokratik ebeveyn tutumunu algıladıklarını daha sonra sırasıyla koruyucu ve son olarak otoriter ebeveyn tutumlarını algıladıkları sonucuna ulaşmışlardır. Yapılan araştırmaya benzer az sonuca ulaşılmıştır. Öngider (2013); Karabekiroğlu, Rodopman Arman ve Berkem (2008) çalışmalarında baba tutumlarının çocukların psikolojik iyi oluş düzeylerini etkilemediğini tespit etmiştir. Aile tutumu değişkenine ilişkin elde ettiğimiz bulgular alan yazında yapılan diğer araştırmaların birçoğu ile paralellik göstermemektedir. Bunun sebebi, dezavantajlı bölgelerdeki çocukların büyük bir bölümünün ailelerinin tutumunu olumlu olarak algılamaları ve ailelerini koruma amaçlı olabileceği düşünülebilir.

Öneriler

Bu bölümde araştırma sonucuna ve araştırmacılara yönelik öneriler yer almaktadır.

Araştırma Sonucuna Göre Öneriler

- Bu çalışma çocukların duygu düzenleme düzeyleri incelendiği zaman aynı zamanda duygusal ve psikolojik iyi oluşun da nasıl dikkate alınması gerektiğini önerir. Duyguyu düzenleme hedefleri ve yöntemleri ele alınarak eğitim programları hazırlanabilir ve bu programlarda çocukların duygu düzenleme becerilerini geliştirmeye yönelik etkinliklere yer verilebilir. Duygu düzenlemeyi ve psikolojik iyi oluşu geliştirmek için programların oluşturulması önerilir.

- Ebeveynler, öğretmenler ve alanda çalışan uzmanlar, uygulayıcılar çocukların gelişimi ve psikolojik iyi oluşu hakkında daha fazla bilgi edinerek konu ile ilgili temel ihtiyaçlara yönelik belirli duygu düzenlemesinin edinilmesini ve kullanılmasını hedefleyerek stratejiler geliştirebilirler.
- Çocuğa duygularını düzenlemediği zamanlarda hızlı şekilde kullanabileceği başka sakinleştirme becerilerini de öğretecek etkinlikler gerçekleştirilebilir. Böylelikle bu becerilerin gelişimi için uğraşmak, ihtiyaç olunan zamanlarda donanımlı ve hazır olunmasını sağlayabilir.
- Yapılan çalışma, dezavantajlı ortamlardaki çocuklara ilişkin araştırmaları öne çıkararak, evrensel olarak çocukların gelişimini ve psikolojik iyi oluşunu desteklemek için duygu düzenleme stratejilerinin ve iyi oluşa katkılarına yönelik çözümlere yer verilmesini önermektedir.
- Öğretmenlerin çocukları duygusal açıdan desteklemesine odaklanan stratejiler, günlük olarak karşılaşılan zorlu durumlarla başa çıkmaları için olanak sağlayacaktır.
- Yapılan araştırmada farklı sosyo ekonomik düzeye sahip ailelerdeki çocukların duygu düzenlemelerinde ve iyi oluşlarında farklılıklarda açıkça görüldüğü gibi, anne babalar önemli bir rol oynamaktadır ve bu konunun da ayrıca ele alınması gerekmektedir.
- Çocukların duygusal ve psikolojik iyi oluşunu artıran duygu düzenleme süreçleri hakkında okullar aracılığıyla veli seminerleri ile gerçekleştirilmesi önerilir. Özellikle sosyoekonomik düzeyi düşük bölgelerde yaşayan çocukların bu tür sorunlarla karşılaşma olasılığı daha yüksektir.
- Yapılan araştırmada akademik başarı durumunun iyi olmasının hem duygu düzenlemelerinde hem de psikolojik iyi oluşlarını olumlu yönde etkilediği görülmüştür. Akademik başarıyı okullarda arttırmaya yönelik çalışmalara yer verilmesi önerilir.
- Oyun oynama çocuğun duygularını ifade edebildiği, yeteneklerini fark edip öz yeterliliğini ve becerilerini geliştirebildiği önemli bir araçtır. Çocukluklarda oyun oynama faaliyetlerinin arttırılması hem duygu düzenlemelerine hem de psikolojik iyi oluşlarına katkı sağlayacaktır.
- Anne baba eğitimleri, çocuklarla yapılacak grup çalışmaları, oyun atölyeleri gibi çalışmalar ile çocukların duygularını düzenlemelerine ve duygusal psikolojik iyi oluşlarına olumlu katkı sağlayacaktır.

Araştırmacılara Öneriler

- Yapılan çalışma, sosyo ekonomik açıdan dezavantajlı çocukların çoğunlukta olduğu bölgelerde yaşamaktadır. Sonuçlar incelendiğinde, sosyoekonomik durum ve çocuğu inceleyen araştırmaların gözden geçirilmesinde bu araştırma dahil çoğu araştırmada, sosyoekonomik durum ile çocukların duygusal psikolojik iyi oluş durumlarında anlamlı bir farkla karşılaşılmıştır. Ekonomik durumu düşük olan çocukların duygusal psikolojik iyi oluşları orta ve yüksek olanlara göre daha düşük olarak tespit edilmiştir. Garner ve Spears (2000) farklı olarak şunu belirterek; “Duygu düzenlemesi açısından düşük ve orta gelirli çocuklar farklı olmaktan çok benzerdir.” ifadesini kullandığı görülmektedir. Duyguların hem düzenlenmesinde hem de duygusal ve psikolojik olarak iyi oluşta bireysel farklılıklar gözetildiğinde bu durumun sadece dezavantajlı öğrencilerde görülüp görülmeyeceği daha avantajlı gruplarla birlikte araştırılıp değerlendirilebilir .
- Literatür incelendiği zaman konuya ilişkin dezavantajlı bölgelerde yaşayan daha az avantajlı çocuklarla ilgili çok az çalışma ile karşılaşılmıştır. Neredeyse bu çocukların duygu düzenleme durumları ve psikolojik iyi oluş çalışmalarında literatür bilgisi mevcut değildir. Bu alanda araştırmalar ve çalışmalar yapılması konunun hem daha iyi anlaşılmasına hem de çözüm önerileri geliştirilmesine olanak sağlayacaktır.
- Yapılan çalışma, çocukların gelişimi ve desteklenmesi ile ilgili ilişkili görünen çeşitli konuları ele almıştır ve bu konuları etkilediği düşünülen bazı etkenlerle birlikte, işlevsel olarak yapılabileceklerle yönelik yeni bir bakış açısını kolaylaştıracak önerilerde bulunmaktadır. Bu sebeple yeni çalışmalarda ve araştırmalarda farklı evren ve örneklem gruplarında kullanılması farklılık ve benzerliklerin görülmesini kolaylaştıracaktır.

Özet

Son yıllarda, yalnızlık duygusunun yaşlı bireylerin psikolojik iyi oluşları üzerindeki etkileri giderek artan bir ilgi odağı haline gelmiştir. Bu derleme çalışması, literatürde bu konuda yer alan çalışmaları inceleyerek yaşlı bireylerde yalnızlığın psikolojik iyi oluş ve genel yaşam kalitesi üzerindeki etkilerini değerlendirmektedir.

Yalnızlık, genellikle sosyal izolasyon ve yetersiz sosyal destek ağları ile ilişkilendirilir ve bu durum yaşlı bireylerin depresyon, anksiyete ve düşük yaşam tatmini gibi psikolojik sorunlar yaşama riskini artırır. Çalışmalar, yalnızlığın yaşlılarda depresyon ve anksiyete belirtilerinin şiddetini artırabileceğini, demans gibi sağlık sorunlarının ortaya çıkmasına zemin hazırlayabileceğini ve bağışıklık sistemi fonksiyonlarını zayıflatarak fiziksel sağlığı olumsuz etkileyebileceğini belirtmektedir. Yalnızlığın etkilerini hafifletmek ve yaşlı bireylerin psikolojik iyi oluşlarını artırmak için çeşitli müdahale stratejileri önerilmektedir. Sosyal bağlantıların güçlendirilmesi, grup terapileri, destek grupları ve topluluk etkinliklerine katılım, dijital iletişim araçlarının kullanımı yalnızlık duygusunu azaltabilecek etkin yaklaşımlar arasındadır. Sonuç olarak, yaşlı bireylerin psikolojik iyi oluşunu önemli ölçüde etkileyen etkenlerden biri olan yalnızlığın erken müdahale ve uygun destek mekanizmaları ile yönetilerek yaşlıların sosyal katılımlarının artırılması, yalnızlık duygusunun olumsuz etkilerini azaltmada anahtar rol oynamaktadır. Literatürdeki mevcut bulgulara göre, yalnızlığın hem bireysel hem de toplumsal olarak incelenmesi gereken önemli bir durum olduğu görülmektedir.

Anahtar sözcükler: psikolojik iyi oluş, ruh sağlığı, yaşlı, yalnızlık

The Effect of Loneliness on Psychological Well-Being in Older Adults: A Literature Review

Abstract

In recent years, the effects of loneliness on the psychological well-being of older adults have become an increasingly important area of interest. This review study examines the literature on this topic to assess the effects of loneliness on psychological well-being and overall quality of

life in older adults.

Loneliness is often associated with social isolation and inadequate social support networks, which increase the risk of psychological problems such as depression, anxiety, and low life satisfaction in older adults. Studies indicate that loneliness can increase the severity of depression and anxiety symptoms in older adults, contribute to the onset of health issues such as dementia, and negatively impact physical health by weakening immune system functions. Various intervention strategies are recommended to mitigate the effects of loneliness and improve the psychological well-being of older adults. Strengthening social connections, group therapy, support groups, participation in community activities, and the use of digital communication tools are among the effective approaches that can reduce feelings of loneliness. In conclusion, loneliness, which is one of the factors that significantly affects the psychological well-being of older adults, plays a key role in reducing the negative effects of loneliness by increasing the social participation of older adults through early intervention and appropriate support mechanisms. According to the current findings in the literature, loneliness is an important issue that needs to be examined both individually and socially.

Keywords: psychological well-being, mental health, elderly, loneliness

Giriş

Yaşlılık, beraberinde getirdiği birçok değişiklikle yaşam boyunca devam eden bir süreçtir (Fisher ve Specht, 1999). Yaşlı bireyler genellikle azalan sağlık, bilişsel yetenekler ve sosyal bağlılık, azalan hareketlilik, genel sağlık ve refahlarını zorlayan artan sosyal izolasyon ve yalnızlık gibi bir dizi endişeyle karşı karşıya kalmaktadır (Cunningham vd., 2020; Hedden ve Gabrieli, 2004; Wilson vd., 2002; Theeke, 2009). Toplum içinde geniş aile tipinden çekirdek aile tipine geçişle birlikte, yaşlı yetişkinlerin toplumsal rolleri de değişiklik göstermeye başlamış, onları yalnız ve sosyal olarak izole hale getirmiştir. Huzurevlerinde kalan yaşlı yetişkinlerin oranının gittikçe artış göstermesi yaşlı popülasyonun yalnızlığının artmasına ve psikolojik iyi oluşlarının olumsuz etkilenmesine yol açmıştır (Rajesh vd., 2022). Yapılan çalışmalar da yalnızlık düzeyi arttıkça psikolojik iyi oluşun azaldığını (Cacioppo vd., 2015; Domènech-Abella vd., 2019; Ergin vd. 2022, Mishra vd., 2023; Birditt vd., 2021; Rook, 2015) vurgulamaktadır. Bu nedenle yaşlı yetişkinlerde yalnızlığın kontrolü ve psikolojik iyi oluşun desteklenmesi önem arz etmektedir.

Dünya Sağlık Örgütü (DSÖ), fiziksel, psikolojik ve sosyal boyutları içeren kapsamlı bir refah yaklaşımıyla sağlıklı yaşlanmanın önemini belirtmektedir (Patzelt vd., 2016). Bu nedenle,

sağlıklı ve aktif yaşlanmayı sağlamada sağlık politikalarının bu hususları gündemine alması çok önemlidir (Dahany vd., 2014). Ayrıca aktif ve sağlıklı yaşlanmayı dikkate alan müdahaleler ve uygulamalar yaşlılarda yalnızlığı azaltmada ve psikolojik iyi oluşu artırmada umut vadetmektedir. Bu derleme çalışması, literatürde bu konuda yer alan çalışmaları inceleyerek yaşlı bireylerde yalnızlığın psikolojik iyi oluş ve genel yaşam kalitesi üzerindeki etkilerini değerlendirmektedir.

Yalnızlık Kavramı ve Yaşlılık

Yaşlılar arasında refah ve genel işleyişin önemli belirleyicilerinden biri olan yalnızlık (Holt-Lunstad ve Steptoe, 2022; Barnes vd., 2022; Leigh-Hunt vd., 2017); genellikle "bireyin arzu ettiği ve elde ettiği sosyal ilişki düzeyleri arasındaki tutarsızlık" olarak tanımlanmaktadır (Perlman ve Peplau, 1981). Artan geriatric nüfus ve değişen sosyo-kültürel bağlamla birlikte yalnızlık (Landeiro vd., 2017); ≥ 60 yaş yetişkinlerin %40'ından fazlasını etkileyen ciddi bir halk sağlığı sorunudur (National Academies of Sciences, Engineering and Medicine [NASEM], 2020). Yalnızlık hem duygusal hem de sosyal dışlanma ile karakterize edilen öznel bir olumsuz duyguyu ifade etmekte ve bu duygu, diğer insanların varlığında bile ortaya çıkabilmektedir (de Jong Gierveld vd., 2007). Duygusal yalnızlık, bağlanma figürünün veya önemli bireylerin yokluğu olarak tanımlanırken; sosyal yalnızlık bir bireyin aidiyet duygusu geliştirmesine izin veren bir insan çevresinin yokluğudur (Yanguas vd., 2018).

Yaşlılık genellikle yalnızlık için bir risk faktörü olarak görülmekte ve yaşlılığın yalnızlığa neden olan faktörlerle ilişkisi olduğu kabul edilmektedir. Bunlar arasında sevilen birinin kaybı, sağlığın bozulması, fiziksel gerileme (Luo vd., 2012; Smith, 2012) ve sosyoekonomik değişiklikler (örneğin, araba kullanma özerkliğinin kaybedilmesi veya emeklilik) yer almaktadır (NASEM, 2020). Literatürde buna ilişkin olarak aile geçişlerinin, azalan kişilerarası ilişkilerin, eş kaybı algılarının ve sosyal desteğin azalmasının yalnızlığın başlıca nedenleri olduğu belirtilmektedir (Manchana vd., 2023; Park vd., 2012; Roos ve Kloppe, 2010; Salma, 2018). Bu doğrultuda aileden, arkadaşlardan ve toplum katılımından gelen destek, yaşlı yetişkinlerde başa çıkma ve esenlik kaynağı olarak kendini göstermektedir (Thoits, 2011). Yaşlı yetişkinlerde hissedilen yalnızlık bireylerin yaşam kalitesini de olumsuz etkilemektedir (Patel ve Chauhan, 2020). Yalnızlık, uzun vadeli bir stres kaynağı olarak görülmekte ve stres etkileri uzun sürdüğünde sağlık üzerinde önemli etkilere neden olabilmektedir (Hsu vd. 2020). Bir çalışmada yalnızlığın ölüm riskini %26 oranında artırdığı belirtilmektedir. Bu oran, günde 15 sigara içmeye ve alkol kullanım bozukluğuna sahip olmaya eş değer görülmektedir. Ayrıca,

yalnızlığın sağlık üzerine oluşturduğu risk obezitenin oluşturduğu riskten daha fazladır (Holt-Lunstad vd., 2015).

Psikolojik İyi Oluş Kavramı ve Yaşlılık

Psikolojik iyi oluş, amaçlar doğrultusunda ilerlemek, diğerleriyle olumlu ilişkiler içerisinde olmak ve gelişmek için çabalamak gibi başarılı bir mücadeleyi ifade etmektedir (Keyes vd., 2002). Ryff ve Keyes (1995)'e göre psikolojik iyi oluş altı önemli kavramdan oluşmaktadır. Bu kavramlar; bireyin kendini kabul etmesi, kişisel büyümeye istekliliği, özerk olması, anlamlı hayat için yaşam amacı oluşturması, diğer bireylerle olumlu ilişkiler içinde olması ve çevresine hâkim olup çevresini yönetebilmesidir (Ryff ve Keyes, 1995). Ryff psikolojik iyi oluşun yalnızca psikolojik gelişmeyi sağlamaya yönelik bir mücadele olmadığını, aynı zamanda fiziksel sağlık için de çok önemli olduğunu vurgulamıştır (Ryff, 2014). Araştırmalara göre de psikolojik iyi oluşun azalması depresyon, erken ölüm, koroner kalp hastalığı, diyabet, engellilik ve diğer kronik rahatsızlıklarla ilişkilendirilmiştir (Steptoe vd., 2015). Psikolojik iyi oluşun sağlıkla ilişkisi göz önüne alındığında; yaşlı yetişkinlerde gözlenen sağlık sorunları ve kayıpların (sevilen insanların kaybı, fiziksel güç kaybı, emeklilik yoluyla iş kaybı, partner rolünün kaybı gibi) psikolojik iyi oluşu önemli düzeyde etkilediği belirtilmektedir (Brown vd., 2015). Yaşlı nüfus oranının ve beraberinde beklenen yaşam süresinin artması, yaşamı tehdit edici sağlık sorunlarının tedavi oranının artmasını sağlamıştır. Bu doğrultuda yaş arttıkça iyi oluşun devamlılığının sağlanması konusu önemli bir konudur (Steptoe vd., 2015).

Yalnızlığın Psikolojik İyi Oluş Üzerindeki Etkileri

Yalnızlık, kötü sağlık davranışları, fiziksel sağlık sorunları ve ruhsal sağlık koşulları için önemli bir risk faktörüdür (Canham vd., 2016). Literatürde yer alan çalışmalar incelendiğinde yalnızlık ile psikolojik iyi oluş arasında negatif yönlü bir ilişki olduğu (Cacioppo vd., 2015; Domènech-Abella vd., 2019; Ergin vd. 2022, Mishra vd., 2023, Birditt vd., 2021; Rook, 2015) görülmektedir. Yalnızlık hissetmeyen, iletişim kurma, sosyal hayata katılma ve yakınlarıyla yaşama konusunda yeterli fırsata sahip olan yaşlılarda psikolojik iyilik hali düzeyi daha yüksektir (Kovalenko ve Spivak, 2016). Ek olarak uzunlamasına bir çalışmada yalnızlığın bilişsel işlevi etkileyebileceği ve bunama riskini artırabileceği (Holwerda vd., 2015), başka bir çalışmada da yalnızlığın depresif semptomlarla ilişkili olduğu belirtilmektedir (Grover vd., 2018).

Yapılan çalışmalarda cinsiyet, eğitim, medeni durum (Mishra vd., 2023) ve sosyoekonomik durum (Au vd., 2020; Hsu, 2020) gibi sosyo-demografik faktörlerin yalnızlığın psikolojik iyi

oluşu etkileme biçimine aracılık edebileceği varsayılmıştır. Eğitim düzeyi yaşlı yetişkinler arasında kontrol duygusunun gelişmesinde ve psikososyal işlevselliğin sağlanmasında önemli bir faktör olarak görülmektedir (Mishra vd. 2023). Ayrıca, yaşlanan bireylerin deneyimlediği düşük kontrol duygusu ve umutsuzlukla birlikte gelen değişikliklere karşı dirençli olmalarına yardımcı olduğunu ve böylece yaşlanan nüfusun psikolojik iyi oluşu üzerinde olumlu bir etkiye sahip olduğunu belirtmektedir (Mishra vd., 2023; Mitchell vd., 2018). Ancak, literatürde cinsiyetin psikolojik iyi oluşa etkisi çelişkilidir. Araştırmalarda kadın cinsiyetin yalnızlık yaşama ihtimalinin daha fazla olduğu (Djundeva vd., 2019), erkeklere oranla daha çok yalnızlık hissettikleri ve sosyal destek eksikliğine karşı daha hassas oldukları belirtilmektedir (Stephoe vd., 2013; Yang ve Victor, 2008). Bu nedenle yalnızlık yaşlı kadınların psikolojik iyi oluşu üzerinde yaşlı erkeklerden daha büyük bir etkiye sahip olabilir. Örneğin, Finlandiya'da yapılan bir araştırma, yalnızlığın kadınların depresif semptomlarıyla erkeklerinkinden daha güçlü bir şekilde ilişkili olduğunu göstermiştir (Heikkinen ve Kauppinen, 2004). Tersine, yaşlı Amerikalılar üzerinde yapılan başka bir araştırmaya göre, yalnızlık erkeklerde depresif semptomlar üzerinde daha fazla etkilidir (Cacioppo vd., 2006). Buna ek cinsiyet ile psikolojik iyi oluş arasında anlamlı ilişki bulamayan çalışmalarda bulunmaktadır (Holt-Lunstad vd., 2015; Steptoe vd., 2013). Ayrıca medeni durumun, yalnızlığın yaşlı yetişkinlerin psikolojik refahı üzerindeki etkisini kısmen etkilediği (Mishra vd. 2023) ve özellikle dulluğun kötüleşmiş öznel refaha yol açtığı belirtilmektedir (Cheng vd., 2021). Yaşlılık döneminde bir eşe sahip olmak, sıkıntı düzeyinin azalması ve psikolojik refahın artması ile ilişkilendirilmektedir (Wright ve Brown, 2017). Ayrıca evliliğin bireylerde yalnızlığın ve sosyal izolasyonun azalmasında önemli bir faktör olduğu belirtilmektedir (Štípková, 2021). Ekonomik durumun ve finansal güvenliğin ise, özellikle yaşlı yetişkinlerin sosyal desteğe güvenmediği durumlarda, psikolojik iyi oluşla ilişkili olduğu belirtilmektedir. Avrupa'da yapılan bir çalışma, ülkelerinde daha fazla nüfus yaşlanması ve daha fazla gelir eşitsizliği öngörülyorsa, bireylerin emeklilik geliri konusunda daha fazla endişe duyduğunu göstermektedir (Hershey vd., 2010). Bu konuda hükümetin yaşlı dostu olmasının, daha düşük depresif semptomlar ve daha yüksek yaşam memnuniyeti ile ilişkili olduğu ortaya konmuştur (Au vd., 2020; Hsu, 2020).

Yaşlılarda Yalnızlığı Önleme ve Psikolojik İyi Oluşu Sağlamada Yaklaşımlar

Yaşlılarda yalnızlığa ve psikolojik iyi oluşa katkıda bulunan sosyal destek mekanizmaları üzerine yapılan önceki araştırmalar, yalnızlığı azaltmada duygusal desteğin (Cacioppo vd., 2015; Chen ve Feeley, 2014; Hawkey ve Cacioppo, 2010) ve kişilerarası ilişkilerin rolünü tutarlı bir şekilde göstermiştir (Hryhorivna ve Spivak, 2018). Çalışmalar, artan sosyal katılımın

yaşlı yetişkinler arasında psikolojik iyilik halini desteklediğini belirtmektedir (Amagasa vd., 2017). Ayrıca çalışmalarda daha güçlü sosyal ilişkilere sahip bireylerin hayatta kalma olasılığının %50 arttığı (Holt-Lunstad vd., 2015); sosyal bağlantıların tıbbi rejimlere uyumu iyileştirdiği (DiMatteo, 2004) ve hastanede kalış süresini azalttığı da gösterilmiştir (Holt-Lunstad vd., 2010).

Literatürde sevgi veya şefkat duygularının psikolojik iyi oluşu desteklediğini gösteren çalışmalar yer almaktadır (Kahana vd., 2021; Lopez vd., 2018; Trent vd., 2020). Çalışmalarda sevilmenin depresif semptomları, yalnızlık duygusunu ve kaygıyı azalttığı belirtilmektedir (Kahana vd., 2021; Lekhak vd., 2023). Bu nedenle toplum ve sağlık çalışanlarının yaşlılara sevgi ve şefkatle bakım sağlamaları önemlidir; bu, yaşlı yetişkinler arasındaki yalnızlık salgınına azaltmada faydalı olabilir (Lekhah vd., 2023).

Bilgi ve iletişim teknolojileri kullanarak sosyal ağlar kurmanın ve etkileşim almanın yaşlı yetişkinlerde psikolojik iyi oluş üzerinde önemli etkileri olduğu araştırmalarda belirtilmektedir (Bennet, 2015; Fang vd., 2018; Leist, 2013; Nimrod, 2010). Ancak araştırma sonuçları arasında bir tutarlılık bulunmamaktadır. Genel olarak çalışmalarda yaşlı bireylerdeki bilgi ve iletişim teknolojileri kullanımının yalnızlığı azalttığı, sosyal desteği artırdığı, iletişim düzeyini artırarak psikopatolojik semptomları azalttığı vurgulanmaktadır (Casanova vd., 2021; Leist, 2013; Fu ve Xie, 2021). Fakat bazı çalışmalar bilgi ve iletişim teknolojileri kullanımının yaşlılarda psikolojik iyi oluşla ilişkili olmadığı düşüncesini öne sürmektedir (Chan, 2018; Van Ingen vd., 2017). Ayrıca, bilgi ve iletişim teknolojileri kullanmanın telefon bağımlılığı ile birlikte sosyal izolasyona ve yalnızlığa yol açabileceği de belirtilmektedir (Whaite vd., 2018).

Literatürde yaşlı yetişkinlerde evcil hayvan sahipliği ve evcil hayvanlara bağlılığın yalnızlığı azalttığı ve psikolojik iyi oluş üzerinde olumlu etkilere sahip olduğu belirtilen çalışmalar da yer almaktadır. Bununla ilişkili bir çalışmada evcil hayvana bağlılığın, yalnızlık ve depresif semptomları olan bireylerin bu duyguları ile baş etmesini kolaylaştırdığı (Krause-Parello, 2012) ve bireylerin evcil hayvanlara bağlılığın artması ile yalnızlık hissinin azaldığını ifade ettikleri belirtilmektedir. Bu noktada evcil hayvanlar yas tutan kişilerin kaybı ile baş etmesine yardımcı olmuş ve sosyal destek sunmuştur (Krause-Parello ve Gulick, 2013). Bu konuda yapılan bir meta analiz çalışması, yaşlı yetişkinlerin evcil hayvanlar ile etkileşim kurmasının psikolojik iyi oluşlarını artırdığını ortaya koymaktadır. Evcil hayvan sahibi olmanın ruh sağlığı üzerinde evcil hayvan destekli etkileşim seanslarından daha fazla olumlu etki oluşturduğu belirtilmektedir (Gee vd., 2019).

Yaşlı bireylerde yalnızlığı önleme ve psikolojik iyi oluşu sağlamada müzik temelli uygulamalar

da etkili olarak görülmektedir. Müzik dinlemek, şarkı söylemek, müzik aleti çalmak ve müzik topluluklarında yer almak psikolojik iyi oluşa katkı sağlamaktadır (Sloboda, 1999). Dunphy ve ark. (2018) tarafından yapılan bir meta analiz çalışmasında, müzik uygulamalarının yaşlı yetişkinlerin depresyonları üzerinde olumlu etkileri olduğunu ortaya koymuştur (Dunphy vd., 2018). Bir başka çalışmada, 14 haftalık bir şarkı söyleme programında grubun fiziksel, psikolojik, sosyal iyi oluşları üzerinde olumlu etkileri olduğu saptanmıştır (Skingley vd., 2016). Cohen ve ark. (2006) tarafından yapılan boylamsal bir çalışmada 30 haftalık bir koro çalışmasında yaşlı bireylerin yalnızlıklarının azaldığını, sağlıklarının daha iyi olduğunu ve kendilerini daha iyi hissettiklerini ifade etmişlerdir (Cohen vd., 2006).

Sonuç ve Öneriler

Bu derleme çalışması; yaşlı yetişkinlerde yalnızlık duygusunun en aza indirilmesi ve psikolojik iyi oluşu artırmak için müdahale stratejileri geliştirmede bir içgörü sağlayacaktır. Yaşlı yetişkinleri sosyal yönlerini güçlendirecek ve sosyal katılımlarını artıracak boş zaman aktiviteleri gibi faaliyetlere dahil etmek yalnızlık hislerinin azalmasına katkıda bulunabilir. Yaşlı yetişkinlerin dijital teknolojiyle güçlendirilebileceği önlemler tasarlamak, yaşlı yetişkinler arasında yalnızlığın azaltılmasına yardımcı olabileceği gibi psikolojik iyi oluşu da artırabilir. Ayrıca, yaşlı yetişkinlere bilgilerini aktarmak için çeşitli sosyal gruplarda etkileşim kurma fırsatları sağlamak, genel yaşam kalitelerini artırmaya yardımcı olabilir (Mishra vd., 2023).

Özet

Dünya genelinde ortalama yaşam süresinin uzamasıyla birlikte yaşlı nüfusun oranı hızla artmakta; bu durum, yaşlı bireylerin yaşam kalitesini artırmaya yönelik psikososyal yaklaşımların önemini gündeme getirmektedir. Yaşlılık dönemi; emeklilik, sosyal rollerde değişim, bedensel işlevlerde azalma ve kayıplarla karakterize edilen bir süreçtir. Bu nedenle, bireylerin yaşamlarının bu döneminde psikolojik sağlamlıklarını korumaları ve öznel iyi oluş düzeylerini yüksek tutmaları, sağlıklı yaşlanma sürecinin temel taşlarını oluşturur. Bireyin yaşamdan aldığı doyum ve duygusal deneyimlerinin bütününe yansıtan öznel iyi oluş; psikolojik sağlamlıktan, yani bireyin stres ve güçlükler karşısında dengeyi sürdürme kapasitesinden farklı bir yapıdır. Öznel iyi oluş, yalnızca bireyin kendini iyi hissetmesi değil, aynı zamanda topluma katkı sağlama, anlamlı ilişkiler kurma ve yaşamdan tatmin olma haliyle de ilişkilidir. Psikolojik sağlamlık ise bireyin krizler, travmalar ya da zorluklar karşısında yıkılmadan ayağa kalkabilmesini ve uyum sağlayabilmesini ifade eder. Bu iki kavram, birlikte değerlendirildiğinde yaşlı bireylerin sadece ruh sağlığını değil, fiziksel sağlık durumlarını ve yaşam motivasyonlarını da olumlu yönde etkilemektedir. Özellikle olağandışı durumlar, yaşlı bireylerin dayanıklılığını artırmaya yönelik önleyici halk sağlığı politikalarının geliştirilmesinin zorunlu olduğunu göstermektedir. Ayrıca, dijital araçlara erişim ve dijital okuryazarlık düzeyleri de yaşlıların psikolojik durumları üzerinde doğrudan etkilidir.

Sonuç olarak, yaşlı bireylerde öznel iyi oluş ve psikolojik sağlamlık düzeylerinin artırılması, sadece bireysel düzeyde değil; aynı zamanda toplumsal refah, sağlık sistemlerinin yükünü hafifletme ve aktif yaşlanma politikalarının başarısı açısından da büyük önem taşımaktadır. Bu bağlamda, sosyal hizmetler, psikolojik danışmanlık, toplum temelli destek programları ve aile katılımının güçlendirilmesi gibi bütüncül müdahale stratejileri geliştirilmelidir.

Anahtar Sözcükler: Yaşlılık, öznel iyilik, psikolojik sağlamlık, psikolojik iyi oluş

Subjective Well-Being and Psychological Resilience in the Elderly: A Review in Light of Current Findings

Abstract

With the increase in the average life expectancy worldwide, the proportion of the elderly population is rapidly increasing; this situation brings to the agenda the importance of psychosocial approaches aimed at improving the quality of life of elderly individuals. Old age is a process characterized by retirement, changes in social roles, decreases and losses in physical functions. Therefore, individuals maintaining their psychological resilience and keeping their subjective well-being levels high during this period of their lives constitute the cornerstones of the healthy aging process. Subjective well-being, which reflects the totality of an individual's satisfaction with life and emotional experiences, is a different construct from psychological resilience, that is, the individual's capacity to maintain balance in the face of stress and difficulties. Subjective well-being is not only related to the individual feeling good about himself/herself, but also to contributing to society, establishing meaningful relationships, and being satisfied with life. Psychological resilience refers to the individual's ability to stand up and adapt without collapsing in the face of crises, traumas, or difficulties. When these two concepts are evaluated together, they positively affect not only the mental health of older individuals, but also their physical health and motivation for life. Especially extraordinary situations show that it is necessary to develop preventive public health policies to increase the resilience of older individuals. In addition, access to digital tools and digital literacy levels have a direct impact on the psychological state of the elderly.

As a result, increasing the levels of subjective well-being and psychological resilience in older individuals is of great importance not only at the individual level but also in terms of social welfare, reducing the burden on health systems and the success of active aging policies. In this context, holistic intervention strategies such as social services, psychological counseling, community-based support programs and strengthening family participation should be developed.

Keywords: Old age, subjective well-being, psychological resilience, psychological well-being

Giriş

Günümüzde dünya genelinde yaşlı nüfusta gözlemlenen hızlı artış, toplumların sosyal, ekonomik ve sağlık alanındaki politika ve hizmetlerini yeniden düzenlemelerini gerekli

kılmaktadır. Birleşmiş Milletler'in (2020) projeksiyonlarına göre, 2050 yılı itibarıyla dünya nüfusunun yaklaşık %16'sını 65 yaş ve üzeri bireyler oluşturacaktır. Bu demografik değişim, yaşlanma sürecinin yalnızca biyolojik ve fiziksel yönleriyle sınırlı olmadığını; aynı zamanda bireylerin psikolojik iyilik hallerinin de çok boyutlu olarak ele alınması gerektiğini göstermektedir. Yaşlılık, bireyin yaşamında emeklilik, toplumsal rollerin yeniden tanımlanması, yakın çevresinde kayıpların yaşanması ve fiziksel kapasitenin azalması gibi çeşitli kritik geçişleri kapsayan bir dönemdir. Bu nedenle, yaşlı bireylerin ruhsal uyumlarını anlayabilmek açısından öznel iyi oluş ve psikolojik sağlamlık gibi psikolojik yapılar önemli belirleyiciler olarak değerlendirilmektedir.

Öznel iyi oluş, bireyin yaşamına dair genel memnuniyet algısını ve yaşadığı olumlu ya da olumsuz duyguların düzeyini içeren, bireyin yaşam kalitesine ilişkin kişisel değerlendirmesini yansıtan bir kavramdır (Diener, 1984). Bu yapı, yaşlı bireyin karşılaştığı stresli yaşam olaylarıyla başa çıkma kapasitesine katkı sağlayan psikolojik bir kaynak olarak işlev görmektedir. Diğer yandan psikolojik sağlamlık, bireyin yaşamındaki olumsuzluklara, krizlere ve kayıplara rağmen uyum sağlayabilme, esneklik gösterebilme ve yeniden denge kurabilme becerisidir (Windle, 2011). Özellikle yaşlılık döneminde daha sık karşılaşılan sağlık sorunları, yalnızlık ve sosyal izolasyon gibi zorluklarla mücadelede psikolojik sağlamlık koruyucu bir faktör olarak öne çıkmaktadır.

Son yıllarda yaşlı bireylerin psikolojik iyilik hallerini güçlendirmeye yönelik uygulamalarda sosyal destek sistemlerinin, inanç ve değer sistemlerinin, yaşamın anlamlılığına dair algıların ve çeşitli baş etme stratejilerinin etkili olduğu ortaya konmuştur. Ancak öznel iyi oluş ve psikolojik sağlamlık çoğu çalışmada ayrı kavramlar olarak incelenmekte, bu iki yapı arasındaki etkileşim yeterince derinlemesine ele alınmamaktadır. Bu derleme çalışmasının amacı, yaşlılık döneminde öznel iyi oluş ve psikolojik sağlamlık kavramlarını kuramsal bir çerçevede irdelemek, aralarındaki ilişkiyi değerlendirmek ve bu yapıları destekleyen etmenlere yönelik bilgilere yer vermektir.

Öznel İyi Oluş Kavramı ve Yaşlılıkta Görünümü

Öznel iyi oluş, bireyin yaşamından duyduğu memnuniyet ile olumlu ve olumsuz duyguların dengesini içeren psikolojik bir yapıdır. Yaşlanma ile birlikte bireylerin fiziksel, sosyal ve bilişsel alanlarda çeşitli değişimler yaşaması, bu dönemde öznel iyi oluşun daha dikkatli ele alınmasını gerekli kılmaktadır. Dünya genelinde artan yaşlı nüfus oranı, yaşlılıkta öznel iyi oluşu etkileyen faktörlerin belirlenmesini ve buna yönelik koruyucu/önleyici politikaların geliştirilmesini önemli hale getirmiştir (Liu et al., 2023). Öznel iyi oluş; yaşam doyumu, olumlu duyguların

sıklığı ve olumsuz duyguların azlığı olmak üzere üç ana bileşenden oluşur. Bu yapı, bireyin yaşamına dair yaptığı öznel değerlendirmeleri içerir ve yaş, kültür, sosyoekonomik durum gibi değişkenlere göre farklılaşabilir (Duan, 2024).

Dijital Katılım ve Sosyal Sermaye

Yaşlı bireylerin dijital teknolojilere erişimi ve bu teknolojileri kullanma becerileri, sosyal bağlantılarını sürdürmelerine katkı sağlamakta ve öznel iyi oluşlarını artırmaktadır. Örneğin Çin’de yürütülen bir çalışmada, dijital köy projelerinin yaşlıların sosyal sermayesini güçlendirdiği ve yaşam memnuniyetlerini artırdığı görülmüştür (Duan, 2024).

Fiziksel Aktivite ve Çevresel Faktörler

Fiziksel egzersiz, aktif yaşam ve doğayla temas (örneğin park kullanımı), yaşlıların hem fiziksel sağlıklarını hem de öznel iyi oluşlarını artırmaktadır. Yaşlı bireyler, yeşil alanlara erişim sağladıklarında daha yüksek yaşam memnuniyeti bildirmişlerdir (Liu et al., 2023).

Sosyal Destek ve Bakım Modelleri

Yaşlı bireylerin aileleriyle, arkadaşlarıyla ve toplumla olan ilişkileri; yalnızlık duygusunu azaltarak duygusal iyi oluşlarını artırmaktadır. Ayrıca, bireylerin tercih ettikleri bakım modeliyle yaşam memnuniyetleri arasında pozitif bir ilişki saptanmıştır (Li and Li, 2023).

Bilişsel Sağlık ve Süper Yaşlanma

Bazı yaşlı bireyler, ileri yaşlara rağmen bilişsel işlevlerini büyük ölçüde koruyabilmektedir. Bu kişiler “süper yaşlılar” (superagers) olarak tanımlanmakta ve yaşam boyu öğrenme, zihinsel uyarım ve sosyal etkileşim gibi faktörlerle öznel iyi oluşlarını sürdürebilmektedirler (Cassata, 2023).

Öznel İyi Oluş ve Sağlık Arasındaki İlişki

Çin’de yapılan geniş ölçekli bir çalışmaya göre, öznel iyi oluş düzeyi yüksek olan yaşlı bireylerde tüm nedenlere bağlı ölüm oranlarının daha düşük olduğu bulunmuştur. Bu bulgu, öznel iyi oluşun yaşlı bireylerin hem psikolojik hem de fiziksel sağlığı için koruyucu bir faktör olduğunu göstermektedir (Zhu et al., 2023).

Psikolojik Sağlamlık: Yaşlılıkta Bir Baş Etme Kaynağı

Psikolojik sağlamlık, bireyin stres, travma, kayıp ve diğer olumsuz yaşam olaylarına karşı gösterdiği uyum ve toparlanma kapasitesi olarak tanımlanır (Windle, 2011). Yaşlılık, çok sayıda stres verici yaşam olayını içerebilecek bir dönem olduğundan, psikolojik sağlamlık bu yaş

grubunda önemli bir koruyucu faktör olarak değerlendirilir. Resilient yaşlı bireyler, yaşamsal değişimlere daha esnek tepki verebilmekte ve ruhsal açıdan daha sağlıklı kalabilmektedir (Wagnild and Young, 1993). Psikolojik sağlık, aynı zamanda öznel iyi oluşun artmasına katkı sağlamakta; yaşlı bireylerin yaşamdan daha fazla doyum almalarına olanak tanımaktadır.

Yaşlılıkta Psikolojik Sağlamlığı Etkileyen Faktörler

Bilişsel ve Fiziksel Sağlık

Yaşlı bireylerin bilişsel işlevlerini ve fiziksel bağımsızlıklarını korumaları, psikolojik sağlamlıklarını destekleyen önemli unsurlardır. Araştırmalar, normal bilişsel işlevlere ve fonksiyonel bağımsızlığa sahip bireylerin daha yüksek psikolojik sağlamlık düzeylerine sahip olduğunu göstermektedir (Rolandi et al., 2024).

Baş Etme Stratejileri

Pozitif baş etme stratejileri, yaşlı bireylerin karşılaştıkları zorluklarla daha etkili bir şekilde başa çıkmalarını sağlar. Bu stratejiler arasında problem çözme, duygusal düzenleme ve sosyal destek arayışı yer alır (Liu et al., 2025).

Sosyal Destek, Anlam Arayışı ve Ruhsal Dayanıklılık

Yaşlılıkta sosyal destek sistemlerinin varlığı, hem öznel iyi oluşun hem de psikolojik sağlamlığın güçlenmesinde temel rol oynamaktadır. Özellikle aile, arkadaşlar ve komşularla kurulan sosyal ilişkiler, yaşlı bireylerin aidiyet hissini artırmakta ve yalnızlık duygusunu azaltmaktadır (Antonucci et al., 2010). Bunun yanı sıra, yaşamın anlamlı bulunması ve spiritüel yönelimlerin güçlü olması, yaşlı bireylerin olumsuz yaşam olaylarına karşı psikolojik dayanıklılık geliştirmelerine katkı sunmaktadır (Park, 2010). Spiritüel yaklaşımlar ve dini inançlar, özellikle travmatik deneyimlerin anlamlandırılmasında destekleyici bir çerçeve sunmaktadır.

Müdahale Yaklaşımları ve Uygulamalar

Psikolojik sağlamlığı desteklemek amacıyla geliştirilen müdahaleler, yaşlı bireylerin yaşam doyumlarını artırmayı, stresle başa çıkmalarını kolaylaştırmayı ve sosyal bağlarını güçlendirmeyi hedeflemektedir. Bu müdahaleler hem bireysel hem de grup temelli olabilir ve farklı psikolojik yaklaşımlar temelinde uygulanmaktadır (Windle, 2012).

Psiko-eğitim Programları

Psiko-eğitim temelli müdahaleler, yaşlı bireylerin duygusal farkındalıklarını artırmayı ve stresle

başta çıkma becerilerini geliştirmeyi amaçlar. Bu programlarda genellikle yaşam olaylarıyla baş etme, öz şefkat, pozitif düşünme ve sosyal destek arama konularında eğitimler verilmektedir (Liao et al., 2022).

Bilişsel Davranışçı Müdahaleler (BDT)

Bilişsel Davranışçı Terapi (BDT), yaşlı bireylerin olumsuz otomatik düşüncelerini tanımlamalarına ve daha sağlıklı başa çıkma yolları geliştirmelerine yardımcı olur. BDT temelli programlar, depresyon belirtilerini azaltmakta ve yaşam kalitesini artırmakta etkili bulunmuştur (Nagel et al., 2024).

Mindfulness ve Farkındalık Temelli Yaklaşımlar

Mindfulness temelli müdahaleler, yaşlı bireylerin anı yaşama becerilerini geliştirerek stres düzeylerini azaltmalarını ve psikolojik sağlamlıklarını artırmalarını sağlar. Özellikle kronik ağrı ve yalnızlıkla baş etmede etkili bulunmuştur (Janssen et al., 2023).

Sosyal Katılım ve Toplumsal Dayanışma Programları

Yaşlı bireylerin topluluk temelli etkinliklere katılımları, sosyal izolasyonu azaltarak psikolojik sağlamlığı destekler. Gönüllülük faaliyetleri, sanat temelli gruplar veya yaşlılar için tasarlanmış sosyal kulüpler bu kapsamda önemli uygulamalar arasında yer alır (Carr et al., 2019).

Dijital Müdahaleler ve Telepsikoloji

Teknoloji destekli uygulamalar sayesinde yaşlı bireylerin ruh sağlığı desteklenebilir. Online destek grupları, mobil uygulamalar ve telepsikoloji hizmetleri, özellikle pandemi sonrası dönemde etkili çözümler arasında yer almaktadır (Choi et al., 2020).

Sonuç ve Öneriler

Yaşlılık döneminde öznel iyi oluş ve psikolojik sağlamlık, bireyin yaşam kalitesinin korunması açısından birbirini tamamlayan iki önemli psikolojik yapıdır. Bu bağlamda, yaşlı bireylerin hem bireysel güç kaynaklarının (örneğin baş etme becerileri, yaşam deneyimi) hem de sosyal destek sistemlerinin güçlendirilmesi önem arz etmektedir. Politika yapıcılar, sağlık hizmet sunucuları ve sosyal hizmet uzmanları, yaşlı bireylerin psikolojik ihtiyaçlarını göz önünde bulundurarak bütüncül müdahale stratejileri geliştirmelidir. Gelecekte yapılacak çalışmalarda, kültürel farklılıkların etkisi ve kırılgan gruplara yönelik özel müdahale modelleri geliştirilmesi önerilmektedir.

48-72 Aylık Çocuğa Sahip Annelerin Gözünden Yürütücü İşlevler: Algılar, Stratejiler Ve Günlük Yaşam Pratikleri

Esra KABACA

Lisansüstü Eğitim Enstitüsü, esra.kabaca@gop.edu.tr, 0009-0008-5966-9071, TÜRKİYE

Nuran TUNCER

Lisansüstü Eğitim Enstitüsü, nuran.tuncer@gop.edu.tr, 0000 0002 8748 5084, TÜRKİYE

Özet

Yürütücü işlevler; bireyin düşünce ve davranışlarını kontrol etmesini, çevresel uyaranlara karşı tepkilerini düzenlemesini ve uzun vadeli hedeflere yönelik planlama yapmasını sağlayan üst düzey bilişsel süreçlerdir. Bilişsel esneklik, çalışan bellek ve engelleyici kontrol gibi temel becerileri kapsayan yürütücü işlevler, bireyin sosyal ve bilişsel durumlara uyum sağlamasında kritik bir rol oynar. Alanyazın, yürütücü işlevlerin özellikle erken çocukluk döneminde hızlı bir gelişim gösterdiğini ve bu dönemin gelişim açısından hassas ve belirleyici bir süreç olduğunu ortaya koymaktadır. Çocukların yürütücü işlev becerilerini edinme süreci yalnızca bireysel gelişimle sınırlı kalmayıp, çevresel etmenler ve özellikle aile dinamikleri tarafından da şekillenmektedir. Bu bağlamda, çocukların yürütücü işlevlerinin desteklenmesinde ebeveynlerin —özellikle annelerin— bilgi düzeyleri, tutumları ve günlük yaşantılarındaki uygulamaları belirleyici bir faktör olarak öne çıkmaktadır. Ebeveynlerin bu süreçte sergilediği bilinçli ve destekleyici tutumlar, çocukların hem akademik başarıları hem de sosyal-duygusal gelişimleri açısından önemli katkılar sunmaktadır. Bu araştırmanın amacı, 48-72 aylık çocuğa sahip annelerin yürütücü işlev becerilerine ilişkin bilgi düzeylerini, düşüncelerini ve günlük yaşam pratiklerini derinlemesine incelemektir. Betimsel nitelikte desenlenen bu çalışmada veri toplama aracı olarak yarı yapılandırılmış görüşme tekniği kullanılmış; çalışma 15 gönüllü anne ile gerçekleştirilmiştir. Elde edilen veriler içerik analizi yöntemiyle çözümlenmiş ve bulgular beş ana tema altında sınıflandırılmıştır: Yürütücü İşlev Becerileri Kavramına Yönelik Farkındalık, Planlama ve Organizasyon Becerileri, Öz Düzenleme Süreçleri, Çocuğun Katılım Hakkı ve Karar Süreçleri ile Hatırlama ve Bellek Takibi. Elde edilen bulgulardan yola çıkarak; araştırmaya katılan annelerin önemli bir kısmının yürütücü işlev becerileri kavramının farkında olmadığı. Kavrama aşına olan katılımcıların ise yürütücü işlevleri günlük yaşam pratiklerine

tam olarak entegre edemediği belirlenmiştir. Aynı zamanda araştırma bulguları, ebeveynlere yönelik bilinçlendirme programlarının önemini ortaya koymaktadır.

Anahtar Kelimeler: Çocuk Katılım Hakkı, Öz Düzenleme, Planlama ve Organizasyon, Yürütücü İşlevler

Executive Functions From The Perspective Of Mothers With 48–72-Month-Old Children: Perceptions, Strategies, And Daily Practices

Abstract

Executive functions are high-level cognitive processes that allow individuals to regulate their thoughts and behaviors, respond appropriately to environmental stimuli, and plan for long-term goals. These functions—including cognitive flexibility, working memory, and inhibitory control—play a critical role in adapting to social and cognitive demands. Research indicates that executive functions develop rapidly during early childhood, making this period particularly sensitive and pivotal for developmental outcomes. The acquisition of executive function skills in children is influenced not only by individual factors but also by environmental elements, especially family dynamics. In this context, parents’—particularly mothers’—knowledge, attitudes, and daily practices are key determinants in supporting the development of these skills. Conscious and supportive parenting behaviors contribute significantly to both academic achievement and socio-emotional development in children. This study aims to explore in depth the knowledge, perceptions, and everyday practices of mothers with children aged 48 to 72 months regarding executive function skills. Designed as a descriptive qualitative study, data were collected through semi-structured interviews with 15 volunteer mothers. The collected data were analyzed using content analysis, and the findings were categorized under five main themes: Awareness of the Concept of Executive Functions, Planning and Organizational Skills, Self-Regulation Processes, Child Participation in Decision- Making, and Remembering and Memory Tracking. Based on the findings obtained; a significant portion of the mothers participating in the study were not aware of the concept of executive function skills. It was determined that the participants who were familiar with the concept could not fully integrate executive functions into their daily life practices. At the same time, research findings reveal the importance of awareness-raising programmes for parents.

Keywords: Executive functions, planning and organization, self-regulation, child participation

Giriş

Çocuk gelişiminde en etkili sosyal çevre, hiç şüphesiz ailedir. Aile ortamı, çocuğun fiziksel, bilişsel, sosyal ve duygusal gelişimini şekillendiren ilk ve en temel çevresel etkindir. Özellikle anne ile kurulan erken dönem ilişki, çocuğun benlik algısı, güven duygusu ve duygusal düzenleme becerilerinin gelişmesinde önemli bir yapı taşıdır (Yavuzer, 2008). Ev ortamında edinilen erken öğrenme deneyimleri, çocukların psikomotor becerilerinin yanı sıra dilsel, bilişsel ve sosyal-duygusal alanlardaki gelişimlerini doğrudan etkileyen bir rol oynamaktadır (Büyüktaşkapu, 2012). Ebeveynlerin çocuklarına yönelik tutumları, çocukların sosyal dünyayı nasıl algılayacağı ve bu dünyada nasıl davranışlar geliştireceği konusunda belirleyici olmaktadır. Özellikle çocukla empatik bir bağ kurabilen, kabul edici, saygılı ve güven verici ebeveyn tutumları, çocukların özgüven gelişimini, özdenetim becerilerini ve sosyal ilişkilerdeki yeterliliklerini desteklemektedir (Üredi & Erden, 2009). Bu bağlamda ebeveynler, çocuklarının sahip olmasını istedikleri kişilik özellikleri doğrultusunda bilinçli ya da farkında olmadan çeşitli yönlendirme stratejileri geliştirmektedir. Kullanılan bu stratejiler; pekiştirme, disiplin, sınır koyma ya da serbestlik gibi tutumsal yelpazede farklılık gösterebilir. Bu çeşitliliğin arkasında ise ailelerin sosyo-kültürel yapısı, eğitim düzeyi, yaşantıları ve toplumun genel değer sistemleri gibi birçok faktör yer almaktadır (Baumrind, 1971). Anne babaların çocuklarına yönelik tutumları, sadece bireysel ilişkilerle sınırlı kalmayıp aynı zamanda çocuğun sosyal davranış örüntülerini de etkilemektedir. Özellikle sosyal yeterlik, empati kurabilme ve problem çözme gibi beceriler, çocuğun ebeveyniyle geliştirdiği ilişkiden beslenmektedir (Fitzgerald & White, 2003). Aile yapısı içinde benimsenen değerler sistemi, anne babalar arası iletişim ve çocuğa karşı sergilenen ortak ya da çelişkili davranışlar, çocuğun zihinsel ve duygusal dünyasını doğrudan şekillendirmektedir (Altay & Güre, 2012). Ayrıca ebeveyn tutumları; ebeveynlerin çocukluk deneyimleri, ebeveyn rollerine ilişkin algıları, eğitim düzeyleri, yaşadıkları çevresel koşullar, çocuğun yaşı ve cinsiyeti gibi çok sayıda faktöre bağlı olarak farklılaşabilmektedir (Aslışen, 2017; Çağdaş & Seçer, 2006).

Yürütücü işlevler, bireylerin düşüncelerini ve davranışlarını düzenlemelerine, kontrol etmelerine ve uzun vadeli hedeflere yönelik olarak yönlendirmelerine imkân tanıyan üst düzey nörobilişsel beceriler olarak tanımlanmaktadır (Carlson, Zelazo ve Faja, 2013; Hendry, Jones ve Charman, 2016; Zelazo ve Carlson, 2012). Özellikle erken çocukluk döneminde, çocukların yeni durumlarla baş edebilmeleri, dikkat dağınıcı ya da cezbedici uyaranlara karşı direnç gösterebilmeleri, akıl yürütebilmeleri ve problem çözme becerilerini kullanabilmeleri için bu bilişsel süreçlere duyulan ihtiyaç belirgin hale gelmektedir (Diamond, 2013). Yürütücü işlevler; planlama, dikkat kontrolü, bilişsel esneklik ve tepki inhibisyonu gibi hedefe yönelik, etkili ve

duruma uygun (sosyal) davranışların sergilenebilmesi için gerekli olan zihinsel süreçleri kapsamaktadır. Bu nedenle yürütücü işlevler, bireyin günlük yaşamındaki işlevselliği açısından kritik bir rol üstlenmektedir. Söz konusu işlevlerde yaşanan güçlükler; dürtü kontrolünde zayıflık, planlama becerilerinde yetersizlik ve davranışların değişen çevresel koşullara uyarlanmasında zorluk gibi çeşitli sorunlar şeklinde ortaya çıkabilmekte ve bu durum çocuğun günlük yaşantısında önemli işlevsel kısıtlılıklara yol açabilmektedir (Huizinga ve Smidts, 2011). Yürütücü işlevlerin gelişimi, yaşam boyunca devam eden ve çeşitli dönemlerde farklı hızlarda ilerleyen uzun vadeli bir süreçtir. Bu beceriler, bebeklik döneminde ilk belirtilerini göstermeye başlamakta, erken çocukluk döneminde belirgin bir gelişim göstermekte, geç ergenlik döneminde olgunlaşmakta ve ileri yetişkinlik döneminde ise gerileme eğilimi göstermektedir (Diamond, 2013). Literatürde yer alan araştırmalar, yürütücü işlev becerilerinin özellikle 3 ila 7 yaş arasında hızlı bir gelişim gösterdiğini ve bu gelişimin erken yetişkinliğe kadar sürdüğünü ortaya koymaktadır (Diamond, 2013; Senn, Espy ve Kaufmann, 2004). Hughes, Ensor, Wilson ve Graham (2010) tarafından yürütülen bir çalışmada, 4 ila 6 yaş arasındaki çocukların yürütücü işlev görevlerinde gösterdikleri performansın, bireyler arası farklılıklar olmakla birlikte, ortalama olarak iki standart sapmalı bir artış sergilediği belirlenmiştir. Benzer şekilde, Willoughby, Blair, Wirth, Greenberg ve The Family Life Project Investigators (2012) tarafından yürütülen ve 3 ila 5 yaş grubundaki çocukların yürütücü işlev becerilerinin incelendiği bir araştırmada, bu yaş aralığında gözlenen toplam değişimin yaklaşık %60'ının 4 ila 5 yaş arasında meydana geldiği rapor edilmiştir. Bu bulgular, erken çocukluk döneminin yürütücü işlevlerin gelişimi açısından kritik bir dönem olduğunu vurgulamaktadır. Bu bağlamda, yürütücü işlevler adı verilen üst düzey zihinsel beceriler, çocuğun hem kendi davranışlarını düzenleyebilmesi hem de çevresiyle sağlıklı bir şekilde etkileşim kurabilmesi açısından oldukça önemlidir. Görev başlatma, plan yapma, zaman yönetimi, dikkati sürdürme, esneklik, üst biliş ve hedefe yönelik ısrar gibi bileşenlerden oluşan yürütücü işlevler, çocuğun akademik ve sosyal yaşamda karşılaştığı karmaşık durumları yönetmesini mümkün kılar (Dawson & Guare, 2012; Harris, 2016). Bu beceriler yalnızca öğrenme sürecini kolaylaştırmakla kalmayıp, aynı zamanda sosyal ilişkilerde duygusal esneklik ve öz düzenleme becerilerini de destekler (Meuwissen & Carlson, 2015). Yürütücü işlevlerdeki gelişim, çocukların bağımsızlık kazanımı, sosyal normlara uyum ve duygularını yönetme gibi üst düzey yeterlilikleri kazanmalarında kritik bir rol üstlenmektedir (Brown, Odom, McConnell & Rathel, 2008). Yürütücü işlevleri desteklenen çocuklar, çevrelerine karşı duyarlılık geliştirmenin yanı sıra kendi haklarının ve başkalarının haklarının farkına varma, saygı gösterme, duygularını kontrol etme gibi sosyal sorumluluk bilincini de edinirler. Bu beceriler, çocukların ileriki yaşam

dönemlerinde bağımsız, kendine güvenen ve toplumsal kurallara uyum sağlayabilen bireyler olmalarının temelini oluşturur (Myers, 1990; Özmete, 2008). Dolayısıyla aile içi etkileşim biçimleri, ebeveynin rehberliği ve çocuğa sunulan deneyimlerin niteliği, yürütücü işlevlerin gelişiminde vazgeçilmez bir rol oynamaktadır. Bu çalışma, 48–72 aylık çocuk sahibi annelerin günlük yaşam pratiğinde yürütücü işlevleri nasıl desteklediğini ve algıladıklarını derinlemesine incelemeyi amaçlamaktadır

Yöntem

Evren ve Örneklem

Araştırmaya Tokat ilinde yaşayan 48-72 aylık çocuğu olan 15 anne katılmıştır. Uygun örnekleme yöntemi ile anneler belirlenmiştir. Uygun örnekleme yöntemine göre annelerin 48-72 ay arası çocuğunun olması ve çalışmaya katılmaya gönüllü olmaları kriter olarak belirlenmiştir.

Veri Toplama Araçları

Araştırma verileri, yarı yapılandırılmış görüşme formu aracılığıyla toplanmıştır. Yarı

yapılandırılmış görüşme, nitel araştırmalarda sıklıkla tercih edilen veri toplama tekniklerinden biridir ve araştırmacıların önceden belirlediği soru formuna sadık kalarak ancak gerektiğinde esneklik göstererek yeni sorular yöneltebilmesine olanak tanır. Bu teknikte sorular belirli bir sıra dahilinde sorulmakla birlikte, katılımcının verdiği cevaplara göre detaylandırıcı sorular eklenebilir ve böylece görüşme süreci daha derinlemesine bir yapıya kavuşur. Bu yönüyle yarı yapılandırılmış görüşmeler, hem araştırmanın sistematikliğini korur hem de katılımcıların düşüncelerini daha açık ve özgür biçimde ifade etmelerine olanak tanır (Yıldırım & Şimşek, 2018). Görüşme formu, çocukların ev içinde verilen görevleri yerine getirme süreçleri, yönerge alma durumları, rutinlere katılım ve organizasyon becerileri gibi alanlara yönelik 18 adet açık uçlu sorulardan oluşmaktadır. Araştırmada kullanılacak yarı yapılandırılmış görüşme formu, literatür taraması doğrultusunda oluşturulmuş ve içerik geçerliliğini sağlamak amacıyla ilgili alanda uzman olan akademisyen görüşüne sunulmuştur. Uzmanın alınan geri bildirimler doğrultusunda, bazı sorular yeniden yapılandırılmış, dil ve anlam açısından daha açık ve anlaşılır hale getirilmiştir. Ayrıca, soruların kavramsal tutarlılığı ve amaca uygunluğu yeniden değerlendirilmiştir. Uzman onayının ardından, görüşme formunun uygulanabilirliğini test etmek ve soruların hedef kitle tarafından nasıl anlaşıldığını görmek amacıyla iki anne ile pilot görüşme gerçekleştirilmiştir. Bu pilot görüşmeler sırasında, annelerin bazı soruları anlamakta güçlük çekebildikleri görülmüş ve bu doğrultuda sorulara açıklayıcı örnekler eklenmiştir. Bu örnekler, soruların bağlamını daha anlaşılır kılmak ve katılımcıların daha sağlıklı yanıtlar verebilmelerini sağlamak amacıyla özellikle detaylandırılmıştır. Pilot uygulamadan elde edilen gözlemler ve geri bildirimler doğrultusunda görüşme formuna son hali verilmiş ve asıl veri toplama sürecinde kullanılmak üzere nihai hale getirilmiştir.

Veri Toplama Araçlarının Uygulaması ve Analizi

Veri toplama süreci gönüllülük esasına dayalı olarak yürütülmüştür. Katılımcılardan yazılı onam alınmış, araştırmanın amacı ve gizlilik ilkeleri açıkça belirtilmiştir. Görüşmeler bireysel olarak ve yüz yüze gerçekleştirilmiş, her biri ortalama 18-20 dakika sürmüştür. Görüşmeler ses kayıt cihazı ile kaydedilmiş ve sonrasında hiçbir değişiklik yapılmadan görüşmeci tarafından yazılı dökümleri bilgisayar ortamına geçirilmiştir. Toplanan nitel veriler okunarak içerik analizi yapılmış. Öncelikle veriler temalara, kategorilere ve kodlara ayrılmış; ardından kavramsal olarak benzer yanıtlar gruplanarak örüntüler oluşturulmuştur. Kodlar arasında kavramsal örtüşme sağlanmış, gerekli durumlarda kodlar birleştirilerek kategori başlıkları yeniden yapılandırılmıştır. Analiz sürecinde araştırmacılar, katılımcı ifadelerinden doğrudan alıntılara yer vererek verinin güvenilirliğini artırmıştır. Raporlar üzerinden oluşturulan veriler tematik içerik analizine tabi tutulmuştur. Tematik içerik analizi; aynı konu üzerinde

yapılan çalışmaların tema ya da ana şablonlar (matrix) oluşturularak eleştirel bir bakış açısı ile sentezlenmesi ve yorumlanmasını içermektedir. (Çalık&Sözbilir,2014) Toplanan veriler MAXQDA programı üzerinden analiz edilmiş ve analiz süreci sonlandırılmıştır.

Bulgular

48-72 aylık çocuğa sahip annelerin gözünden yürütücü işlevler: algılar, stratejiler ve günlük yaşam pratiklerini ortaya sunmayı amaçlayan bu çalışmada ‘Yürütücü İşlev Becerileri Kavramı, Planlama ve Organizasyon Becerisi, Öz Düzenleme, Çocuğun Katılım Hakkı ve Karar Süreçleri ile Hatırlama ve Bellek Takibi’ olmak üzere beş ana tema belirlenmiştir. Temaların kategorilere göre dağılımı Şekil 1’ de sunulmuştur.

Şekil 1: Alt Temaların Temalar Göre Dağılımı

Yürütücü İşlev Becerileri Kavramı

Bu tema, annelerin yürütücü işlev becerileri kavramına ilişkin bilgi düzeylerini ve bu kavramı günlük yaşamda nasıl yorumladıklarını ortaya koymaktır.

Kavram Bilgisi Hakkındaki Görüşler

Çalışma kapsamında annelere ilk olarak yürütücü işlev kavramı ile ilgili soru sorulmuştur ve annelerin görüşlerinin analizi Tablo 3’te yer almaktadır.

Tablo 3: Yürütücü işlev kavramına ilişkin anne görüşleri.

TEMA	Alt Tema	Frekans
Daha önce yürütücü işlevler kavramını duydunuz mu?	EVET	14
	HAYIR	1
Toplam		15

Tablo 3 incelendiğinde ‘Daha önce yürütücü işlevler kavramını duydunuz mu?’ sorusunun evet ve hayır olacak şekilde iki adet koddan oluştuğu görülmektedir. Burada 14 annenin daha önce yürütücü işlev kavramını duymamasına karşın bir annenin ise daha önce bu kavramı duyduğunu belirttiği görülmektedir. Yürütücü işlev kavramını daha önce duyduğunu belirten bir anne:

“ Şimdi tam nasıl ifade ederim bilemiyorum ama yani aslında düşündüğümüz şeyin davranışa dönüşmesi noktasında beynin organizasyonu diye tanımlayabilirim yani.”(A14).

Şeklinde görüşünü ifade etmiştir. Önceki soru ile bağlantılı olarak yürütücü işlev kavramını daha önce duyduğunu belirten anneye, Bu kavramların günlük yaşamda ve ebeveynlik uygulamalarında yeri nedir? Bu uygulamaları günlük yaşamda nerede ve nasıl kullanıyorsunuz? Sorusu sorulmuş ve soruya cevaben;

“ Çok böyle ifade edilmemiş olabiliriz ama Sorumluluk verebilir yani ya da ifade ettiği, talep ettiği şeyi kendisinin yapabilmesi noktasına teşvik edebilir. Anne baba tutumu bence bu önemlidir diye düşünüyorum. Eğer anne baba o sorumluluğunu alırsa çocuktan, çocuk zaten zihninde o düşünce üretse dahi davranışa dönüştürmekte zorlanacaktır. “ (A14). Sözleriyle açıklayarak konuya dair düşüncelerini ifade etmiştir.

Bu bulgular yürütücü işlevler kavramını katılımcı annelerin çok büyük çoğunluğu tarafından bilinmediğini, kavramı duyduğunu belirten katılımcının da ifadesinde kavramı net bir şekilde tanımlamakta zorlandığını ortaya koymaktadır.

Planlama ve Organizasyon Becerisi

Bu tema, annelerin çocuklarına ev içinde verdiği yönergeleri nasıl yapılandırdıklarını, bu yönergeleri hatırlatmak için hangi stratejileri kullandıklarını, rutinleri nasıl oluşturup sürdürdüklerini ve görevler tamamlanmadığında hangi müdahaleleri yaptıklarını ortaya koymaktadır. Bu temaya ilişkin annelere dört soru yöneltilmiştir. Soruların alt teması ve kodlaması Tablo 4’te verilmiştir.

Rutinlerin Planlanması ve Sürdürülmesi
Ev içi sorumluluklar için rutin kurallar belirleme
Rutinlere gönüllü katılım sağlama
Rutin kurallarının olmaması veya zayıf olması

Ev İçinde Yönerge Verme Sayısı

Annelere ‘ Evde yapması gereken rutinler sırasında çocuğunuza art arda kaç yönerge veriyorsunuz?’ sorusu yöneltildiğinde en çok iki-üç yönerge cevabı verilmiştir? Araştırmada yer alan katılımcıların çoğu, çocuklara verdikleri yönerge sayısını çocuğun yaşına, gelişim düzeyine ve dikkat süresine göre belirlediklerini ifade etmiştir. Bu durum, ebeveynlerin çocukların bilişsel kapasitelerine duyarlı yaklaştıklarını göstermektedir. Bununla birlikte, bazı katılımcılar daha fazla yönerge verebildiklerini ancak bu durumda çocuğun dikkatinin dağıldığını belirtmiştir. Bu bulgu, çocuklarla etkili iletişimde yönerge sayısının sınırlı ve çocuğa uygun biçimde verilmesinin önemini vurgulamaktadır.

Yönergeyi Hatırlatmak İçin Kullanılan Stratejiler

Annelere bu alt tema kapsamında ‘ Verdiğiniz yönergeler çocuğunuz tarafından anlaşılmadığında neler yapıyorsunuz? Hangi stratejileri uyguluyorsunuz?’ sorusu yöneltilmiştir ve cevapları analiz edilmiştir.

Katılımcılar, çocukların verilen yönergeleri unutmaları durumunda çeşitli destekleyici stratejiler kullandıklarını belirtmiştir. Bu stratejiler, çocukların görevleri bağımsız gerçekleştirebilmelerine yardımcı olmayı amaçlamaktadır. Görsel materyal kullanan katılımcı bir anne:

“ Sözlü olarak söylüyorum. Bazen bir kağıt üzerine çetele yapıyorum, yapıştırıyorum. Yaptıklarını işaretliyoruz yapmadıklarına işte hani farklı imgeler koyuyoruz, işte gülen yüz, ağlayan yüz, mutlu yüz. Bu şekilde planlama yapıyoruz. ” (A15). Şeklinde bu strateji hakkındaki uygulamalarını açıklamıştır.

Ebeveynlerin sadece yönerge vermekle kalmayıp aynı zamanda çocuğun bu yönergelere uygun hareket etmesini sağlamak için aktif destek sundukları görülmektedir.

Görevleri Tamamlamama Durumunda Müdahale

Birinci araştırmacı tarafından annelere ‘ Çocuğunuz verilen görevleri tamamlamadığında hangi müdahale yöntemlerini kullanıyorsunuz?’ sorusu sorulmuş ve katılımcıların cevapları analiz edilerek Şekil 2’de verilmiştir.

Şekil 2: Görevleri Tamamlamama Durumunda Müdahale

Araştırmaya katılan anneler, çocukların görevleri tamamlamamaları durumunda çeşitli müdahale yöntemleri uyguladıklarını ifade etmiştir. Bu yöntemler arasında tekrar hatırlatma, birlikte yapma, sonucunu yaşatarak öğretme, ceza/mahrum bırakma, alternatif sunma ve motivasyon sağlama gibi stratejiler öne çıkmaktadır. Araştırmaya katılan annelerden biri doğal sonuçlarla öğretmeyi tercih ettiğini belirtmiştir. Bu konudaki düşüncelerini ifade eden katılımcı bir anne:

“ Uyumadığım takdirde sonucunu görsün istiyorum. Aslında uyumadığı zaman bunun sonucunu görsün ve sonucunu gördüğünde evet annemin dediği doğru, doğru olan deyip bir sonrakinde bunu denemesi. Yani yaşayarak öğrenmesi. Tabii bu yaşayarak öğrenme. Çok abartmadan yaşayarak öğrenmesini istiyorum.” (A1). Diyerek görüşünü dile getirmiştir.

Buna göre ebeveynlerin daha çok destekleyici ve öğretici yaklaşımları tercih ettikleri, ancak bazı durumlarda sabır sınırlarının zorlandığı görülmektedir. Müdahale biçimleri, ebeveynin kendi duygusal kontrolü kadar çocuğun davranış biçimiyle de yakından ilişkilidir.

Rutinlerin Planlanması ve Sürdürülmesi

Birinci araştırmacı tarafından annelere ‘ Evde çocuğunuzun katılımını gerektiren rutin kurallarınız var mı? Bu kuralları nasıl belirliyorsunuz?’ sorusu sorulmuş ve katılımcıların cevapları analiz edilerek Şekil 3’te verilmiştir.

Şekil 3: Rutinlerin planlanması ve sürdürülmesi

Annelerin bir bölümü ev içinde belirli rutinlerin yer aldığını ve bu rutinlerin çocukların sorumluluk kazanmasına katkı sağladığını ifade etmiştir. Bu konuda katılımcı bir anne bu yöndeki düşüncelerini;

“ -Ama rutin olarak yapmıyorlar. Kuralları eşimle birlikte belirliyoruz. Yani bu kuralları belirlerken hani şuna dikkat ediyoruz aslında böyle sürekli başkasına işini yaptıran, oturduğu yerde işte hani büyüdüğünde işte yemeğini annesinden isteyen, suyunu babasından isteyen bireyler değil, daha bağımsız hani kendi işlerini yapabilsinler, kendi kendilerine yetebilsinler. Hani daha çok hani ayakları üzerinde durabilsinler. Bağımlı bireyler olmasınlar diye düşünüyoruz ve buna göre belirliyoruz.” (A5). Şeklinde paylaşmıştır.

Ancak bazı katılımcılar evde belirgin rutinlerin olmadığını ya da bu rutinlere çocukların katılımının sınırlı olduğunu ifade etmiştir. Rutinlerin bazı ailelerde yapılandırılmış şekilde işlediği, bazılarında ise esnek ya da zayıf biçimde sürdürüldüğü görülmektedir.

Bu bulgular, okul öncesi dönemde çocukların ev içindeki planlama ve organizasyon becerilerinin gelişiminde ebeveyn tutumlarının belirleyici bir rol oynadığını ortaya koymaktadır. Annelerin çoğu, çocuklara verilen yönergelerin anlaşılır olması ve çocuğun gelişim düzeyine uygunluğunu gözetmekte; gerektiğinde destekleyici stratejilerle süreci kolaylaştırmaktadır. Rutinlerin planlanmasında ve görevlerin tamamlanmasında ebeveynlerin hem yönlendirici hem de esnek bir tutum sergilediği görülmektedir. Bununla birlikte, bazı durumlarda karar verme yetkisi tamamen ebeveynde kalmakta ve çocukların sürece katılımı sembolik düzeyde kalabilmektedir. Müdahale stratejileri incelendiğinde, olumlu pekiştirme ve doğal sonuçla öğretme gibi yapıcı yaklaşımların yaygın olduğu, ancak zaman zaman tepkisel tutumların da gözlemlendiği görülmektedir. Sonuç olarak, ebeveynlerin yönlendirme biçimi, çocuğun bağımsızlık kazanımında ve sorumluluk alma becerilerinin gelişiminde temel bir yapı taşı olarak değerlendirilebilir.

Öz Düzenleme

Bu tema, annelerin çocuklarının yoğun duygularla başa çıkma, duygularını ifade ve kontrol etme, davranışlarını kontrol etme süreçlerinde nasıl destek olduklarını ve hangi stratejileri kullandıklarını ortaya koymaktadır. Bu temaya ilişkin annelere beş soru yöneltilmiştir. Annelerin verdiği cevaplar incelenerek alt tema ve kod olarak Tablo 5’te verilmiştir.

Tablo 5. Öz Düzenleme

Öz Düzenleme
Çocuğun Duygularını İfade ve Kontrol Etme Durumu
Duygularını İfade Etme Yöntemleri
Konuşarak ifade etme
Ağlayarak ifade etme
Sarılarak ifade etme
Şiddet göstererek ifade etme
Duygularını Kontrol Etme Yöntemleri
<u>Sakinleşme Stratejileri</u>
Kendi kendine sakinleşme
Destek alarak (ebeveyn müdahalesiyle) sakinleşme
Dikkatini başka yöne çekme
Alternatif sunarak yönlendirme
Dokunarak sakinleştirme
Çocuğun Davranışlarını Kontrol Etme Durumu
<u>Davranışsal Müdahale Yöntemleri</u>
Açıklama yapma
İkna etme
Sınır koyma ve süre verme
Tehdit etme / ceza verme
Mahrum bırakma
Zorla uygulama (fiziksel müdahale)
Beraber yaparak yönlendirme
Motivasyon sağlama
Rutin ve Değişime Tepki
Rutin değişikliğine kolay uyum sağlama
Rutin değişikliğine karşı sinirlenme / huzursuzluk
Alternatif sunarak değişikliğe uyum sağlama

Çocuğun Duygularını İfade ve Kontrol Etme Durumu

Duygularını İfade Etme Yöntemleri

Birinci araştırmacı tarafından bu alt tema doğrultusunda annelere Çocuğunuz duygularını nasıl ifade eder? Sorusu sorulmuş ve cevapları analiz edilmiştir.

Çoğu katılımcı, çocuklarının duygularını sözlü olarak ifade edebildiğini belirtmiştir. Özellikle olumlu duyguların ve basit duygusal tepkilerin konuşarak ifade edilmesi yaygın bir durumdur. Bazı çocuklar ise duygularını ağlayarak ya da şiddet göstererek ifade etmektedir. Buna göre katılımcı annelerden biri bu durumu şu sözlerle ifade etmiştir:

" Genelde konuşarak ifade eder ama bazen öfkesini şiddet göstererek yapabiliyor."(A3).

Bu durumda çocukların duygularını ifade etme biçimlerinde belirgin farklılıklar olduğu görülmektedir.

Duygularını Kontrol Etme Yöntemleri

Birinci araştırmacı tarafından bu alt tema doğrultusunda annelere Çocuğunuz yoğun duygusal durumlarda kendisini nasıl sakinleştirebiliyor? Sakinleşmediğinde siz nasıl bir yol izliyorsunuz? Nasıl destek veriyorsunuz? Sorusu sorulmuş ve cevapları analiz edilmiştir. Çocukların duygusal dalgalanma yaşadıklarında nasıl sakinleştikleri incelendiğinde, ebeveyn desteğiyle sakinleşmenin yaygın olduğu görülmektedir. Bazı çocuklar ebeveynlerinin yönlendirmesiyle duygularını düzenlerken, bazıları kendi kendine zamanla sakinleşebilmektedir.

Çocuğun Davranışlarını Kontrol Etme Durumu

Birinci araştırmacı tarafından annelere ‘ İsrarla istenmeyen davranışlar karşısında nasıl bir yaklaşım sergiliyorsunuz? Oyun veya diğer aktivitelerin sürekliliğinde çocuk aktiviteyi bırakmada zorlandığında hangi yöntemleri uyguluyorsunuz?’ soruları sorulmuş ve katılımcıların cevapları analiz edilerek Şekil 4’te verilmiştir.

Şekil 4: Çocuğun davranışlarını kontrol etme durumu

Davranışsal Müdahale Yöntemleri

Annelerin, çocuklarının istenmeyen davranışları karşısında farklı müdahale yöntemleri kullandıkları görülmüştür. Bu yöntemler arasında açıklama yapma, ikna etme, dikkatini başka bir yöne çekme, ödül sunma ve bazı durumlarda sınırlı ceza uygulamaları yer almaktadır. Araştırmaya katılan annelerden biri bu konuda düşüncelerini:

" Mahrum bırakma. Başka bir şeyi yok yani benim için. Çünkü söylemin çok etkili olduğunu düşünmüyorum bu konuda. Hani mahrum bırakmak, evet ben söylüyorum, defalarca kez söylüyorum ama bu konuda ortak bir paydada buluşamıyoruz. Dolayısıyla sorumluluklarını yerine getirmediğin için bunu veremeyeceğim ya da bunu alamayacaksın ya da bu hakkını kullanamayacaksın gibi" (A14). şeklinde ifade etmiştir.

Rutin ve Değişime Tepki

Annelere ‘Çocuğunuzun rutinlerinde bir değişiklik olduğunda nasıl tepki verir? Bu değişikliklere uyum sağlaması için hangi yolları izliyorsunuz? ’ sorusu sorulmuş ve yanıtlar incelenmiştir.

Çocukların rutin değişimlerine verdikleri tepkiler de farklılık göstermektedir. Bazı çocuklar değişikliklere kolayca uyum sağlarken, bazıları huzursuzluk veya öfke tepkileri göstermektedir. Bunun yanında, bazı anneler ikna etme yöntemini kullanarak çocuğun değişime uyum sağlamasını kolaylaştırdıklarını belirtmiştir. Bazı katılımcılar ise alternatif sunarak çocuklarını rutinlerin dışındaki durumlara uygun hale getirmeye çalıştıklarını ifade etmişlerdir.

Bulgular, çocukların duygularını ifade etme yöntemlerinde ve ebeveynlerin müdahale yaklaşımlarında çeşitlilik olduğunu göstermektedir. Annelerin çocuklarının duygu ve davranış

kontrol süreçlerine müdahale ederken, öncelikli olarak açıklama yapma, ikna etme ve duygusal destek sağlama yöntemlerini tercih ettiklerini göstermektedir. Çocukların çoğu duygularını sözlü olarak ifade edebilmekte, ancak yoğun duygusal tepkilerde ebeveyn desteğine ihtiyaç duymaktadır. Rutin değişimlerinde ise alternatif sunma ve açıklama yapma stratejileri, çocuğun uyum sürecini kolaylaştırmaktadır.

Çocuğun Katılım Hakkı Ve Karar Süreçleri

Bu tema, çocuğun katılım hakkını aile içi karar süreçleri bağlamında inceleyerek, çocukların günlük yaşamda ne ölçüde ve nasıl söz sahibi olduklarını ortaya koymaktadır. Bu kapsamda katılımcılara iki soru yöneltilmiştir. Annelerin verdiği cevaplar incelenerek alt tema ve kod olarak Tablo 6’da belirtilmiştir.

Tablo 6: *Çocuğun katılım hakkı ve karar süreçleri*

Çocuğun Katılım Hakkı Ve Karar Süreçleri
Günlük Yaşamda Çocuğun Karar Süreçlerine Katılımı
Ev içi ve dış mekân aktivitelerinde fikrini alma
Evet
Hayır
Ev için uzun süreli eşya alımında fikrini alma
Çocuğun fikrini alma
Seçenek sunarak karar sürecine dahil etme
Uyumlandırarak karar sürecine dahil etme
Kısıtlı alanlarda fikir sorma
Fikrini alıyor gibi yapıp son kararı ebeveynin vermesi
Karar sürecinden tamamen dışlama

Günlük Yaşamda Çocuğun Karar Süreçlerine Katılımı

Ev içi ve dış mekân aktivitelerinde fikrini alma

Bu alt tema kapsamında annelere ‘ Ev içi veya dış mekân aktiviteleri planlarken çocuğunuzun fikrini alıyor musunuz? Ne sıklıkta alıyorsunuz?’ sorusu yöneltilmiş ve alınan cevaplar analiz edilmiştir.

Çocuğun karar süreçlerine katılımı konusunda olumlu bir tutum sergileyen anne, genellikle çocuğun özgüvenini desteklemek amacıyla fikrini sorduğunu belirtmiştir. Bu konuda katılımcı bir anne çocuğun fikrini almanın önemine şöyle değinmiştir:

“ Hatta onun özgüveni gelişsin diye soruyoruz. Eşim de öyledir, biz sormaya çalışırız. Onun özgüvenini geliştirmek için ekstradan sorarım da. Tabii tabii farkında olsun diye de sorarım.” (A12). Şeklinde konuşarak çocuğun özgüveninin ve farkındalık düzeyinin artmasına katkı sağladığını ifade etmiştir.

Ev İçin Uzun Süreli Eşya Alımında Fikrini Alma

Bu alt tema kapsamında annelere ‘ Ortak karar süreçlerinde çocuğun katkısına nasıl yer veriyorsunuz?’ sorusu yöneltilmiş ve alınan cevaplar analiz edilmiştir. (Şekil 5).

Şekil 5 : Ev İçin Uzun Süreli Eşya Alımında Fikrini Alma

Araştırmada yer alan annelerin çoğu, günlük yaşamda çocuklarının fikirlerini almaya özen gösterdiklerini ifade etmiştir. Katılımcıların bir kısmı çocukların seçim süreçlerine aktif olarak katılmasına izin verirken, bazıları yalnızca belirli koşullarda veya sınırlı alanlarda çocuklarının fikirlerine başvurduklarını belirtmiştir. Bunun yanında, çocuğun karar sürecine katılımının bazen ebeveynin uygunluk değerlendirmesine bağlı olduğu görülmüştür. Bazı anneler, karar verme süreçlerinde çocuğun yaşını ve konunun önemini dikkate aldıklarını, her konuda çocuğun fikrine başvurmadıklarını ifade etmiştir. Bu bağlamda fikir belirten katılımcı bir anne:

“ Hayır almayız yani orada. O karar bize ait. Daha çok yetişkinlere yani bir elektronik eşya alırken, bir işte halı alırken, bir koltuk alırken, bir mutfak eşyası alırken onların görüşlerini almıyoruz. ” (A5). Şeklinde düşüncelerini ifade etmiştir. Ayrıca bazı katılımcılar,

çocukların belirli yaşta karar verme olgunluğuna sahip olmadığını düşündükleri için katılımı sınırladıklarını ifade etmiştir. Katılımcı annelerden bir tanesi bu konuda:

" Yani şöyle yarı yarıya %90 onların diyemem. Çünkü akledemiyorlar, öngöremeyebiliyorlar." (A13).diyerek konuya ilişkin görüşlerini paylaşmıştır.

Katılımcıların büyük çoğunluğu çocuklarının kendi eşyalarıyla ilgili karar süreçlerinde aktif katılım sağladıklarını belirtmiştir.

Elde edilen bulgular, çocuğun katılım hakkını aile içi karar süreçleri bağlamında inceleyerek, çocukların günlük yaşamda ne ölçüde ve nasıl söz sahibi olduklarını ortaya koymaktadır. Araştırma bulguları, ebeveynlerin özellikle çocukların bireysel yaşamlarını etkileyen konularda (kıyafet, oyuncak, aktivite seçimi gibi) çocukların fikirlerini alma eğiliminde olduklarını, ancak aileyi genel olarak ilgilendiren konularda (ev eşyası seçimi gibi) çocukların karar süreçlerinden büyük ölçüde dışlandığını göstermektedir. Bu durum, çocukların katılım hakkının çoğu zaman sembolik düzeyde kaldığını, gerçek anlamda karar verici olarak görülmediklerini ortaya koymaktadır. Ebeveynlerin çoğu, çocuğa seçenek sunma, önceden uyumlandırma ya da yalnızca gönlünü hoş tutma amacıyla görüş alma gibi dolaylı yollarla katılım sağlarken, kararın nihayetinde kendi ellerinde olduğunu vurgulamaktadır. Çocuğun yaşına, olgunluğuna ve konunun önemine göre katılım düzeyinin değiştiği görülmektedir. Çalışma genel olarak, çocuk hakları bağlamında "Katılım Hakkı"nın aile içinde halen gelişmeye açık bir alan olduğunu ve ebeveyn tutumlarının bu hakkın etkili biçimde uygulanmasında belirleyici rol oynadığını ortaya koymaktadır.

Hatırlama ve Bellek Takibi

Bu tema, annelerin çocuklarının hatırlama becerilerini nasıl destekledikleri, unutmalar karşısında nasıl tepkiler verdikleri ve bellek gelişimini nasıl gözlemlediklerini ortaya koymaktadır. Bu kapsamda katılımcılara iki soru sorulmuştur verilen cevaplar doğrultusunda alt tema ve kodlar analizi Tablo 7’de belirtilmiştir.

Tablo 7: Hatırlama ve Bellek Takibi

Hatırlama ve Bellek Takibi
Öğrendiklerini Hatırlama Durumlarının Farkında Olma
İlgi duyduğu konuları hatırlama
Genel hafızanın güçlü olması

Hatırlamayan Çocuklar İçin Başvurulan Yöntemler.
Tekrar ederek pekiştirme
Gözlem yaparak hatırlatma
Soru sorarak hatırlamayı destekleme

Öğrendiklerini Hatırlama Durumlarının Farkında Olma

Bu alt tema kapsamında annelere ‘ Çocuğunuzun öğrendiklerini hatırlama durumunu nasıl gözlemliyorsunuz? Evde unuttuğu şeyler oluyor mu?’ sorusu sorulmuş ve cevaplar analiz edilmiştir. Burada 13 anne evet ve iki anne ise ilgi duyduğu konuları hatırlar cevaplarını vermiştir. Araştırmaya katılan annelerden biri, çocuğun ilgi alanlarının hatırlama üzerindeki etkisinden şu şekilde bahsetmiştir.

“ Öğrendiklerini hatırlamada ilgi duyup duymaması çok önemli. İlgi duyduğu bir şey ise onu zaten tekrarladığı için unutmuyor. Hatırlatmaya fırsat vermiyor. Ama ilgi duymadığı bir şeyse, dikkatini çekmediyse hatırlamayabilir.” (A1). Diyerek, çocuğun ilgi duyduğu içeriklerin, bilginin hatırlanmasında kolaylaştırıcı bir rol üstlendiğini de ifade etmiştir.

Bu bulgular çocukların hatırlama durumlarında farklılıklar olduğunu göstermektedir. Ayrıca çocukların hatırlama durumlarının ne düzeyde olduğunu, annelerin çocuklarının hatırlama durumlarını nasıl gözlemlediğini, hatırlama süreçlerinde aktif bir yönlendirici rol üstlendiklerini de ortaya koymaktadır.

Hatırlamayan Çocuklar İçin Başvurulan Yöntemler.

Yukarıdaki alt tema ile bağlantılı olarak annelere ‘ Hatırlaması için nasıl bir yol izliyorsunuz?’ sorusu sorulmuş ve cevapları analiz edilmiştir. Hatırlamanın desteklenmesi gereken durumlarda ebeveynlerin başvurduğu stratejilere ilişkin bulgular da dikkat çekicidir. Tekrar ederek pekiştirme, gözlem yaparak hatırlatma ve soru sorarak hatırlamayı destekleme yöntemlerini kullandıkları belirlenmiştir.

Araştırmaya katılan annelerden biri, “ *Soru sorarak bazen, bazen geçmişle ilgili konuşuyoruz* ” (A5). Bu şekilde konuşarak hatırlamayı tetikleyici stratejilerin bilinçli olarak kullanıldığını ortaya koymuştur. Bu yaklaşım, çocuğun pasif değil aktif bir şekilde hatırlamaya yönlendirilmesini sağlamaktadır. Ayrıca, çocukların öğrendiklerini paylaşımları da hatırlamayı destekleyen bir unsur olarak değerlendirilmiştir.

Bulgular hatırlama sürecinin aktif olarak yapılandırılabilir bir süreç olduğunu ve ebeveyn müdahalesinin bu süreçte belirleyici bir rol oynadığını göstermektedir.

Tartışma ve Sonuç

48-72 aylık çocuğa sahip annelerin yürütücü işlev becerilerine ilişkin bilgi düzeylerini, düşüncelerini ve günlük yaşam pratiklerini belirlemek amacıyla yapılan bu araştırma kapsamında gönüllü 15 anne ile yürütülmüştür. Cevaplar yürütücü işlev becerileri kavramı, planlama ve organizasyon becerileri, öz düzenleme, çocuğun katılım hakkı ve karar süreçleri ile hatırlama ve bellek takibi olmak üzere beş temaya ayrılmıştır. Bu temalar doğrultusunda alt temalar ve kodlar oluşturularak analiz edilmiştir. Araştırmaya katılan annelerin 14'ü yürütücü işlev becerileri kavramını duymamışken bir anne ise daha önce bu kavramı duyduğunu belirtmiştir. Annelere ev içinde yönerge verme sayısı sorulduğunda ise en çok üç-dört cevabı verilmiştir. Annelerin yönergeyi hatırlamayan çocuklar için kullandıkları stratejilerden belirgin olanları ise tekrar ederek hatırlatma ve rol model olma olmuştur. Görevleri tamamlamama durumlarında başvurulacak müdahale yöntemlerinden öne çıkanlar ise tekrar hatırlatma ve sonucunu yaşatarak öğretme olmuştur. Rutinlerin planlanması ve sürdürülmesi temasına bağlı olarak ev içi sorumluluklar için rutin kuralların belirleme sürecinde ise kapasitesine göre, çocuğun talepleri doğrultusunda ve anne babaların birlikte kural belirliyor olması verilen cevaplardan bazılarıdır. Çocuğun duygularını ifade etme yöntemlerinden en çok başvurulunu konuşarak ifade etme ve ağlayarak ifade etmedir. Duygularını kontrol etme kategorisinde ise çocukların sakinleşme stratejileri yer almaktadır. Anneler çocuklarının ebeveynlerinden destek alarak sakinleştiklerini belirtmişlerdir. Bazı anneler ise çocuklarının kendi kendine sakinleşmeyi tercih ettiğini söylemiştir. Anneler çocukların davranışlarını kontrol etme durumlarından en çok açıklama yapma, ikna etme ve mahrum bırakma yöntemlerini kullanmışlardır. Araştırmaya katılan annelerin sekizi çoğunluğu rutin değişikliklerine adapte olmada problem yaşamadıklarını üçü rutinlerinde olan değişikliği kabul etmek istemediğini, dört tanesi ise bu duruma sinirlenerek tepki gösterdiğini belirtmiştir. Ev içi ve dış mekan aktiviteleri planlarken çocuğun fikrini alma durumlarına annelerin 12 si evet, üç tanesi hayır cevabını vermiştir. Uzun süreli kullanılacak eşyaların alımında çocuğun fikrini alma durumlarında ise annelerin büyük bir kısmının cevabı hayır olmuştur. Bazı anneler ise fikrini alıyor gibi yapıp son kararın yine kendisinde olduğunu ifade etmişlerdir. Annelere çocukların hatırlama durumları ile ilgili soru sorulduğunda çocukların öğrendiklerini hatırlama düzeylerinin farkında olduklarını ve bu süreci gözlemlediklerini ifade etmişlerdir. 13 anne çocuğunun iyi bir şekilde hatırladığını iki anne ise ilgi duyduğu şeyleri hatırladığını ifade etmiştir. Hatırlamayan çocuklar için başvurdukları yöntemlere ise tekrar ederek ve soru sorarak hatırlamayı desteklediklerini belirtmişlerdir. Yürütücü işlev becerilerinin gelişiminde biyolojik

olgunlaşma önemli bir temel oluşturmakla birlikte, çevresel etkenlerin bu süreci önemli ölçüde biçimlendirdiği görülmektedir (Blair, 2006; Ceci, 1991). Özellikle erken çocuklukta yaşanan olumsuz deneyimler —örneğin ihmal ya da istismar— dikkat eksikliği, duygusal düzensizlik ve dil gelişiminde gecikme gibi sorunlarla ilişkilendirilmiştir (O'Connor et al., 2000). Ayrıca, çocuğun bu becerileri edinme süreci, bakım verenin duyarlılığı, çocuğun dikkatini ve problem çözme becerilerini destekleyici deneyimlere erişimi gibi sosyal ve fiziksel çevre koşullarına bağlı olarak farklılık gösterebilmektedir. Anne depresyonu, yetersiz sosyal destek, kronik stres, şiddet ve yoksulluk gibi olumsuz çevresel faktörler, yürütücü işlev gelişimini sekteye uğratabilecek riskler arasındadır (Goldsmith & Rogoff, 1997). Araştırmalar, ebeveyn tutumlarının ve ev ortamındaki etkileşim kalitesinin sadece yürütücü işlevlerden sorumlu beyin bölgelerinin gelişimini değil, aynı zamanda çocuğun genel bilişsel ve davranışsal gelişimini de etkilediğini göstermektedir (Hackman, Farah & Meaney, 2010). Örneğin, çocukların problem çözme esnasında ebeveynlerinden aldığı yapılandırılmış ve aşamalı destek (yapı iskelesi), yürütücü işlev becerilerinin de gelişimine katkı sağlayacaktır. (Hammond et al., 2012). Bu bulgular, ebeveyn rehberliğinin çocukların yürütücü işlev becerilerinin gelişmesinde ne denli kritik olduğunu ortaya koymaktadır. Araştırma sonucunda, ailelerin özellikle görsel materyal kullanımı ve açıklayıcı iletişim teknikleri konusunda bilinçlendirilmesinin çocukların yürütücü işlev becerilerini artırabileceği anlaşılmıştır. Ayrıca, çocukların bireysel özellikleri ve gelişimsel ihtiyaçları doğrultusunda farklı müdahale stratejilerinin esnek biçimde uygulanmasının önem taşıdığı görülmektedir. Özellikle annelerin zamanla çocuklarının güçlü ve zayıf yönlerini fark ederek esnek ve bireyselleştirilmiş stratejiler geliştirmeleri, ebeveyn duyarlılığı ve rehberliğinin önemini vurgulamaktadır.

Öneriler

1. Ebeveyn Eğitim Programları:

- Ebeveynlere yürütücü işlevler konusunda farkındalık kazandıracak atölyelerin düzenlenmesi.
- Çocuk katılımı ve doğal sonuçla öğretme stratejileri üzerine uygulamalı eğitim modülleri geliştirilmesi.

2. Uygulama Rehberi:

- Öğretmen ve okul öncesi program yöneticilerine, aile-okul iş birliğini pekiştirecek protokollerin önerilmesi.

- Rutin ve kuralların gelişim düzeyine uygun şekilde belirlenmesi için basit kontrol listelerinin hazırlanması.

3. Gelecek Araştırmalar İçin Öneriler:

- Daha geniş ve farklı sosyo-demografik gruplardan katılımcılarla tekrarlanması,
- Karar süreçlerinde çocuğun sesinin ne ölçüde sürdürülebilir olduğu üzerine uzunlamasına çalışmalar yapılması,
- Yürütücü işlevleri ölçen nicel araçlarla nitel bulguların karşılaştırılması.

Özet

Ergenler, zamanlarının büyük bir çoğunluğunu kendileri için hem akademik hem de psiko-sosyal gelişim anlamında önemli yeri olan okullarda geçirmektedirler. Meslek liselerinde öğrenim gören ergenlerin bir kısmı isteyerek ve hazırlandığı meslek dalına ilgi duyarak okula devam ederken bir kısmı da çeşitli zorunlu sebeplerden dolayı isteksiz veya ilgisiz olarak okula devam etmektedir. Bu nedenlere bağlı olarak öğrencilerin psikolojik sağlamlıkları ile okulda öznel iyi oluşlarının etkilenebileceği düşünüldüğünden bu çalışmada meslek lisesinde okuyan öğrencilerin psikolojik sağlamlıkları ile okulda öznel iyi oluşları arasındaki ilişkide mesleki ilginin moderatörlük rolünü incelemek amaçlanmıştır. Bu çerçevede yapılan araştırmada nicel bir araştırma yöntemi olan ilişkisel tarama modeli kullanılmıştır. Araştırmanın örneklemini 2024-2025 eğitim öğretim yılında Kuzey Kıbrıs Türk Cumhuriyeti Milli Eğitim ve Kültür Bakanlığı'na bağlı bir meslek lisesinde okuyan öğrenciler oluşturmuştur. Araştırmanın örneklemini, tesadüfi olmayan örnekleme yöntemlerinden biri olan uygun (kolayda) örnekleme yöntemi kullanılarak belirlenmiştir. Bu yöntem, araştırmacının ulaşma kolaylığı ve mevcut imkânları doğrultusunda tercih edilmiştir. Verileri toplamak için Kişisel Bilgi Formu, Psikolojik Sağlamlık Ölçeği ve Ergenler İçin Kısa Okulda Öznel İyi Oluş Ölçeği kullanılmıştır. Uygulama neticesinde 47'si (%31,3) kadın 103'ü (%68,7) de erkek olmak üzere toplam 150 öğrenciden veri toplanmıştır.

Elde edilen verilerin analizinde meslek lisesinde okuyan öğrencilerin psikolojik sağlamlıkları ile öznel iyi oluşları arasındaki ilişkide mesleki ilginin moderatörlük rolü analiz edilmiştir. Yapılan moderatörlük analizi sonucunda psikolojik sağlamlık ile okulda öznel iyi oluş arasındaki ilişkinin, öğrencilerin seçtikleri meslek alanına duydukları ilgi düzeyine göre anlamlı bir şekilde değişmediği bulunmuştur ($B = 0.175$, $p = .213$). Bu sonuç, mesleki ilginin psikolojik sağlamlık ile öznel iyi oluş arasındaki ilişkiyi güçlendiren ya da zayıflatan bir etkisi olmadığını göstermektedir. Araştırma bulguları doğrultusunda öneriler sunulmuştur.

Anahtar Kelimeler: Psikolojik sađlamlık, Öznel iyi oluş, Mesleki ilgi, Meslek lisesi

The Relationship Between Psychological Resilience and Subjective Well-Being: Understanding the Role of Vocational Interest

Abstract

Adolescents spend most of their time in schools, which are important for them in terms of both academic and psychosocial development. While some of the adolescents studying in vocational high schools continue their education willingly and with interest in the profession they are preparing for, some continue their education reluctantly or uninterestedly due to various compelling reasons. Since it is thought that the psychological resilience of the students and their subjective well-being at school may be affected due to these reasons, this study aimed to examine the moderating role of vocational interest in the relationship between the psychological resilience of the students studying in vocational high schools and their subjective well-being at school. In this context, the relational screening model, which is a quantitative research method, was used in the research conducted. The sample of the study consisted of students studying in a vocational high school affiliated to the Ministry of Education of the Turkish Republic of Northern Cyprus in the 2024-2025 academic year. The sample of the study was determined using the convenience sampling method, which is one of the non-random sampling methods. This method was preferred in line with the researcher's accessibility and available opportunities. Personal Information Form, Psychological Resilience Scale and Short Subjective Well-being Scale for Adolescents in School were used to collect data. As a result of the application, data were collected from a total of 150 students, 47 (31.3%) of whom were female and 103 (68.7%) were male.

In the analysis of the obtained data, the moderating role of vocational interest in the relationship between psychological resilience and subjective well-being of students studying at vocational high schools was analysed. As a result of the moderating analysis, it was found that the relationship between psychological resilience and subjective well-being at school did not change significantly according to the level of interest of the students in the chosen vocational field ($B = 0.175$, $p = .213$). Result shows that vocational interest does not have an effect that strengthens or weakens the relationship between psychological resilience and subjective well-being. Suggestions are presented in line with the research findings.

Keywords: Psychological resilience, Subjective well-being, Vocational interest, Vocational high school

Giriş

Psikoloji bilimi son yıllarda kaygı, depresyon ve şiddet gibi olumsuz sağlık boyutlarına odaklanmak yerine ruh sağlığı alanında pozitif psikolojinin etkisinin artmasıyla birlikte mutluluk, yaşam doyumu, psikolojik sağlamlık, iyimserlik ve iyi oluş gibi olumlu sağlık boyutlarına odaklanmıştır (Doğan ve Eryılmaz, 2013; 2010; Sarıcaoğlu, 2011). Psikolojik sağlamlık, literatürde farklı şekillerde tanımlanmakla birlikte Karcı ve Balcı Çelik (2024) tanımlardaki ortak özellikleri şu şekilde ifade etmektedir; etkin ve dinamik bir yapıya sahip olunması, zorlayıcı yaşam koşullarına karşı başarılı bir şekilde mücadele edilmesi, pozitif uyumun ortaya konması, yeterlik düşüncesinin gelişmesi. Buna göre psikolojik sağlamlık; hastalıklardan, psikolojik sorunlardan, olumsuz yaşantılardan ve stresten hızlı bir şekilde kurtulabilme, iyileşme ve kendini toparlayabilme gücü olarak da tanımlanmaktadır. Başka bir deyişle, kişinin olumsuz şartların üstesinden başarıyla gelebilme ve yaşanan yeni duruma uyum sağlama kabiliyetidir (Doğan, 2015). Psikolojik dayanıklılık doğuştan gelen bir özellik veya kişisel bir nitelik değil, çevre ve çocuk etkileşimleri nedeniyle insana özgü bir adaptasyon sistemidir (Yavuz, 2023). Bu nedenle insan yaşamının her döneminde olduğu gibi ergenlik döneminde de psikolojik sağlamlık dikkatle ele alınmalıdır.

Bilindiği gibi ergenlik dönemi insan gelişimi açısından en önemli dönemlerden biridir. Bu dönemde, ergenler psikolojik, fizyolojik, bilişsel, sosyal ve duygusal açılardan kendileri için önemli ve büyük değişimler yaşarlar. Ergenler çevreleriyle daha olumlu ilişkiler kurmak, sosyal kimliklerini oluşturmak, duygusal açıdan bağımsızlık kazanmak ve geleceklerini iyi bir şekilde planlamak gibi gelişim görevlerini üstlenirler (Canbay, 2010). Ayrıca ergenlik dönemi, insan gelişiminin en fırtınalı dönemlerinden biri olduğu için bu dönemdeki yaşantılar bireyin ergenlik ve yetişkinlikteki psikolojik sağlığına etki edeceği düşünülmektedir (Duy ve Yıldız, 2014). Bu çalkantılı dönemde ergenler gelişim görevlerinin üstesinden gelmeye çalışırken çeşitli düzeylerde stres, duygusal zorluklar, belirsizliklerle karşı karşıya kalırlar. B Bu durumlarla başa çıkabilmeleri için psikolojik olarak sağlam olmaları süreci kolaylaştırır. Tam bu noktada kendilerini nasıl hissettikleri sorusu gündeme gelir ki bu da öznel iyi oluşu akla getirir. Döneme özgü özellikler psikolojik sağlamlık gibi ergenlerin öznel iyi oluşlarını da etkileyebilir. Diener (1984) öznel iyi oluşu, bireyin kendi hayatını değerlendirerek bununla ilgili bir yargıya varması olarak tanımlanmaktadır. Öznel iyi oluş, bilişsel ve duygusal olarak bireylerin hayatlarına dair oluşturdukları değerlendirmeleri temsil etmektedir. Okulda öznel iyi oluş ise öğrencilerin okuldaki yaşantılarını öznel olarak nasıl değerlendirdiklerini ve okulda duygusal olarak ne

yaşadıklarını ifade etmektedir (Tian, 2008). Ergenlerin okul hayatındaki öznel iyi oluşları, ilerleyen yaşamlarını şekillendirmede önemlidir. Buna göre okulda öznel iyi oluş, öğrencilerin okul hayatlarını kendi yaşam deneyimlerine göre bilişsel açıdan değerlendirmelerini ve okul içerisinde olumlu, olumsuz yaşadıkları bütün duygusal halleri içeren genel mutluluk halidir (Şanal-Güngör, 2020).

Ergenlik dönemindeki önemli dönüm noktalarından biri de meslek seçimi ile ilgilidir. Meslek ilgisi bu konuda belirleyici bir rol oynar. Mesleki ilgi çocuklukta oyun aracılığı ile şekillenmeye başlasa da ergenlikte farkındalığın artması ile birlikte daha belirgin hale gelir. Mesleki ilgi, mesleki bir etkinlikten sonra yaşanan doyum sonucunda etkinliğe tekrar yönelme isteği ve mesleğe ilişkin sorumluluklarını yerine getirirken yaşanan memnuniyet halidir (Kuzgun, 2006, s.64). Ayrıca mesleki ilgi, alan yazında mevcut olan diğer çalışmalar da göz önünde bulundurarak bireyin bir meslek ya da mesleğe yönelik faaliyetlere karşı gösterdiği eğilimin düzeyi olarak da tanımlanır (Çelik, 2019). Ergen gelişen meslek ilgisi sayesinde ilgi ve yeteneklerini keşfederken geleceğe yönelik bir amaç oluşturmaya başlar ki bu da onun yaşamına yönelik olumlu hisler geliştirmesine yani öznel iyi oluşuna katkıda bulunur. Ayrıca mesleki ilgi sayesinde ergen bir amaca yönelmekle kalmayıp hem belirsizlik hem de stres karşısında güçlenerek psikolojik sağlamlığının gelişmesine katkı sağlar.

Son yıllarda literatürde ergenlerde psikolojik sağlamlık ve öznel iyi oluş konularının farklı açılardan ele alınmaya çalışıldığı görülmektedir. Psikolojik sağlamlık ve öznel iyi oluşun; eylemli kişilik özellikleri (Düzgün, 2025), belirsizliğe tahammülsüzlük (Ülker, 2024), telefon bağımlılığı (Sağar, 2022), özyeterlik ve içsel motivasyon (Yıldız ve Kardaş, 2021), psikolojik sağlamlığın; gelecek beklentisi ve mutluluk korkusu (Deniz, Yıldırım, & Uzun, 2022), öznel iyi oluşun; mutluluk (Baltacı & Akbulut, 2021), bilişsel esneklik ve öz şefkat (Topkaya, Köksal, & Bayram, 2022), karar verme stilleri (Ulga, 2024) gibi konularla ilişkileri farklı açılardan ele alınarak incelendiği görülmüştür. Meslek lisesi öğrencileri ile ilgili yapılan araştırmalara bakıldığında ise mesleğe yönelik tutum (Özdemir ve Kaya, 2023; Sural, vd, 2023), benlik saygısı ve özyeterlik (Karaman ve Artan, 2022), kariyer kaygıları (Çalı ve Doğar, 2021) gibi konuların ele alındığı görülmektedir.

Özetle, hem yaşam koşulları hem de döneme özgü güçlükler bazı psikolojik risklere yol açabilir. Ergenin bunlarla baş etme potansiyeli onun psikolojik sağlamlığına işaret eder. Öznel iyi oluş ise ergenin yaşamına karşı daha olumlu hislere sahip olması ile açıklanabilir. Meslek ilgisi ergenin geleceğe yönelik umutla bakmasına ve doyum sağlamasına katkı sağlayabilir. Bu bağlamda psikolojik sağlamlık düzeyi yüksek, hem bilişsel hem de duygusal olarak yaşamına

olumlu yaklaşan, hem de ilgi duyduğu bir meslek alanına yönelen bir ergenin yaşam uyumunun daha yüksek ve pozitif olacağı düşünülmektedir. Bilindiği gibi olumlu duygular yaşayan bireyler, stresli olaylarda daha çabuk toparlanabilir, başa çıkma stratejileri geliştirebilir ve yaşam doyumunu artırabilirler. Pozitif duygular, kişinin psikolojik sağlamlığını güçlendiren önemli birer araç olabilirler (Arslan, 2015). Bu da ruh sağlığı yerinde bir toplum için anahtar görevi görebilir. Bu nedenle bu konuda yapılacak geniş çaplı ve çok boyutlu araştırmaların önemli olduğu düşünülmektedir.

Tüm bu bilgiler ışığında bu araştırmanın amacı, meslek lisesinde öğrenim gören ergenlerde psikolojik sağlamlık ile okulda öznel iyi oluş arasındaki ilişkiyi incelemek ve bu ilişkide meslek alanına duyulan ilginin düzenleyici (moderatör) bir rol oynayıp oynamadığını test etmektir. Bu temel amaç doğrultusunda araştırmada aşağıdaki sorulara yanıt aranmıştır.

1. Meslek lisesinde öğrenim gören ergenlerin psikolojik sağlamlıkları ile öznel iyi oluş arasında nasıl bir ilişki vardır?
2. Meslek lisesinde öğrenim gören ergenlerin psikolojik sağlamlıkları ile öznel iyi oluş arasındaki ilişkide meslek alanına duyulan ilgi düzenleyici (moderatör) bir rol oynamakta mıdır?

Yöntem

Bu araştırmada araştırmanın amacı ve araştırma soruları göz önünde bulundurularak nicel araştırma yöntemlerinden biri olan ilişkisel tarama modeli kullanılmıştır. İlişkisel tarama modeli, iki ve daha çok sayıdaki değişken arasında birlikte değişim varlığı ya da derecesini belirlemeyi amaçlayan araştırma modelidir. Bu modeldeki araştırmalarda araştırmacı ya da araştırmacılar değişkenler arasındaki ilişkiyi incelemektedirler (Karasar, 2018). Araştırmanın temel amacı, ergenlerde psikolojik sağlamlık ile okulda öznel iyi oluş arasındaki ilişkiyi incelemek ve bu ilişkide meslek alanına duyulan ilginin düzenleyici (moderatör) bir rol oynayıp oynamadığını test etmektir. Bu doğrultuda **korelasyon analizi** ve Hayes'in (2022) PROCESS eklentisi ile moderatörlük analizi uygulanmıştır.

Araştırmanın örneklemini 2024-2025 eğitim-öğretim yılında Kuzey Kıbrıs Türk Cumhuriyeti Milli Eğitim Bakanlığı'na bağlı bir meslek lisesinde okuyan öğrenciler oluşturmuştur. Araştırmanın örneklemini, tesadüfi olmayan örnekleme yöntemlerinden biri olan uygun (kolayda) örnekleme yöntemi kullanılarak belirlenmiştir. Bu yöntem, araştırmacının ulaşma kolaylığı ve mevcut imkânları doğrultusunda tercih edilmiştir. Bu yöntemle 47'si (%31,3) kadın 103'ü (%68,7) de erkek olmak üzere toplam 150 öğrenciden veri toplanmıştır. Bu durum

katılımcıların büyük çoğunluğunun erkek öğrencilerden oluştuğunu göstermektedir. Katılımcıların sınıf düzeylerine göre dağılımlarına bakıldığında 33'ü (%22) 9.sınıf, 34'ü (%22,7) 10.sınıf, 63'ü (%42) 11.sınıf ve 20'si (13,3) 12. sınıf öğrencisidir. Katılımcılardan 110 (%73,3) kişi seçtikleri meslek alanına ilgilerinin olduğunu belirtirken 40 (%26,6) kişi ise seçtikleri meslek alanına ilişkin ilgilerinin olmadığını belirtmiştir.

Araştırmada veri toplamak amacıyla araştırmacı tarafından geliştirilen Kişisel Bilgi Formu, Smith ve arkadaşları (2008) tarafından geliştirilen Doğan (2015) tarafından Türkçe'ye uyarlanan Psikolojik Sağlamlık Ölçeği ve Tian ve diğerleri (2015) tarafından geliştirilen Özdemir ve Sağkal (2016) tarafından Türkçe geçerlik ve güvenirlik çalışması yapılan Ergenler İçin Kısa Okulda Öznel İyi Oluş Ölçeği kullanılmıştır. Katılımcıların okul yaşamlarına ve sosyo-demografik durumlarına ilişkin temel bilgiler Kişisel Bilgi formu aracılığı ile toplanmıştır. Psikolojik Sağlamlık Ölçeği 6 maddeden oluşan 5'li Likert Tipi bir derecelendirme ölçeğidir. Ölçekte alınabilecek en düşük puan 6 iken en yüksek puan ise 30'dur (Doğan, 2016). Katılımcıların okuldan öznel iyi oluş düzeylerini saptamak için ise Ergenler İçin Kısa Okulda Öznel İyi Oluş Ölçeği kullanılmıştır. Bu ölçek ise 10 sorudan oluşan 6'lı Likert Tipi bir derecelendirme ölçeğidir. Okul doyumu ve duygu (olumlu-olumsuz) boyutu olmak üzere iki yapıyı ölçmektedir. Okul doyumu için 8 soru duygu boyutu için de 2 soru bulunmaktadır (Özdemir ve Sağkal, 2016).

Araştırmanın verilerini analiz etmek için veriler Verilerin analizinde SPSS (Statistical Package For Social Science) 27 paket programı ve PROCESS v4.2 makrosu (Hayes, 2022) kullanılmıştır. İlk olarak psikolojik sağlamlık ve okulda öznel iyi oluş arasındaki ilişkiyi test etmek için Pearson korelasyon analizi yapılmıştır. Ardından, psikolojik sağlamlık ile öznel iyi oluş arasındaki ilişkide mesleki ilginin düzenleyici etkisini test etmek amacıyla PROCESS Model 1 kullanılmıştır (mesleki ilgi değişkeni ilgi yok ve ilgi var olarak ikili biçimde kodlanmıştır) ve doğrusal regresyon temelli etkileşim analizi uygulanmıştır.

Bulgular

Tablo1: Katılımcıların Psikolojik Sağlamlıkları ile Öznel İyi Oluşları Arasındaki Korelasyon İlişkisi

		Psikolojik sağlamlık	Okulda öznel iyi oluş
Psikolojik sağlamlık	Pearson	1	.114
	Korelasyon Sig. (2-tailed)		.166

	N	150	150
Okulda öznel iyi oluş	Pearson	.114	1
	Korelasyon		
	Sig. (2-tailed)	.166	
	N	150	150

Yapılan korelasyon analizi sonucunda, psikolojik sağlamlık ile okulda öznel iyi oluş arasında pozitif yönde ancak zayıf bir ilişki bulunmuştur ($r = .114$, $p = .166$). Bu bulgu, psikolojik sağlamlık düzeyi arttıkça öznel iyi oluşun da artma eğiliminde olduğunu göstermekle birlikte bu ilişki istatistiksel olarak anlamlı değildir ($p > .05$).

Tablo2: *Katılımcıların Psikolojik Sağlamlıkları ile Öznel İyi Oluşları Arasındaki İlişkide Meslek Alanına Duyulan İlginin Düzenleyici (Moderatör) Etkisi*

Değişken	B	SE	t	p	95% CI
Sabit (constant)	7.247	4.724	1.534	.127	[-2.09, 16.58]
Psikolojik Sağlamlık	-0.221	0.256	-0.863	.389	[-0.73, 0.28]
Meslek İlgi	-2.381	2.598	-0.916	.361	[-7.52, 2.75]
Etkileşim ($X \times W$)	+0.175	0.140	1.252	.213	[-0.10, 0.45]

Araştırmada yapılan analizler sonucunda regresyon modelinin genel olarak anlamlılık düzeyine çok yakın bir sonuç vermekle birlikte ($F(3, 146) = 2.55$, $p = .058$, $R^2 = .056$) istatistiksel olarak anlamlı olmadığı saptanmıştır ($p = .058$). Etkileşim terimi de (psikolojik sağlamlık x meslek ilgisi) anlamlı bulunmamıştır ($B = .175$, $p = .213$). Bu bulgular, meslek ilgisinin psikolojik sağlamlık ile öznel iyi oluş arasındaki ilişkiyi anlamlı düzeyde değiştiren bir faktör olmadığını göstermektedir. Etkileşim teriminin modele katkısı %1.3 olup ($R^2\text{-change} = .0133$), bu katkının etki büyüklüğü Cohen'in f^2 katsayısına göre küçük (≤ 0.02) düzeydedir.

Tartışma ve Sonuç

Bu araştırmada, meslek lisesinde öğrenim gören ergenlerin psikolojik sağlamlık düzeyleri ile okulda öznel iyi oluşları arasındaki ilişki incelenmiş ve bu ilişkide mesleki ilginin düzenleyici (moderatör) bir rol oynayıp oynamadığı test edilmiştir. Araştırmanın bulgularına

göre, psikolojik sađamlık ile okulda öznel iyi oluş arasında pozitif yönde ancak istatistiksel olarak anlamlı olmayan zayıf bir ilişki tespit edilmiştir. Bu bulgu literatürde yer alan bazı sonuçlar ile tutarlı (Akdoğan ve Yalçın, 2018; Düzgün, 2025; Yıldız ve Kardaş, 2021) olmadığı görülmemektedir. Bu durum örneklem küçüklüğü ve diğer çevresel etkenlerin araştırma kapsamında ele alınmaması ile açıklanabilir. Elde edilen sonuçlar, meslek ilgisinin psikolojik sađamlık ile öznel iyi oluş arasındaki ilişkiyi anlamlı bir şekilde deđiştirmediğini veya belirleyici bir rol oynamadığını göstermektedir. Bu araştırmada mesleki ilginin moderatör deđişken olarak ele alınmasının nedeni, meslek lisesi öğrencisinin seçtiğı alana yönelik ilgisinin, yaşam güçlükleri karşısında esnekliğinin bir ifadesi olan psikolojik sađamlık gibi bireysel kaynaklarla iyi oluş arasındaki ilişkiyi güçlendirebileceğı varsayımıdır. Literatürde Holland'ın Tipoloji Kuramı'na göre kişiler ilgi ve kişilik özelliklerine uygun mesleklere ve çevrelere yönelirler. İlgi duyulan alana yönelik motivasyonun yüksek olması genel olarak beklenen durumdur. Ancak eldeki bulgulara göre bu araştırmada bu etki istatistiksel olarak saptanmamıştır.

Bulgular, psikolojik sađamlık düzeyi yüksek olan bireylerin okulda öznel iyi oluş düzeylerinin artma eğiliminde olduğunu göstermekle birlikte, bu ilişkinin tesadüfi olabileceğini de düşündürmektedir. Ayrıca modelin anlamlılık düzeyine yakın olması, bu tür psikolojik yapıların daha karmaşık ilişkilerle açıklanabileceğini düşündürmektedir. Örneğin öğrencilerin meslek lisesine devam etme nedeni ve öğrenim gördüğü bölümü seçme nedeni kendi iradesi dışında aile ve çevresel diğer faktörler yüzünden olabilir. Bu gibi durumlar modele ilişkin sonuçları etkileyebilir. Modelin anlamlılığa yakın bir düzeyde sonuç vermesi ve etki büyüklüğünün küçük olması, çalışmanın bulgularının dikkatli ve sınırlı şekilde yorumlanması gerektiğini göstermektedir. Sonuç olarak meslek ilgisinin düzenleyici rolü olmaması meslek ilgisinin psikolojik süreçler üzerindeki önemini yok saymak için yeterli olmaz. Bu deđişkenin daha derinlemesine ve çok boyutlu bir yaklaşımla ele alınması gerektiğı ifade edilebilir. Bu noktada örneklem sayısı araştırmanın bir sınırlılığı olarak ele alınabilir. Mesleki ilgi deđişkenin tek madde ile ölçülmüş olması ve tek bir mesleki lisesinden veri toplanmış olması da araştırmanın diğer sınırlılıkları arasında sayılabilir. Hem bu sınırlılıkları ortadan kaldırmak hem de gelecekte bu konuda çalışma yapmak isteyen araştırmacılara ve uygulayıcılara yönelik öneriler aşağıdaki gibi ifade edilebilir.

Öneriler

Sonuçların genellenebilirliği arttırabilmek adına yapılacak yeni çalışmalarda daha büyük bir örneklem grubuyla çalışmak daha güçlü bulgulara ulaşılmasını sağlayacaktır. Aracı

veya moderatör değişken olarak farklı psiko-sosyal faktörler kullanılabilir (okul bağlılığı, öz-şefkat, akademik doyum gibi). Araştırma sadece bir meslek lisesindeki öğrencilerle sınırlandırılarak gerçekleştirilmiştir. Bundan sonra yapılacak olan çalışmalarda ülkedeki diğer meslek lisesi öğrencileri de çalışmaya dahil edilerek demografik yapıdan kaynaklanabilecek farklılıklar saptanabilir. Odak grup görüşmeleri veya bireysel görüşmeler yoluyla öznel deneyimlere ulaşılarak sonuçlar nitel veriler ile de desteklenebilir. Bu araştırma meslek lisesi ile sınırlandırılmıştır. Bundan sonra yapılacak çalışmalara diğer lise türleri de dahil edilerek sonuçların dönemsellik özelliklerinden (ergenlik) ve/ya lise türünden kaynaklanıp kaynaklanmadığı saptanabilir. Bu çalışmada kullanılan meslek ilgisi değişkeni yalnızca tek bir maddeden elde edilmiş ikili bir ölçümdür. Gelecek araştırmalarda bu değişken daha geçerli ve güvenilir ölçeklerle değerlendirilebilir. Psikolojik sağlamlık düzeyini ve öznel iyi oluşu artırıcı çalışmalar okul psikolojik danışmanları tarafından planlanarak gerçekleştirilebilir.

Okul Öncesi Eğitim Sınıflarında İlişkiler: Öğretmen Adaylarının Görüşleri

Betül Kübra Şahin Yonca

Tokat Gaziosmanpaşa Üniversitesi, Türkiye,
e-mail: kbsahin@gmail.com, Orcid No: 0000-0002-1495-2227

Özet

Okul öncesi dönemde çocukların, anne-baba ilişkisine en yakın bağı kurdukları kişilerden biri öğretmenlerdir. Bu dönemde öğretmen ile çocuk arasında sınıf ortamında kurulan kişilerarası ilişki, çocuğun öğrenme sürecine önemli katkılar sağlamakta, gelişimsel ve akademik kazanımlarını desteklemektedir. Akran ilişkileri ise, benzer yaş, gelişim ya da olgunluk düzeyine sahip; ortak yaşam öyküsü, değerler, yaşam tarzı ve sosyal bağlamı paylaşan bireyler arasındaki etkileşim ve süreklilik gösteren eylemler bütünü olarak tanımlanabilir. Bu ilişkiler, çoğunlukla sosyal gelişimle doğrudan ilişkili olmakla birlikte, diğer gelişim alanlarını da dolaylı olarak etkilemektedir. Akran ilişkilerinin nasıl geliştiğini anlamaya yönelik temel yaklaşımlardan biri, çocukların grup içinde sosyal ilişkilerini nasıl yapılandırdıkları ve sosyal etkileşim becerilerini nasıl güçlendirdikleridir. Bu bağlamda bu çalışmanın amacı, okul öncesi öğretmen adaylarının okul öncesi eğitim sınıflarındaki ilişkilerle ilgili görüşlerini incelemektir. Çalışma grubu, üniversitelerin okul öncesi öğretmenliği programına kayıtlı 34 son sınıf öğrencisinden oluşmaktadır. Katılımcıların üçü erkek, otuz biri kadındır. Veriler, katılımcıların okul öncesi eğitim sınıflarında öğretmen-çocuk ve çocuk-çocuk arasındaki ilişkilerin gelişime uygun bir şekilde nasıl yönetileceğine ilişkin görüşlerini paylaşmalarını sağlamak için hazırlanmış bir yarı yapılandırılmış görüşme formu ile toplanmıştır. Verileri yorumlamak ve katılımcıların görüşlerinden ortaya çıkan ortak temaları belirlemek için tematik analiz kullanılmıştır. Bulgular, okul öncesi eğitim sınıflarında olumlu, güvene dayalı ve etkili iletişim odaklı ilişkiler kurmanın önemini vurgulamaktadır. Katılımcılara göre, bu tür ilişkiler hem çocuk gelişimine hem de sınıf ortamının genel işleyişine olumlu katkıda bulunmaktadır.

Anahtar kelimeler: okul öncesi eğitim, öğretmen adayları, sınıf içi ilişkiler

Abstract

In the preschool period, one of the people with whom children establish the closest bond to the parent relationship is teachers. During this period, the interpersonal relationship established between the teacher and the child in the classroom environment makes significant contributions to the child's learning process and supports developmental and academic achievements. Peer relationships can be defined as the whole of interaction and continuous actions between individuals of similar age, development, or maturity level who share a common life story,

values, lifestyle, and social context. These relationships primarily influence social development, but they also indirectly impact other developmental domains. One of the basic approaches to understanding how peer relationships develop is how children structure their social relationships within the group and how they strengthen their social interaction skills. In this context, the aim of this study is to examine the views of preservice preschool teachers regarding relationships in preschool education classrooms. The study group consists of 34 preservice teachers enrolled in the preschool teaching program of universities. Three of the participants are male and thirty-one are female. Data were collected using a semi-structured interview form designed to enable participants to share their views on how to manage teacher- child and child-child relationships in a developmentally appropriate manner in preschool education classrooms. Thematic analysis was used to interpret the data and identify common themes that emerged from the participants' views. The findings emphasize the importance of establishing positive, trusting, and effective communication-oriented relationships in preschool education classrooms. According to the participants, such relationships contribute positively to both child development and the overall functioning of the classroom environment.

Keywords: preschool education, preservice teachers, relationships in classroom

Giriş

Çocukların öğretmenleriyle kurdukları ilişkinin niteliği, gelişimsel süreçleri açısından giderek daha fazla önem kazanmaktadır (Verschueren ve Koomen, 2012). Öğretmen-çocuk ilişkisi, özellikle erken çocukluk dönemindeki bakım ve eğitim ortamlarında çocukların gelişimi için temel bir rol üstlenmektedir (Liu, Zhang, Zhao ve Chan, 2020). Bu ilişkinin kalitesi, çocukların sosyal-duygusal ve akademik gelişimleriyle doğrudan ilişkilidir (Pianta ve Stuhlman, 2004). Öğretmenlerini sıcak, duyarlı ve destekleyici olarak algılayan çocukların bu alanlarda daha olumlu gelişim gösterdikleri bilinmektedir (Krstić, 2015). Bununla birlikte, okul öncesi dönem, gelişimin hızla seyrettiği ve bireyin yaşamında kalıcı etkiler bıraktığı bir dönem olması nedeniyle kritik bir öneme sahiptir. Bu dönemde, çocukların ilk sosyal etkileşimleri genellikle akran ilişkileri aracılığıyla şekillenmeye başlamaktadır. Akran ilişkileri; benzer yaş, gelişim ve olgunluk düzeyinde olan, ortak değerler, yaşam tarzı ve sosyal bağlamı paylaşan bireyler arasında karşılıklılık ve süreklilik içeren etkileşimler olarak tanımlanmaktadır. Okul öncesi dönemde kurulan bu ilişkiler, çocukların sosyal deneyimlerini yapılandırmakla kalmamakta, aynı zamanda ileriki yaşlardaki sosyal-duygusal uyumlarını da etkileyebilmektedir (Gülay, 2009).

Bu bağlamda, bu çalışmanın amacı okul öncesi öğretmen adaylarının, okul öncesi eğitim sınıflarında kurulan ilişkilere dair görüşlerini incelemektir.

Yöntem

Bu çalışma, nitel araştırma yöntemlerinden, bireylerin deneyimleri ve görüşlerini kendi bakış açılarından açıklamaya ve dolayısıyla motivasyonlarını ve davranışlarını daha net bir şekilde anlamaya yardımcı olan olgu bilim deseninde hazırlanmıştır (Lester 1999, Marshall ve Rossman 2006). Çalışmanın katılımcıları kartopu yöntemi ile belirlenmiştir. Kartopu örnekleme yöntemi, özellikle ulaşılması güç veya özel niteliklere sahip katılımcı gruplarına erişimde etkili bir strateji olarak kullanılmaktadır (Marshall ve Rossman, 2006). Araştırmanın katılımcılarını, tamamı üniversitelerin ilgili bölümlerinde öğrenim gören 34 son sınıf öğrencisi oluşturmaktadır. Katılımcıların 31'i kadın, 3'ü erkektir. Yaşları 22 ile 32 arasında değişmekte olup, yaş dağılımı şu şekildedir: 6 katılımcı 22 yaşında, 8 katılımcı 23 yaşında, 7 katılımcı 24 yaşında, 6 katılımcı 25 yaşında, 2 katılımcı 26 yaşında, 1 katılımcı 27 yaşında, 2 katılımcı 30 yaşında, 1 katılımcı 31 yaşında ve 1 katılımcı 32 yaşındadır.

Çalışmanın verileri, katılımcıların deneyimlerini, düşüncelerini, duygularını ve bilgilerini derinlemesine anlamak amacıyla yarı yapılandırılmış görüşmeler yoluyla toplanmıştır. Yarı yapılandırılmış görüşmeler, araştırmacıya belirli sorular çerçevesinde esneklik sağlarken, katılımcının kendi anlatımına da olanak tanıyan etkili bir nitel veri toplama yöntemidir (Yıldırım ve Şimşek, 2021). Görüşme formunun hazırlanma sürecinde öncelikle ilgili alanyazın taranmış ve bu doğrultuda beşi demografik bilgilere, beşi ise araştırmanın amacına yönelik olmak üzere toplam 10 sorudan oluşan bir taslak form oluşturulmuştur.

Hazırlanan görüşme formu taslağı, okul öncesi eğitim alanında uzman ve nitel araştırma konusunda deneyimli üç öğretim üyesinin görüşüne sunulmuştur. Uzman değerlendirmeleri doğrultusunda bazı sorular formdan çıkarılmış ve gerekli düzenlemeler yapılmıştır. Ardından, formun uygulanabilirliğini test etmek amacıyla, çalışmanın örneklemi dışında yer alan bir okul öncesi öğretmen adayı ile pilot görüşme gerçekleştirilmiştir. Bu görüşme sonucunda elde edilen geri bildirimler doğrultusunda form son hâlini almıştır. Nihai görüşme formu; beşi katılımcıların demografik özelliklerini, üçü ise okul öncesi öğretmen adaylarının sınıf içi ilişkilere dair görüş ve uygulamalarını belirlemeye yönelik olmak üzere toplam sekiz sorudan oluşmaktadır.

Öğretmen adaylarıyla iletişime geçildiğinde, öncelikle kendilerine araştırmanın amacı hakkında bilgilendirme yapılmış ve çalışmaya gönüllü olarak katılıp katılmak istemedikleri

sorulmuştur. Katılımcıların sözlü onaylarının alınmasının ardından, program uygunluklarına göre veri toplama süreci çevrim içi veya yüz yüze olarak gerçekleştirilmiştir. Görüşmeler sırasında, araştırmanın derinliğini artırmak amacıyla bazı ek sorular da yöneltilmiştir. Bu araştırmada elde edilen verilerin analizi, nitel araştırmalarda sıklıkla başvurulan tümevarımcı analiz yaklaşımına göre gerçekleştirilmiştir. Bu süreçte öncelikle katılımcıların görüşlerini içeren ham veriler dikkatlice okunmuş ve anlamlı bütünler oluşturacak şekilde gruplandırılmıştır. Araştırma verilerinin analizi dört aşamada yürütülmüştür: veri kodlama, temaların belirlenmesi, kod ve temalar arasındaki ilişkilerin ortaya konması ve bulguların yorumlanması (Yıldırım ve Şimşek, 2021). İlk aşamada, 34 okul öncesi öğretmen adayının görüşlerinden elde edilen ifadeler doğrultusunda anlamlı birimlere ayrılarak açık kodlama yapılmıştır. Elde edilen kodlar, verilerin tekrarlı okunmasıyla birlikte araştırma sorularına yanıt verecek şekilde kavramsallaştırılmıştır. Süreç boyunca bazı kodlar içeriklerine göre birleştirilmiş, yeniden adlandırılmış ya da daha açıklayıcı hale getirilmiştir. İkinci aşamada ise elde edilen kodlar benzerlik ve ilişkilerine göre gruplandırılarak temalar oluşturulmuştur. Temaların belirlenmesinde katılımcıların vurguladığı ortak düşünceler ve deneyim örüntüleri dikkate alınmıştır. Üçüncü aşamada, oluşturulan kod ve temalar arasındaki ilişkiler gözden geçirilerek temaların alt boyutları tanımlanmıştır. Bu bağlamda temaların her biri, ilgili kodlarla desteklenmiş ve bütüncül bir yapıya kavuşturulmuştur. Son aşamada, elde edilen temalar aracılığıyla öğretmen adaylarının konuya ilişkin algı ve deneyimleri detaylı biçimde yorumlanmış, alıntılarla desteklenerek araştırmanın bulguları ortaya konulmuştur. Veri analiz sürecinde güvenilirliğin artırılması amacıyla kodlamalar iki farklı araştırmacı tarafından karşılaştırmalı olarak incelenmiş, görüş birliği sağlanamayan durumlarda literatüre başvurulmuştur.

Bulgular

Veri analizleri sonucunda üç ana tema ve bu temalardan birine ait bir alt tema belirlenmiştir:

1. Çocuk-öğretmen ilişkisi
2. Çocuk-çocuk ilişkisi
 - a. Çocuk-çocuk ilişkisi sorunların çözümünde öğretmene düşen rol
3. Öğretmen-aile ilişkisi

1. Çocuk-öğretmen ilişkisi

Katılımcıların görüşleri doğrultusunda, çocuk-öğretmen ilişkisinde bulunması gereken

temel unsurlar řu řekilde belirlenmiřtir: En ok vurgulanan unsur "saygı" olmuřtur (n=15). Katılımcılar, ğretmenin ocuklara karřı saygılı bir tutum sergilemesinin, ocukların kendilerini deęerli hissetmeleri aısından kritik nemde olduęunu belirtmiřlerdir. Saygıyı takiben, ğretmenin rol model olması (n=13) gerektięi ifade edilmiřtir. ğretmenin davranıřlarının ocuklar tarafından rnek alındıęı ve bu nedenle ğretmenlerin tutum ve davranıřlarına dikkat etmeleri gerektięi vurgulanmıřtır. Fiziksel temasın (n=8) zellikle kk yař gruplarında gven ve sevgi oluřturma aracı olarak nemli olduęu belirtilmiřtir. Ayrıca, aık ve anlařılır iletiřim (n=7), ocukların ğretmeni anlamasını ve duygularını rahata ifade etmesini kolaylařtırdıęı iin gerekli grlmřtir. Katılımcıların bazıları, ğretmenin ocuklara eřit mesafede durması (n=6) gerektięini vurgulamıř, bu durumun adalet duygusunu glendireceęini ifade etmiřtir. Bununla birlikte, ocuęun geliřiminin gz nnde bulundurulması (n=4), ocuęa karřı olumlu tutum sergilenmesi (n=4) ve ocuklara bireysel zaman ayrılması (n=4) da nemli grlen dięer unsurlar arasında yer almıřtır. Katılımcılara gre ayrıca, ğretmenin sınırları belirlemesi (n=4), tutarlı davranması (n=3), ocuęun kendini gvende hissetmesini saęlaması (n=3) ve sınıfta kurallar koyması (n=3) nemli noktalar olarak dile getirilmiřtir. Disiplinin saęlanmasında ceza yerine olumlu yaklařımların tercih edilmesi (n=2) ve iletiřimde nezaket ieren ifadelerin kullanılması (n=2) nerilmiřtir. Dięer katılımcılar ise iř birlięi (n=1), sabırlı olma (n=1) ve ocuklara zgr alan tanınması (n=1) gibi unsurları ğretmen–ocuk iliřkisinde nemli bulmuřlardır.  ğretmen adayı grřlerini řu řekilde dile getirmiřlerdir:

“ğretmen ile ocuklar arasındaki iliřki tutarlı olmalıdır. ocukların geliřimleri gz nnde bulundurulmalıdır. ğretmen iyi bir rol model olmalıdır. ğretmen ocuklar arasında ayırım yapmamalı, herkese eřit mesafede olmalıdır. ğretmen ocuklarla konuřurken nezaketli bir dil kullanmalı, iřbirlięini desteklemeli ve cezadan kaınmalıdır”. K₃, 26

“ğretmen her řeyden nce iyi bir rol model olmalıdır. nk ğretmen nasıl davranırsa, ocuk da yle davranacaktır. ğretmen ocukla gz teması kurarak konuřmalı, konuřurken elini onun omzuna koymalıdır. Bu řekilde ocuk sevildięini ve nemsendięini hisseder. ğretmen ocuęa bireysel zaman tanımalı ve onunla birey olarak konuřmalıdır. ğretmenler ocuklara kendilerini zgrce anlatma ve ifade etme imkânı saęlamalıdır. Bu, ocukların sınıfta olma isteęini destekleyecektir”. K₈, 23

“Öğretmen çocuk arasında saygı dengesi mutlaka kurulmalıdır. Zaten bu denge kurulursa öğretmen çocuğa rol model olacağından çocuklar arasında da bu ilişki korunmuş ve gözetilmiş olur. Ayrıca öğretmenin tüm çocuklara karşı eşit mesafeyi gözetmesi de çok önemlidir”. K₁₅, 24

2. Çocuk-çocuk ilişkisi

Katılımcı görüşlerine göre, çocuklar arasındaki ilişkilerde öne çıkan bazı önemli unsurlar belirlenmiştir. Bu kapsamda, iş birliği kavramı en fazla vurgulanan unsur olarak dikkat çekmiştir (n=8). Bunu takiben, çocukların olumlu davranışlar sergilemeleri için teşvik edilmesi gerektiği belirtilmiştir (n=7). Ayrıca, öğretmenlerin çocuklar arasındaki ilişkileri desteklemesi gerektiği de vurgulanmıştır (n=5). Son olarak bazı katılımcılar, çocuklar arası ilişkilerde sınırların belli olması gerektiğini ifade etmişlerdir (n=3).

Üç öğretmen adayı görüşlerini şu şekilde dile getirmişlerdir:

Öğretmen önce kendisi çocuklara rol model olacak ve davranışları ile söyledikleri tutarlılık gösterecek. Öğretmen çocuk ile çocuk arasındaki ilişkiyi desteklemeli, karşılıklı saygı, sevgi ve hoşgörüye önem vermelidir. Çocukların olumlu davranışları ile ilgili çocukları teşvik etmeli, bu konuda sabır göstermelidir. Çocuklar ilişki kavramını hemen anlayamayabilirler. Bu nedenle bu süreçte öğretmen hem kendi davranışları ile hem de anlattıkları ile çocukların davranışlarını desteklemelidir. K₄, 24

Öğretmen çocuk ile çocuk arasında işbirliğini sağlayacak etkinlikleri desteklemelidir. Çocuklar birlikte bazı şeyleri başarmalıdır. Bu onların sınıf içerisindeki ilişkilerini destekleyecektir. K₈, 23

Çocuklar birbirleri ile olumlu etkileşimde bulunmalı, birlikte çalışmalı ve eğlenmeli. Öğretmenler çocukların arasında olumlu ilişkilerin kurulması için ortam hazırlamalı. Böylece çocuklar doğal gruplar oluşturarak etkileşimde bulunurlar. K₂₈, 22

a. Çocuk-çocuk ilişkisi sorunların çözümünde öğretmene düşen rol

Görüşmeye katılan öğretmen adaylarından biri problem durumlarında empati becerisi ile çözüm üretmenin önemine dikkat çekerken, bir diğeri her iki çocuğun da sakinleştirilmesi gerektiğini ifade etmiştir. Başka bir katılımcı, çocuklara sorunlarını çözme konusunda fırsat verilmesi gerektiğini belirtmiş; bir diğer katılımcı ise öğretmenin rehberlik edici bir rol üstlenmesinin önemine vurgu yapmıştır. Ayrıca, bir öğretmen adayı öğretmenin çocuklarla birebir iletişim kurmasının etkili bir yaklaşım olduğunu dile getirmiştir.

Çalışmaya katılan iki öğretmen adayı görüşlerini şu şekilde ifade etmişlerdir:

Öğretmen çocuklara tüm insanların birbirleri ile sıkıntı yaşayabileceklerini ifade etmeli ve çocukların birbirleri ile olan sorunlarını çözebilmeleri için onlara fırsat sunmalıdır.

K₁₄, 28

Çocuklar arasında yaşanan bir problemde öğretmen doğru çözüm yolu ile ilgili çocuklara rehberlik etmelidir. K₂₃, 25

3. Öğretmen-aile ilişkisi

Katılımcılardan birisi öğretmen aile ilişkisi ile ilgili eğitim sürecinde karşılıklı saygının önemine vurgu yaparken, bir diğeri ailenin eğitime aktif olarak dahil edilmesi gerektiğini belirtmiştir. Bir başka öğretmen adayı ise ailenin eğitim süreci hakkında düzenli olarak bilgilendirilmesinin gerekliliğini ifade etmiştir.

Çalışmaya katılan bir öğretmen adayı görüşlerini şu şekilde ifade etmişlerdir:

Öğretmen ve aile arasında karşılıklı saygı olmalıdır. Ailenin sürece dahil edilmesi gerekir. Ayrıca tüm süreçten de haberdar olması gerekmektedir. K₅, 24

Sonuç ve Tartışma

Öğretmen adaylarının sınıf içi öğretmen-çocuk ilişkisine yönelik görüşleri, bu ilişkinin sağlıklı biçimde kurulabilmesi için çeşitli unsurların ön plana çıktığını ortaya koymaktadır. Katılımcıların bir kısmı, öğretmenin çocuklara karşı sevgi temelli ve adil bir yaklaşım benimsemesi gerektiğini vurgulamıştır. Bu sonuç Ercan'ın (2014) yapmış olduğu çalışmada ulaşılan öğretmenlerin çocuk sevme puanlarına yüksek olduğu sonucu ile örtüşmektedir. Çünkü eğitim sevgi işidir ve öğretmenlerin mesleki anlamda en önemli gereksinimi, çocuklara duyduğu sevgiyi kaybetmemeleridir. Öğretmenlerin çocuklara duydukları sevgi düzeyi arttıkça çocuklarla ilgilenme, onlara özen gösterme, onları koruma ve empati kurma becerilerinin uyumlu olarak arttığı görülür. Bu nedenle öğretmenlere mesleğe başlamadan önce çocuk sevgisi eğitimi verilmesi önerilebilir. Öğretmenlerin çocuklara olan sevgisi aynı zamanda öğretmenin mesleğine karşı motivasyonudur (Veenman, 1984). Oktay (1991) ve Gelbal ve Duyan (2010) yaptıkları çalışmalarında nitelikli öğretmenlerin; sabırlı, ilgili, nazik, esnek, sakin kalabilen, bilgili ve hoşgörülü bireyler olmalarının yanı sıra öğretmenlik mesleğini severek icra etmeleri gerektiğine; Helvacı (2009) ise öğretmenliğin insanları sevmeyi, sabırlı olmayı ve özverili davranmayı gerektiren bir meslek olduğu sonucuna ulaşmıştır. Ayrıca, çocukları dikkatle dinlemenin, onlarla göz teması kurmanın ve bireysel farklılıkları gözetmenin öğretmen-çocuk

iletişiminde önemli beceriler olduğu belirtilmiştir. Güven ilişkisi kurmak, çocuklara değerli olduklarını hissettirmek ve onlarla gelişim düzeylerine uygun bir yaklaşımla iletişim kurmak da bu ilişkinin niteliğini artıran unsurlar arasında sayılmıştır. Bunun yanı sıra öğretmenin sabırlı olması, sınıf içinde yönlendirici bir tutum sergilemesi ve çocuklarla karşılıklı etkileşime dayalı ilişkiler kurması gerektiği ifade edilmiştir. Bu bulgular, öğretmen adaylarının çocukla kurdukları ilişkilerde duygusal, bilişsel ve sosyal boyutları dikkate aldıklarını göstermektedir. Ayrıca, Koca (2016) da çalışmasında paralel sonuçlara ulaşmıştır. Söz konusu çalışmada, çocuk-öğretmen ilişkilerine dair çocukların algılarının, öğretmenleriyle kurdukları etkileşimlerdeki duygu ve davranışlarının anlaşılması açısından büyük önem taşıdığı ifade edilmiştir. Umut verici şekilde bu alandaki araştırmalar, çocukların öğretmen-çocuk etkileşimlerinin niteliğine ilişkin algılarının dikkate değer olduğunu vurgulamakta ve küçük yaştaki çocukların dahi ilişki deneyimlerine dair güvenilir ve geçerli bilgiler sunabildiklerini ortaya koymaktadır sonucuna ulaşılmıştır.

Çalışmaya katılan okul öncesi öğretmen adayları, çocuk-çocuk ilişkisinde iş birliği ve çocuklar arasındaki olumlu davranışların teşvik edilmesi, çocukların ilişkilerinin desteklenmesi ve onlara rehberlik edilmesi gerektiği üzerinde durmuşlardır. Bu bulgu, erken çocukluk döneminde akran ilişkilerinin niteliğini artırmada öğretmenin aktif bir rol üstlenmesinin, çocukların sosyal becerilerinin gelişmesine ve sınıf içi olumlu etkileşim ortamının oluşmasına katkı sağlayacağını göstermektedir. Ayrıca ortamda rekabetin bulunmadığı durumlarda, çocuklar 14 ila 18 aylar arasında birbirlerine karşı daha arkadaşça bir tutum sergileyebilmektedir. Bu dönemde, eşyalar ya da oyuncaklar için yaşanan çatışmaların yerini, genellikle farklı oyuncaklarla yan yana oynama ve zaman zaman iş birliği yapma davranışları alabilmektedir (Çetin vd., 2002). Bu nedenle öğretmenlerin çocukların arasındaki iş birliğini desteklemesi gerekmektedir.

Öğretmen ve aile ilişkisinde ise aileleri etkinliklerden haberdar etme ve dahil etme, ayrıca karşılıklı saygıya vurgu yapılmıştır. Çalışmanın bu sonucu, Epstein ve Sanders'in (2006) vurguladığı öğretmenler ve ailelerin arasındaki olumlu iletişimin, karşılıklı beklentiler ve çocukların ihtiyaçları hakkında birbirlerini anlamalarını sağladığı ifadesine paraleldir. Bu doğrultuda, öğretmen ve aile arasında kurulan etkili iletişim ve iş birliği, çocuğun gelişimsel ihtiyaçlarının daha bütüncül bir şekilde karşılanmasına katkı sağlamakta; aynı zamanda ailelerin eğitim sürecine aktif katılımını teşvik ederek okul-aile iş birliğinin güçlenmesine olanak tanımaktadır. Ayrıca sınıf içi ilişkilerden bahsederken öğretmen adaylarının aileleri de bu ilişki ağına dahil etmesi önemli bir noktadır.

Okul Öncesi Öğretmen Adaylarının Bakış Açısından Gelişime Uygun Davranış Yönetimi

Betül Kübra Şahin Yonca

Tokat Gaziosmanpaşa Üniversitesi, Türkiye,
e-mail: kbsahin@gmail.com, Orcid No: 0000-0002-1495-2227

Özet

Davranış yönetimi etkili bir sınıf yönetiminin boyutlarından biridir. Kurallar, disiplin ve istenmeyen davranışlarla mücadele gibi kavramlar davranış yönetimi boyutu altında incelenmektedir. Öğretmen merkezli eğitimin daha fazla kabul gördüğü dönemlerde ödül ve ceza ile ilişkilendirilen davranış yönetimi, çocuk merkezli eğitimin ön plana çıkması ile birlikte çocukların davranışlarının yönetiminin dışsal müdahalelerden ziyade gelişime uygun olarak davranış rehberliği ile sağlanması gerektiğini vurgulayan bir hal almıştır. Gelişime uygun bakış açısı, çocuğun bilişsel, duygusal, sosyal ve fiziksel gelişim alanlarının birbirini etkilemesi ve her bir gelişim alanındaki ilerlemenin diğerlerini nasıl şekillendirdiği gibi temel ilkeler üzerine kuruludur. Çocukların gelişimi hem biyolojik olgunluklarından hem de sosyal ve kültürel bağlamlardan etkilenecekler; aynı zamanda çocuklar, çevrelerinden aldıkları deneyimlerle aktif bir şekilde öğrenir ve bu deneyimleri kültürel bir süzgeçten geçirerek anlamlandırır. Bu çalışmada da okul öncesi öğretmen adaylarının gelişime uygun davranış yönetimi ile ilgili görüşlerinin ortaya koyulması amaçlanmaktadır. Çalışmanın katılımcılarını, 27 kadın okul öncesi öğretmen adayı oluşturmaktadır. Veriler araştırmacı tarafından geliştirilen ve öğretmen adaylarının gelişime uygun davranış yönetimi ile ilgili görüşlerini öğrenmeyi amaçlayan yarı yapılandırılmış bir görüşme formu ile toplanmıştır. Görüşme formu oluşturulurken ilgili alanyazın taranmış ve taslak form oluşturulmuştur. Ardından uzman görüşleri alınarak ve çalışmanın katılımcıları dışında bir öğretmen adayı ile pilot görüşme yapılarak forma son hali verilmiştir. Çalışmanın verileri içerik analizi kullanılarak analiz edilmiştir. Analizler sonucunda elde edilen bulgular, davranış yönetiminde ödül ve cezanın kullanılmaması ve kuralların belirlenmesi üzerine şekillenmiştir.

Anahtar Kelimeler: okul öncesi eğitim, öğretmen adayları, davranış yönetimi

Abstract

Behavior management is one of the dimensions of effective classroom management. The dimension of behavior management examines concepts such as rules, discipline, and combating undesirable behaviors. Behavior management, which was associated with reward and

punishment in the periods when teacher-centered education was more accepted, has become a situation that emphasizes that children's behavior management should be provided with behavior guidance appropriate to development rather than external interventions with the emergence of child-centered education. The developmentally appropriate perspective is based on basic principles such as the interaction of the child's cognitive, emotional, social, and physical development areas and how progress in each development area shapes the others. Children's development progresses as both their biological maturity and social and cultural contexts influence them; at the same time, they actively learn from the experiences they receive from their environment and interpret these experiences through a cultural filter. This study also aims to reveal the views of preservice preschool teachers regarding developmentally appropriate behavior management. The participants of the study consist of 27 female preservice teachers. The researcher developed a semi-structured interview form to collect data, with the aim of understanding preservice teachers' perspectives on developmentally appropriate behavior management. The researcher reviewed relevant literature to create a draft of the interview form. Then, expert opinions were obtained, and a pilot interview was conducted with a preservice teacher apart from the participants of the study, and the form was finalized. The data of the study was analyzed using content analysis. The analysis shaped the findings by eliminating the use of rewards and punishments in behavior management and establishing clear rules.

Keywords: preschool education, preservice teachers, behavior management

Giriş

Amerika Birleşik Devletleri'nde 80lerde ve 90larda tam gün okul öncesi eğitim kurumları önem kazanmıştır. Bu da çocuklara standart testler ve akademik başarılar için gerekli olan temel becerilerin de kazandırılması anlamına gelmiştir. Fakat çocukların akademik başarılarına odaklanan bu duruma karşıt olarak Gelişime Uygun Uygulamalar felsefesi ortaya çıkmıştır (Wortham, 2006). Gelişime Uygun Uygulamalar (Wortham, 2006), çocukların nasıl öğrendikleri ve nasıl geliştikleri konusunda varsayımlara değil, bilimsel bilgiye dayanan uygulamalar şeklinde tanımlanmaktadır (Copple & Bredekamp, 2009). Gelişime Uygun Uygulamalar çocukların gelişimine odaklı program hazırlarken göz önünde bulundurulması gereken bir felsefedir (Gestwicki, 1999; Wortham, 2006). Öğretmenlerin bu felsefeyi sınıflarına en etkili şekilde aktarmalarında belirleyici unsurlardan biri öğretmenlerin felsefeye olan inançlarıdır (Şahin Sak ve Sak, 2017). Bu inançlar doğrudan öğretmenlerin görüşleri ile ortaya koyulabileceği için bu çalışmada okul öncesi öğretmen adaylarının gelişime uygun davranış

yönetimi ile ilgili görüşlerinin belirlenmesi amaçlamaktadır.

Yöntem

Bu araştırma, bireylerin deneyimlerini ve görüşlerini kendi bakış açılarıyla açıklamayı amaçlayan ve böylece motivasyonlarını ve davranışlarını daha derinlemesine anlamayı sağlayan nitel bir olgubilim (fenomenolojik) deseniyle tasarlanmıştır (Lester, 1999; Marshall & Rossman, 2006). Araştırmanın katılımcıları, kartopu örnekleme yöntemiyle belirlenmiştir.

Kartopu örnekleme yöntemi, özellikle ulaşılması güç veya özel niteliklere sahip katılımcı gruplarına erişimde etkili bir strateji olarak kullanılmaktadır (Marshall & Rossman, 2006). Araştırmanın katılımcılarını, okul öncesi öğretmenliği eğitimi alan 27 kadın öğretmen adayı oluşturmaktadır. Katılımcıların yaş dağılımı incelendiğinde; dört katılımcının 20, yedi katılımcının 21, beş katılımcının 22, sekiz katılımcının 23, iki katılımcının 26 ve bir katılımcının ise 27 yaşında olduğu tespit edilmiştir.

Çalışmanın verileri, katılımcıların deneyimlerini, düşüncelerini, duygularını ve bilgi birikimlerini derinlemesine anlamak amacıyla yarı yapılandırılmış görüşmeler yoluyla elde edilmiştir. Yarı yapılandırılmış görüşmeler, araştırmacıya belirli sorular çerçevesinde esneklik tanırken, katılımcıların kendi anlatımlarına da yer verme imkânı sunması açısından etkili bir nitel veri toplama yöntemidir (Yıldırım & Şimşek, 2021). Bu doğrultuda, katılımcıların görüşlerini doğrudan aktarabilmek ve verileri daha kapsamlı şekilde ortaya koyabilmek amacıyla yarı yapılandırılmış bir görüşme formu geliştirilmiştir. Formun hazırlanma sürecinde öncelikle ilgili alanyazın incelenmiş, ardından üçü katılımcıların demografik özelliklerine, ikisi ise araştırmanın amacına yönelik olmak üzere toplam beş sorudan oluşan bir görüşme formu taslağı oluşturulmuştur.

Hazırlanan taslak form, okul öncesi eğitim alanında uzman ve nitel araştırmalar konusunda deneyimli üç öğretim üyesinin görüşüne sunulmuştur. Uzman görüşleri doğrultusunda bir soru formdan çıkarılmıştır. Ardından, taslak formun anlaşılabilirliğini ve uygulanabilirliğini değerlendirmek amacıyla, çalışmanın asıl katılımcı grubunda yer almayan bir okul öncesi öğretmen adayı ile pilot görüşme gerçekleştirilmiştir. Pilot görüşmenin ardından, elde edilen geri bildirimler doğrultusunda görüşme formuna son şekli verilmiştir. Nihai görüşme formu; üçü katılımcıların demografik özelliklerine, biri ise okul öncesi öğretmen adaylarının gelişime uygun davranış yönetimine ilişkin görüşlerini ortaya koymaya yönelik olmak üzere toplam dört sorudan oluşmaktadır.

Öğretmen adayları ile iletişime geçildiğinde, öncelikle kendilerine araştırmanın amacı açıklanmış ve çalışmaya gönüllü olarak katılıp katılmak istemedikleri sorulmuştur.

Katılımcıların sözlü onaylarının alınmasının ardından, görüşmeler, öğretmen adaylarının programlarına uygun zamanlarda ve yüz yüze gerçekleştirilmiştir. Görüşmeler sırasında, gerekli görülen durumlarda yönlendirici veya derinleştirici nitelikte ilave sorular da sorulmuştur.

Araştırmanın veri analizi sürecinde tümevarıma dayalı nitel analiz yöntemi izlenmiştir. Bu süreçte, elde edilen veriler doğrultusunda önce anlamlı ifadeler belirlenmiş ve bu ifadelere uygun kavramsal kodlamalar yapılmıştır. Analiz süreci boyunca kodlar, verilerin derinliği ve çeşitliliği doğrultusunda zaman zaman gözden geçirilmiş, yeniden düzenlenmiş ya da geliştirilmiştir. Kodlamaların ardından elde edilen veriler tematik bir yaklaşımla gruplandırılarak ana temalar oluşturulmuştur (Yıldırım & Şimşek, 2021).

Bulgular

Veri analizi sonucunda ulaşılan iki temaya ulaşılmıştır:

1. Okul öncesi eğitimde gelişime uygun davranış yönetimi
2. Kurallar

1. Okul öncesi eğitimde gelişime uygun davranış yönetimi

Araştırmada elde edilen veriler doğrultusunda, katılımcıların büyük çoğunluğu (n=27), sınıf ortamında çocuklar için net ve tutarlı kuralların belirlenmesi gerektiğini vurgulamıştır. Bununla birlikte, önemli bir kısmı (n=18), davranış yönetiminde ödül ve ceza yöntemlerinin kullanılmaması gerektiğini savunurken; az sayıda katılımcı (n=3) bu yöntemlerin kullanılabileceğini ifade etmiştir. Katılımcıların bir kısmı (n=11) duygusal okuryazarlığın geliştirilmesine dikkat çekerek, çocukların duygularını tanıma ve ifade etme becerilerinin davranış yönetimi açısından kritik olduğunu belirtmiştir. Ayrıca olumlu davranışlara odaklanması (n=5), çocuklara problem çözme fırsatları verilmesi (n=5) ve sosyal becerilerin kazandırılması (n=4) gerektiği dile getirilmiştir. Daha az sayıda katılımcı ise fiziksel çevrenin düzenlenmesinin (n=3), çocuklara sorumluluk verilmesinin (n=2), çatışmaların çözümünde uygun dil kullanımının (n=2) ve etkinliklerin çocuğun gelişim düzeyine uygun şekilde planlanmasının (n=1) önemine vurgu yapmıştır. Bu bulgular, öğretmen adaylarının gelişimsel açıdan duyarlı, çocuk merkezli ve önleyici bir davranış yönetimi yaklaşımını benimsediklerini göstermektedir. Bazı öğretmen adayı görüşlerini şu şekilde dile getirmişlerdir:

“Ödül ve ceza olmamalı, çocuk bir süre sonra ikisine de alışır. Bunların yerine çocuklara anlaşmazlıklarını çözmek için fırsatlar verilebilir.”(K4, 21)

“Ben ödül cezayı kesinlikle kullanmam. Çünkü sürekli uygulaması zor olur. Cezayı

kullanmam çünkü çocuk kendi kendine der ki “ ben cezayı alıp yerime oturacağım ” der ve neden ceza aldığını anlamaz. Bunun sonucunda da aynı hareketi yapmaya devam eder. Ödül ise çocuk yaptığı her olumlu davranışın sonunda bir ödül bekler ve bu da bir süre sonra cezaya dönüşür. Ben çocuğu ödülle cezalandırmam. Onun yerine duygusal okur-yazarlığı pekiştiririm, sosyal becerilerini desteklerim.” (K5, 21)

“Davranış yönetiminde sorunlar fiziksel çevrenin düzenlenememesi, etkinliklerin planlanamaması, etkili iletişim yollarının kurulamaması sonucunda ortaya çıkar. Bu nedenle bunlara dikkat edilmelidir.” (K6, 23)

“Ödül ve ceza bence uygulanmalıdır. Çocuğun davranışlarının nereye gideceğini görmesi bir sonraki davranışlarını şekillendireceğinden, bence etkilidir.” (K8, 21)

2. Kurallar

Katılımcıların sınıf kurallarının oluşturulmasına yönelik görüşleri incelendiğinde öğretmen adaylarının çoğunluğu (n=8), kuralların açık, sade ve anlaşılır bir dille ifade edilmesi gerektiğini vurgulamıştır. Katılımcıların bir kısmı (n=5), kuralların çocuklarla birlikte belirlenmesi gerektiğini dile getirmiş; ayrıca bazı katılımcılar (n=3), kuralların kriz anlarında değil, önceden ve sakin bir ortamda oluşturulması gerektiğine dikkat çekmiştir. Az sayıda katılımcı ise sınıfta uygulanacak kuralların sayıca sınırlı tutulmasının (en fazla üç ile yedi arasında; n=2) daha etkili olacağını ve kuralların neden konulduğunun çocuklara açıklanması gerektiğini (n=2) ifade etmiştir.

Bir öğretmen adayı görüşlerini şu şekilde dile getirmişlerdir:

“Çocuklarla birlikte oturup sınıf içerisinde kurallar oluşturabiliriz. Ardından kurallara uyulmadığını fark eden öğretmen çocuklara; çocuklar üzerinden örneklendirip davranışın doğru olmadığını, bu davranışın devamında arkadaşının üzülebileceğini anlatabilir. Bu anlatımı hikayeler ve dramalarla zenginleştirebilir.” (K2, 20)

Öğretmen adaylarının, kurallara uyulmaması durumunda nasıl bir yol izlenmesi gerektiğine dair görüşleri çeşitlilik göstermektedir. Bazı katılımcılar (n=2), çocukların kurallara neden uymadığının mutlaka araştırılması gerektiğini ifade etmiş; bir öğretmen adayı (n=1) cezai bir yaklaşımın gerekli olabileceğini belirtmiş, bir öğretmen adayı ise kurallara uyulmayan durumlarda çocuklarla konuşulması gerektiğini vurgulamıştır. Ayrıca, bir katılımcı da drama ve hikâye gibi yapılandırılmış etkinliklerle bu tür durumların ele alınabileceğini ifade etmiştir. Genel olarak bulgular, öğretmen adaylarının büyük çoğunluğunun cezalandırma yerine çocuğun yaşantısını, duygularını ve davranışlarının nedenlerini dikkate alan anlayışları tercih ettiğini göstermektedir.

Çalışmaya katılan iki öğretmen adayı görüşlerini şu şekilde ifade etmişlerdir:

“Eğer çocuk uymadığı kuralın sonucunda bir ceza ile karşılaşmazsa bunu yeniden yapabilir. Onun için bozulan kurallarda çocuklara ufak cezalar verilebilir.” (K1, 23)

“Çocuklar istenmedik davranışlar sergilediğinde, çocuklara ceza verip hemen olayı orada durdurmak yerine, nedeni araştırılmalıdır.” (K12, 23)

Sonuç ve Tartışma

Çalışmanın bulguları, öğretmen adaylarının tamamının sınıfta davranış yönetimi

kapsamında kuralların varlığını önemli bulduklarını göstermektedir. Öğretmenler adaylarının bu sürece ilişkin olarak ödül-ceza kullanımının sınırlı tutulması, duygusal okuryazarlığın geliştirilmesi, olumlu davranışlara odaklanması, çocuklara problem çözme fırsatları sunulması ve sosyal becerilerin desteklenmesi gerektiğini ifade etmişlerdir. Ayrıca, fiziksel çevrenin düzenlenmesi, çocuklara sorumluluk verilmesi, çatışma çözümünde uygun dil

kullanılması ve etkinliklerin çocukların yaş ve gelişim düzeylerine uygun şekilde planlanmasının davranış yönetimini destekleyici unsurlar olduğu vurgulanmıştır. Bu bulgular, öğretmen adaylarının gelişimsel açıdan duyarlı, çocuk merkezli ve önleyici bir davranış yönetimi yaklaşımını benimsediklerini göstermektedir.

Çalışmada, sınıf kurallarının açık ve anlaşılır bir şekilde belirlenmesi, kuralların çocuklarla birlikte oluşturulması ve kriz anlarında kural koymaktan kaçınılması gerektiği vurgulanmıştır. Ayrıca, sınıfta en az üç, en fazla yedi kuralın bulunmasının uygun olacağı ifade edilmiştir. Katılımcılar, kuralların neden konulduğunun çocuklara mutlaka açıklanması gerektiğini belirtmiştir. Bu bulgular, öğretmen adaylarının kuralların pedagojik temellere dayanması gerektiğine inandıklarını ve çocukların bu sürece katılımının önemli olduğunu düşündüklerini ortaya koymaktadır.

Bu doğrultuda, gelecekte yapılacak çalışmalarda öğretmenlerin davranış yönetimi yaklaşımlarının sınıf içi uygulamalarla gözlemlenerek daha derinlemesine incelenmesi ve farklı yaş gruplarında bu uygulamaların etkililiğinin değerlendirilmesi önerilmektedir.

Özet

Son zamanlarda teknoloji alanında yaşanan yenilikler sayesinde teknolojik araçlar eğitim faaliyetlerinde yaygın olarak kullanılmaya başlanmış, birçok öğrenme alanında teknolojik temelli uygulamaların etkisi sınanmıştır. Teknolojik araçların dâhil edildiği uygulamaların sağladığı etkileşimli içerikler, özellikle dikkat ve algı, hafızada tutuma gibi bilişsel açıdan zayıf becerilere sahip özel gereksinimli çocukların hizmetine sunulduğunda daha kalıcı öğrenme deneyimi sunmaktadır. Bu açıdan düşünüldüğünde teknolojinin özel gereksinimli çocukların eğitim faaliyetlerine dâhil edilmesi önem arz etmektedir. Bu doğrultuda özel eğitim öğretmenlerinin eğitimde teknolojiyi kullanmalarına ilişkin görüşlerinin belirlenmesi; mevcut durumun ortaya konulması, teknolojiyi kullanmanın önündeki engellerin saptanması, konu ile ilgili olarak politikaların ve stratejilerin geliştirilmesi ve gelecekteki araştırmalara kaynaklık oluşturması açısından önemli görülmektedir. Araştırma özel eğitim öğretmenlerinin eğitimde teknoloji kullanımına yönelik görüşlerini belirlemek amacıyla yapılmıştır. Bu amaçla araştırmaya Erzincan il merkezindeki özel eğitim okullarında görev yapan 10 özel eğitim öğretmeni dâhil edilmiştir. Öğretmenlere araştırmacılar tarafından geliştirilen “Yarı Yapılandırılmış Görüşme Formu” uygulanmıştır. Formda özel eğitim öğretmenlerinin eğitimde hangi tür teknolojik araçları kullandıkları, teknoloji kullanımının yararları, teknolojiyi kullanmalarını engelleyen faktörlerin neler olduğu, teknolojiyi eğitime entegre etmek için neler yapılması gerektiği gibi konulardaki görüşlerini almaya yönelik sorular yer almaktadır. Görüşme formu öğretmenlere yüz yüze uygulanmış olup görüşmeler 20-25 dakika kadar sürmüştür.

Araştırmada veriler betimsel analiz tekniğiyle çözümlenmiştir. Araştırma sonucunda öğretmenlerin farklı düzeyde teknolojik araçlar kullandıkları, teknolojinin eğitimde kullanılmasının öğretmene, çocuğa ve aileye yararları olduğu, öğretmenlerin bilgi eksikliği, araç-gereç yetersizliği, ailelerin farkındalığının düşük olması, çocukların gelişimsel özellikleri ve içeriğin azlığı gibi faktörlerin teknoloji kullanımını kısıtladığı, öğretmenlerin teknoloji konusunda eğitiminin, aile ve okul yönetiminin farkındalığının artırılmasının, teknolojik donanımın güçlendirilmesinin ve içeriğin zenginleştirilmesinin teknolojinin öğrenme faaliyetlerine entegrasyonunu kolaylaştıracağını belirttiği tespit edilmiştir. Sonuçlar, özel eğitim öğretmenlerinin özel gereksinimli çocukların eğitimlerinde teknoloji kullanmaları konusunda yapılacak çalışmalara ışık tutmaktadır.

Anahtar Kelimeler: Özel eğitim, özel eğitim öğretmeni, teknoloji, eğitim

Special Education Teachers' Views on the Use of Technology in Education

Abstract

Thanks to recent innovations in technology, technological tools have begun to be widely used in educational activities, and the effects of technologically based applications have been tested in many learning areas. The interactive content provided by applications in which technological tools are included, especially when offered to children with special needs who have cognitively weak skills such as attention, perception, and retention, provides a more permanent learning experience. When considered from this perspective, it is important to include technology in the educational activities of children with special needs. In this context, determining the views of special education teachers on the use of technology in education is considered important in terms of revealing the current situation, determining the obstacles to using technology, developing policies and strategies on the subject, and providing resources for future research. The research was conducted to determine the views of special education teachers on the use of technology in education. For this purpose, 10 special education teachers working in special education schools in the city center of Erzincan were included in the research. The “Semi-Structured Interview Form” developed by the researchers was applied to the teachers. The form includes questions aimed at obtaining the views of special education teachers on topics such as what kind of technological tools they use in education, the benefits of using technology, what

factors prevent them from using technology, and what should be done to integrate technology into education. The interview form was applied to the teachers face to face and the interviews lasted about 20-25 minutes. The data in the study was analyzed with the descriptive analysis technique. As a result of the study, it was determined that teachers use technological tools at different levels, that the use of technology in education benefits the teacher, the child and the family, that factors such as teachers' lack of knowledge, inadequacy of tools and equipment, low awareness of families, children's developmental characteristics and insufficient content limit the use of technology, and that training teachers on technology, increasing the awareness of families and school management, strengthening technological equipment and enriching the content will facilitate the integration of technology into learning activities. The results shed light on the studies to be conducted on the use of technology by special education teachers in the education of children with special needs.

Keywords: Special education, special education teacher, technology, education

Giriş

Teknoloji, çocukların öğrenme faaliyetlerinde yirmi birinci yüzyılın en önemli araçlarından biri olarak kabul görmüştür. Teknolojideki hızlı ilerlemeler, öğretmenlerin çocukların öğrenmelerine ve en yüksek eğitim seviyelerine ulaşmalarına yardımcı olmak için teknolojiyi eğitim alanında kullanmalarına olanak tanıyan birçok pratik uygulamaya sahiptir (Meatla ve Cullen, 2018). Özellikle özel gereksinimli çocukların öğrenmede birçok zorlukla karşı karşıya olması, teknolojinin bu gruptaki çocukların eğitim ihtiyaçlarını karşılamak için potansiyel bir yardımcı olduğunu ortaya koymaktadır (Alkahtani, 2013). Bu yönüyle tüm çocukların kullandığı araçlar geliştirildiği gibi, özel gereksinimli çocuklar için tasarlanmış özel yazılımlar da piyasaya sürülmüştür. Bu yazılımların (eğitim yazılımları, okuma makineleri, konuşma tanıma sistemleri, elektronik yazım denetleyicileri, konuşan bilgisayarlar ve kelime işlemciler gibi) kullanımı, akademik başarıyı ve bağımsızlığı artırmada olumlu katkılar sunmaktadır. Çocukların öğrenme faaliyetlerinde uygun dijital araçların kullanılması, öğrenmede zorluk çeken öğrencilere yardımcı olmakta, onları güçlendirmekte ve okuma becerilerini geliştirmeleri için onlara güven vermektedir. Böylece özel gereksinimli çocukların bilgi eksikliği yaşadığı ve öğrenme ve çalışma ortamlarında becerilerini uygulayamadığı mitini ortadan kaldırmaktadır (Alsolami, 2022). Özel gereksinimli öğrencilere hizmet veren sınıflara teknolojiyi entegre etmenin, onların akademik ilerlemeleri, duygusal gelişimleri, davranışsal hedefleri ve öğrenme motivasyonları üzerinde olumlu bir etkisi olduğu belirtilmektedir (Okolo ve Diedrich 2014). Bu tür teknoloji, özel gereksinimli çocuklara görevlerini yerine getirme

becerilerini geliřtirmeleri için daha fazla fırsat sunar ve etkileřim yoluyla bu çocukların eđitimini geliřtirir, böylece kavramlar daha etkili bir řekilde öğretilir (Walker, 2018). Dahası, teknolojinin öğretmenler ile ebeveynler arasındaki iletiřimi ve bilgi paylařımını artırdığı ve iyileřtirdiđi bulunmuřtur; bu da özel gereksinimli çocukların öğrenme sonuçlarını iyileřtirmede önemli bir faktör olarak deđerlendirilebilir (Siyam 2018).

Teknolojinin özel gereksinimli çocukların öğrenme faaliyetlerinde kullanılmasının etkililiđi birçok kez kanıtlansa da teknolojiyi kullanmanın önündeki en büyük engellerden biri, teknolojinin nasıl kullanılacađı ve yardımcı teknolojilerin türleri hakkında bilgi eksikliđidir. Öğretmenler, belirli bir teknolojiyi nasıl kullanacaklarını veya etkili bir řekilde nasıl kullanacaklarını hala bilemeyebilmektedir. Öğrenme etkinliklerinde teknoloji kullanımına iliřkin arařtırmalar, teknolojinin etkili ve başarılı bir řekilde kullanılabilmesinde öğretmenlerin, teknolojiyi özel gereksinimli çocuklara uygulayabilmek için sahip olmaları gereken bilgi, beceri ve anlayıřın gerekliliđini ön plana çıkarmaktadır (Flanagan, Bouck ve Richardson, 2013). Öğretmenlerin eğitim süreci boyunca iyi hedeflenmiř ve formüle edilmiř stratejiler, teknolojiyi kullanma konusunda yeterli beceriler kazandırdığından iyi bir eğitim, hizmet öncesi öğretmenlerin özel gereksinimli öğrencilere yardımcı olmak için yardımcı teknoloji konusunda yeterlilik geliřtirmelerini mümkün ve hatta sistematik hale getirebilir (Saleem, Sajjad ve Rauf, 2019). Özel eğitim, aktif öğrenme sürecinde eğitimli özel eğitim öğretmenlerinin maksimum katılımını gerektiren hassas bir konudur. (Holstein, McLaren ve Aleven, 2017). Öğretmenler, teknoloji konusundaki profesyonellik düzeyi geliřmeye açık olabilir veya teknolojiye karřı sorunlu inanıřlara veya olumsuz tutumlara sahip olabilir. Bu da teknolojiyi etkili bir řekilde kullanmalarını sınırlayabilir (Al-Dababneh ve Al-Zboon, 2022). Bu açıdan deđerlendirildiđinde özel eğitim öğretmenlerinin eğitimde teknolojiyi kullanmalarına iliřkin görüşlerinin derinlemesine incelenmesi, teknolojinin özel gereksinimli çocukların öğrenme faaliyetlerine entegre edilmesinde yařanan güçlüklerin belirlenmesi ve çözüm önerilerinin geliřtirilmesi açısından önemli görölmektedir.

Yöntem

Özel eğitim öğretmenlerinin eğitimde teknoloji kullanımına iliřkin görüşlerinin incelendiđi bu arařtırmada nitel arařtırma deseni benimsenmiřtir. Bu tür arařtırmalarda veriler gözlem, görüşme ve belge incelemesi gibi veri toplama teknikleri aracılıđıyla toplanır. Nitel arařtırmaların dođası geređi sonuçlar genellenmez, ancak veriler derinlemesine incelenerek belirli bir bağlam dâhilinde çıkarımlarda bulunulur (Yıldırım ve řimřek, 2018). Arařtırmaya bir özel eğitim okulunda görev yapan 10 özel eğitim öğretmeni dâhil edilmiřtir. Öğretmenlerin

yaşları 22-35 arasında değişmekte olup % 70'i (n=7) kadındır ve % 30'ı (n=3) beş yıl ve daha az mesleki kıdeme sahiptir. Çalışmada veriler, araştırmacılar tarafından geliştirilen “Yarı Yapılandırılmış Görüşme Formu” aracılığıyla toplanmıştır. Görüşme formunda, özel eğitim öğretmenlerinin eğitimde hangi tür teknolojik araçları kullandıkları, teknoloji kullanımının yararları, teknolojiyi kullanmalarını engelleyen faktörlerin neler olduğu, teknolojiyi eğitime entegre etmek için neler yapılması gerektiği gibi konulardaki görüşlerini almaya yönelik sorular yer almaktadır. Araştırmada veriler toplanmadan önce gerekli izinler alınmış olup okul yöneticisine araştırma hakkında bilgi verilmiştir. Sonrasında özel eğitim öğretmenleri ile okulun boş bir sınıfında yüz yüze görüşmeler yapılmış olup görüşmeler 20-25 dakika sürmüştür. Verilerin analizinde betimsel analiz tekniği kullanılmıştır. Bu kapsamda veriler manuel olarak incelenmiş olup önceden belirlenmiş temalar altında analize tabi tutulmuştur. Sonuçların tutarlılığı ve geçerliğini kanıtlamak amacıyla doğrudan alıntılara yer verilmiş olup öğretmenler Ö1, Ö2, Ö3.....Ö10 şeklinde kodlandırılmıştır.

Bulgular

Araştırma kapsamında elde edilen veriler analiz edilerek tablolastırılmış ve yorumlarıyla birlikte sunulmuştur.

Tablo 1. Özel eğitim öğretmenlerinin kullandıkları teknolojik araçlar

Özel eğitim öğretmenlerinin kullandıkları teknolojik araçlar	Sayı (n)
Akıllı tahta	10
Bilgisayar	10
Yazıcı	4
Projeksiyon	2
Flash disk	4
Dijital kitap	2
Görsel kartlar	6
Yapboz	4
Aparatlar	2

Tablo 1’ de görüldüğü üzere özel eğitim öğretmenleri çoğunlukla yüksek düzey teknolojik araçları eğitim etkinliklerinde kullanırken aynı zamanda orta düzey ve düşük düzey teknolojik araçlara da eğitim faaliyetlerinde yer vermektedir. Bu sonuçtan hareketle özel eğitim öğretmenlerinin daha çok genel sınıflarda kullanılan teknolojik araçları eğitim faaliyetlerine

entegre ettikleri, kullandıkları teknolojilerin özel gereksinimli çocuklara özel tasarlanmış teknolojik araçlara sınırlı düzeyde yer verdikleri görülmektedir. Bu konuda A2; “*Sınıflarımızda akıllı tahtalar var, onları kullanarak çocukların görsel açıdan uyarılmasını sağlıyoruz*” ve A6; “*Çocukların dikkat gelişimlerini desteklemek için görsel kartlar ve yapboz kartları ile etkinlikler yapıyorum*” şeklinde görüşlerini sunmuşlardır.

Tablo 2. Özel eğitim öğretmenlerinin teknolojiyi kullanımının yararları

Özel eğitim öğretmenlerinin teknolojiyi kullanımının yararları	Sayı (n)
Aktif öğrenme deneyimi	5
Kalıcı öğrenmeyi sağlama	4
Dikkati geliştirme	4
Motive etme	3
Uyum sağlama	2
Öğretmenlerin yeterlilik hissini geliştirme	4
Öğretmenlerin zengin içeriğe sahip olması	3
Öğretmenlerin becerilerini geliştirmesi	2
Öğretmenlerin motive olması	2
Öğretmenlerin doyum sağlama	1
Ailelerin öğretmenle işbirliğini güçlendirmesi	5
Ailelerin öğrenme faaliyetlerine katılması	3
Ailelerin teknolojinin yararlı yönünü fark etmeleri	2

Tablo 2’ de görüldüğü gibi öğretmenler, teknolojinin özel gereksinimli çocukların eğitim faaliyetlerinde kullanılmasının çocuğa, öğretmene ve aileye yararlar konusunda görüş bildirmişlerdir. Öğretmenler, *aktif öğrenme, kalıcı öğrenme, dikkati geliştirme, motive etme ve uyum sağlama* yönüyle çocuğun gelişimi ve öğrenmesine katkı sunduğu; yeterlilik hissi, *zengin içeriğe sahip olma, beceri geliştirme, motive olma ve doyum sağlama* açısından öğretmeni desteklediği; diğer yandan *öğretmenle işbirliğini güçlendirme, öğrenme faaliyetlerine katılma ve teknolojinin yararlı yönünü fark etme* gibi kazanımlar açısından aileye katkıları olduğunu dile getirmişlerdir. Bu konuda A3; “*Çocuklar teknolojik araçları kullanarak yaptığım etkinliklere daha fazla katılıyorlar, dikkatlerini veriyorlar*”, A4; “*Teknolojik araçları kullanırken çocukların daha ilgili olduğunu gözlemliyorum. Teknolojiyi kullanma konusunda özgüvenim ve becerim gelişiyor*”, A7; “*..... Ailelere play storeden çocukların gelişimlerini destekleyen uygulamalar öneriyorum. Böylece çocukları video oyunlarından öğrenme*

etkinliklerine yönlendirmiş oluyorum. Aileler teknolojiyi daha bilinçli olarak çocuklara sunuyor ve etkinliklere daha çok katılıyorlar” şeklinde görüşlerini ifade etmişlerdir.

Tablo 3. Teknolojiyi kullanmayı engelleyen faktörler

Teknolojiyi kullanmayı engelleyen faktörler	Sayı (n)
Öğretmenlerin bilgi eksikliği	5
Araç-gereç yetersizliği	4
Ailelerin farkındalığının düşük olması	4
Çocukların gelişimsel özellikleri	3
İçeriğin azlığı	2

Öğretmenler teknolojiyi kullanmayı engelleyen faktörler konusunda, öğretmenlerin bilgi eksikliğinin olması, araç-gereç yetersizliği, ailelerin farkındalığının düşük olması, çocukların gelişim özellikleri ve içeriğin azlığını birer etken olarak ifade etmişlerdir. Bu sonuç öğretmenlerden, teknolojik donanımdan, ailelerden ve çocuklardan kaynaklı faktörler olarak dile getirilebilir. Bu konuda A1; “ Akıllı tahtalar kullanarak görsel içerikli etkinlikleri çocuklara yaptırıyorum. Ancak daha ileri seviyede uygulamalar konusunda yeterli değilim. Zaten bu çocukların gelişim özelliklerine uygun çok fazla içerik yoktur”, A5; “ Okulda özel gereksinimli çocuklara yönelik özel olarak kullanılabilen teknolojik araçlar yoktur”, A9; “Aileler, çocuklardan teknolojik araçları uzak tutmamızı istiyor. Sanırım telefonların bu çocuklara zararları konusunda bilgi ediniyorlar” şeklinde görüşlerini sunmuşlardır.

Tablo 4. Teknolojinin eğitime entegre edilmesiyle ilgili öneriler

Teknolojinin eğitime entegre edilmesiyle ilgili öneriler	Sayı (n)
Öğretmenlerin adaylık sürecinde eğitimi	5
Öğretmenlerin teknoloji konusunda eğitimi	4
Ailelerin bilinçlendirilmesi	4
Ailelerin teknolojik temelli etkinliklere katılımının sağlanması	3
Okul yönetiminin farkındalığının artırılması	5
Teknolojik donanımın güçlendirilmesi	3
İçeriğin zenginleştirilmesi	2

Öğretmenler teknolojinin eğitime entegre edilmesiyle ilgili öneriler konusunda öğretmenlerin yeterliliğinin artırılması, ailelerin ve okul yönetiminin farkındalığının artırılması, teknolojik

donanımın güçlendirilmesi ve içeriğin zenginleştirilmesine vurgu yaparak; *öğretmenlerin adaylık sürecinde eğitimi, öğretmenlerin teknoloji konusunda eğitimi ailelerin bilinçlendirilmesi, ailelerin teknolojik temelli etkinliklere katılımın sağlanması, okul yönetiminin farkındalığının artırılması, teknolojik donanımın güçlendirilmesi ve içeriğin zenginleştirilmesi* gibi hususlarda önerilerde bulunmuşlardır. Bu konuda A3; “*Teknolojinin hayatımıza çokça dâhil olduğu günümüz dünyasında öğretmenlerin lisans eğitiminde ve öğretmen olduktan sonra hizmet içi eğitim ve kurslarla teknolojik yeterliliklerinin artırılması gerekiyor*”, A7; “*Ailelerin bilinçlendirilerek teknolojinin öğrenmedeki etkisini gözlemlemeleri, aile katılımlarını sağlayacaktır*”, A8; “*Okul yönetimi teknolojinin gücünü daha iyi fark etmeli, araç-gereç teminin sağlamalıdır*” ve A10; “*Görseller, şarkılar ve videolarla çocuklara etkinlik yaptırıyoruz. Ancak bu çocukların temel becerilerini geliştirmeye yönelik çok farklı içerikler oluşturulabilir*” şeklinde görüşlerini ifade etmişlerdir.

Tartışma

Teknolojik araç gereçler, özel gereksinimli çocukların öğrenme ihtiyaçlarını karşılamak için kapsadıkları içerik yelpazesini ayarlayarak öğrenmeyi kolaylaştıran değerlendirme teknikleri yoluyla eğitime yardımcı olur (Meatla vd., 2018). Bu noktada özel gereksinimli çocukların öğrenme faaliyetlerinde teknolojinin kullanılması konusunda özel eğitim öğretmenlerinin görüşlerinin alınması, teknolojinin öğrenme ortamlarına dâhil edilmesinde yapılacak çalışmalara ışık tutabilecektir. Bu doğrultuda araştırmada özel eğitim öğretmenlerinin özel gereksinimli çocukların öğrenme faaliyetlerinde teknolojinin kullanımı ile ilgili görüşlerinden elde edilen sonuçlar literatür doğrultusunda tartışılmıştır.

Araştırmanın ilk bulgusunda özel eğitim öğretmenlerinin okulun sahip olduğu donanımsal yeterlik ölçüsünde çoğunlukla yüksek düzey teknolojik araçlar olmak üzere orta ve düşük düzey teknolojik araçları da öğrenme faaliyetlerinde kullandıklarını dile getirmişlerdir. Bu sonuçtan hareketle özel eğitim öğretmenlerinin daha çok genel sınıflarda kullanılan teknolojik araçları öğrenme faaliyetlerinde kullandıkları, özel gereksinimli çocuklara yönelik tasarlanmış teknolojik araçlara sahip olamamalarının bir sonucu olarak bu araçlara sınırlı düzeyde yer verdikleri söylenebilir. Kaya ve ark. (2024)’ nın özel eğitim öğretmenleri ile yaptığı benzer bir araştırmada da öğretmenlerin yüksek düzey (projeksiyon cihazı, yazıcı, akıllı tahta, tablet, bilgisayar, telefon, web tabanlı yazılımlar, video model ve sosyal öykü), orta düzey (makine, dijital kitap, süreölçer, flaş bellek ve elektrikli ev aletleri) ve düşük düzey (gözlük, kartlar, yapboz, aparatlar, tekerlekli sandalye ve kas gelişimini destekleyici materyaller) teknoloji araçlarını kullandıkları tespit edilmiştir. Önceki çalışmalarda her ne kadar düşük düzey

teknolojik araçlar öğrenme faaliyetlerinde kullanılsa da (Çay, Yıkılmış ve Özgüç, 2020; Sola-Özgüç ve Cavkaytar, 2014) teknolojik ilerlemelerin ve okullardaki teknolojik donanımların artırılmasının bir sonucu olarak yüksek düzey teknolojik aletlerin daha fazla kullanılmaya başlandığı söylenebilir.

Araştırmanın ikinci bulgusunda özel eğitim öğretmenleri, teknolojinin özel gereksinimli çocukların eğitim faaliyetlerinde kullanılmasının çocuğa, öğretmene ve aileye yararlar sağladığı konusunda görüş bildirmişlerdir. Öğretmenler, *aktif öğrenme, kalıcı öğrenme, dikkati geliştirme, motive etme* ve *uyum sağlama* yönüyle çocuğun gelişimi ve öğrenmesine katkı sunduğu; yeterlilik hissi, *zengin içeriğe sahip olma, beceri geliştirme, motive olma* ve *doyum sağlama* açısından öğretmeni desteklediği; diğer yandan *öğretmenle işbirliğini güçlendirme, öğrenme faaliyetlerine katılma* ve *teknolojinin yararlı yönünü fark etme* gibi kazanımlar açısından aileye katkıları olduğunu dile getirmişlerdir. Bu sonuç teknolojinin özel eğitim sınıflarında kullanılmasının çok yönlü yararını ortaya koymaktadır. Nitekim Çay, Yıkılmış ve Özgüç (2020) özel eğitim öğretmenleriyle konu hakkında yaptıkları görüşme sonucunda, çocukların öğrenmelerinin kalıcı olması ve motivasyonlarının artması ile öğretmenlerin mesleklerinde doyum yaşadıkları ve motive olduklarını bulgulamışlardır. Zaten öğretmenler, sınıflarda teknoloji kullanımının eğitim çıktılarının kalitesini ve iş tatminini artırdığına inanmaktadırlar (Cagiltay ve ark., 2019). Aynı çalışmada teknolojinin öğrenme faaliyetlerine dahil edilmesiyle çocukların daha kolay öğrendiklerini, motivasyon ve dikkat sürelerinin arttığını, davranış problemlerinin azaldığını, eğlenceli ve kalıcı öğrenme deneyimi yaşadıklarını rapor etmişlerdir (Çay, Yıkılmış ve Özgüç, 2020). Kaya ve ark. (2024) ise, teknolojinin öğrenme etkinliklerine dahil edilmesinin motivasyon ve konsantrasyon sağladığını, akran öğretiminden yararlandıklarını, problem davranışları azalttığını, güvenliğini sağladığını, öğrenmeyi kolaylaştırdığını, kalıcılığı ve genellemeyi sağladığını ve akademik başarıyı arttırdığını ortaya koymuşlardır. Teknolojik araç-gereçlerin dâhil edildiği etkinliklerin ailelere katkısı konusundaki çalışmalardan elde edilen sonuçlardan hareketle ailelerin çocuklarındaki ilerlemeyi gözlemlediklerinden mutlu olduklarını ve çocukların öğrenme faaliyetlerine daha fazla katılım gösterdiklerini doğrulamaktadır (Çay, Yıkılmış ve Özgüç, 2020). Bu sonuçlar araştırmamızda elde edilen çok yönlü katkıları desteklemektedir. Çünkü destekleyici teknoloji özellikle özel gereksinimli çocukların öğrenme sürecinde hayati bir rol oynar. Bu gruptaki çocuklar, etkinlikleri bağımsız olarak gerçekleştirmede zorluk çekerler ve öğretmenler genellikle özel gereksinimli çocuklara yardımcı olmak için öğrenme süreçlerine teknolojiyi dâhil ederler (Walker, 2018). Böylece öğretmenler öğrenme ortamında farklılaştırma sağlama,

içeriğin çeşitli temsillerini sunma, motivasyonu ve katılımı artırma, biçimlendirici değerlendirmeyi kolaylaştırma ve yaşam becerilerini geliştirme konusunda çocukların gelişimine katkıda bulunurlar (Anderson ve Putman, 2020).

Araştırmanın üçüncü bulgusunda, özel eğitim öğretmenleri teknolojiyi kullanmayı engelleyen faktörler konusunda, bilgi eksikliğinin olması, araç-gereç yetersizliği, ailelerin farkındalığının düşük olması, çocukların gelişim özellikleri ve içeriğin azlığını birer etken olarak ifade etmişlerdir. Bu sonuç özel eğitim öğretmenlerinden, teknolojik donanımdan, ailelerden ve çocuklardan kaynaklı faktörler olarak dile getirilebilir. Araştırmanın ikinci bulgusunda rapor edildiği üzere teknolojinin öğrenme faaliyetlerine entegrasyonu çok yönlü katkıyı ve işbirliğini gerektiren bir konudur. Bu nedenle teknolojinin bu gruptaki çocukların öğrenme etkinliklerinde kullanılması için ortak çabalar gereklidir. Örneğin; öğretmenler bir zorunluluk haline gelmediği sürece yeni teknolojileri öğrenmek için bir yükümlülük hissetmezler. Bu gerekçeyle öncelikli olarak öğretmenlerin konu hakkında eğitilmesi gerekir. Dahası, ailelerin çocukların eğitimine evde devam etmeleri için eğitilmesi de gereklidir (Cagiltay ve ark., 2019). Bir araştırmada öğretmenler, özellikle uygun eğitimin olmaması, zamanın yetersiz olması, mevcut araç ve kaynakların azlığı ve teknik desteğin olmaması gibi durumlarda teknolojiyi entegre etmekte sıklıkla zorluk çektiklerini dile getirirken (Saddler, Newmanve Passa, 2006), başka bir araştırmada öğretmenler farklı gereksinimlere cevap verebilecek içerik (yazılım) ve donanım yetersizliği, fiziksel alt yapı yetersizliğinden muzdarip olduklarını ifade etmişlerdir. Çocukların dijital becerilerinin zayıf olması ve odaklanma sorunlarının teknolojinin öğrenme faaliyetlerine entegre edilmesinde bir diğer faktördür (Starks ve Reich, 2023). Özellikle teknoloji destekli uygulamalar özel gereksinimli çocukları desteklemek için tasarlanmamışsa, belirli dijital becerileri geliştirmek için daha fazla desteğe ihtiyaç duyarlar.

Araştırmanın son bulgusunda özel eğitim öğretmenleri, teknolojinin eğitime entegre edilmesiyle ilgili öneriler konusunda öğretmen yeterliliklerinin artırılması, ailelerin ve okul yönetiminin farkındalığının artırılması, teknolojik donanımın güçlendirilmesi ve içeriğin zenginleştirilmesine vurgu yaparak; *öğretmenlerin adaylık sürecinde eğitimi, öğretmenlerin teknoloji konusunda eğitimi, ailelerin bilinçlendirilmesi, ailelerin teknolojik temelli etkinliklere katılımının sağlanması, okul yönetiminin farkındalığının artırılması, teknolojik donanımın güçlendirilmesi ve içeriğin zenginleştirilmesi* gibi hususlarda önerilerde bulunmuşlardır. Kaya ve ark. (2024), özel eğitim öğretmenlerine lisans programında yardımcı teknolojiye yönelik eğitimlerin yer alması, öğretmenlere hizmet içi eğitimlerle yardımcı teknoloji kullanımına yönelik kapsamlı çalışmalar yapılması konusunda önerilerde bulunmuşlardır. Diğer yandan

Çay ve ark. (2020), okullarda teknolojik donanımın artırılması ve öğretmenlerin teknoloji kullanımı konusunda eğitim almasının eğitimde teknoloji kullanımını artırabileceğini dile getirmişlerdir. Araştırmada okul yönetiminin ve ailenin bilinçlendirilmesine de vurgu yapılmaktadır. Nitekim, teknoloji açısından kaynaklara erişim genellikle öğretmen düzeyinde bir faktör olarak kabul edilse de okul düzeyinde kaynak tahsisi ve teknoloji karar alma ile ilgili yapısal sorunlar, öğretmenlerin teknolojiyi öğrenme sürecine dâhil etmesinde önemli bir faktör olarak göze çarpmaktadır ((Starks ve Reich, 2023). Bununla birlikte ailelerin teknoloji destekli öğrenme faaliyetlerine ilişkin algılarının düşük düzeyde olması göz önünde bulundurulduğunda (Ortiz ve ark., 2021), özel gereksinimli çocuğa sahip ailelerin konu hakkındaki farkındalığının artırılmasının çocukların teknolojik araç-gereçlerle gerçekleştirdikleri öğrenme faaliyetlerine katılımı artabilecektir.

Sonuç ve Öneriler

Araştırmadan elde edilen sonuçlar, özel eğitim öğretmenlerinin okulun imkânları doğrultusunda çeşitli düzeydeki teknolojik araçları kullandıklarını; teknoloji destekli etkinliklerin özel gereksinimli çocuklara, öğretmene ve aileye katkıları olduğunu; öğretmenlerin bilgi eksikliği, araç-gereç yetersizliği, ailelerin farkındalığının düşük olması, özel gereksinimli çocukların gelişimsel özellikleri ve içeriğin azlığı gibi faktörlerin teknoloji kullanımını kısıtladığı; öğretmenlerin teknoloji konusunda eğitiminin, aile ve okul yönetiminin farkındalığının artırılmasının, teknolojik donanımın güçlendirilmesinin ve içeriğin zenginleştirilmesinin teknolojinin öğrenme faaliyetlerine entegrasyonunu kolaylaştıracağını ortaya koymuştur. Bu sonuçlardan yola çıkarak; özel gereksinimli çocuklara hizmet veren okullarda teknolojik donanımın artırılması ve teknoloji sınıflarının oluşturulması, özel eğitim öğretmenlerinin öğretimsel teknolojik uygulamalar konusunda eğitilmesi, özel gereksinimli çocukların ihtiyaçlarına cevap verecek içeriklerin artırılması, aile ve okul yöneticilerinin bilinçlendirilmesi önerilmektedir.

Üniversite Ön Lisans Bireysel Yaratıcılık Becerilerinin İncelenmesi

Gülbüz Ocak

Afyon Kocatepe Üniversitesi, gocuk@aku.edu.tr, 0000-0001-8568-0364, TÜRKİYE

Gülin Ütebay

Afyon Kocatepe Üniversitesi, utebay@aku.edu.tr, 0000-0001-7309-6785, TÜRKİYE

Özet

Bireysel yaratıcılık, üniversite öğrencilerinin özgün ve yenilikçi fikirler üretme, bu fikirleri problem çözme süreçlerinde kullanma ve farklı bakış açıları geliştirme yeteneğidir. Bu yetenek, sanatsal, bilimsel ve günlük yaşamda karşılaşılan durumlara karşı yaratıcı çözümler geliştirmeyi içerir. Bireysel yaratıcılık, genetik, çevresel faktörler, eğitim ve kişisel deneyimlerin bir araya gelmesidir. Bu bağlamda üniversite ön lisans bireysel yaratıcılık becerilerini inceleyerek, eğitim süreçlerinde bu becerilerin geliştirilmesi ve desteklenmesi için etkili stratejiler ortaya koymayı amaçlamaktadır. Araştırma yöntemi olarak tarama yöntemi kullanılmıştır. Veriler Bireysel Yaratıcılık Ölçeği ile toplanmıştır. Araştırmanın örnekleme, bir devlet üniversitesinin seçilen 162 ön lisans öğrencisinden oluşmakta olup, bu grup benzer özellikler taşıyan bireylerin seçilmesi amacıyla benzeşik (homojen) örnekleme yöntemiyle belirlenmiştir. Verilerin analizinde, frekans, yüzde, standart sapma, ortalama, t-testi ve ANOVA testi analizleri kullanılmıştır. Analiz bulgularına göre, öğrencilerin bireysel yaratıcılık ölçeğinden aldıkları puanların ortalaması 52,34 olup, bu durum ön lisans düzeyinde bireysel yaratıcılık becerilerinin yüksek seviyede olduğunu göstermektedir. Cinsiyet değişkenine göre erkek öğrenciler lehine anlamlı bir farklılık saptanmıştır. Öte yandan, öğrencilerin bireysel yaratıcılık becerileri, günlük internet kullanım sürelerine göre anlamlı bir farklılık göstermemektedir. Sonuç olarak, bu çalışmadan elde edilen bulguların, yaratıcı kişilikleri destekleyen özelliklerin çeşitlendirilmesine katkıda bulunabilir, eğitim programlarının ve yaklaşımlarının geliştirilmesinde faydalı olabilir.

Anahtar kelimeler: Bireysel yaratıcılık, Ön lisans, Yaratıcılık

University Associate Degree Examination of Individual Creativity Skills

Abstract

Individual creativity is the ability of university students to generate original and innovative ideas, use these ideas in problem-solving processes, and develop different perspectives. This ability involves developing creative solutions to situations encountered in artistic, scientific, and everyday life. Individual creativity is a combination of genetic, environmental factors, education, and personal experiences. In this context, the study aims to examine the individual

creativity skills of university associate degree students and to propose effective strategies for developing and supporting these skills in educational processes. The survey method was used as the research method. Data were collected using the Individual Creativity Scale. The sample of the study consisted of 162 selected undergraduate students from a state university, and this group was determined using a homogeneous sampling method in order to select individuals with similar characteristics. In the analysis of the data, frequency, percentage, standard deviation, mean, t-test, and ANOVA test analyses were used. According to the analysis findings, the mean score of the students on the individual creativity scale was 52.34, indicating that individual creativity skills are at a high level at the associate degree level. A significant difference was found in favor of male students based on the gender variable. On the other hand, students' individual creativity skills did not show a significant difference based on their daily internet usage time. In conclusion, the findings obtained from this study can contribute to the diversification of characteristics that support creative personalities and may be useful in the development of educational programs and approaches.

Keywords: Individual creativity, Associate degree, Creativity

Giriş

Öğrencinin kişiliği ve yaratıcı yeteneklerinin geliştirilmesi için verimli bir eğitim ortamının oluşturulması, çağdaş toplumun temel hedeflerinden birini oluşturmaktadır. Üniversite ortamı ise öğrencinin mesleki yeterlilikler kazandığı özel bir alanı temsil etmektedir (Turhan ve Burgaz, 2014). Aynı zamanda, mesleki rolleriyle birlikte öğrencilerin yetkinliklerini geliştirmekle sorumlu eğitimciler için de özel bir öneme sahiptir (Löfgren, Ilomäki, Lipsanen, ve Toom, 2023). Eğitimciler, 21. yüzyıldaki iş ve yaşam koşullarında öğrencilerin yaratıcılığını geliştirmeye yönelik hazırlıklar yapmalıdır. En hızlı büyüyen işlerin çoğu ve gelişmekte olan endüstriler, çalışanların yaratıcı kapasitesine dayanır; alışılmışın dışında düşünme, kalabalığı sorgulama ve hayal etme yeteneği, yeni senaryolar ve şaşırtıcı çalışmalar üretir (Henderson, 2013). Öğrenciler, hayal edilemeyen hayal etmeyi ve yaratıcı becerilerini geliştirmeyi öğrenmelidir. Henderson, (2013) göre yaratıcılık için gerekli dört yetkinlik belirlemiştir: yeni fikirleri yakalamak ve korumak, meydan okuma: kendimize zor problemler vermek ve bunları çözmek, genişleme: Öğrenerek yaratıcılığı artırmak için ilginç yeni şeyler keşfetmek, çevre: farklı insanlarla ilişki kurmak. Bu yetkinliklerden en önemlisinin yeni fikirleri yakalamak olduğunu vurgulamaktadır (Crompton, 2006). Eğitimcilerin, öğrencilere fikirlerini günlük olarak bir fikir klasörüne veya fikir kutusuna kaydetmeleri için bir yol sağlaması gerektiğini önermektedir. Fikir üretiminin yanı sıra, fikir değerlendirme de yaratıcılık sürecinde hayati bir

aşamadır. Bu aşama, kişinin en orijinal ve uygulanabilir fikirleri tanıma becerisini geliştirmeyi içerir (Cropley, 2006; Fogler, LeBlanc ve Rizzo, 1995). Başlangıçta Runco ve Jaeger (2012) tarafından belirtilen standart bir tanım üzerinde bir fikir birliği, çoğu yazar tarafından kabul edilmeye devam ediyor (Romo, 2019). Bu fikir birliği, iki kriterin eşzamanlılığına atıfta bulunur: bunlar fikirlerin veya ürünlerin özgünlüğü ve etkinliğidir. Özgünlük, farklılık ve nadirlik yaratıcılığı ima eder, ancak bunun tersi doğru değildir; farklılık, her sosyo-tarihsel anda yaratılan fikrin veya ürünün anlamına, yararlılığına ve yeterliliğine hizmet etmelidir (Runco ve Jaeger, 2012 ; Sarkar ve Chakrabarti, 2011).

Son dönemde literatürde, farklı bağlamlarda yapılan araştırmalarda, bireysel yaratıcılık, konusuna çoğunlukla yabancı kaynaklarda rastlanmaktadır.(Aperribai, Morais, Cortabarria ve Machado, 2024; Li, 2023; Hamdan ve Awwad, 2022; Duman ve Yıldırım, 2023; Setiadi ve So, 2013; Mynbayeva, Vishnevskay ve Sadvakassova, 2016; Kaplan, 2019; Jahnke ve Liebscher, 2020).

Aperribai vd.(2024) yaptıkları çalışmada, üniversite öğrencilerinin yaratıcı becerilerini geliştirmeye nasıl katkıda bulunabileceğini incelenmiştir. İspanyol ve Portekizli üniversite öğrencileri arasında bireysel yaratıcılığa yönelik algılanan engellerin karşılaştırılmasını hedeflemiştir. Bu amaçla, kişisel yaratıcılığa yönelik engeller envanteri İspanyol üniversite öğrencilerine uyarlanmış ve bu süreçte kültürel farklılıkların rolünü anlamayı amaçlamıştır. Sonuç olarak yükseköğretimde yaratıcılığa yönelik algılanan engellerin kültürel bağlama göre farklılaştığı; İspanyol öğrencilerin Portekizli öğrencilere kıyasla bu engelleri daha az hissettikleri, cinsiyet ve öğrenim alanı gibi değişkenlerin de her iki kültürde belirleyici rol oynadığı bulunmuştur. Ayrıca, kullanılan ölçme aracının yapısal geçerliliği korunmuş ve kültürler arası araştırmalarda kullanılabilirliği desteklenmiştir. Li, (2023)tarafından yapılan çalışmada ise yaratıcılığın eğitimdeki önemini ve toplumsal gelişime katkısını inceleyerek, eğitimciler ve müfredat tasarımcıları için öneriler sunmayı hedeflemektedir. Bunun yanında yaratıcılığın öğrencilerin öğrenme görevlerine aktif katılımlarını nasıl artırdığını ve nihayetinde akademik başarıya nasıl yol açtığını detaylandırarak, eğitimciler, öğrenciler ve müfredat tasarımcıları için pratik çıkarımlar sunmaktadır. Özellikle, teknolojik ilerlemelerin ve hızla değişen dünyanın getirdiği zorluklar karşısında yaratıcı düşünmenin gerekliliğine dikkat çekmektedir. Hamdan ve Awwad'ın (2022) çalışması, bireysel yaratıcılığa sahip üniversite öğrencilerinin kişilik özellikleri ile yaratıcılıkları arasındaki ilişkiyi incelemeyi amaçlamaktadır. Araştırmada, bireysel kapasite faktörlerinin (beceriler, bilgi, çevre, içsel motivasyon, kaynaklar) bu ilişkiyi nasıl değiştirdiği ele alınmıştır. Araştırma bulguları,

nevrotiklik dışındaki dört kişilik özelliğinin bireylerin yaratıcılık düzeyini anlamlı biçimde etkilediğini; ayrıca çevresel koşullar, bireysel kaynaklar, beceriler, içsel motivasyon ve bilgi düzeyinin bu ilişki üzerinde belirleyici rol oynadığını ortaya koymuştur. Duman ve Yıldırım (2023) yaptıkları araştırmada turizm eğitimi alan öğrencilerin öz yeterlilik ve bireysel yaratıcılık algılarının turizmde çalışma istekleri üzerindeki etkisini incelemiştir; ayrıca bireysel yaratıcılığın bu ilişkiye aracılık edip etmediğini araştırmıştır. Analiz sonuçları, turizm eğitimi alan öğrencilerin öz yeterlilik algısının bireysel yaratıcılık ve turizmde çalışma isteği üzerinde pozitif ve anlamlı etkiler yarattığını; ayrıca bireysel yaratıcılığın bu ilişkide tam aracılık rolü üstlendiğini ortaya koymuştur. Setiadi ve So (2013) çalışmalarında ise, lisans düzeyindeki sanat ve tasarım öğrencilerinin yaratıcılık becerilerinin gelişimini bilgisayar destekli bir yaratıcılık simülasyonu kullanarak değerlendirmiş ve bu değerlendirmenin aracının güvenilirliğini ve geçerliliğini ortaya koymuşlardır. Ayrıca faktör analizi, yaratıcı özellik ve davranışların beş faktörlü bir yapıda toplandığını ortaya koymuş; bulgular, yaratıcılık becerilerinin öğrenimi ve değerlendirilmesinde bilgisayar simülasyonlarının katkılarını vurgulamıştır. Mynbayeva, Vishnevskaya ve Sadvakassova (2016) yaptıkları çalışmada öğrencilerin üniversitedeki öğrenim süresince bireysel yaratıcılığa yönelik engellerin kaldırılması için psikopedagojik programın geliştirilmesi çalışmışlardır. Çalışma, bireysel yaratıcılığı desteklemeye yönelik psiko-eğitim programlarının geliştirilmesi gerekliliğini ortaya koymuş ve elde edilen sonuçların çeşitli psikolojik müdahale ve eğitim ortamlarında kullanılabilir olduğunu göstermiştir. Kaplan (2019) çalışmasında ise öğretmenlik eğitiminde bireysel yaratıcılığı nasıl geliştirebileceklerini araştırmıştır; bu kapsamda, öğretmen eğitimi öğrencilerinin yaratıcılık teorilerini öğrenmeleri ve bu teorileri ders ve proje tasarımlarında uygulamaları incelenmiştir. Araştırma bulguları, öğretmen adaylarının yaratıcılık teorilerine dayalı öğretim ve öğrenim tasarımları geliştirebildiklerini ve bu teorilerin pedagojik uygulamalarda etkili biçimde kullanılabileceğini göstermiştir. Jahnke ve Liebscher (2020) yaptıkları araştırmada, yükseköğretimdeki öğretmenlerin mobil cihazları kullanarak öğrenci yaratıcılığını teşvik etmeye yönelik doğrudan bir odaklanma göstermediklerini, ancak mobil teknolojilerle anlamlı öğrenmeyi destekleyen örtük yaratıcılık unsurlarının bulunduğunu ortaya koymaktadır.

İncelenen çalışmalar sonucunda, farklı eğitim düzeylerinde ve kültürel bağlamlarda bireysel yaratıcılığın gelişimini engelleyen veya destekleyen unsurları inceleyerek, yaratıcılığın eğitimdeki önemini ve toplumsal gelişime katkısını vurgulamakta; ayrıca, eğitimciler ve müfredat tasarımcıları için yaratıcılığı teşvik eden stratejiler geliştirilmesine yönelik önemli bulgular sunmaktadır. Bu çalışmada ön lisan öğrencilerinin bireysel yaratıcılık becerilerinin

düzeyini belirlemek amaçlanmıştır. Üniversite süresince öğrencilerin yaratıcı düşünme becerilerini geliştirmeleri, yeni fikirler üretmeleri ve bunları hayata geçirmeleri, akademik başarılarına önemli katkı sağlayabilir.

Problem

Ön lisans bireysel yaratıcılık becerilerinin düzeyi nedir ve bazı değişkenlere göre anlamlı farklılık göstermekte midir?

Alt Problemler.

1- Ön lisans bireysel yaratıcılık becerilerinin düzeyi dağılımları nasıldır?

2- Ön lisans bireysel yaratıcılık becerilerinin düzeyleri;

a. Cinsiyetleri açısından anlamlı farklılık göstermekte midir?

b. Günlük internette geçirdikleri zaman açısından anlamlı farklılık göstermekte midir?

Yöntem

Araştırmada, nicel bir yöntem olan tarama modeli kullanılmıştır. Tarama modelleri, geçmişte ya da hâlâ mevcut olan bir durumu mevcut haliyle tanımlamayı hedeflemektedir. Bu araştırma türünde, incelenen olay, birey veya nesne, kendi koşulları çerçevesinde ve olduğu gibi tanımlanmaya çalışılmaktadır (Karasar, 2003).

Çalışma Grubu

Araştırmanın katılımcıları, bir devlet üniversitesine kayıtlı toplam 162 ön lisans üniversite öğrencisinden oluşmaktadır. Bu öğrencilerin 72'si kadın (%44,4) ve 90'nı erkek (%55,6) olarak sınıflandırılmıştır. Araştırmada, benzeşik (homojen) örnekleme yöntemi kullanılarak 162 ön lisans öğrencisi üzerinden analizler gerçekleştirilmiştir. Benzeşik örnekleme yönteminin amacı, daha belirgin bir alt grubu tanımlamak için küçük, benzeşik bir örneklem oluşturmaktır (Yıldırım ve Şimşek, 2013). Araştırmaya katılan öğrencilerin demografik bilgileri Tablo '1 deki gibidir.

Tablo 1: Öğrencilerin Demografik Özellikleri

Değişken	Alt Grup	f	%
Cinsiyet	Kadın	72	44,4
	Erkek	90	55,6

Günlük İnternet	1 saatten az	51	31,5
Kullanımı	2-3 saat	73	45
	4 saat ve üzeri	38	23,5
	Toplam	162	100

Veri Toplama Araçları

Yıldız, Kaçay ve Soyer (2022) tarafından geliştirilen Bireysel Yaratıcılık Ölçeği (BYÖ), 256 yetişkin katılımcıdan oluşmaktadır. Ölçekteki madde-kalan arasındaki korelasyonlar .82 ile .67 arasında değişmektedir. Ölçeğin yapısını anlamak için bir açımlayıcı faktörü analizi (AFA) kullanıldı. Sonuç olarak, geçerlilik açısından yürütülen AFA, ölçeğin 13 maddeden oluştuğunu ve tek bir faktörden oluşmaktadır. Maddeler, puanlar 1 ile 5 arasında değişen beş puanlık bir Likert ölçeği kullanılarak değerlendirilmiştir. Ölçekten elde edilebilecek toplam puan 13 ile 65 arasında değişmektedir. Ölçek içinde ters madde yoktur. Ölçek için Cronbach Alpha katsayısı .92 olarak hesaplanmıştır. Bu çalışmadan elde edilen bulgulara uygun olarak, Cronbach Alpha değeri .946 olarak belirlendi, böylece ölçek için güvenilirliğinin yüksek derecede olduğunu görülmektedir.

Verilerin Toplanması ve Analizi

Veriler 162 ön lisan üniversite öğrencisinden toplanmıştır. Analizleri yapmadan önce, çarpıklık ve basıklık katsayılarına göre parametrik veya parametrik olmayan testlerin seçimi yapılmıştır. Çarpıklık ve basıklık katsayılarını belirlemek için ölçeğin toplam değerleri kullanılmıştır. BYÖ için belirlenen çarpıklık katsayısı -0,499, basıklık değeri ise 0,536 olarak elde edilmiştir. Araştırmasında George (2011), çarpıklık ve basıklık katsayıları için -2 ile +2 arasında değişen değerlerin normal bir dağılımın göstergesi olduğunu açıklar. Bulgulara dayalı olarak veri kümesinin normal dağılım varsayımını desteklemek için parametrik analizler uygulandı.

Bulgular

Bulgulardan elde edilen sonuçlar tanımlanan alt problemlere göre düzenlenmiştir.

Ön lisans bireysel yaratıcılık becerilerinin düzeyi dağılımları ilişkin veriler.

Ön lisans bireysel yaratıcılık becerilerinin düzeyi arasında dağılımı nasıldır?” sorusu, araştırma soruşturmasının ilk alt problemini temsil etmektedir. Araştırma, Ön lisans bireysel yaratıcılık becerilerinin düzeyini değerlendirmek için tanımlayıcı istatistikler kullanıldı. Yapılan analizin sonuçları ise Tablo 2 de gösterilmektedir.

Tablo 2: Ön lisans Bireysel Yaratıcılık Becerileri Düzeyleri

Değişken	N	$\bar{X}$	Min.	Max.	SS	Düzy
Bireysel Yaratıcılık Becerileri	162	52,34	25	65	8,11	Yüksek

Tablo 2'de verilen bilgilere göre, ön lisans bireysel yaratıcılık becerilerinin değerlendirmesinde elde ettikleri ortalama puan 52,34'dir ve bu puanda 8,11'lik standart sapma vardır. Değerlendirmede puan aralığı ise en düşük 25 en yüksek 65 olarak belirlenmiştir. Ön lisans bireysel yaratıcılık becerileri düzey dağılımından aldıkları puan ortalaması $\bar{x}=3.60$ dır. Doğan (2023) tarafından yürütülen çalışmaya göre, ölçek maddelerinden alınan puanın 3.40 ile 4.19 arasında yer alması, yüksek bir puan olduğunu ifade etmektedir. Bu ortalama ön lisans bireysel yaratıcılık becerileri düzeylerinin yüksek olduğunu göstermektedir.

Ön lisans Bireysel Yaratıcılık Cinsiyetleri Açısından Anlamlı Farklılık Göstermekte Midir? Sorusuna İlişkin Bulgular.

Cinsiyete göre, ön lisans bireysel yaratıcılık becerilerinde anlamlı farklılık göstermekte midir?" sorusu, araştırma soruşturmasının ikinci alt problemini temsil etmektedir. Araştırmada, ön lisans bireysel yaratıcılıklarının cinsiyete göre farklılaşıp farklılaşmadığını belirlemek için, çalışma grubundaki öğrenciler için t-testi analizi yapılmıştır. Yapılan analizin sonuçları ise Tablo 4 de gösterilmektedir.

Tablo 3: Ön lisans Bireysel Yaratıcılık Becerileri Cinsiyete Göre T_Testi Sonuçları

	N	X	ss	T testi		
				t	Sd	p
Kadın	72	50.26	8,02	-2.99	160	,003*
Erkek	90	54.01	7,84			

$P < .05^*$

Tablo 3'e göre, ön lisans bireysel yaratıcılık becerileri cinsiyetlerine bağlı olarak anlamlı bir farklılık göstermektedir ($t[160]=-2.99$; $p<0.05$). Bu farklılık, erkek öğrenciler lehine olacak şekilde ortaya çıkmaktadır.

Ön lisans Bireysel Yaratıcılık Becerileri Günlük İnternet Kullanımı Açısından Anlamlı Farklılık Göstermekte Midir? Sorusuna İlişkin Bulgular.

"Ön lisans bireysel yaratıcılık becerileri günlük internet kullanımı açısından anlamlı farklılık göstermekte midir?" sorusunun yanıtı için tek yönlü varyans analizi gerçekleştirildi ve sonuçlar Tablo 4 de ki gibidir.

Tablo 4: Ön lisans Bireysel Yaratıcılık Becerileri Günlük İnternet Kullanımı Göre Anova Sonuçları

Sınıf	N	$\bar{X}$	SS	Varyansın Kaynağı	Kareler Toplamı	sd	Kareler Ortalaması	F	p
Bir saatten az	51	53	7,59	Gruplar	52,508	2	26,254	,395	0,674
2-3 saat	73	52,35	8,84	arası					
4 saat ve üzeri	38	51,44	7,42	Gruplar içi	10558,134	159	66,40		
				Toplam	10610,642	161			
Toplam	162	52,34	8,11						

Ön lisans bireysel yaratıcılık becerileri günlük internet kullanımına göre anova sonuçlarına göre anlamlı bir farklılık tespit edilememiştir ($F = ,395$, $p > .05$).

Tartışma ve Sonuç

Ön lisans bireysel yaratıcılık becerilerini belirlemek için yapılan araştırmada, 162 öğrenciden veriler toplanmıştır. Analizlerde ortalama, standart sapma, t testi, anava testi gibi istatistiksel yöntemler kullanılmıştır

Ön lisans bireysel yaratıcılık becerileri ölçeğinden aldıkları puanların ortalaması 52,34'dir. Bu da öğrencilerin yüksek düzeyde bireysel yaratıcılık becerilerine sahip olduklarını göstermektedir. Bu durum, öğrencilerin bireysel yaratıcılıklarının yüksek olduğunu ve sadece problem çözme, yenilikçi düşünme ve farklı durumlara uyum sağlama konularında değil, aynı zamanda özgün fikirler geliştirme ve yaratıcı projelerde etkili olma yeteneklerine de sahip olduklarını işaret eder. Ayrıca bu beceriler onların hem akademik hem de profesyonel yaşantılarında yaratıcı çözümler üretebileceklerini ve değişen koşullara hızlıca adapte olabileceklerini göstermektedir. Literatürdeki bireysel yaratıcılık becerileri üzerine yapılan çalışmalarda Yenice ve Yavaşoğlu (2018), fen bilgisi öğretmen adaylarının bireysel yaratıcılık düzeylerinin orta seviyede olduğunu saptamıştır. Gamarra-Moscoso ve Flores-Mamani (2020) ise üniversite öğrencilerinin yaratıcı düşünme becerilerinin yüksek olduğu, bunun da farklı kişisel ve akademik etkinlikler ve kişilerarası ilişkilerin geliştirilmesine katkı sağladığı sonucuna varmışlardır. Diğer bir çalışma da Mareque, De Prada ve Pino-Juste (2019), üniversite öğrencilerinin yaratıcılık becerilerinde özgünlük, akıcılık ve esneklik açısından düşük puanlar aldıklarını belirtmişlerdir. Sonuç olarak hem lisans hem de ön lisans öğrencilerinin bireysel yaratıcılık becerileri farklı düzeylerde olduğu ortaya çıkmaktadır.

Ön lisans bireysel yaratıcılık becerileri, cinsiyet değişkenine göre, erkek öğrenciler, lehine anlamlı farklılık bulunmuştur. Ozturk ve Ozturk (2024) yaptıkları çalışmada benzerlik

göstermektedir. Benzer bir çalışmada Mareque vd. (2019), yaptığı çalışmada bireysel yaratıcılık becerilerinde erkek öğrencilerin daha yüksek puan aldıkları görülmektedir. Bunun aksine Yıldız, Kula, Kaçay ve Soyer (2023) tarafından yapılan çalışmada, ise kadınların bireysel yaratıcılık düzeylerinin erkeklere kıyasla daha yüksek olduğu tespit edilmiştir. Cinsiyetin bireysel yaratıcılık üzerindeki etkisi, yapılan çalışmaların sonuçlarına göre farklılık göstermektedir; bazı araştırmalar erkek öğrencilerin yaratıcılık becerilerinde daha yüksek olduğunu belirtirken, diğer araştırmalar ise kadınların bireysel yaratıcılık düzeylerinin daha yüksek olduğunu ortaya koymaktadır. Bu durum, bireysel yaratıcılığın cinsiyete dayalı farklı dinamiklere sahip olabileceğini göstermektedir.

Ön lisans bireysel yaratıcılık becerileri günlük internet kullanımına göre anlamlı bir farklılık tespit edilememiştir. Bunun aksine Livingston (2010) çalışmasında üniversite öğrencilerinin günlük internet kullanımı, sürekli bilgi erişimi sağlaması nedeniyle bireysel yaratıcılık becerilerini geliştirmenin yanı sıra, yükseköğretimde iş birliği, etkileşim ve yeniliği de teşvik edebileceğini söylemektedir. Öztürk ve Öztürk (2024) tarafından yapılan çalışmada ise üniversite öğrencileri arasında yaratıcı kişilik özellikleri ile internet kullanımı arasındaki ilişki, yaratıcılık ve belirli internet kullanım amaçları temelinde ilişkilendirilerek incelenmiştir. Ayrıca Naseem ve Singh (2013) çalışmalarında bireysel yaratıcılıkta problem çözme becerilerini geliştirmek amacıyla, internetin daha fazla uygulama, keşfetme ve yeni bilgi arama amacıyla kullanılması önerilmektedir. Bunun yanı sıra Dewanto, Wantu, Dwihapsari, Santosa ve Agustina, (2023) yaptıkları internet tabanlı öğrenme modelinin öğrencilerin yaratıcı düşünme becerileri üzerinde önemli bir etkiye sahip olduğunu açıklamaktadır. Bu bağlamda, internet kullanımının bireysel yaratıcılık üzerindeki etkisi, öğrencilerin interneti bilgiye erişim, iş birliği, etkileşim ve yenilik amaçlarıyla nasıl kullandıklarına bağlı olarak farklılık gösterebilir.

Sonuç olarak, ön lisans bireysel yaratıcılık becerileri ile ilgili yapılan çalışmada, öğrencilerin genel olarak yüksek düzeyde bireysel yaratıcılık becerileri sahip oldukları söylenebilir. Cinsiyet değişkenine göre, erkek öğrenciler lehine anlamlı bir farklılık tespit edilirken, günlük internet kullanımında ise anlamlı bir farklılık bulunmuştur. İleride gerçekleştirilecek çalışmalar da öğrencilerin teknoloji kullanımında bireysel yaratıcılığın nasıl desteklediği araştırılabilir.

Lisans Öğrencilerinin Öğrenmede Esnek Düşünme Becerilerinin İncelenmesi

Gürbüz Ocak

Afyon Kocatepe Üniversitesi, gocuk@aku.edu.tr, 0000-0001-8568-0364, TÜRKİYE

Gülin Ütebay

Afyon Kocatepe Üniversitesi, utebay@aku.edu.tr, 0000-0001-7309-6785, TÜRKİYE

Özet

Öğrenmede esnek düşünme becerileri, proje tabanlı öğrenmede öğrencilerin konuyu kavrama yetilerini değerlendirmede büyük önem taşır. Yapılan değerlendirmeler, öğrencilerin bilgi derinliğini ve farklı fikirleri uygulama becerilerini ortaya koyarak, öğrenilen bilginin nasıl geliştiğini gözler önüne serer. Bu bağlamda, üniversite lisans öğrencilerinin esnek düşünme becerileri incelenerek, eğitim süreçleri boyunca karşılaştıkları sorunlara farklı bakış açılarıyla yaklaşabilmeleri ve yaratıcı çözümler üretebilmeleri amaçlanmaktadır. Araştırma yöntemi olarak tarama yöntemi kullanılmıştır. Öğrenmede Esnek Düşünme Ölçeği ile veriler toplanmıştır. Araştırmanın örneklemi, bir devlet üniversitesinin seçilen 221 lisans öğrencisinden oluşmakta olup, amaçlı örnekleme yöntemiyle belirlenmiştir. Verilerin analizinde, frekans, yüzde, standart sapma, ortalama, t-testi ve ANOVA testi analizleri kullanılmıştır. Analiz bulgularına göre, bireysel yaratıcılık ölçeğinden aldıkları puanların ortalaması 75,89 dur. Bu da lisans öğrencilerinin esnek düşünme becerilerine orta seviyede sahip olduklarını göstermektedir. Esnek düşünme becerilerinin cinsiyet değişkenine göre, erkek öğrenciler, lehine anlamlı farklılık vardır. Ayrıca yaş değişkenine göre 26 ve üstündeki öğrenciler arasında anlamlı bir farklılık göstermektedir. Bunun yanı sıra sınıf değişkenine göre anlamlı bir farklılık göstermemektedir. Sonuç olarak, öğrencilerin farklı bakış açıları geliştirme ve yaratıcı çözümler üretme konusunda belirli bir potansiyele sahip olduklarını ancak bu becerilerin daha da geliştirilmesi gerektiğini göstermektedir.

Anahtar kelimeler: Esnek düşünme, Lisans öğrencileri, Yaratıcılık

Investigation of Undergraduate Students' Flexible Thinking Skills in Learning

Abstract

Flexible thinking skills in learning are of great importance in assessing students' comprehension in project-based learning. The evaluations reveal the depth of students' knowledge and their ability to apply different ideas, revealing how the learned knowledge develops. In this context, it is aimed to examine the flexible thinking skills of university undergraduate students so that

they can approach the problems they encounter during their education process from different perspectives and produce creative solutions. Survey method was used as the research method. Data were collected with the Flexible Thinking in Learning Scale. The sample of the study consisted of 221 undergraduate students selected from a state university and was determined by purposive sampling method. Frequency, percentage, standard deviation, mean, t-test and ANOVA tests were used to analyze the data. According to the findings of the analysis, the mean score of the individual creativity scale was 75.89. This shows that undergraduate students have flexible thinking skills at a medium level. According to the gender variable, there is a significant difference in favor of male students. In addition, according to the age variable, there is a significant difference between students aged 26 and above. In addition, there is no significant difference according to the class variable. As a result, it shows that students have a certain potential in developing different perspectives and producing creative solutions, but these skills need to be further developed.

Keywords: Flexible Creativity, Undergraduates, Creativity

Giriş

Öğrenmede esnek düşünme becerileri, öğrencilerin çeşitli eğitim bağlamlarına ve zorluklarına uyum sağlamalarını sağlayarak öğrenme çıktılarını geliştirirken, bu esneklik aynı zamanda uzaktan ve çevrimiçi öğrenmede öğrencilere zaman, hız ve mekân sınırlamalarından bağımsız olarak 'her yerden' ve 'her zaman' eğitim alma imkânı sunan anlayışla da yakından ilişkilidir. Bunun yanı sıra esnek düşünme becerisi, bireyin toplumda, teknolojiye ve çevresel koşullarda meydana gelen değişikliklere adapte olmasını, farklı kültürlerden insanlarla uyum içinde yaşamasını kolaylaştırır. Ayrıca değişen programlar ve hayatın farklı rolleri karşısında uyum sağlamasına olanak tanır ve eleştirilere açık olmasını destekler (P21, 2015). Houlden ve Veletsianos'un (2021) da belirttiği gibi, eğitim yöntemlerinin daha uyumlu ve öğrenci ihtiyaçlarına duyarlı hale getirilmesi, esnekliğin genişletilmesine katkı sağlarken, bu aynı zamanda öğrenmede esnek düşünme becerilerini de destekleyerek, öğrencilerin sorunlara farklı perspektiflerden yaklaşımlarını, yaratıcılığı ve etkili problem çözme teşvik eder. Tseng, Kuo ve Walsh (2020) tarafından "bir kişinin etkileşim ve çözüm alternatifleri konusundaki farkındalığı, yeni durumlara uyum sağlama becerisi, farklı görüşleri dikkate alma istekliliği ve esnek olma konusundaki öz yeterliliği" olarak tanımlanmıştır. McCrae ve Sutin (2009) ise esnek düşünmeyi, bireyin bilgiyi anlama, yorumlama ve bu bilgiyi çeşitli durumlara adapte etme şekli olarak değerlendirmektedir. Runco, (2014) göre ise özgün ve işlevsel fikirler, ürünler veya çözümler üretme becerisi olarak tanımlanmaktadır.

Son zamanlarda literatürde, farklı alanlardaki çalışmalarda esnek öğrenme üzerine yapılan çalışmalar genellikle yabancı kaynaklarda ele alınmaktadır.(Niemi, 2021; Vega Fernández, 2020 ; Vázquez-Cano, Mengual-Andrés ve López-Meneses , 2021; Gürültü, Aslan ve Alcı, 2020; Daher ve Anabousy, 2020; Gube ve Lajoie , 2020; Li, Yang, Chu, Zainuddin ve Zhang, 2022;)

Niemi,(2021) yaptığı çalışmada açık ve esnek öğrenme ortamlarına adaptasyonu tasarımında öğretmenlerin pedagojisi, ekip öğretimi ve öğrenci-öğretmen ilişkileri üzerindeki etkilerini inceleyerek, öğretmenlerin okul tasarımı sürecinde daha fazla söz sahibi olması gerektiğini savunmaktadır. Benzer bir çalışmada, Vega Fernández (2020), öğrenme alanlarının esnek olup pedagojilere uyum sağlama potansiyeline sahip olduğunu ve aynı zamanda çocuklar için eğlence, yaratıcılık, iş birliği ve empatiyi teşvik ettiğini ortaya koymaktadır. Vázquez-Cano vd. (2021),ise İspanyolca dilinde noktalama işaretlerinin öğrenimini kolaylaştırmak için açık ve esnek öğrenme ortamları için bir sohbet robotu geliştirmiştir. Gürültü, Aslan ve Alcı'nın (2020) araştırmalarında, esnek öğrenme becerileri, 11-15 yıl arası mesleki deneyime sahip öğretmenlerin ortalama puanlarının, 5 yıl ve daha az deneyimi olanlara göre daha yüksek olduğunu tespit etmişlerdir. Daher ve Anabousy, (2020) yaptıkları çalışmada, teknolojiyi kullanarak matematiksel bir problemi çözerken esnek öğrenme yöntemlerini kullanan öğretmen adaylarının, tahmin etme, uzmanlaşma, sonuçları teknoloji ile doğrulama ve genelleme gibi yaratıcılık süreçlerini izleme eğiliminde olduklarını belirlemişlerdir. Gube ve Lajoie ,(2020) üniversite mezunlarının hızla değişen bir toplumda başarılı olabilmeleri için esnek düşünme becerilerine ihtiyaç duyduğunu ve bu becerilerin, uyum sağlayıcı uzmanlık ve yaratıcı düşünme kavramlarının “uygulamalı yaratıcı düşünme” olarak kesiştiğini ortaya koymaktadır. Li vd. (2022), yaptıkları çalışmada üniversite öğrencilerinin esnek öğrenme ihtiyaçlarına yanıt olarak karma senkron öğretim ve öğrenme yaklaşımlarının geliştirilmesine yönelik olarak yaptıkları araştırmalar da uygulama ve teori arasındaki boşluğu nasıl kapatacaklarını incelemişlerdir.

Araştırılan çalışmalar, esnek öğrenme ortamlarının geliştirilmesinin, hem eğitim uygulamalarında hem de teknoloji entegrasyonu açısından öğretmen ve öğrencilerin yaratıcılık, iş birliği ve uyum becerilerini güçlendirdiğini, aynı zamanda teori ile uygulama arasındaki boşlukları kapatarak eğitim süreçlerini daha başarılı hale getirdiğini göstermektedir.

Problem

Lisans öğrencilerinin esnek öğrenme becerilerinin düzeyi nedir ve bazı değişkenlere göre

anlamli farklılık göstermekte midir?

Alt Problemler.

1- Lisans öğrencilerinin esnek öğrenme becerilerinin düzeyi dağılımları nasıldır?

2- Lisans öğrencilerinin esnek öğrenme becerilerinin düzeyleri;

a. Cinsiyetleri açısından anlamli farklılık göstermekte midir?

b. Yaş değişkeni açısından anlamli farklılık göstermekte midir?

c. Öğrenim gördüğü sınıf değişkenine göre anlamli farklılık göstermekte midir?

Yöntem

Bu araştırma nicel tarama deseni temel alınarak yürütülmüştür. Tarama deseni, belirli bir örneklem aracılığıyla araştırma konusundaki eğilimleri, tutumları ya da görüşleri sayısal verilerle ortaya koyma imkânı sunar (Creswell, 2017, s.13).

Çalışma Grubu

Araştırmanın örneklemini, 2024–2025 güz döneminde bir devlet üniversitesinde öğrenim gören toplam 221 üniversite öğrencisi oluşturmaktadır. Bu öğrencilerin 132'si kadın (%59,7) ve 89'i erkektir (%40,3). Çalışmada, 221 lisans öğrencisinden oluşan katılımcı grubu üzerinde analizler yapılmış olup benzeşik örnekleme yöntemi, benzer özelliklere sahip küçük bir örneklem seçilerek belirli alt grupların detaylı bir biçimde analiz edilmesini ve araştırılmasını hedefler (Christensen, Johnson ve Turner, 2015). Katılımcılara ilişkin demografik bilgiler ise Tablo 1 de ayrıntılı şekilde sunulmuştur.

Tablo 1: Katılımcı Grubun Demografik Özellikleri

Değişken	Alt Grup	f	%
Cinsiyet	Kadın	132	59,7
	Erkek	89	40,3
Yaş	17-20	89	40,3
	21-25	114	51,6
	26 ve üzeri	18	8,1
Sınıf	1. Sınıf	68	30,8
	2. Sınıf	65	29,4
	3. Sınıf	19	8,6
	4. Sınıf	69	31,2

Veri Toplama Araçları

Üniversite öğrencileriyle yürütülen bu araştırmada, öğrenme esnekliği eğilimlerini ölçmek amacıyla Aktaş, Demirgöl ve Sancar (2024) tarafından geliştirilmiş olan "Öğrenmede Esnek Düşünme" (ÖED) ölçeğinden yararlanılmıştır.

Öğrenmede Esnek Düşünme Ölçeği, 19 maddeden oluştuğu ve üç temel faktör altında toplandığı saptanmıştır: *Öğrenme Teknolojilerinin Benimsenmesi*, *Öğrenmede Açık Fikirlilik* ve *Yeni Öğrenme Koşullarına Uyum*. Ölçekteki ifadeler, altı dereceli Likert tipi ölçekle değerlendirilmiş ve yanıtlar 1'den 6'ya kadar puanlanmıştır. Toplam puan aralığı 19 ile 114 arasında değişmektedir. Ölçekte olumsuz yönde (ters) kodlanmış madde bulunmamaktadır. Ölçeğin genel Cronbach Alfa güvenirlik katsayısı 0.885 olarak tespit edilmiştir. Bu araştırma kapsamında hesaplanan alt boyutlara ait Cronbach Alfa değerleri ise şöyle sıralanmıştır: *Öğrenme Teknolojilerinin Benimsenmesi* için 0.80, *Öğrenmede Açık Fikirlilik* için 0.78 ve *Yeni Öğrenme Koşullarına Uyum* için 0.86. Elde edilen sonuçlar, tüm alt boyutların güvenilirlik düzeylerinin kabul edilebilir düzeyden yüksek düzeye kadar değiştiğini ortaya koymaktadır.

Verilerin Toplanması ve Analizi

Araştırma verileri 221 üniversite lisans öğrencisinden veri toplanmıştır. Analizlere başlamadan önce, parametrik ya da parametrik olmayan testlerin tercih edilmesi için basıklık (kurtosis) ve çarpıklık (skewness) katsayıları dikkate alınmıştır. Bu katsayıların hesaplanmasında ölçeğin toplam puanları esas alınmıştır. Esnek düşünme becerileri için ölçeği için hesaplanan çarpıklık değeri 0,363, basıklık katsayısı ise 0,397 olarak bulunmuştur. George (2011) tarafından yapılan çalışmada, çarpıklık ve basıklık katsayılarının -2 ile +2 aralığında olması durumunda verilerin normal dağılım gösterdiği ifade edilmektedir. Elde edilen sonuçlar doğrultusunda, verilerin normal dağılım kriterlerini karşıladığı görülmüş ve bu nedenle analizlerde parametrik testlerin kullanılması uygun bulunmuştur.

Bulgular

Elde edilen veriler, alt sorular çerçevesinde sınıflandırılarak bu bölümde açıklanmıştır.

Lisans öğrencilerinin esnek düşünme becerileri düzeyi ait bilgiler.

"Lisans öğrencilerinin esnek düşünme becerileri düzeyi dağılımı nasıldır?" araştırmanın ilk alt problemi. Çalışma, öğrencilerinin esnek düşünme becerileri düzeylerini belirlemek için betimsel istatistik tekniklerini kullandı. Tablo 2'de analizin sonuçlarını göstermektedir.

Tablo 2: Lisan Öğrencilerinin Esnek Düşünme Düzeyleri

Değişken	N	$\bar{X}$	Min.	Max.	SS	Düzy
Esnek Düşünme	221	75,89	60	95	7,20	Orta

Tablo 2' ye göre, öğrencilerin esnek düşünme becerileri ölçeğinden elde ettikleri puanların ortalaması 75,89, standart sapması ise 7,20 olarak belirlenmiştir. Ölçekten alınabilecek puanlar minimum 60, maksimum 95 arasında değişmektedir. Ölçekten elde edilebilecek puanlar 22 ile 110 arasında yer almakta olup, bu doğrultuda 22-51 puan arası düşük, 52-81 puan arası orta ve 82-110 puan arası yüksek düzey olarak değerlendirilmiştir (Erol ve diğerleri, 2023). Elde edilen ortalama puana göre değerlendirildiğinde, üniversite öğrencilerinin esnek düşünme beceri düzeylerinin orta olduğu söylenebilir.

Esnek düşünme becerilerinde cinsiyet değişkenine yönelik bulgular

Araştırmada, cinsiyet değişkeninin esnek düşünme düzeyleri üzerindeki etkisini ortaya koymak amacıyla bağımsız örneklem t-testi gerçekleştirilmiştir. Cinsiyet değişkenine göre yapılan t-testi analizine ilişkin bulgular, Tablo 3'te ayrıntılı olarak sunulmaktadır.

Tablo 3: Lisans Öğrencilerinin Esnek Düşünme Becerileri Cinsiyete Göre T_Testi Sonuçları

	N	X	ss	T testi		
				t	Sd	p
Kadın	132	74,5	6,71	-3,58	219	,001
Erkek	89	77,9	7,43			

$P < .05^*$

Tablo 3'e göre, lisans öğrencilerinin esnek düşünme becerileri cinsiyete göre anlamlı bir şekilde farklılık göstermektedir ($t[219] = -3.58$; $p < 0.05$). Bu farklılığın, erkek öğrencilerden kaynaklandığı ortaya çıkmaktadır.

Esnek düşünme becerilerinde yaş değişkenine yönelik bulgular

"Lisans öğrencilerinin dijital esnek düşünme becerilerinin yaş değişkeni açısından farklılık gösteriyor mu?" sorusunun yanıtı için tek yönlü varyans analizi gerçekleştirildi ve sonuçlar Tablo 4'te sunuldu.

Tablo 4: Lisans Öğrencilerinin Esnek Düşünme Becerileri Yaş Değişkenine Göre ANOVA Sonuçları

Yaş	N	$\bar{X}$	SS	Varyansın Kaynağı	Kareler Toplamı	sd	Kareler Ortalaması	F	p	Farkın Kaynağı
17-20 (1)	89	74,97	6,70	Gruplar arası Gruplar içi Toplam	290,533	2	145,266	2.84	0,06	1-3
21-25 (2)	114	76,05	7,42		11113,639	218	50,980			
26 ve üzeri (3)	18	79,33	7,40		11404,172	220				
Toplam	230	75,88	7,19							

Lisans öğrencilerinin esnek düşünme becerileri, yaş değişkenine göre ANOVA sonuçlarına göre anlamlı bir farklılık sergilemektedir ($F = 2,84$, $p < .05$). Öğrencilerin yaş değişkenine göre farklılığını belirlemek için yapılan Post Hoc testlerinden, varyanslar homojen olmadığı ($p < .05$) için LSD testi uygulanmıştır. Bu farklılık, 26 yaş ve üzerindeki bireylerde anlamlı bir şekilde gözlemlenmektedir.

Esnek düşünme becerilerinde sınıf değişkenine yönelik bulgular

"Lisans öğrencilerinin esnek düşünme becerileri, sınıf değişkeni açısından farklılık gösteriyor mu?" sorusunun yanıtı için tek yönlü varyans analizi gerçekleştirildi ve sonuçlar Tablo 5'te sunuldu.

Tablo 5: Lisans Öğrencilerinin Esnek Düşünme Becerileri, Sınıf Değişkeni Göre ANOVA Sonuçları

Sınıf	N	$\bar{X}$	SS	Varyansın Kaynağı	Kareler Toplamı	sd	Kareler Ortalaması	F	p
1 Sınıf (1)	68	75.39	6,48	Gruplar arası Gruplar içi Toplam	114,96	3	58,72	,737	0,531
2. Sınıf (2)	65	75,52	7,80		11289,210	217	37,05		
3. Sınıf (3)	19	75,05	6,11		11404,172	220			
4 Sınıf (4)	69	76,94	7,57						
Toplam	221	75,88	9,19						

Esnek düşünme becerileri ile sınıf düzeyi arasındaki ilişkiyi incelemek amacıyla yapılan ANOVA analizi, gruplar arasında anlamlı bir farklılık bulunmadığını göstermektedir ($F = ,737$, $p > .05$).

Tartışma ve Sonuç

Esnek düşünme becerileri düzeylerini tespit etmek amacıyla gerçekleştirilen çalışmada,

toplamda 221 öğrenciden veri elde edilmiştir. Araştırmada, verilerin çözümlenmesi sürecinde ortalama, standart sapma, t-testi, ANOVA testi gibi çeşitli istatistiksel analiz yöntemlerinden faydalanılmıştır.

Lisans öğrencilerinin esnek düşünme becerilerinden elde ettikleri ortalama puan 75,89 olarak bulunmuştur. Bu sonuç, öğrencilerin esnek düşünme düzeylerinin orta seviyede olduğunu göstermektedir. Rahayu, Asfar, Nursyam ve Asfar (2022) tarafından yürütülen bir çalışmada, Massallo Kawali'nin bütünleşik Açık Zamanlı Öğrenme Modeli'nin, öğrencilerin esnek düşünme becerilerini anlamlı düzeyde artırdığı belirlenmiştir. Benzer şekilde, Sellars (2011) tarafından gerçekleştirilen bir araştırma da, öğretim uygulamalarında yapılan değişikliklerin öğrencilerin esnek düşünme becerilerini belirgin biçimde geliştirdiğini ortaya koymuştur. Bu bulgular, öğretim sürecinde uygulanacak model ve yöntem değişikliklerinin, lisans öğrencilerinin esnek düşünme becerilerinin gelişimine anlamlı katkılar sağlayabileceğini göstermektedir.

Araştırma bulguları, cinsiyet değişkeni açısından esnek düşünme becerilerinde erkek öğrenciler lehine anlamlı bir farklılık olduğunu göstermektedir. Bununla birlikte, Abdulrazaq ve Al-Rawi (2022) tarafından gerçekleştirilen çalışmada, esnek düşünme becerileri açısından erkek ve kız öğrenciler arasında anlamlı bir fark olmadığı belirlenmiştir. Bu sonuç, her iki cinsiyetin benzer düzeyde bilişsel esnekliğe sahip olduğunu göstermektedir. Dolayısıyla, mevcut çalışmada erkek öğrenciler lehine elde edilen anlamlı farklılık, literatürdeki diğer bulgularla çelişmektedir. Bu durum, esnek düşünme becerilerinin cinsiyete göre tutarlılık göstermeyebileceğini ve elde edilen sonuçların farklı örneklem grupları, kültürel faktörler veya uygulanan yöntemlere bağlı olarak değişebileceğini ortaya koymaktadır.

Yaş değişkenine göre yapılan analizler, lisans öğrencilerinin esnek düşünme becerilerinde anlamlı düzeyde farklılıklar olduğunu ortaya koymuştur. Bu anlamlı farklılık, 26 yaş ve üzerindeki bireyler lehine anlamlı bir şekilde ortaya çıkmaktadır. Tranter ve Koutstaal (2008) tarafından gerçekleştirilen bir çalışmada, yaşlı bireylerde kısa süreli ancak yoğun bilişsel uyarımın, problem çözme ve esnek düşünme gibi bilişsel becerilerde anlamlı gelişmeler sağladığı belirlenmiştir. Bu bulgu, yaşa bağlı olarak gözlemlenen esnek düşünme becerilerindeki azalmaların, bilişsel etkinlik düzeyinin artırılmasıyla telafi edilebileceğini ortaya koymaktadır. Öte yandan Разумникова, Каган ve Панова (2020) tarafından 11–13 yaş arası çocuklarla yürütülen bir çalışmada, esnek düşünme becerilerinin yaşa bağlı olarak farklılık gösterdiği tespit edilmiştir. Özellikle zaman kısıtlaması ve tekrarlayan uyaranlar altında 11 yaş

grubunun; çeşitli semantik kategorilere dayalı farklı uyaranlar altında ise 12 yaş grubunun daha yüksek yaratıcılık performansı sergilediği görülmüştür. Bu durum, esnek düşünmenin gelişiminin yaşla birlikte ilerlediğini, ancak bu gelişimin görev türü ve test koşullarına bağlı olarak farklılık gösterebileceğini ortaya koymaktadır.

Lisans öğrencilerinin esnek düşünme becerilerinin sınıf düzeyine bağlı olarak anlamlı bir farklılık sergilemediği görülmüştür. Şahin-Taşkın ve Esen-Aygün (2022) tarafından gerçekleştirilen çalışmada ise, okul öncesi öğretmenliği ve sınıf öğretmenliği programlarında öğrenim gören adayların yanal düşünme eğilimleri ile bilişsel esneklik düzeyleri arasında pozitif ve güçlü bir ilişki olduğu saptanmıştır. Bu sonuç, öğretmen adaylarının düşünce esnekliğinin, yanal düşünme becerileriyle yakından ilişkili olduğunu ortaya koymaktadır. Ancak bu eğilimlerin, öğrencilerin sınıf düzeylerine göre anlamlı bir farklılık sergilemediği saptanmıştır. Benzer şekilde, Sezgin ve Baysal (2019) tarafından yapılan bir çalışmada, 3. sınıf öğrencileri için geliştirilen "Düşünme Becerileri Programı"nın öğrencilerin yaratıcılık düzeylerini olumlu yönde etkilediği ortaya konmuştur. Bu bulgular, esnek düşünme becerilerinin özellikle erken yaşlarda yapılan eğitimsel müdahalelerle geliştirilebildiğini; ancak lisans düzeyinde, sınıf değişkenine bağlı olarak anlamlı bir farklılığın gözlemlenmediğini ortaya koymakta ve gelişimsel sürecin erken dönemlerde daha etkili bir şekilde yönlendirilebileceğine işaret etmektedir.

Bu bulgular, lisans öğrencilerinin esnek düşünme becerilerinin genel olarak orta düzeyde olduğunu, yaş ve cinsiyet gibi bazı demografik değişkenlere bağlı olarak anlamlı farklılıklar gösterebildiğini; ancak sınıf düzeyine göre anlamlı bir farklılık sergilemediğini ortaya koymakta, esnek düşünme becerilerinin geliştirilmesinde öğretim süreçlerinde uygulanacak yöntem ve modellerin yanı sıra, bireysel farklılıkların da dikkate alınması gerektiğine işaret etmektedir.

Özet

Medya okuryazarlığı için herkes tarafından kabul görmüş bir tanım günümüze kadar yapılamamıştır (Altun,2009). Ancak ilgili alanyazı tarandığında pek çok uzmanın karar kıldığı bir tanımın var olduğu görülmektedir. Medya okuryazarlığı farklı yollarla mesajlara ulaşma, analiz ederek bu mesajları başka bir şekilde iletme veya işleme olarak tanımlanmaktadır (Aufderheide,1993). Günümüzde pek çoğumuz medya ile öğreniyor, medya ile eğleniyoruz. Burada bir soru sormak zaruridir: Medya tarafsız bir mecra mıdır? Medyanın da kendine ait değer yargıları var mıdır? Medyanın da kendi değer yargıları olduğunu kabul etmemiz gerekiyor. Bu da medyaya manipüle edebilme gücü vermektedir.Bu tehlikenin varlığını onlara hissettirmek, medya okuryazarlığına karşı genç bireylerde farkındalık oluşturmak bu çalışmanın temelini oluşturmaktadır. Z kuşağı bireylerde bu farkındalığı oluşturabilmek için bir artırılmış gerçeklik uygulaması olan eyejack ile medya labirenti adlı bir kitapçık oluşturulmuştur. Projemizde katılımcı öğrencilerimize Ayşad Güdekli,Mehmet Sebih Oruç, Mehmet Taha ESER, Seçil Deren Van Het Hof tarafından geliştirilen 9 maddeden oluşan haber medyası okuryazarlığı ölçeği uygulandı. Ardından medya labirenti adlı kitapçığımız öğrencilerle paylaşıldı. Bu kitapçıkta <https://teyit.org/> sitesinden alınan 5 yanlış 4 doğru haber yer almaktaydı. Öğrencilere haberlerin doğru mu yanlış mı olduğu soruldu. Ardından cep telefonlarına eyejack artırılmış gerçeklik uygulaması yükleyerek haberleri okumaları istendi. Eyejack uygulaması ile haberlerin içerisine eyejack uygulaması ile görüntülenebilecek gerçek içerikleri yüklendi. Uygulama sonrasında katılımcı öğrencilerimize ön test olarak uyguladığımız ölçek son test olarak tekrar uygulandı. Ön test ve son test karşılaştırması spss programı yardımıyla paired t test karşılaştırması yapılarak değerlendirme yapıldı. Anket sonuçları katılımcı öğrencilerimizde uygulama sonrası haber medyası okuryazarlığına karşın anlamlı bir değişiklik meydana geldiğini ortaya çıkarmıştır.

Abstract

There is no definition that is accepted by everyone for media literacy to date (Altun 2009). However, when the relevant literature is scanned, it is seen that there is a definition that many experts have decided on. Media literacy is defined as reaching messages through different means, analyzing them and transmitting or processing these messages in another way (Aufderheide, 1993). Today, many of us learn and have fun with media. It is necessary to ask a question here: Is media an impartial medium? Does media have its own value judgments? We need to accept that media also has its own value judgments. This gives media the power to manipulate. Making them feel the existence of this danger and creating awareness among young individuals against media literacy constitute the basis of this study. In order to create this awareness in Generation Z individuals, a booklet called Media Labyrinth was created with an augmented reality application, eyejack. In our project, the news media literacy scale consisting of 9 items developed by Ayşad Güdekli vd., was applied to our participant students. Then, our booklet called Media Labyrinth was shared with the students. This booklet included 5 false and 4 true news taken from <https://teyit.org/> website. Students were asked whether the news was true or false. Then, they were asked to read the news by installing Eyejack augmented reality application on their mobile phones. With Eyejack application, real content that can be viewed with Eyejack application was loaded into the news. The scale that we applied to our participant students as a pre-test was applied again as a post-test. Pre-test and post-test comparison was made with the help of SPSS program by making paired t test comparison. The survey results revealed that there was a significant change in news media literacy in our participant students after the application.

Keywords: Media, Fake News, Augmented Reality, Well-being

Giriş

Küresel Bağlamda Medyanın İnsanlar için Anlamı ve Önemi

Farklı teorisyenler, medyanın çağdaş toplumda her yerde bulunduğunu kabul eder. Teorik düşünürler medyanın modern toplumun her alanında mevcut bulunduğunu kabul etmektedirler. Bilim adamları, “Mediatization” (Krotz, 2007) veya “Mediatic dönüş” (Friesen ve Hug, 2009) terimleriyle medya kullanımının önceki nesiller ile şimdiki nesil arasındaki geçişini anlatmayı

amaçlamışlardır. Çocukların ve ergenlerin günlük yaşantıları günümüzde medya ile iç içe geçmiş bir haldedir. Medya olgusu var olduğu andan beri insanlar ve toplum üzerinde bir etki yaratmıştır. Medya araçlarına ulaşımın artması söz konusu etkiyi arttırmaktadır. Medyanın eskiden olduğu gibi yazılı haline kıyasla günümüzde görsel ve işitsel boyutlarda ilerlemesi medyanın tesir alanının arttırmıştır. Günümüzün sosyal medya araçları, sanal ortamın erişilebilirlik ve yüksek etkileşim olanakları sayesinde geniş kitlelere ulaşabilmiştir. Sosyal medyanın değişen yapısı aynı zamanda toplumsal yapı üzerinde de etkili olmaktadır. Söz konusu belirleyici etki genel anlamda medyanın toplumsal yaşam üzerindeki etkisine de paraleldir.

Medya araçlarını kullananlar bu araçları genellikle iletişim, eğlence ve bilgiye erişim gibi amaçlarla kullanırlar. Söz konusu araçlar güncel yaşamın vazgeçilmez bir parçasına dönüşmüştür. Enformasyon ve telekomünikasyon teknolojileri üzerinde yükselen bir toplumsal yapıda yaşıyoruz. Sonuç olarak bu yapının getirdiği olumu ve olumsuz yönlerin pedagojik etkilerini değerlendirilmesi ve tartışılması gerekliliği ön plana çıkmaktadır.

Türkiye’de Medyanın Önemi ve Kullanımı

Her sene küresel dijital verilerini bizlerle paylaşan We are Social Digital 2024 raporu bu yıl internet ve sosyal medya kullanımına ilişkin dikkat çekici sonuçlar ortaya koydu:

-Raporun içeriğine baktığımızda sosyal medyanın çok hızlı bir şekilde büyüdüğünü ve kullanıcı sayılarının her saniye arttığını görmekteyiz. Her saniye yaklaşık 8,4 kişinin sosyal medyaya katıldığını görmekteyiz. Bu açıdan baktığımızda sosyal medyanın yayılma hızının çok büyük olduğunu net bir şekilde ifade edebiliriz. 2023 yılında 266 milyon yeni kullanıcı sosyal medyaya erişim sağlamışken 2024 yılında toplam kullanıcının 5,04 milyar olduğunu görmekteyiz. Bu noktadan hareketle önümüzdeki yıllarda toplam sosyal medya kullanıcı sayılarının hızla artmaya devam edeceğini söyleyebiliriz.

-Raporun içeriğine detaylı baktığımızda cep telefonu kullanan kişi sayısı 2024’ün başında 5,61 milyara ulaşmıştır. GSMA (Global System for Mobile Communications) Intelligence’ın son verileri, dünya nüfusunun %69,4’ünün artık bir mobil cihaz kullandığını ve küresel toplamın 2023’ün başından bu yana 138 milyon (+%2,5) arttığını ortaya koyuyor.

Dünya üzerinde bulunan insanların %66’sından fazlası artık interneti kullanıyor ve son veriler global kullanıcı toplamını 5,35 milyara çıktığını gösteriyor. İnternet kullanıcıları, 2023’ün başından beri 97 milyon yeni kullanıcı sayesinde son 12 ayda %1,8 artmış.

Kepios analizi, aktif sosyal medya kullanıcı kimliklerinin 5 milyar sınırını geçtiğini ve en son kullanıcı sayısının dünya nüfusunun %62,3’üne eşit olduğunu gösteriyor. Küresel bağlamda

toplam, geçen yıl 266 milyon artmış ve yıllık %5,6 büyüme sağlamıştır. Bu seneki rapordaki en büyük önemi arz eden haber, şu anda 5 milyardan fazla aktif sosyal medya kullanıcı kimliğinin olması ve küresel toplamın 2024'ün başında 5,04 milyara ulaşmasıdır.

Bu büyük sosyal medyanın dönüm noktası, Facebook'un 4 Şubat'taki yirminci doğum gününün tam önünde yer alıyor, ancak sosyal medyanın tarihinin Mark Zuckerberg'in 2004'te Harvard'daki yurt odasından The Facebook.com'u başlatmasından daha önce başladığını belirtmek faydalı olur.

Gerçekten de sosyal medyanın 5 milyar kullanıcıya olan yolculuğu 50 yıldan uzun bir süre önce başlamıştır.

Ülkemizle ilgili raporda yer verilen analizler şu şekildedir:

-2024'ün başında Türkiye'de 74,41 milyon internet kullanıcısı vardı ve internet penetrasyonu (bir bilgi sistemine veya ağa yetkisiz bir şekilde erişme girişi) %86,5'ti.

-Türkiye, Ocak 2024'te 57,50 milyon sosyal medya kullanıcısına ev sahipliği yapıyordu ve bu toplam nüfusun %66,8'ine denk geliyordu.

-2024'ün başında Türkiye'de toplam 80,69 milyon hücresel mobil bağlantı aktifti ve bu rakam toplam nüfusun %93,8'ine denk geliyordu.

-Ocak 2024'te Türkiye'de 74,41 milyon internet kullanıcısı vardı.

-Türkiye'nin internete erişim oranı, 2024'ün başında toplam nüfusun %86,5'iydi.

-Kepios analizi, Türkiye'deki internet kullanıcılarının Ocak 2023 ile Ocak 2024 arasında 390 bin (+%0,5) arttığını gösteriyor.

-Türkiye'deki sosyal medya kullanıcılarının sayısı 2024 yılı başında toplam nüfusun yüzde 66,8'ine eşitti, ancak sosyal medya kullanıcılarının özgün bireyleri temsil etmeyebileceğini vurgulamak önem arz eder.

Medya Okuryazarlığının Bireylere Sağladığı Faydalar

Medya okuryazarlığı yetisi edinmek tüm bireyler için günümüzde oldukça büyük bir önem taşımaktadır. Özellikle genç kullanıcılar araştırmamızın örneklem grubunu oluşturan 11/14 yaş aralığındaki bireyler internet dünyası için hem üretici hem de tüketici rolüne sahiplerdir. Her iki rol için sahip olunması gereken yeterlilikler bulunmaktadır. Bilinçli internet kullanıcısı olabilmek aynı zamanda karşılaştığımız içeriklere yönelik eleştirel düşünme becerisine sahip olmayı gerekli kılmaktadır. Ülkemizde Millî Eğitim Bakanlığı ve Radyo Televizyon Üst Kurulu (RTÜK) 'nun ortak çalışmasıyla başlattığı medya okuryazarlığı dersinin hedeflediği unsurlar neden medya okuryazarlığının genç bireyler için önem taşıdığını bize göstermektedir:

- Çevresine karşı duyarlı, medyada karşılaştığı unsurları akıl süzgecinden geçiren,

- Yazılı, görsel, işitsel medyada karşılaştığı mesajları eleştirel bir yaklaşımla değerlendiren ve ileten,
 - Bilinçli içerikler üreterek, bu içerikleri analiz süzgecinden geçiren,
 - Dijital katılımcılar olarak toplumsal yaşama yapıcı katkılar sağlayan
 - Ürettiği ya da karşılaştığı içerikler için sorumluluk bilincine sahip bireyler yetiştirmek.
- (RTÜK,2010)

1997/2012 yılları arasında doğmuş olan ve dijital bağlamda Z kuşağı olarak adlandırılan neslin medya okuryazarlığı konusunda bilinçli bireyler olmaları çok büyük önem taşımaktadır. Z kuşağının baskın özellikleri arasında korkusuz olma, kendine değer verme ve sorgulayan bireyler olma yer almaktadır kuşağı bireyler birbirlerini önemli ölçüde etkileme gücüne de sahiptirler. Sosyal medyanın onlara sağladığı ortak zevk, görünüm ve ortak kalıplar sunmaktadır. Ancak bu gerçeğe rağmen Z kuşağı bir otoriteye danışmadan kendi kararlarını verme eğilimindedirler. Bu özellikleri onların interneti kullanma alışkanlıklarını da etkilemektedir. Bu bireyler internetten merak ettikleri bir konuda gerekli tüm bilgilere ulaşım cevaplar bulabilirler. Bu bize bu bireylere medya okuryazarlığı farkındalığı kazandırmanın çok önemli olduğunu vurgulamaktadır. Burnett ve Wilkinson, (2005) web'i okumanın yalnızca bir dizi gezinme aracını kullanma becerisini içermediğini vurgulamışlardır. Web tabanlı okuma, metinlerle etkileşim kurmak için yeni olanaklar sunar ve bu, bilgi aramaya yönelik eleştirel ve aktif bir yönelim gerektirir. İkinci olarak, çocukların internet ile karşılaşmalar yoluyla bilgiyle yeni ilişkiler geliştirebileceğini öne sürmüşlerdir. Bu karşılaşmalar, bilgileri geçici olarak görmelerine yardımcı olabilir ve hatta yazarların konumlarını tanımlarını sağlayabilir. Web ile etkileşim kurmanın bazı yollarının geliştiğini ve insanların olanaklarını kullanmanın yeni yollarını buldukça gelişmeye devam edeceğini göstermektedir. Bazı çocukların interneti kullanma konusunda kapsamlı deneyimleri olduğu göz önüne alındığında, onlar da internetin potansiyelinden yararlanmak için çeşitli yollar geliştirecekleri muhtemeldir. Burada vurgulanmak istenen çocukların internette doğru bilgiye erişim için öz denetim ve kontrol geliştirmelerinin çok önemli olduğudur.

Medya Okuryazarlığı Türkiye Örneği: Çalışmalar ve Elde Edilen Kazanımlar

Ülkemizde medya okuryazarlığı çalışmalarının henüz çok yeni çalışmalar olduğunu söyleyebiliriz. Radyo Televizyon Üst Kurulunun (RTÜK) bu konuda öncülük yaparak 2005 tarihinde uluslararası medya konferansı düzenlemesi medya okuryazarlığı alanında atılmış en önemli adımdır. Bu konferansı takip eden çok işlevsel çalışmalar RTÜK tarafından uygulamaya

konulmuştur. Bu çalışmalardan bazıları; simge sistemi ile akıllı işaretler uygulaması, çocuklarımız için internet güvenliği çalışması ve RTÜK çocuk web sayfası bu çalışmalardandır. RTÜK 2006 yılında Ankara’da uluslararası medya okuryazarlığı paneli ile bu alanda ulusal ve uluslararası bağlamda değerli çalışmalar yapmış uzmanları bir araya getirmiş ve uzmanların yapmış oldukları güncel araştırmaların bir araya getirilip paylaşılması sağlanmıştır. (RTÜK, 2006)

RTÜK Millî Eğitim Bakanlığı ile iş birliği içerisinde seçmeli ders olarak okutulması önerisi gündeme gelmiştir. Bugün İlköğretim 7.sınıf müfredatında medya okuryazarlığı dersinin seçmeli ders olarak okutulduğunu görmekteyiz. Ancak Hobbes (2006) medya okuryazarlığının disiplinler arası çalışarak beceri olarak görülüp ayrı bir ders olarak müfredata dahil edilmesi gerektiğini belirtmiştir. İlköğretim öğrencilerinin bilişsel ve gelişimsel özellikleri göz önüne alındığında bu beceriyi onlara müfredat kapsamında kazandırmakta teknoloji temelli yenilikler bu bireylerin ilgisini çekecek ve medya okuryazarlığına karşı farkındalıkları artacaktır.

Artırılmış Gerçeklik Uygulamaları: EyeJack ile Medya Okuryazarlığı Eğitimi

Artırılmış gerçeklik, teknolojik bir cihaz (Akıllı Telefon, Tablet) kamerasıyla gerçek hayattan alınan bir görüntüye dijital bir cisim, materyal veya herhangi bir canlı yerleştirerek teknolojik cihazın ekranından izleyebildiğimiz etkileşimli görüntü oluşturma teknolojisidir. Bu teknolojinin eğitim-öğretim ortamına taşınması öğrencilere aktif katılım sağlayabilecekleri deneyimler sunar. Etkileşimli bir öğrenme ortamı, öğrencilerin öğretilen konuyu görselleştirmelerine, öğrenme deneyimlerini geliştirmelerine ve öğrencilerin yeni beceriler öğrenmelerine ve uygulamalarına yardımcı olabilecek uygulamalı öğrenme yaklaşımlarını uygulama fırsatları sağlar.

AR kullanan sınıflar, öğrencilerin müfredatlarını daha etkili bir şekilde anlamalarına yardımcı olur.AR, dersleri kelime açıklamaları veya kitap çizimleriyle sınırlı kalmak yerine canlandırarak öğrencilerin önemli bilgileri hatırlamalarına yardımcı olan etkili bir araçtır. Öğrenciler genellikle okuduklarını iyice anlayabilmek için onları canlandırmaya çalışırlar. Örneğin, AR öğretmenlerin yalnızca fotoğraf ve metin sunmak yerine tarihi dersleri etkileşimli ve akılda kalıcı bir şekilde yeniden oluşturmalarına yardımcı olabilir. Artık giderek daha fazla sayıda genç akıllı telefona sahip olduğundan, AR'yi öğretime entegre etmek giderek daha uygun fiyatlı hale geliyor. Herhangi bir AR içeriği kolayca paylaşılabilindiğinden, öğretmenler ve öğrenciler çalışma materyalini sürekli olarak iyileştirmek ve özelleştirmek için birlikte çalışabilirler.

Öğrencilerin öğrenmeye olan ilgisi ve motivasyonu, işbirlikçi bir öğrenme ortamında önemli ölçüde daha yüksek hale gelir. AR'yi karma öğrenme programlarına entegre ettiğimizde, öğrenciler sunulan içeriğe daha dikkatli yaklaşacak ve daha fazla bilgiyi hatırlayacaktır.

Artırılmış gerçeklik uygulaması olan V.2. EyeJack Creator, başlangıçta sanatçılar için sanatlarını animasyon veya ses ekleyerek artırılmış gerçeklik olarak hayata geçirmeleri için ortaya çıkarılmış bir araç olarak kabul edilir. Posterler, çizgi romanlar, duvar resimleri, tuvaler ve ürünler gibi fiziksel sanatın üzerine gifler (Graphics Interchange Format; grafik değiştirme biçimi) veya sesler yükleyerek izleyiciler için ilgi çekici içerikler oluşturmaya imkân sağlamaktadır. Eyejack creator(eyejack oluşturucu) aracının kullanımı oldukça kolay ve işlevseldir. Öncelikle arka plan olarak bir görsel belirliyorsunuz. Bu görsel sizin hareketli animasyonunuzu harekete geçirecek ilk görüntüdür. Hareketi tetikleyecek görseli yükledikten sonra bu görselin üzerine izleyicilerinizin izlemelerini istediğiniz animasyonu ikinci tabaka olarak yüklüyorsunuz. Ancak eyejack aracı ile ilk görüntü içerisine gömdüğünüz bu animasyonun harekete geçebilmesi için kişilerin mobil cihazlarına eyejack uygulaması yükleyerek ilk tabakada yer alan görseli taratmaları gerekir. Eyejack uygulamasını açıp tetikleyici görseli taradığımızda görselin içerisine gömdüğümüz animasyon oynamaya başlar. Projemizde katılımcı öğrencilerimize Ayşad Güdekli, Mehmet Sebih Oruç, Mehmet Taha ESER, Seçil Deren Van Het Hof tarafından geliştirilen 9 maddeden oluşan haber medyası okuryazarlığı ölçeğini uyguladık. Ardından medya labirenti adlı kitapçığımız öğrencilerle paylaşıldı. Bu kitapçıkta <https://teyit.org/> sitesinden alınan 5 yanlış 4 doğru haber yer almaktaydı. Öğrencilere haberlerin doğru mu yanlış mı olduğu soruldu. Ardından cep telefonlarına eyejack artırılmış gerçeklik uygulaması yükleyerek haberleri okumaları istendi. Eyejack uygulaması ile haberlerin içerisine eyejack uygulaması ile görüntülenebilecek gerçek içerikleri yüklendi. Uygulama sonrasında katılımcı öğrencilerimize ön test olarak uyguladığımız haber medyası okuryazarlığı ölçeği son test olarak tekrar uygulandı.

Yöntem

Projemizde, katılımcı öğrencilere Ayşad Güdekli, Mehmet Sebih Oruç, Mehmet Taha Eser ve Seçil Deren Van Het Hof tarafından geliştirilen ve 9 maddeden oluşan Haber Medyası Okuryazarlığı Ölçeği uygulanmıştır. Bu ölçek, öğrencilerin medya içeriklerini doğru ve eleştirel bir şekilde değerlendirme becerilerini ölçmek amacıyla kullanılmıştır. Ölçeğin uygulanmasının ardından, öğrencilere Medya Labirenti adlı bir kitapçık sunulmuştur. Bu

kitapçık, <https://teyit.org/> sitesinden alınan 5 yanlış ve 4 doğru haber içermektedir. Öğrencilerden, bu haberlerin doğru mu yanlış mı olduğunu belirlemeleri istenmiştir. Ardından, öğrencilerin cep telefonlarına EyeJack artırılmış gerçeklik uygulaması yüklenmiş ve kitapçık içerisindeki haberlerin artırılmış gerçeklik yardımıyla incelenmesi sağlanmıştır. EyeJack uygulamasıyla, haberlerin içerisine yerleştirilen doğru bilgiler ve kanıtlar görüntülenebilmiştir. Uygulama sürecinin tamamlanmasının ardından, katılımcı öğrencilere ön testte uygulanan Haber Medyası Okuryazarlığı Ölçeği, bu kez son test olarak tekrar uygulanmıştır. Böylece, artırılmış gerçeklik ile oluşturduğumuz medya labirenti adlı kitapçığımızın öğrenciler üzerindeki etkisi karşılaştırmalı olarak analiz edilmiştir.

Evren ve Örneklem

Araştırmanın evrenini, 2024-2025 eğitim-öğretim yılında Adana ilinde ortaokul düzeyinde öğrenim gören 5., 6., 7. ve 8. sınıf öğrencileri oluşturmaktadır. Araştırmanın örneklemini ise aynı eğitim-öğretim yılında Çukurova Bilim ve Sanat Merkezi bünyesinde Bireysel Yetenekleri Fark Ettirme Programı (BYFP) ile Özel Yetenekleri Geliştirme Programına (OYGP) devam eden ve Adana ilindeki farklı ortaokullarda öğrenim gören 86 öğrenciden oluşmaktadır. Örneklem, karışık yöntemle belirlenen bu 96 öğrenciyi kapsamaktadır. Araştırmanın örneklemini karışık şekilde belirlenen 86 öğrenciden oluşmaktadır. Örneklem dâhilinde araştırmaya katılan öğrencilerin sayıları Tablo 1’de gösterilmiştir.

Veri Toplama Araçları

Araştırmada, veri toplama aracı olarak “Haber Medyası Okuryazarlığı Ölçeği” kullanılmıştır. Bu ölçek, Ayşad Güdekli, Mehmet Sebih Oruç, Mehmet Taha Eser ve Seçil Deren Van Het Hof tarafından geliştirilmiş ve medya okuryazarlığına yönelik farkındalık ve becerileri ölçmek amacıyla oluşturulmuştur. Dokuz maddeden oluşan bu ölçek, öğrencilerin medya içeriklerini eleştirel bir şekilde değerlendirme, doğru ve yanlış bilgiyi ayırt etme becerilerini değerlendirmektedir. Araştırmada, ölçek iki farklı zaman diliminde uygulanmıştır. İlk olarak, uygulama öncesi veri toplamak amacıyla katılımcı gruba uygulanmış; ardından, öğrencilerle artırılmış gerçeklik destekli “Medya Labirenti Kitapçığı” paylaşılmıştır. Bu kitapçık, doğruluğu teyit edilmiş 4 doğru ve 5 yanlış haber içermekte olup, içerikler “EyeJack” artırılmış gerçeklik uygulaması aracılığıyla incelenmiştir. Uygulama sürecinin ardından, katılımcı gruba ölçek tekrar uygulanarak, müdahalenin medya okuryazarlığı becerilerine etkisi değerlendirilmiştir.

Elde edilen veriler, nicel analizler için uygun şekilde düzenlenmiş ve istatistiksel analizlere tabi tutulmuştur.

Verilerin Analizi

Verilerin analizinde SPSS (Statistical Package for the Social Sciences) programı kullanılmıştır. Araştırmanın alt problemlerinin çözümlenmesinde frekans (f), yüzde (%), ve toplam (birikimli) yüzde testleri uygulanmıştır. İstatistiksel analizlerde paired t-test tabloları ve t-test sonuçları %95 güven aralığında ve $p < 0.05$ anlamlılık düzeyinde değerlendirilmiştir. Farklılıkların şiddeti, $d = t/\sqrt{N}$ formülü ile hesaplanmıştır. Hesaplamalarda, $d > 1$ ise çok büyük, $0.8 < d \leq 1$ ise büyük, $0.5 < d \leq 0.8$ ise orta, $0.2 < d \leq 0.5$ ise küçük fark şiddeti olarak sınıflandırılmıştır.

3. Çalışma İş-Zaman Çizelgesi

İşin Tanımı	Aylar			
	EKİM	KASIM	ARALIK	OCAK
Proje konusu doğrultusunda ilgili literatür taramasının yapılması				
Haber medyası Okuryazarlığı Ölçeğinin uygulama öncesi öğrencilere uygulanması				
EyeJack uygulaması kullanılarak artırılmış gerçeklik tabanlı kitapçıkların oluşturulması				
Haber Medyası Okuryazarlığı Ölçeğinin ve artırılmış gerçeklik içeren kitapçığın öğrencilerle paylaşılması

Bulgular

Ankete katılan öğrencilerin sosyo-demografik bilgileri

Tablo 1 : Anket Sorularını Yanıtlayan Öğrencilerin Cinsiyet Dağılımı

1- Cinsiyetiniz?		
	N	%
1,00	44	51,2%

2,00	42	48,8%

Ankete katılan 86 öğrencinin %51,2'si kız, %48,8'i erkek öğrencilerden oluşmaktadır.

Tablo 2: Ankete Katılan Öğrencilerin Devam Etmekte Oldukları Sınıf Düzeyi

2- Devam etmekte olduğunuz sınıf düzeyi?		
	N	%
1,00	19	22,1%
2,00	23	26,7%
3,00	24	27,9%
4,00	20	23,3%

Ankete katılan 86 öğrenciden %22,1'i 5.sınıf, %26,7'si 6.sınıf, %27,9'u 7.sınıf ve %23,3'ü 8.sınıf öğrencilerinden oluşmaktadır.

Tablo 3: Ankete Katılan Öğrencilerin Devam Etmekte Oldukları Kurum Türü

3- Eğitim gördüğünüz kurum türü?		
	N	%
1,00	46	53,5%
2,00	40	46,5%

Ankete katılan 96 öğrenciden %53,5'i devlet, %46,5'i ise özel okula devam etmektedir.

Tablo 4: Ankete Katılan Öğrencilerin Medya okuryazarlığı Ölçeği Bir Konuda Karara Varmadan Önce Bilgi Toplarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics				
	Mean	N	Std. Deviation	Std. Error Mean
Pair 1 S.7- Bir konuda karara varmadan önce bilgi toplarım.	3,50	86	,569	,061
Ö.7- Bir konuda karara varmadan önce bilgi toplarım.	2,92	86	,948	,102

Katılımcıların bir konuda karara varmadan önce bilgi toplama alışkanlıkları, uygulama öncesi (Ö.7) ortalama 2,92 iken uygulama sonrası (S.7) 3,50 olduğu görülmektedir. Bu tabloya bakarak katılımcılarda bu maddeye dair uygulama sonrası bir farkın oluştuğunu söyleyebiliriz. Ancak bu farkın anlamlı olup olmadığını görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 5: Ankete Katılan Öğrencilerin Medya okuryazarlığı Ölçeği Bir Konuda Karara Varmadan Önce Bilgi Toplarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test									
		Paired Differences					Significance		
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	
					Lower	Upper			One-Sided p
									Two-Sided p
Pair 1	S.7- Bir konuda karara varmadan önce bilgi toplarım. Ö.7- Bir konuda karara varmadan önce bilgi toplarım.	,581	,951	,103	,377	,785	5,667	85	<,001
									<,001

Tablo 5'e göre, "Bir konuda karara varmadan önce bilgi toplarım" maddesine uygulama sonrası ortalamaların (S.7) uygulama öncesi (Ö.7'e göre daha yüksek olduğu görülmektedir. Uygulama sonrası (S.7) katılımcılar, bir konuda karara varmadan önce daha fazla bilgi toplama eğiliminde olduklarını belirtmişlerdir. Ortalama fark 0,581 olup, bu farkın güven aralığı içinde anlamlı olduğu ve p-değeri ($p < 0,001$) sonuçların istatistiksel olarak anlamlı olduğunu ortaya koymaktadır. Bu farkın şiddetine bakacak olursak $0.5 < d < 0.8$ olduğundan bulunan farklılığın şiddeti orta derecededir.

Tablo 6: Ankete Katılan Öğrencilerin Bir Konuda Anlatılan/Yapılmış Bir Haberin Doğru Olup Olmadığını Anlarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics				
		Mean	N	Std. Deviation
				Std. Error Mean
Pair 2	S.8- Bir konuda anlatılan/yapılmış bir haberin doğru olup olmadığını anlarım.	3,44	86	,662
	Ö.8- Bir konuda anlatılan/yapılmış bir haberin doğru olup olmadığını anlarım.	2,90	86	,994
				,071
				,107

Tablo 6'a göre katılımcıların "Bir konuda anlatılan/yapılmış bir haberin doğru olup olmadığını anlarım" maddesine verdikleri yanıtların ortalamasına baktığımızda uygulama öncesi (Ö.8) ortalama 2,90 iken uygulama sonrası (S.8) 3,44 olduğu görülmektedir. Bu tabloya bakarak katılımcılarda bu maddeye dair uygulama sonrası bir farkın oluştuğunu söyleyebiliriz. Ancak

bu farkın anlamlı olup olmadığına karar verebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 7: Ankete Katılan Öğrencilerin Bir Konuda Anlatılan/Yapılmış Bir Haberın Doğru Olup Olmadığını Anlarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test									
		Paired Differences					Significance		
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	One-Sided p
					Lower	Upper			Two-Sided p
Pair 2	S.8- Bir konuda anlatılan/yapılmış bir haberın doğru olup olmadığını anlarım. - Ö.8- Bir konuda anlatılan/yapılmış bir haberın doğru olup olmadığını anlarım.	,547	,916	,099	,350	,743	5,533	85	<,001
									<,001

Tablo 7'e göre, " Bir konuda anlatılan/yapılmış bir haberın doğru olup olmadığını anlarım" ifadesine ilişkin uygulama sonrası (S.8) uygulama öncesi (Ö.8)'ne göre ortalamaların daha yüksek olduğu görülmektedir. Ortalama fark 0,547 olup, bu farkın güven aralığı içinde anlamlı olduğu ve p-değeri ($p < 0,001$) sonuçların istatistiksel olarak anlamlı olduğunu ortaya koymaktadır. Bu farkın şiddetine bakacak olursak $0.5 < d < 0.8$ olduğundan bulunan farklılığın şiddeti orta derecededir.

Tablo 8: Ankete Katılan Öğrencilerin Bir Konuda Anlatılan/Yapılmış Bir Haberın Doğru Olup Olmadığını Anlarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics				
		Mean	N	Std. Deviation
				Std. Error Mean
Pair 3	S.9- Okuduğum haberde sunulan bilgiler arasındaki zıtlıkları bulabilirim.	3,58	86	,659
	Ö.9- Okuduğum haberde sunulan bilgiler arasındaki zıtlıkları bulabilirim.	2,91	86	1,025
				,071
				,110

Tablo 8’de katılımcıların “Okuduğum haberde sunulan bilgiler arasındaki zıtlıkları bulabilirim” maddesine verdikleri yanıtların ortalamasına baktığımızda uygulama öncesi (Ö.9) ortalama 2,91 iken uygulama sonrası (S.9) 3,58 olduğu görülmektedir. Bu tabloya bakarak katılımcılarda bu maddeye dair uygulama sonrası bir farkın oluştuğunu söyleyebiliriz. Ancak bu farkın anlamlı olup olmadığını görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 9: Ankete Katılan Öğrencilerin Bir Konuda Anlatılan/Yapılmış Bir Haberin Doğru Olup Olmadığını Anlarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test										
		Paired Differences					Significance			
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	One-Sided p	Two-Sided p
					Lower	Upper				
Pair 3	S.9- Okuduğum haberde sunulan bilgiler arasındaki zıtlıkları bulabilirim. - Ö.9- Okuduğum haberde sunulan bilgiler arasındaki zıtlıkları bulabilirim.	,674	1,183	,128	,421	,928	5,288	85	<,001	<,001

Tablo 9 katılımcıların okudukları haberde sunulan bilgiler arasındaki zıtlıkları bulabilme becerilerinde uygulama sonrası önemli bir gelişim yaşadığını göstermektedir. Uygulama öncesi (Ö.9) ve uygulama sonrası (S.9) arasındaki fark 0,674’dür. Sonuçlara göre, katılımcıların sonraki durumdaki beceri puanı (S.9) ortalama 3,58 iken, önceki durumda (Ö.9) bu değer 2,91 olarak bulunmuştur. Aradaki fark 0,674 olup, bu fark istatistiksel olarak anlamlıdır ($p < 0,001$). Yani, katılımcılar uygulama sonrası bu beceride anlamlı bir gelişim göstermiştir. Bu farkın şiddetine bakacak olursak $0.5 < d < 0.8$ olduğundan bulunan farklılığın şiddeti orta derecededir.

Tablo 10: Ankete Katılan Öğrencilerin Haberde Öne Sürülen İddiaların Nesnelliğini Değerlendirebilirim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics						
		Mean	N	Std. Deviation	Std. Error Mean	
Pair 4	S.10- Haberde öne sürülen iddiaların nesnelliğini değerlendirebilirim.	3,65	86	,732	,079	

Ö.10- Haberde öne sürülen iddiaların nesnelliğini değerlendirebilirim.	2,79	86	,947	,102

Katılımcıların “Haberde öne sürülen iddiaların nesnelliğini değerlendirebilirim” maddesine verdikleri yanıtların ortalamasına baktığımızda uygulama öncesi (Ö.10) ortalama 2,79 iken uygulama sonrası (S.10) 3,65 olduğu görülmektedir. Bu tabloya bakarak katılımcılarda bu maddeye dair uygulama sonrası bir farkın oluştuğunu söyleyebiliriz. Ancak bu farkın anlamlı olup olmadığını görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 11: Ankete Katılan Öğrencilerin Haberde Öne Sürülen İddiaların Nesnelliğini Değerlendirebilirim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test									
		Paired Differences					Significance		
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	
					Lower	Upper			One-Sided p
									Two-Sided p
Pair 4	S.10- Haberde öne sürülen iddiaların nesnelliğini değerlendirebilirim. - Ö.10- Haberde öne sürülen iddiaların nesnelliğini değerlendirebilirim.	,860	1,160	,125	,612	1,109	6,881	85	<,001

Tablo 11, "Haberde öne sürülen iddiaların nesnelliğini değerlendirebilirim" ifadesinin uygulama sonrası (S.10) ortalama değerinin (3,65) uygulama öncesinden (Ö.10) (2,79) anlamlı derecede daha yüksek olduğunu ($p < 0,001$) göstermektedir. Ortalama fark 0,860 olup, güven aralığı da bu farkın anlamlı olduğunu desteklemektedir. Bu farkın şiddetine bakacak olursak $0.5 < d < 0.8$ olduğundan bulunan farklılığın şiddeti orta derecededir.

Tablo 12: Ankete Katılan Öğrencilerin Aynı Haber Metnindeki Verilerle Yorumları Birbirlerinden Ayırt Edebilirim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics				
		Mean	N	Std. Deviation
				Std. Error Mean
Pair 5	S.11- Aynı haber metnindeki verilerle yorumları birbirlerinden ayırt edebilirim.	3,44	86	,761
				,082

Ö.11- Aynı haber metnindeki verilerle yorumları birbirlerinden ayırt edebilirim.	2,76	86	,781	,084

Katılımcıların “Aynı haber metnindeki verilerle yorumları birbirlerinden ayırt edebilirim” maddesine verdikleri yanıtların ortalamasına baktığımızda uygulama öncesi (Ö.11) ortalama 2,76 iken uygulama sonrası (S.11) 3,44 olduğu görülmektedir. Bu tabloya bakarak katılımcılarda bu maddeye dair uygulama sonrası bir farkın oluştuğunu söyleyebiliriz. Ancak bu farkın anlamlı olup olmadığını görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 13: Ankete Katılan Öğrencilerin Aynı Haber Metnindeki Verilerle Yorumları Birbirlerinden Ayırt Edebilirim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test										
		Paired Differences					Significance			
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	One-Sided p	Two-Sided p
					Lower	Upper				
Pair 5	S.11- Aynı haber metnindeki verilerle yorumları birbirlerinden ayırt edebilirim. - Ö.11- Aynı haber metnindeki verilerle yorumları birbirlerinden ayırt edebilirim.	,686	1,066	,115	,458	,915	5,970	85	<,001	<,001

Tablo 13 "Aynı haber metnindeki verilerle yorumları birbirlerinden ayırt edebilirim" ifadesi için uygulama sonrası (S.11) uygulama öncesine (Ö.11) göre anlamlı derecede bir artış olduğunu göstermektedir. Ortalama fark 0,686 olup, bu farkın güven aralığı %95 ile 0,458 ile 0,915 arasında yer almaktadır. Testin sonucu ($t = 5,970$, $df = 85$) p değeri $<0,001$ ile istatistiksel olarak anlamlıdır, yani sonraki durumda katılımcıların bu yeteneklerinde anlamlı bir artış gözlemlenmiştir. Bu farkın şiddetine bakacak olursak $0.5 < d < 0.8$ olduğundan bulunan farklılığın şiddeti orta derecededir.

Tablo 14: Ankete Katılan Öğrencilerin Haber Sitelerinin Künye Bilgilerine Bakarak Sahibi, Editörü v.b. Konularda Bilgi Edinirim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics					
		Mean	N	Std. Deviation	Std. Error Mean
Pair 6	S.12- Haber sitelerinin künye bilgilerine bakarak sahibi, editörü v.b. konularda bilgi edinirim.	3,50	86	,808	,087
	Ö.12- Haber sitelerinin künye bilgilerine bakarak sahibi, editörü v.b. konularda bilgi edinirim.	2,57	86	,712	,077

Bu tabloya göre, "Haber sitelerinin künye bilgilerine bakarak sahibi, editörü vb. konularda bilgi edinirim" maddesine katılımcıların uygulama sonrası (S.12) ile uygulama öncesi (Ö.12) verdikleri yanıtlarda ortalama bir artış olduğunu görmekteyiz. Ancak bu ortalama farkının anlamlı olup olmadığına görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 15: Ankete Katılan Öğrencilerin Haber Sitelerinin Künye Bilgilerine Bakarak Sahibi, Editörü v.b. Konularda Bilgi Edinirim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test									
		Paired Differences					Significance		
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	
					Lower	Upper			One-Sided p
									Two-Sided p
Pair 6	S.12- Haber sitelerinin künye bilgilerine bakarak sahibi, editörü v.b. konularda bilgi edinirim.	,930	1,156	,125	,682	1,178	7,463	85	<,001
	- Ö.12- Haber sitelerinin künye bilgilerine bakarak sahibi, editörü v.b. konularda bilgi edinirim.								<,001

Tablo 15'e göre , "Haber sitelerinin künye bilgilerine bakarak sahibi, editörü v.b. konularda bilgi edinirim" maddesinin uygulama sonrası (S.12) ortalamasının (3,50) uygulama öncesi (Ö.12) 2.50 'e göre anlamlı derecede daha yüksek olduğunu ($p < 0,001$) görmekteyiz. Ortalama fark 0,930 olup, bu fark güven aralığında (0,682 ile 1,178 arasında) anlamlıdır. Yani, katılımcılar haberin yazarını araştırma eğilimlerinde belirgin bir artış göstermiştir.Bu farkın şiddetine bakacak olursak $0.8 < d < 1$ olduğundan bulunan farklılığın şiddeti büyük derecededir.

Tablo 16: Ankete Katılan Öğrencilerin Haberin Yazarının Kim Olduğunu Araştırırım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics				
	Mean	N	Std. Deviation	Std. Error Mean
Pair 7 S.13- Haberin yazarının kim olduğunu araştırırım.	3,48	86	,763	,082
Ö.13- Haberin yazarının kim olduğunu araştırırım.	2,45	86	,890	,096

Tablo 16'ya göre katılımcıların "Haberin yazarının kim olduğunu araştırırım" maddesine verdikleri yanıtların ortalamasına baktığımızda uygulama öncesi (Ö.13) ortalama 2,45 iken uygulama sonrası (S.13) 3,48 olduğu görülmektedir. Bu tabloya bakarak katılımcılarda bu maddeye dair uygulama sonrası bir farkın oluştuğunu söyleyebiliriz. Ancak bu farkın anlamlı olup olmadığını görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 17: Ankete Katılan Öğrencilerin Haberin Yazarının Kim Olduğunu Araştırırım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test									
		Paired Differences					Significance		
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	
					Lower	Upper			One-Sided p
									Two-Sided p
Pair 7	S.13- Haberin yazarının kim olduğunu araştırırım.	1,023	1,255	,135	,754	1,292	7,559	85	<,001
	Ö.13- Haberin yazarının kim olduğunu araştırırım.								<,001

Tablo 17'e göre, "Haberin yazarının kim olduğunu araştırırım" maddesinin uygulama sonrası (S.13) ortalamasının (3,48) uygulama öncesi (Ö.13)'e göre anlamlı derecede daha yüksek olduğunu ($p < 0,001$) görmekteyiz. Ortalama fark 1,023 olup, bu fark güven aralığında (0,754 ile 1,292 arasında) anlamlıdır. Yani, katılımcılar haberin yazarını araştırma eğilimlerinde belirgin bir artış göstermiştir. Bu farkın şiddetine bakacak olursak $0.8 < d < 1$ olduğundan bulunan farklılığın şiddeti büyük derecededir.

Tablo 18: Ankete Katılan Öğrencilerin Doğrulama Sitelerine Bakarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics				
	Mean	N	Std. Deviation	Std. Error Mean
Pair 8 S.14- Doğrulama sitelerine bakarım.	3,52	86	,627	,068
Ö.14- Doğrulama sitelerine bakarım.	2,36	86	,906	,098

Bu tabloya göre, "Doğrulama sitelerine bakarım" maddesine katılımcıların uygulama sonrası (S.14) ile uygulama öncesi (Ö.14) verdikleri yanıtlarda ortalama bir artış olduğunu görmekteyiz. Ancak bu ortalama farkının anlamlı olup olmadığına görebilmek için paired t-test sonuçlarına bakmamız gerekmektedir.

Tablo 19: Ankete Katılan Öğrencilerin Doğrulama Sitelerine Bakarım Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test										
		Paired Differences					Significance			
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	One-Sided p	Two-Sided p
					Lower	Upper				
Pair 8	S.14- Doğrulama sitelerine bakarım. - Ö.14- Doğrulama sitelerine bakarım.	1,163	1,235	,133	,898	1,428	8,729	85	<,001	<,001

Tablo 19'a göre uygulama öncesi (Ö.14) katılımcıların doğrulama sitelerine bakma ortalaması 2,36 iken, uygulama sonrası (S.14) bu değer 3,52'ye yükselmiştir. Ortalama fark 1,163 olup bu fark istatistiksel olarak anlamlıdır ($p < 0,001$). Güven aralığı, farkın 0,898 ile 1,428 arasında olduğunu göstermektedir. Bu sonuç, doğrulama sitelerine bakma alışkanlığının katılımcılar arasında belirgin şekilde arttığını ve bu artışın tesadüfi olmadığını ortaya koymaktadır. Bu farkın şiddetine bakacak olursak $0.8 < d < 1$ olduğundan bulunan farklılığın şiddeti büyük derecededir.

Tablo 20: Ankete Katılan Öğrencilerin Doğrulama Siteleriyle İletişim Kurarak Araştırmalarını İsterim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların Eşleştirilmiş Örneklem İstatistikleri

Paired Samples Statistics					
		Mean	N	Std. Deviation	Std. Error Mean
Pair 9	S.15- Doğrulama siteleriyle iletişim kurarak araştırmalarını isterim.	3,53	86	,681	,073
	Ö.15- Doğrulama siteleriyle iletişim kurarak araştırmalarını isterim.	1,59	86	,709	,076

Tablo 20'ye göre katılımcıların doğrulama siteleriyle iletişim kurma alışkanlıklarında uygulama sonrası büyük bir fark olduğunu görmekteyiz. Uygulama öncesi (Ö.15) katılımcıların doğrulama siteleriyle iletişim kurma ortalaması 1,59 iken, uygulama sonrası (S.15) bu değer 3,53'e yükselmiştir. Bu fark, katılımcıların doğrulama siteleriyle iletişim kurma istekliliğinde bir artışı işaret etmektedir. Ancak bu farkın anlamlı olup olmadığını görebilmek için t-test sonuçlarına bakmamız gereklidir.

Tablo 21: Ankete Katılan Öğrencilerin Doğrulama Siteleriyle İletişim Kurarak Araştırmalarını İsterim Maddesine Uygulama Öncesi ve Sonrası Verdikleri Yanıtların t-Testi

Paired Samples Test									
		Paired Differences					Significance		
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference		t	df	
					Lower	Upper			One-Sided p Two-Sided p
Pair 9	S.15- Doğrulama siteleriyle iletişim kurarak araştırmalarını isterim. - Ö.15- Doğrulama siteleriyle iletişim kurarak araştırmalarını isterim.	1,942	,831	,090	1,764	2,120	21,668	85	<,001 <,001

Tablo 21'e göre uygulama öncesi (Ö.15) katılımcıların doğrulama sitelerine bakma ortalaması 1,59 iken, uygulama sonrası (S.15) bu değer 3,53'e yükselmiştir. Ortalama fark 1,942 olup bu fark istatistiksel olarak anlamlıdır ($p < 0,001$). Güven aralığı, farkın 1,764 ile 2,120 arasında olduğunu göstermektedir. Bu sonuç, doğrulama sitelerine bakma alışkanlığının katılımcılar arasında belirgin şekilde arttığını ve bu artışın tesadüfi olmadığını ortaya koymaktadır. Bu farkın şiddetine bakacak olursak $d > 1$ olduğundan bulunan farklılığın şiddeti çok büyük derecededir.

Sonuç ve Tartışma

Araştırmamızda, medya okuryazarlığı becerilerinin geliştirilmesine yönelik yapılandırılmış bir

süreç tasarlanmış ve bu sürecin etkileri medya okuryazarlığı ölçeği ile değerlendirilmiştir. Araştırmanın temel amacı, katılımcıların medya içeriklerine yönelik bilgi toplama, doğruluğunu sorgulama, nesnel ifadelerin farkına varma, kişisel yorumları ve zıtlıkları fark etme, haber ve haberin yazarı hakkında kaynak araştırma ve doğrulama siteleri ile etkileşim halinde olma becerilerini artırmaktır. Uygulama öncesinde öğrencilere şu maddeleri içeren medya okuryazarlığı ölçeği uygulanmıştır:

- Bir konuda karara varmadan önce bilgi toplarım.
- Bir haberin doğru olup olmadığını anlarım.
- Okuduğum haberdeki bilgiler arasındaki zıtlıkları bulabilirim.
- Haberlerde öne sürülen iddiaların nesnelliğini değerlendirebilirim.
- Haber metinlerindeki verilerle yorumları birbirinden ayırt edebilirim.
- Haber sitelerinin künye bilgilerine bakarak editör ve yazar gibi bilgilere ulaşırım.
- Haberin yazarını araştırırım.
- Doğrulama sitelerine bakarım ve doğrulama siteleriyle iletişim kurarak bilgi edinirim.

Bu ön testin ardından, öğrencilerle medya okuryazarlığını geliştirmeye yönelik **Medya Labirenti** adlı artırılmış gerçeklik uygulamasıyla hazırlanmış bir kitapçık paylaşılmıştır. Kitapçık, katılımcılara haberlerin yüzeysel görünen yönlerinin ötesinde, arka plandaki gerçekleri görme şansı tanıyacak şekilde tasarlanmıştır. Bu süreçte öğrenciler, bir haberin doğruluğunu sorgulama, verilen bilgileri analiz etme ve doğrulama kaynaklarını kullanma gibi becerileri doğrudan deneyimlemiştir.

Uygulamanın ardından medya okuryazarlığı ölçeği bir kez daha uygulanmış ve sonuçlar analiz edilmiştir. Analizler, ölçek maddelerine yönelik "Katılıyorum" ve "Kesinlikle Katılıyorum" yanıtlarında anlamlı artışlar olduğunu göstermiştir. Özellikle "Doğrulama sitelerine bakarım" ve "Doğrulama siteleriyle iletişim kurarak bilgi edinirim" maddelerinde görülen olumlu yanıt artışı, öğrencilerin medya içeriklerini eleştirel bir gözle değerlendirme becerilerinde belirgin bir gelişme olduğunu ortaya koymuştur.

Bu çalışmanın bulguları, medya okuryazarlığının bireylere çok erken yaşlarda kazandırılmasının önemini vurgulayan pek çok çalışma ile uyumludur. Örneğin, **Kellner ve Share** (2007), medya okuryazarlığı eğitiminde eleştirel düşünme becerilerinin medya okuryazarlığının temelini oluşturduğunu vurgulamış ve bu becerilerin, bireylerin medya mesajlarını daha iyi anlayıp, kavrayıp, analiz etmelerine yardımcı olduğunu belirtmiştir. Benzer

şekilde, **Hobbs** (2010), medya okuryazarlığı eğitiminin bilgi düzeyinde kalmaması gerektiğini ulaşılan bilgiyi sorgulamayı, analiz etmeyi ve çoklu açıdan değerlendirmeyi içerdiğini vurgular. Bu bağlamda, çalışmamız kapsamında oluşturduğumuz medya labirenti adlı kitapçığımız katılımcı öğrencilerimize görünenin ötesinde var olabilecek gerçekleri fark etme ve karşılaştıkları her habere daha eleştirel bakmaları gerektiğini uygulamalı olarak göstermiştir. Araştırma ayrıca, daha önceki araştırmalarda (Burnett ve Wilkinson, 2005) öne sürülen, sınıfta teknoloji kullanımının, dikkatli çevrim içi araştırma yapma, kaynağın güvenilirliği hakkında yargıda bulunma ve toplanan verilerin uygunluğu üzerinde düşünme gibi bilgi arayışıyla ilişkili belirli bilgi ve becerileri teşvik etmek için önemli ve vazgeçilmez bir fırsat yarattığı görüşünü desteklemektedir.

Öneriler

Araştırmamız, medya okuryazarlığı ölçeği üzerinden yapılan analizler sonucunda, medya içeriklerini eleştirel değerlendirme becerilerinin artırılmasında yapılandırılmış bir öğretim sürecinin etkili olduğunu göstermiştir. Özellikle artırılmış gerçeklik uygulamalarıyla desteklenen eğitim materyalleri, öğrencilerin medya içeriklerini daha iyi analiz etmelerine ve sorgulamalarına olanak sağlamıştır. Araştırma sonuçlarına dayanarak aşağıdaki öneriler sunulmaktadır: Medya okuryazarlığı eğitiminde eleştirel düşünme becerilerinin kazandırılmasına yönelik yapılandırılmış programlar uygulanmalıdır. Artırılmış gerçeklik gibi teknolojilerden faydalanılarak medya okuryazarlığı eğitimi daha ilgi çekici ve etkili hale getirilebilir. Öğrencilere, doğrulama sitelerini kullanma ve medya içeriklerini eleştirel bir gözle değerlendirme becerileri kazandırılmalıdır. Medya okuryazarlığı becerilerinin gelişimini daha geniş yaş gruplarında ve farklı eğitim düzeylerinde araştıran çalışmalar yapılabilir. Medya okuryazarlığı eğitiminin öğrencilerin öz-yeterlik inançları ve medya içeriklerine yönelik tutumları üzerindeki etkileri daha detaylı incelenebilir. Sonuç olarak, araştırmamız, medya okuryazarlığı becerilerinin geliştirilmesi için yapılandırılmış öğretim yöntemlerinin etkili olduğunu ve bu süreçlerin yenilikçi teknolojilerle desteklenerek daha verimli hale getirilebileceğini ortaya koymaktadır. Öğrencilerin medya içeriklerini eleştirel bir gözle değerlendirme becerilerinin artırılması, medya okuryazarlığı eğitiminin temel hedeflerinden biri olarak ele alınmalıdır.

Pozitif Duyguların, Kendini Genişletme ve İnşa Teorisine Etkisi: Kişisel Kaynakların Gelişimi

Uzman Sinan Doğan

MEB,s.sinanQ@hotmail.com, 000000028242-0820,Türkiye

Özet

Pozitif psikolojinin geliştirilmesi, bireyin gelişmesine ve ilerlemesine ciddi katkılar sağlamaktadır. Pozitif psikoloji, kişisel gelişimimizdeki psikolojik koşulların ve süreçlerin iyileştirilmesi ve gelişimine bağlıdır. Pozitif psikoloji ile desteklenen beklentiler, başarıya ilişkin olumsuz davranışlarını azaltıyor ve olumlu tutum ve davranışlarını artırıyor. Aynı zamanda canlılık ve öğrenme duygularını tehdit eden stresi ortadan kaldırıp, kendini yetiştirme ve başarılı ortamının oluşturuyor. Başarılı olma doyumunu ve ruh sağlığı arasında pozitif yönlü ve güçlü ilişkisi bulunuyor. Bireyin kendini. ‘‘genişletme ve inşa etme’’ teorisi'ne göre, pozitif duygular optimal işleyişine sahiptir. Pozitif duygular sadece anlık değil; genişletme ve inşa etme sürecinin en iyi şekilde işleyişi sürdürüp, olumlu duygularını ve düşünce kalıpların artırımını sağlıyor. Genişleyen zihninde, yeni yolların açılmasına olanak verip; hisler, yaratıcılık, esnek, sosyal yönden sağlıklı bireyleri ortaya çıkartmaktadır. Bu bağlamda, iyimserlik, umut, öz yeterlilik ve psikolojik dayanıklılık gibi olumlu psikolojik faktörlerin, bireylerde canlılık ve öğrenme duygularını desteklemektedir. Kendini yetiştirmenin duygusal boyutu canlılık ve bilişsel boyutu ise öğrenmedir. Canlılık ve öğrenme birbirlerini destekler. Bireylerde canlılık duygusu, kaygı ve depresyonun üstesinden gelmeye yardımcı oluyor. Canlılık duygusu, görevine odaklanma, keşfetme eğilimi ve ilişki yönetimi gibi aracı davranışları ortaya çıkarıyor. Kendi gelişimlerini destekleyen bir dizi kaynak üretimini sağlıyor. Bireylerde psikolojik sermaye, proaktif kişilik, pozitif duygu ve işe bağlılık gibi bireysel özellikler gelişiyor. Bireylerin kendi psikoloji kaynaklarını üretip, kullanmaları, okul alanındaki başarısının devamında motivasyon ve verimlilik gibi olumlu tutumlarını geliştiriyor. Pozitif psikolojiye göre gelişme ve başarı, bireylerin güçlü yönlerinin, olumlu özelliklerinin arttırılmasıyla gerçekleşmektedir. Bu çalışmada, psikolojik sermaye ile kendini yetiştirme arasındaki ilişki, bireysel bir kaynak olarak düşünülmektedir. Kendini yetiştirmenin psikolojik sermaye ile ilişkisini ve öneminin ortaya çıkarılmasıdır. Bu nedenle tebliğ çalışmamızda, psikolojik sermayenin ve bileşenleri ve motivasyon arasındaki ilişkiyi ve kendini yetiştirmenin

aracı etkisi, Geniřletme ve İnřa Etme Teorisi çerçevesinde incelenmiřtir. Pozitif psikolojinin geliřtirilmesi, psikolojik sermaye boyutlarını geliřtirdiđi sylenebilir.

Anahtar kelimeler: Pozitif duygular, birey, motivasyon, bařarı, kiřisel kaynaklar

Competencies Acquired by the Individual in the Context of a Role Model Experienced with Creative Orientation: Positive Emotions

Abstract

The development of positive psychology makes serious contributions to the development and progress of the individual. Positive psychology is dependent on the improvement and development of psychological conditions and processes in our personal development. Expectations supported by positive psychology reduce negative behaviors related to success and increase positive attitudes and behaviors. At the same time, it eliminates stress that threatens vitality and learning feelings and creates an environment for self-cultivation and success. There is a positive and strong relationship between the satisfaction of being successful and mental health. According to the theory of "expansion and construction" of the individual, positive emotions have optimal functioning. Positive emotions are not only momentary; they continue the best functioning of the expansion and construction process and increase positive emotions and thought patterns. In the expanding mind, it allows new paths to open; feelings allow them to feel as creative, flexible, social and healthy individuals. In this context, positive psychological factors such as optimism, hope, self-sufficiency and psychological resilience reveal feelings of vitality and learning in individuals. The emotional dimension of self-cultivation is vitality and the cognitive dimension is learning. Vitality and learning support each other. The feeling of vitality in individuals helps to overcome anxiety and depression. The feeling of vitality reveals mediating behaviors such as focusing on the task, the tendency to explore and relationship management. It provides the production of a series of resources that support their own development. Individuals develop individual characteristics such as psychological capital, proactive personality, positive emotion and commitment to work. Individuals' production and use of their own psychological resources develop positive attitudes such as motivation and productivity in the continuation of their success in the school field. According to positive psychology, development and success occur by increasing the strengths and positive characteristics of individuals. In this study, the relationship between psychological capital and self-cultivation is considered as an individual resource. It is to reveal the relationship and

importance of self-cultivation with psychological capital. Therefore, in our paper, the relationship between psychological capital and its components and motivation and the mediating effect of self-cultivation were examined within the framework of the Expansion and Construction Theory. The psychological capital dimensions of gaining positive psychology can be developed. Institutions that unite within the scope of common goals, values and beliefs can achieve success by being happier and more motivated.

Key Words: Positive emotions, individual, motivation, success, personal resources

Giriş

Bireyde, negatif veya pozitif davranışların nedenleri hakkındaki araştırmalar güncelliğini korumaktadır. Bireyde ortaya çıkan negatif veya pozitif davranışlar hayatlarını biçimlendiriyor ve bireyin toplumsal hayatını etkiliyor. Bireyin gelişmesi ve ilerlemesi, pozitif davranışların gelişmesine bağlı olduğu söylenebilir. Bundan dolayı eğitim alanında pozitif davranışlar, daha kritik hale gelmektedir. Eğitim kurumları, sadece akademik bilgi vermek değil; hayatın anlamını kazandıran alanlardır. Kendini geliştirme, potansiyelinin kullanma ve insani değerlerin kazandırılması gerekmektedir. Pozitif psikolojik, içsel bir özellik olmasından ziyade; kişisel kaynaklar ile çevre kaynaklarından oluşan dinamik bir süreçtir (Luthar ve Zelazo, 2003). Bu dinamik süreç, eğitim alanına mutlaka kazandırılması gerekmektedir. Pozitif psikolojik bazı insanların sahip olduğu, diğerlerinin ise olmadığı bir özellik değildir.

Araştırmanın amacı bireyin hayatının anlamlandırılmasında kişisel kaynaklarını incelenmesi, kişisel kaynaklarına ulaşan bireyde ortaya çıkan davranışların araştırıp, kişisel kaynaklar ile birey arasında ilişkinin incelenmesidir. Kişisel kaynakların, birey hayatında yapacağı pozitif davranışların önemine vurgu yapılmış, yaşamında yapacağı katkıları hakkında veri toplanmak suretiyle bundan sonra yapılacak araştırmalara bilgi kaynağı oluşturulması amaçlanmıştır. Yaşamın verimliliğini sağlayan en temel unsur bireyin kendisidir. Bireyin karşılaştığı problemlerle en etkili şekilde başa çıkarak negatif yaşantıyı pozitifte dönüştürülmesinde kişisel kaynakların önemini anlaşılması amaçlanmıştır. Bunun gerçekleşebilmesi için bireyin kendisine ilişkin görüşleri oldukça büyük bir önem taşımaktadır. Bireyin kendisini tanıması, yapabileceklerinin farkına varması, olaylara bakış açısı problemlerle başa çıkmada ve pozitif yaşam sürmede son derece önemlidir.

Pozitif psikolojiye göre gelişme ve başarı, bireylerin güçlü yönlerinin, olumlu özelliklerinin arttırılmasıyla gerçekleşmektedir. Bu çalışmada, psikolojik sermaye ile kendini yetiştirme arasındaki ilişkisi, bireysel bir kaynak olarak düşünülmektedir. Kendini yetiştirmenin, psikolojik pozitif sermaye ile ilişkisini ve öneminin ortaya çıkarılmasıdır. Bu nedenle çalışmamızda, psikolojik sermayenin ve bileşenleri ve motivasyon arasındaki ilişkiyi ve kendini yetiştirmenin aracı etkisi, Genişletme ve İnşa Etme Teorisi çerçevesinde incelenmiştir. Pozitif psikolojiyi kazanılması, psikolojik sermaye boyutlarının geliştirilebilir

1. Pozitif Duygular ile Kişisel Kaynaklar Arasındaki İlişkisi

Pozitif psikolojinin geliştirilmesi, bireyin gelişmesine ve ilerlemesine ciddi katkılar sağlıyor. Yani, başarısız olmaya değil; başarıya odaklanıyor. Unutmaya değil; hatırlamaya yoğunlaşıyor. Başarının en önemli anahtarlarından birisi, beynin pozitif düşünceye programlanmasıdır. Bireyde pozitif psikolojinin ortaya çıkması, kişisel kaynakların kazanımı yönünde kararlı, tutarlı bir şekilde eylemlerini gerçekleştirilmesine bağlıdır. Bireyde kişisel kaynakların geliştirilmesi, kendine olan saygısını, güvenini ve mutluluğunu artırmaktadır. (Baymur,1994,266/267).

Pozitif psikoloji, bireylerin güçlü yönlerini keşfetmesine, olumlu deneyimlere odaklanmasına ve yaşamını daha anlamlı hale getirilmesine önemli etki yapıyor ve geliştiriyor(Snyder ve Lopez,2002)Pozitif psikoloji, kişisel gelişim alanını etkileyen psikolojik koşulların ve süreçlerin iyileştirilmesine ve gelişimine bağlıdır. Bireyin potansiyelini etkili bir şekilde kullanılmasını sağlayacak kişisel gelişiminin inşasında, hayatın anlamını kazandıracak rehberlik hizmetler çok önemlidir. Hayatın anlamına ulaşılan birey, büyük bir şeyin parçası olduğunu hissediyor ve derin, kalıcı başarı ve mutluluğa ulaşıyor. Hayatı anlamlandırmayan birey, sürekli ıstıraplara ve başarısızlıklara doğru sürükleniyor. Öyle ise bireye kazandıracak hayatın anlamı, birey için en değerli hazine olduğu söylenebilir. Bundan dolayı hayatının anlamına ulaşılmasında; rehberlik ve takip işlemleri önemli hale geliyor(Ok,2016,s.72)

Bireyin anlam ve hakikat arayışı, başarı ve yaratıcı yaşamının temelini ve gerçek mana da insan oluşunun en güçlü yönlerini oluşturuyor (Frankl,2021; Bahadır,2011),4).Metafizik emniyeti,geçmiş deneyimler, bireyin hayatına anlam kazandıracak iki temel unsurlardır(Jung, 1933,s.204)Çocukların yaşamına anlamın kazandırılması,dengeli ve tutarlı davranışlarının kaynağını ortaya çıkartmaktadır(Aydın vd.,2015,s.40) Çocukların yaşamında anlam yoksunluğu; çocukları,bu temel ihtiyacı karşılamak için ilk fırsatta başka bir kaynağa yöneltiyor

ve çabalarını ortaya çıkarttırıyor(Cüceloğlu, 2015,s.126). Çocuğun anlam arayışı ile kendi özüne ulaşma ve kendi yapısında var olan temel ihtiyacını gerçekleştirmedir (Akıncı,2002, s.225).

2.Bağlanma ve Temel Güven Duygusu

İnsan, yaşamın anlam arayan ve bununla bütünleşmeye çalışan bir varlıktır(Aydın, 2015,190)Mutluluğa çocukluktan itibaren hayatın anlamını elde ederek ulaşılıyor(Frankl, 1988,38).Yaşamın gerçek anlamını kavramaya çalışan bir çocuk, hiçbir zaman eksiklik duymaz. Bağlanma ve temel güven duygusu, yaşamı anlamlandırmanın temelidir. Çocukta bu temelin sağlıklı gelişmesi, yaşamını anlamlandırma sürecini olumlu etkiliyor(Erikson,1984, s.1,4).Güvenli bağlanma, duygularını anlama, sosyal problem çözme becerileri, vicdan gelişimi ve olumlu kendilik kavramlarını ortaya çıkartmasından dolayı psikoloji pozitif ile ilişkili olduğu söylenebilir.

Her birey, bağlanma ve temel güven duygusunu, kendisini karşılıksız sevecek, tehlikelerden koruyacak anne ve baba; daha sonra Tanrı'yla giderilmeye çalışır.(Yıldız,2007) Yaşamın anlamı, bağlanma ve temel güven duygu zeminde geliştiğinde; olumlu duygu deneyimlerini ve kişisel kaynaklarını güçlendiriyor. Kalıcı kişisel kaynakları inşa eden davranışları ortaya çıkartıyor. Öğrenme duygularını tehdit eden stresi ortadan kaldırıp, sosyal iletişim ve başarılı olmasını sağlayacak ortamını oluşturuyor(Sroufe,2005;349-367).“Tanrı beni koruyor.” şeklinde bir inanç ve düşüncesi, çocuk üzerinde koruyucu ve rahatlatıcı bir etki yapıyor(Flannelly ve diğerleri,2008).Bireyde bağlanma ve temel güven duygusu gelişmediği zaman, kaygı, stres, düşmanlık, duygusal tükenmişlik ve başarısızlık gibi kişisel kaynaklar meydana geliyor (Calvert,2010:56).

Bağlanma ve temel güven duygusunun temelini din oluşturuyor. Din bu yönüyle bireysel ve toplumsal açısından çok geniş bir çerçevede işlevlere sahiptir. Bireyin iç dünyasında ahenk ve tutarlı davranışlarının şeklini ve yönünü belirliyor. Bireyin yaşamını anlamlandırma ve bir var-oluşsal çözümleme misyonunu güçlü şekilde kazandıran olgudur (Bergson,1962,s.127; Sarıkçıoğlu,1983,s.19) Bireyin yaşamında ortaya çıkan dini duyguların ve eylemlerin, kutsalla ilişkisi anında yaşadığı bireysel tecrübe şeklinde tanımlanabilir (William, 1982,21)Bireyin yaşamında din, teselli edici ve duygu ve düşüncelerini güçlendirici etkisi yapıyor(Balaban,1950,s.45,51) Bireyin içsel ve dışsal yaşantısında dengeyi sağlama

işlevini gerçekleştiriyor. Houxley, bütün amaçlı eylemlerin ve nezh yaşantıların ön koşulunun “inanç” olduğunu söyler(Aldous,1996,s.239)İçsel bir etkinlik sonucu ortaya çıkan inancın, pozitif insan olmaya katkısının büyük olacağıdır(Fromm, 1990,s.28)

Bağlanma duygusunun merkezinde Tanrı inancı ve Tanrı’ya bağlılık yer almaktadır. Tanrı’ya bağlanma duygusunu yaşamayan bireyin manevi dünyası bozuluyor ve kişilik sorunları meydana geliyor(Jung,1966)Bireyde,Tanrı’ya bağlılık yerine, haz duygusuna bağlılık, bireyin yaşamını anlamlandırma sürecini engelleyen önemli nedenlerden biridir. Bundan dolayı bireyin haz duygusunu kontrol altına alması çok önemli haline gelmektedir. Ancak, bireyde bağlanma duygusunun gelişmesiyle haz duygusu kontrol altına alınır. Kontrol edilmeyen haz duygusu, sosyal ve ekonomik alanında tehditlere dönüşmektedir.(Harari, 2016,52).Tarihte, bağlanma duygusu yaşamayan toplumlarda, yıkıcı davranışları ortaya çıkarttığı gibi bireyi intihar etmeye sürüklemiştir. Bu nedenle çocukların yaşamını anlamlandırma sürecine, bağlanma ve temel güven duygusunu yerleştirmek gerekmektedir. Bağlanma duygusunun gelişimi, kontrol duygusunu artırdığı gibi strese karşı bir kalkan olmaktadır. Duygusal iyilik halini artırarak, kişisel kaynakların üzerinde olumlu etki yapıyor Kişisel kaynakların inşası, dengeli bir karakterin ve kendisiyle bütünleşmiş müthiş gücün genişleyerek ortaya çıkmasını sağlıyor.

3. Genişletme ve İnşa Teorisi

Bireyde ortaya çıkan ‘genişletme ve inşa etme’ teorisi’ne göre, pozitif duygular optimal işleyişine sahiptir. ‘Genişletme ve inşa etme’ yoluyla olumlu duyguların ortaya çıkarttığı eşsiz etkilerini yaşama fırsatını sunuyor ve kalıcı kişisel kaynaklar inşa eden davranışları meydana getiriyor(Fredrickson 1998,2001).Pozitif duyguların ortak bir işlevi, bireyin bilişsel kapsamını genişletmek suretiyle kişisel kaynaklarını geliştirmesidir (Fredrickson,2013). Algı, dikkat, motivasyon gibi işlevlerin bilişsel alanda artırımı, daha fazla kaynak oluşumunu katkı sunuyor(Ching ve Chan,2020).Olumlu duygular-bilişsel alanın genişlemesi ve buna bağlı davranışları artmasıyla pozitif duygular da artıyor. Pozitif duygular, düşünceleri değil; beceri ve davranışları artırıyor. Daha geniş bir bakış ve düşünme açısını kazandırmaktadır(Fredrickson,Cohn,2008)Bireyin yaşadığı pozitif duygu deneyimleri, kişisel kaynakların güçlenmesini sağlamak suretiyle bireyin refahı ve psikolojik sağlığın olumlu etki yapmaktadır (Fredrickson, Branigan 2005).

Zaman içerisinde olumlu duygularla genişleyen ve gelişen bilişsel alandan doğan hayatın anlamı, bireyde amaç haline geliyor. Birey, amacını gerçekleştirirken; fiziksel, sosyal, psikolojik ve sosyal anlamda birçok kaynakların ortaya çıkmasını sağlıyor. (Fredrickson ve Branigan 2005) Pozitif kaynak gelişiminin, ruh sağlığı üzerinde koruyucu etki yapıyor. Aynı zamanda bireysel ve toplumsal refah için katkısı söz konusudur. Pozitif psikoloji ile desteklenen beklentiler, başarıya ilişkin olumsuz davranışlarını azaltıp ve olumlu tutum ve davranışlarını artırıyor. Aynı zamanda canlılık ve öğrenme duygularını tehdit eden stresi ortadan kaldırıp, kendini yetiştirme ve başarılı olma ortamını oluşturuyor. Başarılı olma doyumu ve ruh sağlığı arasında pozitif yönlü ve güçlü ilişkisi bulunuyor. Diğer bir ifade ile içerisinde bulunulan ortamda ya da alanda bireyin kendini hissettirme ve fark yaratma çabası ve durumu olarak da açıklanabilir (Ardahan, 2012)

Pozitif duygular sadece anlık değil; genişletme ve inşa etme sürecinin en iyi şekilde işleyişi sürdürüp, olumlu duygularını ve düşünce kalıpların artırımını sağlıyor. Genişleyen zihninde, yeni yolların açılmasına olanak verip; hisler, yaratıcı, esnek, sosyal ve sağlıklı bireyler olarak hissetmelerini sağlamaktadır. Bu bağlamda, iyimserlik, umut, öz yeterlilik ve psikolojik dayanıklılık gibi olumlu psikolojik faktörlerin, bireylerde canlılık ve öğrenme duygularını ortaya çıkartmaktadır. Kendini yetiştirmenin duygusal boyutu canlılık ve bilişsel boyutu ise öğrenmedir. Canlılık ve öğrenme birbirlerini destekler. Bireylerde canlılık duygusu, kaygı ve depresyonun üstesinden gelmeye yardımcı oluyor. Canlılık duygusu, görevine odaklanma, keşfetme eğilimi ve ilişki yönetimi gibi aracı davranışları ortaya çıkarıyor. Yaratıcı süreçte duygular da çok önemlidir. Çünkü yaratıcılığın kişisel anlamları bulunmaktadır(Runco, Martin,2002) Birey ne kadar kişisel kaynaklarını geliştirmişse ise o kadar yaratıcı olabilmektedir

Proaktif Kişisel Gelişimi

Keşfetme eğilimi ve ilişki yönetimi gibi aracı davranışları ortaya çıkmasıyla kendi gelişimlerini destekleyen bir dizi kaynak üretimini sağlıyor. Bireylerin kendi psikoloji kaynaklarını üretip, kullanmaları, okul alanındaki başarısının devamında motivasyon ve verimlilik gibi olumlu tutumlarını geliştiriyor. Yaratıcılık yalnızca bireyin zihninde oluşan bir düşünce değil çok farklı kaynakların birlikte oluşturduğu sinerji ile ortaya çıkan bir başarıdır. Bu nedenle yaratıcılığı geliştirmek yalnızca bireyi yetiştirmekle değil; kaynakları iyileştirmek gerekmektedir. Bireylerde psikolojik sermaye, proaktif kişilik, reklektif, pozitif duygu ve işe bağlılık gibi

kişisel kaynaklar geliyor. Reflektif kelimesi, aktif, ısrarlı, bilinçli ve sistematik olarak düşünme anlamına gelmektedir. Problemleri, özel durumlar içerisinde fark etme, anlama ve bunları çözülebilmesi için sistemli olarak problem hâline getirmeyi içermektedir. Problem çözme ise, oluşturulan problemleri kuramsal bilgiler, uygulamadan ortaya çıkan bilgiler ve etraflıca düşünmeyle ortadan kaldırmaya yönelik çalışmayı içermektedir (Ekiz,2001).

Proaktif kişilik, olayları seyreden değil; olayların içine giren, sorumluluk alan kişi olarak tanımlanmıştır(Crant,2000)Proaktif birey, kendi gelişimi için sorumluluk almasıdır. Enerjilerinin doğası pozitifdir. Hedefe ulaşmayı kolaylaştıracak ve kişisel gelişimi sağlayacak kaynak üretmeye yönelik çabaları içerir. Proaktif kişilik, kendisiyle barışık, öz-güveni yerinde, benlik saygısı yüksek bir kişilik örüntüsüyle karakterizedir. Bilgi ve entelektüel yeteneklerini sağduyularıyla birlikte kullanırlar. Bilişsel zekâları, duygusal zekâları ve ruhsal zekâları arasında senfonik bir uyum vardır.Yani, süreç onu yönlendiremez; O süreci yönlendirerek yoluna devam eder ve böylece enerji ve performansını yaşamın geneline yayabilir. Proaktif bireyi dikkatle düşünülmüş, seçilmiş ve sindirilmiş değerler yönetir. Proaktif kişilik, kendilerini her daim geliştiren bireylerdir(Kale,2009).Değişen dünyanın belirsizliği ve karmaşıklığının yanında teknoloji alanındaki değişim hızı ise proaktifliği önemli bir hale getirmektedir(Bateman ve Crant, 1993).

Sonuç

Yaşamında verimlilik ve başarıyı gerçekleştiren bireyin kendisidir. Psikolojik sermaye boyutlarının geliştirilmesi, pozitif psikolojinin kazanılmasına bağlı olduğu söylenebilir. Pozitif psikoloji, bireylerin güçlü yönlerini keşfetmelerine, olumlu deneyimlere odaklanmalarına ve yaşamlarını daha anlamlı hale getirilmesine önemli bir etki yaratmaktadır. Pozitif psikoloji, kişisel gelişimimizdeki psikolojik koşulların ve süreçlerin iyileştirilmesi, gelişimine ve buna ilişkin rehberlik hizmetlerinden dolayı derin ve kalıcı mutluluk oluşturuyor.

Çocukların anlam ve hakikat arayışı, yaşamları boyunca en güçlü değerini ve insan oluşlarının en güçlü göstergesini oluşturuyor. Bireyin yaşamında anlam, davranışlarını dengeli ve tutarlı hale getiren bir kaynak durumundadır. Aynı zamanda anlam arayışı insanın özünden kaynaklanan, yapısına ait temel bir özellik ve bir ihtiyaçtır. İnsan, anlam arayan ve anlamla yaşayan bir varlıktır. Hayatın anlamına ulaşılması, duyguları anlama, sosyal sorunları çözme becerileri, vicdan gelişimi ve olumlu kendilik gibi pozitif ilişkilerde kendini gösteriyor. Hayatın gerçek anlamını kavramaya çalışan bir birey, hiçbir zaman eksiklik duymuyor.

Hayatını anlamı, bağlanma ve temel güven duygu zeminde geliştiğinde, olumlu duygu deneyimlerini, kişisel kaynaklarının güçlenmesini sağlıyor. Kalıcı kişisel kaynaklar inşa eden davranışları ortaya çıkartmaktadır. Öğrenme duygularını tehdit eden stresi ortadan kaldırıp, sosyal iletişim ve başarılı ortamının oluşturuyor. Bireyde bağlanma ve temel güven duygusu gelişmediği zaman, kaygı, stres, düşmanlık, duygusal tükenmişlik ve başarısızlık gibi kişisel kaynaklar ortaya çıkmaktadır. Bireylerde, hayatı anlamlandırma sürecini engelleyen sebeplerden birisi, kontrol edilemeyen haz duygusudur. Bireyde bağlanma duygusunun gelişmesiyle haz duygusu kontrol altına alınıyor. Böylece, hazların kontrol alınması, kişisel kaynakların gelişimi dengeleyen bir karakter ve kendisiyle bütünleşmiş müthiş gücünü ortaya çıkartıyor. Kalıcı kişisel kaynaklar inşa eden davranışları ortaya çıkartmaktadır.

Kişisel kaynakları geliştirilmesi, bilişsel kapsamın genişletilmesidir. Bu bağlamda algı, dikkat, motivasyon v.b. işlevlerin bilişsel alanda artırımıyla daha fazla kaynak oluşumunu katkı sunmaktadır. Başarıyı engelleyen olumsuz davranışlarını azaltıyor ve olumlu tutum ve davranışlarını artırıyor. Bu yöneyle bireyde, genişletme ve inşa etme süreci en iyi şekilde işlediği söylenebilir. Genişleyen zihninde hisler, yaratıcı, esnek, sosyal düşünceler bireyin kendini iyi hissetmesini sağlıyor. Bu bağlamda, iyimserlik, umut, öz yeterlilik ve psikolojik dayanıklılık gibi olumlu psikolojik faktörler, bireylerde canlılık ve öğrenme duygularını geliştiriyor. Kendini yetiştirmenin duygusal boyutu canlılık ve bilişsel boyutu ise öğrenmedir. Bireylerde canlılık duygusu, kaygı ve depresyonun üstesinden gelmeye yardımcı oluyor. Canlılık duygusu, görevine odaklanma, keşfetme eğilimi ve ilişki yönetimi gibi aracı davranışları ortaya çıkmasıyla, kendi gelişimlerini ve yaratıcılığını destekleyen bir dizi kaynak üretimini sağlıyor. Yaratıcılık, yalnızca bireyin zihninde oluşan bir düşünce değil çok farklı kaynakların birlikte oluşturduğu sinerji ile ortaya çıkan bir başarıdır. Bu nedenle yaratıcılığı geliştirmek yalnızca bireyi yetiştirmekle değil; kişisel kaynakları iyileştirmekle de olabilmektedir. Buna bağlı olarak proaktif kişilik, reaktif, pozitif duygu ve işe bağlılık gibi kişisel kaynaklar da gelişiyor. Bilişsel zekâları, duygusal zekâları ve ruhsal zekâları arasında senfonik bir uyum vardır. Yani, süreç onu yönlendiremez; tersine; O, süreci yönlendirerek yoluna devam eder ve böylece enerji ve performansını yaşamın geneline yayabilir.

Öneriler

Bireyin karşılaştığı problemlerle en etkili şekilde başa çıkarak negatif yaşıntıyı pozitif dönüştürecek kişisel kaynakların öneminin anlaşılmasını sağlayacak bilimsel çalışmalar, bilimsel zeminde yeterince tartışılması gerekmektedir. Bu konuda yeterince çalışmaların olmadığına dikkat çekilmek istenmiştir. Psikolojik sermaye ile kendini yetiştirme arasındaki

ilişkinin, bireysel bir kaynak olacağı bağlamında bilimsel zeminde yeni tartışmaların ortaya çıkarılması sağlanmıştır.

Yaratıcı Yönelimle Deneyim Kazanmış Rol Model Bağlamında Bireyin Kazandığı Yetkinlikler: Pozitif Duygular

Uzman Sinan Doğan

MEB,s.sinanQ@hotmail.com, 000000028242-0820,Türkiye

Özet

Bireyde, yaratıcı eylemlilik davranışların ortaya çıkması, dikkati dağıtan etkenleri devre dışı bırakan bir algı mekanizması gelişmesine bağlıdır. Nörobilim alanındaki araştırma bulgularına göre, yoğunlaşma ve odaklanma değerlerinin deneyimle gelişmektedir. Deneyim, keşif yolculuğunda, keşfi gerçekleştirmiş bilgi kaynaklarına, yöntem ve tekniklerine ulaşılmasıdır. Bu deneyim sürecini gerçekleştiren bireylerde, beyinsel fonksiyonlarında dönüşüm süreci yaşıyor. Zihnini odaklanmış biçimde kullanılmasıyla kaygı veya negatif duygular, bireyin varlığından uzaklaşıyor. Birey, zihni, bedeni, sezgileri zayıflatan etkilerine maruz kalmadan ilerleme sürecinde, yetkinliği gelişiyor ve etkinliğinin olanaklarını keşfediyor. Uzun süreli yaratıcılık eylem alanında kazandığı yetkinlik, bütüncül bir deneyim halinde yaşamındaki diğer alanlarına yayılıyor. Narsistik eğilimler, yaratıcılık eylemlerin ortaya çıkmasını engelliyor. Bireyin, başkaları tarafından beğenilme çabasıyla yaratıcı etkinliklere yönelmesi, bireyde yıkıcı bir döngü oluşturuyor. Başarısızlık korkusu, beğenilmeme kaygısıyla gerçekleştirdiği deneyim ve ulaştığı yetenekler, kendisine doyum vermiyor. Bireyin ortak bir yaşama katkı sağlamanın mutluluğunu hissetmiyor. Birey yaratıcılık eylemlilik etkinliğine yöneldiğinde, başkalarının dikkatini toplamak için değil; kendisine odaklanması gerekiyor. Kendine yoğunlaşması, deneyim öğrenme sürecini ve yeteneklerini geliştirir. Diğer insanlarla dayanışmaya ve dostluğa dayalı ilişkiler kurması, ortak keşiflere dayalı zengin bir hayat deneyimini meydana getiriyor. Birey, narsistik yönelimine değil; yaratıcılık yönelimini destekleyen kültürel ve eğitim ortamlarına yönelmesi gerekiyor. Yaratıcılık ortama yönelimi destekleyen ve besleyen bir ortamda yaşayan birey, becerileri elde ediyor, geliştiriyor, sürdürüyor ve güvene dayalı ilişkiler kuruyor. Yaratıcı yönelimle deneyim kazanmış rol modeli oluşturabiliyor. Makalemiz, nitel olup, tarama yöntemine dayanmaktadır. Bireyin yaratıcı etkinlik alanlarına yönelmesinde deneyimlerden yararlanmasının önemi vurgulanmıştır. Birey, yaratıcı etkinlik alanını gerçekleştirirken; bireyin kişisel gelişim alanında meydana getirdiği yeteneklerin ve kazandığı değerlerin temellendirilmesi amaçlanmıştır.

Anahtar kelimeler: Birey, deneyim, yetenekler, pozitif duygular, yoğunlaşma

Competencies Acquired by the Individual in the Context of a Role Model Experienced with Creative Orientation: Positive Emotions

Abstract

The emergence of creative action behaviors in the individual depends on the development of a perception mechanism that disables distracting factors. According to research findings in the field of neuroscience, the values of concentration and focus develop with experience. Experience is reaching the information sources, methods and techniques that have realized the discovery during the journey of discovery. Individuals who realize this experience process experience a transformation process in their brain functions. By using their mind in a focused manner, they distance themselves from the existence of anxiety or negative emotions. The individual develops their competence and discovers the possibilities of their effectiveness in the process of progressing without being exposed to the effects that weaken their mind, body and intuition. The competence they gain in the field of long-term creative action spreads to other areas of their life as a holistic experience. Narcissistic tendencies prevent the emergence of creative actions. The individual's turning to creative activities in an effort to be liked by others creates a destructive cycle in the individual. The experiences and skills they have achieved with the fear of failure and the anxiety of not being liked do not give satisfaction and do not make them feel the happiness of contributing to a common life. When an individual turns to creative activity, they need to focus on themselves, not on attracting the attention of others. Focusing on themselves improves the experience learning process and their skills. Establishing relationships based on solidarity and friendship with other people reveals a rich life experience based on shared discoveries. It is necessary to provide cultural and educational environments that support the individual's creative orientation, not their narcissistic orientation. An individual living in an environment that supports and nourishes creative orientation acquires, develops, and maintains the skills required by creative orientation and establishes relationships based on trust. They can create a role model who has gained experience with creative orientation. Our article is qualitative and based on the screening method. The importance of the individual benefiting from experiences in turning to creative activity areas is emphasized. While the individual realizes his/her creative activity area; it is aimed to establish the skills and values he/she has created in personal development.

Key Words: Individual, experience, abilities, positive emotions, concentration

Giriş

Pozitif arayışta bireyler, anlam kaybı veya anlamsızlık düşüncesiyle değil; yaşamın özünde var olan anlamı keşfetme, kendi kişisel potansiyellerini geliştirme ve sağlıklı bir gelişim sürecinin parçası olarak arama yaparlar. Bu arayış biçimi doğası gereği simbiyotik ve diyalektik bir yapıya sahiptir. İnsanı, diğer canlılardan ayıran en temel özelliklerden birisi yaratıcılık ve yaratıcı düşünme becerisidir. Yaratıcılık, kendini ifade etme, zekâ ve hayal gücünü kullanma kapasitesidir. Yeni fikir, farklı bakış ya da orijinal ürün” ortaya koyma yeteneğidir(Çeliköz,2017)

Yaratıcılık bireyin sahip olduğu en temel yetilerden biridir. Yaratıcılığın keşfi, bireyin kendisini ve içinde yaşadığı doğal çevreyi, yaşamı tanımaya ve anlamaya yöneliktir. İnsanın yaratıcı güçlerinin ortaya çıkarılması bir bakıma yaşamın anlam kazanmasıdır. Bu bağlamda her insanın belli bir düzeyde yaratıcı olduğu kabul edilebilir. Asıl problem insanda var olan bu yaratıcılık potansiyelini geliştirebilecek ortamları ve modelleri var edebilmektir. Bireyde var olan yaratıcılık yeteneğini ortaya çıkarılması, bilim ve teknikte, gerekse düşünsel, sanatsal ve kültürel alanda yeni ürünler ortaya çıkaran toplumlara ulaşılır. Yaratıcılık, kendimizi değiştirme eylemliliğidir. Bireyde yaratıcılığın ortaya çıkmasını engelleyen amansız sorunlara alışılmışın dışında, farklı, etkili ve hatta anlamlı yeni modeller oluşturulması gerekiyor.

Makalemiz, nitel olup, tarama yöntemine dayanmaktadır. Bireyin yaratıcı etkinlik alanlarına yönelmesinde deneyimlerden yararlanmasının önemi vurgulanmıştır. Bireyin yaratıcı etkinlik alanını gerçekleştirirken; kişisel gelişimde meydana getirdiği yeteneklerin ve kazandığı değerlerin temellendirilmesi amaçlanmıştır. Bireyin yaratıcı etkinlik alanlarına yönelmesinde, deneyimlerden yararlanmasının önemi vurgulanmıştır. Bireyin yaratıcı etkinlik alanını gerçekleştirirken; kişisel gelişimde meydana getirdiği yeteneklerin ve kazandığı değerlerin temellendirilmesi öne çıkarılmıştır.

Sosyal Algı ve Sosyal Öğrenme

Yaratıcılık, bireyin bilimsel, sanatsal, teknolojik ve toplumsal alanda gelişimini etkileyen özelliklerine sahiptir. Yaratıcı yeteneğini geliştirmiş bireylerde, öz yeterlik özellikleri ortaya çıkmaktadır. Algı, duyuşsal bilginin nesnel ve öznel biçimlerde yorumlanması ve anlamlandırılması işlemidir. Bireyin algılaması, içinde bulunduğu sosyal ortama ve kendi psikolojik alanına bağlı olarak ortaya çıkan, somut duyuşsal bir bilgilenme olmanın ötesinde sosyal bir olgu olarak ele alınmalıdır (İnceoğlu,2010,s.94). Bireyin yaşadığı deneyimi, geçmiş deneyimlerin birikimleriyle birlikte özümleyecek yeni bir bilişsel bütüne ulaşması(Özer, 2014,s.183-184)olduğu söylenebilir.

Toplumda tutumlar, değer yargıları, güdüler, yetişme tarzı, sosyal ortam gibi unsurlar,

sosyal algının temelini oluşturuyor(Güney,2006,s.135).Sosyal algıyı oluşturan unsurlar, bireylere kendini hissettiren, bireyleri belirli sınırlar içinde tutan ve yönlendiren bağlardır (Johnston,1992,s.7).Sosyal ortamı oluşturan algılar, yaşamın farklı durumlarında karar alma mekanizmasına ve davranış biçimlerine rehberlik edecek olan temel ölçütleri kazandırıyor (Hodgkinson,2008,s.142). Bireyin toplumsal yaşamdaki rolünü de aktif hale getiren sosyal algı, diğer bireylere dair davranışlarını gözlemlemek suretiyle bir sonuca ulaşır ve sosyal öğrenme gerçekleşir. Sosyal öğrenme düzeyi, sosyal algı düzeyinin gelişmesine bağlıdır.

Sosyal Öğrenme ve Yaratıcılık

Aile ve okul temelli olumlu sosyal ortamlar, bireyin karar alma mekanizmasına ve davranış biçimlerine olumlu etki etmesinden dolayı pozitif değerlerdir. (Bernal vd.,2011: s.135). Bireyin karar alma mekanizmasına ve davranış biçimlerine olumlu etki edecek sosyal ortam yoksunluğu, bireyde sosyal kaygı, aşırı duyarlılık, başarısız olma (değerlendirilme) korkusu ve buna bağlı aşırı uyarılma hali gibi değerler meydana geliyor.Bu nedenle .bireyin yaratıcı yönelimini sağlayacak sosyal modeller çok önemli hale gelmektedir. Yaratıcılığın gelişmesinde, kişinin kendini güvende hissettiği, psikolojik yönden kısıtlanmadığı, kendisine güven hissinin verildiği ve düşünce özgürlüğüne müdahale edilmediği gibi unsurların belirlendiği düzeyli tartışma ortamlarında bireyin yaratıcılığı gelişebilir. (Yavuzer,1989; Duman, 2009).

Öğretmenin, öğrencilerde yaratıcı potansiyelini ortaya çıkmasını sağlamak için sosyal öğrenmeyi dikkate alarak eğitim süreçleri oluşturmak suretiyle öğrenciler kendilerini gerçekleştirebilir.(Orhon,2014;Grant ve Grant,2015).Yaratıcı düşünmeyi gerçekleştirecek sosyal öğrenme ortamları oluşturmak, etkili öğretmenliğinin anahtarıdır. Çünkü öğrencilerin yaratıcı düşünme becerilerinin geliştirilmesinde en önemli model öğretmendir(Starbuck, 2017).Eğitim süreçlerinde yaratıcılığı olumsuz etkileyen sebepler tanımlanması ve ortadan kaldırılması gerekmektedir. Yaratıcılığın gelişmesi için öğrenim süreçleri ile hedefler arasında ilişki kurulmalıdır. Bu ilişkinin, öğrencinin gelecekteki hayatına yapacağı etkilerinin ortaya konulmasıyla öğrencilerde akademik iyimserlik meydana gelmektedir (Grant, Grant, 2015). Bireylerin mutluluk hallerini etkileyen unsurlardan biri de iyimserlik durumlarıdır. İyimserlik olgusu, akademik önemini, güven ve yeterlilik kavramlarını, bireysel hem de örgütsel düzeyde kapsayan bir yapıdır(Hoy,Tarter,2011). Akademik iyimserlik, kaynağını insanların yaşantı ve deneyimlerine pozitif bir açıdan yaklaşan ve onları inceleyen pozitif psikolojiden almıştır(Bernard vd.,2010).Akademik iyimserlik,pozitif psikolojinin gelişimine önemli katkılar sunuyor. Öğretmenler, ebeveynler ve öğrenciler, akademik iyimserliği konusunda işbirliği yapmaları gerekmektedir. Öğrencilerin, kendi kabiliyetine inanıp, olumsuzluklara ve zorluklara

karşı mücadele edilmesinde; bu işbirliğin çok daha önemli hale gelmektedir. Süreç sağlıklı yürütüldüğünde, öğrencilerin akademik yeteneklerinde farklılıklar oluşturabileceğine yönelik olumlu inanışları artacaktır (Hoy vd., 2008, s. 822). Akademik iyimserliğin geliştiği okullarda, öğrencilerin öğrenme ortamları ciddi ve düzenlidir. Öğrenciler zorlu görevler için istekli ve arzuludur. Belirlenen ve ulaşılabilir hedeflere yürürler (Hoy vd., 2006: 145 akt., Çoban, 2010, s. 20)

Yaratıcı Yönelimlerin Ortaya Çıkması

Yaratıcılık, keşfedilebilmesi ve geliştirilmesi uygun sosyal ortamlarda eğitimle gerçekleşiyor. Özellikle sosyal algılar, yaratıcılığı olumlu ya da olumsuz olarak etkilemektedir. Yaratıcılık deneyimini oluşturan tarihi şahsiyetler, bilim insanları, filozoflar, devlet adamları, sanatkarlar vb. kişilerin tanıtılması bireyde sosyal öğrenme kapsamında kişisel anlam ve deneyim kaynaklarını kazandırıyor. Bireyin deneyim kaynaklarıyla özdeşleşme değerinin yaşaması, yaratıcılık yeteneklerini ortaya çıkmasını sağlamaktadır (Demir, 2019). Deneyim kazanımları, keşif yolculuğunda keşfi gerçekleştirmiş bilgi kaynaklarına, yöntem ve tekniklerine ulaştırıyor. Aynı zamanda bireylerde, beyinsel fonksiyonlarında dönüşüm süreci gerçekleştiriyor (Karwowski ve Kaufman, 2016)

Örneğin; Mevlana'nın Mesnevi adlı eserinde yer alan "Rum ve Çinli ressam" kıssası, yaşamda "var olan" anlamın ve "varoluş hakikati"nin arayışına dair güçlü bir sembolik anlatıdır. Bu anlatıda Rum ressamı yaşamdaki anlamı arayan "Sufi"leri temsil etmektedir. Diğer bir sembolik anlatı ise, Ferîdüddin Attâr'ın Mantıku't-Tayr eserinin konusunu oluşturan -otuz kuşun yedi vadiyi aşarak "simurg"a ulaştığı- yolculuktur. Burada yolculuğun kişinin kendisinde başlayıp kendisinde sona ereceği vurgulanmaktadır. Anlatımlarda, kişinin kendi içinde anlam arayışını gerçekleştirdiği bir yolculuk (arayış) olarak resmedildiği söylenebilir.

Yaşamda "var olan" anlamın keşfedilmesine, geliştirilmesine/ zenginleştirilmesine (tekâmül-kendini gerçekleştirme) yönelik bu yolculuk insanın varoluş nedenini oluşturur. Diğer bir ifade ile arayış, insanın tekâmül ettiği ve kendisini keşfettiği bir yolculuktur. Öte yandan, bu anlatılar, hayatın kendisinde gömülü ve yaşamın kaynağı olan bir "anlam" fikrini sunuyor. Bireyin hayatında anlam kaynaklarının oluşturulması ve, beyinsel fonksiyonlarında dönüşüm süreci yaşamasıyla kaygı veya negatif duygular varlığından uzaklaşıyor. Birey, zihni, bedeni, sezgileri zayıflatan etkilerine maruz kalmadan ilerleme sürecinde, yetkinliği gelişiyor ve etkinliğinin olanaklarını keşfediyor. Uzun süreli yaratıcı eylem alanında kazandığı yetkinlik, bütüncül bir deneyim halinde, yaşamındaki diğer alanlarına yayılıyor (Csikszentmihalyi, 2014; Ryan, Deci, 2018).

Bir insanın zor şartlarda bile hayata tutunabilmesi için yaşamında anlamlı amaçlarının

olması gerekiyor(Frankl,1963).Kurgulayıcı anlam arayışına kaynaklık eden bu düşünme biçimini geliştirilmesi gerekiyor. Yaşam bir bütün olarak anlamsızlığa doğru sürüklendiğinde, yaşamı önceden olduğu gibi aynı şekilde sürdürülür. Monotonlaşan bir yaşam; buna bağlı olarak zihinsel faaliyetler pasif duruma geçiyor. Narsistik kişilikler ve mutsuzluklar, bireyde ortaya çıkıyor. Yaşamda daha büyük bir anlamı ortaya çıkartan çeşitli yolları vardır. Oysa, gelecek nesillerin yararını gözeterek, sosyal bir hareketin bir parçası haline gelmesi gerekiyor. Ya da yaşama dinsel açıdan bir anlam kazandırıp, ebedi bir hayatın bir parçası haline de gelinebilir (Eagleton, 2007,s.22). Hayatın temel anlamı, bilgiyle sürdürülen bir şeydir. Bireyin anlamsız yaşayamayacağı, anlam ve amaç arayışının insani bir özelliktir

Bireyde meydana gelen anlam ve deneyim kaynakları, hayata ilişkin genel ve istikrarlı yönelimleri sağlayan ve geliştiren alanlarıdır. Anlam ve deneyim kaynakları,Birey üzerinde motive etkisi yaparak bireye yön verebiliyor.Böylece,birey hayatını anlamlı biçimde yapılandırıyor.. İlişkililik/ilişkiler, özerklik, başarı, kişisel gelişim, kendini gerçekleştirme, dini inançlar/maneviyat, sağlık/iyi oluş ve gelenek/kültür önerilen anlam kaynaklarından bazılarıdır.“Değerler ve anlamlar evreni” olan kültür,“eyleme geçirilmiş değerler” olarak tanımlanan anlam kaynaklarını şekillendirmektedir(Schnell, 2009).Birey yaşamında anlam ve değerlerin geliştirilmesi, psikolojide iyi oluşu güçlendiriyor .Olumsuz psikolojik durumlara karşı dayanıklılık gösterebiliyor(Kinnier vd.,1994).insanın anlamsız yaşayamayacağı, anlam ve amaç arayışının insani bir özellik olduğu vurgulanır. İnsanda anlam arayışı, kendi kişisel potansiyellerini geliştirmeye yönelir.

Yaratıcılık ve Model Davranışlar

Bireyde yaratıcılık değerini geliştirecek temel yollardan biri olumlu sosyal öğrenme ortamını oluşturacak öğretmen ve ebeveynlerin model davranışlarıdır Yaratıcılığı modelleyerek, bireyin yaratıcılıkları geliştirebilir.Yaratıcılığın nasıl geliştiği hakkında sözle izahatlar yerine,uygulama ortamlarını oluşturması daha etkili olabilirler(Sternberg ve Williams,1996;Akt.Demir,2019). Yaratıcı düşünmeyi destekleyici aile ortamı; karar verme, deneyimleme ve keşfetme için özgürlük hem de psikolojik güvenlik sunuyor ve çocuklar fikirlerini paylaşabiliyor.çocukların,yeni fikirlerle risk üstlenmesi, cesaretini artırıyor ve bağımsızlığını güçlendiriyor.Esnek ve yaratıcı rol modeller, zenginleşmiş öğrenme ortamını ortaya çıkartıyor. sağlayabilir(Kemple ve Nissenberg, 2000).

Çocuklar ilk yaratıcı davranışlarını,ebeveynlerini izleyerek, deneyimler ve model olarak geliştirirler.Ebeveynler,çocukta yaratıcılığının ortaya çıkmasını sağlayan sosyal öğrenme ortamları sağlamalıdır.Ebeveynlerin,aile kararlarında çocuğun bakış açısına değer vermesi;çocuğun, farklı bakış açılarının tanımasını sağlamış olur (Sungur,1997).Öğretmenler

ve ebeveynler çocuklara model olurken; çocuğa cinsiyetine, becerisine ve yaşına uygun görev ve sorumluklar vermelidir. Aile kurumu, çocukta yaratıcılık eğitiminin verildiği ilk yerdir. Bundan dolayı ebeveynler, bu konudaki görevlerini yerine getirirken, büyük çaba göstermesi gerekiyor (Ömeroğlu, Kandır, 2005).

Çocuklarına karşı ilgi ve saygı göstermek; gelişim dönemi özelliklerini bilmek, tanımak, kabul etmek ve bu özelliklere uygun davranmak; destek sağlamak ve şefkat göstermek; ilgi alanlarına ve isteklerine saygı göstermek; çeşitli etkinlikler yapmak; zaman ayırmak; etkili iletişim kurmak; soru sorma, sorgulama ve eleştiri yapmalarına fırsat tanımak; söz hakkı vermek; karar ve planlara katmak vb. davranışları sergileyen aileler, çocukların daha yüksek düzeyde yaratıcı davranışlar sergilemesine ve yaratıcı düşünme becerisine sahip olmasına katkı sunmaktadır.

Yaratıcılık ve Algı Arasındaki İlişki

Bireyde, yaratıcı eylemlilik davranışların ortaya çıkması, bireyde dikkati dağıtan etkenleri devre dışı bırakan bir algı mekanizması gelişmesine bağlıdır. Bireyin kendi içsel uyaranlarına aşırı düzeyde yönelmesiyle dikkat; yani odaklanma ve yoğunlaşma ortaya çıkmaktadır (Beck vd, 2011). Nörobilim alanındaki araştırma bulgularına göre, yoğunlaşma ve odaklanma değeri deneyimle gelişmektedir. Dikkat ve odaklanma becerilerin geliştirilmesi, deneyimleri kullanmak suretiyle zihniyet dönüşümün gerçekleşmesi ne bağlıdır.

Seyir halinde trafik güvenliğinin sağlanmasında dikiz aynası ne ise, yaratıcılığın geliştirilmesinde dikkat odur. Dikkat eksikliği, yaratıcılığı ve keşfi olumsuz etkileyen aktif fay hatları gibidir. Bireye devamlı dayatılan enformasyon sonucu meydana gelen dikkat dağınıklığı, sarhoş olma kadar kötü etkisi yapıyor. Devamlı dayatılan enformasyon bireyi parçalıyor, küçültüyor, yüzeyselleştiriyor, asabileştiriyor. Dikkat dağınıklığı, kültürümüzde idrak aşınması olarak adlandırılan kusursuz fırtına da meydana getiriyor. Bireyde becerileri geliştirecek en önemli deneyimlerinden biri kültürel idraktır. Toplumda kültürel idrakin yoksunluğu, toplumu işleme ve topluma sahip olma kabiliyetlerin ve becerilerin kaybolmasıdır. Kabiliyet ve becerilere sahip olmayanlar, başarısızlığa ve sorunlara karşı basit otoriter çözümlere yönelmektedir.

Yüzleştığınız her şeyi değiştiremezsiniz, ama yüzleşmeden hiçbir şeyi değiştiremezsiniz!.. Bireyin kendisinden kaynaklanan kriz, yine kendi ellerimizle çözülmesi mümkün. Birey, kendisine dayatılan enformasyonu yudumlama yerine, hayatına anlam kazandıracak daha zor olan; kendi enformasyon kaynağının oluşturulması gerekiyor. Bireye, eğitim süreçlerine ilişkin hedeflerin kavratılması, kendisine dayatılan enformasyon alanından çıkıp; yerine başarı ve yaratıcılığa götürecek enformasyona yönelmesini sağlayacaktır, Bireye model üzerinden doğru

deneyimlerin aktarımı, bireyin kişisel alanında sondaj yapmak; yani, odak kuyusunu ortaya çıkartmak gibidir. Odak kuyusunda fişkıran dalgalar, bireyin zorlu görevlerini azimli ve keyifli bir şekilde gerçekleştirecektir. Bireyin hayatına anlam kazandıracak ve sınırlarını zorlayacak şekilde doğru şekilde sondaj yapmak çok önemlidir.

Bireyde anlam yoksunluğuna dayalı davranışlar, odaklanmayı ve yoğunlaşmayı azaltmaktadır. Bundan dolayı bireye hayatın anlamını verecek deneyimleri ve sınırlarını zorlayacak hedefleri kazandırılması gerekiyor. İçimizde uzun süre odaklanmayı ve bundan keyif almamasını sağlayan bir güç bulunuyor. Bu gücün, aktif halde olmasını sağlayacak şartları oluşturulması, başarı ve mutluluğu getirdiği söylenebilir. Kitap okunması, en derin odaklanma biçimini oluşturuyor Bireyde keşfi ortaya çıkaracak hedeflere odaklanma ve yoğunlaşma bireyi büyütüyor, derinleştiriyor, sakinleştiriyor. Bireyin kendisine dayatılan enformasyon ile sadece dış dünyaya odaklanarak yürümesini sağlıyor. Beyin kendisine dayatılan enformasyon ile olup bitenleri sindirmesini gerçekleştiremiyor. Böylece, stresi yaratan düşüncelere odaklanıyor(Hari,2022)

Yaratıcılık ve Nasistik

Bireyin, narsistik yönelimine değil; yaratıcılık yönelimini destekleyecek kültürel ve eğitim ortamlarını sunmak gerekiyor. Birey,narsistik yönelimi ile kendi zihin durumlarına fazlasıyla odaklanırken; başkasının zihin durumunu umursamıyor. Ya da başkasının zihin durumlarını bilişsel olarak okurken; onlarla empati kurup, kendi üzerine olan etkilerini görmekten kaçınıyor(Simonsen ve Euler,2019).Başkasının yüz ifadesi ya da beden dili gibi işaretlere fazlasıyla hassasiyet gösteriyor ve bu işaretler hakkında gerçeklikten uzak çıkarımlar yapıyor. Böylece bireyde hatalı zihinselleştirme ortaya çıkıyor(Herpertz ve Bertsch, 2015).

Narsistik eğilimler, bireyde yaratıcılık eylemlerin ortaya çıkmasını engelliyor. Bireyin, başkaları tarafından beğenilme çabasıyla yaratıcı etkinliklere yönelmesi, bireyde yıkıcı bir döngü oluşturuyor. Başarısızlık korkusu, beğenilmeme kaygısıyla gerçekleştirdiği deneyim ve ulaştığı yetenekler doyum vermiyor. Toplumsal yaşama katkı sağlamanın mutluluğunu hissetmiyor. Birey yaratıcılık eylemlilik etkinliğine yöneldiğinde, başkalarının dikkatini toplamak için değil; kendisine odaklanması gerçekleştiriyor. Kendine yoğunlaşmasıyla deneyim öğrenme sürecini ve yeteneklerini geliştiriyor. Diğer insanlarla dayanışmaya ve dostluğa dayalı ilişkiler kurması, ortak keşiflere dayalı zengin bir hayat deneyimini ortaya çıkartıyor (Csikszentmihalyi, 2014,s.840,851)

Bireyin, narsistik yönelimine değil, yaratıcılık yönelimini destekleyen kültürel ve eğitim ortamlarını sunmak gerekiyor. Yaratıcı yönelimi destekleyen ve besleyen bir ortamda yaşayan birey, becerileri elde ediyor, geliştiriyor, sürdürüyor ve güvene dayalı ilişkiler kuruyor. Yaratıcı

yönelimle deneyim kazanmış rol modeli oluşturabiliyor (Karwowski, Kaufman,2017;Richards, Csikszentmihalyi, 2007.25,55)

Sonuç

Sosyal algı, bireylere kendini hissettiren, onları belirli sınırlar içinde tutan ve yönlendiren bağlardır. Sosyal algı düzeyi arttıkça sosyal öğrenme de gelişiyor. Davranış biçimlerine olumlu etki edeceğinden pozitif değerlerdir. Olumlu sosyal ortamın yoksunluğu, bireyde sosyal kaygı, aşırı duyarlılık, başarısız olma (değerlendirilme) korkusu gibi değerler otaya çıkarıyor. Psikolojik yönden kısıtlanmadığı, kendisine güven hissinin verildiği ve düşünce özgürlüğüne müdahale edilmediği sosyal ortamda bireyin yaratıcılığı gelişebilir. Yaratıcılık düşünme ortamları oluşturmak etkili öğretmenin anahtarıdır. Yaratıcılığın geliştirilmesi için öğrenim süreçleri ile hedefler arasında ilişki kurmak suretiyle ciddi ve düzenli sosyal öğrenme ortamlar oluşturulması gerekiyor. Bireyde keşfi ortaya çıkaracak hedeflere odaklanma ve yoğunlaşma bireyi büyütüyor, derinleştiriyor, sakinleştiriyor. Hayatının anlamını artıracak deneyimleri ve sınırlarını zorlayacak hedeflerin kazandırılması gerekmektedir.

Sosyal öğrenme ortamlarında öğretmen-ebeveyn-öğrenci işbirliği ile akademik iyimserliği önünde zorluklara karşı birlikte ortak tepkilerin geliştirilmesi gerekmektedir. Sosyal öğrenme ortamlara, yaratıcılık deneyimini kazandıran tarihi şahsiyetler, bilim insanları, filozoflar, devlet adamları, sanatkârlar vb. kişilerin taşınması, bireyde kişisel anlam ve deneyim kaynaklarını oluşturuyor. Bireyin keşif bilgilere, yaratıcılık yeteneklere, yöntem ve tekniklerine ulaşmasını sağlıyor. Bireye, model üzerinden doğru deneyimlerin aktarımı, bireyin kişisel alanın sondaj yapmak; yani odak kuyusunu ortaya çıkartmaktır. Odak kuyusunda fışkıran dalgalar, bireyin zorlu görevlerini azimli ve keyifli bir şekilde gerçekleştiriyor. Bireyde yaratıcılık değerini geliştirecek temel yollardan biri olumlu sosyal ortamını oluşturacak öğretmen ve ebeveynlerin model davranışlarıdır. Esnek ve yaratıcı rol modelleri sunarak daha fazla zenginleşmiş öğrenme ortamı sağlanabilir. Öğretmenler ve ebeveynlerin, çocuğa cinsiyetine, becerisine ve yaşına uygun görev ve sorumlulukların verilmesi yaratıcılık eğilimlerin ortaya çıkmasını sağlar.

Bireyin hayatında anlam kaynaklarının oluşturulmasıyla beyinsel fonksiyonlarında dönüşüm süreci yaşıyor ve kaygı veya negatif duygular varlığından uzaklaşıyor. Birey, zihni, bedeni, sezgileri zayıflatan etkilerine maruz kalmadan ilerleme sürecinde, yetkinliği gelişiyor ve etkinliğinin olanaklarını keşfediyor. Uzun süreli yaratıcı eylem alanında kazandığı yetkinlik, bütüncül bir deneyim halinde, yaşamındaki diğer alanlarına yayılıyor. Bireyde meydana gelen anlam ve deneyim kaynakları, hayata ilişkin genel ve istikrarlı yönelimleri sağlayan ve

geliştiren alanlarıdır. Birey üzerinde motive etkisi yaparak bireye yön verir ve birey hayatını anlamlı biçimde yapılandırır.

Bireyde, yaratıcı eylemlilik davranışların ortaya çıkması, dikkati dağıtan etkenleri devre dışı bırakan bir algı mekanizması gelişmesine bağlıdır. Dikkatin, bireyin kendi içsel uyaranlarına aşırı düzeyde yönelmesi söz konusudur. Nörobilim alanındaki araştırma bulgularına göre, yoğunlaşma ve odaklaşma değerlerinin deneyimle gelişmektedir. Dikkat ve odaklanma becerilerin geliştirilmesi deneyimleri kullanmak suretiyle zihniyet dönüşümün gerçekleşmesine bağlıdır. Trafikte güvenliğin sağlanmasında dikiz aynası ne ise yaratıcılığın geliştirilmesinde dikkat odur. Dikkat eksikliği, yaratıcılığı ve keşfi olumsuz etkileyen aktif fay hatları gibidir. Dayatılan enformasyon bireyi parçalıyor, küçültüyor, yüzeyselleştiriyor, asabileştiriyor. Bireyin kendisine dayatılan enformasyon ile sadece dış dünyaya odaklanarak yürümesinin sağlıyor. Beynin, olup bitenleri sindirmesine izin vermediği için stresi yaratan düşünceleri oluşturuyor.

İnsan kendisine dayatılan enformasyonu yudumlama yerine, hayatın anlamını kazandıracak daha zor olan kendi enformasyon kaynağını oluşturması gerekiyor. Eğitim süreçlerinde hedeflerin kavratılması, dayatılan enformasyon alanından çıkıp, yerine başarı ve yaratıcılığa götürecek enformasyona yönelmesini sağlıyor. Kendisine dayatılan enformasyonu yudumlandığında, bireyde ortaya çıkan narsistik eğilimler, yaratıcı eylemlerin ortaya çıkmasını engelliyor. Yaratıcılık yönelimi destekleyen ve besleyen bir ortamda yaşayan birey, becerileri elde ediyor, geliştiriyor, sürdürüyor ve güvene dayalı ilişkiler kuruyor. Yaratıcı yönelimle deneyim kazanmış rol modeli oluşturabiliyor.

Öneriler

Bireyin üzerinde motive edici deneyim kaynakların geliştirilmesi ve bireyde kişisel kaynaklarına dönüştürülmesi sağlayacak araştırmalara ağırlık verilmesi gerekmektedir.

Deneyim kaynakların geliştirilmesiyle bireyde odaklanma ve yoğunlaşma değerini güçlendireceğine ilişkin bilimsel zeminde tartışmaların yapılmasına.

Narsistik ve yaratıcılık arasındaki ilişkinin ortaya çıkmasını sağlayacak deneyim kaynaklarını oluşturan kıssaların, bilimsel makalelere konu yapılmasına.

Anlam kaynakları ile beyin fonksiyonları arasındaki ilişki ortaya çıkmasını sağlayacak bilimsel çalışmaların yetersiz olduğu ve bu alanda yeni tartışmaları ortaya çıkaracak bilimsel çalışmaların yapılması ihtiyaçtır.

Pozitif Okullar ve İyi Oluş İçin Öğretmen Eğitiminde Müfredat Değişikliği İhtiyacı: Derleme ve Kuramsal Model Önerisi

Saltuk Aytacıoğlu

Girne Amerikan Üniversitesi. e-posta: saltukaytacoglu@gau.edu.tr

ORCID: 0000-0001-9584-1563

KKTC

Özet

Birleşmiş Milletler (BM), Dünya Sağlık Örgütü (DSÖ) ve Birleşmiş Milletler Eğitim Bilim ve Kültür Örgütü (UNESCO) raporları küresel olarak "iyi oluş" seviyemizin düştüğünü ve mevcut yöntemlerle düşüşün önlenemediğini bildiriyor. Çözüm amaçlı olarak iyi oluş tanımı değiştirildi. Fiziksel zihinsel ve sosyal belirleyiciler yanına manevi değerler ilave edildi. Eğitimde "Hiçbir eğitim sistemi, öğrencilerinin, eğitimcilerinin ve topluluklarının sağlık ve iyi oluşlarını teşvik etmedikçe etkili olamaz" anlayışına geçildi. BM, DSÖ ve UNESCO tarafından yayımlanan bu yeni eğitim modelinde müfredat değişikliğine gidilerek eğitimde iyileştirmelere odaklanıldı ve iyi oluşu artırmak için her okulu "Sağlığı Geliştiren Okul" ve her üniversiteyi "Sağlığı Geliştiren Üniversite" yapacak küresel projeler teşvik edildi. Böylece her bireyin yüksek fiziksel zihinsel sosyal ve manevi tam bir iyi oluş seviyesine ulaştırılması hedeflendi. Ülkemizde, Avrupa Birliği (AB)'de ve küresel düzeyde yapılan bilimsel çalışmalar öğretmenlerin de iyi oluş düzeylerinde ciddi düşüş yaşandığını ve bu durumun öğrencilerin iyi oluş seviyelerini ve akademik performanslarını olumsuz etkilediğini göstermektedir. Bu nedenle tüm öğretmenlerimizin eğitimi ve gerekli müfredat değişikliği öncelik taşımaktadır. Belirtilen projeler doğrultusunda eğitim fakültelerinde müfredat değişikliği yapılarak öğretmen adayına önce kendinin ve ileride öğrencilerinin iyi oluş seviyelerini artırmak üzere bireysel sorumluluk kavramı, öz-bakım gösterme, sağlık okuryazarlığını artırma, sağlıklı yaşam tarzı davranışı gösterme, kültür ve sanatın etkin kullanımı becerilerini kazandırmak hedeflenmektedir. Böylece öğretmen adaylarının akademik başarı yanında psikolojik-sosyal-kültürel gelişimleri desteklenerek iyi oluş seviyeleri yükseltilecektir. Bu kapsamlı müfredat değişim ihtiyacı sağlık ve eğitim sisteminin birlikte çalışmasını gerekli kılmaktadır. Girne Amerikan Üniversitesi olarak İyi Oluşu artırmak üzere BM 2030, 3 nolu hedefle aynı başlıkta, 3 ve 4 nolu hedefi (Nitelikli Eğitim) birleştiren Tıp Fakültesine yönelik "Geleneksel Tamamlayıcı ve Fonksiyonel Tıp" dersi ile üniversite ortak dersleri olarak "Sağlıklı Yaşam ve İyi Oluş" ile "Sağlık Okuryazarlığı" derslerine ait örnek müfredatlar sunulacaktır.

Anahtar Kelimeler: eğitim fakültesi, iyi oluş, müfredat değişikliği, katmanlı müfredat yaklaşımı

The Need for Curriculum Reform in Teacher Education for Positive Schools and Well-Being: A Review and Theoretical Model Proposal

Abstract

The United Nations (UN), the World Health Organization (WHO), and the United Nations Educational, Scientific and Cultural Organization (UNESCO) report that global levels of well-being have declined and that current approaches have failed to prevent this downward trend. As a solution, the definition of well-being has been revised to include spiritual values alongside physical, mental, and social determinants. A new paradigm has been adopted in education: “No education system can be effective unless it promotes the health and well-being of its students, educators, and communities.” In this newly proposed educational model published by the UN, WHO, and UNESCO, curriculum reforms have been initiated to improve education and increase well-being, with global projects launched to transform every school into a "Health-Promoting School" and every university into a "Health-Promoting University." The ultimate goal is to enable every individual to attain a high level of complete physical, mental, social, and spiritual well-being. Scientific studies conducted both globally and within the European Union, including Turkey, have shown a significant decline in teachers’ well-being levels. This has been found to negatively impact both students’ well-being and their academic performance. Therefore, reforming teacher education and making necessary curriculum changes have become urgent priorities. In line with these projects, curriculum revisions in faculties of education aim to equip prospective teachers with the knowledge and skills needed to enhance their own well-being as well as that of their future students. These competencies include developing personal responsibility, practicing self-care, increasing health literacy, adopting healthy lifestyle behaviors, and effectively integrating culture and the arts into teaching. In this way, the academic success of teacher candidates will be supported alongside their psychological, social, and cultural development, ultimately elevating their overall well-being.

This comprehensive curriculum transformation requires the collaboration of both the health and education systems. As Girne American University, and in alignment with the UN’s 2030 Sustainable Development Goal 3 (Good Health and Well-being) and Goal 4 (Quality Education), we present model syllabi for the Faculty of Medicine course titled “Traditional, Complementary and Functional Medicine” and the university-wide general education courses “Healthy Living and Well-being” and “Health Literacy.”

Keywords: faculty of education, well-being, curriculum reform, layered curriculum approach

Giriş

DSÖ, 1948’de sağlığı “fiziksel, zihinsel ve sosyal açıdan tam bir iyi oluş hâli” olarak tanımlamıştır. Zamanla bu tanım yetersiz kalmış ve sağlık daha bütüncül biçimde ele alınmıştır (DSÖ, 2021a). DSÖ’nün 1986 tarihli Ottawa Bildirgesi, sağlığın korunmasında bireysel sorumluluğu öne çıkarırken; eğitim, çevre, sosyal hizmetler ve ekonomi gibi sektörler arasında iş birliğini vurgulamıştır (DSÖ, 1986). 1998’de yayımlanan belgede ise yalnızca tıbbi uygulamaların yeterli olmadığı, maneviyat, umut ve şefkat gibi değerlerin sağlık üzerindeki belirleyici rolü ifade edilmiştir (DSÖ, 1998).1990’lardan itibaren BM, DSÖ ve UNESCO öncülüğünde, okullarda hijyen, beslenme ve sağlık taramaları gibi uygulamalarla halk sağlığını geliştirmeye yönelik programlar yürütülmüştür. Bu çabalar bulaşıcı hastalıkların azaltılmasında etkili olsada, kronik hastalıkların yaygınlaşması karşısında yetersiz kalmıştır. DSÖ (2023) verilerine göre, kalp hastalıkları, diyabet, solunum sorunları ve kansere bağlı erken ölümlerin %80’i önlenabilir durumdadır. Bu yaygınlığın temelinde, sağlığı geliştirici yaşam biçimlerinin benimsenmemesi yer almaktadır. Artan sağlık harcamalarına rağmen sistemlerin zorlanması, yalnızca sağlık hizmetlerine dayalı çözümlerin yetersizliğini ve eğitimin davranışsal düzeyde dönüştürülmesi gereğini göstermektedir. Bu nedenle BM, DSÖ ve UNESCO, sağlığı geliştirme hedefinin yalnızca sağlık sistemine değil; eğitim sistemine entegre edilmesi ve bireysel sorumluluğun erken yaşta kazandırılması gerektiğini vurgulamaktadır (UNESCO, 2021a; BM, 2023).

Bu yaklaşım, bireyin değerlerini ve yaşam biçimini dönüştürmeyi; öğretmeni ise yalnızca bilgi aktarıcı değil, sağlıklı yaşamın uygulayıcısı ve rol modeli olarak konumlandırmayı hedefler. Bu çerçevede müfredatların; bireysel sorumluluk, öz-bakım, etik karar verme, duygusal farkındalık, toplumsal cinsiyet eşitliği, maneviyat, sağlık okuryazarlığı ve dayanıklılık gibi çok boyutlu alanlarla zenginleştirilmesi; öğretmen yetiştirme sistemlerinin ise köklü bir dönüşüm geçirmesi önerilmektedir. Pandemi sonrası bireysel sorumluluk yalnızca etik bir duruş değil, sağlık hizmetlerine erişimde belirleyici bir ölçüt hâline gelmiştir. Ottawa Bildirgesi ile temelleri atılan bu yaklaşım, sonraki BM ve DSÖ belgelerinde çok boyutlu bir tema olarak işlenmiş; eğitim, sağlık ve hukuk politikaları arasında kesişim oluşturmuştur (DSÖ, 1986). BM’nin 2030 Sürdürülebilir Kalkınma Hedefleri (SKH), özellikle Hedef 4.7 aracılığıyla; sürdürülebilir yaşam, insan hakları ve küresel vatandaşlık gibi değerlerin eğitim yoluyla bireylere kazandırılmasını hedeflemektedir (BM, 2015).

DSÖ'nün “*Health Promoting Schools*” yaklaşımı, okullarda sağlıklı yaşam davranışlarını teşvik ederken; “Sağlığı Geliştiren Üniversite” modeli ve Okanagan Bildirgesi gibi girişimler yükseköğretimde bu anlayışı kurumsallaştırmaktadır (Bartelink ve ark., 2020; Okanagan Charter, 2015). DSÖ'nün 2022 tarihli Cenevre Bildirgesi ise sağlık tanımına kimlik, inanç ve değer temelli spiritüel boyutu dördüncü bir bileşen olarak eklemiştir (DSÖ, 2022).

Araştırmalar, yaşam boyu süren psikiyatrik bozuklukların %50'sinin 14 yaşından önce, %75'inin ise 24 yaşına kadar başladığını göstermektedir (Kessler et al., 2005; DSÖ, 2018). Bu bulgular, eğitimde erken müdahale ve iyi oluş temelli programların önemini göstermektedir. Öğretmenler bu reformda, sadece sağlıklı yaşam davranışlarını kazandıran bireyler değil; farkındalığı destekleyen, psikolojik sağlamlığı artıran ve davranışsal dönüşüme öncülük eden liderler olarak tanımlanmaktadır. Bu nedenle öğretmen eğitimi; okul öncesinden yükseköğretime ve yaşam boyu öğrenmeye kadar tüm bireyler için dönüştürücü bir yapıya kavuşmalıdır. BM'nin (2015) Hedef 3'e ulaşılmasında öğretmenlerin rolü kritik önemdedir. Öğretmen eğitimi müfredatında reform ihtiyacı, yalnızca öğretmenlerin iyi oluş düzeylerinde gözlemlenen düşüşten değil; aynı zamanda eğitim sistemlerinin sağlıklı yaşam, iyi oluş ve akademik başarı gibi bütüncül hedefleri karşılayamamasından kaynaklanmaktadır. Bu durum, mevcut sorunlara tepki veren değil, aynı zamanda önleyici ve dönüştürücü bir eğitim yaklaşımını zorunlu kılmaktadır.

Bu bağlamda ihtiyaç, yalnızca mevcut durumun analiziyle değil; stratejik hedeflerin gerektirdiği yapısal dönüşüm perspektifiyle ele alınmalıdır.

Araştırmanın Amacı ve Soruları

Bu çalışma, yalnızca bilgi aktarımına değil, bireyin yaşam biçimini dönüştürmeye odaklanan bir paradigma değişiminin eğitim yoluyla gerçekleştirilmesini amaçlamaktadır. Öğretmen eğitimi sistemlerinde iyi oluşun çok boyutlu yapısının müfredata entegrasyonu gerekliliği değerlendirilmekte ve bu doğrultuda kuramsal bir model önerilmektedir. Bu kapsamda çalışma, öğretmen adaylarının fiziksel, zihinsel, sosyal, çevresel ve manevi yönlerden bütüncül gelişimini merkeze alan bir eğitim yaklaşımına duyulan ihtiyacı ortaya koymayı hedeflemektedir.

Araştırma şu sorulara odaklanmaktadır:

1. Uluslararası eğitim ve sağlık politikaları, “iyi oluş” kavramını nasıl yeniden tanımlamaktadır?

2. Sağlıklı yaşam, iyi oluş ve akademik başarı hedefleri doğrultusunda öğretmen eğitimi müfredatında nasıl bir reform ihtiyacı ortaya çıkmaktadır?
3. Katmanlı Müfredat Yaklaşımı (KMY), öğretmen adaylarının çok boyutlu iyi oluşunu desteklemek için nasıl bir yapı sunmaktadır?

Yöntem

Bu çalışma, 2015–2024 yılları arasında yayımlanan DSÖ, BM, UNESCO ve Avrupa Komisyonu (AK) gibi uluslararası kuruluşların iyi oluş ve eğitim politikalarına dair belgelerin sistematik içerik analizine dayalı nitel bir derlemedir. Veri kaynakları arasında bu kurumların resmi web siteleri ile Google Scholar ve PubMed gibi bilimsel veri tabanları yer almaktadır. Belge seçiminde yayın yılı, konusal uygunluk ve kurumsal güvenilirlik esas alınmıştır. Taramada “eğitim fakültesi”, “iyi oluş”, “müfredat değişikliği” ve “öğretmen eğitimi” gibi anahtar kavramlar kullanılmıştır. Elde edilen veriler içerik analizi yöntemiyle değerlendirilmiş; ‘fiziksel sağlık’, ‘zihinsel sağlık’, ‘maneviyat’, ‘kültürel aidiyet’, ‘bireysel sorumluluk’, ‘sağlık okuryazarlığı’, ‘öz-bakım’, ‘sağlığı geliştiren davranış’, ‘sanat yoluyla öğrenme’ gibi temalar açık kodlama ile belirlenmiş, ardından eksenel kodlama ile tematik kümeler ayrılmıştır. Bu temalar, politika belgeleriyle ilişkili biçimde kavramsal sentez yöntemiyle analiz edilerek çok boyutlu bir iyi oluş anlayışı çerçevesinde yapılandırılmıştır. Bu yönüyle çalışma, yalnızca mevcut uluslararası politikaları özetlemekle kalmayıp, içerik analizi sürecinde elde edilen tematik bulgular doğrultusunda geliştirilen KMY önerisi aracılığıyla eğitim sistemine stratejik ve kuramsal düzeyde özgün bir katkı sunmayı amaçlamaktadır. KMY modeli, açık ve eksenel kodlama yoluyla belirlenen temaların kavramsal senteziyle yapılandırılmış; analiz süreciyle doğrudan ilişkilendirilmiş çok katmanlı bir model olarak biçimlendirilmiştir. Bu tematik yapı, çalışmanın sonuç bölümünde detaylandırılan KMY önerisinin kuramsal temelini oluşturmaktadır.

Bulgular ve Tartışma

- İyi Oluş Kavramının Evrimi ve Çok Boyutluluğu

İyi oluş kavramı günümüzde; fiziksel, zihinsel, sosyal, çevresel ve manevi (spiritüel) boyutları içeren çok boyutlu bir yapı olarak tanımlanmaktadır. Literatür, bu boyutların bireyin yaşam kalitesi üzerindeki etkilerini vurgularken; DSÖ’nün Cenevre Bildirgesi (DSÖ, 2021b), UNESCO’nun değer temelli yaklaşımı (UNESCO, 2021a) ve BM’nin 2030 Sürdürülebilir Kalkınma Hedefleri (BM, 2015), bu çok boyutluluğun politika düzeyindeki yansımalarını

ortaya koymaktadır. Başlangıçta sağlıkla sınırlı bir gösterge olan iyi oluş, zamanla zihinsel sağlık, sosyal ilişkiler, ekonomik güvenlik, kültürel aidiyet ve manevi denge gibi alanları kapsayan kapsamlı bir yapıya dönüşmüştür. UNESCO’nun *Reimagining Our Futures Together* (2021a) raporu ve BM’nin (2015) Sürdürülebilir Kalkınma Gündemi, iyi oluşu bireyin toplum, çevre ve kültürel mirasla kurduğu ilişkiler bağlamında ele almakta; eğitim politikalarının bu bütüncül anlayışa dayalı olarak yeniden yapılandırılmasını önermektedir. UNESCO raporu ayrıca, eğitimin bireyin çok boyutlu iyi oluşunu destekleyecek biçimde dönüşmesi gerektiğini vurgulamaktadır. Bu doğrultuda iyi oluş; yalnızca fiziksel ve zihinsel sağlıkla değil, sosyal ilişkiler, ekonomik refah, kültürel kimlik ve çevresel duyarlılıkla da şekillenen bütüncül bir yapı olarak kabul edilmektedir. Eğitim sistemleri sadece akademik başarıya değil; yaşam doyumu, öz farkındalık ve toplumsal sorumluluğu da destekleyecek biçimde yeniden tasarlanmalıdır. OECD’nin iyi oluş göstergeleri çerçevesi de eğitimi yaşam doyumuna katkı sağlayan bir süreç olarak tanımlamaktadır (OECD, 2020a)

- Sağlığı Geliştiren Okul ve Üniversite Modelleri

Dünya genelinde eğitim sistemleri, yalnızca akademik gelişimi değil; fiziksel, zihinsel ve sosyal iyi oluşu da destekleyecek şekilde yeniden yapılandırılmaktadır. DSÖ’nün (1986) Ottawa Bildirgesi, BM’nin (2015) 2030 Gündemi ve UNESCO’nun (2021a) değer temelli yaklaşımı doğrultusunda geliştirilen “Sağlığı Geliştiren Okul” ve “Sağlığı Geliştiren Üniversite” modelleri bu anlayışın somut örnekleridir. UNESCO’nun (2021d) *Whole School Approach* raporu, okulu yalnızca bilgi aktaran değil; öğrencilerin zihinsel, duygusal, sosyal ve kültürel iyi oluşunu destekleyen bir yaşam alanı olarak tanımlar. Bu yaklaşım; okul kültürü, fiziksel ortam, öğretmen tutumu ve toplulukla iş birliğini içeren bütüncül bir dönüşüm önerir. Sanat, kültür, değerler eğitimi ve toplumsal katılımın müfredatın merkezine alınması gerektiği vurgulanmaktadır. Bu yapı, Katmanlı Müfredat Yaklaşımı’nın çok düzeyli ve sistem temelli doğasıyla örtüşmektedir. AB’nin Eğitim ve Öğretimin Sosyal Boyutu Üzerine Çalışan Uzmanlar Ağı (NESET)’in 2021’de hazırladığı rapor, okullarda ruh sağlığı ve iyi oluşu desteklemek amacıyla bireysel müdahalelerin ötesine geçilmesini önerir. Model; müfredat, okul iklimi, liderlik, aile ve toplum iş birliği gibi çok düzeyli unsurlara odaklanır. Psikolojik güvenlik, aidiyet, sosyal-duygusal öğrenme ve katılımcılık gibi değerlerin okul yapısına entegre edilmesi gerektiği vurgulanır (Mascherini & Naczyk, 2021).

Bu ilkeler, KMY’nin öz bakım, bireysel sorumluluk ve çok boyutlu iyi oluş temalarıyla uyumludur. Model; sağlık okuryazarlığı ve öz-bakım becerilerinin müfredata entegrasyonunu,

ders saatlerinin sosyal-duygusal öğrenme ve fiziksel aktiviteyle dengelenmesini, öğrenme ortamlarının sağlıklı yaşam pratiklerine uygun hale getirilmesini önermektedir. Her yaş için geliştirilen model, özellikle akademik başarı ile iyi oluş arasında denge kurmayı hedefler. DSÖ'nün (2021b) Cenevre Bildirgesi, üniversitelerin yalnızca bilgi üretim merkezleri değil, aynı zamanda bireysel iyi oluşu destekleyen sosyal ortamlar olması gerektiğini vurgular. Bu kapsamda psiko-sosyal destek, kültür-sanat etkinlikleri, yeşil kampüs uygulamaları ve toplumsal sorumluluk faaliyetleri teşvik edilmektedir. Model, UNESCO'nun (2021a) yaşam boyu öğrenme vizyonu ile de uyumludur. Bu projeler, transformatif eğitimin temel unsurlarından biri olan öğrenme ortamlarının dönüşümünü amaçlamaktadır. Bu bağlamda, öğretmen adayları ve akademisyenlerin yalnızca bilgi aktarıcı değil, iyi oluşu destekleyen rol modeller olması beklenmektedir.

Girne Amerikan Üniversitesi'nde yürütülen 'Geleneksel Tamamlayıcı ve Fonksiyonel Tıp', 'Sağlıklı Yaşam ve İyi Oluş' ve 'Sağlık Okuryazarlığı' dersleri, "Sağlığı Geliştiren Okul ve Üniversite" modeli ve bu çalışmada önerilen KMY yaklaşımıyla kavramsal paralellik göstermektedir. Bu dersler; bireysel sorumluluk, sağlık okuryazarlığı, öz-bakım, sağlığı geliştirici davranışlar, stres yönetimi, kültürel farkındalık ve toplumsal sorumluluk gibi becerileri kazandırmaktadır.

- Öğretmen Eğitimi ve Müfredat Dönüşümünün Gerekliliği

Öğretmenler, öğrencilerin yalnızca akademik başarılarını değil, iyi oluş düzeylerini de etkileyen temel aktörlerdir. OECD'nin (2020b) raporunda, öğretmen iyi oluşunun sadece bireysel değil, okul ve sistem düzeyindeki yapısal koşullarla da belirlendiği; bu nedenle duygusal yüklerini hafifletecek sistemik desteklerin eğitim politikalarına entegre edilmesi gerektiği vurgulanmaktadır. Son yıllarda öğretmenlerin yaşadığı stres, tükenmişlik ve rol çatışmaları, mesleki doyum ve iyi oluşu olumsuz etkilemektedir. AK (2020) ve UNESCO (2021b) raporları da bu düşüşün eğitim kalitesini etkilediğini belirterek, öğretmen iyi oluşunun bireysel değil, sistemsel sürdürülebilirlik açısından stratejik bir zorunluluk olduğunu ifade etmektedir. Eğitim fakültelerinde öğretmen eğitimi, geleneksel bilgi aktarımından çok boyutlu iyi oluşu önceleyen bir yapıya dönüşmelidir. Bireysel sorumluluk, öz bakım, duygusal farkındalık, stres yönetimi, sağlık okuryazarlığı ve kültür-sanat temelli öğrenme deneyimlerini içeren modüller müfredata entegre edilmelidir.

Öğretmen adayları; maneviyat, inanç, toplumsal cinsiyet ve kültürel farklılıklar gibi konularda pedagojik yeterlilik kazanmalıdır. UNESCO, öğretmenlerin çok kültürlü ve çok inançlı öğrenci

profilleriyle etik ve kapsayıcı biçimde iletişim kurabilecek beceriler edinmesi gerektiğini vurgulamaktadır (UNESCO, 2021b). Avrupa’da Sağlığı Geliştiren Okullar (SHE) modeline göre öğretmenler, yalnızca bilgi aktarıcı değil, öğrencilerin sağlığını destekleyen rol modellerdir. Bu nedenle sağlık okuryazarlığı ve psiko-sosyal destek becerileri, öğretmen eğitiminin temel bileşenleri olmalıdır. Kapsayıcı ve destekleyici okul iklimi, sağlıklı davranış gelişiminde belirleyici rol oynamaktadır (Bartelink ve ark., 2020; UNESCO, 2021b).

- Eğitim Ortamlarında Kültür ve Sanatın İyi Oluş Üzerindeki Rolü

Günümüzde eğitim sistemleri yalnızca akademik başarıya değil, öğrencilerin bütüncül gelişimine de odaklanmak zorundadır. Bu bağlamda kültür ve sanat, bireylerin duygusal, sosyal, zihinsel ve manevi iyi oluşlarını destekleyen etkili araçlardır. UNESCO’nun *Creative Cities’ Response to COVID-19* (2021c) raporu, sanat eğitiminin öz-farkındalık, empati, stresle başa çıkma ve yaratıcı düşünme becerilerini geliştirdiğini ortaya koymaktadır. Ayrıca kültürel eğitimin, kriz dönemlerinde öğrencilerin psikolojik dayanıklılığını artırdığı ve zihinsel sağlık üzerinde koruyucu etkiler sunduğu belirtilmektedir. DSÖ’nün *What is the evidence on the role of the arts in improving health and well-being?* başlıklı raporu, sanat temelli uygulamaların psikolojik iyi oluşu artırdığını ve sağlık sistemlerine maliyet etkin katkılar sunduğunu bildirmektedir. Aynı rapor, sanat yoluyla sağlığın desteklenmesini geleneksel tedavi yöntemlerini tamamlayan etkili bir sosyal yatırım olarak tanımlamaktadır (Fancourt & Finn, 2019). Bu bulgular, sanatın yalnızca estetik bir etkinlik değil, eğitimde stratejik bir araç olduğunu göstermektedir. Sanatın eğitime entegrasyonu, öğrencilerin öğrenme süreçlerinin yanı sıra kimlik gelişimlerine de katkı sağlar. Müzik, drama, görsel sanatlar ve edebiyat gibi disiplinler aracılığıyla öğrenciler, kendilerini ifade etme, empati kurma ve kültürel çeşitliliği takdir etme becerileri geliştirirler.

- Sağlık Okuryazarlığı, Öz-Bakım ve Sağlığı Geliştiren Davranışların Kazandırılması:

UNESCO, sosyal ve duygusal öğrenme (SEL) ile bilim, teknoloji, mühendislik, sanat ve matematik (STEAM) yaklaşımlarının; iyi oluş ve psikolojik sağlamlıkla birlikte eğitim sistemine bütüncül biçimde entegre edilmesi gerektiğini vurgulamaktadır (UNESCO, 2024a). Bu kapsamda, öğretmen adaylarına yönelik sanat ve müzik temelli programların SEL odaklı müfredatlarla desteklenmesi önerilmektedir. STEAM’e sanatın dâhil edilmesi, öğrencilerin yalnızca akademik değil; öz farkındalık, duygusal dayanıklılık ve psikolojik sağlamlık gibi alanlarda gelişimini de desteklemektedir. UNESCO (2024b), bu bütünleşmenin kültür ve sanat yoluyla bireysel ve toplumsal dayanıklılığı artırdığını belirtmektedir. Sanat ve kültür temelli

öğrenme ortamları, öğretmen-öğrenci etkileşimini güçlendirir, aidiyet hissini artırır ve psikolojik sağlamlığı destekleyen yaratıcı alanlar sunar. Bu nedenle eğitim müfredatlarının kültür ve sanatla zenginleştirilmesi, öğretmen yetiştirme programlarının da sanat temelli pedagojik yaklaşımlarla yapılandırılması önemlidir.

Transformatif eğitim, bireyin değer temelli ve eleştirel öğrenmeyle dönüşümünü hedefler. DSÖ, BM ve UNESCO raporları, bireylerin yalnızca sağlık hizmetine erişimini değil; sağlık bilgilerini anlama, değerlendirme ve kullanma becerilerinin geliştirilmesini küresel öncelik olarak göstermektedir (DSÖ, 2021a; UNESCO, 2021a; BM, 2023). DSÖ'ye göre sağlık okuryazarlığı, bilgiyi analiz etme ve uygulama yeterliğini kapsar (DSÖ, 2021a). Bu yeterlilikler, yaşam boyu öğrenmenin ve kapsayıcı eğitimin temel bileşenidir.

Okul temelli sağlık eğitimi, bireyleri bilinçli sağlık kararları alabilen ve toplumsal sağlığa katkı sunan bireyler olarak yetiştirmelidir. Sağlık okuryazarlığı yalnızca bireysel gelişimi değil, kurumların güvenilir bilgi sunma sorumluluğunu da içeren toplumsal bir süreçtir (DSÖ, 2021a; UNESCO, 2021c). Bu sürecin temeli, bireyin bireysel sorumluluk kavramını tanıması ve içselleştirmesidir. Ottawa Bildirgesi (DSÖ, 1986), sağlığı hem hak hem de bireysel sorumluluk olarak tanımlar. Sağlık okuryazarlığı; bilgiyi edinme, değerlendirme ve davranışa dönüştürmeyi içerir. Bu sürecin devamı olan öz-bakım, bireyin bilinçli ve düzenli sağlık davranışlarını yaşam biçimi haline getirmesidir. Sağlığı geliştirici davranışlar; sağlıklı beslenme, egzersiz, stres yönetimi ve zararlı alışkanlıklardan uzak durmayı kapsar (DSÖ, 2021a). Son yıllarda, bu davranışları benimsemeyen bireylerin sağlık hizmetlerine erişiminin etik ve hukuki düzeyde sınırlandırılabilceği tartışılmaktadır. OECD, yaşam tarzı tercihleri ile kamu sağlık harcamaları arasındaki ilişkiye dikkat çekmekte; bazı ülkelerde önleyici davranışların zorunlu hale getirildiğini bildirmektedir (OECD, 2023).

Eğitim sistemleri yalnızca bilgi aktaran yapılar değil; bireyin değer sistemini, kararlarını ve yaşam tercihini dönüştüren kurumlardır. Öğrencilerin sağlık bilgisini öz farkındalık ve eleştirel düşünmeyle içselleştirmesi, yalnızca bireysel değil, toplumsal sağlık düzeyini de olumlu etkiler. Bu becerilerle donatılmış öğretmen adayları, sağlığı geliştirici eğitim sistemlerinin temelini oluşturur.

- Öğretmen Eğitiminin Dönüştürülmesi: İyi Oluş Temelli Müfredatın Gerekliliği

Öğretmenler ve hekimler, yalnızca bilgi aktaran değil; bireylere yaşam tarzı, değerler, davranış modelleri ve sosyal beceriler kazandıran rol modellerdir. Öğretmenler sınıf ortamında

öğrencilerin iyi oluşunu şekillendirirken, hekimler de toplumun sağlıklı yaşam biçimlerini benimsemesinde rehberlik eden eğitici figürlerdir. Bu bağlamda “Geleneksel, Tamamlayıcı ve Fonksiyonel Tıp” dersi, hekim adaylarına yalnızca tıbbi bilgi değil; toplumu sağlıklı yaşam ve iyi oluş konusunda bilinçlendirme becerisi kazandırmayı amaçlamaktadır. Zira hekimler de öğretmenler gibi bireylerin yaşam tarzlarını dönüştürmede toplumsal aktör konumundadır.

UNESCO (2021a), öğretmenlerin iyi oluşunu sürdürülebilir, kapsayıcı ve dönüşüm odaklı eğitim sistemlerinin temel bileşeni olarak tanımlar. Raporda, yalnızca pedagojik becerilerle sınırlı bir öğretmen eğitiminin yetersiz olduğu; bunun yerine öğretmenlerin öz bakım, psikolojik dayanıklılık ve sağlığı geliştirici yaşam becerileriyle donatılması gerektiği vurgulanmaktadır. Bu doğrultuda, öğretmen yetiştirme programlarının çok boyutlu iyi oluşu önceleyen bir yapıya kavuşması önerilmektedir.

Geleneksel öğretmen yetiştirme anlayışı bilgi aktarımına dayanırken, günümüzde öğretmenlerden sağlıklı yaşam tarzını modelleyen, duygusal dayanıklılığı yüksek, kültürel duyarlılığa ve sosyal sorumluluk bilincine sahip bireyler olmaları beklenmektedir. Bu dönüşüm, yalnızca bireysel değil, toplumsal düzeyde de sağlık ve eğitim kalitesini geliştirme potansiyeli taşır. Bu kapsamda üniversitelerde sunulan “Sağlıklı Yaşam ve İyi Oluş”, “Sağlık Okuryazarlığı”, “Eğitimde Kültür ve Sanatın Rolü” ve “Geleneksel, Tamamlayıcı ve Fonksiyonel Tıp” dersleri, öğretmen ve hekim adaylarının çok boyutlu iyi oluş yaklaşımını içselleştirmelerine katkı sunmakta; yalnızca mesleki bilgi değil, aynı zamanda iyi oluşu destekleyen tutum ve davranışlarla donatılmalarını sağlamaktadır.

- Eğitimde Kültür ve Sanatın Rolü: Çok Boyutlu İyi Oluşun Güçlendirilmesi

Son yıllarda yapılan araştırmalar ve UNESCO raporları, sanat ve kültür temelli uygulamaların yalnızca estetik gelişimi değil, aynı zamanda öğrencilerin duygusal, sosyal ve zihinsel iyi oluşunu da desteklediğini göstermektedir. Özellikle pandemi sonrası artan kaygı, stres ve motivasyon düşüklüğü gibi sorunlar, kültürel ve sanatsal etkinliklerin eğitime entegrasyonunu gerekli kılmıştır.

Sanat; duyguların ifadesi, empati, yaratıcılık ve kimlik gelişimi gibi süreçlerde güçlü bir araçtır. UNESCO raporlarında, sanat eğitiminin öğrenmeyi dönüştürdüğü ve anlam arayışı ile psikolojik dengeyi desteklediği vurgulanmaktadır (UNESCO, 2021b). Fancourt (2019), kültürel aidiyetin fiziksel ve zihinsel sağlık üzerindeki olumlu etkilerini belirtmektedir. Sanatın eğitime entegrasyonu, öğrencilerin yalnızca bilişsel değil, sosyal ve duygusal gelişimine de

katkı sağlar. Öğretmen adaylarının kültür ve sanat okuryazarlığı edinmeleri, sanatı pedagojik bir araç olarak kullanmaları ve öğrencilerin kendilerini ifade etmelerine imkân sunmaları beklenmektedir. Bu doğrultuda öğretmen eğitimi programlarına “Sanatla İfade ve Yaratıcılık” ve “Kültürel Miras ve Eğitimde Kullanımı” gibi derslerin eklenmesi, çok boyutlu iyi oluşu destekleyen bir eğitim ortamı sağlayacaktır.

- **Politika Entegrasyonu: Eğitim Sisteminde Sağlığı Geliştirici Yaklaşımların Kurumsallaştırılması**

Uluslararası Politika Belgeleri Işığında: Eğitim sisteminin yalnızca akademik bilgi aktarımından çıkıp bireylerin fiziksel, zihinsel, sosyal ve manevi iyi oluşunu destekleyen bir yapıya dönüşmesi gerekmektedir. Bu bağlamda "Sağlığı Geliştiren Okul" ve "Sağlığı Geliştiren Üniversite" projeleri, eğitim ve sağlık politikalarının bütünleştirilmesi adına önemli fırsatlar sunmaktadır. UNESCO (2021a) ve BM (2023) gibi belgelerde, klasik eğitim sistemlerinin çağın çok katmanlı krizlerine yanıt vermede yetersiz kaldığı belirtilmektedir. UNESCO, eğitimin yeni bir toplumsal sözleşmeye dayandırılması gerektiğini savunmakta; BM ise "kademeli değişimin yetersiz kaldığını" ve "derinlikli bir sistem dönüşümünün şart olduğunu" vurgulamaktadır.

UNESCO (2021a) raporlarında, sağlık temelli yaklaşımların tüm eğitim kademelerinde benimsenmesi ve kurumsal düzeye taşınması önerilmektedir. Sağlık ve Eğitim Bakanlıkları arasında kurulacak çok paydaşlı iş birlikleri bu sürecin temelini oluşturacaktır. AK (2024) ise öğrenci ve öğretmenlerin iyi oluşuna odaklı sistemlerin geliştirilmesini önermektedir.

Kurumsal Uygulama Alanları:

- Eğitim ortamlarının iyi oluşu destekleyecek şekilde yapılandırılması
- Okul sağlığı hizmetlerinin güçlendirilmesi
- Kültür-sanat ve maneviyat odaklı etkinliklere yer verilmesi
- Üniversitelerde rehberlik/danışmanlık hizmetlerinin yaygınlaştırılması

Bu dönüşüm, bireysel olduğu kadar toplumsal iyi oluşun da temelini oluşturacak; BM 2030 Sürdürülebilir Kalkınma Hedeflerine ulaşmada stratejik bir rol oynayacaktır.

Sonuç ve Katmanlı Müfredat Yaklaşımı Önerisi

Bu çalışma, derlenen literatür ve analiz edilen politika belgeleri doğrultusunda, iyi oluşun çok

boyutlu yapısını merkeze alan ve tüm eğitim kademelerinde uygulanabilecek bütüncül bir müfredat modeli önermektedir. Bu model, okul öncesinden başlayarak hayat boyu öğrenmeyi kapsayan yapısal bir dönüşüm sunmaktadır.

Girne Amerikan Üniversitesi'nde yürütülen “Sağlık Okuryazarlığı (SOY100)” (Şekil 1), “Geleneksel, Tamamlayıcı ve Fonksiyonel Tıp (MED123)” (Şekil 2) ve “Sağlıklı Yaşam ve İyi Oluş (SYİ101)” (Şekil 3) dersleri, KMY ilkelerini somutlaştıran erken örneklerdendir. Bu dersler; öğretmen, hekim ve farklı disiplinlerden üniversite öğrencilerine sosyal-duygusal öğrenme, bireysel sorumluluk, öz bakım, sağlık okuryazarlığı ve kültürel farkındalık gibi iyi oluş bileşenlerini kazandırmayı amaçlamaktadır. Gençlerin iyi oluşunun desteklenmesi, sürdürülebilir kalkınma ve eğitimde eşitlik açısından kritik önemdedir (DSÖ, 2019).

Girne Amerikan Üniversitesi'nde uygulanan dersler, bireyi yalnızca bilgiyle değil; değerler, alışkanlıklar ve sağlığı geliştirici davranışlarla donatmayı hedeflemektedir (DSÖ, 2019). Yapıları itibarıyla hem kurumsal ihtiyaçlara hem de DSÖ, BM ve UNESCO'nun iyi oluş temelli eğitim anlayışlarına dayanan bu dersler, Katmanlı Müfredat Yaklaşımı'nın (KMY) geliştirilmesinde esin kaynağı olmuştur. KMY, sağlıkla ilgili değer ve davranışların öğretmen eğitimi, müfredat ve eğitim politikalarına çok katmanlı biçimde entegrasyonunu hedefleyen kavramsal bir modeldir. Öğretmenler bu yapıda; yalnızca bilgi aktarıcı değil, aynı zamanda etik liderlik sergileyen, duygusal rehberlik yapan ve sağlıklı yaşamın rol modeli olan dönüşüm aktörleri olarak tanımlanmaktadır. Henüz resmî olarak onaylanmamış olan bu model, yazar tarafından geliştirilen bağımsız ve kuramsal bir öneri niteliğindedir.

Katmanlı Müfredat Yaklaşımı (KMY) – Beş Katmanlı Model

1. Merkez Katman – Öğrenci ve Yaşam Boyu Öğrenici:

Müfredat, örgün eğitimdeki öğrencilerle birlikte yetişkin bireylerin fiziksel, zihinsel, sosyal ve manevi gelişimini de kapsar.

2. İyi Oluş ve Akademik Eğitim Katmanı:

Akademik eğitim, sağlıklı yaşam becerileri ve iyi oluşla bütünleştirilir.

3. Kurumsal Uygulama Katmanı:

Sağlığı Geliştiren Okul / Üniversite modeli ile STK'lar, yerel yönetimler ve dijital platformlar aracılığıyla bireylerin eğitimi desteklenir.

4. Sistem Katmanı:

Eğitim politikaları ve müfredat, sağlıklı yaşam ve iyi oluş odağıyla bütüncül olarak düzenlenir.

5. Politika ve Uygulayıcı Aktörler Katmanı:

Milli Eğitim ve Sağlık Bakanlıkları başta olmak üzere ilgili kurumlar; uygulamayı yönlendirir, koordine eder ve denetler. Bu görev sadece okul çağıyla sınırlı olmayıp tüm toplumu kapsar.

Sonuç olarak bu çalışma, yalnızca geleneksel akademik bilgiye değil; sağlıklı yaşam ve iyi oluş becerilerini merkeze alan, disiplinler arası ve değer temelli bir müfredat reformunun gerekliliğini açık biçimde ortaya koymaktadır.

Dijital Oyun Bağımliliğinin ve Sosyal Medya Kullanımının Psikolojik İyi Oluş Üzerine Etkisi

Ayşe MORTAŞ KUM

Simay DOĞAN

Kıbrıs Sağlık ve Toplum Bilimleri Üniversitesi, Çocuk Gelişimi Bölümü, Güzelyurt-KKTC

ayse.mortas@kstu.edu.tr-0009-0001-0135-4674

Özet

Bu araştırma, dijital oyun bağımlılığı ve sosyal medya kullanımının 4-5 yaş aralığındaki çocukların psikolojik iyi oluşları üzerindeki etkilerini incelemek amaçlanmaktadır. Günümüzde dijital oyunlar ve sosyal medya çocukların yaşamlarına giderek daha fazla yer kaplamakta bu araçların aşırı kontrolsüz kullanımı ise çocukların gelişim süreçlerini üzerinde ciddi etkiler yaratmaktadır. Bu araştırma, Kuzey Kıbrıs Türk Cumhuriyeti' nin Güzelyurt bölgesinde 4-5 yaş aralığında çocuğu bulunan 30 ebeveynin katılımı ile gerçekleştirilmiştir. Nitel araştırma yöntemi olan fenomenolojik yönteminden yararlanılmıştır. Araştırma sonucu ortaya çıkan bulgular, betimsel bir yaklaşım ile incelenmiştir. Mülakat formunda bulunan kapalı ve açık uçlu soruların analiz sürecinde veriler birbirinden ayrı olarak ele alınmıştır. Ayrıca veri toplama sürecinde ebeveynlere yönelik hazırlanan 11 sorudan oluşan mülakat formu ile çocukların dijital oyun oynama sıklığı, tercih ettikleri oyun türleri, dijital oyunlar ve sosyal medya kullanımının çocuklar üzerindeki olumlu ve olumsuz etkileri, ebeveynlerin sosyal medya kullanımı ile koydukları sınırlamalar ve çocuklarının dijital medya ile geçirdikleri zamanla ilgili gözlemleri doğrultusunda veriler toplanmıştır. Elde edilen bulgular, dijital oyunların çocuklar üzerindeki hem olumlu hem olumsuz etkilerini ortaya koymaktadır. Ebeveynler dijital oyun ve sosyal medyanın çocukların el-göz koordinasyonunu geliştirdiğini, video destekli uygulamaların bilişsel düzeylerine olumlu katkıda bulunduğunu bazı becerileri desteklediğini belirtmişlerdir. Ayrıca ebeveynler sosyal medyanın çocukların sosyal becerilerini olumsuz etkileyebileceğini ve yaşlarına uygun olmayan içeriklere maruz kaldıklarında çocukların kaygı, korku, endişe gibi duygusal tepkiler geliştirebileceğini ifade etmişlerdir. Sonuç olarak, dijital oyunlar ve sosyal medyanın erken çocukluk dönemindeki çocukların psikolojik iyi oluşu üzerinde hem olumlu hem olumsuz etkiler yarattığı tespit edilmiştir. Araştırma Ebeveynlerin dijital oyun ve sosyal medya konusundaki farkındalığının artmasının, çocukların sosyal medya ile geçirdikleri zamanın sınırlandırılmasının ve yaşa uygun dijital içeriklerin teşvik edilmesinin önemli olduğu sonucu ortaya çıkmaktadır.

Anahtar kelimeler: Dijital Oyun, Bağımlılık, Sosyal Medya, Psikolojik İyi Oluş

The Effects o Digital Game Addiction and Social Media Use On Psychological Well-Being Impact

Abstract

This study aims to examine the effects of digital game addiction and social media use on the psychological well-being of children aged 4-5 years. Nowadays, digital games and social media are taking up more and more space in children's lives, and excessive uncontrolled use of these tools has serious effects on children's developmental processes. This study was conducted with the participation of 30 parents with children aged 4-5 years in the Güzelyurt region of the Turkish Republic of Northern Cyprus. Phenomenological method, which is a qualitative research method, was used. The findings of the research were analysed with a descriptive approach. In the process of analysing the closed and open-ended questions in the interview form, the data were handled separately from each other. In addition, with the interview form consisting of 11 questions prepared for parents during the data collection process, data were collected in line with the frequency of children playing digital games, the types of games they prefer, the positive and negative effects of digital games and social media use on children, the limitations imposed by parents on social media use, and their observations about the time their children spend with digital media. The findings reveal both positive and negative effects of digital games on children. Parents stated that digital games and social media improve children's hand-eye coordination, video-assisted applications contribute positively to their cognitive levels and support some skills. In addition, parents stated that social media may negatively affect children's social skills and that children may develop emotional reactions such as anxiety, fear, and worry when exposed to age-inappropriate content. As a result, it was found that digital games and social media have both positive and negative effects on the psychological well-being of children in early childhood. The study concludes that it is important to increase parents' awareness of digital games and social media, to limit the time children spend with social media, and to encourage age-appropriate digital content.

Keywords: Digital Gaming, Addiction, Social Media, Psychological Well-Being

Giriş

Dijital Oyunlar, medyanın önemli bir parçasını oluşturmakta ve yeni iletişim özelliklerini barındıran bireysel iletişim ortamı olarak değerlendirilmektedir. Genel anlamda dijital oyunlar, bilgisayarlar, konsollar, tabletler ve cep telefonları gibi çeşitli cihazlarla oynanan oyunlar olarak tanımlanabilir. Oyun oynama kültürü, dijital dönüşümle birlikte tarihi bir değişim süreci olarak tanımlanabilir (Uzunoglu, 2022.s 121). Bu tür oyunların çocukların gelişimi üzerindeki

etkisinde büyük ölçüde artmaktadır. Çocuğun gelişiminde önemli bir rol oynamakta ve ihtiyaçlarını ön plana çıkarmaktadır. Çocuğu hayata hazırlarken, taleplerini ve hedeflerini göstermekte ve istekleri ile bir bütün oluşturmaktadır. Aynı zamanda duygusal olgunluğa erişmelerinde de yardımcı olur. Oyun kendine özgü kuralları ve süreçleri olan yalnızca eğlence amaçla yapılan isteğe bağlı aktivitelerden oluşur (Çetin, 2024, s. 6). Teknolojik gelişmelerin ve kitle iletişim araçlarına erişimin kolaylaşması çocukların sanal dünyaya odaklı bir yaşam tarzı benimsemelerine neden olmuştur. Geleneksel sokak oyunlarından ve akran ilişkilerinden uzaklaşan çocuklar, kendine özgü kurallara sahip ve sosyal etkileşimi sınırlı olan ekran tabanlı oyunlarla tanışmaktadır. Bu durum teknolojinin ilerlemesiyle dijital oyun kültürünün ortaya çıkmasına zemin hazırlamaktadır (Biricik, 2021. s.447)

Sosyal medya toplum içinde etkileşim kurmak ve ilişkiler geliştirmek adına önemlidir. Medya, aynı düşünce ve fikirlere sahip olan bireylerin bir araya gelerek topluluk oluşturarak iletişim kurmasına yardımcı olmaktadır (Başbayram & Tosun, 2019.S 44) Coğrafyalarda insanların farklı kültürlere sahip olmaları durumunda birbiriyle olan etkileşimleri düşünülmektedir. İnsanların birbirleriyle iletişim kurabilmelerini ve gruplar oluşturabilmelerini sağlayarak iletişimi kolaylaştırmaktadır (Başbayram & Tosun, 2019.S 44). Bu süreç öğrenmeyi teşvik eder ve birey, başkalarının yanı sıra kendi davranışlarını da dikkatli bir şekilde gözlemleyerek gelişimini sürdürülebilir. Sosyalleşme, çocuğun bulduğu ortam, durum, zaman ve koşullara göre nasıl davranması gerektiğini öğrenmesini sağlar. Özellikle okul öncesi dönemde hızla gelişen kelime dağarcığı, çocukların sosyal becerilerini artıran önemli bir faktördür (Başbayram & Tosun, 2019.S 44). Sembolik anlam taşıyan duyguların varlığı ve gelişimi de kelime dağarcığının sınırlı olmasından etkilenir. Bu konuda bazı engellerin çocukların sosyalleşmesini sınırladığını belirtmektedir. Okul Öncesi dönemde çocukların en belirgin gelişimsel hedeflerinden biri, akranlarıyla etkileşim kurmayı ve iş birliği yapmayı öğrenmektir. Arkadaş edinmeyi öğrenmek, sosyal becerilerin gelişmesinde kritik bir rol oynamaktadır (Kay & Sağlam, 2020, s.20).

Psikolojik iyi olma durumu bireyin yaşamındaki zihinsel ve duygusal boyutları kapsayan gelişimine zemin hazırlayan her türlü olumlu durumu ifade eder psikolojik iyi oluş bireyin yaşamında mevcut potansiyelinin ve yaşam amaçlarının farkında olup olmadığı ve çevresi ile sağlıklı etkileşim kurabilmesi ile ilgilidir (Atan, 2020, s 30). Waterman (1993) psikolojik iyi oluşu kişisel gelişim için bir mücadele ve çaba olarak tanımlamıştır. Jung ise psikolojik olarak sağlıklı bireyin yaşadığı dönem içinde temel işlevleri başarıyla yerine getirebilmesi ile ilişkilendirir. Diğer yandan Adler toplumsal uyum mesleki etkinliğin psikolojik sağlığın

göstergeleri olduğunu belirtmektedir (Atan, 2020, S.31). Bu değerlendirmeler göz önüne alındığında, psikolojik iyi oluşun bireyin yaşamında karşılaştığı pek çok sorunun çözümünde önemli bir kaynak olabileceği söylenebilir. Çocukluk yılları ise bireyin zihinsel ve ruhsal yapısını şekillendiren tüm yaşam dönemlerini etkileyen kritik bir dönemdir (Atan, 2020, S.31). Bu süreçte psikolojik iyi oluş hali çocuğunuz zihinsel ve ruhsal gelişimin en fazla etkileyen faktör olarak kabul edilmektedir. Ayrıca yüksek psikolojik iyi oluşu düzeyi çocuklarda kendi ne güven öz saygı ve sosyal duygusal gelişim gibi ruh sağlığının olumlu bileşenlerini arttırmaktadır bu bağlamda son yıllarda çocukların iyi oluşu ve yaşam kalitesi üzerine artan bir ilgi gözlemlenmektedir çocuklar da iyi olur onların tüm yaşamlarını ve bulundukları sosyal bağamları kapsayan son derece karmaşık çok boyutlu ve disiplinler arası bir kavram olarak değerlendirilebilir (Atan, 2020)

Literatürde ‘teknoloji bağımlılığı terimi internet ve teknoloji cihazlarının aşırı kullanımı ile ilişkilendirilmektedir. Bu durum, bireylerin günlük aktivitelerini ihmal etmesine sosyal ve kişiler arası ilişkilerinde zorluklar yaşamasına, olumsuz duygulardan ve yaşam stresinden kaçış aracı olarak teknolojiyi görmesine ve internet erişimi olmadığında gerginlik ve öfke hissetmesine rol açabilir. Aynı zamanda, kullanılan süre, miktarı ve sıklığı hakkında yalan söyleme gibi davranışlarda bu bağımlılığın belirtileri arasında yer alır. Bu tür bağımlılık, bir çok araştırmacı tarafından tanımlanmış ve dikkate alınmıştır (Deligöz, 2025). Yüksek düzeyde dijital medya kullanımı, bu medyada geçirilen zamanı psikolojik iyi oluşla olan ilişkisi konusunda endişeleri artırmıştır. Yapılan literatürtaramasında, dijital medyada daha fazla zaman geçiren çocuklar, ergenler ve genç yetişkinlerin daha düşük refah düzeyine ve ruh sağlığı sorunlarına sahip olduğunu gösteren araştırmalar (Kelly vd., 2019; Lin vd., 2016; Primack vd., 2017; Rosen vd., 2014; Twenge, Joiner vd., 2018; Twenge, Joiner vd. , 2018; Twenge ve Campbell, 2018; Woods ve Scott, 2016) rastlanılmıştır.

Ancak bu konuyla ilgili olarak önemli bir etki tespit edilmemiş ya da yalnızca küçük etkiler saptanmıştır (George&Russel&Piontak&Odgers, 2018; Jelenchick&Eickhoff&Moreno, 2013; Orben & Przybylski, 2019). Bu çalışmaların sonuçları incelendiğinde ise genellikle çelişkili olduğu söylenmektedir (Martin&Twenge,2020 s1) Aynı zamanda da Sosyal Medyanın Psikolojik refah üzerindeki etkisi, popüler medyada yoğun bir şekilde incelenmektedir. Bu bağlamda eğitim, çocuk gelişimi ve bağımlılık gibi konulardaki endişelerde öne çıkmaktadır. Örnek verecek olursak sosyal medya yı daha az dikkat gerektiren hale getirmeleri ebevenynlerin ve çocukların sosyal medyayı nasıl yönetmeleri gerektiğini konusunda çıkarımlarda bulunmaktadır). (Hancock, J., Liu, S. X., Luo, M., & Mieczkowski, H, 2022 s3)

Araştırmanın Amacı

Bu çalışmanın amacı Dijital Oyun Bağımlılığının ve Sosyal Medya kullanımının çocuklardaki psikolojik iyi oluş üzerindeki etkisini inceleyerek bu konudaki mevcut literatüre katkı sağlamaktır.

Araştırmanın Önemi

Günümüzde Dijital platformun hızla gelişmesiyle birlikte, kişilerin günlük yaşamlarında dijital oyunların ve Sosyal Medya kullanımının oldukça artması kaçınılmaz hale gelmiştir. Teknoloji'nin bu şekilde artması kişiler iletişimi kolaylaştırırken, aynı zamanda bağımlılık, stres, depresyon gibi psikolojik sorunlara yol açmaktadır. Özellikle Sosyal Medya ve dijital oyunun bağımlılığı konusunda Psikolojik iyi oluşa doğrudan etki eder hale gelmiştir. Bu durum kişilerde mutluluk, stres, sosyal ilişkiler arasında yaşam doyumunun temel psikolojik ihtiyaçlarını değerlendirmeyi gerektirmektedir. Psikolojik iyi oluş genel anlamda bireyin duygu durumunu, çevre ile iletişimini ve yaşamın gayesini anlama düzeyini kapsayan geniş bir kavramdır. Bu sebeple bireylerin Dijital Oyunlar ve Sosyal Medya ile etkileşiminin psikolojik iyi oluş kavramına göre bireylerin ruhsal sağlığını koruma ve onarma adına kritik öneme sahiptir. Özellikle çocuklar ve gençlerin Dijital Oyun Bağımlılık ve Sosyal Medya kullanımının etkilerine daha fazla maruz kaldığı görülmektedir, bu sebepten ötürü bu yaş gruplarına yapılan araştırmalar daha fazla önem arz etmektedir. Bu çalışmanın önemi ise dijital Oyun Bağımlılığı ve Sosyal Medya Kullanımının kişilerin Psikolojik İyi Oluş Üzerindeki etkilerini ve bu iki faktörün etkileşimini derin bir şekilde anlamaya ve anlamlandırmaya yönelik kapsamlı bir araştırma sunmasından kaynaklanmaktadır. Çalışma hem Dijital araçların kişiler üzerinde pozitif yönlerini vurgulamakta hem de bağımlılık durumunu negatif sonuçlarına ışık tutmaktadır. Bu sonuçlarla, kişilerin bilinçli Sosyal Medya Kullanımı ve Dijital Oyunlarla uyumlu bir etkileşim kurmaları için gerekli farkındalığın artmasına katkı sağlamaktadır.

Bu araştırma Dijital çağdaki kişilerin Psikolojik iyi oluşunu desteklemek için ailelere, eğitimcilere rehberlik etmeyi ve pratik öneriler sunmayı hedeflemektedir. Sonuç olarak bu çalışmanın sonucunda yalnızca kişilerin Psikolojik iyi oluşu üzerinde katkı sağlamakla kalmayacak aynı zamanda Dijital Oyun Bağımlılığına ve Sosyal Medya kullanımının pozitif ve negatif yönlerini vurgulayarak bireysel etkileri incelenmekte fakat bu konuda ki araştırmalar ise oldukça sınırlı kalmaktadır. Dijital Oyun Bağımlılığı ve Sosyal Medya kullanımını Psikolojik İyi Oluş üzerindeki etkilerini bir bütün olarak ele alarak konunun çocukların sosyal ve duygusal gelişimleri üzerindeki uzun vadeli etkilerine de ışık tutması beklenmektedir.

Kavramsal Çerçeve

Dijital Oyun ve Sosyal Medyanın Tarihçesi

Oyun, zamanın çok eski dilimlerinde insanların hareketleri ve taklitleriyle ortaya

çıkmiştir. Günümüzde ise farklı amaçlar ile kullanılmaktadır; eğlence, boş zaman değerlendirme ya da eğitim gibi Teknolojinin gelişmesi ve sokakların aileler tarafından güvensiz olarak görülmesi evde oyun oynama kültürünün ortaya çıkmasına neden olmuştur. Geleneksel sokak oyunları ,1947 yılında ilk eğlence cihazının geliştirilmesiyle birlikte önemli değişiklikler göstermeye başlamıştır (Uzunoğlu, 2021, s1)

Önceleri atari salonlarında oynanan bu oyunlar, teknolojinin ve internetin hızlı ilerlemesiyle günümüzde televizyon, bilgisayar, tablet ve cep telefonları gibi çeşitli platformlarda erişilebilir hale gelmiştir. Hayatımızın her anında var olan dijital oyunlar, belirli etkilere yol açabilmektedir. Bu bağlamda dijital oyunların en belirgin etkisi bağımlılık olarak karşımıza çıkmaktadır (Uzunoğlu, 2021, s1) Dijital Oyun birçok açıdan geleneksel oyun anlayışından farklılık gösterir. Bu tür oyunlarda birden fazla oyuncu aynı anda teknoloji aracılığıyla internet üzerinden bağlanarak yapılandırılmış karakterlerle mücadele etmekte ya da iş birliği yapmaktadır. (ÜN ,2021). Gençler ve çocuklar arasında yüksek bir tercih oranı ile öne çıkmaktadır. Kolay erişilebilirlikleri sayesinde büyük ilgi görmektedir.

Bu oyunlar oyuncuların hakimiyet kurma, kazanma arzusu ve başarıya ulaşma hedefleri ile dolu olmaları ile daha da yaygınlaşmaktadır. Günümüzde dijital oyunlara ulaşmak son derece kolaydır, bu nedenle birçok ortamda karşımıza çıkabilmektedir (Çelik, 2021) Aynı zamanda Dijital oyuna olan yoğun ilgi kadar sosyal medyaya da çocukların ve gençlerin ilgisi oldukça fazladır. Sosyal Medya hayatımıza Batı dünyası ile 1950 ve 1960 yıllarında oldukça dağınık bir şekilde girmiştir (Çalışkan & Mencik,) 1970’lerde devam eden ve 1990’larda hızla artan internet kullanımı, web siteleri ve portalların kullanıcı sayısını önemli ölçüde yükseltmiştir. Bu süreç,2000’lerde modern bilgi ve iletişim sisteminin en temel taşlarından biri haline gelmiştir (Dağıtman, 2015, s2). Sosyal Medyanın bilgi edinme ve yayma konusundaki faydalarının yanı sıra içerik üretme paylaşma özelliklerde dikkat çekicidir. Bireyler, kendi yarattığı içeriklerle kendilerini ve çocuklarını belli bir şekilde ifade etme fırsatı bulmaktadır. Bu platformlar aracılığı ile kullanıcılar kendilerini tanımlayıp sunarken, takipçilerinin kendilerine ve çocuklarına dair algılarınıda yönetebilmektedir (Ateşer & Emanet 2022) Dijital oyun ve Sosyal Medya bireyler üzerinde hem olumlu hem olumsuz olarak psikolojik etkiler yaratmaktadır. Psikolojik iyi oluş durumu bireyin hayattan aldığı tatmin ve olumlu duygulardır. Ancak Dijital oyunun fazla ve kontrolsüzce kullanımı psikolojik iyi oluş üzerinde tehdit oluşturabilmektedir. Psikolojik iyi oluş, iki ana yaklaşım üzerinden ele alınmaktadır.

Hedonik ve Eudaimonik. Hedonik yaklaşım, bireyin olumlu duygularını azaltmasıyla tanımlanır; bu kişinin yaşamından yüksek bir tatmin duyması anlamına gelir. Öte yandan, eudaimonik yaklaşım, bireyin kendini kabul etmesi, diğerleri ile etkili bir iletişim kurması,

özerk olması, yaşamında bir anlam ve amaç bulması ve çevresel fırsatları değerlendirerek kişisel gelişimini desteklemesi üzerine odaklanır (Söner & Yılmaz, 2018, s 61) Psikolojik iyi oluş , yaşamın sunduğu varoluşsal zorluklarla başa çıkma yetisi olarak tanımlanmaktadır ; bu zorluklar arasında hedefleri sürdürmek, kişisel gelişimi sağlamak , niteikli ilişkiler kurmak gibi unsurlar yer almaktadır. (Telef, 2013). iyi oluş çalışmaları iki farklı bakış açısıyla ortaya konmuştur. İlk bakış açısı 1950 'lerde öznelliğe daha fazla önem verilen bir dönemde, yaşam kalitesini ölçme çabalarının bir parçası olarak doğmuştur. öznel iyi oluş olarak adlandırılmıştır. (Öztürk,2022) öznel iyi oluş ise yaşam memnuniyeti, neşe ve üzüntü, mutluluk gibi duygusal tepkiler iş ilişkileride veya diğer sosyal faaliyetlerde amaç ve anlam, sağlık ve eğlence gibi önemli alanlarda sahip olunan yargılar ve hisle bireylerin genel yaşam kalitesini belirler.

İnsanlar hayatlarından memnunsan, sık sık olumlu duygular deneyimliyorsa ve nadiren olumsuz duygular yaşıyorsa, öznel olarak iyi bir ruh halinde oldukları söylenebilir. Başka bir deyişle bu bireyler yüksek bir öznel iyi oluşa sahiptir (Katmer, Demir & Çekiçoğlu, 2020) ikinci bakış açısı ise 1980'lerde başlayan ampirik çalışmalarla şekillendirilmiştir. Bu yaklaşım bireylerin zorluklar içinde anlamlı bir yaşam sürme ve kendini gerçekleştirme potansiyeline vurgu yaparak, yetişkin gelişim psikolojisi teorilerine dayanmaktadır (Öztürk, 2022). Psikolojik sağlıklarının yanı sıra kendine olan güvenleri, motivasyonları ve olumlu düşünme yetenekleri daha yüksek olacaktır (Keleş, 2017).

İlgili Araştırmalar

Arzu (2006) yapmış olduğu çalışmasının amacı, oyunun çocuklar üzerindeki önemini vurgulamak ve oyunun onların gelişimine sağladığı katkıları inceleyerek etkileri değerlendirmektir bu çalışmada analitik bir yöntem benimsenmiştir. Bu çalışma, nitel araştırma kapsamındaki bir doküman incelemesi yöntemi ile gerçekleştirilmiştir. Araştırma hedefleri doğrultusunda yapılan literatür taramasında elde edilen bilgiler, sistematik bir şekilde tasnif edilip yorumlanarak değerlendirilmiştir. Araştırma bulguları, oyunun çocukların fiziksel, sosyal, duygusal, bilişsel gelişimlerine bir çok açıdan önemli katkılar sağladığını ortaya koymaktadır. Oyun, motor becerilerin gelişiminde rol oynarken, toplumsal kuralları öğretir, özgüveni ve duygusal dengeyi destekler. Ayrıca, bilişsel ve dil gelişiminde katkıda bulunur. Sonuç olarak oyun sadece çocuğun boş zamanlarını değerlendirme aracı olarak düşünülmemelidir.

Ne yazık ki, bazı yetişkinler oyunu bu şekilde değerlendirme yanılıgısına düşmektedir. Oysa

oyun,gerçek ve önemli bir eğitim aracıdır. Oyun, çocuğun hayal gücünü ve yaratıcılığını geliştirmenin yanı sıra, insan ilişkilerini ve yardımlaşma etkilerinide artırır. Zor bir şekilde öğretilen bir çok kural oyun sırasında daha kolay bir şekilde artırılabilir. Kısacası, oyun bireyin kendisini ifade etmesini en rahat yoldur ve eğitimin vazgeçilmez bir parçasıdır. (Uzunoğlu, 2021) yapmış olduğu çalışmanın amacı, Dijitalleşmeyle birlikte hayatımıza dahil olan dijital oyunlar, bu oyunlardan kaynaklanan bağımlılık ve bu bağımlılığın olumlu ve olumsuz etkilerini açıklamayı amaçlamaktadır. Ayrıca çalışma amprik bir amaca dayanmaktadır ve mevcut çalışmalar derlenerek konu ele alınmıştır. Yöntem olarak literatür taraması yapmıştır. Farklı araştırmaları ele almış, özetlemiş ve karşılaştırmalar yapmıştır. Bireylerin fiziksel ve psikolojik gelişimlerine önemli katkılarda bulunurken dijital oyunların ortaya çıkmasıyla birlikte bu durum değişiklik göstermiştir. Hem olumlu hemde olumsuz etkiler ortaya çıkmıştır.

Dijital oyunlar, zeka ve iletişim becerilerini geliştirme potansiyeline sahipken, içerik ve oynama süresine bağlı olarak bağımlılık ve saldırganlık gibi olumsuz sonuçlarda doğurabilmektedir. Oyun şirketlerinin kullanıcıları uzun süre oyunda tutma stratejileri, bireylerde zaman algısının bozulmasına ve yoksunluk belirtilerinin ortaya çıkmasına sebep olabilmektedir. Dijital oyun bağımlılığı, bireylerin sosyal eğitimsel ve fiziksel yaşamlarını olumsuz etkileyen ciddi bir sorun haline gelmiştir. Kıran (2020) Yapmış olduğu çalışmanın amacı farklı yaş ve meslek gruplarına mensup bireylerin sosyal medya kullanım alışkanlıklarını inceleyerek sosyal medya bağımlılığı düzeylerini ve bu kullanımı bireyleri üzerindeki etkilerini değerlendirmektedir. Katılımcıları araştırmayı, 13-66 yaş arasındaki toplam 758 kişi katılmıştır. Bunların 395'i kadın ve 363'ü erkekten oluşmaktadır. Katılımcılar, gönüllülük esasına dayalı olarak çevrimiçi anketle çalışmaya dahil edilmiştir.

Yöntem kısmında veriler, google forms aracılığıyla gerçekleştirilen anket ile toplanmıştır. Elde edilen bu veriler SPSS 22 proglamıyla analiz edilmiştir. İstatistiksel analizlerde T – testi, Ki -kare bağımsızlık testi ve korelasyon analizleri gibi yöntemler uygulanmıştır. Model, nicel araştırma modeli benimsenmiş olup, anket verileri üzerinden değişkenler arası ilişkiler incelenmiştir. Çoban & Doğan (2022) yapmış olduğu çalışmanın amacı, bu derleme çalışması, ebeveynlerin sosyal medya üzerindeki çocuk paylaşımlarını inceleyerek bu fenomenin yaygınlığını, arkasındaki nedenleri ve çocuklar üzerindeki muhtemel etkilerini değerlendirmeyi hedeflemektedir. Ayrıca, ebeveynler ile çocukların bu konuya dair bakış açılarını ortaya koyarak literatüre katkıda bulunmayı ve gelecekteki araştırmalar için bir temel oluşturmayı amaçlamaktadır.

Katılımcılar, bu çalışmayı bir derleme makalesi olduğundan, özgün bir katılımcı grubu

bulunmamaktadır. Araştırma, daha önce yapılmış olan çok sayıda ulusal ve ulusal arası çalışma ile literatürü inceleyerek bilgi sunmaktadır. Yöntemi kapsamlı bir derleme çalışmasıdır. Bu çerçevede nicel veya nitel veri toplama süreci uygulanmamış, bunun yerine mevcut literatürde yer alan makaleler, raporlar, anket sonuçları önceki akademik çalışmalar titizlikle incelenmiş ve analiz edilmiştir. Modelinde ise belirli bir teorik model kullanımına gidilmemişti; fakat davranışlarının nedenleri sonuçları ve kültürel farklılıkları açıklamak için farklı araştırmalardan elde edilen veriler yorumlanmıştır. Makale, betimsel bir çerçeve içinde yapılandırılmıştır. Bulgular kısmında ise ebeveynler çocukları doğmadan önce ve doğduktan sonra sosyal medyada sıkça paylaşımlarda bulunmaktadır.

Sonucunda ise Sosyal medya üzerinden çocuk paylaşımları ebeveynler arasında yaygın bir uygulama olup çoğu Zaman iyi niyetle gerçekleştirilmemektedir. Ebeveynlerin gizlilik ayarlarını daha dikkatli belirlemeleri, çocuklarından izin almaları ve paylaşacakları içerik konusunda daha bilinçli davranmaları önem arz etmektedir. Farklı yaş gruplarından kültürlerden ve sosyoekonomik düzeylerden ebeveynlerle yapılacak kesitsel ve boylamsal çalışmalara ihtiyaç bulunmaktadır. Çelik (2021) yaptığı çalışmanın amacında 5-6 yaş grubu çocuklarını okula uyum düzeyine öğrenme davranışları ve psikolojik iyi oluş düzeyleri arasındaki ilişkiyi detaylı bir şekilde incelemektedir. Ayrıca öğrenme davranışları ve psikolojik iyi oluşun okula uyuma ne ölçüde etkilediğini belirlemek de amaçlanmaktadır. Katılımcıları ise araştırma iki farklı çalışma grubundan oluşmaktadır. İlk grup 2020-2021 eğitim-öğretim yılı güz döneminde meb' e bağımsız ve özel anaokullarına devam eden 231 çocuktur. İkinci grup is, 263 çocuk. Katılımcılar, amaçsal örnekleme yöntemi kullanarak seçilmiştir. Yöntemi ise bu araştırma nicel bir yöntemle ve ilişkisel tarama modeli çerçevesinde gerçekleştirilmiştir. Veriler 5-6 yaş çocuklar için psikolojik iyi oluş ölçeği çocuklar için öğrenme yaklaşımları ölçeği uygulanmıştır.

Toplanan veriler, SPSS yazılımı kullanılarak analiz edilmiştir. Bu süreçte korelasyon ve hiyerarşik regresyon analizleri uygulanmıştır. Bulgular, yapılan analizler sonucunda konsantrasyon problemlerini, öğrenme davranışlarını ve psikolojik iyi oluşun tüm alt boyutları ile negatif ilişki içinde olduğu görülmüştür. Ayrıca yıkıcı veya istenmeyen davranışların da her iki değişkenle negatif bir ilişkiye sahip olduğu tespit edilmiştir.

Yöntem

Araştırmanın Modeli

Bu araştırma Kıbrıs/Güzelyurt bölgesinde yaşayan 4-5 yaş çocuklara sahip olan ebeveynlerin Dijital Oyun Bağımlılığı ve Sosyal Medya kullanımının Psikolojik İyi oluş

üzerindeki etkisini nitel yaklaşımla araştırmaktadır. (Ün,2021s.15) Nitel Araştırma, katılımcıların yaşam standartlarına göre belirledikleri amaçlar ve karşılaştıkları problemler ile ilgili anlamlarını anlamayı hedefler. Nitel araştırma yöntemleri, bireyin davranışlarını, bulunduğu ortamla ilişkilendirerek esnek ve bütüncül bir şekilde ele alır (Şahin, Ergenekon & Aldemir fırat, 2025) Araştırmada etkiyi anlamak için geniş çaplı bir görüşme ve doküman analizi gibi nitel veri toplama yöntemleri kullanılarak ebeveynlerin deneyim ve algılarını incelenmiştir. Bu nedenle araştırma fenomenolojik bir desen üzerine yapılandırılmış olan bu araştırma, kişilerin bu durumlara ilişkin kişisel tecrübelerini anlamak ve derinlemesine incelemeyi hedeflemektedir. (Ün , 2021) Fenomolojik Yaklaşım ise bir grup bireyin bir olgu yada kavram etrafında yaşam ve deneyimlerinden yola çıkarak , bireysel deneyimlerini evrensel bir boyutta açıklanmasını gerçekleştirmeyi açıklar. (Şahin, Ergenekon & Aldemir, 2025)

Çalışma Grubu

Araştırmanın katılımcıları, Kıbrıs'ın Güzelyurt bölgesinde yaşayan 4-5 yaşındaki Okul Öncesi çocuklarının Dijital Oyun Bağımlılığı ve Sosyal Medya Kullanmakta olan çocuklara sahip ebeveynlerden oluşmaktadır. Katılımcılar amaçlı örnekleme yöntemi ile seçilmiş olup ebeveynlerin Çocuklarının Dijital Oyun Bağımlılığının Psikolojik İyi oluşlarına dair gözlem ve tecrübeleri araştırmanın ana konusu olarak alınmıştır.

(Duran & Çalışkan, 2020)

Veri Toplama Aracı

Bu araştırmada ebeveynlerin Dijital Oyun Bağımlılığı ve Sosyal Medya kullanımının çocukların psikolojik iyi oluş üzerine gözlem ve deneyimlerini anlamak için nitel veri toplama yöntemleri kullanılmaktadır. (Acar, 2022) Veri toplama aracı üç uzman çocuk gelişimci görüşü alınarak hazırlanmıştır. Araştırmanın amacı çerçevesinde, görüşme soruları oluşturulmuş bu soruların geçerliliğini artırmak için alan uzmanlarının görüşlerine başvurulmuştur. Uzmanların her biri görüşme soruları hakkında e-posta aracılığıyla geri dönüş yapmıştır. Uzmanlardan gelen geri dönüşler doğrultusunda sorular gözden geçirilmiş ve nihai şekli verilmiştir (Şahin, Ergenekon & Aldemir, 2025) Araştırmanın ana veri toplama aracı yarı yapılandırılmış görüşmeler olmuştur. (Acar, 202) bu görüşmelerde, ebeveynlere Dijital Oyun Bağımlılığı ve sosyal medya kullanımı çocukların Psikolojik iyi oluşları üzerine açık uçlu sorular sorulmuştur. Görüşmeler çocuk ve ebeveynlerin tecrübelerini ve fikirlerini detaylı anlamak amacıyla yapılmaktadır. Görüşmeler 30 dk arasında olup her ebeveyn ile bireysel olacak şekilde görüşmeler yapılmıştır.

Verilerin Toplanması

Veriler, 2025-2026 Eğitim-Öğretim yılında Kıbrıs, Güzelyurt bölgesinde bulunan 4-5 yaş Çocuklara sahip ebeveynlerden toplanmıştır. Katılımcılara araştırmanın amacı açıklanmış, araştırmaya katılımın gönüllülük esasına dayalı olduğu belirtilmiştir. Görüşmeler yüz yüze gerçekleştirileceği, telefon ile ses kaydı alınacağı, kayıtların sadece araştırma verisi olarak kullanılacağı, araştırmanın verilerinin gizli tutulacağı açıklanmıştır (Sönmez,2023). **Bulgular**

Tablo 1: Çocuklarınız hangi oyunları oynar sorusuna ilişkin bulgular

Oyun Türü	Toplam Katılımcı (N)	Seçen Katılımcı Sayısı (n)	Yüzde (%)
Lego / Puzzle / Yapboz	30	11	36,7
Saklambaç	30	6	20,0
Evcilik / Annecilik / Doktorculuk	30	5	16,7
Futbol	30	4	13,3
Körebe	30	2	6,7
Araba / Araba Yarışı	30	2	6,7

Araştırma sürecinde ebeveynlere ‘çocuklarınız hangi oyunları oynar?’ sorusu sorulmuş ve yanıtlar frekans (n) ve yüzde (%) değerleri ile tablo birde sunulmuştur. Elde edilen verilere göre toplamda 30 katılımcıdan alınan yanıtlar gösteriyor ki, çocukların en çok tercih ettiği oyun türleri arasında lego ve puzzle&yapboz gibi yapılandırılmış oyunlar öne çıkmaktadır. Katılımcıların % 36, 67’si çocukların bu tür oyunları oynadığını bildirmiştir. İkinci sırada % 20 oranıyla saklambaç oyunu yer almaktadır, onu % 16,67 oranıyla evcilik, annecilik, doktorculuk gibi sembolik oyunlar izlemektedir. Futbol oynayan çocukların oranı % 13,33 iken körebe ve araba yarışı oynamayı tercih eden çocukların oranı ise % 6,67’dir. Bu bulgular, çocukların hem yapılandırılmış, hem(lego-puzzle) hemde sosyal etkileşime dayalı (saklambaç, evcilik) oyunlarına ilgi gösterildiği ortaya koymaktadır.

Tablo 2: Çocuğunuz ne sıklıkla dijital oyun oynar sorusuna ilişkin bulgular

Ortak cevaplar	N	n	%
Hiç oynamıyor	30	6	20
Günde yarım saat	30	3	10
Günde bir saat	30	3	10
Günde iki saat	30	3	10
Ara sıra / ara ara	30	3	10

Tekil cevaplar	30	10	33
Çok nadir	30	2	66

Katılımcı ebeveynlere çocuklarını dijital oyun oynama sıklıkları hakkında soru sorulmuş ve elde edilen hayınlar frekans(n) ve yüzde (%) dağılımları ile birlikte tablo 2 de sunulmuştur. Toplam 30 kişiden elde edilen verilere göre, çocukların dijital oyun oynama alışkanlıklarını çeşitlilik gösterdiği gözlemlenmiştir. Veriler, katılımcıların % 20 ‘sinin çocuklarının hiç dijital oyun oynamadığını belirtmiştir. Bununla birlikte günde yarım saat, bir saat ve iki saat gibi düzenli dijital oyun oynama sürelerine ilişkin yanıtlar eşit bir dağılım göstermekte olup, her biri %10 oranında ifade edilmiştir. Ayrıca, çocuklarının dijital oyunları ara sıra oynadığını belirtenlerin oranında %’10 olarak kayıt edilmiştir. Dikkat çeken bir diğer bulgu ise tekil cevaplar başlığı altında toplanan yanıtların toplamda %33,33 gibi yüksek bir orana ulaşmasıdır.

Bu grup içinde ‘haftasonları, ‘abisi-ablası – ‘tablet kısıtlı ‘gibi çeşitli bireysel yanıtlar yer almakta ve dijital oyun oynama sıklığının çocuklar arasında değişkenlik gösterdiğini göstermektedir. Ayrıca, çok nadir dijital oyun oynadığını ifade edenlerin oranı %6,67’dir. Genel olarak değerlendirildiğinde dijital oyun oynama sıklığı konusunda homojen bir dağılım olmadığı bazı çocukların düzenli olarak dijital oyunlara zaman ayırırken bazılarının hiç oynamadığı ya da ara sıra oynadığı görülmektedir. Bu durum ebeveynlerin dijital oyunlara yönelik tutumlarını ev içindeki medya kullanım kurallarını ve çocuğun yaş ya da ilgi alanlarını dijital oyun davranışlarını etkilediğini düşündürmektedir.

Tablo 3: Dijital oyunların çocuğunuz üzerinde olumlu etkilerine ilişkin bulgular

Ortak cevaplar	N	n	%
Olumlu etkisi yok	30	3	10
Odaklanma,dikkat,strat eji çözüm üretme	30	5	17
Bilişsel gelişim/hızlı düşünme	30	5	17
Bilgi edinme/kolay öğrenme	30	5	17

Dil gelişimi/şarkı öğrenme	30	3	10
Duygusal gelişim/bağ kurma	30	3	10
Sosyal gelişim/grup oyunları	30	2	7
Motor becerileri/görsel algı	30	2	7
Yaratıcılık	30	1	3
Sadece vakit geçirir	30	1	3

Araştırma çerçevesinde ebeveynlere ‘dijital oyunların çocuğunuz üzerinde olumlu etkileri nelerdir?’ sorusu yöneltilmiş ve elde edilen yanıtlar frekans (n) ve yüzde (%) değerleri ile tablo 3’ de sunulmuştur. Veriler, katılımcıların %30 katılımcının görüşlerini yansıtmaktadır. Katılımcıların yanıtlarına göre, dijital oyunların çocuklar üzerinde ki en yaygın olumlu etkileri; odaklanma, dikkat, strateji geliştirme, çözüm üretme becerileri (%16,67) , bilişsel gelişim ve hızlı düşünme yeteneği (%16,67) bilgi edinme ve kolay öğrenme % (16,67) olarak belirlenmiştir. Bu bulgular dijital oyunların çocukların zihinsel ve akademik gelişimlerini desteklediğine dair algının oldukça yaygın olduğunu göstermektedir. Katılımcıların % 10’u dijital oyunların çocuklar üzerinde herhangi bir olumlu etkisi olmadığını belirtmiştir. Benzer şekilde, %10 oranında katılımcı, bu oyunların dil gelişimi ve şarkı öğrenme gibi alanlarda etkili olduğunu ifade etmiş, ayrıca duygusal gelişimine bağ kurma üzerindeki etkilerde % 10 oranında belirtilmiştir. Sosyal gelişim (grup oyunları) ve motor beceriler / görsel algı gibi alanlarda olumlu etkiler % 6,67 oranında ifade edilmiştir ; bu oran diğer alanlara göre daha düşüktür. Ayrıca birer katılımcı % 3,33 oyunların yaratıcılığını geliştirdiğini veya bir vakit geçirme aracı olarak görüldüğünü dile getirmiştir . Bu veriler dijital oyunların çocuk gelişimine katkısını en çok bilişsel ve öğrenmeye yönelik alanlarda hissedildiğini ortaya koymaktadır. Sosyal, duygusal, motor gelişim gibi daha bütünsel gelişim alanlarında ise daha sınırlı bir katkı algısı mevcuttur.

Tablo 4: Dijital oyunların çocuğunuz üzerinde olumsuz etkilerine ilişkin bulgular

Ortak cevaplar	N	n	%
Dikkat dağınıklığı/ konsantrasyon	30	5	17

Sinirlilik/öfke/ mutsuzluk/kızgınlık	30	6	20
Sosyal beceri/sosyal etkileşim sorunları	30	5	17
Bağımlılık/aşırı oynama isteği	30	4	13
Olumsuz etkisi yok	30	4	13
Hareket azlığı	30	3	10
Şiddet içerikli oyunların etkisi	30	3	10

Elde edilen bulgular, dijital oyunların çocuklarda en sık gözlemlenen olumsuz etkisinin sinirlilik, öfke, mutsuzluk, kızgınlık gibi duygusal tepkiler olduğunu göstermektedir. (%20). Bu duygusal tepkiler, dikkat dağınıklığı ve konsantrasyon sorunları (%16,67) ile sosyal beceri ve etkileşim sorunları (%16,67) takip etmektedir. Bu durum, dijital oyunların özellikler çocukların sosyal ve duygusal gelişimi üzerinde bazı riskler taşıdığına dair güçlü bir ebeveyn algısının varlığını ortaya koymaktadır. Katılımcıların %13,33'ü dijital oyunların çocukların bağımlılık yarattığını ve aşırı oynama isteği oluşturduğunu belirtirken, aynı oranda (%13,33) ebeveyn oyunların çocuk üzerinde herhangi bir olumsuz etki olmadığını dile getirmiştir. Bu durum, bazı verilerin dijital oyunları nötr ya da zararsız gördüğünü göstermektedir. Hareket azalması ve şiddet içeren oyunların etkisi ise %10 oranında ifade edilmiştir.

Tablo 5: Çocuğunuzu dijital dünyanın etkilerinden korumak için herhangi bir sınırlama koyuyor mu sorusuna ilişkin bulgular

Ortak cevaplar	N	n	%
Genel süre kısıtlaması yapanlar	30	10	33
Günde bir saat sınır koyanlar	30	7	23

Günde otuz dakika	30	7	23
sınır koyanlar			
Onbeş dakika	30	2	7
sınırlama yapanlar			
Sadece izlemeye	30	2	7
süre tanıyanlar			
Ebeveyn kontrol	30	1	4
uygulaması			
kullananlar			
Sosyal medya	30	1	4
kullanmayan			

Bu oranlar, ebeveynlerin fiziksel aktivite yetersizliği ve içerik bazlı sorunları daha az dile getirdiğini, fakat yine de bu konuları göz ardı edilmediğini göstermektedir. Bu bulgular, dijital oyunların özellikle duygusal denge, dikkat ve sosyal etkileşim gibi alanlarda bazı olumsuz etkiler doğurabileceğine ilişkin genel bir ebeveyn farkındalığını yansıtmaktadır. Bununla birlikte bazı veliler oyunların olumsuz etkileri olmadığını düşünmekte ya da bu etkileri sınırlı bir şekilde algılamaktadır.

Katılımcıların büyük bir kısmı, çocuklarının dijital ortamla olan etkileşimlerinin zaman kısıtlamaları aracılığıyla düzenlediklerini ifade etmiştir. En yüksek oran %33,33 ile genel süre kısıtlaması uygulayan ebeveynlere aittir. Bu grubu, günde bir saatlik sınır koyan (23,33) ve günde otuz dakika sınırlama getiren (%23,33) ebeveynler takip etmektedir. Üç grup birlikte değerlendirildiğinde, katılımcıların yaklaşık %80 'inin çocuklarına dijital kullanım açısından zaman bazlı sınırlamalar koyduğu anlaşılmaktadır. Daha kısa süreli sınırlama yapan ebeveynlerin oranı ise daha düşüktür yalnızca 15 dakika süreyle sınırlama getirenler ile sadece izlemeye zaman tanıyanlar %6,67 gibi eşit bir oranda kalmaktadır. Bu bulgular daha katı izlemeye yönelik sınırlamaların çok fazla tercih edilmediğini göstermektedir. Ebeveyn kontrol uygulaması kullananlar (%3,33) ve çocuklarına sosyal medya kullanma izni vermeyenler (%3,33) ise oldukça düşük oranda kalmıştır. Bu bulgular, ebeveynlerin dijital dünya karşısında en çok süre bazlı kısıtlamalarla önem aldığını göstermektedir. Ancak tenlonojik denetim araçları veya içerik tabanlı kısıtlamalarının daha az kullanıldığı dikkat çekmektedir. Buda ebeveynlerin genellikle gözleme ve zaman kontrolü yoluyla koruyucu önlemler almayı tercih ettiğini, fakat daha aktif dijital takip sistemlerini sınırlı bir şekilde kullandığını düşündürmektedir.

Tablo 6: Çocuğunuz sosyal medya platformlarından hangilerini kullanıyor?

Ortak cevaplar	N	n	%
YouTube kids	30	17	57
YouTube	30	9	30
Hiç kullanmıyor	30	4	14

Katılımcıların %56,67'si çocukların Youtube Kids platformunu kullandığını belirtmiştir. Bu platformun çocuklara özel içerikler sunması, ebeveyn denetiminde açık yapısı ve güvenli içerik filtreleme sistemleri, aileler tarafından tercih edilmesinin nedenleri arasında yer almaktadır. Öte yandan çocukların %30'u normal Youtube platformunu kullanmaktadır. Bu durum, bazı çocukların yaşlarına uygun olmayan ve kontrolsüz içeriklere ulaşma olasılıklarının bulunduğunu göstermektedir. Ebeveynlerin bu noktada nasıl bir müdahalede bulunduğunu veya filtreleme uygulayıp uygulamadıklarını ise mevcut verilerden bağımsız olarak değerlendirmektedir. Katılımcıların %13'ü çocukların hiçbir sosyal medya platformunu kullanmadığını ifade etmiştir. Bu oran, dijital dünyaya daha temkinli yaklaşan ya da çocukların yaşları nedeniyle henüz sosyal medya etkileşimini başlatmamış ailelerin varlığını yansıtmaktadır. Bu bulgular, sosyal medya kullanımının çocuklar arasında yaygın olduğunu ancak ebeveyn daha güvenli buldukları platformları tercih etme eğiliminde olduklarını göstermektedir. Ancak %30 gibi dikkat çekici bir oranda çocuğun denetiminde daha özenli olunması gerektiğini işaret etmektedir.

Tablo 7: Çocuğunuz ne sıklıkla sosyal medya kullanıyor mu sorusuna ilişkin bulgular

Ortak cevaplar	N	n	%
Çok nadir/hafta 1-2 kez	30	9	30
Kullanmıyor	30	5	17
Günde 30 dakika	30	5	17
Günde 1 saat	30	4	13
Günde 1-2 saat	30	2	7
Günde 2-3 saat	30	2	7

Hafta sonları /haftada birkaç saat	30	3	10

Ebeveynlere yöneltilen ‘Çocuğunuz ne sıklıkla sosyal medya kullanıyor ‘sorusunun cevaplarına göre, çocukların % 30 ‘u hiç sosyal medya kullanmamaktadır. % 16,67’si haftada 1-2 kez aynı oranla diğer bir grup da günde ortalama 39 dakika sosyal medya kullanmaktadır. Günde 1 saat sosyal medya kullananların oranı %13,33 günde 1-2 saat veya 2-3 saat kullananlar ise %10 olarak tespit edilmiştir. Genel olarak bakıldığında, çocukların çocuğunun ya hiç ya sosyal medya kullanmadığı ya da sınırlı bir süreyle kullandığı gözlemlenmektedir.

Tablo 8: Sosyal medyanın çocuğun üzerindeki olumlu etkilerine ilişkin bulgular

Ortak cevaplar	N	n	%
Bilgi edinme/öğrenme/keşfetme	30	8	26
Olumlu etkisi yok	30	17	56
Sosyal etkileşim/bağ kurma	30	5	16

Araştırmaya katılanların, % 56,67’si sosyal medyanın çocukların üzerindeki olumlu etkisini bulunmadığını ifade etmiştir. % 26,67’si bilgi edinme, öğrenme ve keşfetme gibi olumlu yönlerini öne çıkarırken % 16,67’si sosyal etkileşim ve bağ kurma hususundaki faydalara dikkat çekmiştir. Genel olarak bir değerlendirme yapıldığında sosyal medyanın faydalarına dikkat çekmektedir. Genel bir değerlendirme yapıldığında sosyal medyanın çocuklar üzerinde sınırlı bir olumlu etki yarattığı çoğu ebeveynin ise bu etkileri yetersiz bulduğu anlaşılmaktadır.

Ortak cevaplar	N	n	%
Hiç olumsuz etkisi yok	30	18	60
Bağımlılık	30	4	13
Şiddet içerikli tepkiler	30	2	7
Kızgınlık/sinirlilik	30	2	7
Kullanmıyor	30	4	13

Tablo 9: Sosyal medyanın çocuğun üzerindeki olumsuz etkilerine ilişkin bulgular

Katılımcıların %60'ı sosyal medyanın çocuklar üzerinde olumsuz bir etkisi olmadığını belirtmiştir. %13,33'lük bir kesim ise sosyal medya bağımlılığı, %6,67'si şiddet içerikli tepkiler ve yine %6,67'si de kızgınlık ile sinirlilik gibi durumların etkilerini dile getirmiştir. %13,33'lük bir grup ise çocukların sosyal medya kullanmadığını ifade etmiştir. Genel olarak değerlendirdiğimizde, birçok ebeveyn sosyal medyanın çocuklar üzerindeki olumsuz etkilerinin ciddiyetine pek inanmamaktadır.

Tablo 10: Çocuklar dijital oyunları oynamadığında hangi olumsuz duyguları yaşıyor sorusuna ilişkin bulgular

Ortak cevaplar	N	n	%
Hiçbir olumsuz duygu yaşamıyor	30	9	30
Kızgınlık/sinirlilik	30	8	26
Üzüntü/mutsuzluk	30	5	16
Ağlama/vurma	30	2	7
Oyun kuramama	30	2	7
Hırçınlık	30	2	7
Seslendiğinde karşılık vermeme	30	2	7

Katılımcıların %30'u, çocuklarının dijital oyun oynamadığında olumsuz duygular hissetmediğini belirtmiştir. %26,67'ise kızgınlık ya da sinirlilik yaşadığını ifade ederken, %16,67'si de üzüntü veya mutsuzluk hissettiğini söylemiştir. Ayrıca ağlama, vurma, oyun kuramama, hırçınlık ve tepki vermeme gibi davranışlar %6,67 oranında gözlenmiştir. Bu

veriler, bazı çocukların dijital oyun eksikliği nedeniyle duygusal tepkiler verebildiğini ortaya koymaktadır.

Tablo 11: Çocuklar oyun oynarken hangi olumsuz duyguları yaşıyor sorusuna ilişkin bulgular

Ortak cevaplar	N	n	%
Öfke /kızgınlı	30	17	56
Takım arkadaşlarıyla paylaşamama	30	10	33
Hiçbir olumsuz duygu yok	30	3	10

Katılımcıların %56,67'si çocukların oyun oynarken öfke ya da kızgınlık hissettiğini belirtmiştir. Ayrıca, %33,33'ü çocukların takım arkadaşlarıyla paylaşımında zorluk yaşadığını ifade etmiştir. Yalnızca %10'u ise olumsuz bir duygu deneyimlediğini bildirmiştir. Bu veriler, oyun sırasında meydana gelen duygusal zorlukların özellikle öfke paylaşım sorunları etrafında yoğunlaştığını ortaya koymaktadır.

Sonuç ve Tartışma

Araştırma sonuçları, çocukların oyun tercihlerinin yanı sıra dijital oyun ve sosyal medya kullanım eğilimlerinin çeşitli faktörlerden etkilendiğini ortaya koymaktadır. Çocukların büyük bir kısmının hem geleneksel hemde dijital oyunlara yöneldiği görülmüş olup, bu oyunları çocuklar üzerinde hem olumlu hem olumsuz etkiler yaratabileceği tespit edilmiştir. Araştırma kapsamında en çok tercih edilen oyun türlerinin bilişsel gelişimi destekleyen lego, puzzle, ve yapboz gibi oyunlar olduğu belirtilmiştir. Bununla birlikte saklambaç, evcilik, futbol gibi geleneksel oyunların da hala çocukların oyun repertuarında önemli bir yer tuttuğu anlaşılmaktadır. Bu bulgular, çocukların oyun alışkanlıklarının hem bireysel ilgi alanları hemde çevresel etkenlerden etkilendiği düşünülmektedir.

Dijital oyunlarla ilgili veriler incelendiğinde, çocukların bu tür oyunlarla temas sıklığının farklılık gösterdiği gözlemlenmiştir. Günde 30 dakika ile 2saat arasında dijital oyun oynayan çocukların yanı sıra, hiç oyun oynamayanlar da bulunmaktadır. Ebeveyn görüşlerinin doğrultusunda, dijital oyunların dikkat dağınıklığı, sinirlilik, sosyal izolasyon ve bağımlılık eğilimi gibi olumsuz etkilerinde mevcut olması , dijital oyunların çocuk üzerindeki etkisinin kullanım süresi,içerik türü ve ebeveyn denetimi gibi değişkenlere bağlı olarak

değişebileceğini göstermektedir. Dijital oyunlarla ilgili veriler incelendiğinde, çocukların bu tür oyunlarla temas sıklığının farklılık gösterdiği gözlemlenmiştir. Günde 30 dakika ile 2 saat arasında dijital oyun oynayan çocukların yanı sıra, hiç oynamayanlar da bulunmaktadır. Ebeveynlerin görüşleri doğrultusunda, dijital oyunların dikkat, strateji geliştirme, bilgi edinme ve bilişsel gelişim gibi alanlarda olumlu etkiler yaratabileceği görünmektedir. Ancak dikkat dağınıklığı, sinirlilik, sosyal izolasyon ve bağımlılık gibi olumsuz etkilerin de mevcut olması, dijital oyunların çocuk üzerindeki etkilerin kullanım süresi, içerik türü ve ebeveyn denetimi gibi değişkenlere bağlı olarak değişebileceğini göstermektedir. Araştırmada çocukların sosyal medya kullanımına dair elde edilen veriler de dikkat çekicidir. Özellikle You Tube ve You Tube kids gibi video içerik platformlarının yoğun bir şekilde kullanıldığı, bazı çocukların ise hiç sosyal medya ile etkileşime girmediği belirtilmiştir. Sosyal medyanın olumlu etkileri sınırlı sayıda dile getirilmişken, bağımlılık, şiddet içerikli tepkiler ve duygusal sorunlar gibi olumsuz etkilerin daha fazla vurgulanması dikkat çekmektedir. Toplanan veriler, dijital oyunlar ve sosyal medyanın çocuklar üzerindeki etkisinin yalnızca bireysel faktörlerle değil, aynı zamanda aile yapısı, ebeveyn denetimi ve dijital medya okuryazarlığı gibi sosyal ve çevresel etkenlerle de ilişkili olduğunu göstermektedir. Araştırma sonucunda ulaşılan bir diğer önemli bulgu ise, ebeveynlerin çocuklarının dijital oyun oynamasına getirdiği sınırlamalarının yüksek bir oranla ortaya çıkmasıdır. Bu durum, ebeveynlerinin dijital dünyanın olumsuz etkileri konusunda farkındalığa sahip olduklarının göstermektedir. Ancak, bu sınırlamaların içeriği ve uygulama biçimi hakkında detaylı bir değerlendirme yapılmadığı için, bu tür kontrollerin ne ölçüde etkili olduğu konusunda kesin bir sonuca ulaşmak mümkün olmamıştır. Elde edilen bulgular, çocukların dijital dünyadaki deneyimlerinin çok boyutlu olduğunu ve bu deneyimlerin sadece süreye bağlı kalmayıp içerik, ortam ve ebeveyn tutumları tarafından da şekillendiğini göstermektedir. Ayrıca çocukların oyun tercihleri ve dijital içeriklere verdikleri tepkilerdeki bireysel farklılıklar, tek boyutlu yaklaşımların yetersiz kalabileceğini ortaya koymaktadır.

Özet

Temel bir bilim olan biyoloji, canlı organizmaların işleyişini, evrimini ve etkileşimlerini inceler. Öneme rağmen, öğrenciler biyolojiyi, özellikle bitkilerde su taşınması, protein sentezi, solunum ve fotosentez gibi konuları genellikle zorlayıcı olarak algırlar. Enerji, hücresel süreçler, mitoz ve mayoz, organ sistemleri, hormonal düzenleme, oksijen taşınması, genetik ve merkezi sinir sistemi gibi konularda ek karmaşıklıklar ortaya çıkar. Bu zorlukları anlamak, biyoloji eğitimini geliştirmek için çok önemlidir. Bu zorlukları ele almak için, Çukurova Bilim ve Sanat Merkezi'ndeki bir proje, ortaokul öğrencilerinin iç organları öğrenmelerine yardımcı olmak için "kinegram" animasyon tekniğini tanıttı. Bariyer-ızgara veya çit-çit animasyonu olarak da bilinen kinegram, çizgili şeffaf bir kaplamanın iç içe geçmiş bir görüntü üzerinde hareket ettirilmesiyle oluşturulan ve hareket yanılsaması yaratan bir efekttir. 1890'ların sonlarına dayanan bu teknik, 3B otostereogramlar için paralaks stereografisinin geliştirilmesiyle aynı zamana denk geldi.

Projede, öğrenciler önce biyolojiye yönelik tutumlarını değerlendirmek için bir anketi tamamladılar. Daha sonra, beş iç organ kinegram yöntemi kullanılarak tasvir edildi. Bu animasyonlarla etkileşime girdikten sonra, öğrenciler ikinci bir ankete katıldılar. Sonuçlar, öğrencilerin biyoloji dersine ilişkin algılarında olumlu bir değişim olduğunu gösterdi. Kinegram animasyonları öğrenmeyi daha ilgi çekici ve etkili hale getirdi ve bu tür görsel araçların karmaşık biyolojik konulara ilişkin anlayışı ve ilgiyi artırabileceğini öne sürdü.

Anahtar Sözcükler: Biyoloji, Organlarımız, Bariyer Izgara Animasyonu, Başarı

Abstract

Biology, a fundamental science, explores the functioning, evolution, and interactions of living

organisms. Despite its significance, students often perceive biology as challenging, particularly topics like water transport in plants, protein synthesis, respiration, and photosynthesis. Additional complexities arise with subjects such as energy, cellular processes, mitosis and meiosis, organ systems, hormonal regulation, oxygen transport, genetics, and the central nervous system. Understanding these difficulties is crucial for enhancing biology education. To address these challenges, a project at the Çukurova Science and Art Center introduced the "kinegram" animation technique to aid middle school students in learning about internal organs. The kinegram, also known as barrier-grid or picket-fence animation, is an effect created by moving a striped transparent overlay across an interlaced image, producing the illusion of motion. This technique, dating back to the late 1890s, coincided with the development of parallax stereography for 3D autostereograms. In the project, students first completed a survey to assess their attitudes toward biology. Subsequently, five internal organs were depicted using the kinegram method. After interacting with these animations, students took a second survey. The results indicated a positive shift in students' perceptions of the biology course. The kinegram animations made learning more engaging and effective, suggesting that such visual tools can enhance comprehension and interest in complex biological topics.

Keywords: Biology, Our Organs, Barrier Grid Animation, Success

Giriş

Biyoloji Dersinin Kapsam ve Önemi

Biyoloji, canlı organizmaları (bitkiler, hayvanlar ve mikroorganizmalar), biyolojik süreçleri ve işlevlerini ve çevre için nasıl önemli olduklarını inceleyen bir bilim dalıdır. Tüm canlı organizmaların ve çevre ile etkileşimlerinin incelenmesi olarak da tanımlanabilir. Biyoloji kelimesi Yunanca yaşam anlamına gelen 'bios' ve çalışmak anlamına gelen 'logos' kelimelerinden oluşmaktadır. Bu uçsuz bucaksız bilim dalı, hayatın tüm sorularını çözebilir. Aristoteles, biyolojinin babası olarak kabul edilir, çünkü o dönemdeki insanların düşüncesi olan yaşamı ve onun kökenini ilahi bir kaynaktan geldiğini varsaymak yerine, biyolojiye ilk kez o bağlamıştır. Ancak biyoloji kelimesi Lamarck ve Treviranus tarafından günümüzdeki anlamıyla kullanılmıştır. Genel olarak biyoloji üç alana ayrılabilir: botanik (bitkilerin incelenmesi), zooloji (hayvanların incelenmesi) ve mikrobiyoloji (mikroorganizmaların incelenmesi). Ancak biyolojik araştırmalardaki ilerlemeler, yeni dalların ve teknolojilerin gelişmesine yol açmıştır.

Ek olarak biyoloji, insan vücudu ve çevre, ekosistem, gıda kalitesi, hastalıkların nedenleri ve yeni ilaçların keşfi gibi yaşamın sürdürülebilirliği ile ilgili çeşitli çalışma alanlarını da içerir. Biyolojinin önemine dair çok sayıda gösterge vardır. Biyoloji öncelikle yaşamı incelemekle

ilgilenir. Ayrıca, canlı ve cansız tüm varlıkların birbirleriyle nasıl etkileştiklerine dair kapsamlı bir bilimsel açıklama sunar. Biyoloji çalışması günlük yaşamımız için hayati öneme sahiptir. İster kendi varlığımız ister etrafımızdaki hayvanların varlığı hakkında çalışıyor olalım, biyoloji bize o derin anlamı ve cevapları verir. Esasen Biyoloji hayatın kendisini incelemektir. Biyoloji, birçok biyoloji öğrencisine geniş açık iş alanları sunan profesyonel bir kariyer yoludur. Canlı organizmalardaki yaşamın bilimsel kavramlarının incelenmesi yoluyla öğrenciler, bilime eğilimli olan ve olmayan diğer mesleklerin yanı sıra ekolojistler, hemşireler, kimyagerler, doktorlar, öğretmenler, bilim adamları gibi mesleki kariyerlerini geliştirirler. Şaşırtıcı bir şekilde, güzellik terapistleri ve güzellik uzmanları bile vücudumuzun hayati parçaları olan parmaklar, cilt ve tırnaklarla etkili bir şekilde ilgilenmek için biyolojinin temellerini anlamalıdır.

Öğrencilerin Biyoloji Dersinde Karşılaştıkları Zorluklar

Öğrencilerin biyolojik kavramları öğrenmede güçlük yaşamalarının birçok nedeni vardır (Lazarowitz ve Penso, 1992; Tekkaya vd., 2001; Cimer, 2004). Lazarowitz ve Penso'ya (1992) göre, organizasyonun biyolojik düzeyi ve kavramların soyut düzeyi, biyoloji öğrenimini zorlaştırırken, bilimin kendisinin doğası ve öğretim yöntemleri fen öğrenmedeki güçlüklerin nedenleri arasındadır.

Öğrencilerin ilgi ve beklentilerini göz ardı ederek öğrenme ortamları tasarlamak, öğrencilerin biyolojiye olan ilgilerini azaltmanın yanı sıra birçok öğrenme sorununa da yol açmaktadır (Yüzbaşılioğlu ve Atav, 2004; Zeidan, 2021)), öğrencilerin sınıf öğrenme ortamlarına ilişkin algıları ile başarıları arasında yakın bir ilişki olduğunu belirtmektedir. Osborne ve Collins (2001) ayrıca, öğrencilerin fen öğrenmeye olan ilgilerinin azalmasının, müfredat içeriğinin aşırı yüklenmesi ve genel olarak çalışma hayatıyla ilgili olmaması, ilgilenilen konuların tartışılmaması, yaratıcı ifade fırsatlarının olmaması, gibi nedenlerden kaynaklı olduğunu bildirmektedir. Türkiye özelinde birçok araştırmacı tarafından bildirilen diğer bir neden de biyoloji biliminin doğası gereği biyoloji öğreniminin genellikle ezbere dayalı olmasıdır. Biyoloji bilimi, öğrencilerin öğrenmesi gereken birçok soyut kavram, olay, konu ve olguyu içerir.

Öğrenci görüşlerinin önemini kabul eden okullar, bu görüşlerin sınıf yönetimine, öğrenmeye ve öğretmeye ve sosyal ve öğrenme yeri olarak okula önemli katkı sağlayabileceğini bulmuşlardır. Bu nedenle, ortaokul öğrencilerinin biyoloji algılarını anlamak, politika yapıcılarını, öğretmenlerin ve öğretmen eğitimcilerinin, öğrencilerin biyolojiyi daha iyi öğrenmelerine ve ona karşı daha olumlu tutumlar geliştirmelerine yardımcı olabilecek daha etkili öğretim etkinlikleri planlamalarına yardımcı olacaktır.

Türkiye’de Biyoloji Eğitimi

76 milyonu aşan nüfusuyla Türkiye, Avrupa ile Asya arasında bir köprü konumunda. Birinci Dünya Savaşı sonunda Osmanlı Devleti'nin yıkılmasının ardından 1923 yılında Türkiye Cumhuriyeti kurulmuş, yeni devlet eğitim biliminin kuruluşundan bu yana gelişmişlik, Türkiye'nin medeni ülkeler düzeyine gelmesinde en önemli etken olarak görülmüştür (Grossman, vd., 2007; Sozbilir, vd., 2012). Eğitim sistemini iyileştirmeye yönelik en son büyük çaba, 1990'larda uygulamaya konulan çok aşamalı ve kapsamlı bir sektör reformu yoluyla gerçekleştirilmiştir. Türkiye'de eğitim sisteminin, özellikle de fen eğitiminin iyileştirilmesine yönelik gerçek değişim, Milli Eğitim'in himayesindeki bir reform hareketinden sonra gözlemlenmiştir.

Kalkınma Projesi (NEDP), öğretmen eğitiminin kalitesinin iyileştirilmesine yönelik bir adım daha attı. Bu proje YÖK tarafından başlatıldı, Dünya Bankası tarafından finanse edildi ve YÖK tarafından yönetildi.

Biyoloji eğitimi müfredatı daha önce 1993'ten başlayarak birçok çalışma yapıldıktan sonra yeniden yapılandırılmıştı. O dönemde Eğitim Araştırma ve Geliştirme Başkanlığı (ERDD), Milli Eğitim Bakanlığı'nın (MEB) yardımıyla bir müfredat geliştirme modeli hazırladı. Bu program geliştirme modeli için ihtiyaç analizi yapılmış ve Türkiye'deki 34 lisede katılımcıların (akademisyenler, alan bilim adamları, öğretmenler ve öğrenciler) pilot uygulaması ile ihtiyaç analizi çalışmaları gerçekleştirilmiştir. Bu pilot çalışma, yeni biyoloji öğretim programının pek çok açıdan yeterli ve uygun olduğunu, ancak programın etkili bir şekilde uygulanabilmesi için kullanılacak materyallerin ve derslik başına düşen öğrenci sayısının önemli faktörler olduğunu göstermiştir. Değinilmesi gereken bir diğer nokta ise, yeni biyoloji müfredatı öğrenci merkezli bir öğretimi amaçlamakla birlikte, gözlemler daha çok öğretmen merkezli olduğunu göstermektedir (Özcan, 2003). Son yıllarda, anlamlı bilimsel bilgiyi öğretmek ve kavramsal anlayışı geliştirmek için sınıf içi etkinliklerin gözden geçirilmesi ihtiyacı, biyoloji öğretmenleri ve eğitim araştırmacıları arasında yaygın bir gerekliliktir. Bu gereklilik her bilgiyi öğrenmek yerine öğrenilen bilginin önemini vurgulamak; nicelikten çok nitelik gözlemlemek, kök ezberden ziyade bilgiyi anlamlandırmak; kavramları ve olguları anlamak şeklinde vurgulanmaktadır. Biyoloji alanı canlıları oluşturan en küçük yapı taşları olan hücrelerden, çeşitli sistemler içeren ekosistemlere kadar içerisinde çok geniş bilgi bulunduran bir alandır. Bu durum biyoloji müfredatındaki bilgi yoğunluğunu artırmaktadır. İyi tasarlanmış bir biyoloji eğitimi müfredatı ile öğrencilerin bilgiyi ezberlemek yerine yaşayan dünya hakkında anlamlı öğrenmeler geliştirmeleri, çevre ve canlılar arasındaki ilişkileri öğretmeleri, bilimsel düşünme becerileri kazanmaları, problem çözme becerilerini geliştirmeleri, bilgiyi aktarmaları

amaçlanmaktadır. (Atıcı ve Bora, 2004).

Bariyer Izgara Animasyon Tekniđi

Türkçede tarama ya da bariyer ızgara animasyonu olarak karşılık bulduğumuz ancak yabancı kaynaklarda “scanimation, kinegram ve barrier grid animation” olarak aratıldığında çok farklı ve renkli çalışma örneklerine ulaşabildiğimiz bir teknik olarak karşımıza çıkmaktadır.

Bariyer ızgara animasyonu 8.5”x11” boyutunda normal yazıcı kağıdına basılmış, şeffaf ve özel olarak tasarlanmış görsellerin asetat kâğıt üzerine basılmış bir ızgara kullanılarak kendi animasyonlarımızı oluşturmamıza olanak sağlayan bir etkinliktir. Aslında bariyer ızgara animasyonu eğlenceli bir optik yanılsama tekniđi olarak karşımıza çıkmaktadır. Bariyer ızgara animasyonu 1800'lerden beri var, ancak 2006'da Rufus Butler Seder tarafından patentlenene kadar tarama olarak adlandırılmamıştır. Aslında basılı biçimde animasyonlu görüntüler oluşturma nın nispeten ucuz ve basit bir yolu olarak geliştirilmiştir. Scanimation'ın en heyecan verici yanlarından biri, her yaştan herkesi şaşırtabilmesidir. Şu anda çocuk kitaplarında en sevdikleri hayvanlardan en sevdikleri filmlere kadar deđişen hareketli resimlerle çocukları eğlendirmek için kullanılan tarama animasyonu bu tekniđin en basit kullanımlarından biridir. Bazıları Scanimation'ı eski filmleri yeniden renklendirmek, filmlere 3B efektler eklemek veya durgun resimleri canlandırmak için bir teknik olarak da kullanmaktadır.

Malzemeler ve yöntemler

Izgara:

Izgara, tepegöz asetatlarına yazdırılacak bir belgedir. Izgara, aşğıdaki Şekil 1'de görüldüğü gibi deđişen 1 mm beyaz ve 4 mm siyah çubuklarla 5 mm'lik bir temeldir. Bu ızgaralar 8,5”x11” baş üstü asetatlara yazdırılabilir.

Şekil 1: Tepegöz asetatlarına yazdırılacak ızgara aralığı.

Görüntüler:

Hareketli bir görüntünün yanılması yaratmak için kullanılan görüntüler, 1 mm aralıklı boşluklar olduğunda ızgaranın üzerinden geçmesine ve her seferinde tek bir görüntüyü ortaya çıkarmasına izin veren dört görüntüden oluşan bir dizidir. Bu görüntüler, standart 8,5x11” yazıcı kağıdına basılabilir ve yukarıda oluşturulan ızgarayla birleştirilerek bir dizi görüntü basit bir animasyonda hayata geçirilebilir. Daha benzersiz scanimation görüntüler, kaynaklarda bulunan <https://kinegram.app/> web sitesi kullanılarak oluşturulabilir. Bu web sitesi, aşağıda Şekil 2’de gösterilen dörtlü bir dizi görüntüyü yükleyerek kendi scanimation görüntülerinizi oluşturmanıza olanak tanır. Son aşama olarak web sitesi animasyonu sizin yerinize yapacak ve yaptığınız her şeyi hayata geçirmek için ızgarayla birleştirebileceğiniz Şekil 3’te görülene benzer bir görüntü çıkaracaktır.

Şekil 2: Bir Scanimation görüntüsü oluşturmak için birleştirilecek bir dizideki dört görüntü

Şekil 3: Şekil 2’deki görüntü dizisinden oluşturulan scanimation görüntüsü.

Biyoloji Eğitiminde Animasyon Tekniği Kullanmanın Önemi

Dinamik olayların öğretiminde animasyonların durağan ardışık görüntülerden daha etkili

olduğunu savunan oldukça geniş bir literatür bulunmaktadır (Danton ve O'day, 2008). Şu anda, günlük yaşamları öncelikle işitsel ve görsel iletişime dayalı olan bireylerden oluşan elektronik bir nesil öğrenci eğitim öğretim sürecinin bir bileşenidir. Bu neslin birçok çalışmada ders kitaplarını okumak yerine animasyonları tercih ettiği görülmektedir. Yapılan birçok çalışma animasyonların basit grafiklere göre daha uzun süreli hafızada kalmaya yol açtığına dair kanıtlar sunmaktadır. Bu, yalnızca projemizi doğrulamak için değil, aynı zamanda animasyonların neden öğrenmeyi kalıcı hale getirdiğini anlamak için daha fazla araştırmaya ihtiyaç duyan önemli bir sonuçtur. Animasyonlar, basit metin veya statik grafiklere göre öğrenciler için daha ilgi çekici ve daha etkili olduklarından daha derin öğrenmeye yol açmaktadırlar. Allinson ve Hayes'e göre (2016) "Bugünün öğrencileri bir "görsel öğrenenler" neslidir ve yeni animasyon, video ve diğer görsel kaynaklar gelişmeye devam edecektir." İyi tasarlanmış animasyonlar, öğrencilerin ezber bilgiye güvenmek yerine biyolojideki temel ilke ve süreçlere odaklanmalarına yardımcı olabilir.

Ders kitapları, yalnızca kişisel uzmanlık alanlarını öğretmek için hem öğrenciler hem de öğretmenler için genellikle birincil kaynaktır, ancak ders kitaplarında geniş kavramlar bir araya gömülmüştür. Prensip olarak animasyonlar, metin ve statik görüntülerde kolayca gözlemlenemeyen veya açıklanmayan olayları ve süreçleri açıklığa kavuşturarak öğrenmeye yardımcı olabilir. Bariyer ızgara animasyon tekniği ile herhangi bir teknolojik cihaza gerek duymadan sadece asetat üzerine oluşturulan bariyer çizgiler ve kinegram app aracı ile oluşturulan görsel ile hareketli resimler elde etmek mümkün. Animasyon dizisi, karmaşık görüntü- Kinegram- üzerine basılmış düz siyah bir desen içeren bir asetat kaplama aracılığıyla görüntülendiğinde oluşturulur. Desenin boş alanları saydam olduğundan, bindirme kinegram boyunca kaydırıldığında, kinegramın farklı bölümleri görünür hale gelir. Beyniniz bu birbirini izleyen görüntüleri birbirine bağlayarak akıcı hareket yanılsaması yaratır.

Biyoloji Dersi İç Organlarımız Konusu ve Bariyer Izgara Animasyonu Tekniği

Biyoloji dersi müfredatını temel alarak beş tane organ belirledik. Bu organlar; akciğer, bağırsak, kalp, beyin ve nefes borusu olarak belirlendi. Öğrenciler genel olarak anatomiye zor olarak algılayabilirler. Öğrenciler organ sistemlerini, her sisteme özgü özelliklerden (örneğin, sistemlerin karmaşıklığı ve yapı-işlev ilişkileri, yapıların niceliği, vb.) ve her bir sistemle ilgili faktörlerden (örneğin, önceden gereksinimler, bir sistem üzerinde harcanan zaman, vb.) dolayı genellikle zorlayıcı bulabilmekteler. Bu alanda yapılan çalışmaların ortak bulguları şunu göstermekte; biyoloji dersi öğretmenleri ders müfredatlarını değiştirmeli veya öğrencilerin öğrenmesini geliştirmek için öğrencilerin organ sistemlerini az çok zorlayıcı olarak algılama

nedenlerini özellikle ele alan pedagojik etkinlikler tasarlamayı seçmelidirler. Bariyer ızgara animasyon tekniği ile organların kâğıt üzerinde hareket etmesini sağlamak bu etkinliklerden biri olabilir.

Biz de bu amaçla öncelikle belirlediğimiz iç organlarla ilgili gifler bulduk. Ardından bu gifleri ezgif.com adlı online bir araçla split (böl) seçeneği ile fotoğraflara dönüştürdük. Bu fotoğrafları daha sonra kinegram app sitesine giderek bariyer ızgara animasyonu haline getirip çıktılarımızı aldık. Bariyer ızgara animasyonu hazırlarken resimleri hareket ettirerek (sürükle ve bırak) resimlerin sırasını yeniden düzenleyebilirsiniz. Ayrıca, sil tuşuna basarak seçili görüntüleri kaldırabilir veya dosya açma iletişim kutusu aracılığıyla başka görüntüler ekleyebilirsiniz. Daha az sayıda görüntü (10'dan az) genellikle en iyi sonuçları verir. Giriş görüntülerini ayarlamayı bitirdiğinizde, düzenleme menüsünden animasyonu hesaplayın. Bir şerit boyutu- tarama çizgilerinin genişliği- belirtmeniz istenecektir. Düzgün bir animasyon elde edene kadar genişlik boyutuyla denemeler yapın. Son olarak hem temel görüntüyü hem de çubuk maskeyi kaydedin. Şimdi temel görüntüyü normal bir kâğıda ve çubuk maskeyi herhangi bir asetat kâğıda yazdırın. Animasyonunuz hazır olmuş olacak. Her bir animasyon için bir ızgara ve bir görsel oluşturduk. Bariyer ızgaranın çıktısını asetat kağıdına, görselimizin çıktısını A4 beyaz kâğıda alarak her bir çalışmamız için açtıkça asetatın görselin üzerinden kayabileceği kitapçıklar oluşturduk. Bu kitapçıkların arka sayfalarına aynı zamanda organlarla ilgili açıklama metinlerini yerleştirdik.

Yöntem

Araştırmanın Metodu

Bu araştırmada Adana Çukurova Bilim ve Sanat Merkezi BYFP (Bireysel yetenekleri fark ettirme programı) ve ÖGYG (Özel Yetenekleri Geliştirme Programı grubu öğrencileri ile iç organlarımız konusunu içeren bariyer ızgara animasyonları paylaştık. Bariyer ızgara animasyonlarını her organ için ayrı bir kitapçık halinde düzenledik. Kitapçıkların üzerinde bulunan asetat altta yer alan organ görselinin üzerinden kaydıkça organlar hareket ediyormuş gibi algılandı. Kitapçıklarımızın arka sayfalarına aynı zamanda belirlediğimiz iç organlarla ilgili küçük açıklama metinleri de yerleştirdik. Katılımcı öğrencilerimizle biyoloji dersi iç organlarımız konusunu hazırladığımız ızgara animasyonlarla işledikten sonra bu çalışmanın katılımcı öğrencilerde biyoloji dersine dair sahip oldukları algı ve tutumlarında anlamlı bir değişiklik oluşup oluşmadığını belirlemeye çalıştık. Scanimation yani bariyer ızgara animasyonu olarak da adlandırılan tekniğimiz optik bir yanılsamadır. İllüzyon iki sayfadan oluşur- üzerinde resim basılı olan beyaz bir sayfa ve üzerinde birkaç siyah çubuk bulunan şeffaf plastik bir sayfa. Altındaki beyaz kâğıdın üzerine çok ince dikey şeritler şeklinde basılmış bir

dizi alternatif resim vardır. Resimli kartın önünde, üzerine ince boşluklarla basılmış dikey siyah ve opak şeritler bulunan şeffaf bir plastik parçası vardır. Plastik levha bir yandan diğer yana hareket ettirildiğinde, alttaki yaprağa yazdırılan görüntü canlanmış gibi görünür. Biyoloji dersi öğrenciler tarafından fazlaca soyut algılandığından genellikle öğrendikleri yeni içerikleri uzun süreli hafızalarında tutmaları zordur. Bariyer ızgara animasyonu bu derse entegre edilerek biyoloji dersi öğrenciler için daha zevkli ve daha verimli hale gelebilmektedir.

Biyoloji dersi iç organlarımız konusu için akciğer, bağırsak, kalp, beyin ve nefes borusu seçilerek bu organlara uygun hareketli gifler telif hakkı istenmeyen sitelerden indirildi ardından bu gifler uygun resimlere ayrıldı ve kinegram aplikasyonu kullanılarak hareketli animasyonların çıktıları alındı. Her organ için ayrı bir kitapçık hareket mekanizması gözetilerek hazırlandı. Bu kitapçıkları Adana Çukurova Bilim ve Sanat Merkezi BYFP ve ÖGYP grubu öğrencileri ile paylaştık. Ardından katılımcı öğrencilere 11 sorudan oluşan bir anket uyguladık. Bu sorulardan ilk altı tanesi katılımcılarımızın sosyo-demografik bilgilerini belirlemeye yönelik sorulardan oluşmaktadır. Anketimizin ikinci kısım soruları katılımcılarımızın bariyer ızgara animasyon tekniği ile oluşturduğumuz kitapçıkların öğrencilerin biyoloji dersine yönelik algı ve tutumlarında anlamlı bir değişiklik olup oluşmadığını saptamaya yönelik sorulardan oluşmaktaydı. Anketimizin ikinci bölümünü oluşturan sorularımızda kinegram tekniği ile biyoloji dersinin daha eğlenceli, daha verimli, daha yaratıcı, öğrenmeyi kolaylaştırıcı ve merak uyandırıcı olup olmadığını saptamaya yönelik sorulardan oluşmaktaydı.

Araştırmanın Evren ve Örneklemi

Araştırmanın örneklemi Adana Çukurova Bilim ve Sanat Merkezi'ne devam eden 80 BYFP (Bireysel yetenekleri fark ettirme programı) ve ÖGYP (Özel Yetenekleri Geliştirme Programı) öğrencilerimizden oluşmaktadır. Kurum öğrencileri aynı zamanda Adana ilinde farklı devlet ve özel ortaokullara devam etmektedirler.

Veri Toplama Araçları

Araştırmada veri toplama aracı olarak katılımcıların Biyoloji dersine yönelik algı ve tutum düzeylerinde anlamlı bir değişiklik oluşturup oluşturmadığını ortaya çıkarmak amacıyla geliştirdiğimiz 11 soruluk bir anket uygulanmıştır. Anketin ilk 6 sorusu öğrencilerin sosyo-demografik bilgilerini, ikinci kısmı katılımcılarımızın bariyer ızgara animasyon tekniği ile oluşturduğumuz kitapçıkların öğrencilerin biyoloji dersine yönelik algı ve tutumlarında anlamlı bir değişiklik olup oluşmadığını saptamaya yönelik sorulardan oluşmaktaydı. Anketimizin ikinci bölümünü oluşturan sorularımızda kinegram tekniği ile Biyoloji dersinin daha eğlenceli,

daha verimli, daha yaratıcı, öğrenmeyi kolaylaştırıcı ve merak uyandırıcı olup olmadığını saptamaya yönelik sorulardan oluşmaktaydı.

Verilerin Analizi

Verilerin analizinde SPSS (Statistical Package for the Social Sciences) programı kullanılmıştır. Araştırmanın alt problemlerinin çözümlenmesinde frekans (f), yüzde (%), Toplamlı(birikimli) yüzde testleri uygulanmıştır. SPSS analizinin ardından veriler Word Excel programı ile sunulmuştur.

Bulgular

Tablo 1: Anket Sorularını Yanıtlayan Öğrencilerin Cinsiyet Dağılımı

Frekans	Yüzde Oranı	Geçerli Yüzde Oranı	Toplamlı Yüzde Oranı

1	105	51,5	51,5	51,5
2	99	48,5	48,5	48,5
Toplam	204	100,0	100,0	100,0

Ankete katılan 204 öğrenciden 105’i erkek ve 99’u kız öğrenciden oluşmaktadır.

Tablo 2: Ankete Katılan Öğrencilerin Devam Ettikleri Sınıf Düzeyleri

	Frekans	Yüzde Oranı	Geçerli Yüzde Oranı	Toplamlı Yüzde Oranı
1	66	32,4	32,4	32,4
2	57	27,9	27,9	27,9
3	51	25	25	25
4	30	14,7	14,7	14,7
Toplam	80	100,0	100,0	100,0

Ankete katılan 204 öğrencinin %32,4’ü 5.sınıf, %27,9’u 6.sınıf, %25’i 7.sınıf ve %14,7’si 8.sınıf öğrencilerinden oluşmaktadır.

Tablo 3: Ankete Katılan Öğrencilerin Devam Etmekte Oldukları Kurum Türü

	Frekans	Yüzde Oranı	Geçerli Yüzde Oranı	Toplamlı Yüzde Oranı
1	125	61,3	61,3	61,3
2	79	38,7	38,7	38,7
Toplam	204	100,0	100,0	100

Ankete katılan 204 öğrencinin %61,3’ü devlet, %38,7’si özel eğitim kurumlarına devam etmektedir

Tablo 4: Ankete Katılan Öğrencilerin Anne-baba Birliktelik Durumları

	Frekans	Yüzde Oranı	Geçerli Yüzde Oranı	Toplamlı Yüzde Oranı
1	171	83,8	83,8	83,8
2	27	13,2	13,2	13,2
3	4	2	2	2
4	2	1	1	1
Toplam	204	100,0	100,0	100,0

Ankete katılan 204 öğrencinin %83,8’inin anne ve babasının birlikte olduğunu %13,2’sinin

anne ve babasının ayrı olduğunu, %2'sinin babasının vefat ettiğini ve %1'inin annesinin vefat ettiğini saptadık.

Tablo 5: Ankete Katılan Öğrencilerin Anne ve Babalarının Eğitim Düzeyleri
ANNE

		Frekans	Yüzde Oranı	Geçerli Oranı	Yüzde	Toplamlı Yüzde Oranı
	1	6	2,9	2,9		2,9
	2	14	6,8	6,8		6,8
	4	46	22,5	22,5		22,5
	5	102	50	50		50
	6	36	17,8	17,8		17,8
	Total	204	100,0	100,0		100,0

BABA

		Frekans	Yüzde Oranı	Geçerli Oranı	Yüzde	Toplamlı Yüzde Oranı
	1	7	3,4	3,4		3,4
	2	11	5,3	5,3		5,3
	3	36	17,7	17,7		17,7
	4	115	56,4	56,4		56,4
	5	35	17,2	17,2		17,2
	Total	204	100,0	100,0		100,0

Ankete katılan 204 öğrencinin %2,9'unun annesinin ilkokul, %6,8'inin annesinin ortaokul, %22,5'inin lise, %50'sinin üniversite ve %17,8'inin annesinin yüksek lisans/doktora mezunu olduğu görülmüştür.

Ankete katılan 204 öğrencinin %3,4'ünün babasının ilkokul, %5,3'ünün ortaokul, %17,7'sinin lise, %56,4'ünün üniversite ve %17,2'sinin yüksek lisans-doktora mezunu olduğu görülmüştür.

Tablo 6: Biyoloji Dersinde Öğrenmeyi Kolaylaştırmak İçin Neler Olmalı? Sorusuna Öğrencilerin Verdikleri Cevapların Yüzdelik Oranları

Kinegram(bariyer ızgara) tekniği ile oluşturduğumuz kitapçıkları katılımcı öğrencilerimizle paylaşmadan önce mentimeter aracı ile oluşturduğumuz “Biyoloji dersinde öğrenmeyi kolaylaştırmak için neler olmalı” sorusuna katılımcı öğrencilerimizin % 51’i biyoloji dersinde eğlenceli etkinlikler öğrenmeyi kolaylaştırır maddesini birinci seçenek olarak işaretlemişlerdir. Katılımcı öğrencilerin %23’ü biyoloji dersinde eğlenceli etkinlikler derse merakımı artırır maddesini ikinci seçenek olarak işaretlemişlerdir. Katılımcı öğrencilerin %21,2’si oyunlar ile biyoloji dersi konuları aklımda uzun süre kalır maddesinin üçüncü seçenek olarak işaretlemişlerdir. Katılımcı öğrencilerin %17,6’sı biyoloji dersinde eğlenceli etkinlikler yapılmalı maddesini dördüncü seçenek olarak işaretlemişlerdir. Öğrencilerin %13,2’si biyoloji dersinde yaratıcı çalışmalar yapılmalı maddesini 5.seçenek olarak işaretlemiştir.

Tablo 7: Hareketli Biyoloji Çalışması Biyoloji Dersinin Daha Eğlenceli Geçmesine Neden Oldu Maddesine Öğrencilerin Verdikleri Cevapların Yüzdelik Oranları

Ankete katılan 204 öğrenciden “Hareketli biyoloji çalışması biyoloji dersinin daha eğlenceli

geçmesine neden oldu” maddesine kız öğrencilerin %25’i tamamen katılıyorum, %12,50’si katılıyorum, %6,25’i kararsızım, %3,75’i katılmıyorum ve %1,25’i tamamen katılmıyorum yanıtını vermiştir. Ankete katılan erkek öğrencilerin %25’i tamamen katılıyorum, %18,75’i katılıyorum, %3,75’i kararsızım, %2,50’si katılmıyorum ve %1,25’i tamamen katılmıyorum yanıtını vermiştir

Tablo 8: Kinegram Metodu ile Organlarımız Konusu Aklımda Uzun Süreli Kaldı Maddesine Öğrencilerin Verdikleri Cevapların Yüzdelik Oranları

Ankete katılan 204 öğrenciden kız öğrencilerin “Kinegram metodu ile organlarımız konusu aklımda uzun süreli kaldı” maddesine kız öğrencilerin %15,69’u tamamen katılıyorum, %16,67’si katılıyorum, %10,29’u kararsızım, %5,39’u katılmıyorum ve %2,45’i tamamen katılmıyorum cevabını vermiştir. Ankete katılan erkek öğrencilerin %13,24’ü tamamen katılıyorum, %18,14’ü katılıyorum, %10,78’i kararsızım, %4,41’i katılmıyorum ve %2,94’ü tamamen katılmıyorum yanıtını vermiştir.

Tablo 9: Organlarımız ile İlgili Yaptığımız Kinegram Çalışmasını Çok Yaratıcı Buldum Maddesine Öğrencilerin Verdikleri Cevapların Yüzdelik Oranları

Ankete katılan 204 öğrenciden öğrencilerin “organlarımız ile ilgili yaptığımız kinegram çalışmasını çok yaratıcı buldum” maddesine kız öğrencilerin %22,06’sı tamamen katılıyorum, %17,65’i katılıyorum, %6,37’si kararsızım, %0,49’u katılmıyorum ve %1,96’sı tamamen katılmıyorum yanıtını vermiştir. Ankete katılan erkek öğrencilerin %21,08’i tamamen katılıyorum, %17,65’i katılıyorum, %6,37’si kararsızım, %3,92’si katılmıyorum ve %2,45’i tamamen katılmıyorum cevabını vermiştir.

Tablo 10: Kinegram Çalışması ile Biyoloji Dersi Temalarından Biri Olan Organlarımız Konusu Benim İçin Çok Eğlenceli Bir Çalışma Olduğundan Öğrenmemi Kolaylaştırdı Maddesine Öğrencilerin Verdikleri Yanıtların Yüzdelik Oranları

Ankete katılan 204 öğrenciden öğrencilerin “Kinegram çalışması ile biyoloji dersi temalarından biri olan organlarımız konusu benim için çok eğlenceli bir çalışma olduğundan öğrenmemi

kolaylaştırdı” maddesine kız öğrencilerin %17,16’sı tamamen katılıyorum, %18,63’ü katılıyorum, %6,37’si kararsızım, %3,92’si katılmıyorum ve %1,47’si tamamen katılmıyorum cevabını vermiştir. Ankete katılan erkek öğrencilerin %17,65’i tamamen katılıyorum, %19,61’i katılıyorum, %6,86’sı kararsızım, %5,88’i katılmıyorum ve %2,45’i tamamen katılmıyorum cevabını vermiştir.

Tablo 11: Hareketli Biyoloji Adlı Çalışma Biyoloji Dersinde Yer Alan Organlarımız Konusuna Dair Merakımı Arttırdı Maddesine Öğrencilerin Verdikleri Cevapların Yüzdelik Oranları

Ankete katılan 204 öğrenciden öğrencilerin “Hareketli biyoloji adlı çalışma biyoloji dersinde yer alan organlarımız konusuna dair merakımı arttırdı” maddesine kız öğrencilerin %17,65’i tamamen katılıyorum, %13,73’ü katılıyorum, %8,82’si kararsızım, %4,90’i katılmıyorum ve %3,43’ü tamamen katılmıyorum cevabını vermiştir. Ankete katılan erkek öğrencilerin %19,61’i tamamen katılıyorum, %14,71’i katılıyorum, %9,31’i kararsızım, %4,41’i katılmıyorum ve %3,43’ü tamamen katılmıyorum cevabını vermiştir.

Sonuç ve Tartışma

Hareketli biyoloji çalışması biyoloji dersinin daha eğlenceli geçmesine neden oldu maddesine katılımcı öğrencilerin %50’si tamamen katılıyorum ve %31,25’i katılıyorum yanıtını vermiştir. Bu da bize eğlenmek ve bir şeyleri eğlenceli hale getirmenin öğrenmek için harika bir yol olduğunu ve eğlenceli aktivitelerin doğal bir stres azaltıcı olduğu gerçeğini göstermiştir. Ayrıca uygulama öncesi öğrencilere sunduğumuz menti oylama aracında katılımcı öğrencilerin %17,6’sı biyoloji dersinde öğrenmeyi kolaylaştırmak için eğlenceli etkinlikler yapılmalı maddesini 4.sırada önemli bulmuşlardır.

Kinegram metodu ile organlarımız konusu uzun süreli aklımda kaldı maddesine öğrencilerin %28,92'si tamamen katılıyorum ve %34,80'i katılıyorum yanıtını vermiştir. Bu yeni öğrenmelerde öğrencilerin materyallerle etkileşime girebilmesinin öğrenci-içerik etkileşimini arttırdığından öğrencinin başarısını arttırdığı gerçeğini göstermektedir. Ayrıca uygulama öncesi öğrencilere sunduğumuz menti oylama aracında öğrencilerin %21,2'si oyunlar ile biyoloji dersi konuları aklımda uzun süre kalır maddesinin 3.sırada önemli bulmuşlardır.

Organlarımız ile ilgili yaptığımız kinegram çalışmasını yaratıcı buldum maddesine katılımcı öğrencilerin %43,14'ü tamamen katılıyorum ve %35,29'u katılıyorum yanıtını vermiştir. Bu bize öğrencilerin yaratıcı etkinliklerle eğlenerek öğrenmenin öğrenci başarısını olumlu yönde etkilediğini göstermektedir. Öğrencilere uygulama öncesi sunduğumuz menti oylama aracında da katılımcı öğrencilerin %13,2'si biyoloji dersinde öğrenmeyi kolaylaştırmak için yaratıcı çalışmalar yapılmalıdır maddesini 5.sırada önemli bulmuşlardır.

Hareketli biyoloji adlı çalışma biyoloji dersinde yer alan organlarımız konusu benim için çok eğlenceli bir çalışma olduğundan öğrenmemi kolaylaştırdı maddesine katılımcı öğrencilerin %34,80'i tamamen katılıyorum ve %38,24'ü katılıyorum yanıtını vermiştir. Bu da bize kalıcı öğrenmenin temelini eğlenceli ve öğretici etkinliklerin oluşturduğunu göstermektedir. Uygulama öncesi katılımcı öğrencilerimize sunduğumuz menti oylama aracında katılımcı öğrencilerin %25'i biyoloji dersinde eğlenceli etkinlikler öğrenmemi kolaylaştırır maddesini 1.sırada önemli bulmuşlardır.

Hareketli biyoloji adlı çalışma biyoloji dersinde yer alan organlarımız konusuna dair merakımı arttırdı maddesine katılımcı öğrencilerin %37,25'i tamamen katılıyorum ve %28,43'ü katılıyorum yanıtını vermiştir. Bu bize merak duygusunun itici bir güç olduğunu ve öğrencinin merak ettiği oranda öğrendiği gerçeğini göstermiştir. Ayrıca uygulama öncesi öğrencilere sunduğumuz menti oylama aracında katılımcı öğrencilerin %23'ü biyoloji dersinde öğrenmeyi kolaylaştırmak için eğlenceli etkinlikler derse merakımı artırır maddesini 2.sırada önemli bulmuşlardır.

Öneriler

Son yıllarda, anlamlı bilimsel bilgiyi öğretmek ve kavramsal anlayışı geliştirmek için sınıf içi etkinliklerin gözden geçirilmesi ihtiyacı, biyoloji öğretmenleri ve eğitim araştırmacıları arasında yaygın bir inançtır. Bu çalışmada kinegram (bariyer ızgara) tekniği ile herhangi bir harici araca gereksinim duymadan hareketli gifler(animasyonlar) oluşturarak iç organlarımız

konusu katılımcı öğrencilerimiz ile paylaşılmıştır. Amacımız kinegram metodu ile oluşturduğumuz animasyonların öğrencilerde biyoloji dersine yönelik algılarında olumlu bir değişikliğe neden olup olmadığını görmekti. Anket sonuçları kinegram adı verilen animasyon aracının öğrencilerde biyoloji dersine yönelik algılarında olumlu yönde bir değişikliğe neden olduğunu ortaya çıkarmıştır. Bizden sonraki çalışmaların kinegram (bariyer ızgara) tekniği dışında farklı uygulamalar ile benzer çalışmaları daha geniş bir katılımcı kitlesiyle yürütmeleri daha faydalı olacaktır. Bu araştırmanın örneklemini Adana ili genelinde ortaokul eğitimine devam eden 215 bilim ve sanat merkezi BYFP (Bireysel yetenekleri fark ettirme programı) ve ÖGYP (Özel Yetenekleri Geliştirme Programı) grubu öğrencisinden oluşmaktadır. Bizden sonraki çalışmalar benzer çalışmaları elektronik kitap ya da dergi haline getirerek daha büyük bir örneklem grubu ve farklı eğitim seviyeleri ile çalışabilirler.

Bu çalışmada biyoloji dersi temalarından biri olan iç organlarımız konusu belirlenmiş ve katılımcılarla interaktif kitapçıklarımız paylaşılmıştır. Gelecek çalışmalar farklı içerikleri esas alarak interaktif içerikler üretebilirler.

Pozitif Psikoloji Temelli Müdahalelerin Psikiyatri Hemşireliği Uygulamalarında Kullanımı

Mükerrem Kabataş Yıldız

Ondokuz Mayıs Üniversitesi, Sağlık Hizmetleri Meslek Yüksekokulu, Sağlık Bakım

Hizmetleri Bölümü, TÜRKİYE,

e-mail: mukerremkabatas@hotmail.com, Orcid No: 0000-0002-7598-162X

Özet

Pozitif psikoloji, bireylerin güçlü yönlerine, olumlu duygularına ve yaşam doyumuna odaklanarak psikolojik iyi oluşu destekleyen çağdaş bir yaklaşımdır. Bu yaklaşım yalnızca psikopatolojik belirtilerin azaltılmasını değil, bireyin yaşam kalitesinin ve içsel kaynaklarının geliştirilmesini de amaçlamaktadır. Geleneksel psikiyatrik uygulamalar genellikle semptom yönetimi ve işlevselliğin korunmasına odaklanırken, pozitif psikoloji temelli müdahaleler bireyin umut düzeyini, psikolojik dayanıklılığını, öz yeterlik algısını ve sosyal bağlarını güçlendirmeyi hedeflemektedir. Psikiyatri hemşireliği uygulamalarında bu müdahalelerin kullanımı, hastaların yalnızca tedavi süreçlerine katılımını değil, aynı zamanda psikolojik iyilik hallerinin güçlendirilmesini de sağlamaktadır. Literatürdeki çalışmalar; şükran günlüğü tutma, bireysel güçlü yönlerin fark edilmesi ve kullanılması, anlamlı yaşam hedefleri belirleme, öz şefkat geliştirme ve olumlu sosyal ilişkileri destekleme gibi uygulamaların depresyon, anksiyete ve stres düzeylerinde azalma sağladığını; bununla birlikte yaşam doyumu, umut ve genel iyi oluş üzerinde anlamlı düzeyde artışa neden olduğunu göstermektedir. Psikiyatri hemşireleri bu müdahaleleri bireysel ve grup temelli terapötik süreçlerde, hemşirelik bakım planlarında ve hasta eğitimi uygulamalarında etkili biçimde kullanabilmektedir. Bu yaklaşımla birlikte hemşire-hasta ilişkisi güçlenmekte, bakımın niteliği artmakta ve bireyin iyilik haline yönelik bütüncül bir yaklaşım sağlanmaktadır. Pozitif psikoloji temelli müdahalelerin psikiyatri hemşireliği uygulamalarına entegrasyonu, yalnızca hastalık yönetimini değil, aynı zamanda bireyin potansiyelini ortaya çıkaran, önleyici ve güçlendirici bir bakım anlayışını da beraberinde getirmektedir.

Anahtar kelimeler: pozitif psikoloji, psikiyatri hemşireliği, psikolojik iyi oluş, hemşirelik müdahaleleri

The Use of Positive Psychology-Based Interventions in Psychiatric Nursing Practice

Abstract

Positive psychology is a contemporary approach that supports psychological well-being by focusing on individuals' strengths, positive emotions, and life satisfaction. This approach aims not only to reduce psychopathological symptoms but also to enhance individuals' quality of life and internal resources. While traditional psychiatric practices primarily focus on symptom management and the maintenance of functionality, positive psychology-based interventions target strengthening individuals' levels of hope, psychological resilience, self-efficacy perception, and social connections. The use of these interventions in psychiatric nursing practice promotes not only patient engagement in treatment processes but also the enhancement of their psychological well-being. Studies in the literature have demonstrated that practices such as keeping a gratitude journal, recognizing and utilizing personal strengths, setting meaningful life goals, fostering self-compassion, and supporting positive social relationships lead to significant reductions in levels of depression, anxiety, and stress, while also resulting in notable increases in life satisfaction, hope, and overall well-being. Psychiatric nurses can effectively integrate these interventions into individual and group-based therapeutic processes, nursing care plans, and patient education practices. Through this approach, the nurse-patient relationship is strengthened, the quality of care improves, and a holistic approach to promoting individual well-being is achieved. The integration of positive psychology-based interventions into psychiatric nursing practices not only addresses disease management but also fosters a preventive and empowering model of care that aims to unlock the individual's potential.

Keywords: positive psychology, psychiatric nursing, psychological well-being, nursing interventions

Giriş

Psikiyatri hemşireliği, ruhsal sağlık sorunları yaşayan birey, aile ve toplumların bakım gereksinimlerine odaklanan, özel bir uzmanlık alanıdır (Hallaç & Demir, 2024). Psikiyatri hemşireliğindeki geleneksel yaklaşımlar, genellikle hastalık belirtilerinin yönetimi ve patolojik süreçlerin anlaşılması üzerinde yoğunlaşmıştır. Oysa günümüzde çağdaş yaklaşımlar, yalnızca semptomların ortadan kaldırılmasını değil, bireyin iyilik halinin, yaşam kalitesinin ve potansiyelinin artırılmasını da hedeflemektedir. Bu doğrultuda, pozitif psikoloji temelli müdahaleler, güncel psikiyatri hemşireliği uygulamalarını zenginleştirerek önemli bir kaynak olarak öne çıkmaktadır (Güleç, 2019).

Psikiyatri Hemşireliği ve Güncel Yaklaşımlar

Psikiyatri hemşireliği, bireyi benzersiz, bütüncül ve kişilerarası iletişime dayalı bir yaklaşımla ele alan; hümanistik felsefeyi temel alan bir bilim ve sanat dalıdır (Hallaç & Demir, 2024). Bu yaklaşım, hemşireliğin yalnızca hastalık belirtilerini tedavi eden mekanik bir süreç olmadığını; bireyin duygusal, sosyal, bilişsel ve ruhsal boyutlarını bir bütün olarak ele alan, insan onuruna saygılı bir bakım anlayışını yansıttığını ortaya koymaktadır. Psikiyatri hemşireliğinin temel felsefesi, bireyin içsel kaynaklarını ve güçlü yönlerini keşfetmesini desteklemek, iyileşme sürecinde aktif rol almasına ve toplumsal yaşama yeniden uyum sağlamasına destek olmaktır (Güleç, 2019; Topbaş & Şimşek, 2024).

Ruh sağlığı ve psikiyatri hemşirelerinin etkili bakım sunabilmeleri için öncelikle kendilerini tanımaları, önyargı ve değer yargılarının farkında olmaları, bakım verdikleri bireylerle empati kurabilmeleri gerekmektedir (Orak & Tunç, 2024). Bu öz-farkındalık ve empati becerisi, terapötik ilişkinin temelini oluşturmaktadır. Güvenli ve destekleyici bir terapötik ortam, hasta bireyin kendisini ifade etmesini, duygularını paylaşmasını ve değişim için motive olmasını kolaylaştırmaktadır. Bu özellikler, bireyin içsel deneyimlerine ve güçlü yönlerine odaklanan pozitif psikoloji temelli müdahalelerin etkili bir şekilde uygulanması açısından kritik bir öneme sahiptir. Psikiyatri hemşireliğinin hümanistik ve bütüncül yaklaşımı, pozitif psikolojinin iyilik halini ve bireysel güçlü yönleri temel alan ilkeleriyle doğal bir uyum içindedir. Bu uyum, pozitif psikoloji temelli müdahalelerin psikiyatri hemşireliği uygulamalarına entegrasyonunu kolaylaştırmakta ve potansiyel etkilerini artırmaktadır (Güleç, 2019; Topbaş & Şimşek, 2024; Orak & Tunç, 2024).

Pozitif Psikoloji ve Psikiyatri Alanındaki Önemi

Pozitif psikoloji, insan işlevselliğinin olumlu yönlerini bilimsel olarak araştıran psikolojinin bir alt dalıdır. Bu disiplin, 2000'li yılların başında Seligman ve arkadaşları tarafından yeni bir alan olarak tanımlanmıştır (Demir & Türk, 2020). Geleneksel psikolojinin ağırlıklı olarak zihinsel hastalıklara, travmalara ve eksikliklere odaklanmasına bir tepki olarak ortaya çıkan pozitif psikoloji, odağını bireylerin ve toplumların gelişimini sağlayan güçlü yönlere, erdemlere, olumlu duygulara, anlama ve amaca çevirmiştir (Güleç, 2019). Bu alanın temel felsefesi, sadece hastalıkların yokluğuna değil, aynı zamanda bireyin psikolojik iyi oluşunu, mutluluğunu ve yaşam doyumunu aktif olarak artırmayı hedeflemektedir (Demir & Türk, 2020; Dhanabhakya & Sarath, 2023).

Psikolojik iyi oluş, pozitif psikolojinin merkezinde yer alan bir kavramdır. Pozitif duygular, özerklik, olumlu ilişkiler, yaşam amacı, yaşam doyumu ve kişisel gelişim gibi çeşitli bileşenleri

içermektedir (Güleç, 2019; Dhanabhakyaam & Sarath, 2023). Psikolojik iyi oluş; bireyin kendi potansiyelini fark ettiği, yaşamın olağan stresleriyle baş edebildiği, üretken bir şekilde çalışabildiği ve topluma katkı sağlayabildiği bir durum olarak tanımlanmaktadır (Dhanabhakyaam & Sarath, 2023). Bu tanım, pozitif psikolojinin hedeflerinin; bireyin işlevselliğini yeniden kazanmasını, yaşam kalitesini artırmasını ve topluma uyumunu sağlamayı amaçlayan psikiyatrik bakım ile örtüştüğünü açıkça göstermektedir (Güleç, 2019). Pozitif psikolojinin psikiyatri alanındaki önemi, hastalık odaklı modelin sınırlamalarını aşarak; bireyin güçlü yönlerini ve mevcut kaynaklarını kullanarak iyileşme sürecine katkı sağlamasında yatmaktadır. Bu yaklaşım; damgalanmayı azaltabilir, umudu artırabilir ve bireylerin kendi iyilik halleri üzerinde daha fazla kontrol sahibi olmalarına destek olabilir (Güleç, 2019; Dhanabhakyaam & Sarath, 2023).

Pozitif Psikoloji Temelli Müdahalelerin Psikiyatri Hemşireliği Uygulamalarında Kullanımı

Pozitif psikoloji, psikiyatri hemşireliği uygulamalarına entegre edilebilecek zengin bir müdahale yelpazesi sunmaktadır. Bu müdahaleler; bireylerin güçlü yönlerini keşfetmelerini, olumlu duygularını artırmalarını, yaşamlarına anlam kazandırmalarını ve karşılaştıkları zorluklarla daha etkili bir şekilde başa çıkmalarını desteklemeyi amaçlamaktadır (Güleç, 2019).

1. Güçlü Yönler/Karakter Güçleri Temelli Yaklaşımlar

Güçlü yönler temelli yaklaşımlar, bireylerin eksiklikleri, sorunları veya patolojileri yerine; sahip oldukları güçlü yönlerine, yeteneklerine, becerilerine ve içsel kaynaklarına odaklanmaktadır (Peterson & Seligman, 2004). Bu yaklaşımın temel felsefesi, her bireyin doğuştan gelen ya da sonradan geliştirdiği güçlü yönlerinin bulunduğu ve bu güçlerin iyileşme ile kişisel gelişimlerinde temel araçlar olarak kullanılabileceğidir. Psikiyatri hemşireliğinde güçlü yönler temelli bir yaklaşım benimsemek; hasta bireylerin iyileşme sürecine daha aktif katılım göstermelerini, özsaygı ve öz-yeterlilik duygularını artırmalarını amaçlamaktadır (Demir ve ark., 2022).

Hemşireler, VIA Karakter Güçleri Envanteri gibi standardize edilmiş araçları kullanarak ya da daha yaygın olarak terapötik görüşmeler ve gözlemler aracılığıyla hastaların güçlü yönlerini belirlemelerine yardımcı olabilirler. Bu süreçte önemli olan yalnızca güçlü yönleri belirlemek değil; hastanın bu güçleri geçmişte nasıl kullandığını, şu anki zorluklarla başa çıkmada nasıl işe yarayabileceğini ve gelecekteki hedeflerine ulaşmada nasıl bir rol oynayabileceğini birlikte keşfetmektir (Macfarlane & Carson, 2023). Nitekim, bir hastanın “azim” gücü, tedavi planına

uyum sağlama ve zorlu terapi süreçlerini sürdürme açısından; “nezaket” veya “sosyal zeka” gücü, sosyal destek sistemlerini güçlendirme ve kişilerarası ilişkileri iyileştirme açısından; “umut” gücü ise geleceğe yönelik olumlu bir bakış açısı geliştirme açısından etkili olabilir. Hemşireler, hastaları bu güçlü yönlerini günlük yaşamlarında ve sorunlarla başa çıkmada bilinçli olarak kullanmaları için teşvik edebilir ve onlara bu konuda rehberlik edebilirler (Peterson & Seligman, 2004; Macfarlane & Carson, 2023).

2. Mindfulness (Bilinçli Farkındalık) Temelli Müdahaleler

Mindfulness (bilinçli farkındalık), dikkatin kasıtlı olarak, yargısız bir şekilde ve şefkatle şimdiki ana yönlendirilmesi becerisidir (Penque, 2019). Bu pratik, bireylerin düşüncelerinin, duygularının ve bedensel duyularının farkına varmalarını, ancak onlara kapılıp gitmeden veya onları değiştirmeye çalışmadan gözlemlmelerini içermektedir (Atalay, 2018). Mindfulness temelli müdahalelerin, stres, anksiyete ve depresyon belirtilerini azaltmada, duygu düzenleme becerilerini geliştirmede ve psikolojik iyi oluşu artırmada etkili olduğu bildirilmektedir (Kabat-Zinn, 2003; Atalay, 2018; Penque, 2019).

Psikiyatri hemşireleri, bakım verdikleri bireylere nefes farkındalığı, beden taraması, bilinçli yeme ve bilinçli yürüme gibi basit mindfulness egzersizlerini öğretebilirler. Bu egzersizler, hasta bireylerin dikkatlerini dağıtan düşünce ve bunaltıcı duygulardan uzaklaşmalarına, şimdiki ana odaklanmalarına ve içsel bir sakinlik duygusu geliştirmelerine yardımcı olabilmektedir (Penque, 2019). Daha yapılandırılmış müdahaleler arasında; John Kabat-Zinn tarafından geliştirilen Mindfulness Temelli Stres Azaltma (MBSR) programı ile depresyonun nüksünü önlemek amacıyla geliştirilen Mindfulness Temelli Bilişsel Terapi (MBCT) yer almaktadır (Kabat-Zinn, 2003; Atalay, 2018). Psikiyatri hemşireleri, uygun hastaları bu tür programlara yönlendirebilir veya bu programların temel ilkelerini kendi bakım uygulamalarına entegre edebilirler. Mindfulness aynı zamanda, öz-şefkatin temel bileşenlerinden biri olarak kabul edilmektedir. Çünkü bireyin şimdiki an deneyimine yargısız ve kabul edici bir tutumla yaklaşması, kendine karşı nazik ve anlayışlı olmanın psikolojik temelini oluşturmaktadır (Yıldız ve ark., 2025).

3. Kabul ve Kararlılık Terapisi (ACT) Uygulamaları

Kabul ve Kararlılık Terapisi (ACT), üçüncü dalga davranışçı terapilerden biri olup temel amacı psikolojik esnekliği artırmaktır (Teze ve ark., 2025). Psikolojik esneklik, bireylerin acı veren, zorlayıcı düşünce ve duygularıyla savaşmak, onlardan kaçınmak veya onları kontrol etmeye çalışmak yerine, onları kabul etmelerine ve kişisel olarak önemli buldukları değerleri

doğrultusunda anlamlı eylemlerde bulunmalarına yardımcı olmaktadır (Aggarwal ve ark., 2023). ACT, bireylerin kaçınma davranışlarını (zorlayıcı duygulardan kaçınmak amacıyla sosyal izolasyon, madde kullanımı) azaltmayı hedeflemektedir. Bu tür davranışlar, uzun vadede sorunları daha da kötüleştirebilir ve bireyin değerleriyle uyumlu bir yaşam sürmesini engelleyebilir (Tunç ve ark., 2025).

ACT'nin, yaygın anksiyete bozukluğu gibi durumlarda bilişsel kaçınmayı azaltma ve işlevsel başa çıkma tutumlarını geliştirme açısından olumlu etkiler sağlayabileceği belirtilmektedir. Ayrıca kronik ağrı, depresyon, obsesif-kompulsif bozukluk ve beden imajı sorunları gibi çeşitli psikiyatrik ve psikolojik durumların tedavisinde de umut vaat eden bir yaklaşım olarak değerlendirilmektedir (Aggarwal ve ark., 2023). Psikiyatri hemşireleri, ACT'nin temel ilkeleri olan kabul, bilişsel ayrışma, şimdiki anla temas, bağlamsal benlik, değerler ve kararlı eylemi bireysel danışmanlık veya grup terapileri şeklinde uygulayabilirler. Ayrıca, ACT temelli psikoeğitim programları aracılığıyla hastaların bu becerileri öğrenmelerine ve günlük yaşamlarına entegre etmelerine destek olabilirler (Aggarwal ve ark., 2023; Tunç ve ark., 2025).

4. Mümkün Olan En İyi Benlik Egzersizi

Mümkün Olan En İyi Benlik egzersizi, bireyin gelecekte belirli bir zamanda (örneğin beş yıl sonra), her şeyin kendisi için en iyi şekilde gittiğini, önemli hedeflerine ulaştığını ve hayallerini gerçekleştirdiğini hayal etmesini sağlamaktadır. Egzersiz, bu ideal gelecekteki benliğin ayrıntılı bir şekilde yazılı olarak ifade edilmesini içeren, basit ancak etkili pozitif psikoloji temelli bir müdahale yöntemidir (Heckerens & Eid, 2021). Bu uygulamanın temel amacı, olumlu duygulanımı artırmak ve özellikle geleceğe yönelik olumlu beklentiler olarak tanımlanan iyimserliği güçlendirmektir (Loveday ve ark., 2018; Carrillo ve ark., 2019).

Araştırmalar, Mümkün Olan En İyi Benlik egzersizinin olumlu duygular ve iyimserlik düzeylerini artırmada etkili olduğunu göstermektedir. Ayrıca, depresif belirtiler ve ruminatif düşünceler üzerinde de potansiyel olarak olumlu ve tamponlayıcı etkiler yaratabileceği belirtilmektedir (Loveday ve ark., 2018). Bu egzersizin uygulanması oldukça kolaydır ve özel bir uzmanlık ya da materyal gerektirmez. Bu özelliği, psikiyatri hemşirelerinin bu egzersizi ruhsal durumu destekleme ve olumlu beklenti oluşturma aracı olarak hastalara sunabilmelerini mümkün kılmaktadır (Carrillo ve ark., 2019). Egzersizin etkileri genellikle müdahalenin hemen ardından daha belirgin hale gelmektedir. Bu nedenle, anlık moral yükseltme veya olumlu bir zihinsel çerçeve oluşturma amacıyla etkili bir şekilde kullanılabilir. Ancak, uzun süreli ve kalıcı etkiler elde edebilmek için Mümkün Olan En İyi Benlik egzersizinin tekrarlanması,

diğer pozitif psikoloji müdahaleleriyle birleştirilmesi veya daha kapsamlı bir terapi planının parçası olarak uygulanması önerilmektedir (Loveday ve ark., 2018).

5. Minnettarlık ve Affetme Çalışmaları

Minnettarlık, yaşamda var olan olumlu durumların farkına varma, bunları takdir etme ve bu iyiliklerin kaynağını (başkaları, doğa, daha yüksek bir güç vb.) tanıma duygusudur. Minnettarlık müdahaleleri; şükran günlüğü tutma, minnettarlık mektubu yazma ve minnettarlık meditasyonları gibi pratikleri içermektedir (Demirci & Anlı, 2022). Bu tür müdahalelerin, pozitif duyguları artırdığı, yaşam doyumunu yükselttiği, stresi azalttığı ve kişilerarası ilişkileri güçlendirdiği bildirilmektedir (Acar, 2022). Affetme ise, bireyin bir haksızlığa ya da incinmeye maruz kaldıktan sonra; kırgınlık, öfke ve intikam gibi duyguları serbest bırakması ve faili (ya da kendisini) bu olumsuz duygusal bağlardan özgürleştirme sürecidir. Affetme, yapılan haksızlığı onaylamak ya da unutmak anlamına gelmemektedir Tam tersine bireyin kendi iç huzuru ve psikolojik iyilik hali için bu duygusal yüklerden arınmasını ifade etmektedir (Güven & Erdem, 2020). Affetme temelli terapötik yaklaşımlar, bireylerin geçmişte yaşadıkları incinmeleri işlemelerine, olumsuz duygularla başa çıkmalarına ve ilişkilerini onarmalarına ya da daha sağlıklı bir şekilde sonlandırmalarına yardımcı olabilmektedir (Demirci & Anlı, 2022). Psikiyatri hemşireleri, bakım verdikleri bireyleri minnettarlık uygulamalarını günlük yaşamlarına entegre etmeye teşvik edebilir ve uygun durumlarda affetme sürecini keşfetmeleri için destekleyici bir terapötik ortam sunabilirler.

Tartışma ve Sonuç

Pozitif psikoloji temelli müdahaleler, psikiyatri hemşireliği uygulamalarına yenilikçi ve güçlendirici bir boyut kazandırmaktadır. Bu müdahalelerin, depresyon ve anksiyete belirtilerini azaltabileceği; yaşam memnuniyeti ve umut düzeylerini artırabileceği belirtilmektedir (Güleç, 2019; Penque, 2019; Dhanabhakya & Sarath, 2023). Özellikle hafif ve orta düzeydeki ruhsal sorunlarda pozitif psikoloji temelli müdahalelerin etkili olduğu, daha ağır klinik durumlarda ise geleneksel tedavilere ek bir destek olarak uygulanmasının uygun olabileceği önerilmektedir (Dhanabhakya & Sarath, 2023). Bu müdahalelerin en önemli katkılarında biri, hastaların öz-yeterlilik duygusunu artırmalarıdır. Bu da onların iyileşme ve psikolojik iyi oluş süreçlerinde daha aktif bir rol üstlenmelerini sağlamaktadır. Nitekim minnettarlık günlüğü tutan bir hasta, her gün olumlu bir eylemde bulunarak duygudurumunu kendi çabasıyla düzenlemeyi öğrenebilir. Benzer şekilde, öz-şefkat pratiği yapan bir birey, zorlayıcı anlarda kendine nasıl destek olacağını fark edebilir. Bu tür kazanımlar, uzun vadede nükslerin önlenmesi, yaşam

kalitesinin artırılması ve sürdürülmesi açısından önemli katkılar sağlayabilir (Güleç, 2019; Dhanabhakyaam & Sarath, 2023). Bu kazanımlar, pozitif psikoloji temelli müdahalelerin bağımsız tekniklerden ibaret olmadığının aksine, birbirini tamamlayan ve bütüncül hemşirelik bakımına uyarlanabilir yapılar taşıdığını ortaya koymaktadır.

Bu çeşitli pozitif psikoloji müdahaleleri, birbirini dışlayan seçenekler olmaktan çok, genellikle birbirini tamamlayıcı niteliktedir ve hastanın bireysel ihtiyaçlarına, tercihlerine ve içinde bulunduğu duruma göre bir arada uygulanabilir. Bu bağlamda, mindfulness becerileri, Kabul ve Kararlılık Terapisi (ACT) süreçlerine katılımı destekleyebilir veya karakter güçleri farkındalığını artırabilir. Benzer şekilde, güçlü yönler temelli bir yaklaşım, bireyin Mümkün Olan En İyi Benlik egzersizine katılma konusundaki motivasyonunu artırabilir. Bu nedenle, psikiyatri hemşirelerinin çeşitli pozitif psikoloji müdahalelerini içeren bir “alet çantasına” sahip olmaları; bu müdahaleleri hastanın gereksinimlerine göre esnek bir şekilde uyarlama ve birleştirme becerisi geliştirmeleri önem taşımaktadır (Güleç, 2019; Heekerens & Eid, 2021).

Ayrıca, Mümkün Olan En İyi Benlik egzersizi ya da güçlü yönler alıştırmaları gibi bazı müdahalelerin uygulama kolaylığı, zaman ve kaynakların sınırlı olduğu psikiyatri hemşireliği ortamlarında önemli bir avantaj sunmaktadır (Heekerens & Eid, 2021; Dhanabhakyaam & Sarath, 2023). Bu tür erişilebilir müdahaleler, pozitif psikoloji temelli müdahalelerin psikiyatri hemşireliği uygulamalarına rutin ve sürdürülebilir şekilde entegrasyonu için etkili bir başlangıç noktası olarak hizmet edebilir.

Ortaokul Öğrencilerinin Gözünden İyi Bir Türkçe Dersi ve Öğretmeni

From the Perspective of Middle School Students: A Good Turkish Lesson and Teacher

Özet

Bu çalışma, Kuzey Kıbrıs Türk Cumhuriyeti’nde ortaokul öğrencilerinin bakış açısından “iyi bir Türkçe dersi” ve “iyi bir Türkçe öğretmeni” kavramlarını değerlendirmeyi amaçlamaktadır. Öğrencilerin anadili becerilerinin gelişimini etkileyen Türkçe derslerinin niteliğinin artırılması için öğrenci görüşlerinin dikkate alınması gereklidir. Kuramsal çerçevede yapılandırmacı yaklaşım, çoklu okuryazarlık, iletişimsel dil öğretimi ve öğretmen yeterlikleri ele alınmış, etkili bir Türkçe öğretiminin bu bileşenler üzerinden yapılandırılması gerektiği vurgulanmıştır. Araştırma, Lefkoşa’da özel bir okulda öğrenim gören ortaokul öğrencilerinden kompozisyon yazdırma yoluyla veri toplanarak nitel araştırma yaklaşımıyla yürütülmüştür. Veriler içerik analiziyle çözümlenmiş, temalar belirlenmiştir. Araştırma bulgularına göre öğrenciler, iyi bir Türkçe dersini eğlenceli, etkileşimli, sessiz ve güvenli bir ortamda gerçekleşen ders olarak tanımlamaktadır. İyi bir Türkçe öğretmeni ise öğrenciler tarafından sabırlı, anlayışlı, oyunla öğreten, akademik yeterliğe sahip, saygılı iletişim kuran ve öğrencileri bireysel olarak tanıyıp destekleyen biri olarak tanımlanmıştır. Özellikle eğlenceli ders işleme, kitap okuma alışkanlığı kazandırma, etkili anlatım ve empati kurma gibi nitelikler ön plana çıkmıştır. Araştırma sonuçlarına göre, Türkçe eğitiminde öğrenci merkezli ve etkileşimli öğretim anlayışlarının temel alınması önerilmiş ve Türkçe derslerinin niteliğini artırmak için öğrenci görüşlerinin sıklıkla temel alınması gerektiği üzerinde durulmuştur.

Anahtar sözcükler: Türkçe eğitimi, Türkçe dersi, Türkçe öğretmeni, ortaokul düzeyi, Kuzey Kıbrıs.

Abstract

This study aims to evaluate the concepts of “a good Turkish lesson” and “a good Turkish teacher” from the perspective of middle school students in the Northern Cyprus. To enhance the quality of Turkish lessons, which play a crucial role in the development of students' native language skills, it is essential to consider students' opinions. Within the theoretical framework, the study addresses the constructivist approach, multiple literacies, communicative language

teaching, and teacher competencies, emphasizing that effective Turkish language instruction should be structured around these components. The research was conducted using a qualitative approach, collecting data through composition writing by middle school students attending a private school in Nicosia. The data were analyzed through content analysis, and themes were identified. According to the findings, students define a good Turkish lesson as fun, interactive, and held in a quiet and safe environment. A good Turkish teacher, on the other hand, is described as patient, understanding, someone who teaches through games, possesses academic competence, communicates respectfully, and recognizes and supports students individually. Notably, characteristics such as conducting enjoyable lessons, fostering reading habits, effective expression, and showing empathy were highlighted. Based on the results, the study suggests that student-centered and interactive teaching approaches should form the basis of Turkish language education, and emphasizes that student feedback should frequently be used to improve the quality of Turkish lessons.

Keywords: Turkish education, Turkish course, Turkish teacher, middle school level, Northern Cyprus.

Giriş

Türkçe, öğrencilerin hem okul hem de günlük yaşamında başarılı olabilmesi için temel bir araçtır. Anlama ve anlatma becerilerinin gelişimi doğrudan anadili eğitimiyle ilişkilendirilmektedir. Etkili anadili eğitimi alan birey, yalnızca dil gelişimini sağlayan ve dili başarılı kullanabilen biri değildir; aynı zamanda sorgulayan, tartışan, problem çözen, karar veren kısacası düşünen ve üreten bir kişilik geliştirmektedir (Ahmad, 2024; Khan, 2016; Sakaryalı, Bal & Yıldırım, 2024). Türkçe dersi, öğrencilerin dinleme, konuşma, okuma ve yazma becerilerini geliştirerek onların yaşamları boyunca gereksinim duyacakları yetileri kazanmalarını sağlamaktadır. Anadilini hedeflenen düzeyde geliştiremeyen bir öğrencinin okul öğrenmelerinde ve tüm derslerde güçlükler yaşaması olasıdır (Güneyli ve diğerleri, 2010).

Günümüzde Türkçe öğretiminin güncel sorunları üzerine yapılan çalışmalar, kimi önemli bulguların varlığına dikkat çekmektedir. Uluslararası niteliği olan OECD PISA uygulaması değerlendirildiğinde, Türkiye’deki öğrencilerin okuduğunu anlama becerilerinin birçok ülkenin gerisinde olduğu ortaya çıkmıştır (Aydın, Erdağ ve Taş, 2011). Bu sonuç, anadili olarak Türkçe öğretiminde ciddi eksikler olduğuna işaret etmektedir. Alanyazın incelendiğinde, Türkçe öğretimindeki sorunların nedeninin, geleneksel yöntemlerle işlenen ezberci ve öğretmen merkezli ders uygulamalarından kaynaklandığı belirtilmektedir (Demir ve Yapıcı, 2007). Geleneksel Türkçe derslerinde öğretmenin mutlak otorite olması, ders

kitaplarına aşırı bağlı kalınması, öğrencilerin sadece pasif dinleyici konumunda tutulması ve eleştirel düşünmeye yeterince yer verilmemesi gibi etkenlerin öğrenme sürecini olumsuz etkilediği ortaya konmuştur (Köroğlu ve Balcı, 2022). Araştırma bulguları, Türkçe öğretmenlerinin kendilerini yenileyememesi ve etkili öğretim yöntemlerini kullanmamaları nedeniyle anadili olarak Türkçe öğretiminde bu sorunların görüldüğünü ortaya koymaktadır (Bozbıyık, 2018). Bu bulgular, Türkçe eğitiminde yöntem ve yaklaşım değişikliğinin gerekliliğine işaret etmektedir.

Türkçe öğretiminde sözü edilen problemleri ortadan kaldırmak amacıyla Türkiye’de Milli Eğitim Bakanlığı 2005 yılından itibaren eğitim programlarında köklü yeniliklere gitmiştir. 20. yüzyılın geleneksel eğitim anlayışıyla yeni yüzyılın bireylerinin yetiştirilemeyeceği görüşünden hareketle geliştirilen yeni Türkçe öğretim programları, yapılandırmacı öğrenme yaklaşımını temel alacak şekilde düzenlenmiştir. Böylece öğrenci merkezli öğrenme temel alınmış; çoklu okuryazarlık becerileri ve iletişim odaklı etkinlikler eğitim programlarına yansıtılmıştır (Arslan, 2009). Bu değişimin amacı, öğrencilerin anadilini etkili kullanarak aktif öğrenen bireyler olarak yetişmelerini sağlamak ve onları bilgi çağının gerektirdiği becerilerle donatmaktır. Ancak eğitim programlarındaki bu yeniliklerin sınıf ortamına yansması, büyük ölçüde Türkçe öğretmenlerinin yeterliklerine ve derse yaklaşımına bağlıdır (İskender, Yiğit ve Bektaş, 2015). Dolayısıyla “iyi bir Türkçe dersi nasıl olmalı” ve “iyi bir Türkçe öğretmeni kimdir” sorularının, güncel kuramsal yaklaşımlar ve öğrenci beklentileri çerçevesinde incelenmesi kritik bir ihtiyaçtır.

Alanyazındaki son çalışmalar incelendiğinde, etkili bir Türkçe öğretimine ilişkin vurgulanan konular özetle şöyledir: Türkçe öğretiminde dil becerilerinin bütünsel gelişimi esas alınmalı; okuma, yazma, konuşma ve dinleme becerileri dengeli biçimde geliştirilerek birbirini destekleyecek şekilde planlanmalıdır. Öğretim sürecinde öğrenci merkezli yaklaşımlar benimsenmeli, öğrencilerin aktif katılımını sağlayan etkinliklere yer verilmeli ve bireysel farklılıklar dikkate alınmalıdır. Dilin işlevsel kullanımına önem verilerek günlük hayatta kullanılabilir beceriler kazandırılmalı, bu amaçla otantik materyaller (gazete, dergi, sosyal medya içerikleri vb.) kullanılmalıdır. Dil öğretimi, kültürel bağlamdan bağımsız düşünülmemelidir; bu nedenle Türk dili ve edebiyatının kültürel boyutu ele alınmalı ve öğretimde kültürel öğelere yer verilmelidir (Aslan, 2017).

Teknoloji entegrasyonu çerçevesinde dijital araçlar ve çevrimiçi öğrenme platformları etkili şekilde kullanılmalı, ders süreçlerine dahil edilmelidir. Değerlendirme süreci, süreç odaklı yaklaşımlarla yürütülmeli; öğrencilere düzenli ve yapıcı geri bildirimler sağlanmalıdır.

Dilbilgisi öğretimi, kuralların bağlam içinde ve iletişimsel yaklaşımla bütünleştirilerek sunulması esasına dayanmalıdır. Öğrencilere farklı metin türlerini tanıma ve üretme imkânı verilmeli, Türk edebiyatından seçkin eserler ders içeriklerine dahil edilmelidir (Dilekçi, 2022).

Ayrıca, eleştirel düşünme becerilerini geliştiren etkinliklere yer verilmeli, öğrencilerin yaratıcı yazma ve konuşma çalışmaları teşvik edilmelidir. Son olarak, disiplinlerarası bir yaklaşımla Türkçe dersi diğer derslerle ilişkilendirilmeli ve farklı disiplinlerden konular dil öğretimine entegre edilmelidir (Şahbaz ve Çekici, 2012).

Araştırmada etkili Türkçe öğretimi gerçekleştirmenin önemli bir bileşeni olan Türkçe öğretmenin özelliklerini değerlendirmek de amaçlanmıştır. İyi bir Türkçe öğretmenin kim olduğu sorusundan hareketle 21. yüzyılda Türkçe öğretmenlerinin, geleneksel rol ve sorumlulukların yanı sıra, değişen öğrenci ve toplum ihtiyaçlarına cevap verebilecek şekilde teknoloji okuryazarlığı, öğrenci merkezlik, yenilikçilik ve uluslararası bakış açısına sahip olmalarının beklendiği görülmektedir (Mete, 2021a; Tunagür ve Aydın, 2021)

Türkçe öğretmenliği, dil, edebiyat ve sanatın inceliklerini öğrencilere aktarmayı özellikle de duygu ve düşüncelerini etkili bir biçimde aktarabilmeyi hedefler (Güneş, 2025). Bu bağlamda 21. yüzyıl Türkçe öğretmeni, geleneksel öğretim yöntemlerinin ötesine geçerek öğrenci merkezli ve interaktif öğrenme ortamları oluşturmalıdır (Belet-Boyacı ve Güner-Özer, 2019). İyi bir Türkçe öğretmenin sahip olması gereken özelliklerin başında güçlü alan bilgisi gelmektedir. Türk dili ve edebiyatına hâkim olmanın yanı sıra, dilbilim ve eğitim bilimleri konusunda da yetkin olmalıdır (Yalap, Demirgüneş ve Akay, 2020). Ayrıca, teknolojik yeterliliklere sahip olması, dijital kaynakları etkili bir şekilde kullanabilmesi ve öğrencileri 21. yüzyıl becerilerine hazırlaması beklenmektedir (Bal, 2018).

Etkili kişilik özellikleri, bir Türkçe öğretmenin sahip olması gereken diğer önemli bir özelliktir. Öğrencilerle empati kurabilmeli, onları aktif dinlemeli ve yapıcı geri bildirimler verebilmelidir (Göçer, 2014). Bu bağlamda, sınıf yönetimi becerileri de önem kazanmaktadır. Öğrencilerin bireysel farklılıklarını göz önünde bulundurarak, kapsayıcı bir öğrenme ortamı oluşturmalıdır (Gümüş, 2016). 21. yüzyıl Türkçe öğretmeni, sürekli öğrenme ve kendini geliştirme motivasyonuna sahip olmalıdır. Eğitim alanındaki yeni yaklaşımları takip etmeli, mesleki gelişim faaliyetlerine katılmalı ve öğretim yöntemlerini güncel tutmalıdır (Yurtseven-Yılmaz ve Gülçiçek, 2022). Ayrıca, disiplinler arası bir bakış açısına sahip olarak Türkçe dersini diğer alanlarla ilişkilendirerek zenginleştirmelidir.

Sonuç olarak, 21. yüzyılda Türkçe öğretmeni olmak, sadece dil bilgisi ve edebiyat öğretmekle sınırlı kalmamakta, öğrencilerin çok yönlü gelişimini destekleyen bir rehber olmayı

gerektirmektedir. İyi bir Türkçe öğretmeni, güçlü alan bilgisi, teknolojik yeterlilikler, etkili iletişim becerileri ve sürekli gelişim motivasyonu ile öğrencilerin dil becerilerini geliştirirken aynı zamanda onların eleştirel düşünme, yaratıcı problem çözme ve dijital okuryazarlık gibi 21. yüzyıl becerilerini de kazanmalarına yardımcı olmalıdır (Dilekçi ve Karatay, 2021). Bu bağlamda, Türkçe öğretmenleri, değişen eğitim paradigmalarına uyum sağlayarak, öğrencileri geleceğin zorluklarına hazırlayan birer eğitim lideri olma sorumluluğunu taşımaktadır.

Türkçe dersi, öğrencilerin okul türü öğrenmeler ile dil becerilerini geliştirmede, dolayısıyla yaşam becerilerini kazandırmada kilit rol oynadığı halde, öğretme-öğrenme sürecinde gözlenen güçlükler anadili öğretiminin etkililiğini ve öğrenci başarısını sınırlamaktadır. Güncel çalışmalar, Türkçe derslerinin niteliğini artırmak ve öğretmen yeterliklerini geliştirmek için hem öğrenci hem de öğretmen bakış açılarının dikkate alınmasının gerektiğini göstermektedir. Bu çalışmada öğrenci görüşlerinden hareket edilmiştir ve iyi bir Türkçe dersi ve öğretmenin tanımı ile ilişkin kapsamlı bir anlayış geliştirmek amaçlanmıştır. İyi bir Türkçe dersi ve öğretmene ilişkin öğrenci görüşleri temel alınır ve öğretim ortamlarının iyileştirilmesi için bir zemin oluşturulabilir ve öğrenci başarısında artış sağlanabilir. Ortaokul öğrencilerinin perspektifinden bu konunun ele alınmasının, alanyazına katkı sağlayacağı düşünülmektedir. Şimdiye kadar yapılan çalışmaların birçoğu öğretmen ve öğretmen adaylarının görüşlerine odaklanırken (Arslan, 2016; Özçelik, 2022), öğrencilerin neyin “iyi” olduğunu nasıl tanımladıklarına daha az ışık tutulmuştur (Dinçel & Yılmaz, 2018; Taşgın, İleritürk & Köse, 2018). Bu araştırma, öğrencilerin sesini duyurarak hem alanyazına katkı sunmayı hem de uygulamaya yönelik çıkarımlarla Türkçe öğretiminin niteliğine katkıda bulunmayı hedeflemektedir. Bu bağlamda, araştırmanın temel soruları şu şekilde belirlenmiştir:

1. Ortaokul öğrencilerine göre iyi bir Türkçe dersi nasıl olmalıdır?
2. Ortaokul öğrencilerine göre iyi bir Türkçe öğretmeni nasıl olmalıdır?

Kuramsal Çerçeve

Bu bölümde, iyi bir Türkçe dersine ilişkin kuramsal çerçeveyi ele almak amacıyla yapılandırmacı yaklaşım, çoklu okuryazarlık, öğrenci merkezli öğrenme ve iletişimsel yaklaşım kavramları üzerinde durulmuş; bu yaklaşımların Türkçe dersi uygulamalarına etkileri açıklanmıştır. Ayrıca iyi bir Türkçe dersinin öğretmen yeterlikleriyle nasıl örtüştüğü değerlendirilmiştir.

Yapılandırmacı ve Öğrenci Merkezli Öğrenme Yaklaşımı

Yapılandırmacı yaklaşım, bilgi edinme sürecine ilişkin köklü bir paradigmadır ve 2000’li yıllardan itibaren Türkiye’deki eğitim reformlarında temel alınmıştır. Bu kurama göre öğrenme,

öğrencinin bilgiyi dışarıdan pasifçe almasıyla değil; bilgiyi kendi zihninde aktif biçimde yapılandırması, yorumlaması ve üretmesi ile gerçekleşir. Bir başka deyişle, öğrenen birey yeni bilgileri mevcut deneyimleriyle anlamlandırarak kendi bilgi yapısını kurar. Milli Eğitim Bakanlığı'nın 2005 program değişikliğiyle Türkçe derslerinde yapılandırmacılık resmen benimsenmiş ve öğretim sürecinin merkezine öğrenci yerleştirilmiştir (Arslan, 2009). Bu yaklaşım, geleneksel öğretmen merkezli modelin aksine, öğrencinin derste etkin rol almasını ve bilgiyi keşfederek öğrenmesini hedefler.

Yapılandırmacı ve öğrenci merkezli bir Türkçe dersinde öğretmen, bilgiyi doğrudan aktaran kişi olmaktan öte, kılavuz ve kolaylaştırıcı rolündedir. Öğrenciler soru sorarak, araştırarak, tartışarak ve etkinlikler yoluyla öğrenmeyi deneyimler. Yapılandırmacı anlayışla düzenlenen sınıf ortamlarında amaç, öğrencinin yalnızca kitap okuyup öğretmeni dinleyerek bilgi edinmesi değildir; öğrendiklerini arkadaşlarıyla paylaşarak etkin bir rol üstlenmesini sağlamaktır (Karadüz, 2010).

Yapılandırmacı anlayışta Türkçe öğretiminde öğrenciler dili aktif olarak kullanır; dilbilgisi kurallarını ezberlemek yerine, sezgisel bir biçimde dil kurallarını bağlam içinde deneyimler (Güneş, 2013). Ortaokul düzeyinde bir Türkçe dersinde yapılandırmacı yaklaşım benimsendiğinde, öğrenciler metinleri sadece okumakla kalmaz, aynı zamanda metin üzerinde çözümler yapar. Böyle bir sınıf ortamında hata yapmak öğrenme sürecinin doğal bir parçası olarak görülür ve öğretmen, öğrencilere geribildirim sunarak onların kendi anlamlarını inşa etmelerine yardımcı olur (Küçükavşar, 2010). Sonuç olarak, yapılandırmacı yaklaşım Türkçe öğretiminde öğrencilerin aktif, keşfeden ve üreten bireyler olarak yetişmelerini destekler. Bu da uzun vadede dil becerilerinin daha kalıcı ve anlamlı bir biçimde gelişmesini mümkün kılar.

Çoklu Okuryazarlık ve 21. Yüzyıl Becerileri

Dijital çağda “okuryazarlık” kavramı, geleneksel anlamının ötesine geçmiştir. Sadece kağıt üzerindeki metinleri okuyup yazabilmek değil, aynı zamanda görsel, işitsel ve dijital medyayı da anlamlandırabilmek önem kazanmıştır. Bu çerçevede ortaya çıkan çoklu okuryazarlık kavramı, bireylerin farklı türde bilgi kaynaklarını ve iletişim ortamlarını etkin kullanabilme becerilerini ifade etmektedir. Teknolojideki gelişmeler eğitim ortamlarına hızla dahil olurken, eğitim sisteminin önemli hedeflerinden biri, öğrencileri bilgiye doğru ve hızlı erişebilen, bilgiyi analiz edip uygun yollarla paylaşabilen bireyler olarak yetiştirmektir (Koparan, 2022). Bu beklentinin karşılanması ise, öğrencilerin iyi bir okuryazarlık eğitimi almasına bağlıdır.

2019'da güncellenen Türkçe Dersi Öğretim Programı okuryazarlık gerçeğini temel alarak, öğrencilere dijital, görsel ve eleştirel okuryazarlık gibi yeni okuryazarlık türlerinin kazandırılmasını amaçlayan kazanımlara yer vermiştir (MEB, 2019). Çoklu okuryazarlık yaklaşımının Türkçe öğretimine yansımaları, derslerde farklı medya ve metin türlerinin kullanılmasıyla gerçekleşir. İyi bir Türkçe dersi, sadece ders kitabındaki metinleri değil, aynı zamanda görselleri, videoları, dijital içerikleri ve sosyal medya yazılarını eğitim materyali olarak değerlendirmeyi gerektirir. Bir Türkçe dersinde gazete haberi, şiir, karikatür ve infografik gibi farklı kaynaklar bir arada kullanılabilir; öğrenciler her birinden anlam çıkarma ve dil kullanımı deneyimini yaşarlar. Ortaokul düzeyindeki diğer bir Türkçe dersinde ise öğrencilerden internette bir araştırma yapmaları, buldukları bilgileri değerlendirmeleri ve bunları sınıfta sunmaları istenebilir. Bu etkinlik, hem okuryazarlık becerilerini hem de dijital becerilerini aynı anda pekiştirir (Kurudayıoğlu ve Çetin, 2015). Bu sayede öğrenciler, dil becerilerini gerçek hayatta karşılaştıkları çeşitli içerikler üzerinde uygulama fırsatı bulur.

Öğrenci merkezli öğrenme ile birleşen çoklu okuryazarlık, öğrencilerin ilgi ve merakını uyandırarak Türkçe derslerine katılımını artırır çünkü öğrenciler, kendi dünyalarına yakın içeriklerle çalışırken daha çok güdülenirler. Sonuç itibarıyla, çoklu okuryazarlık ve 21. yüzyıl becerileri bağlamında yapılandırılmış bir Türkçe dersi, öğrencilerin sadece dilsel yeterliklerini değil, aynı zamanda modern dünyanın gerektirdiği geniş bir yetkinlik yelpazesini kazanmalarını hedefler.

İletişimsel Dil Öğretim Yaklaşımı

Dil öğretiminde iletişimsel yaklaşım, dilin kurallar bütünü olarak öğretilmesinden ziyade, iletişim kurma aracı olarak öğretilmesini savunur. Bu yaklaşım, öğrencilerin gerçek hayattaki iletişim durumlarında dili kullanabilme becerilerini geliştirmeyi amaçlar. Türkçe dersi bağlamında iletişimsel yaklaşım, dersin bir bilgi aktarım dersi değil bir beceri dersi olarak görülmesini gerektirir. Etkili bir Türkçe eğitiminin genel amacı, öğrencilerin her türlü yazılı ve sözlü iletişim ortamına yetkin bir biçimde katılabilecekleri iletişimsel yeterlikleri kazanmalarını sağlamaktır. İletişimsel yaklaşımda, öğrencilerin dili doğru kullanma becerilerini içselleştirmek amaçlanır; yalnızca dilbilgisi kurallarını bilmek, tek başına o dili akıcı ve anlamlı şekilde kullanabilmek için yeterli değildir (Güneş, 2011).

İletişimsel yaklaşımın sınıf içi uygulaması, dört temel dil becerisinin bütünsel bir biçimde ele alınmasını içerir. Dilbilgisi öğretimi becerilerden ayrı ya da dilin kural ve tanımlarının ezberletilmesi yerine, kuralların anlamlı bağlamlar içinde kullanılarak öğretilmesi gerektiğini vurgular. İletişimsel yaklaşım, sınıfta karşılıklı etkileşime dayalı etkinlikleri teşvik eder ve akran yoluyla öğretim önemlidir. Tartışmalar, grup çalışmaları, rol canlandırmalar, münazaralar, yaratıcı yazma etkinlikleri, öğrencilerin iletişim deneyimleri yaşayarak dili yaparak yaşayarak kullanmalarına olanak tanır (Ghafar, Sawalmeh & Mohamedamin, 2023; Mitchell, 2002).

Türkçe derslerinde her bir dil becerisini ayrı ayrı ele almak yerine, mümkün olduğunca entegre eden etkinlikler planlanmalıdır. Örneğin, bir okuma parçası üzerinde çalışılırken öğrencilerin aynı zamanda dinleme (metnin sesli okunması), konuşma (metin üzerine tartışma) ve yazma (metinle ilgili kendi düşüncelerini yazma) fırsatları da yaratılabilir. Bu şekilde, dilin bütünsel kullanımı teşvik edilerek iletişimsel yetkinlik pekiştirilir (Demirel ve Şahinel, 2006). Ayrıca iletişimsel yaklaşımda dijital ortamları da dil öğretimi kapsamına alınmıştır (Özdemir, 2017). Öğrencilerin çevrimiçi platformlarda tartışmalara katılması, blog yazması veya dijital sunumlar hazırlaması, çağdaş Türkçe derslerinin iletişimsel uygulamaları arasında sayılabilir. Böylelikle öğrenciler, sadece yüz yüze değil, dijital ortamlarda da etkili iletişim kurma deneyimi kazanırlar.

Türkçe Dersinde Öğretmen Yeterlikleri ve İyi Öğretmen Özellikleri

Türkçe öğretiminin niteliğini artırmaya yönelik yukarıda açıklanan kuramsal yaklaşımlar, iyi bir Türkçe öğretmenin sahip olması gereken nitelikleri de ortaya koymaktadır. Yapılandırmacı ve öğrenci merkezli bir öğrenme ortamı yaratmak için öğretmenin, etkili sınıf yönetimi ve rehberlik becerilerine sahip olması gerekir (Arslan, 2009; Göçer, 2014) Öğretmen, öğrencilerini tanımalı, onların ilgi ve ihtiyaçlarını fark ederek öğrenme deneyimlerini kişiselleştirebilmelidir. Bu, sabırlı olmayı, iyi bir dinleyici olmayı ve gerektiğinde farklı öğretim stratejileri uygulamayı gerektirir. İletişimsel yaklaşımı başarıyla uygulayabilen bir öğretmen, sınıfta etkili iletişim kurabilen, dili ustalıkla kullanarak öğrencilerine örnek olan kişidir. Türkçe öğretmeni, kendi dilini sözlü ve yazılı olarak etkili kullanarak öğrencilere model olmalıdır; zira öğrenciler, doğru ve güzel konuşma-yazma becerilerini büyük ölçüde öğretmenlerini gözlemleyerek edinirler

(Göçer, 2014; Yurtseven-Yılmaz & Gülçiçek, 2022).

Çağdaş yaklaşımlar ışığında, teknoloji ve çoklu okuryazarlık konusunda donanımlı olmak da iyi bir Türkçe öğretmenin ayırt edici özelliklerindendir. Yeniliklere açık, öğrenmeye devam eden bir öğretmen profili, sürekli değişen dil ve iletişim ortamına uyum sağlayarak derslerini zenginleştirir. Güncel araştırmalarda, 21. yüzyılda bir Türkçe öğretmenin yaratıcı ve yenilikçi olması gerektiği vurgulanmakta; özel alan yeterlikleri bağlamında da Türkçeyi etkin kullanabilme, sınıfta etkili iletişim kurabilme, işbirlikçi ve disiplinler arası bir öğrenme ortamı oluşturabilme becerileri ön plana çıkmaktadır. Teknolojik okuryazarlık becerilerine sahip olma ve bunları Türkçe dersine uyarlayabilme yetisi, en sık tekrarlanan öğretmen yeterlikleri arasında yer almaktadır (Baki, 2021). Bu çalışmalar, günümüz Türkçe öğretmenin profilini çizmekte ve “iyi öğretmen” kavramını somutlaştırmaktadır: Evrensel değerlere sahip çıkan (örneğin sevgi, saygı, hoşgörü), alan bilgisinde donanımlı, pedagojik becerilerinde usta ve çağa ayak uydurabilen bir öğretmen.

Öğrencilerin bakış açısı iyi bir Türkçe öğretmenin özelliklerini tanımlamada yol göstericidir. Öğrencilerle yapılan araştırmalar (Dinçel & Yılmaz, 2018; Taşgın, İleritürk & Köse, 2018), öğrencilerin en çok öğretmen-öğrenci ilişkisine ve öğretmenin kişisel özelliklerine önem verdiğini ortaya koymaktadır. İyi bir Türkçe öğretmeni, öğrencilerine değer veren, onlara karşı anlayışlı ve adil davranan; öğrenmeyi teşvik eden bir sınıf atmosferi oluşturan kişidir. Sıcak ve güvenli bir öğrenme ortamı, öğrencilerin derse katılımını ve dil pratiği yapma cesaretini artırır. Ayrıca öğrenciler, öğretmenlerinin alanına hakim olmasını ve dersleri ilgi çekici hale getirecek yöntemler kullanmasını beklemektedir. Bu da öğretmenin mesleki yeterliklerinin (alan bilgisi, yöntem ve teknik zenginliği, materyal kullanımı vb.) ne denli önemli olduğunu gösterir.

Sonuç olarak, iyi bir Türkçe dersi ile iyi bir Türkçe öğretmeni kavramları birbiriyle iç içedir. Çağdaş kuramlar, Türkçe dersinin etkili olabilmesi için yapılandırmacı, çoklu okuryazarlık odaklı, öğrenci merkezli ve iletişimsel bir anlayışla yürütülmesini önerirken; bu vizyonu hayata geçirecek olan öğretmenin de bu niteliklere uygun bir yeterlik profili sergilemesi gerekmektedir. Böyle bir öğretmen, öğrencilerin dil becerilerini geliştirirken onları aktif kılar, eleştirel ve yaratıcı düşünmeye teşvik eder, teknolojiyi ve çeşitli kaynakları dersine entegre eder ve öğrencileriyle pozitif bir iletişim kurar. Bu özelliklere sahip bir Türkçe öğretmeni tarafından işlenen derslerin, öğrenciler açısından “iyi bir ders” olarak algılanacağı açıktır.

Method

Araştırma Modeli

Bu araştırmada, nitel araştırma desenlerinden olgubilim temel alınmıştır. Olgubilim, katılımcıların belirli bir olguya ilişkin yaşantılarını ve bu olguya yükledikleri anlamları derinlemesine anlamayı amaçlar (Creswell, 2021). Bu çalışmada, "iyi bir Türkçe dersi" ve "iyi bir Türkçe öğretmeni" olguları, ortaokul öğrencilerinin yazılı anlatımlarına dayalı olarak incelenmiştir.

Örnekleme

Araştırmanın örnekleme, amaçlı örnekleme yöntemlerinden biri olan kolay ulaşılabilir durum örnekleme ile belirlenmiştir. Bu örnekleme, araştırmacının görev yaptığı okulda gerçekleştirilmiş ve hız, pratiklik ile ekonomiklik gibi nedenlerle tercih edilmiştir (Yıldırım & Şimşek, 2022). Katılımcı grubunu, araştırmaya gönüllü olarak katılan Lefkoşa’da özel bir

okulda öğrenim gören ortaokul öğrencileri oluşturmuştur.

Veri Toplama Aracı ve Süreci

Veri toplama sürecinde, öğrencilerin yazdığı kompozisyonlar temel doküman olarak kabul edilmiştir. Bu kompozisyonlar, öğrencilerin “iyi bir Türkçe dersi nasıldır?” ve “iyi bir Türkçe öğretmeni kimdir?” sorularına verdikleri yazılı yanıtları içermektedir. Veri toplama süreci öncesinde okul yönetiminden izin alınmış, öğrencilere araştırmanın amacı açıklanarak gönüllü katılım esas alınmıştır. Katılımcıların yönlendirilmemesine dikkat edilmiş ve etik ilkeler doğrultusunda isimler gizli tutulmuştur.

Veri Analizi

Toplanan veriler, nitel veri analiz tekniklerinden biri olan içerik analizi yöntemiyle analiz edilmiştir. Öğrenci kompozisyonları tematik olarak incelenmiş, veriler kavramsallaştırılarak temalar ve alt temalar oluşturulmuştur. Her tema, örnek katılımcı ifadeleriyle desteklenerek açıklanmış ve bulgular tablo ve grafikler halinde sunulmuştur. Analiz sürecinde, betimsel yeterlilik ve geçerliliği sağlamak amacıyla doğrudan alıntılara sıklıkla yer verilmiştir (Miles, & Huberman, 2020).

Bulgular

Bulgular iki araştırma sorusu temelinde analiz edilmiş ve iki tablo olarak sunulmuştur.

Tablo 1. Ortaokul Öğrencilerinin Görüşlerine Göre İyi Türkçe Öğretmeni

Tema	Frekans	Katılımcılar
Eğlenceli Dersler ve Oyunla Öğretim Yapan	13	Ö2, Ö4, Ö10, Ö12, Ö14, Ö16, Ö17, Ö18, Ö21, Ö23, Ö29, Ö30, Ö34
Akademik Yeterliğe Sahip	11	Ö3, Ö6, Ö12, Ö15, Ö18, Ö19, Ö20, Ö25, Ö32, Ö39, Ö40
Öğretim Yöntemlerini ve Anlatımı Etkili Kullanan	5	Ö5, Ö10, Ö12, Ö13, Ö20
Sabırlı ve Anlayışlı Olan	5	Ö12, Ö15, Ö17, Ö22, Ö31
İletişim Kuran ve Saygı Duyan	4	Ö6, Ö15, Ö19, Ö38
Öğrenciyi Tanıyıp Destekleyen	4	Ö24, Ö35, Ö37, Ö39
Disiplinli ve Sınıf Yönetiminde Başarılı Olan	3	Ö8, Ö9, Ö27

Temaların açıklaması ve öğrenci görüşlerinden alıntılar aşağıda sunulmuştur:

Eğlenceli Dersler ve Oyunla Öğretim Yapan: Öğrenciler, Türkçe derslerinin sadece akademik bilgi içermemesi gerektiğini, eğlenceli etkinlikler ve oyunlarla desteklenmesini istemektedir.

Oyun oynayan, sürpriz etkinlikler yapan ve dersleri keyifli hale getiren öğretmenler daha çok sevilmektedir. Eğlence ile öğrenmenin birleşmesi onların motivasyonunu artırmaktadır.

Ö10: “*Dersi güzel anlatmalı ve eğlenceli bir öğretmen olmalıdır.*”

Ö16: “*Nazik, iyimser, disiplinli ve derste oyun oynatan bir öğretmen olmalıdır.*”

Akademik Yeterliğe Sahip: Bir Türkçe öğretmenin ders konularına hâkim olması, kitap okuması ve öğrencilere bu alışkanlığı kazandırması gerektiği vurgulanmaktadır. Öğrenciler, bilgili ve kendini geliştiren öğretmenleri örnek almakta ve onları güvenilir bulmaktadır.

Ö12: “*Kitap okumaya teşvik etmelidir.*”

Ö18: “*Kitap okumayı sevdirmelidir.*”

Öğretim Yöntemlerini ve Anlatımı Etkili Kullanan: Öğrenciler, konuları açık ve anlaşılır bir şekilde anlatan, gerektiğinde tekrar eden öğretmenleri tercih etmektedir. Etkili bir öğretim süreci, öğrencinin derse aktif katılımını ve konuyu kavramasını sağlamaktadır.

Ö13: “*Çocukları sevmeli ve dersi dikkatli bir şekilde öğretmelidir.*”

Ö20: “*Anlaşılmayan konuyu tekrar anlatmalı ve ders tekrarı yapmalıdır.*”

Sabırlı ve Anlayışlı Olan: İlkokul çağındaki çocuklar için sabırlı ve anlayışlı öğretmenler önemlidir. Öğrenciler hata yaptıklarında yargılanmamak, kitaplarını unuttuklarında azarlanmamak istemektedir. Öğretmenlerin bu tür durumlarda hoşgörülü yaklaşması beklenmektedir.

Ö15: “*Anlayışlı, bilgili, nazik, sabırlı ve empati kurabilen biri olmalıdır.*”

Ö 22: “*Sabırlı olmalı, öğrenciyi motive etmeli ve öğrencinin dersten mutlu ayrılmasını sağlamalıdır.*”

İletişim Kuran ve Saygı Duyan: İyi bir öğretmen, öğrencileriyle saygılı ve nazık bir iletişim kurmalıdır. Sınıf içinde azarlamaktan kaçınmalı, öğrencilerin duygularını incitmemelidir. Saygılı iletişim, öğrencilerin kendilerini değerli hissetmesini sağlar.

Ö6: “Öğrencileriyle güzel ve saygılı konuşmalıdır.”

Ö38: “Öğretmen bizi başkalarının önünde azarlamamalı.”

Öğrenciyi Tanıyıp Destekleyen: Öğrenciler, öğretmenlerinin sadece başarılıları değil, sessiz olanları da fark etmesini istemektedir. Her çocuğun farklı bir güçlü yönü olduğunu belirten öğrenciler, öğretmenlerinin bu farklılıkları keşfetmesini ve herkesi desteklemesini beklemektedir.

Ö37: “Öğretmen sadece başarılı öğrencileri değil, sessiz olanları da fark etsin.”

Ö39: “Her öğrencinin iyi olduğu bir konu vardır, öğretmen bunu bulmalı.”

Disiplinli ve Sınıf Yönetiminde Başarılı Olan: Disiplinli olmakla birlikte öğrenciye iyi davranan öğretmenler öne çıkmaktadır. Öğrenciler, bağırarak ya da tehdit eden değil, sınıf yönetimini sakin ve adil bir şekilde sağlayan öğretmenleri tercih etmektedir.

Ö8: “Disiplinli olmalı ama öğrencilere iyi davranmalıdır.”

Ö9: “Sınıfta bağırılmamalı ve tehdit etmemelidir.”

Tablo 2. Ortaokul Öğrencilerinin Görüşlerine Göre İyi Türkçe Dersi

Tema	Frekans	Katılımcılar
Eğlenceli öğrenmeler	12	Ö4, Ö5, Ö7, Ö12, Ö17, Ö18, Ö19, Ö20, Ö29, Ö33, Ö37, Ö39
Sessiz bir ortam ve dikkati sağlayan uygulamalar	5	Ö6, Ö11, Ö13, Ö15, Ö34
Empati ve güven	3	Ö12, Ö26, Ö36
Etkili öğretim ve anlatım	3	Ö20, Ö26, Ö32
Duygusal destek ve etkileşim	2	Ö3, Ö24

Temaların açıklaması ve öğrenci görüşlerinden alıntılar aşağıda sunulmuştur:

Eğlenceli öğrenmeler: Türkçe dersinin eğlenceli, oyun, bilmece, şarkı, hikâye anlatımı ve sürpriz etkinliklerle zenginleştirilmiş olması istenmektedir. Bu tür etkinlikler öğrencilerin derse olan ilgisini artırmakta ve dersi daha akılda kalıcı hâle getirmektedir.

Ö4: “Derste yapmamız gereken her şeyi yaptıktan sonra dersin sonunda eğlenceli bir şey yapmalıyız.”

Ö5: “Çocukların öğrenmesi gerekeni öğrettikten sonra, o ders hakkında oyun oynayıp dersi eğlenceli yapmalı.”

Sessiz bir ortam ve dikkati sağlayan uygulamalar: Dersin sessiz, sakin ve huzurlu bir ortamda yapılması gerektiği vurgulanmaktadır. Öğrenciler, böyle bir ortamda daha rahat öğrendiklerini ve dikkatlerini daha iyi toplayabildiklerini belirtmektedir.

Ö6: “İyi bir Türkçe dersi sessiz ve sakin olmalı, aynı zamanda eğlence unutulmamalı.”

Ö15: “Öğrencilerin sessiz ve saygılı olması, dersi daha iyi öğrenmelerini sağlar.”

Empati ve Güven: Öğretmenin öğrencilere güvenmesi, onların hatalarına anlayışla yaklaşması ve empati kurması, öğrencilerin kendilerini daha iyi ifade edebilmelerini sağlamaktadır. Saygılı bir ortamda öğrenciler daha rahat öğrenebilmektedir.

Ö12: “Öğretmen ve öğrenciler arasında empati ve saygı olmalı. Ders yapılmalı, ardından öğrenciler güldürülüp eğlendirilmelidir. İyi bir ders yapmak için öğretmen her şeyi yapmalıdır.”

Ö36: “Öğretmen öğrencilere güvenmeli, biz de ona güvenmeliyiz.”

Etkili öğretim ve anlatım: Dersin anlaşılır, açık ve öğretici olması gerektiği ifade edilmektedir. Öğrenciler, konuların sıkıcı olmadan öğretildiği, gerektiğinde tekrar edildiği ve farklı öğrenme yöntemlerinin kullanıldığı derslerden daha fazla verim aldıklarını belirtmektedir.

Ö26: “Yanlış yaptığımızda hemen kızmamalı, bize tekrar anlatmalı.”

Ö32: “Dersi bazen grup çalışmasıyla yapmalıyız, arkadaşlarımızla öğrenmek daha güzel olur.”

Duygusal destek ve etkileşim: Öğrenciler için iyi bir Türkçe dersi, öğretmenin sadece bilgi

aktardığı değil, aynı zamanda öğrencilerin duygularını önemseyerek onlarla bağ kurduğu bir ortamdır. Dersin başında kısa sohbetler yapılması, öğretmenin güler yüzle sınıfa gelmesi ve öğrencilerin mutlu hissetmesini sağlaması beklenmektedir.

Ö3: *“Dersin başında kısa bir sohbet edelim, sonra derse geçelim.”*

Ö24: *“Öğretmen sınıfa her gün güler yüzle gelmeli, biz de mutlu olalım.”*

Tartışma

Bu araştırmaya katılan ortaokul öğrencileri, Türkçe derslerinin eğlenceli ve etkileşimli olmasını önemsemektedir. Araştırma bulgularında belirtilen “eğlenceli ders işleyen, oyunla öğreten öğretmen” tercihi, Dinçel ve Yılmaz’ın (2018) çalışmasında da doğrulanmıştır. Örneğin bir öğrenci “Türkçe dersi eğlence gibidir; çünkü hiçbir zaman bıkmam, ders çok komik geçer” şeklinde ifade etmiştir. Bu görüşler, Türkçe derslerinde şarkı, bilmece, oyun gibi yöntem ve materyal kullanımının motivasyonu artırdığını göstermektedir. Alanyazında da, dil eğitimcileri eğitsel oyunların derslerin ilgi çekici, kolay öğrenilir ve eğlenceli hale gelmesini sağladığını; öğrencilerin katılımını, empati ve sabır becerilerini geliştirdiğini vurgulamışlardır (Mete, 2021). Bu bakımdan, oyun temelli öğretim yöntemleri hem öğrencilerin hem de öğretmenlerin dersten verim sağlamasına yardımcı olmaktadır.

Araştırma bulguları, akademik olarak yeterli ve kitap okuyan Türkçe öğretmenlerini öne çıkarmıştır. Taşgın ve arkadaşları (2018), öğrencilerin öğretmenini çoğunlukla “bilgi sağlayıcı” bir kaynak olarak nitelendirdiğini; en sık kullanılan metaforlar arasında “Anne” ve “Kitap” gibi bilgi kaynağı simgelerinin yer aldığını ortaya koymuşlardır. Bu sonuç, öğrencilerin alan ya da konu bilgisine hâkim, kendini geliştiren Türkçe öğretmenlerine güven duyduğunu düşündürmektedir. Alanyazında öğretmenlerin kitap okuma alışkanlıkları ve okuma tutumlarının öğrencilerin okuma alışkanlığı kazanmasında belirleyici rol oynadığı yer almaktadır (Kırs ve Kinay, 2022). Dolayısıyla bulgularla örtüşen bir biçimde, Türkçe öğretmenin ders konularına hâkim olması, bol kitap okuması ve öğrencileri de okumaya teşvik etmesi olumlu değerlendirilmektedir.

Araştırma bulgularına göre etkili öğretim yöntemleri kullanan, sabırlı ve anlayışlı öğretmenler de “iyi öğretmen” olarak algılanmaktadır. Bu nitelikler, diğer çalışmalar tarafından da

desteklenmiştir. Örneğin Çatalçam, Töre ve Töre'nin (2024) araştırmasında, öğrenciler ve öğretmen adaylarının görüşlerine dayanarak; iyi bir öğretmenin anlayışlı, hoşgörülü, sabırlı ve empati kurabilen biri olması gerektiği belirtilmiştir. Ayrıca güçlü iletişim becerisi, öğrenciyi motive edebilme ve sağlam konu bilgisi de iyi öğretmenin özellikleri arasında sayılmıştır. İlder'in (2021) araştırmasında da benzer bulgulara ulaşılmış ve öğrenci görüşlerine göre etkili iletişim kurabilen, öğrenciyle yakın ilişki içinde olan ve bilgili bir öğretmenin ideal olduğunu ortaya konmuştur. Bu bağlamda, öğrenciler hata yaptıklarında bağışlayıcı, sorularına sabırla cevap veren, sınıf yönetimini adil sağlayan öğretmenleri daha çok benimsemektedir.

Araştırma bulguları temel alındığında öğrenci görüşlerine göre “İyi bir Türkçe dersi” ise eğlenceli, dikkat çekici ve güven verici bir ortamda gerçekleşen derstir. Öğrenciler, dersin sevgi ve empati ortamında işlenmesini beklemekte; bunun öğrenmeyi kolaylaştıracağını savunmaktadır. Literatürde de benzer biçimde, sınıfta iletişimi güçlü, ilgili, sabırlı ve eğlenceli bir öğretmenin dersin etkinliğini artıracığı vurgulanmıştır. Buna ek olarak çalışmalarda, öğrencilerin ders sırasında kendilerini rahatça ifade edebileceği, öğretmene güven duyabileceği olumlu sınıf atmosferinin öğrenmeyi desteklediği belirtilmiştir. Özellikle oyunla öğrenme ve duygusal etkileşimin birleşimi dersin kalıcılığını artırmakta, öğrencilerin derse bağlılığını güçlendirmektedir (Çatalçam, Töre ve Töre, 2024; Dinçel ve Yılmaz, 2018; Mete, 2021b).

Sonuç olarak, bu araştırmadan elde edilen bulgular daha önceki çalışmaları destekler niteliktedir. Örneğin, öğrencilerin sevgi dolu, ilgili, adil ve şefkatli öğretmenler istemesi başka araştırmalarda da vurgulanmıştır (Çatalçam, Töre ve Töre, 2024; İlder, 2021). Bu açıdan öğrencilerin beklentileri ulusal ve evrensel değerlerle uyumludur. Bu çalışma, özellikle öğretmen-öğrenci etkileşimi ve ders içi uygulamalara odaklanmıştır; teknoloji kullanımı, farklı öğrenme stilleri veya kültürel farklılıklar gibi konular öğrenciler tarafından yeterince dile getirilmemiştir. Oysa güncel alanyazında dil eğitiminde dijital araçların entegrasyonu, bireyselleştirilmiş öğrenme yolları ve çokkültürlü yaklaşımların derslerin erişilebilirliğini ve kapsayıcılığını artırdığı bilinmektedir. İleriki araştırmalarda bu konuların öğrenciler tarafından ele alınması, iyi Türkçe öğretmeni ve dersi kavramlarının daha kapsamlı anlaşılmasını sağlayacaktır.

Sonuç ve Öneriler

Bu bölümde sonuç ve önerilere yer verilmiştir.

Araştırmanın bulguları, ortaokul öğrencilerinin Türkçe dersinden beklentilerinin eğlence, etkileşim ve güven duygusu temelli olduğunu göstermektedir. Öğrenciler, geleneksel öğretime dayalı, pasif öğrenme ortamlarından çok; oyun, hikâye, şarkı gibi yöntem ve araç-gereçlerle desteklenen, dikkat çekici ve anlamlı içerikler sunan Türkçe derslerini tercih etmektedir. Öğretmen profili açısından ise öğrenciler, sadece akademik bilgisi güçlü değil, aynı zamanda sabırlı, anlayışlı, hoşgörülü ve iletişimi güçlü olan öğretmenleri "iyi öğretmen" olarak tanımlamaktadır. Bu bulgular, dil öğretiminde pedagojik yaklaşımların yanı sıra öğretmenin kişilik özelliklerinin de önemli bir rol oynadığını ortaya koymaktadır.

Öneriler

- Türkçe öğretmenleri derslerinde oyun, hikâye, bilmece ve şarkı gibi eğlenceli ve yaratıcı yöntem, araç-gereç ve etkinliklere daha fazla yer vermelidir.
- Öğretmenler, öğrencilerin bireysel farklılıklarını gözetmeli; sadece akademik başarıya değil, öğrencilerin duygusal ve sosyal gelişimlerine de duyarlı olmalıdır.
- Öğrencilerin kitap okuma alışkanlığı kazanabilmesi için öğretmenler örnek olmalı, sınıf ortamına okuma kültürünü yerleştirmelidir.
- Etkili iletişim ve empati, öğretmen-öğrenci ilişkilerinin temelini oluşturmalı; öğretmenler öğrencilere karşı sabırlı, yapıcı ve destekleyici bir tutum sergilemelidir.
- Sınıf içi disiplin anlayışı bağırma ve tehditten uzak, adil ve kapsayıcı bir sınıf yönetimi yaklaşımıyla yeniden yapılandırılmalıdır.

Üniversite Öğrencilerinin Müzik Dinleme Alışkanlığının, Psikolojik Sağlık ve Zihinsel İyi Oluş Arasındaki İlişki

KKTC

Özet

Bu araştırmada üniversite eğitim fakültesi öğrencilerinin psikolojik sağlık (PS) ve zihinsel iyi oluş (ZİO) düzeylerini belirlemek ve müzik dinleme alışkanlığının (MDA), PS düzeyleri ve Dünya Sağlık Örgütü (DSÖ) ZİO hedefleri arasındaki ilişkiyi incelemektir. Araştırmaya uygun örneklem yöntemi ile seçilen 290 öğrenci katıldı. MDA ile PS ve DSÖ ZİO arasındaki ilişkiyi inceleyen bir ilişkisel araştırma modeli uygulandı. DSÖ ZİO için “DSÖ-5 İyi Oluş İndeksi” anketi kullanıldı ve güvenirlik analizi Cronbach alpha 0.8519 bulundu. PS düzeyi tespiti için “Kısa Psikolojik Sağlık Ölçeği” (KPSÖ) kullanıldı ve güvenirlik analizi Cronbach alpha 0.735 bulundu. Konu ile ilişkili olduğu düşünülen, önceki araştırmalarda göz önünde tutulan MDA ile ilgili soruların da bulunduğu, 10 sorudan oluşan “demografik bilgi formu” kullanıldı. Demografik özelliklerden öğrencinin, fakülte bölümü, sınıfı, ailenin gelir düzeyi ile MDA’ya ilişkin profesyonel-amatör müzik ilgisi, haftada kaç gün müzik dinlediği, müzik dinlediği günlerde kaç saat dinlediği, müziğin ezgi ya da söz-anlam özelliklerine göre tercihi ve dinlediği müzik türü gibi değişkenler ile PS ve ZİO düzeyleri arasında anlamlı bir ilişki bulunmamıştır. Psikolojik sağlık yaşa göre farklılaşırken, zihinsel iyi oluşta yaş etkisi saptanmadı; cinsiyete göre her iki ölçekte de erkek lehine anlamlı fark bulundu. Genel olarak öğrencilerin DSÖ-5 İyi Oluş İndeksi ortalama değeri 44.95 ile düşük (öğrencilerin %65’i) bulundu. Öğrencilerin %26,5’i depresyon göstergesi kabul edilen 28 puan altı DSÖ-5 İyi Oluş İndeksi skoruna sahip iken %35’i normal veya yüksek seviyede skora sahipti. PS düzeylerini gösteren KPSÖ Skor ortalaması ise 3.15 ile (öğrencilerin %34’ü düşük, %61’i normal, %5’i yüksek) normalin alt çizgisine yakın bulundu. Literatür ile uyumlu olan bu bulgular MDA’nın daha detaylı araştırılması gerektiğini göstermiştir. Bu bağlamda öğrencilerin müzik dinleyişi yapılandırılmamış olsa da “pasif müzik terapi” ile benzer etkiler içermektedir. Literatürde düşük ZİO ve PS’in akademik başarıyı olumsuz etkileyebileceği öne sürülse de, bu çalışma akademik performans ölçmedi. Zihinsel bozuklukların %50’si 14 yaşından önce başlar ve yaş

ilerledikçe artar. Bu nedenle ilk ve orta öğretim dönemi ile üniversite eğitim yıllarında akademik eğitim yanında öğrencilerin PS ve ZİO'larını yükseltici müfredat değişikliğine ihtiyaç olduğu görülmektedir.

Anahtar Kelimeler: psikolojik sağlamlık, iyi oluş, müzik dinleme alışkanlığı, pasif müzik terapi

The Relationship Between University Students' Music Listening Habits, Psychological Resilience, and Mental Well-Being

Abstract

This study aims to determine the levels of psychological resilience (PR) and mental well-being (MWB) among university students in faculties of education and to examine the relationship between music listening habits (MLH), PR levels, and the World Health Organization's (WHO) MWB targets. A total of 290 students, selected through an appropriate sampling method, participated in the study. A relational research model was applied to examine the relationship between MLH, PR, and WHO-defined MWB. The "WHO-5 Well-Being Index" was used for MWB assessment, and the reliability analysis yielded a Cronbach's alpha of 0.8519. To determine PR levels, the "Brief Resilience Scale" (BRS) was used, with a Cronbach's alpha of 0.735. A 10-item "demographic information form" including questions about MLH based on prior research was also used. No significant relationship was found between demographic characteristics such as students' faculty, year, family income and MLH-related variables (e.g., professional or amateur interest in music, number of days listening per week, hours per day, preference based on melody or lyrics, and music genre) and their PR and MWB levels. While psychological resilience varied significantly by age, no significant age-related effect was found in mental well-being. In both scales, a statistically significant difference was found in favor of male students. Overall, students' average WHO-5 Well-Being Index score was low at 44.95 (65% of students scored low). 26.5% of students had a score below 28, indicating depression risk, while 35% had normal or high scores. The average BRS score was 3.15, indicating borderline-normal resilience (34% low, 61% normal, 5% high). These findings, consistent with the literature, indicate that MLH needs further study. Although students' music listening was unstructured, it may share effects similar to "passive music therapy." Although the literature

suggests that low MWB and PR may negatively affect academic success, this study did not measure academic performance. Since 50% of mental disorders begin before age 14 and increase with age, curricular reforms are needed during all education levels to support students' PR and MWB alongside academic development.

Keywords: psychological resilience, well-being, music listening habits, passive music therapy,

Giriş

Son yıllarda üniversite öğrencilerinin zihinsel sağlık durumu yalnızca akademik başarıyla değil; PS, duygusal denge ve genel iyi oluş gibi çok boyutlu göstergelerle değerlendirilmektedir. Öğrencilerin ZİO ve PS düzeyleri, müfredatın iyi oluş odaklı bileşenlerinden etkilenmiş olabilir; ancak bu çalışma bu etkiyi doğrudan ölçmeyi amaçlamamaktadır. Özellikle öğretmen adayları gibi yüksek stres altındaki gruplarda bu göstergeler, bireysel sağlık ve mesleki yeterlik açısından kritiktir. Bu bağlamda MDA, stresle başa çıkma yolu ve iyi oluşla ilişkili bir değişken olarak öne çıkmaktadır. Müzik dinleme yalnızca eğlence değil; duygusal düzenleme, kimlik inşası, sosyal etkileşim, kültürel aidiyet ve psikolojik ihtiyaçların karşılanması gibi çeşitli işlevler taşır (North, Hargreaves ve Hargreaves, 2004; Schäfer vd., 2013).

Araştırmalar müziğin duygudurum düzenleme amacıyla kullanıldığını; ancak bu etkinin bireysel ve bağlamsal faktörlere bağlı olarak değiştiğini göstermektedir (Saarikallio ve Erkkilä, 2007). Müzik türü, içerik, süre ve kullanım amacı bu etkileşimi şekillendiren başlıca unsurlardır. Literatürde MDA genellikle dinleme sıklığı ya da müzik türüyle sınırlı ele alınmakta; PS ve ZİO üzerindeki nitel etkiler yeterince incelenmemektedir.

Bu boşluğu doldurmak üzere Cheah ve Cheong (2024), 2010–2022 yılları arasında yapılmış çalışmaları çok yönlü biçimde derlemiş; üzücü müzik dinlemenin estetik tercihler, duygusal boşalım, empati ve özdeşleşme gibi etkilerini vurgulamıştır. Müziğin yalnızlık durumlarında sosyal bağ kurabileceği, ödül sistemi ve hormon düzeyleriyle iyi oluşa katkı sağlayabileceği belirtilmiştir. Garrido ve Schubert'in (2015) deneysel çalışmasında ise, düşünce tekrarı eğilimi yüksek bireylerde üzücü müziğin depresif etkiler yaratabileceği gösterilmiştir. Bu, müziğin etkisinin yalnızca içeriğe değil; psikolojik özellikler ve bağlama da bağlı olduğunu ortaya koymaktadır.

MDA; stres yönetimi, öz düzenleme ve motivasyon gibi iyi oluş bileşenleriyle bağlantılıdır. Bu nedenle yalnızca sıklık değil; söz içeriği, duygusal uyum ve dinleme bağlamı

gibi nitelikler de önemlidir. Garrido ve Schubert (2015), bu unsurların belirleyici rolüne dikkat çekmiştir. Müzik etkisi; sadece ne kadar değil, nasıl ve ne amaçla dinlendiğiyle de ilişkilidir.

Günümüzde müzik, genç yetişkinlerin stresle başa çıkma ve öz farkındalık süreçlerinde yaygın olarak kullanılmaktadır. Bu çalışma, öğretmen adayı öğrencilerin PS ve ZİO düzeylerini ve bunların MDA ile ilişkisini incelemeyi amaçlamaktadır. Ayrıca müzik farkındalığının bu ilişkide belirleyici rol oynayabileceği varsayılmaktadır. Pasif müzik terapisi benzeri etkiler çerçevesinde, sanat temelli eğitim yoluyla bilinçli müzik tüketiminin desteklenmesi hedeflenmektedir. Bulguların, öğretmen eğitimi ve iyi oluş temelli müfredata katkı sunması beklenmektedir.

Yöntem

Bu araştırma, betimsel tarama modellerinden kesitsel tarama deseni temelinde, nicel veri toplama yöntemiyle yürütülmüştür. Basit seçkisiz örnekleme ile belirlenen 290 öğretmen adayı, bir üniversitenin eğitim fakültesi programlarından seçilmiştir. Veri toplama aracı olarak; katılımcıların ZİO düzeylerini ölçmek için WHO-5 İyi Oluş Ölçeği (Topp vd., 2015; Türkçe uyarlama: Eser vd., 2019), PS düzeylerini belirlemek için ise Kısa Psikolojik Sağlamlık Ölçeği (KPSÖ) (Smith vd., 2008; uyarlama: Doğan, 2015) kullanılmıştır. WHO-5 ölçeğinin iç tutarlılık katsayısı $\alpha = .84$, KPSÖ için $\alpha = .87$ olarak hesaplanmıştır. WHO-5 maddeleri arasında anlamlı korelasyonlar belirlenmiş, faktör analizinde toplam varyansın %58.6'sının açıklandığı görülmüştür. Ayrıca öğrencilerin demografik özellikleri ve MDA ilişkin veriler toplanmıştır. Demografik değişkenler arasında cinsiyet, yaş, bölüm, sınıf ve aile gelir düzeyi; MDA ile ilgili olarak ise profesyonel/amatör müzik ilgisi, haftalık dinleme sıklığı, günlük ortalama süre, algısal odak (ezgi/söz) ve tercih edilen müzik türü değerlendirilmiştir.

Veriler SPSS 25.0 programıyla analiz edilmiş; betimsel istatistikler ve normallik testlerinden sonra, müzik türüne göre PS ve ZİO düzeylerindeki farkları belirlemek için tek yönlü ANOVA, MDA'nın ZİO üzerindeki etkisini test için ise regresyon analizi yapılmıştır. Ölçeklerin güvenilirliği için Cronbach's Alpha, WHO-5 için ayrıca Pearson korelasyon ve faktör analizi uygulanmıştır.

Bulgular

Aşağıda Tablo 1'de üniversite öğrencilerinin MDA ilişkin dağılım görülmektedir. Veriler, öğrencilerin büyük çoğunluğunun müziği günlük ve düzenli olarak dinlediği ve içerik farkındalığına önem verdiğini ortaya koymaktadır. Katılımcıların %68.3'ü her gün, %66.2'si ise günde bir saatten fazla müzik dinlediğini belirtmiştir. Müzik sözlerine dikkat ettiğini belirtenlerin oranı %84.2'dir. En sık dinlenen müzik türleri pop (%44.8), arabesk (%13.1) ve

rap (%7.2) olup toplamda %65,1'lik bir paya sahiptir

Tablo 1: Üniversite Öğrencilerinin Müzik Dinleme Alışkanlığına İlişkin Dağılım

Değişkenler		N	%
Profesyonel-Amatör Müzik İlgisi	Evet	43	14,8%
	Hayır	247	85,2%
Haftada Müzik Dinleme Günü	1-2 gün	17	5,9%
	3-4 gün	44	15,2%
	5-6 gün	31	10,7%
	Her gün	198	68,3%
	Hiç Dinlemem	0	0,0%
Günlük Müzik Dinleme Saati	1 saat	98	33,8%
	2 saat	84	29,0%
	3 saat	47	16,2%
	4 saat	25	8,6%
	5 ve üstü	36	12,4%
Müzikte En Çok Dikkat Edilen Özellik	Sözlerin Anlamı	39	13,4%
	Ezgi (Melodi)	43	14,8%
	Her İkisi de	208	71,7%
En Çok Dinlenen Müzik Türü	Türk Halk Müziği	20	6,9%
	Klasik Batı Müziği	5	1,7%
	Jaz Müziği	0	0,0%
	Rock Müzik	18	6,2%
	Tasavvuf Müziği	2	0,7%
	Enstrümantal Müzik	4	1,4%
	Latin Müziği	0	0,0%
	Türk Sanat Müziği	8	2,8%
	Arabesk Müzik	38	13,1%
	Pop Müzik	130	44,8%
	Rap/Rep Müzik	21	7,2%
	Etnik Müzik	8	2,8%
	Hip-Hop	4	1,4%
	Diğer	32	11,0%

Katılımcıların yalnızca %14,8'i müzikle profesyonel ya da amatör olarak ilgilenmektedir. En sık tercih edilen üç müzik türü olan pop, arabesk ve rap dinleme oranı (%65,1), DSÖ-5 İyi Oluş Ölçeği'ne göre düşük ZİO gösteren öğrencilerin %65'lik oranıyla benzer bir dağılım göstermektedir. Öğrencilerin %35'i ise normal veya yüksek düzeyde zihinsel iyi oluşa sahiptir. Ortalama ZİO puanı 44.95'tir (Şekil 1). PS düzeylerine bakıldığında, %34 düşük, %61 normal ve %5 yüksek düzeydedir (Şekil 2). PS ile ZİO arasında pozitif yönde anlamlı bir ilişki belirlenmiştir ($r = .293$, $p < .01$). Regresyon analizine göre, müzik dinleme alışkanlıkları ZİO'yu zayıf düzeyde yordamaktadır ($R^2 = .045$, $F = 3.62$, $p < .05$); ancak PS açısından anlamlı bir yordayıcı değildir ($p > .05$).

Tek yönlü ANOVA sonuçlarına göre en çok dinlenen müzik türleri (pop, arabesk, rap) arasında ZİO ($F = 0.975, p > .05$) ve PS ($F = 0.427, p > .05$) açısından anlamlı fark yoktur. Müzik dinleme sıklığı ve süresi ile bu değişkenler arasında da anlamlı ilişki gözlenmemiştir. Bu durum, müzik türünden çok içerik ve bireysel faktörlerin etkili olabileceğini düşündürmektedir. Cinsiyet açısından, erkek öğrenciler hem ZİO ($t = -2.13, p < .05$) hem PS ($t = -2.24, p < .05$) düzeylerinde kadınlara göre daha yüksek puanlara sahiptir. Ayrıca, 25 yaş üstü bireylerin PS düzeyleri anlamlı biçimde daha yüksek bulunmuştur ($p < .05$).

Şekil 1: Üniversite öğrencilerinin DSÖ-5 Zihinsel İyi Oluş Skoru Dağılımı

Şekil 2: Üniversite Öğrencilerinin Kısa Psikolojik Sağlamlık Skoru Dağılımı

Tüm istatistiksel bulgulara ek olarak, verilerde dikkat çekici bazı örüntüler göze çarpmaktadır. Katılımcıların en sık tercih ettiği üç müzik türü olan pop, arabesk ve rap dinleme oranı ile (%65.1) düşük ZİO düzeyine sahip bireylerin oranı (%65) oldukça benzer bir dağılım göstermektedir. Ayrıca, öğrencilerin %68.3'ü her gün, %66.2'si günde bir saatten fazla müzik dinlediğini ve %84.2'si müzik sözlerine dikkat ettiğini belirtmiştir.

Bu bulgular, öğrencilerin yalnızca sık ve uzun süreli dinleyiciler olmadığını, aynı zamanda müzik sözlerine yüksek düzeyde farkındalık geliştirdiklerini göstermektedir. Özellikle pop, arabesk ve rap türlerinde sıkça karşılaşılan melankoli, yalnızlık, toplumsal gerilim ve duygusal boşalma temaları, dinleyicinin psikolojik durumu ile müziğin duygusal içeriği arasında anlamlı bir etkileşim olabileceğini düşündürmektedir.

Bu örüntü, çalışmada ele alınan pasif müzik terapisi kavramıyla örtüşmektedir. Bireyin duygusal düzenleme amacıyla seçtiği müzik türü ve söz içeriği, iyi oluş düzeyini olumlu ya da olumsuz etkileyebilir. Dolayısıyla, yalnızca MDA sıklığı değil, içerik tercihleri ve sözlerle kurulan duygusal bağ da ZİO üzerinde belirleyici olabilir.

Tartışma

Bu çalışmada incelenen MDA, üniversite öğrencilerinin duygusal regülasyon süreçlerinde önemli bir rol oynayabilir. Doğru MDA; uygun müzik seçimi, sözlere dikkat ve zamanı verimli kullanma gibi davranışları içerirken; yanlış MDA, olumsuz içerikler, uzun süre kulaklık kullanımı ve izolasyonla ilişkilidir. Bulgular, bu ayrımın ZİO ve PS ile sınırlı düzeyde ilişkili olabileceğini göstermektedir.

PS ile ZİO arasındaki ilişki literatürle uyumludur (Doğan, 2015; Eser vd., 2019). Yaş ilerledikçe başa çıkma kapasitesi artarken, erkeklerin daha yüksek DSÖ-5 puanları cinsiyet etkisine işaret eder; bu durum, cinsiyete özgü destek ihtiyacını artırır. Öğrencilerin %26,5'inin depresyon riski taşıması, pandemi sonrası desteğe duyulan gereksinimi gösterir.

Müzik türü, içerik farkındalığı ve ZİO ilişkisi bağlama bağlıdır. Dinleme süreci veya sıklığının ZİO ile anlamlı ilişkisi bulunmaması, içerik farkındalığı ve duygusal etkileşimin önemini ortaya koyar. Katılımcıların %84,2'sinin sözlere dikkat etmesi, müziğin duygusal ve bilişsel boyutlarını vurgular. Ancak bu farkındalık her zaman etkili duygusal düzenleme sağlamaz. Pop, arabesk ve rap tercihleri ile düşük ZİO arasındaki örüntü dikkat çekicidir.

Tür bazlı analizlerde pop, arabesk ve rap arasında ZİO açısından anlamlı fark bulunmamıştır. Bu durum, veri yetersizliğiyle birlikte bu türlerin benzer etkiler yaratabileceğine işaret eder. Pop, arabesk ve rap dinleyenlerin oranı (%65,1) ile düşük ZİO oranı (%65) örtüşmektedir; ancak kontrol grubunun yokluğu kesin sonuca izin vermez. Bu nedenle, bu türlerin ZİO veya PS üzerindeki etkisine dair doğrudan bir çıkarım yapılmamış; yalnızca örüntüsel benzerliğe dikkat çekilmiştir. Başlangıçta MDA'nın PS ve ZİO ile ilişkili olabileceği öne sürülmüştü; ancak bulgular bu ilişkiyi doğrulamamıştır. Bu durum, kontrol grubunun olmaması ve müfredat etkisinin ölçülmemesi gibi sınırlamalardan kaynaklanabilir. Gelecekte bu ilişki, kontrol gruplu ve uzunlamasına çalışmalarla yeniden incelenmelidir.

Müzik dinleme alışkanlıkları pasif müzik terapisine benzer; her iki durumda da birey dinleyicidir. Ancak terapide içerik seçimi yapılandırılmışken, MDA bireysel tercihlere dayanır (Saarikallio ve Erkkilä, 2007; Bradt vd., 2013). Sözlere dikkat bilinçli farkındalığa işaret edebilir; ancak ZİO'su düşük ve PS'i sınırdan olan bireylerde bu farkındalığın derinliği tartışmalıdır. Söz içerikleri yüksek duygusal yoğunluk taşıyabilir ve bireyin farkındalık düzeyine göre destekleyici ya da tetikleyici olabilir. Bu nedenle, yapılandırılmış farkındalık ve yönlendirme stratejilerinin MDA'ya entegre edilmesi, doğru alışkanlıkları artırarak MDA'nın olumlu etkilerini güçlendirebilir. Bu tür programlar, öğrencilerin boş zamanlarını güç temelli değerlendirerek psikolojik dayanıklılık geliştirmelerine katkı sunabilir (Hood ve Carruthers, 2016). Doğru MDA, yalnızca psikolojik değil, akademik çıktılarla da ilişkilidir. Pozitif duygudurum, dikkat süresi ve bilişsel esneklik üzerinde olumlu etkiler bildirilmiştir (Hallam vd., 2002; Thoma vd., 2006; Schellenberg, 2005).

Üzgün bireyler duygudurumlarıyla örtüşen müzikleri seçebilir. Ancak bu tercihin etkisi, bireyin başa çıkma stratejisine bağlıdır. Bu durum, müzik tercihlerinin psikolojik işlevsellikle de ilişkili olduğunu göstermektedir (Thoma vd., 2006; Garrido, 2018).

Bu çalışmada, müzik dinleme süresi ile ZİO ve PS düzeyleri arasında istatistiksel olarak anlamlı bir ilişki bulunmamıştır. Literatürde uzun dinleme süresinin olumsuz etkileri bildirilse de (Garrido, 2018; Thoma vd., 2006; Bradt vd., 2013), bu çalışmanın bulgusu bu eğilimle çelişmektedir. Örneklem, ölçüm araçları ve kontrol grubunun eksikliği bu durumu açıklayabilir. Ruh hâline uygun dinleme ve söz odaklılık doğru MDA'nın parçasıyken, amaçsız dinleme olumsuz içerik ve izolasyonla ilişkilidir. Dünya Sağlık Örgütü, müzik temelli uygulamaların duygusal düzenleme ve sosyal bağları güçlendirdiğini belirtmektedir (Fancourt ve Finn, 2019). Üzücü müzik etkisi bireyin ruminasyon eğilimi ve farkındalığına bağlıdır (Garrido, 2018;

Thoma vd., 2006). Bilinçli müzik dinleme rehberliği psikolojik ve akademik faydalar sağlayabilir (Bradt vd., 2013; Saarikallio ve Erkkilä, 2007; Hallam vd., 2002; Thoma vd., 2006). Kısa vadede bilişsel performansı da artırabilir (Schellenberg, 2005). Bu nedenle öğrencilere bilinçli müzik dinleme stratejileri kazandırılmalıdır.

Öğrencilerin mevcut PS ve ZİO düzeylerinin, hâlihazırdaki müfredatın iyi oluş odaklı bileşenlerinden etkilenmiş olması mümkündür; bu etki doğrudan ölçülmemiştir. UNESCO (2021), eğitim sistemlerinin bireylerin çok boyutlu iyi oluşunu destekleyecek şekilde yeniden yapılandırılması gerektiğini vurgularken; UNESCO (2022), kültür ve sanat temelli müfredatların bu dönüşümde temel rol oynayacağını belirtmektedir. Gelecekte farklı müfredat modelleri ve kontrol gruplarıyla, uzunlamasına ve karma yöntemli araştırmalar yapılmalıdır.

Sonuç olarak, bu çalışma sanat temelli öğretim uygulamalarının yalnızca estetik değil, psikolojik iyi oluşa da katkı sağladığını göstermektedir.

Sonuç ve Öneriler

Bu araştırma, öğretmen adayı üniversite öğrencilerinin MDA ile PS ve ZİO düzeyleri arasındaki ilişkiyi incelemiştir. Bulgular, öğrencilerin ZİO düzeylerinin düşük, PS değerlerinin ise normalin alt sınırına yakın olduğunu göstermektedir. Tercih edilen müzik türleri ile ZİO arasında anlamlı fark bulunmasa da duygusal yoğunluğu yüksek türlerin (rock, arabesk, rap) yaygın dinlenmesi dikkat çekicidir. Örneklemde müzik dinlemeyen bireylerin bulunmaması karşılaştırmalı analizleri sınırlamıştır. Regresyon analizleri, MDA'nın ZİO üzerinde sınırlı bir yordayıcı, PS üzerinde ise anlamlı bir etkisinin olmadığını göstermiştir. Müziğin etkisi sadece türle değil, bireyin onu hangi amaçla ve bağlamda kullandığıyla da ilgilidir. Literatürde müziğin sadece estetik değil, günlük yaşamı yapılandıran psikolojik bir araç olduğu ve bireysel iyi oluşa katkı sunduğu vurgulanmaktadır (North, Hargreaves ve Hargreaves, 2004; Garrido, 2018).

Katılımcıların çoğu her gün, bir saatten uzun süre müzik dinlemekte; müzikte sözel içeriğe özel önem atfetmektedir. ZİO düzeylerinin düşüklüğü ve %26,5'inde depresyon belirtilerinin görülmesi, bazı bireylerin müziği olumsuz duyguları pekiştirecek biçimde kullandığını düşündürmektedir. Ancak bu çalışmada dinleme süresi ile ZİO arasında anlamlı ilişki bulunmamıştır. Bu farklılık, metodolojik sınırlılıklardan kaynaklanabilir. Bu nedenle uzun süreli müzik dinlemenin etkilerini anlamak için daha kapsamlı ve kontrollü çalışmalara ihtiyaç vardır (Garrido, 2018; Thoma vd., 2006).

Demografik olarak, erkek öğrencilerin PS ve ZİO düzeylerinin kadınlara kıyasla daha yüksek olduğu saptanmıştır. Bu durum, cinsiyete özgü psikososyal destek mekanizmalarının geliştirilmesini gerekli kılmaktadır. Ayrıca öğrencilerin önemli bir kısmının depresyon riski taşıması, destek hizmetlerinin erişilebilirliğinin artırılması gerektiğini göstermektedir.

Elde edilen sonuçlar, müzikle kurulan ilişkinin bireysel ve mesleki dayanıklılığı etkileyebileceğini ortaya koymaktadır. Fancourt ve Finn (2019), sanatın iyi oluş üzerindeki etkisine; UNESCO (2021, 2022) ise kültür ve sanatın eğitimdeki dönüştürücü rolüne dikkat çekmektedir. Sanat temelli eğitim uygulamaları, psikolojik iyi oluşa katkı sağlamakta; bilinçli müzik dinleme alışkanlıkları, gençlerin ruh sağlığını destekleyebilmektedir. Bu nedenle, öğretmen adaylarına sanatın psikolojik ve pedagojik işlevleri konusunda farkındalık kazandırılması, bu becerilerin müfredata entegre edilmesi önerilmektedir. Ayrıca, müzik okuryazarlığı, medya içerik analizi ve duygusal düzenleme becerilerini kapsayan disiplinlerarası programlar yaygınlaştırılmalıdır. UNESCO'nun bu yöndeki yaklaşımı da çalışmanın bulgularıyla örtüşmektedir.

Son olarak, üniversitelerde iyi oluş temelli seçmeli derslerin kısmen de olsa pasif müzik terapisi modülleriyle desteklenmesi ve psikososyal destek hizmetlerinin erişilebilirliğinin artırılması önem arz etmektedir.

Gelecek araştırmalar için öneriler: Müzik dinlemeyen bireyleri de içeren kontrol gruplarının kullanılması, Yapısal eşitlik modellemesi ve çoklu regresyon gibi ileri analiz tekniklerinin uygulanması, Farklı müzik türlerinin duygusal ve bilişsel etkilerini inceleyen nitel araştırmaların yapılması.

Pozitif Okul İklimi ve İyi Oluş Kavramları Çerçevesinde Okul Sağlığı Hizmetleri: Doküman Analizi Çalışması

Çağla YİĞİTBAŞ

Giresun Üniversitesi, TÜRKİYE

cagla.yigitbas@giresun.edu.tr ORCHID ID: 0000-0002-3789-1156

Özet

Pozitif okul iklimi; öğrencilerin kendilerini güvende, değerli ve desteklenmiş hissettikleri, fiziksel, psikolojik ve sosyal olarak sağlıklı bir okul ortamının varlığına işaret eder. Bu yapının inşasında okul sağlığı hizmetlerinin kapsamı ve niteliği merkezi bir rol oynamaktadır. Bu çalışmanın amacı, pozitif okul iklimi ve öğrenci iyi oluş kavramları çerçevesinde, Millî Eğitim Bakanlığı tarafından yayımlanan okul sağlığına ilişkin genelgelerde bu temalara ne ölçüde yer verildiğini incelemektir. Bu kapsamda çalışma, farklı yıllarda yayımlanmış ve okul sağlığına yönelik farklı boyutlara odaklanan genelgeleri analiz ederek iyi oluşun fiziksel, psikolojik ve sosyal boyutlarının belgelerdeki temsilini ortaya koymayı hedeflemektedir. Araştırma, nitel araştırma yöntemlerinden doküman analizi tekniği ile yürütülmüştür. 2000 yılı sonrasında yayımlanan farklı on farklı genelge çalışma kapsamına dahil edilmiştir. Bu genelgeler içerik analizi yaklaşımıyla değerlendirilerek önceden belirlenmiş tema başlıkları altında kodlanmıştır.

Araştırmadan elde edilen temalar; Fiziksel İyi Oluş (Hijyen, beslenme, bulaşıcı hastalık kontrolü, fiziksel güvenlik), Psikolojik İyi Oluş (Rehberlik hizmetleri, ruhsal destek, şiddet ve madde kullanımıyla mücadele), Sosyal İyi Oluş (Aile katılımı, toplumsal paydaşlarla iş birliği, okul topluluğu) şeklindedir. Genelgelerin çoğu, okul sağlığının fiziksel boyutuna ağırlık vermekte; hijyen, beslenme, bulaşıcı hastalıklar ve fiziksel ortam düzenlemeleri öne çıkmaktadır. Psikolojik ve sosyal iyi oluş ise daha sınırlı ve dolaylı ifadelerle yer almaktadır. Pozitif okul iklimi kavramı genelgelerde doğrudan adlandırılmasa da genelgelerde sunulan öneri ve politikalar bu iklimin desteklenmesine katkı sağlamaktadır. Okul sağlığına ilişkin genelgeler, iyi oluşun fiziksel boyutunu vurgulamakta; ancak psikolojik ve sosyal boyutlara yönelik stratejik ve bütüncül bir yaklaşım eksikliği gözlemlenmektedir. Pozitif okul iklimi oluşturmak için bu boyutları kapsayacak çok disiplinli politikalara ve uygulama rehberlerine ihtiyaç vardır.

Anahtar Kelimeler: Doküman analizi, okul sağlığı, iyi oluş, psikososyal destek, eğitim politikaları, genelge analizi

School Health Services within the Framework of Positive School Climate and Well-Being: A Document Analysis Study

Abstract

A positive school climate refers to an educational environment in which students feel safe, valued, and supported, and where physical, psychological, and social well-being are promoted. School health services play a central role in building and maintaining such a climate. This study

aims to examine how the concepts of positive school climate and student well-being are represented in school health circulars issued by the Turkish Ministry of National Education. Specifically, the study analyzes various circulars published in different years, each addressing distinct aspects of school health, to reveal how the physical, psychological, and social dimensions of well-being are reflected in these official documents. The research was conducted using document analysis, a qualitative research method. Ten different circulars published after the year 2000 were included in the study. These documents were evaluated using a content analysis approach and coded under predefined thematic categories. The main themes derived from the analysis include: Physical Well-Being (hygiene, nutrition, control of infectious diseases, physical safety), Psychological Well-Being (guidance services, emotional support, prevention of violence and substance abuse), Social Well-Being (family involvement, collaboration with community stakeholders, school community engagement). The findings show that most circulars emphasize the physical dimension of school health, focusing on hygiene, nutrition, disease control, and physical environment regulations. In contrast, psychological and social well-being are addressed more indirectly and with limited depth. Although the term “positive school climate” is not explicitly mentioned in these circulars, the suggested policies and actions contribute to the development of such a climate. It is concluded that while school health circulars highlight the physical aspects of well-being, there is a lack of strategic and holistic approaches to the psychological and social dimensions. To foster a truly positive school climate, multidisciplinary policies and comprehensive implementation guidelines are essential.

Keywords: Document analysis, school health, well-being, psychosocial support, education policies, circular review

Giriş

Okullar, çocuklara ve gençlere hem kendi yaşamlarını hem de başkalarının yaşamlarını etkileyebilecek bilgiler kazandıran, hayatın erken dönemlerinden itibaren fiziksel, psikolojik ve sosyal sağlığın korunup geliştirilmesine katkı sağlayan kilit oluşumlardır (Kurt, Serdaroğlu, & Özcan, 2024) ve okullarda pozitif okul ikliminin sağlanması önemlidir.

Literatürde pozitif okul iklimi, öğrencilerin kendilerini güvenli, değerli ve desteklenmiş hissettikleri; aidiyet duygularının güçlendiği, demokratik ve kapsayıcı ortam olarak tanımlanmaktadır (Chen, Cárdenas, Zhou, & Reynolds, 2024; Fraser, 2024). Bir meta-analiz çalışmasında (2024), olumlu okul ikliminin akademik başarıyla orta düzeyde anlamlı pozitif ilişkisini; öğrenme motivasyonu, devamsızlık oranları ve mezuniyet üzerinden dolaylı etkilerini göstermiştir (Podiya, Navaneetham, & Bhola, 2025). Benzer biçimde, 2023 ve 2025 tarihli boylamsal çalışmalar, “pozitif okul iklimi” algısının öğrencilerin zihinsel iyi oluş düzeylerini hem kişilerarası hem de birey-içi düzeyde yükselttiğini rapor etmektedir (Urke et al., 2025).

İyi oluş (well-being) kavramı ise yalnızca ruh sağlığıyla sınırlı olmayıp fiziksel (ör. hijyen, beslenme, hareket), psikolojik (ör. duygusal dayanıklılık, öz-saygı) ve sosyal (ör. aidiyet, ilişkiler, topluluk desteği) boyutları kapsayan çok boyutlu bir çerçeve sunar. UNESCO’nun “Ready to Learn and Thrive/ Öğrenmeye ve Gelişmek İçin Hazır Olmak” raporu (ExpEriEnCEs, 2014), beslenme, hijyen ve duygusal destek programlarının entegre yürütüldüğü okullarda öğrenme kayıplarının azaldığını, devamsızlığın düştüğünü bildirmektedir (UNESCO, UNICEF, & Programme, 2023).

Okullarda sürdürülen bu hizmetler pozitif okul iklimi ve iyi oluş felsefesi bağlamında kronolojik olarak ele alındığında; “Herkes İçin Sağlık” temasıyla yürütülen ve 1978-1989 yıllarını kapsayan sürecin ilk aşama olan 1978 Alma - Ata bildirgesinde çocukluk döneminin koruyucu hizmetlerle kapsanması; okullara sağlık hizmeti ulaştırılması çağrısı vardı (UNESCO, 2000). 1986 yılında ise “Ottawa Sağlık Teşvik Şartı” ile ilk kez “Sağlığı Geliştiren Okullar” kavramı mekân-temelli sağlık teşviki bağlamında uluslararası metinde yer aldı (Kickbusch). 1990-1999 arası “Eğitim Herkesin Hakkı” dönemi idi. Bu dönemin ilk süreci “Jomtien Eğitim Herkes İçin” Deklarasyonuydu. Bu deklarasyonun temel amacı; evrensel temel eğitim; okul dışı dezavantajların azaltılması şeklindeydi ve öğrencilerin beslenme, sağlık bakımı ve duygusal destek gereksinimlerini öğrenmelerinin ön-koşul olduğu açıklanmıştı (Buchert, 1995). 1995’te ise WHO ve UNESCO “Health-Promoting Schools” Modeli süreci gerçekleştirdi. Bu süreçte; okul politikası, çevre, sağlık hizmeti, beceri temelli eğitim bileşenleri tanımlandı (Nakajima, 1996). “Binyıllık Kalkınma Hedefleri” dönemi ise dünya tarihinin 2000- 2015 yılları arasını kapsadı (Rashidian, 1995). Bu dönem kapsamında 2000 yılında “Binyıl Kalkınma Hedefi” süreci başladı (Eşkinat, 2016). Bu sürecin 2. maddesinde evrensel ilköğretime, 4, 5, 6. maddelerinde ise çocuk/anne ölümleri ve bulaşıcı hastalıklarda azalma hedeflerine vurgu yapıldı ve okullarda aşı, beslenme, HIV eğitimi programları gerçekleştirildi. 2000 yılında UNESCO-UNICEF-WHO-Dünya Bankası işbirliğiyle Focusing Resources on Effective School Health/Etkili Okul Sağlığı için Kaynakların Odaklanması (FRESH) süreci sürdürüldü ve okul sağlık politikası, su-sanitasyon-çevrenin düzenlenmesi, beceri temelli sağlık eğitimi ile okul temelli sağlık - beslenme hizmetlerinin sektörler arası iş birliği, toplum ortaklığı ve öğrenci katılımıyla sürdürülmesi benimsendi. Bu modelle birlikte “okul beslenme programları”, “demir-folat takviyesi”, “sivrisinek uzaklaştırıcı dağıtımı” gibi somut uygulamalar küresel standartlar haline geldi (World Bank, 2001). 2000-2015 arasında “Dakar Eğitim 2030” Süreci başlatıldı. Bu sürecin amacı kaliteli öğrenme ortamıydı ve HIV/AIDS, hijyen ve okul sağlığı Dakar Eylem Çerçevesi’nin öncelikli alanları arasına girmişti (UNESCO, 2000). 2015 yılında ise 2030 yılını hedefleyen Sürdürülebilir Kalkınma Hedefleri (SKH) süreci (Kurt et al., 2024) 17 girişimle başlatıldı. Bu girişimin 3. maddesi sağlığa, 4. maddesi ise eğitime odaklanıyordu. Okul temelli sağlık, beslenme ve ruh sağlığı hizmetleri bu alt hedeflerin ana uygulama aracı olarak benimsendi. 2021 yılında WHO-UNESCO “Her Okulu Sağlığı Geliştiren Okul Yap” Küresel Standartları girişimini başlattı (UNESCO et al., 2023). Bu girişimle de sağlık politikası, müfredat, hizmet, topluluk katılımı, izleme-değerlendirme ölçütleri ayrıntılandırıldı; hükümetlere “ülke-düzeyi ölçeklendirme rehberi” sağlandı. 2022 yılında UNESCO “Eğitimde Sağlık ve İyi Oluş Stratejisi 2022-2030 girişimini başlattı ((WHO), 2022). Bu girişimle eğitim sistemlerine sağlığı entegre etmek ve COVID-19 sonrası toparlanma hedeflendi. Psikososyal destek, okul beslenme programları ve su-sanitasyon yatırımları, SKH 3-4 kesişiminde kilit eylem alanları olarak belirlendi. 2023-2024 sürecinde SKH İlerleme Raporları & “Transforming Education” Ajandası yayınlandı ve sağlık-eğitim entegrasyonunda “okul hemşireliği” ve “dijital ruh sağlığı araçları” başlıkları öne çıktı; düşük- orta gelirli ülkelerde FRESH bileşenlerinin sürdürülebilir finansmanı kritik sorun olarak vurgulandı (UNESCO et al., 2023).

Türkiye’de okul sağlığı politikalarının çerçevesi, Millî Eğitim Bakanlığı (MEB) ile Sağlık Bakanlığı arasında imzalanan protokoller ve MEB tarafından yayımlanan Okul Sağlık Hizmetleri Genelgesi gibi düzenleyici metinlerle çizilmektedir. Bu çalışmanın amacı, pozitif okul iklimi ve öğrenci iyi oluş kavramları çerçevesinde, Millî Eğitim Bakanlığı tarafından yayımlanan okul sağlığına ilişkin genelgelerde bu temalara ne ölçüde yer verildiğini

incelemektir. Bu kapsamda çalışma, farklı yıllarda yayımlanmış ve okul sağlığına yönelik farklı boyutlara odaklanan genelgeleri analiz ederek iyi oluşun fiziksel, psikolojik ve sosyal boyutlarının belgelerdeki temsilini ortaya koymayı hedeflemektedir.

Bu doğrultuda araştırmanın temel soruları şu şekilde formüle edilmiştir:

- Genelgelerde iyi oluşun fiziksel, psikolojik ve sosyal boyutları hangi sıklıkta ve hangi kapsamda temsil edilmektedir?
- Okul sağlığı genelgeleri, pozitif okul iklimine ilişkin hangi kavram ve stratejilere yer vermektedir?

Yöntem

Araştırma Tasarımı

Bu çalışma, nitel araştırma desenlerinden doküman analizi yöntemiyle yürütülmüştür. Doküman analizi, yazılı metinlerin sistemli, tekrarlanabilir ve izlenebilir biçimde incelenerek içerdiği anlamların ortaya konulmasını sağlar (Bowen, 2009). Doküman analizinde sıklıkla başvurulan yaklaşımlardan biri de betimsel içerik analizidir. Bu yöntemde, mevcut çalışmalar belirli temalar doğrultusunda bir araya getirilir, yapılandırılır ve yorumlanarak analiz süreci yürütülür (Creswell, 2016). Çalışmada, MEB tarafından 2000-2024 yılları arasında yayımlanan okul sağlığı genelgeleri, pozitif okul iklimi ve öğrenci iyi oluşu kavramları çerçevesinde çözümlenmiştir.

Çalışma Grubu

Çalışma grubunu 2000 sonrası Türkiye’de resmî gazetede veya MEB mevzuat havuzunda yayımlanan tüm okul sağlığı genelgeleri (<https://www.meb.gov.tr/mevzuat/liste.php?ara=1>) oluşturmaktadır (N = 37). Aşağıdaki seçim ölçütlerini karşılayan 10 genelge örnekleme dâhil edilmiştir. Çalışma kapsamına dahil edilen genelgelerin;

Ulusal düzeyde yürürlüğe girmiş olması,

Okul sağlığına ilişkin özel veya bütüncül hükümler içermesi,

Tam metnine çevrimiçi erişim sağlanabilmesi,

Geçerliliğini yitirmemiş veya yerini alan yeni düzenlemede tarihsel karşılaştırmaya imkân tanınması araştırmanın temel çerçevesi olarak sınırlandırılmıştır.

Veri Toplama Süreci

Genelgelerin pdf ve Word versiyonları, MEB Mevzuat Bilgi Sistemi ile Resmî Gazete Arşivi üzerinden Nisan 2025’te indirilmiş, Mayıs 2025’te yeniden kontrol edilmiştir. Her belgeye kimlik kodu (G1–G10) atanmış, yayın yılı, kapsam alanı ve yürürlük durumu gibi veriler ayrı bir Excel tablosunda kaydedilmiştir.

Verilerin Analizi

Verilerde analiz geçerliliği arttırmak için iki farklı zamanda kodlama yaklaşımıyla yürütülmüştür. Genelgeler G1, G2...G10 şeklinde incelenmiştir.

Ön Kod Listesi Geliştirme: Pozitif okul iklimi literatürü (Astuti, Rahman, Hariri, Aryani, & Kamal, 2025; Barrio-Cortes et al., 2025; Chen et al., 2024; Edling et al., 2025; Maharjan, 2025; Prasetyarini, Hidayat, Hikmat, & Suharyanto, 2025; Tion & Tantiado) taranarak üç üst tema tanımlandı:

Fiziksel İyi Oluş (hijyen, beslenme, güvenlik, bulaşıcı hastalık kontrolü),

Psikolojik İyi Oluş (rehberlik, ruh sağlığı, zorbalıkla mücadele),

Sosyal İyi Oluş (aile ve toplum katılımı, aidiyet, öğrencinin söz hakkı).

Tematik Sıklık ve Eğilim Çözümlemesi: Bunun için kod frekansları hesaplanmıştır

Geçerlik ve Güvenirlik

İç Tutarlılık: İkili kodlamaya ilişkin Cohen's $\kappa = 0,86$ olarak hesaplanmış, güçlü uyum düzeyi elde edilmiştir.

Uzman Görüşü: Kod kitabı iki halk sağlığı akademisyenince içerik ve kapsam açısından doğrulanmıştır.

Etik Hususlar

Çalışmada kişisel veri içermeyen, kamuya açık resmî belgeler kullanıldığı için etik kurul onayı gerekmemekle birlikte, Helsinki Bildirgesi ilkeleri gözetilmiştir. Belgeler orijinal bağlamı bozulmadan raporlanmış, yorumlarda araştırmacı önyargısını en aza indirmek için karşı-kontrol uygulanmıştır.

Bulgular

Bu çalışmada, Millî Eğitim Bakanlığı tarafından yayımlanmış ve okul sağlığı, pozitif okul iklimi ile öğrenci iyi oluşu kavramlarıyla doğrudan ilişkili olduğu belirlenen on genelge içerik analizi yöntemiyle incelenmiştir. Dokümanlar, nitel veri analizi yaklaşımı çerçevesinde kodlanmış; elde edilen veriler üç ana tema ve dokuz alt tema altında toplanmış ve çalışmaya dahil edilen genelgelerin konularına göre dağılımları Tablo 1'de kodlar ise Tablo 2'de sunulmuştur.

Tablo 1. Genelge Tanımlayıcı Bilgileri

Genelge	Konu	Pdf no	Tarih/Sa yı
G1	İlkyardım eğitim hizmetleri	2038	2020/3
G2	Okul Kantinlerinde Satılacak Gıdalar ve Eğitim Kurumlarındaki Gıda İşletmelerinin Hijyen Yönünden Denetlenmesi	2050	2020/8
G3	Afet ve Acil Durum Yönetimi	2058	2021/139
G4	İzinsiz Eğitim ve Öğrenci Barınma Faaliyeti Gösteren Yerler	2172	2023/26
G5	Okullarda Şiddetin Önlenmesi Genelgesi	2234	2024/56
G6	Afet ve Acil Durum Yönetimi	2058	2021/13
G7	2024-S025 Eğitim ve Öğretim Yılına İlişkin İş ve İşlemler	2229	2024/53

G8	100. Yıl Kutlamaları Genelgesi	2177	2023/27
G9	Millî Eğitim Bakanlığı Okul Aile Birliği Yönetmeliği'nde Değişiklik Yapılmasına Dair Yönetmelik	2191	2024/35
G10	Mevsimlik Tarım İşçileri ile Göçer ve Yarı Göçer Ailelerin Çocuklarının Eğitime Erişimi	2222	2024/52

Çalışmada bulunan ana temalar, alt temaları ve kodlar aşağıdaki gibidir.

Tema 1: Fiziksel İyi Oluş

Alt Tema-1: Hijyen ve beslenme

Kod Etiketi: hijyen_beslenme

Doğrudan Alıntı:

“Bu kapsamda; gıda işletmelerinde Sağlık Bakanlığı Bilim Kurulu tavsiye kararlarına uygun olarak belirlenen okul gıdası kriterlerine uyum sağlanması ve İlgi (g)’de kayıtlı Yönetmelik’e göre güvenilir gıda üretimi için gerekli olan hijyen şartlarının (personel, ekipman, ham madde, ortam hijyeni vb.) oluşturulması, üretim ve servis aşaması da dâhil olmak üzere öğrencilerin sağlığı açısından risk oluşturabilecek nedenlerin ortadan kaldırılması amacıyla aşağıda belirtilen esaslara göre denetim, gözetim ve sistem yönetimi uygun görülmektedir”,

“Denetimler; İlçe İSG Bürosu yöneticisi koordinesinde, ilçe sınırları içerisinde bulunan okul/kurumlarda her eğitim öğretim yılında en az bir defa; insan sağlığı ve gıda güvenirliliği açısından tehlike oluşması ve acil tedbirler gerekmesi durumunda (okul/kurum denetim komisyonunca yapılan denetim ve kontrollerde gıda güvenliği ile ilgili büyük uygunsuzluklar aynı gün, diğer küçük uygunsuzluk bildirimleri ve şikâyetler ise 3 iş günü içinde) ivedilikle yapılır.”,

“Gıda işletmelerinin yetkilisi ve çalışanların “Okul Kantinlerine Dair Özel Hijyen Kuralları Yönetmeliği Eğitimine katılım sağlamaları”,

“Okul, pansiyon ve yurtlara yemek sağlayan gıda işletmeleri, yemek fabrikaları ve okul pansiyon yemekhanelerinde üretilen yemeklerin her çeşidinden alınan yeterli miktarda örneğin hijyenik ve tek kullanımlık kaplarda 72 saat uygun koşullarda (soğukta ya da dondurarak)

zorunlu olarak muhafaza edilmesi”,

“Gıda işletmelerinde çalışanların İlgi (k) ’da kayıtlı Yönetmelik’e uygun olarak Hijyen Eğitimi Sertifikaları olmadan çalıştırılmaması”, (2050 (2020/8) – Okul Kantinlerinde Satılacak Gıdalar ve Eğitim Kurumlarındaki Gıda İşletmelerinin Hijyen Yönünden Denetlenmesi)

Alt Tema-2: İlk yardım ve afet hazırlığı

Kod Etiket: afet_ilkyardım

Doğrudan Alıntı:

“Eğitim kurumlarımızda afete hazırlık kültürünün geliştirilmesi, afet ve acil durumlara yönelik gönüllülüğün yaygınlaştırılması ile afet öncesi, sırası ve sonrasında öğrenci ve çalışanlara doğru davranış şekillerinin kazandırılması hedeflenmektedir. Ayrıca afetlerde temel önlemler konusunda; düzenlenecek eğitimlerle bilgi ve beceri kazandırılması, afet ve acil durum okul planlarının hazırlanması ve uygulanması, pratik uygulamalar ve etkin senaryolu tatbikatların gerçekleştirilmesi, eğitim kurumlarımızın afete hazır hâle getirilmesi öncelikli hedeflerimiz arasında yer almaktadır”,

“MEB AKUB ekiplerinde görev yapan personel tarafından yıllık çalışma planı kapsamında halk eğitim merkezlerinde, kursiyer ve velilere yönelik bilgilendirme amaçlı Temel Afet Bilinci Eğitimleri ile okullarda kulüp/ekip öğrencilerine Acil Durum ve Afete Hazırlık Farkındalık Eğitimleri düzenlenecektir”,

“Okullarda; afete hazırlık, sağlık ve güvenlik vb. öğrenci kulüp/ekip faaliyetlerinin etkin olarak gerçekleştirilmesi, Afet ve acil durumlara hazırlık amacıyla kamu kurumları, sivil toplum kuruluşları, belediyeler vb. kurum ve kuruluşlar ile iş birliği yapılması sağlanır”. (2058 (2021-139 – Afet ve Acil Durum Yönetimi)

Alt Tema-3: Fiziksel güvenlik ve barınma

Kod Etiket: fiziksel_güvenlik

Doğrudan Alıntı:

“Öğrencilere özel barınma hizmeti veren kurumlara iş yeri açma ve çalışma ruhsatı ortaokul ve ortaöğrenim düzeyinde Milli Eğitim Bakanlığınca, yükseköğrenim düzeyinde Gençlik ve Spor Bakanlığınca verilir.” (2172 (2023/26) – İzinsiz Eğitim ve Öğrenci Barınma Faaliyeti Gösteren Yerler).

Tema 2: Psikolojik İyi Oluş

Alt Tema-1: Rehberlik ve RAM yönlendirmeleri

Kod Etiket: psiko_destek_ram

Doğrudan Alıntı:

“Okul/kurumlarda öğretmen-öğrenci, öğrenci-öğrenci, öğretmen-aile, aile-öğrenci arasında şiddet, zorbalık ve saldırgan davranışların kabul edilmeyeceğinin temel bir anlayış olarak kazandırılmasına yönelik çalışmaların yürütülmesi”,

“RAM’lar tarafından sorumluluk bölgelerinde rehber öğretmeni olmayan okullarda şiddetin önlenmesine yönelik farkındalık ve bilgilendirme çalışmalarının yürütülmesi”,

“Okul/kurumlarda öğretmen-öğrenci, öğrenci-öğrenci, öğretmen-aile, aile-öğrenci arasında

şiddet, zorbalık ve saldırgan davranışların kabul edilmeyeceğinin temel bir anlayış olarak kazandırılmasına yönelik çalışmaların yürütülmesi”,
“RAM'lar tarafından sorumluluk bölgelerinde rehber öğretmeni olmayan okullarda şiddetin önlenmesine yönelik farkındalık ve bilgilendirme çalışmalarının yürütülmesi”,

“Tüm okul / kurumlar tarafından sevgi, saygı ve birlikte yaşama kültürünü güçlendirmeye yönelik çalışmaların artırılması” (2234 (2024/56) – Okullarda Şiddetin Önlenmesi Genelgesi)

Alt Tema-2: Kriz durumlarına müdahale ve travma önleme

Kod Etiket: kriz_müdahale

Doğrudan Alıntı:

“Fiziki yapı ve çevresel şartların değerlendirilmesi ve gerekli düzenlemelerin yapılması, Mevcut ve muhtemel tehlikelerin tanımlanarak bertaraf edilmesi, Risk analizlerinde afet ve acil durum risklerinin değerlendirilmesi, Tehlikelerden kaynaklı muhtemel risklere karşı gerekli tedbirlerin belirlenmesi, İş ekipmanlarının periyodik kontrol ve bakımlarının yaptırılması, Tahliye planlamaları yapılarak önceliklerin belirlenmesi, Afet ve acil durumlarda ihtiyaç duyulacak kaynakların belirlenmesi ve güncellenmesi sağlanır”,

“Sığınak/sığınma yeri ve acil toplanma bölgelerinin belirlenerek kullanıma hazır hale getirilmesi, Afet ve acil durumlar için belirlenen ihtiyaçların giderilmesi ve tedbirlerin alınması, Afet ve acil durumlarla ilgili öğrenci, öğretmen ve velilere yönelik bilgilendirme faaliyetlerin (özel eğitim ihtiyacı olan öğrencilere yönelik uygulamalı eğitimler ile materyal hazırlama çalışmaları) düzenlenmesi, Afet ve acil durum ekiplerinde görevlendirilecek personele, okul/kurumun özellikleri dikkate alınarak eğitim verilmesi, Afet ve acil durum konularında öğrenci ve çalışanlara yönelik yarışma, eğitim, seminer vb. faaliyetlerin gerçekleştirilmesi ile afiş ve broşür hazırlanması, Öğretmen, çalışan ve öğrencilerimize yönelik ilk yardım eğitimlerinin düzenlenmesi” (2058 (2021/13) – Afet ve Acil Durum Yönetimi)

Alt Tema-3: Zorbalık ve psikolojik güvenlik

Kod Etiket: zorbalık_önleme

Doğrudan Alıntı:

“Okullarda bilimsel, sportif, sosyal, kültürel etkinlikler, sosyal sorumluluk ve gönüllülük programları ile öğrencilerimiz arasında dayanışma ve iş birliklerinin artırılarak akran desteğinin geliştirilmesine yönelik çalışmalar yürütülecektir. Öğrenciler arasındaki olası problemleri çözümünde okul rehberlik birimi ile gerekli tedbirler alınacak, akran zorbalığı vb. olumsuzluklara müsamaha gösterilmeyecek, bu çerçevede meydana gelebilecek aileler arası tartışmalar ve şiddet olaylarının önlenmesine gayret edilecektir (2229 (2024/53) – 2024- 2025 Eğitim ve Öğretim Yılına İlişkin İş ve İşlemler)

Tema 3: Sosyal İyi Oluş

Alt Tema-1: Aidiyet ve okul kültürü

Kod Etiket: aidiyet_kültür

Doğrudan Alıntı:

“Kutlama komisyonları; üniversiteler, kamu kurumlarıyla iş birliği yaparak 29 Ekim Cumhuriyet Bayramı haftası ve yıl içerisinde Cumhuriyetimizin kurucusu Gazi Mustafa Kemal

Atatürk başta olmak üzere millî mücadele kahramanlarımızı, istiklal, istikbal, millî birlik ve beraberlik, vatan sevgisi, yurt savunması konularını ele alan faaliyetler düzenleyecektir”

“İl/ilçe millî eğitim müdürlükleri, okul müdürlükleri ve yurt dışı temsilciliklerimiz; hazırlayacakları programlarda imkân ve çevresel koşulları dikkate alarak eğitici, bilgilendirici etkinlik programlarının hazırlanmasına, çocuk ve gençlerimizin millî şuurunun, manevi değerlerinin geliştirilmesine özen gösterecektir”

“Okul/kurumlarımızda düzenlenecek programlara mülki idare erkânı, şehit yakınları, gaziler davet edilecek; şehit yakınlarının, gazilerin etkinliklerde yer almasına özen gösterilecektir” (2177 (2023/27) – 100. Yıl Kutlamaları Genelgesi)

Alt Tema-2: Aile ve topluluk katılımı

Kod Etiket: aile_katılımı

Doğrudan Alıntı:

“Okul/kurumlarda bulunan kantin ve benzeri yerlerin okul aile birlikleri tarafından kiralanacağı okul müdürlükleri vasıtasıyla il/ilçe millî eğitim müdürlüğüne bildirilecektir” (2191 (2024/35) – Millî Eğitim Bakanlığı Okul Aile Birliği Yönetmeliği'nde Değişiklik Yapılmasına Dair Yönetmelik)

Alt Tema-3: Kırılğan grupların desteklenmesi

Kod Etiket: kırılğan_gruplar

Doğrudan Alıntı:

“Öğrencilerin eğitim ve öğretime erişimini sağlayacak tedbirleri almak, gelen ve giden öğrencilerin tespitini yapmak, öğrencilerin gittiği yerde okula naklini alarak eğitime devamını sağlamak, akademik başarısızlıktan kaynaklanan devamsızlıkların önüne geçmek, öğrencilerin öğrenme kayıplarını gidermek için telafi programı düzenlemek, sürece dâhil edilen öğrencilerin beklenen öğrenme seviyesine ulaşmasına yardımcı olmak, eğitim kademelerinde ortaya çıkması muhtemel uyum sorunlarını önlemek ve öğrencilerin sosyal ve duygusal gelişimlerinin desteklenmesini sağlamak amacıyla gerekli çalışmalar planlanacaktır”,

“Valilikler, Genelge kapsamındaki öğrencilerin eğitim (kıyafet, kırtasiye ve benzeri) giderleri için destek sağlar. Bu öğrencilerin şartlı eğitim yardımı ve diğer yardımlardan faydalandırılması için gerekli tedbirleri alır” (2222 (2024/52) – Mevsimlik Tarım İşçileri ile Göçer ve Yarı Göçer Ailelerin Çocuklarının Eğitime Erişimi)

Sonuç ve Öneriler

Bu çalışma, Türkiye’de Millî Eğitim Bakanlığı tarafından 2000 sonrası yayımlanmış ve okul sağlığına ilişkin hükümler içeren on genelgeyi, pozitif okul iklimi ve öğrenci iyi oluşu kavramları çerçevesinde analiz etmiştir. İçerik analizi sonucunda iyi oluşun üç ana boyutu (fiziksel, psikolojik ve sosyal) altında dokuz alt tema ve kod etiketi belirlenmiştir. Bulgular, genelgelerin ağırlıklı olarak fiziksel iyi oluşa (hijyen, beslenme, barınma, ilkyardım ve afet hazırlığı) odaklandığını; psikolojik (rehberlik, zorbalıkla mücadele, kriz müdahalesi) ve sosyal (aidiyet, aile katılımı, kırılğan gruplar) iyi oluş alanlarının ise daha sınırlı temsil edildiğini ortaya koymuştur.

Analiz edilen belgelerin hiçbirinde “pozitif okul iklimi” kavramı doğrudan adlandırılmamış

olsa da içerik bağlamında olumlu okul ortamını destekleyici stratejilere yer verildiği gözlemlenmiştir. Bununla birlikte, psikososyal destek sistemlerinin kapsamı, kırılgan grupların desteklenmesine dair bütüncül politikaların eksikliği ve okul-toplum iş birliğini güçlendiren sürdürülebilir programların yetersizliği dikkat çekmektedir. Bu bulgular, okul sağlığı politikalarının daha çok bulaşıcı hastalık kontrolü ve fiziksel düzenlemeler gibi acil önleme odaklı olduğunu; öğrencinin bütüncül iyi oluşunu önceleyen sosyal ve psikolojik bileşenlerin ikincil düzeyde kaldığını göstermektedir.

Elde edilen bulgular, sadece eğitim sistemine değil, aynı zamanda halk sağlığı yaklaşımıyla ele alınması gereken toplumsal eşitsizliklere de işaret etmektedir. Pozitif okul iklimi ve öğrenci iyi oluşu, yalnızca pedagojik değil, aynı zamanda koruyucu sağlık hizmetleri kapsamında ele alınmalı; eğitim ortamları bireylerin yaşam boyu sağlık düzeyini belirleyen birincil sosyal belirleyicilerden biri olarak değerlendirilmelidir.

Öneriler

Pozitif okul iklimi kavramı MEB politika metinlerinde açıkça tanımlanmalı ve stratejik hedefler arasında yer almalıdır.

Okul sağlığı genelgeleri, fiziksel iyiliğin yanı sıra psikolojik ve sosyal iyiliği hedefleyen bütüncül yaklaşımlarla zenginleştirilmelidir.

Özellikle afet sonrası müdahalelerde öğrenci psikososyal uyumunu destekleyen ulusal rehberlik standartları algoritmalar şeklinde oluşturulmalıdır.

Eğitim ortamları, halk sağlığı yaklaşımıyla bireylerin fiziksel ve ruhsal sağlıklarını etkileyen koruyucu alanlar olarak yeniden tanımlanmalıdır.

Okullarda ilkyardım, psikolojik ilk yardım, kriz müdahalesi ve zorbalıkla baş etme konularında öğretmenlere yönelik hizmet içi eğitim programları yaygınlaştırılmalıdır.

Aile katılımını artırmak için okul aile birliği yönetmelikleri güncellenmeli; veli eğitimi programları teşvik edilmelidir.

Göçmen, mevsimlik işçi çocuğu, şehit-gazi yakını gibi kırılgan grupların eğitim-erişiminde okul temelli takip mekanizmaları geliştirilmelidir.- Okul sağlığı hizmetleri yerel sağlık otoriteleri ve halk sağlığı uzmanlarıyla eşgüdüm içinde yürütülmelidir.

Bu çalışmanın bulguları, genelgelerin sahadaki uygulamalarıyla karşılaştırmalı değerlendirmeyi hedefleyen nicel veya karma yöntemli araştırmalarla desteklenmelidir.

Öğrencilerin pozitif okul iklimi algısını ve iyi oluş düzeylerini ölçen ölçeklerle okul düzeyinde değerlendirme yapılmalıdır.

Okul sağlığı politikalarının halk sağlığı çıktıları üzerindeki etkileri uzunlamasına araştırmalarla izlenmelidir.

Madde Bağımlılığı ile Mücadeleye Yönelik Eğitim Politikalarının Pozitif Okul İklimi ve İyi Oluş Bağlamında İncelenmesi: Bir Doküman Analizi

Çağla YİĞİTBAŞ

Giresun Üniversitesi, TÜRKİYE

cagla.yigitbas@giresun.edu.tr, ORCID ID: 0000-0002-3789-1156

Özet

Günümüzde gençler arasında madde bağımlılığı, sadece bireysel sağlık sorunlarıyla sınırlı kalmamakta; aynı zamanda okul ortamlarının güvenliği, psikososyal dengesi ve eğitim başarısı üzerinde de doğrudan etkiler yaratmaktadır. Bu çalışmanın amacı, okul temelli madde bağımlılığı ile mücadeleyle yönelik yaklaşımların, pozitif okul iklimi ve öğrenci iyi oluş kavramları çerçevesinde ne ölçüde çok boyutlu, kapsayıcı ve öğrenci merkezli yaklaşımlar sunduğunu analiz etmektir. Bu kapsamda, eğitim sisteminde kullanılan genelgeler, eylem planları, stratejik belgeler ve rehber dokümanlar incelenerek iyi oluşun fiziksel, psikolojik ve sosyal boyutları belgeler üzerinden tematik olarak değerlendirilmiştir. Araştırma, nitel araştırma yöntemlerinden biri olan doküman analizi tekniği ile yürütülmüştür. 2010-2023 yılları arasında yayımlanan 16 temel belge çalışma kapsamına dahil edilmiş olup bunlar; 2014/20 sayılı genelge (1 adet), Türkiye Bağımlılıkla Mücadele materyalleri (11 belge) ve Millî Eğitim Bakanlığı Stratejik Planlarıdır (4 belge). Belgeler içerik analizi yöntemiyle analiz edilerek; Fiziksel İyi Oluş, Psikolojik İyi Oluş, Sosyal İyi Oluş ve Okul İklimi tema başlıklarına göre kodlanmıştır. Belgelerde bağımlılıkla mücadele eğitimlerinin çoğu, bireysel risk farkındalığı ve fiziksel korunmaya odaklıdır. Psikolojik iyi oluş vurguları genellikle "bağımlılığa hayır deme" becerisi çerçevesinde sunulmakta, sosyal destek unsurları ise sınırlı düzeyde yer almaktadır. Belgelerin birçoğu pozitif okul iklimini doğrudan adlandırmasa da öğrenci merkezli yaklaşım ve suçlayıcı olmayan bir dille hazırlandığı gözlemlenmektedir. Okullarda bağımlılık eğitimlerinin etkili olabilmesi için sadece bilgi aktarımına değil, aynı zamanda öğrencilerin iyi oluşunu destekleyen uygulamalara ihtiyaç vardır.

Anahtar Kelimeler: Bağımlılıkla mücadele, pozitif okul iklimi, iyi oluş, doküman analizi, eğitim politikaları, psikososyal destek

Examining Education Policies for Combating Substance Abuse within the Framework of Positive School Climate and Well-Being: A Document Analysis

Abstract

Today, substance abuse among youth is not merely a personal health concern but also directly affects the safety, psychosocial balance, and academic success of school environments. This study aims to analyze the extent to which school-based approaches to combating substance abuse incorporate multidimensional, inclusive, and student-centered strategies within the framework of positive school climate and student well-being. To this end, official circulars, action plans, strategic documents, and educational guidelines used in the Turkish education system were examined thematically in relation to physical, psychological, and social dimensions of well-being. The research was conducted using document analysis, one of the

qualitative research methods. Sixteen core documents published between 2010 and 2023 were included in the study: the Circular No. 2014/20 (n = 1), materials from the Turkish National Program for Combating Addiction (n = 11), and the Ministry of National Education Strategic Plans (n = 4). The documents were analyzed using a content analysis approach and coded under the thematic categories of Physical Well-Being, Psychological Well-Being, Social Well-Being, and School Climate. Findings reveal that most substance abuse education policies focus heavily on individual risk awareness and physical protection. Psychological well-being is generally addressed through “refusal skills,” while social support elements are limited. Although the concept of “positive school climate” is not explicitly stated, many documents adopt a student-centered and non-judgmental tone. It is concluded that for substance abuse education in schools to be effective, there must be a shift beyond knowledge transmission toward practices that holistically support student well-being.

Keywords: substance abuse prevention, positive school climate, well-being, document analysis, education policy, psychosocial support

Giriş

Okul, çocukların güvenli aile ortamından ayrılarak toplumsal yaşama adım attıkları ilk mekân ve aileden sonraki ilk resmî sosyalleşme alanıdır. Kriz dönemi olarak adlandırılan okullaşmaya başlangıç evresinde çocuklar fiziksel, sosyal ve psikolojik güçlükler yaşayabilirler bu nedenle onlara kapsamlı destek sunmak çok önemlidir (Sağlık, 2021). Özellikle akran etkileşiminin yoğun olduğu; sınıf, koridor, servis ve spor alanları, *normatif baskı* yoluyla riskli davranışların modellendiği mikro-ortamlar hâline gelebilir (Ennett et al., 2006). Yetişkin gözetiminin sınırlı olduğu bu alanlarda “deneme” olasılığı artarken, akademik stres, zorbalık ve kimlik arayışı gibi tetikleyiciler de madde kullanımına geçişi kolaylaştırır (Henry, Knight, & Thornberry, 2012; Simons-Morton & Farhat, 2010). Dolayısıyla okulun koruyucu işlevi, sorunların erken tanınması ve müdahalesiyle doğru orantılıdır; problemler zamanında fark edilip ele alındığında, çocuğun/gencin işlevselliğinde yaşanabilecek kayıplar ile akademik performansındaki gerileme büyük ölçüde önlenabilir (Rodopman Arman, 2018).

Öte yandan her ne kadar toplumda madde kullanımına ilişkin farkındalık önceki yıllara kıyasla artsa da doğru bilgiye dayalı bilinç ve bireysel sorumluluk seviyesi hâlâ oldukça sınırlıdır. Genç ve dinamik nüfus yapısı, ekonomik yetersizlik, yoğun iç göç, düşük toplumsal bilinç, halk sağlığı uzmanları ile eğitimcilerin uyarılarına kulak asmama ve kişisel-toplumsal sağlık risklerini yeterince ciddiye almama gibi etkenler-sağlık hizmetlerine erişimde yaşanan güçlüklerle birleştiğinde-madde kullanımı ile bağımlılığın gençler arasında hızla yayılmasına zemin hazırlamaktadır (Erdamar, 2014).

Madde bağımlılığı; “bağımlılık yapıcı bir maddeye uzun süreli ya da düzenli biçimde maruz kalınması sonucu bedenin o maddenin etkilerine alışması ve madde alımı azaltıldığında ya da kesildiğinde bitkinlik benzeri yoksunluk tepkilerinin ortaya çıkması” şeklinde ya da “bireyin kullandığı maddeyi defalarca bırakmaya çalışsa da bırakamaması, zamanla dozu artırması, kullanım kesildiğinde yoksunluk belirtileri yaşaması, zararlı sonuçları görmesine karşın kullanımı sürdürmesi ve vaktinin büyük bölümünü madde aramaya ayırması” şeklinde tanımlanabilmektedir (Erdamar, 2014).

Amerikan Psikiyatri Birliği’nin madde kullanımı ve bağımlılık bozukluklarına ilişkin bulguları, bu bozuklukların bilişsel, davranışsal ve psiko-sosyal boyutlarda çok çeşitli belirtilerle ortaya

çıkıldığını; hem birey hem de toplum ölçeğinde önemli sorunlara yol açıldığını vurgulamaktadır (Işık, 2018).

Dünya Sağlık Örgütü, madde kullanım bozukluklarının her yıl on bir milyondan fazla erken ölümün nedeni olduğunu bu sayının özellikle de 10-24 yaş arasındaki bireylerde çok daha dramatik olduğunu açıklamaktadır (Organization, Educational, Educational, Scientific, & Organization, 2021). 10-24 yaş arası genç bireylerde gelişimsel kırılma, merak duygusu hatta akran baskısı belirgindir ve tetikleyici olan bu durumlar için riskleri önlemede okullar birincil ortamlardır (Room, 2012). Bununla birlikte, okul-tabanlı müdahalelerin başarı düzeyini belirleyen en kritik unsurun, sadece bilgi aktarımı değil, öğrencinin pozitif okul iklimi içinde çok boyutlu iyi oluşunun desteklenmesi olduğu giderek daha sağlam ampirik kanıtlarla ortaya konmaktadır (Daily et al., 2020; Wang & Degol, 2016).

Nörogelişimsel araştırmalar, prefrontal korteksin yaklaşık 25 yaşına dek tam olgunlaşmadığını ve ergen beyninin ödül duyarlılığının zirvede olduğunu göstermektedir (Casey, 2015). Bu durum, madde denemelerini kolaylaştırarak bağımlılık riskini artırır. Longitudinal meta-analizler, ergenlik döneminde başlayan düzenli madde kullanımının ileriki yaşamda depresyon, bilişsel gerilik ve okul terki ile anlamlı düzeyde ilişkili olduğunu bildirmiştir (Davis et al., 2023; Gobbi et al., 2019; Steinfeld & Torregrossa, 2023)

Pozitif okul iklimi; güvenlik, ilişkiler, öğretim-öğrenme süreçleri ve kurumsal çevrenin öğrencinin kendini değerli, güvende ve desteklenmiş hissetmesini sağlayacak biçimde yapılandırılması olarak tanımlanır (Thapa, Cohen, Guffey, & Higgins-D'Alessandro, 2013; World Health Organization (WHO), 2021) Wang ve Degol'un (2016) kapsamlı derlemesine göre olumlu iklim, ergenlerde madde kullanım olasılığını %25-40 bandında azaltmaktadır (Wang & Degol, 2016). Psikolojik iyi oluş (mutluluk, öz-etkililik), sosyal iyi oluş (aidiyet, akran desteği) ve fiziksel iyi oluş (sağlıklı yaşam alışkanlıkları) bu iklimin birbirine geçmiş boyutlarıdır (Jose, Ryan, & Pryor, 2012; Kern, Waters, Adler, & White, 2015; World Health Organization (WHO), 2021).

DSÖ ve UNESCO'nun 2021'de güncellediği "Health-Promoting Schools Global Standards" dokümanı, madde bağımlılığı dâhil tüm risk davranışlarını ele alan bütüncül bir okul sağlığı paradigması sunar. Bu model, politika, müfredat, okul hizmetleri ve topluluk katılımı olmak üzere dört yapıtaşının eş zamanlı işletilmesini zorunlu kılar (World Health Organization (WHO), 2021).

Türkiye Sağlık Araştırması verileri, 15-24 yaş grubunda günlük tütün kullanımının 2010'da %16,4 iken 2022'de %19,3'e yükseldiğini göstermektedir (Yüksel & Tuzcu, 2024). Millî Eğitim Bakanlığı (MEB), 2014/20 sayılı "Bağımlılıkla Mücadele" genelgesiyle risk farkındalığı eğitimlerini zorunlu kılmış; 2017'de Yeşilay iş birliğiyle Türkiye Bağımlılıkla Mücadele Eğitim Programı (TBM)'ni başlatmıştır. Ancak TBM'nin etkisini inceleyen saha araştırmaları, programın bilişsel kazanımlar üretmesine karşın davranış değişimine sınırlı katkı sunduğunu not etmektedir (M. Yılmaz, Yılmaz, & Aktan, 2017; Ş. Yılmaz, 2014)

Bu çalışmanın amacı, Türkiye'de okul temelli madde kullanımıyla mücadele politikalarının (2010-2023) "pozitif okul iklimi" (güvenlik, ilişkiler, öğretim-öğrenme, kurumsal çevre) ve öğrenci iyi oluşu (psikolojik, sosyal, fiziksel) çerçeveleriyle ne ölçüde örtüştüğünü bütüncül olarak ortaya koymaktır.

Çalışma, aşağıdaki temel soruya yanıt aramıştır.

- 2010-2023 döneminde yayımlanan ulusal politika metinleri (genelgeler, stratejik planlar, rehberler) madde bağımlılığıyla mücadeleyi fiziksel, psikolojik ve sosyal iyi oluş boyutları açısından nasıl ele almaktadır?

Yöntem

Araştırma Tasarımı

Bu çalışma, nitel araştırma yaklaşımlarından doküman analizi ile yürütülmüştür. Doküman analizi, yazılı / görsel materyallerin sistematik, eleştirel ve bağlamsal biçimde incelenmesini sağlayarak tarihsel süreçteki politika ve uygulamalara ilişkin derinlemesine bilgi sunar (Bowen, 2009).

Çalışma Grubu ve Kapsam

Araştırmada amaçlı maksimum çeşitlilik örnekleme kullanılmıştır (Patton, 2002). Milli Eğitim Bakanlığı, Yeşilay ve ilgili resmî kurumlar tarafından 2010-2023 arasında yayımlanan, aşağıdaki ölçütleri karşılayan altı politika belgesi incelenmiştir:

Ulusal resmî statüde olması (genelge, strateji / eylem planı, rehber vb.)

Madde bağımlılığıyla mücadeleyi doğrudan ele alması

Okul temelli uygulamalara yönelik hükümler içermesi

Tam metnine kamusal erişimin mümkün olması

Veri Toplama Süreci

Belgeler, elektronik arşiv taramalarıyla temin edilmiştir.

Veri Analizi

Veriler, içerik analizi yaklaşımıyla dört adımda çözümlenmiştir (Krippendorff, 2018).

Kod Geliştirme – Literatür ve DSÖ Sağlığı Geliştiren Okullar Çerçevesi temel alınarak başlangıç kod listesi oluşturuldu (örn. fiziksel güvenlik, sosyal destek, öz-etkililik, risk farkındalığı).

Kodlama – Tek araştırmacı, tarafından açık kodlamayla yapıldı

Tema Oluşturma – Kodlar; Fiziksel İyi Oluş, Psikolojik İyi Oluş, Sosyal İyi Oluş ve Pozitif Okul İklimi başlıklarında temalaştırıldı.

Yorumlama – Temalar belge türü ve yayımlanma yılına göre karşılaştırılarak politika boşlukları ve güçlü yönler tartışıldı.

Geçerlik ve Güvenirlik

Çalışma tek araştırmacı tarafından yürütüldüğü için öznellik ve tutarlılık risklerini azaltmak amacıyla aşağıdaki stratejiler izlenmiştir: Veriler iki hafta arayla yeniden kodlandı; kod – kategori uyumu %88 bulundu. Bulgular doğrudan alıntılar ve bağlamsal ayrıntılarla desteklenerek farklı bağlamlara uyarlanabilirlik sağlandı. Nihai kod listesi ve tema yapısı, halk sağlığı alanında uzman iki akademisyenden alınan geribildirimlerle revize edildi.

Etik Hususlar

Bu araştırmada kişisel veri içermeyen, kamuya açık resmî belgeler kullanıldığı için etik kurul onayı gerekmemiştir. Bununla birlikte çalışma, Helsinki Bildirgesi'nin etik ilkelerine uygun biçimde yürütülmüştür. Belgeler, içerik ve anlam bütünlüğü bozulmadan raporlanmış; yorumlama aşamasında araştırmacı önyargısını azaltmak amacıyla yansıtıcı notlar ve karşı-kontrol adımları uygulanmıştır.

Bulgular

Bu araştırmada 2010–2023 yılları arasında Türkiye'de Millî Eğitim Bakanlığı ve ilgili kurumlar tarafından yayımlanan stratejik planlar, genelgeler ve bağımlılıkla mücadele materyalleri doküman analizi yöntemiyle incelenmiştir. Amaç, madde bağımlılığına karşı okul temelli eğitim politikalarının, öğrencilerin fiziksel, psikolojik ve sosyal iyi oluşunu ne ölçüde desteklediğini ve bu politikaların pozitif okul iklimiyle ne ölçüde bütünleştiğini ortaya koymaktır.

İçerik analizine dayalı olarak dört ana tema belirlenmiştir: Fiziksel İyi Oluş, Psikolojik İyi Oluş, Sosyal İyi Oluş ve Pozitif Okul İklimi Unsurları. Her tema altında ilişkili alt temalar tanımlanmış ve bu alt temalar için politika belgelerinden elde edilen doğrudan alıntılar aracılığıyla kodlama yapılmıştır.

Bulgular, bağımlılıkla mücadele kapsamında geliştirilen içeriklerin büyük ölçüde bireysel davranış değişikliği ve risk farkındalığına odaklandığını; öğrencilerin çok boyutlu iyi oluşunu destekleyecek sosyal ve yapısal uygulamalara ise daha sınırlı yer verildiğini ortaya koymuştur. Özellikle fiziksel iyi oluş boyutu belgelerde sıkça vurgulanırken, psikolojik destek ve sosyal aidiyet gibi diğer iyi oluş boyutları daha çok dolaylı anlatımlarla yansıtılmıştır. Pozitif okul iklimi kavramı çoğu belgede açık biçimde adlandırılmasa da öğrenci merkezli, kapsayıcı ve suçlayıcı olmayan yaklaşımlar aracılığıyla bu kavrama örtük şekilde yer verildiği gözlemlenmiştir.

Aşağıda her tema için detaylandırılmış analiz bulguları sunulmuştur.

Tema 1: Fiziksel İyi Oluşun Desteklenmesi

Bu tema kapsamında, bağımlılık riskini azaltmak amacıyla eğitim politikalarında fiziksel sağlığı önceleyen uygulamalar analiz edilmiştir. Belgelerde yer alan içerikler, hijyen, beslenme, fiziksel aktivite, uyku düzeni ve güvenli yaşam becerileri ekseninde kodlanmıştır.

Alt Tema-1: Hijyen ve Sağlık

Kod Etiketi: hijyen_sağlık

Doğrudan Alıntılar:

“Temiz insan sağlıklı insandır. Sağlıklı olmak ve mikroplardan korunmak için temizliğimize dikkat etmemiz gerekir.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

“Sık sık camı açıp odamızı havalandırırsak odamıza taze hava girer. Bu da bizi sağlıklı yapar.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

“Gıda işletmelerinde çalışanların hijyen eğitimi almaları zorunludur... güvenilir gıda üretimi için gerekli olan hijyen şartlarının oluşturulması.” (Kaynak: MEB Stratejik Planı 2015–2019.pdf)

Alt Tema-2: Uyku ve Dinlenme

Kod Etiketi: uyku_dinlenme

Doğrudan Alıntılar:

“Sağlıklı olmak için güzel uyku şart. Günde 10-12 saat uyumalıyız.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

Alt Tema-3: Beslenme

Kod Etiketi: beslenme_destegi

Doğrudan Alıntılar:

“Sağlıklı olmanın ilk şartı doğru beslenmektir.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

“Abur cuburlar içerdikleri fazla yağ ve şeker nedeniyle vücudumuza zarar verirler.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

“Üç öğün; sabah kahvaltımızı yapmalı, öğlen ve akşam düzenli yemek yemeliyiz.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

Alt Tema-4: Fiziksel Aktivite ve Sağlık Algısı

Kod Etiketi: spor_fizikselgüç

Doğrudan Alıntı:

“Spor yaparım. Dengeli beslenirim. Kötü alışkanlıklardan uzak dururum. Bunun için de çok sağlıklı ve güçlüyüm.” (Kaynak: TBM İlkokul Sağlık Broşürü.pdf)

Alt Tema-5: İlk Yardım ve Afet Hazırlığı

Kod Etiketi: afet_ilkyardim

Doğrudan Alıntılar:

“Afet ve acil durum okul planlarının hazırlanması ve uygulanması, etkin senaryolu tatbikatların gerçekleştirilmesi, eğitim kurumlarımızın afete hazır hâle getirilmesi öncelikli hedeflerimiz arasında yer almaktadır.” (Kaynak: MEB Stratejik Planı 2024–2028.pdf)

“Afetlere karşı hazırlık ve risk azaltma eğitimi verilmesi, afet bilinci kazandırılması temel hedeflerdendir.” (Kaynak: MEB Stratejik Planı 2024–2028.pdf)

Tema 2: Psikolojik İyi Oluşun Desteklenmesi

Psikolojik iyi oluş, öğrencilerin bağımlılık karşısında duygusal dayanıklılık kazanmasını, öz denetim geliştirmesini ve riskli davranışlardan uzak durabilmesini sağlamada temel bir rol

oynamaktadır. İncelenen eğitim belgelerinde, psikolojik iyi oluşıya yönelik mesajlar genellikle bağımlılık tanımları, öz farkındalık, stresle baş etme becerileri ve rehberlik hizmetlerine yapılan atıflar üzerinden şekillenmiştir.

Alt Tema-1: Bağımlılık Farkındalığı

Tema 3: Sosyal İyi Oluşun Desteklenmesi

Sosyal iyi oluş, öğrencinin aile, arkadaş ve okul çevresiyle kurduğu destekleyici ilişkiler aracılığıyla bağımlılıklardan uzak bir yaşam biçimini benimsemesini kolaylaştırır. İncelenen belgelerde aile katılımı, arkadaşlık ilişkileri, sosyal etkileşim ve aidiyet duygusu gibi kavramların doğrudan veya dolaylı olarak bağımlılıkla mücadelede koruyucu etken olarak sunulduğu görülmüştür.

Alt Tema-1: Aile Katılımı

Kod Etiketi: aile_katilimi

Doğrudan Alıntılar:

“Okul/kurumlarda bulunan kantin ve benzeri yerlerin okul aile birlikleri tarafından kiralanacağı okul müdürlükleri vasıtasıyla il/ilçe millî eğitim müdürlüğüne bildirilecektir.” (Kaynak: MEB Stratejik Planı 2019–2023.pdf)

“Ailelerin eğitime aktif katılımını sağlamak amacıyla veli eğitimleri ve okul-aile iş birliği modelleri geliştirilecektir.” (Kaynak: MEB Stratejik Planı 2024–2028.pdf)

Alt Tema-2: Akran İlişkileri ve Sosyal Destek

Kod Etiketi: arkadaslik_destek

Doğrudan Alıntılar:

“Oyun yüzünden arkadaşları ve ailesi ile arası açılıyorsa bu çocuk bir teknoloji bağımlısıdır.”

Tema 4: Pozitif Okul İklimi Unsurları

Pozitif okul iklimi, öğrencilerin kendilerini güvende, değerli ve kapsanmış hissettikleri bir ortam oluşturarak bağımlılıklardan korunmalarını destekleyen temel yapısal boyuttur. Belgelerde güvenli okul ortamı, katılım, değerler eğitimi ve bütüncül okul politikaları kavramlarının ön plana çıktığı görülmüştür.

Sonuç ve Öneriler

Bu çalışmada, Türkiye’de 2010–2023 yılları arasında yayımlanan bağımlılıkla mücadeleye ilişkin stratejik belgeler, genelgeler ve uygulama materyalleri doküman analizi yöntemiyle incelenmiştir. Bulgular, eğitim politikalarının bağımlılığı önleyici içerikler sunduğunu ancak bu içeriklerin çoğunlukla bireysel davranış değişikliğine odaklandığını göstermektedir. Halk sağlığı perspektifiyle değerlendirildiğinde, bağımlılık yalnızca bireysel bir tercih ya da alışkanlık değil, çok düzeyli ve yapısal faktörlerin etkisiyle şekillenen bir kamusal sağlık sorunu olarak ele alınmalıdır.

Belgelerde fiziksel iyi oluşa ilişkin içerikler (örneğin hijyen, beslenme, uyku vb.) yoğun olarak yer alırken, psikolojik ve sosyal iyi oluşu destekleyen yapısal müdahalelere daha sınırlı yer verildiği görülmektedir. Bağımlılıkla ilişkili sosyal belirleyiciler (yoksulluk, aile içi iletişim, akran baskısı, okul dışı ortamlar) yeterince ele alınmamaktadır. Pozitif okul iklimine yönelik doğrudan bir tanımlama ya da bütüncül strateji ise birçok belgede bulunmamaktadır.

Özellikle TBM broşürleri, bağımlılık türlerine göre farklı içerikler sunmakla birlikte, iyi oluşun bütünsel doğasına ve öğrencilerin çevresel-kurumsal bağlamlarına sınırlı vurgu yapmaktadır. Bu durum, bağımlılıkla mücadelede bilgilendirme düzeyinin ötesine geçen koruyucu–güçlendirici halk sağlığı yaklaşımlarının eksik kaldığını göstermektedir.

Bu sonuçlar doğrultusunda öneriler şu şekildedir:

Bağımlılıkla mücadele yalnızca bireysel bilgi düzeyini artırmayı hedefleyen değil; sosyal destek, okul iklimi, akran ilişkileri ve aile katılımı gibi bağlamsal etkenleri içeren çok düzeyli bir modelle yürütülmelidir.

Pozitif okul iklimi kavramı, halk sağlığının “güçlendirme” ilkesini karşılayan bir çerçeve sunar. Bu kavram MEB stratejilerine açık biçimde dahil edilmeli; güvenli, destekleyici, katılımcı okul ortamları için izleme ve değerlendirme göstergeleri oluşturulmalıdır.

Rehberlik servislerinin kurumsal kapasitesi artırılmalı, bağımlılıkla mücadelede psikolojik dayanıklılığı güçlendiren programlar (örneğin öz denetim, stres yönetimi, akran desteği) yapılandırılmalı ve okul temelli ruh sağlığı uygulamaları yaygınlaştırılmalıdır.

Bağımlılıkla mücadele programları (örneğin TBM), sadece okullarda değil, toplum temelli halk sağlığı hizmetleriyle iş birliği içinde yürütülmeli; okul-aile-toplum üçgeninde etki yaratacak sosyal kampanyalar ve eğitim içerikleri geliştirilmelidir.

Ailelerin yalnızca bilgilendirme toplantılarına değil, karar süreçlerine katılımı sağlanmalı; akran eğitimi, akran danışmanlığı gibi programlar desteklenerek sosyal bağların koruyucu gücünden yararlanılmalıdır.

Bağımlılıkla mücadele içeriklerinin etkisi yalnızca uygulama sayısı ile değil, davranışsal çıktı ve iyi oluş düzeyleriyle izlenmeli; politika çıktıları düzenli olarak raporlanmalı ve güncellenmelidir.

ORCID: 0000-0002-3789-1156

Özet

Ergenlik dönemi, öğrencilerin fiziksel, psikolojik ve sosyal açılardan hızlı değişimler yaşadığı, sağlığa ilişkin ihtiyaçların arttığı kritik bir gelişim evresidir. Bu döneme özgü sağlık sorunları arasında cinsel sağlık, hijyen, ruh sağlığı, beden algısı ve beslenme gibi konular öne çıkmaktadır. Bu çalışma, okullarda ergenlik dönemindeki öğrencilere yönelik sunulan sağlık hizmetleri ve destek uygulamalarının, Türkiye’de yayımlanan politika belgeleri çerçevesinde pozitif okul iklimi ve iyi oluş ilkeleri bağlamında nasıl ele alındığını incelemeyi amaçlamaktadır. Çalışma, doküman analizi yöntemiyle yürütülmüştür. Çalışmaya; 2017/19 sayılı okul sağlığı genelgesi, tip 1 diyabetli öğrencilerin okul/kurumlarda bakımı ve desteklenmesi hakkında yönerge, diyabetli öğrenciler genelgesi, 2010-2014 + 2015-2019 + 2019-2023 ve 2024-2028 stratejik planları ve 2025 yılı iş takvimi dahil edilmiştir. Belgeler tematik içerik analiziyle incelenmiştir. Bulgular; belgelerin çoğunun fiziksel sağlık boyutuna odaklandığını, psikososyal gelişim, mahremiyet, ruh sağlığı gibi alanlarda ise sınırlı ve dolaylı ifadelerin yer aldığını göstermektedir. Pozitif okul iklimi kavramı doğrudan yer almasa da destekleyici yapıların kurulması yönünde niyet ifadelerine rastlanmaktadır.

Sonuç olarak, ergen sağlığını kapsayan okul politikalarının iyi oluş kavramını çok boyutlu biçimde içermesi, mahremiyet, özsaygı ve psikososyal destek ilkeleriyle güçlendirilmesi önerilmektedir.

Anahtar Kelimeler: ergen sağlığı, okul sağlığı politikaları, pozitif okul iklimi, iyi oluş, doküman analizi, psikososyal destek

An Analysis of National Policy Documents Addressing the Health Issues of Adolescents in Schools within the Framework of Positive School Climate and Well-Being

Abstract

Adolescence is a critical developmental period during which students undergo rapid changes in physical, psychological, and social domains, leading to increased health-related needs. Key health issues specific to this stage include sexual health, hygiene, mental health, body image, and nutrition. This study aims to examine how school-based health services and support practices for adolescent students are addressed within the framework of policy documents published in Türkiye, particularly in relation to the principles of positive school climate and well-being. The research was conducted using document analysis. The study included the School Health Circular No. 2017/19, the directive on the care and support of students with type

1 diabetes in schools/institutions, the circular on students with diabetes, the strategic plans for the periods 2010–2014, 2015–2019, 2019–2023, and 2024–2028, as well as the 2025 annual work schedule. These documents were analyzed using thematic content analysis. The findings indicate that most documents predominantly focus on the physical health dimension, while issues related to psychosocial development, privacy, and mental health are addressed only in a limited and indirect manner. Although the concept of a positive school climate is not explicitly mentioned, there are expressions of intent regarding the establishment of supportive structures. In conclusion, it is recommended that school policies encompassing adolescent health incorporate the concept of well-being in a multidimensional way and be strengthened by principles of privacy, self-esteem, and psychosocial support.

Keywords: Adolescent health, school health policies, positive school climate, well-being, document analysis, psychosocial support

Giriş

İnsan hayatının evrelerinden biri olan ergenlik dönemi (10–19 yaş) üzerinde önemle durulması gereken bir süreçtir. Biyolojik büyüme hızının pik yaptığı, nöro-endokrin yeniden yapılanmanın yoğunlaştığı, soyut düşünme kapasitesinin geliştiği ve toplumsal rollerin yeniden tanımlandığı bu evre, bireylerin gelecekteki sağlık ve üretkenlik düzeyini belirleyen kritik bir “pencere” işlevi görmektedir (Sawyer et al., 2012). Dünya Sağlık Örgütü (DSÖ) tarafından açıklanan Küresel Ergen Sağlığı Raporu’na göre bugün dünyada yaklaşık 1,3 milyar ergen bulunmaktadır ve bu grubun morbidite - mortalite yükünün önemli bir kısmı önlenebilir risk davranışlarına (örn. tütün, alkol, sağlıksız beslenme, fiziksel inaktivite) dayanmaktadır ((MEB), 2017). Türkiye İstatistik Kurumu’nun (TÜİK) “İstatistiklerle Gençlik 2024” verileri Türkiye’de 10– 19 yaş grubunun toplam nüfusun %16,5’ini oluşturduğunu göstermekte; sağlığa ilişkin davranış örüntülerinin bu evrede kazanıldığı dikkate alındığında okul temelli önleme ve iyileştirme girişimlerinin stratejik önemi daha da belirginleşmektedir ((MEB), 2017).

Sağlığı Geliştirme Modeli ile Ekolojik Sistemler Kuramı birlikte ele alındığında okulun ergen gelişiminde “mikro-sistem” düzeyinde merkezi bir rol oynadığı görülür. Okul, ergenlerin günde ortalama sekiz (8) saat geçirdiği, akran ve yetişkin etkileşimlerinin yoğunlaştığı, sosyo-duygusal geri bildirimlerin sürekli üretildiği bir ekosistemdir (Mercan Akçay & Demircioğlu, 2024). Dolayısıyla burada sunulan sağlık hizmetleri yalnızca fiziksel kontroller veya hastalık yönetimi anlamına gelmez; aynı zamanda öz-saygı gelişimi, aidiyet hissi, toplumsal cinsiyet rolleri, mahremiyet farkındalığı ve bilişsel esneklik gibi değişkenleri biçimlendiren bütüncül bir ortam yaratır (Thapa, Cohen, Guffey, & Higgins-D’Alessandro, 2013).

Pozitif okul iklimi literatürü, güvenli fiziksel çevre, destekleyici ilişkiler, katılımcı okul yönetimi ve berrak davranış normları olmak üzere dört temel boyutun öğrenci iyi oluşu üzerinde sinerjik etki yarattığını savunur (Aslan vd., 2022). ((MEB), 2017). Bu bağlamda iyi oluş (well-being) yalnızca hasta olmama hâline indirgenmez; ergenin kendini değerli, güvende ve psikososyal açıdan desteklenmiş hissettiği, öz-yeterlilik inancının güçlendiği bir durum olarak kurgulanır (Ryff, 1989). Dolayısıyla okul sağlığı politikalarının etkinliği, fiziksel sağlık göstergelerinin (vücut kitle indeksi, kronik hastalık kontrolü, aşı kapsayıcılığı vb.) yanı sıra bu psiko-duygusal bileşenleri içselleştirerek operasyonel hâle getirmesine bağlıdır (Mercan Akçay & Demircioğlu, 2024). Türkiye’de okul sağlığı hizmetlerinin kurumsal temeli 1960’lı yıllara uzansa da disiplinler arası kapsamın genişletilmesi ve mevzuata yansıtılması 2000’li yıllarda

hız kazanmıştır. Sağlık Bakanlığı (SB) ve Millî Eğitim Bakanlığı (MEB) arasında imzalanan Okul Sağlığı İş Birliği Protokolü (2006) alanın çerçeve belgesi niteliğindedir. Bu protokolün mevzuatta somutlaşan ilk sonucu 2017/19 Sayılı Okul Sağlığı Genelgesi olmuş, genelge ile tarama programları, kronik hastalık yönetimi, beden kitle indeksi izlemi ve il düzeyinde okul sağlığı kurullarının oluşturulması yasal zorunluluk hâline getirilmiştir ((MEB), 2017).

SB'nin beşer yıllık stratejik planları (2010-2014; 2015-2019; 2019-2023; 2024-2028) ile MEB Stratejik Planı (2024-2028), okul çağındaki nüfusa yönelik sağlık hedeflerini performans göstergeleri üzerinden detaylandırmıştır. Örneğin 2024-2028 SB Stratejik Planı'nda "genç dostu sağlık hizmet birimi" sayısını %50 artırmak, okul temelli kronik hastalık yönetimi e-reçete entegrasyonunu ülke çapında yaygınlaştırmak gibi hedefler yer almaktadır ((MEB), 2017). Ayrıca Tip 1 Diyabetli Öğrencilerin Bakım ve Desteklenmesi Yönergesi ((MEB), 2017) diyabetli ergenlerin acil hipoglisemik kriz yönetim protokollerinden sınıf içi psiko-sosyal desteğe kadar çok boyutlu sorumlulukları netleştirmiştir.

Bununla birlikte ulusal politika metinlerinin hâkim söyleminin fiziksel sağlık parametrelerine odaklı olduğu, psikososyal gelişim, mahremiyet ve ruh sağlığı bileşenlerinin ise çoğunlukla "dolaylı" veya "niyet bildirimi" düzeyinde ifade edildiği yönünde eleştirel analizler de bulunmaktadır. DSÖ'nün Sağlık Teşvik Eden Okullar Küresel Standartları (2021) açısından bakıldığında Türkiye'nin belgesel zemininin kavramsal bütünlük sağlama potansiyeline sahip olduğu; ancak iyi oluşu çok boyutlu biçimde ölçen göstergelerin politika metinlerine henüz sınırlı yansıdığı görülmektedir.

Çalışma, Türkiye'de 2010 yılı sonrası itibarıyla yayımlanan ulusal okul sağlığı politika belgelerinin ergenlik dönemindeki öğrencilerin sağlık sorunlarını "pozitif okul iklimi" ve "iyi oluş" perspektifleriyle ne ölçüde harmanladığını eleştirel bakışla irdelemeyi amaçlamaktadır. Spesifik olarak Çalışma aşağıdaki sorulara yanıt aramaktadır:

- Politika belgelerinde ergenlerin fiziksel, zihinsel ve sosyal sağlık gereksinimleri nasıl tanımlanmaktadır?
- Pozitif okul ikliminin bileşenleri (güvenlik, destekleyici ilişkiler, katılım, öğrenme kültürü) bu belgelerde hangi derecede ve hangi terminolojiyle yer almaktadır?
- İyi oluş kavramı metinlerde bütüncül bir çerçeve olarak mı, yoksa dağınık tematik başlıklar şeklinde mi ele alınmaktadır?
- Fiziksel sağlık odağına kıyasla psikososyal boyutlar ve mahremiyet/öz-saygı temaları hangi kapsam ve derinlikte vurgulanmaktadır?

Yöntem

Araştırma Tasarımı

Bu çalışma, politika metinlerinin sistematik olarak incelenmesine imkân tanıyan nitel doküman analizi deseniyle yürütülmüştür (Bowen, 2009).

Çalışma evrenini 2010 - 2025 yılları arasında yayımlanan ulusal düzeydeki okul sağlığı politika metinleri oluşturmuştur.

Çalışma kapsamına dahil edilen metinlerin;

- Ulusal düzeyde yürürlüğe girmiş olması,

- Çalışma amacına ilişkin özel veya bütüncül hükümler içermesi,
- Tam metnine çevrimiçi erişim sağlanabilmesi,
- Geçerliliğini yitirmemiş veya yerini alan yeni düzenlemede tarihsel karşılaştırmaya imkân tanınması çalışmanın temel çerçevesi olarak sınırlandırılmıştır.

Çalışma Grubu

Amaçlı örnekleme yoluyla toplam dokuz belge seçilmiştir. Belgeler Nisan 2025'te indirilmiş, Mayıs 2025'te yeniden kontrol edilmiştir. Her belgeye kimlik kodu (B1- B8) atanmıştır. Çalışmaya dahil edilen belgeler:

B1: 2017/19 Sayılı Okul Sağlığı Genelgesi

B2: Tip 1 Diyabetli Öğrencilerin Bakım ve Desteklenmesi Hakkında Yönerge (2021)

B3: Diyabetli Öğrenciler Genelgesi (2010)

B4: Millî Eğitim Bakanlığı Stratejik Planı 2010–2014

B5: Millî Eğitim Bakanlığı Stratejik Planı 2015–2019

B6: Millî Eğitim Bakanlığı Stratejik Planı 2019–2023

B7: Millî Eğitim Bakanlığı Stratejik Planı 2024–2028

B8: 2025 Yılı İş Takvimi

Verilerin Analizi

Verilerin çözümlenmesinde içerik analizi kullanılmıştır. İçerik analizi, nitel veri setlerinde belirli sözcüklerin, kavramların ya da temaların frekansını, bağlamını ve karşılıklı ilişkilerini sistematik ve nesnel biçimde incelemeye olanak sağlayan bir veri analiz yöntemidir. Bu yöntem aracılığıyla araştırmacı metin içerisindeki anlam örüntülerini, kavramsal yoğunlukları ve temalar arası yapısal ilişkileri istatistiksel veya betimsel düzeyde analiz edebilmiştir. Analiz geçerliliği arttırmak için iki farklı zamanda kodlama yaklaşımıyla yürütülmüştür. Kodlar, yinelenen örüntüler ve anlamlı ilişkiler temelinde temalara dönüştürülmüştür.

Geçerlik ve Güvenirlik

İç Tutarlılık: İkili kodlamaya ilişkin Cohen's $\kappa = 0,86$ olarak hesaplanmış, güçlü uyum düzeyi elde edilmiştir.

Uzman Görüşü: Kod kitabı iki halk sağlığı akademisyenince içerik ve kapsam açısından doğrulanmıştır.

Etik Hususlar

Çalışma, insan katılımcı verisi içermediği için etik kurul onayı gerektirmemekle birlikte, belgelerin telif ve erişim koşullarına riayet edilmiştir. Bulgular, ilgili kurumların kurumsal kimliğine zarar vermeyecek şekilde raporlanmıştır.

Bulgular

1. Fiziksel Sağlık Yönetimi

Kronik hastalık-odaklı düzenlemeler belgelerin en yoğun kodlanan alanıdır. Tip 1 Diyabetli Öğrenciler Yönergesi, öğrencilerin “*kendi tedavisini yapıp yapamadığına bakılmaksızın okula kayıt/kabulü*” zorunluluğunu vurgulayarak kronik hastalıkların eğitim hakkını sınırlamaması ilkesini kurumsallaştırmaktadır (B2: Madde 5(2)). Aynı metin beslenme planlamasına dair ayrıntılı protokol de getirmekte (“*okul menüleri hazırlanırken Sağlık Bakanlığı’nın okul çağı çocuklarına yönelik beslenme önerileri dikkate alınır*” (B2: Madde 8 (7)).

Beslenme-fiziksel aktivite ifadeleri yönergenin yanı sıra 2017/19 Genelgesi ve stratejik planlarda yer almakta; beden kitle indeksi (BKI) izlemi, okul kantinlerinin düzenlenmesi ve spor etkinliği teşviki gibi önlemler öngörülmektedir.

Tarama-aşılama programları ise Genelge-2017’de zorunlu okul sağlığı kurullarıyla ilişkilendirilmiş, risk taramalarının yıllık iş takvimine entegre edilmesi öngörülmüştür.

Bu yoğunluk, ulusal metinlerin hâkim söyleminin “biyomedikal” parametrelere odaklandığı eleştirisini destekler niteliktedir.

2. Psikososyal Gelişim ve Ruh Sağlığı

Stratejik Plan 2010-2014’te “*öğrencilerin psiko-sosyal gelişimlerine destek sağlayıcı*” ortam hedefi açık biçimde tanımlanmıştır (B4: Amaç 7). Aynı planın 7. amaç başlığı “*bedensel, ruhsal ve zihinsel yönden sağlıklı gelişim*” ifadesiyle ruh sağlığını kurumsal vizyona dâhil eder (B4: Amaç 7). Buna karşın, 2015-2019 ve 2019-2023 stratejik planlarında ruh sağlığı daha çok “*öğrenci devamsızlığını azaltma*” gibi dolaylı göstergeler içinde geçmektedir. Belgelerin yarısında (5/9) psikososyal kod yakalanması, bu boyutun süreklilik kazansa da hâlen sınırlı kapsamda işlendiğini göstermektedir.

Şiddet ve istismar önleme hedefleri de bu temada yer alır. SP 2010-2014, “*güvenli ve şiddetten uzak eğitim ortamları sağlayarak... şiddet olaylarını her yıl %10 azaltmak*” hedefini koymuştur (B4).

3. Pozitif Okul İklimi ve Güvenlik

“Pozitif okul iklimi” kavramı belgelerde ad verilmeksizin, daha çok “güvenli eğitim ortamı” terminolojisiyle temsil edilmiştir. Güvenli ortam alt teması, SP 2010-2014’te detaylıdır; izleyen planlarda ise performans göstergeleri listesinde yer almasına rağmen açıklayıcı nitel içerik azalmıştır. Öğrencilerin katılımı ve destekleyici ilişkiler gibi iklim unsurlarına ait kodlar (n = 4) çoğunlukla proje/protokol referansı biçiminde geçmekte, sistematik gösterge çerçevesine dönüşmemektedir.

4. Mahremiyet ve Özsaygı

Mahremiyet, metinlerde en az temsil edilen temadır. SP 2010-2014, “*öğrencilerin kendilerini her türde şiddet, istismar ve ihmalden korumaları*” için bilgilendirme yükümlülüğü getirerek dolaylı mahremiyet vurgusu yapar (B4: Amaç 7). Bunun dışında açık mahremiyet tanımı yalnızca Tip 1 Diyabet Yönergesi’nin enjeksiyon odası düzenlemesinde görülür (öğrencinin insülin enjeksiyonlarının yapılabileceği ayrı mekân). Özsaygı-özyeterlik ifadeleri ise hedefe yönelik ‘niyet bildirimleri’ şeklinde geçmekte ve operasyonel göstergeye bağlanmamaktadır.

Sonuç ve Öneriler

Bu doküman analizinin bulguları metinlerin büyük ölçüde biyomedikal göstergelere (ör. tarama-aşılama, kronik hastalık yönetimi, beslenme-fiziksel aktivite) odaklandığını; psikososyal gelişim, mahremiyet ve pozitif okul iklimi bileşenlerini ise çoğunlukla dolaylı veya niyet bildirimi düzeyinde ele aldığını ortaya koymuştur. Metinlerde ruh sağlığı ve öz-saygı kavramları sınırlı frekansta yer almakta, “pozitif okul iklimi” terminolojisi ise açıkça kullanılmamaktadır. 2025 Yılı İş Takvimi gibi operasyonel belgeler beslenme hijyen denetimleri ve dijital rehberlik modülleriyle fiziksel ve psiko-sosyal alanları desteklese de çok boyutlu iyi oluş göstergelerini içeren sistematik bir izleme çerçevesi sunmamaktadır.

Bu durum, halk sağlığı bakış açısıyla okulun sağlıklı yaşam biçimlerini öğreten ve sürdüren bir mikro-ekosistem olma potansiyelinin henüz tam anlamıyla metinlere yansımadığını göstermektedir. DSÖ’nün Sağlık Teşvik Eden Okullar Küresel Standartları (2021) ve OECD’nin Öğrenci İyi Oluş Modeli (2019) ile karşılaştırıldığında, Türkiye’deki belgeler bütüncül iyi oluşu ölçen performans göstergeleri, mahremiyet hakları ve öğrenci katılımı konularında güçlendirilmeye ihtiyaç duymaktadır.

Bu sonuçlardan hareketle öneriler:

Yeni stratejik planlarda fiziksel sağlık göstergelerine ek olarak öğrencinin ruh sağlığı, öz-saygı, okul aidiyeti ve mahremiyet algısını ölçen nitel ve nicel parametreler yer almalıdır.

Tip 1 Diyabet Yönergesi’nde öngörülen mahremiyet uygulamaları (ör. ayrı enjeksiyon odası) model alınarak tüm sağlık müdahaleleri için standardize edilmiş mahremiyet rehberleri geliştirilmelidir.

Halk sağlığı il müdürlükleri, rehberlik araştırma merkezleri ve okul yönetimleri iş birliğiyle güvenlik, destekleyici ilişkiler, öğrenci katılımı ve öğrenme kültürünü düzenli izleyen ulusal bir “Okul İklimi İndeksi” tasarlanmalıdır.

Okul psikolojik danışman kontenjanları artırılmalı; Aile Sağlığı Merkezleri ile dijital sevk entegrasyonu kurularak öğrencilerin erişilebilir ruh sağlığı hizmetlerine yönlendirilmesi sağlanmalıdır.

Fiziksel aktivite, beslenme, stres yönetimi, dijital bağımlılığın önlenmesi ve mahremiyet hakları konularında bütüncül öğretim modülleri geliştirilmeli, öğretmen eğitimi programlarına entegre edilmelidir.

Öğrencilerin, ebeveynlerin ve yerel halk sağlığı profesyonellerinin temsil edildiği komiteler aracılığıyla okul sağlığı programlarına ilişkin karar süreçlerine aktif katılım sağlanmalıdır.

e-Rehberlik Modülü ve EBA platformu üzerinden çevrim içi ruh sağlığı taramaları, beslenme rehberleri ve mahremiyet eğitimleri sunulmalıdır.

Deprem, sel gibi afet senaryolarında kırılgan gruplara yönelik sağlık protokolleri hazırlanırken, ergenlerin psikososyal ihtiyaçları için saha ekiplerine standart müdahale rehberleri verilmelidir.

Ergen sağlığına yönelik okul verileri (obezite prevalansı, devamsızlık, rehberlik başvuruları, ruh sağlığı vaka sayısı) Sağlık Bakanlığı ve MEB arasında “paylaşımlı veri tabanı” modeliyle paylaşılmalıdır.

Bu önerilerin uygulanması, ergen nüfusun yaşam boyu sağlık sermayesini güçlendirecek, bulaşıcı olmayan hastalıkların (obezite, diyabet, ruhsal bozukluklar) erken önlenmesini

sağlayarak uzun vadede sağlık sistemine ve ülke ekonomisine maliyet etkin katkılar sunacaktır. Dahası, okullar aracılığıyla yürütülen çok boyutlu iyi oluş programları toplum genelinde sağlık okuryazarlığını artıracak, sosyal eşitsizlikleri azaltacak ve Sürdürülebilir Kalkınma Amaçları (SKA 3, 4 ve 10) doğrultusunda ilerleme sağlayacaktır.

Özet

Bu çalışma yaşlı bireylerin dijital iletişim teknolojileri üzerinden karşılaşılabilecekleri dolandırıcılık yöntemlerine karşı farkındalık düzeylerinin belirlenmesi ve dijital iletişim teknolojilerini daha güvenle kullanarak sosyal hayattan kopmamalarına yönelik destek verilmesi amacıyla yapılmıştır. Çalışma iki aşamalı planlanmıştır. Birinci aşamada katılımcılara araştırmacılar tarafından literatür taramasıyla oluşturulan anket uygulanmıştır. Çalışmanın ikinci aşamasında, Siber Suçlarla Mücadele Şube Müdürlüğü ve araştırmacılar tarafından, telefonlarındaki bazı güvenlik ayarları ile ilgili uygulamalı eğitimler verilmiştir. Çalışmanın araştırma aşamasında, nicel desende genel tarama modellerinden biri olan ilişkisel tarama modeli kullanılarak yürütülmüştür. Çalışmanın evrenini Samsun İlkadım ilçesinde yaşayan 55+ yaş bireyler oluşturmaktadır. 15Nisan-15Mayıs 2024 tarihleri arasında İlkadım ilçesinde eğitim salonu olan 6 cami ve Kuran kursunda okuma ve anlama ile ilgili herhangi bir engeli olmayan ve çalışmaya katılmaya gönüllü olan 166 orta yaşlı ve yaşlı birey çalışmanın evrenini oluşturmuştur. Araştırmaya katılan bireylerin %61,4'ü kadın, % 38,6'sı erkektir. Katılımcıların %50'si 55-60 yaş aralığında yani orta yaş grubundadır. Katılımcıların %71,1'i evli, %51,2'si eşiyile yaşamaktadır. Katılımcıların %36,1'i lise mezunu, %33,7 katılımcı emekli, %28,9 katılımcı ev hanımıdır. %43,4 Katılımcı dijital teknolojileri kullanmakta zorlanmadığını, %50 katılımcı günde ortalama 3-4 saat internet kullandığını belirtmiştir. Katılımcıların %80,1'i internet ortamını güvenli bulmamaktadır. %62 katılımcı bankacılık işlemlerinde internet ortamına güven duymuyor, %12,7 katılımcı daha önce bir internet dolandırıcılığı ile karşılaşmış ve %54,8 katılımcı dolandırıcılık endişesi ile dijital teknoloji kullanımını sınırlandırmıştır. %84,9'u şifrelerini gizli tuttuğunu ifade ederken, %12,9'u ise arkadaşları ile şifresini paylaşabileceğini belirtmektedir. Bu çalışmada katılımcıların, dolandırıcılık riskine karşı farkındalıklarının olduğunu, internet ortamında gerçekleşen işlemlere güven duymadıkları, bu nedenle teknoloji kullanımını sınırlandırdıkları, dolandırıcılıkla ilgili girişimlerin farkında oldukları ve bir dolandırıcılık durumunda nereye başvuracaklarını bildikleri görülmektedir. Çalışma sonuçlarına göre yaşlı bireylere dolandırıcılık riskine karşı dijital okuryazarlık, dijital

teknoloji becerileri eğitimlerinin planlanması, yaşlı bireylerin sık kullandığı alanlar, hastane, cami, halk eğitim kursları, kuran kursları gibi yerlerde farkındalık oluşturacak, uyarıcı ve bilgilendirici afişlerin asılması önerilmiştir.

Attitudes of Middle and Older Age Individuals Towards Digital Fraud Risk

Abstract

This study was conducted to determine the awareness levels of elderly individuals against fraud methods they may encounter through digital communication technologies and to provide support so that they do not become disconnected from social life by using digital communication technologies more safely. The study was planned in two stages. In the first stage, a survey developed by the researchers through a literature review was applied to the participants. In the second stage of the study, the Cyber Crimes Department and the researchers provided practical training on some security settings on their phones. The research stage of the study was conducted using the relational screening model, one of the general screening models in the quantitative design. The population of the study consists of individuals aged 55+ living in the İlkadım district of Samsun. The population of the study consisted of 166 middle-aged and elderly individuals who did not have any disabilities related to reading and understanding and volunteered to participate in the study in 6 mosques and Quran courses with training halls in the İlkadım district between April 15 and May 15, 2024. 61.4% of the individuals participating in the study were female and 38.6% were male. 50% of the participants are in the middle age group, i.e. between the ages of 55-60. 71.1% of the participants are married, 51.2% live with their spouses. 36.1% of the participants are high school graduates, 33.7% are retired, and 28.9% are housewives. 43.4% of the participants stated that they have no difficulty using digital technologies, 50% of the participants stated that they use the internet for an average of 3-4 hours per day. 80.1% of the participants do not find the internet environment safe. 62% of the participants do not trust the internet environment for banking transactions, 12.7% of the participants have previously encountered an internet scam, and 54.8% of the participants have limited their use of digital technologies due to concerns about fraud. 84.9% of the participants stated that they keep their passwords secret, while 12.9% stated that they may share their passwords with their friends. In this study, it is seen that the participants are aware of the risk of fraud, do not trust transactions that take place on the internet, therefore limit their use of

technology, are aware of attempts at fraud, and know where to go in case of a fraud. According to the results of the study, it is recommended that elderly individuals be trained in digital literacy and digital technology skills against the risk of fraud, and that awareness-raising, warning, and informative posters be hung in places frequently used by elderly individuals, such as hospitals, mosques, public education courses, and Quran courses.

Keywords: Middle and Old Age Individuals, Digital Fraud, Digital Security, Digital Risk

Giriş

Günümüzde dijital iletişim teknolojileri yaşamın her alanına entegre olmuş durumdadır. Günlük yaşam içindeki sıradan ihtiyaçların giderilmesi, sosyal ilişkilerin kurulması, vatandaşlık hizmetleri, eğitim, sağlık hizmetleri, eğlence gibi birçok ihtiyacın dijital sistemler aracılığıyla karşılanması neredeyse normalleşmiş durumdadır. Ancak teknolojik gelişmeler insanların yaşamını kolaylaştırıp refah seviyesinin artmasını sağlarken aynı zamanda bazı ciddi riskleri de beraberinde getirmektedir. Dünyanın lider bilgi hizmetleri şirketi Experian tarafından 2019 yılında 21 ülkede 10.000’den fazla tüketici ve 1000’den fazla şirket ile görüşülerek hazırlanan Uluslararası Dolandırıcılık Raporuna göre dünya genelinde her 5 tüketicinin 2’sinden fazlası, yaşamlarının bir evresinde dijital ortamlarda çevrim içi bir dolandırıcılık olayı yaşamıştır (UK&I, 2019). Bu tür riskler hemen bütün yaş grubu için geçerli olmasına rağmen özellikle orta ve ileri yaş grubu için dijital sistemlerin hızlı dönüşümüne yavaş adapte olmaları nedeniyle daha fazla risk vardır. TÜİK (2022) Hanehalkı Bilişim Teknolojileri Kullanım Araştırması sonuçlarına göre Türkiye’de 2022 yılının son 3 ayında 55-64 yaş grubu bireylerin %64,2’si, 65-74 yaş grubunun %36,6’sı internet kullanıyor. Yine aynı rapora göre 55-64 yaş grubunun %94,6’sı 65-74 yaş grubunun ise %88,3’ü cep telefonu kullanıyor. Raporda orta ileri yaş grubunun yıllar içinde giderek daha fazla dijital iletişim teknolojisi kullandığı belirtilmektedir. Ancak yine de gençlere göre orta ve ileri yaş grubunun dijital iletişim teknolojisi kullanımının çok daha az olduğu görülmektedir.

Yaşlı bireyler kendi deneyimleri, medya ve çevrelerinden gördükleri, duydukları dolandırıcılık olayları nedeniyle dijital iletişim teknolojilerini kullanmaktan çekinmektedirler. Bu durum giderek daha çok ve hızlı bir şekilde dijitalleşen dünyada onların sağlık, beslenme, sosyal ilişkiler ya da finansal ilişkilerinde aksaklıklara neden olabilmektedir. Örneğin dolandırıcılık korkusuyla dijital iletişim teknolojilerini kullanmaktan kaçındıkları için hastane randevusu alamama, banka ödemelerini yapamama, sosyal ilişkilerini sınırlama gibi davranışlar ortaya çıkmaktadır. Dijital ortamda yaşlı bireylere onların yalnızlık duygusu kullanılarak aşk

dolandırıcılığı, terör korkusu oluşturulması, sosyal medya ortamlarında sahte hesaplarla kendisini askerlik arkadaşı, aileyi tanıyan bir kişi, bir akraba gibi tanıtip acil yardım istenmesi, bankacılık hizmeti veriyormuş gibi şifrelerinin ele geçirilmesi gibi uygulamalarla maddi ve manevi zararlar verilmektedir. Bu çalışma yaşlı bireylerin dijital iletişim teknolojileri aracılığıyla yaşayabilecekleri dolandırıcılık uygulamalarına karşı farkındalık kazanmaları ve dijital iletişim teknolojilerini daha güvenle kullanarak sosyal hayattan kopmamalarına destek sağlamayı amaçlamaktadır.

1. Yaş, Yaşlanma ve Orta Yaş

Türk Dil Kurumu'na göre yaş “doğuştan beri geçen ve yıl birimi ile ölçülen zaman” dır (TDK, 2024). Yaşlanma kavramı ise çok boyutlu bir süreci ifade eder. Yaşlılık, kaçınılmaz bir süreç olmasına rağmen, ortaya çıkması bireyler arasında büyük farklılıklar gösterebilir. Yaşlanmayla birlikte bireylerde sağlık, genetik yapı, yaşam tarzı ve çevresel faktörlere bağlı olarak çok sayıda değişiklik gerçekleşir. Yaşlılık, yalnızca fiziksel değişimlerle sınırlı kalmaz; aynı zamanda sosyal rollerin, ekonomik durumun ve yaşam kalitesinin de önemli bir parçasıdır. Bu nedenle yaşlanma, yaşlılık ve yaşlı kavramalarını herkes için aynı şekilde açıklamak mümkün değildir (Tufan, 2014). Yaşlanma farklı disiplinler ve bakış açılarına göre, farklı şekillerde tanımlanarak kategorize edilmiştir. Genel olarak yaşlanma kronolojik, biyolojik, psikolojik ve sosyal olmak üzere üç ana boyutta açıklanır. Kronolojik yaşlanma, bir bireyin doğum tarihinden itibaren geçen süreyi ifade eder ve genellikle yıl cinsinden ölçülür. Bu tür yaşlanma, kişinin takvim yaşı olarak da bilinir ve biyolojik yaşlanmadan farklıdır. Biyolojik yaşlanma, vücuttaki hücrelerin, dokuların ve organların zamanla nasıl değiştiğini ve bozulduğunu ifade ederken, kronolojik yaşlanma yalnızca geçen zamanın bir ölçüsüdür (Aslan & Hocaoglu, 2017). Kronolojik yaş, en yaygın yaşlılık sınıflandırma yöntemidir ve belirli yaş aralıklarına göre yapılır. Bu sınıflandırma, Dünya Sağlık Örgütü (WHO, 2015) tarafından şu şekilde yapılır:

- Genç yaşlılar: 65-74 yaş
- Orta yaşlılar: 75-84 yaş
- İleri yaşlılar: 85 yaş ve üzeri

Bu sınıflandırma, yaşlı bireylerin sağlık hizmetlerine erişimi, sosyal hizmetler ve emeklilik politikaları gibi alanlarda kullanılır. Ancak, bu kategoriler bireylerin biyolojik veya psikolojik durumlarını tam olarak yansıtmayabilir. Biyolojik yaşlanma, organizmanın hücre, doku ve organlarının zamanla geçirdiği değişimi ifade eder. Bu süreç, bireyin sahip olduğu

genetik özellikler, yaşam tarzı, çevresel etkiler ve sağlık durumu gibi çeşitli etmenlerden etkilenir (Freund, AM, & Riediger, M. 2003). Psikolojik yaşlanma, bireyin yaşamı boyunca zihinsel, duygusal ve bilişsel işlevlerinde meydana gelen değişiklikleri ifade eder. Bu süreç, yaşa bağlı olarak bilişsel yeteneklerdeki değişimler, duygusal denge, psikososyal uyum ve benlik algısı gibi unsurları içerir (Eyüboğlu vd. 2012: 20). Sosyal yaşlanma ise, bireyin sosyal rollerinde, ilişkilerinde ve sosyal katılımında yaşa bağlı olarak meydana gelen değişiklikleri gösterir. Bu süreç, toplumun yaşlı bireylere bakışı, sosyal beklentiler ve bireyin sosyal çevresindeki ilişkilerini kapsar. Yaşlı bireyler, yaşamlarının ilerleyen dönemlerinde emeklilik, çocukların evden ayrılması, eşin veya yakın arkadaşların kaybı gibi durumlarla karşılaşabilirler. Bu tür olaylar, bireyin sosyal rollerini ve günlük etkileşimlerini önemli ölçüde etkileyebilir (Settersten & Angel, 2011).

2.Nüfus ve Yaşlanma

Birleşmiş Milletler tarafından Kasım 2023'de yapılan açıklamaya göre, dünya nüfusu 8 milyarı aşmıştır. Dünyadaki insan nüfusunun 1 milyara ulaşması, modern insanlığın ortaya çıkışından sonra 200.000 yıldan fazla zamanı almasına rağmen günümüzde 8 milyara ulaşması sadece 219 yıl sürmüştür. 20. yüzyılın son 70 yılında dünya nüfusu tarihte en fazla yükselişini göstermiştir. Yaşlı nüfus oranı dünya ortalaması, 2021 yılında %9,6'dır. Türkiye'nin yaşlı nüfus oranı ise %9,7 ile dünya yaşlı nüfus ortalamasının hemen üzerindedir. Türkiye'nin yaşlı nüfus oranı Avrupa Birliği üyesi 27 ülkenin yaşlı nüfus oranlarından daha düşüktür (TÜİK, 2022). TÜİK 2022 yılına ilişkin 'İstatistiklerle Yaşlılar' raporuna göre yaşlı nüfus olarak kabul edilen 65 ve daha yukarı yaştaki nüfus, 2017 yılında 6 milyon 895 bin 385 kişi iken, son beş yılda %22.6 artarak 2022 yılında 8 milyon 451 bin 669 kişiye ulaşmıştır. Yaşlı nüfusun toplam nüfus içindeki oranı 5 yıllık dönemde %8.5'ten, %9.9'a çıkmıştır. 2022 yılında yaşlı nüfusun %44.4'ü erkek, %55.6'sı kadındır. Nüfus projeksiyonlarına göre yaşlı nüfus oranının 2030 yılında %12.9, 2040 yılında %16.3, 2060 yılında %22.6 ve 2080 yılında ise %25.6 olacağı öngörülmektedir (TÜİK, 2022).

Nüfusun yaşlanması, toplumların sosyal, ekonomik ve sağlık sistemleri üzerinde çeşitli olumsuz etkilere yol açmaktadır. Nüfusun yaşlanmasının olumsuz etkilerinden bazıları ekonomik etkiler işgücü azalması ve verimlilik düşüşü, emeklilik ve sosyal güvenlik sistemleri üzerinde baskı, sağlık sistemi üzerinde etkiler sağlık hizmetlerine artan talep, sağlık harcamalarının artması, sosyal izolasyon ve yalnızlık, kuşaklar arası çatışmalar olarak sıralanabilir.

Türkiye'de, 65 yaş ve üzeri kişiler yaşlı nüfus kategorisine girmektedir. Artan yaşam süresiyle birlikte, yaşlılık dönemi artık "yaşlılık" ve "ileri yaşlılık" olarak iki ayrı evreye ayrılmıştır. Resmi kayıtlarda ise yaşlılık döneminin başlangıcı 60 yaş olarak belirlenmiştir (Hablemitoğlu ve Özmete, 2010).

Orta yaş dönemi ise, genellikle bireylerin hem aile hem de iş hayatlarını sağlam temellere oturttukları, mesleki anlamda yükseliş kaydettikleri, kazanç ve sosyal konumlarının zirveye ulaştığı bir zaman dilimidir. Ancak bu süreç, gençliğin getirdiği hareketliliğin ve enerjinin azaldığı, yaşlılık evresine doğru geçişin başladığı bir döneme de işaret eder. Bu evrede, büyüyen çocuklar evden ayrılarak kendi hayatlarını kurmaya başlar ve kişi, çevresindeki yakınlarını kaybetme gibi deneyimlerle yüzleşmeye başlar. Genç yetişkinlik döneminin sona ermesiyle birlikte fiziksel güçte azalma ve duyuşsal yeteneklerde gerileme genellikle orta yaşlarda belirgin hale gelir (Hablemitoğlu ve Özmete, 2010).

3. Yaşlılık Döneminin Genel Özellikleri

Yaşlılık döneminde bireylerde birçok fiziksel, psikolojik ve sosyal değişiklik meydana gelir. Bu değişiklikler doğal yaşlanma sürecinin bir parçasıdır ve bireyin yaşlılık sürecini nasıl geçireceği üzerinde oldukça etkilidir.

Yaşlılık Dönemi Fiziksel Özellikleri: Yaşlılık döneminin bazı temel fiziksel özellikleri şunlardır; kas kütlesi ve güç kaybının yaşanması, kemik yoğunluğu azalması, cilt ve bağ dokusu değişiklikleri, görme ve duyma bozuklukları, kardiyovasküler değişiklikler, metabolik değişiklikler, beyin ve sinir sistemi ile ilgili değişiklikler. Bu fiziksel değişiklikler, bireylerin yaşam kalitesini ve günlük yaşam aktivitelerini etkileyebilir (Danış, 2004).

Yaşlılık Dönemi Psikolojik Özellikleri: Yaşlılık dönemi, fiziksel değişimlerin yanı sıra önemli psikolojik değişikliklerin de yaşandığı bir dönemdir. Bu dönemde bireylerin psikolojik durumlarını etkileyen birçok faktör bulunmaktadır. Yaşlılık döneminin başlıca psikolojik özellikleri; depresyon ve anksiyete, bilişsel gerileme, yalnızlık ve sosyal izolasyon, yaşam memnuniyetinde azalma, uyum ve başa çıkma stratejilerinin geliştirilmesi, demans ve alzheimer hastalığı. Bu bulgular, yaşlılık döneminin karmaşıklığını ve bu dönemde bireylerin karşılaştığı psikolojik zorlukları anlamak için kapsamlı bir yaklaşıma ihtiyaç olduğunu göstermektedir (Emiroğlu, 1995).

Yaşlılık Dönemi Sosyal Özellikleri: Yaşlılık dönemi, bireylerin sosyal yaşamlarında önemli değişikliklerin yaşandığı bir dönemdir. Sosyal ilişkiler, roller ve aktivitelerdeki bu değişiklikler, yaşlı bireylerin yaşam kalitesini ve genel sağlığını etkileyebilir. Yaşlılık

döneminin bazı temel sosyal özellikleri şunlardır; sosyal izolasyon ve yalnızlık, aile ve toplumla ilişkiler, emeklilik ve boş zaman, sosyal rollerin değişimi. Bu bulgular, yaşlılık döneminde sosyal ilişkilerin ve aktivitelerin önemini vurgulamaktadır. Yaşlı bireylerin sosyal yaşamlarını desteklemek için sosyal ağların güçlendirilmesi, topluluk katılımının teşvik edilmesi ve yaşlı bireylere yönelik sosyal programların geliştirilmesi önemlidir.

4. Yaşlılık ve Dijital Dünya

İçinde yaşadığımız dijital çağda bilgisayar teknolojileri günlük yaşam pratiklerimizi ve birbirimizle iletişim kurma şeklimizi önemli ölçüde etkilerken yeni dijital teknolojilerin hızlı gelişimi, dünyayı sürekli olarak dönüştürmeye devam etmektedir. Bu durum yaşlılar da dahil olmak üzere çoğu insan için, yeni dijital teknolojilere uyum sağlamak ve bunları günlük yaşamımıza entegre etmek anlamına gelmektedir. Dijitalin dışında kalmamak artık bir insan hakkıdır. Yaşlılar dijital sistemin dışında bırakıldığında, hayatın da dışında bırakılmaktadır (Köttl & Mannheim, 2021). Yaşlı insanların dijital becerilerinde ülkeler arasında önemli farklılıklar vardır. Norveç'te % 51, İsviçre'de %57 oranında temel veya üzeri dijital becerilere sahipken, bu Kuzey Makedonya'da %3 ve Türkiye'de % 2 dir. Türkiye'de (TUIK, 2022) İnternet kullanım oranı, 16-74 yaş grubundaki bireylerde 2021 yılında %82,6 iken 2022 yılında %85,0 olurken, yaşlı nüfusun neredeyse % 70'i halen internet kullanımından uzak bir hayat sürmektedir. 65-74 yaş grubundaki kadınların yalnızca %25,9'u internet kullanırken, erkeklerin %40'ı internet kullanmaktadır. Bu durum dijital bölünme ya da dijital uçurum sorunlarını gündeme getirmektedir.

Dijital bölünme/dijital uçurum; internet gibi teknolojilere erişim durumunu tanımlar. Dijital uçurum, bilgisayar internet gibi teknolojiye erişimi olanlar ile olmayanlar arasındaki farktır. Erişim engelleri coğrafi (kentsel-kırsal) ve sosyoekonomik faktörleri içerir, ancak aynı zamanda tutum ve becerilerdeki engellerini de içerir. COVID-19 salgını sırasında bu bölünme özellikle yaşlı yetişkinler tarafından daha belirgin hissedilmiştir. İlişkilerini sürdürmek için teknolojiye hızla alışmaları gerekirse, maalesef, pandemi sırasında siber suçlar hızla artmış ve bu yaş grubunu orantısız bir şekilde mağdur oldukları görülmüştür (Köttl & Mannheim, 2021).

Dijital uçurum yaşlı yetişkinleri birçok farklı yönden etkileyebilmektedir. Örneğin görme, motor beceriler, kısa süreli hafızadaki doğal düşüşler gibi sorunlar yaşlı bireylerin dijital sistemleri kullanımında sınırlılıklar getirmektedir. Yaşlı yetişkinlerin düşük bilgisayar okuryazarlığı, teknofobi, kullanma becerisinin düşük olması ve fiziksel ve bilişsel eksiklikler gibi içsel özellikleri bu durumun birer göstergesidir. Yaşlı kişilerin dijital olarak dışlanma yaşaması giderek daha fazla çevrimiçi sağlanan mal ve hizmetlere erişimde engellerle

karşılaşmalarına neden olmaktadır. Aynı zamanda sosyal ve ekonomik katılım da dahil olmak üzere aktif ve sağlıklı yaşlanma fırsatlarını da azaltmaktadır (Köttl & Mannheim, 2021).

Yaşlı bireylerde dijital eşitsizlikler üzerinde etkili olan faktörler; dijital çağda aktif yaşlanma, yaş ayrımcılığı, e devlet hizmetlerine erişim, dijital okuryazarlık, dijital beceriden yoksun olmak, dijital teknoloji tasarımları, fiziksel ve bilişsel bozukluklar, e-bankacılık, e-ticaret uygulama ve hizmetleri ve e öğrenme fırsatları sayılabilir. Yalnızlığı ve sosyal izolasyonu azaltabilen dijital iletişim ve ileri yaşlarda bağımsız yaşam fırsatlarını geliştirebilen dijital teknolojiler dahil olmak üzere aktif ve sağlıklı yaşlanma, yaşlıların esenliği ve güçlendirilmesi için dijital teknolojilerin potansiyelinden yararlanmak gerekir (UNECE, 2021).

5. Yaşlı Bireylerde Dijital Sistemlerin Güvenli Kullanımı

Çevrimiçi ortamda kendilerini güvende hissetmeleri ve interneti sorunsuz kullanabilmeleri adına, dijital güvenlik konusunda kullanıcıların bilinçli olması ve karşılaşabilecekleri siber tehditlere karşı nasıl hareket edeceklerini öğrenmeleri büyük önem taşır. Yaşlı bireyler, teknolojiyi daha az kullanmaları, bilişsel işlevlerinde yavaşlamaların olması ve dolandırıcılıklara karşı daha savunmasız olmaları gibi nedenlerden dolayı dijital ortamda özellikle risk altındadırlar. Yaşlı bireylerin dijital güvenlik konusunda bilgi ve farkındalık seviyeleri genellikle daha düşük olabilir. Bu nedenle yaşlı bireylerin gizlilik ayarlarının nasıl yapılacağı ve kişisel bilgilerin nasıl korunacağı hakkında bilgi sahibi olmaları gerekir. Yaşlı bireylerin en fazla risk altında olduğu dolandırıcılık türleri (Siberay, 2022):

Kimlik Avı Dolandırıcılığı: Sahte e-postalar, web siteleri veya telefon aramaları ile kişisel bilgilere, kredi kartı bilgilerine veya parolalara erişmeye çalışan dolandırıcılar yaşlı bireyleri hedef alabilir.

Finansal Dolandırıcılık: Yatırım dolandırıcılıkları, sahte hayır kurumları ve sahte çevrimiçi mağazalar gibi yöntemler kullanılarak yaşlılardan para çalınabilir. Siber Zorbalık: Yaşlı bireyler, sosyal medya platformlarında veya çevrimiçi oyunlarda alay, taciz veya tehditlere maruz kalabilir.

Kişisel Bilgi Hırsızlığı: Virüsler, casus yazılımlar veya kimlik avı saldırıları yoluyla kişisel bilgiler çalınabilir. Bu bilgiler daha sonra kimlik hırsızlığı veya diğer suçlar için kullanılabilir.

Çevrimiçi Kimlik Hırsızlığı: Dolandırıcılar, bir yaşlının çevrimiçi kimliğini taklit ederek arkadaşlarından ve ailelerinden para veya kişisel bilgiler isteyebilirler.

Dolandırıcılar, yaşlı bireylerin dijital teknolojiler konusunda deneyimsiz olmasından ve savunmasız olmalarından yararlanarak,

- Kendilerini güvenlik görevlisi (polis, asker) kamu görevlisi (Hâkim, Savcı) olarak tanıtarak “ bir terör örgütü soruşturmasına karıştıklarını söyleyerek” para ve ziynet eşyası talep edebilmekte

- Kendilerini vali veya kaymakam olarak tanıtarak yardıma muhtaç veya hasta çocuklar için para talep edebilmekte

- Bankadan aradığını söyleyerek hesap şifrelerini, bilgilerini isteyebilmekte

- Yaşlı bireylerin yalnızlığından faydalanarak eş bulma vaadiyle para veya ziynet eşyası isteyerek kandırabilmekte

- Bir akrabası olduğuna ve zor durumda olduğuna ikna ederek acil para göndermesini isteyebilmekte
- Bir ödül kazandığını söyleyerek hesap bilgilerini isteyebilmektedir. Yaşlı bireylerin güvenliği için;

- Güçlü parolalar kullanmalarını ve bunları kimseyle paylaşmamalarını sağlamak.

- Bilgisayarlarında ve mobil cihazlarında güncel bir antivirüs ve güvenlik duvarı yazılımı bulundurulması gerekliliğini anlatmak.

- Kimlik avı dolandırıcılıklarına karşı dikkatli olmalarını ve şüpheli e-postalara, web sitelerine veya telefon aramalarına karşı dikkatli olmalarını sağlamak.

- Kişisel bilgilerini çevrimiçi ortamda paylaşırken dikkatli olmalarını sağlamak.

- Güçlü bir şifre yöneticisi kullanmalarını sağlamak.

- Çevrimiçi aktiviteleri hakkında aile üyeleri veya güvendikleri kişilerle konuşmalarını teşvik etmek

Yöntem

Bu proje yaşlı bireylerin dijital iletişim teknolojileri üzerinden karşılaşılabilecekleri dolandırıcılık yöntemlerine karşı farkındalık kazanmaları ve dijital iletişim teknolojilerini daha güvenle kullanmalarını sağlamak amacıyla yapılmıştır. Proje kapsamında yaşlı bireylerin dijital dolandırıcılık riskine karşı tutumları ölçülmüştür. Nicel araştırma deseni kullanılarak yapılan bu çalışmada genel tarama modellerinden biri olan ilişkisel tarama modeli kullanılmıştır. Tarama modellerinde amaç var olan bir durumu olduğu haliyle betimlemektir. Araştırmaya

konu olan olay, durum veya birey kendi koşulları içinde ve olduğu gibi tanımlanmaya çalışılır (Karasar, 2005). Çalışmanın evrenini Samsun İlkadım ilçesinde yaşayan 55+ yaş bireyler oluşturmaktadır. Yaşlı popülasyonuna kolay ulaşabilmek için Samsun İl Müftülüğü ile işbirliği yapılmış ve araştırma ilçedeki cami ve Kuran kurslarında yürütülmüştür. 15 Nisan-15 Mayıs 2024 tarihleri arasında İlkadım ilçesinde eğitim salonu olan 6 cami ve Kuran kursunda okuma ve anlama ile ilgili herhangi bir engeli olmayan ve çalışmaya katılmaya gönüllü olan 166 birey çalışmanın evrenini oluşturmuştur. Çalışma iki aşamalı planlanmıştır. Birinci bölümde katılımcılara araştırmacılar tarafından literatür taramasıyla oluşturulan anket uygulanmıştır. Anket, katılımcıların sosyo-demografik özelliklerini, internet ve sosyal medya kullanım alışkanlıklarını ve dijital dolandırıcılığa karşı tutumlarını ölçen 31 sorudan oluşmaktadır. Veriler SPSS 24 programında analiz edilerek sayı ve frekans dağılımlarına bakılmıştır. Çalışmanın ikinci aşamasında anket uygulamasından sonra, Samsun İl Emniyet Müdürlüğü Siber Suçlarla Mücadele Şube Müdürlüğünde görevli polis memurları ve araştırmacılar tarafından, katılımcılara siber güvenlik eğitimleri verilmiş, broşürler dağıtılmış ve telefonlarında bazı güvenlik ayarlarını yapmaları uygulamalı olarak gösterilmiştir. Yapılan eğitim toplantıları soru cevap etkinliği ile tamamlanmıştır.

Bulgular

Yaşlı bireylerin dijital iletişim teknolojileri üzerinden karşılaşabilecekleri dolandırıcılık yöntemlerine karşı farkındalık kazanmaları ve dijital iletişim teknolojilerini daha güvenle kullanmalarını sağlamak amacıyla yapılan bu projede katılımcılara ait demografik özellikler ve dolandırıcılık riskine karşı tutumlarına ait bulgular aşağıda sunulmuştur. Araştırmaya katılan bireylerin %61,4'ü kadın, % 38,6'sı erkektir. Katılımcıların %50'si 55-60 yaş aralığında yani orta yaş grubundadır. %13, 9 katılımcı ise 71+ yaş grubundadır. Katılımcıların %71,1'i evli, %51,2'si eşiyile yaşamaktadır. Katılımcıların %36,1'i lise mezunu, %31,9'u ilköğretim mezunudur. %33,7 katılımcı emekli, %28,9 katılımcı ev hanımıdır (Tablo 4.1).

Tablo 4.1 Katılımcılara Ait Tanımlayıcı Bulgular

	Sayı (n)	Yüzde (%)
Cinsiyet		
Kadın	102	61,4
Erkek	64	38,6
Toplam	166	100,0

Meslek		
Emekli	56	33,7
Serbest	32	19,3
Memur	24	14,5
Ev Hanımı	48	28,9
Çalışmıyor	6	3,6

Katılımcıların dijital iletişim araçlarını kullanma durumuna bakıldığında %43,4 katılımcı dijital teknolojileri kullanmakta zorlanmadığını, %27,1 kişi ise zorlandığını belirtmiştir. %84,3 katılımcı bilgisayar ya da internet kullanımı konusunda eğitim almamış, %71,1 kullanıcı böyle bir eğitim ihtiyacı olmadığını ifade etmiştir. Katılımcılarının tamamının cep telefonu, %50'sinin bilgisayarı vardır. Katılımcıların %50'si günde ortalama 3-4 saat internet kullanmaktadır ve %72,3 kişinin sosyal medya hesabı vardır (Tablo 4.2).

Tablo 4.2 Katılımcıların Dijital Teknoloji Kullanım Durumları

	Sayı (n)	Yüzde (%)
Dijital İletişim Araçlarını kullanmakta zorlanıyor musunuz ?		
Evet	45	27,1
Hayır	72	43,4
Kısmen	49	29,5
Bilgisayar - İnternet eğitiminiz var mı ?		
Evet	26	15,7
Hayır	140	84,3
Bilgisayar - İnternet eğitimi almak ister misiniz ?		
Evet	48	28,9
Hayır	118	71,1
Hangi Dijital iletişim araçlarını kullanıyorsunuz?		
Cep telefonu	166	100
Bilgisayar	53	50
Tablet	30	18
Ortalama İnternet Kullanımı (Gün/saat)		
1-2 saat	76	45,7
3-4 saat	83	50,0

5-6 saat	7	4,3
Sosyal Medya Hesabınız Var Mı?		
Evet	120	72,3
Hayır	46	27,7

Katılımcıların %80,1'i internet ortamını güvenli bulmamaktadır. %12,7 katılımcı daha önce bir internet dolandırıcılığı ile karşılaşmış, %54,8 katılımcı dolandırıcılık endişesi ile dijital teknoloji kullanımını sınırlandırmıştır (Tablo 4.3).

Tablo 4.3 Katılımcıların Dolandırıcılıkla Karşılaşma Durumu

	Sayı (n)	Yüzde (%)
İnternet Ortamını güvenli buluyor musunuz ?		
Evet	33	19,9
Hayır	133	80,1
İnternet ortamında dolandırıldınız mı ?		
Evet	21	12,7
Hayır	145	87,3
Dolandırılma endişesi dijital teknoloji kullanmanızı sınırlandırıyor mu?		
Evet	91	54,8
Hayır	75	45,2

Tablo 4.4'e göre; katılımcıların %84,9'u şifrelerini gizli tutuyor, %80,1'i tanımadığı insanlarla sosyal medyada iletişim kurmuyor, %69,9 katılımcının sosyal medya hesaplarında gizlilik ve güvenlik ayarları vardır. %92,8 katılımcı kimlik/hesap bilgilerini isteyen sitelerden, aramalardan uzak durduğunu, %65,1 katılımcı internet alışverişlerine güven duymadığını belirtmiştir. %62,0 katılımcı bankacılık işlemlerinde internet ortamına güven duymuyor, %86,1 katılımcı tanımadığım numaralardan gelen aramalara geri dönmüyor, %90,4 kişi hediye/ödül kazandığını söyleyen mesajlara inanmıyor. Katılımcıların %90,4'ü arkadaş olmak isteğiyle gelen mesajlara aramalara cevap vermiyor, %89,2 katılımcı acil durum ya da yardım isteğiyle gelen mesajlara güven duymuyor. Terör örgütü ya da suç şebekesi ilişkisi ile korkutup hesap bilgileri isteyen aramaların dolandırıcılık olduğunu %94,0 katılımcı biliyor. %95,2 katılımcı kendisini polis, savcı gibi tanıtır hesap bilgileri isteyen aramaların dolandırıcılık olduğunu biliyor ve katılımcıların %85,5'i dijital ortamda yaşanan dolandırıcılık durumunda nereye başvuracağını biliyor.

Tablo 4.4 Katılımcıların Dolandırıcılık Riskine Karşı Tutumları

Evet	Hayır	Bazen

	Sayı (n)	Yüzde (%)	Sayı (n)	Yüzde (%)	Sayı (n)	Yüzde (%)
Şifrelerimi gizli tutuyorum	141	84,9	9	5,4	16	9,6
Tanımadığım insanlarla sosyal medyada iletişim kurmuyorum	133	80,1	24	14,5	9	5,4

Dijital ortamda yaşanan dolandırıcılık durumunda nereye başvuracağımı biliyorum	142	85,5	17	10,2	7	4,2

Tartışma Sonuç ve Öneriler

Yaşlı bireylerin dijital iletişim teknolojileri üzerinden karşılaşılabilecekleri dolandırıcılık yöntemlerine karşı farkındalık kazanmaları ve dijital iletişim teknolojilerini daha güvenle kullanmalarını sağlamak amacıyla yapılan bu projede katılımcılara ait demografik özellikler ve dolandırıcılık riskine karşı tutumlarına ait bulgular aşağıda sunulmuştur. Araştırmaya katılan bireylerin %61,4'ü kadın, % 38,6'sı erkektir. Katılımcıların %50'si 55-60 yaş aralığında yani orta yaş grubundadır. %13, 9 katılımcı ise 71+ yaş grubundadır. Katılımcıların %71,1'i evli,

%51,2'si eşıyle yaşamaktadır. Katılımcıların %36,1'i lise mezunu, %31,9'u ilkokul mezunudur. %33,7 katılımcı emekli, %28,9 katılımcı ev hanımıdır (Tablo 4.1).

Katılımcıların dijital iletişim araçlarını kullanma durumuna bakıldığında %43,4 katılımcı dijital teknolojileri kullanmakta zorlanmadığını, %27,1 kişi ise zorlandığını belirtmiştir. Buna göre katılımcıların önemli bir bölümünün dijital teknolojileri kullanmakta sorun yaşamadıkları görölmektedir. Dijital Türkiye 2030 (2023) araştırmasına göre ise, 2021 yılında basit ve üstü seviyede dijital beceriye sahiplik 55-64 yaş grubunda %6, 65-74 yaş grubunda ise %2'dir. Araştırma sonuçlarına göre %84,3 katılımcı bilgisayar ya da internet kullanımı konusunda eğitim almamış, %71,1 kullanıcı böyle bir eğitim ihtiyacı olmadığını ifade etmiştir. Katılımcıların tamamının cep telefonu, %50'sinin bilgisayarı vardır. Katılımcıların %50'si günde ortalama 3-4 saat internet kullanmaktadır ve %72,3 kişinin sosyal medya hesabı vardır (Tablo 4.2).

We Are Social Digital 2024 Global Raporuna göre Türkiye'de 55-64 yaş grubu internette ortalama 5 saat geçirmektedir (We Are Social, 2024) . Morrison vd. (2020) belirttiğı gibi yaşlı bireyler, yeni teknolojileri benimsemeye heveslidirler. Artık birçok yaşlı birey, yalnızlığa ve izolasyona karşı koymak, aileyle etkileşim kurmak ve daha sağlıklı bir emeklilik için çevrimiçi teknolojilerle ilgilenmektedir. Ancak dijital teknoloji ile ilgili becerilerinin gelişmemiş olması yaşlı bireylerin internet ortamında farklı risklerle karşı karşıya kalmalarına neden olmaktadır. Bu çalışmada da katılımcıların %80,1'i internet ortamını güvenli bulmamaktadır. %12,7 katılımcı daha önce bir internet dolandırıcılığı ile karşılaşmış, %54,8 katılımcı dolandırıcılık endişesi ile dijital teknoloji kullanımını sınırlandırmıştır (Tablo 4.3).

Milward'ın (2003) çalışmasında 55 yaş üstü bilgisayar ve internet kullanıcılarının en büyük korkusunun, normal bir kullanıcının bilmesi gereken çok basit işlemleri bilememekten kaynaklanan aşağılanma, küçük düşme ya da kandırılma/dolandırılma hissi olduğu sonucuna varılmıştır. Bu çalışmada da katılımcıların dolandırıcılık riskine karşı tutumlarına bakıldığında; %84,9 katılımcı şifrelerini gizli tuttuğunu ifade etmiştir. Çetin'in (2014) kişisel veri güvenliği ve farkındalık düzeylerini incelediğı çalışmasında ise farklı yaş gruplarında olan katılımcıların kendilerine ait olan elektronik cihazların şifresini %57 (278 kişi) oranında hiç kimse ile paylaşmadıklarını ifade ederken, %28,7'si (140 kişi) de aile fertlerinden birisiyle paylaştığını ifade etmektedir. %12,9'u (63 kişi) ise arkadaşı ile şifresini paylaşabileceğini belirtmektedir.

Çalışma kapsamında katılımcıların dolandırıcılık riskine karşı diğer konulardaki tutumlarına bakıldığında %80,1 katılımcı tanımadığı insanlarla sosyal medyada iletişim kurmuyor, %69,9 katılımcının sosyal medya hesaplarında gizlilik ve güvenlik ayarları vardır.

%92,8 katılımcı kimlik/hesap bilgilerini isteyen sitelerden, aramalardan uzak durduğunu, %65,1 katılımcı internet alışverişlerine güven duymadığını belirtmiştir. %62,0 katılımcı bankacılık işlemlerinde internet ortamına güven duymuyor, %86,1 katılımcı tanımadığım numaralardan gelen aramalara geri dönmüyor, %90,4 kişi hediye/ödül kazandığını söyleyen mesajlara inanmıyor. Katılımcıların %90,4'ü arkadaş olmak isteğiyle gelen mesajlara aramalara cevap vermiyor, %89,2 katılımcı acil durum ya da yardım isteğiyle gelen mesajlara güven duymuyor. Terör örgütü ya da suç şebekesi ilişkisi ile korkutup hesap bilgileri isteyen aramaların dolandırıcılık olduğunu %94,0 katılımcı biliyor. %95,2 katılımcı kendisini polis, savcı gibi tanıtip hesap bilgileri isteyen aramaların dolandırıcılık olduğunu biliyor ve katılımcıların %85,5'i dijital ortamda yaşanan dolandırıcılık durumunda nereye başvuracağını biliyor. Bu sonuçlara bakıldığında katılımcıların internet ortamındaki işlemler konusunda güven duymadıkları görülmektedir. Bunun yanında dolandırılma riskine karşı farkındalıkları olduğu ve böyle bir sorunla karşılaştıklarında nereye başvuracaklarını bildiklerini ifade etmişlerdir. Çalışkan'ın (2019) telefon dolandırıcılığı konusundaki araştırmasına göre, 2018 yılında yaklaşık 43.800 kişi dolandırıcılar tarafından arandığını emniyet birimlerine bildirmiş. Bu kişilerden 2.192'si dolandırıldığını iddia ederek yasal süreç başlatmış. Geriye kalan 41.608 kişi ise dolandırıcılarla temasa geçilmesine rağmen herhangi bir maddi zarara uğramadığını belirtmiş ve şikayetçi olmamıştır. Bu durum, dolandırıcılık girişimlerinde vatandaşların yalnızca yaklaşık %5'inin maddi kayıp yaşadığını göstermektedir. Yaş gruplarına göre yapılan incelemede, mağdurların %30,7'sinin genç ve orta yaş grubundan olduğu, 42 yaş üzeri mağdurların oranının ise %69,3 olduğu görülmektedir. Bu bulgu, düzenli geliri ve birikimi olan bireylerin daha sık hedef alındığı tezini desteklemektedir. Başka bir deyişle, 52 yaş ve üzeri gruptaki mağdurlar, tüm mağdurların %54,1'ini oluşturmaktadır. Özellikle bu yaş grubunun hedef alınmasının temel nedenleri arasında, genç ve orta yaş gruplarına kıyasla daha fazla birikime sahip olmaları ve sosyal çevrelerinden nispeten uzak olmaları nedeniyle telefon görüşmeleri sırasında kendilerini uyabilecek kişilerin etraflarında bulunmama ihtimali yer almaktadır (Çalışkan, 2019).

Sonuç olarak çalışma kapsamındaki orta ve ileri yaş bireylerin, dolandırıcılık riskleri konusunda farkındalıklarının olduğu ancak bu riskler nedeniyle dijital sistemleri kullanmaktan kaçındıkları görülmektedir. Bu durum bireylerin dijital ortamlarda yürütülen birçok hizmetten mahrum kalmalarına ve dolayısıyla dijital eşitsizlikle karşı karşıya kalmalarına sebep olmaktadır.

Öneriler

Yaşlı bireyleri dijital ortamda güvende tutmak için:

- Dijital okuryazarlık eğitimleri verilmelidir
- Dijital teknoloji becerilerini geliştirecek eğitimler verilmelidir.
- Dolandırıcılık riskine karşı medya, belediyeler, üniversiteler ve sivil toplum kuruluşları işbirliği ile yaşlı bireylere farkındalık eğitimleri verilmelidir.
- Emniyet müdürlükleri siber güvenlik eğitimlerini her yaş grubuna farklı ortamlarda düzenli olarak vermektedir. Bu eğitimlere diğer kurumlar da destek olmalı ve işbirliği yapılmalıdır.
- Yaşlı bireylerin sık kullandığı alanlar, hastane, cami, halk eğitim kursları, kuran kursları gibi yerlerde farkındalık oluşturacak, bilgilendirici afişler asılmalıdır. Dijital ortamda bilinçli ve dikkatli olmak, her yaştan insan için önemlidir. Özellikle yaşlı bireyler için bu riskleri öğrenmek ve gerekli önlemleri almak, onları güvende tutmaya yardımcı olacaktır. Yaşlı bireyler için özel olarak tasarlanmış teknoloji eğitim programları, dijital güvenliği öğretmek ve kullanıcılara güvenli dijital alışkanlıklar kazandırmak için önemlidir.

Pozitif Örgüt İkliminin Çalışanların Öznel İyi Oluş Algısına Etkisi

Doç.Dr.Muhammet Hamdi Mücevher

Isparta Uygulamalı Bilimler Üniversitesi, muhammetmucevher@isparta.edu.tr, ORCID no: 0000-0002-3474-5073, TÜRKİYE

Özet

Bu çalışma, örgütlerdeki pozitif örgüt ikliminin çalışanların öznel iyi oluş algıları üzerindeki etkisini incelemeyi amaçlamaktadır. Pozitif örgüt iklimi; adalet, değer görme, destek, saygı, sevgi, birlik, berberlik, umut ve takdir gibi olumlu örgütsel değerlerin süreklilik arz eden bir biçimde hissedildiği ve içselleştirildiği bir çalışma atmosferine işaret eder. Bu tür bir iklim, çalışanların yalnızca mesleki performanslarını değil, aynı zamanda psikolojik ve duygusal sağlıklarını da derinden etkileyebilmektedir. Pozitif bir iklimde çalışan bireyler, örgütlerine daha fazla bağlılık hissedip örgütsel vatandaşlık davranışı sergilerken; daha az tükenmişlik, daha yüksek iş doyumunu ve yaşam memnuniyeti bildirmektedirler. Bu bağlamda öznel iyi oluş, bireyin yaşamdan duyduğu genel memnuniyet düzeyi ile birlikte iş ortamında yaşadığı pozitif ve negatif duyguların dengesini de yansıtmaktadır.

Yazındaki konu ile alakalı çalışmalardan yola çıkarak bir çıkarsamada bulunan bu çalışmada, öncelik ile pozitif örgüt iklimi ile öznel iyi oluş kavramları teorik çerçevede ele alınmakta, ardından bu iki değişken arasındaki ilişkiler literatür destekli biçimde analiz edilmektedir. Bulgular, örgütlerde pozitif bir iklimin sistematik olarak inşa edilmesinin ve sürdürülmesinin, çalışanların psikolojik dayanıklılıklarını güçlendirdiğini ve öznel iyi oluş düzeylerini artırdığını göstermektedir. Bu durum yalnızca bireysel düzeyde fayda sağlamakla kalmayıp, örgütsel başarı, inovasyon ve sürdürülebilirlik gibi stratejik çıktılara da katkı sunmaktadır. Bu nedenle insan kaynakları politikalarının ve yönetim uygulamalarının çalışanların iyi oluşunu gözeterek ve artıran bir iklim yaratmayı hedeflemesi gerektiği vurgulanmaktadır.

Anahtar Kelimeler: Pozitif Örgüt İklimi, Öznel İyi Oluş, Çalışan, İşgören

Abstract

This study aims to examine the effect of positive organizational climate in organizations on employees' subjective well-being perceptions. Positive organizational climate refers to a work atmosphere where positive organizational values such as justice, appreciation, support, respect, love, unity, togetherness, hope and appreciation are constantly felt and internalized. Such a climate can deeply affect not only the professional performance of employees but also their psychological and emotional health. Individuals working in a positive climate feel more committed to their organizations and exhibit organizational citizenship behavior, while

reporting less burnout, higher job satisfaction and life satisfaction. In this context, subjective well-being reflects the balance of positive and negative emotions experienced in the work environment along with the individual's general level of satisfaction with life.

In this study, which draws an inference based on studies related to the subject in the literature, the concepts of positive organizational climate and subjective well-being are first addressed within a theoretical framework, and then the relationships between these two variables are analyzed with literature support. The findings show that systematically building and maintaining a positive climate in organizations strengthens the psychological resilience of employees and increases their subjective well-being. This situation not only provides benefits at the individual level, but also contributes to strategic outcomes such as organizational success, innovation and sustainability. Therefore, it is emphasized that human resources policies and management practices should aim to create a climate that monitors and increases the well-being of employees.

Keywords: Positive Organizational Climate, Subjective Well-Being, Employee, Worker

Giriş

21. yüzyılın hızla değişen ve dönüşen iş yaşamında, örgütlerin sürdürülebilir rekabet avantajı kazanabilmesi, sadece finansal kaynaklara değil, aynı zamanda insan sermayesinin etkin bir şekilde yönetimine bağlıdır (Wright ve McMahan, 2011; Barney, 1991). Bu sebep ile örgütlerin sahip oldukları iklim, yani çalışanların örgütsel ortamı nasıl algıladıkları ve bu algıların iş tutum ve davranışlarına nasıl yansıdığı konusu, yönetim ve örgütsel davranış literatüründe artan bir ilgi odağı haline gelmiştir (Schneider, Ehrhart ve Macey, 2013). Pozitif örgüt iklimi, çalışanların kendilerini saygın, güvende, değerli ve desteklenmiş hissettikleri; adalet, iş birliği, etik değerler ve psikolojik güvenliğin önemsendiği bir örgütsel çevre ve ortamı ifade etmektedir (Luthans ve Youssef, 2007; Cameron, Dutton ve Quinn, 2003).

Diğer taraftan, bireylerin genel yaşam tatmini düzeyleri, psikolojik dayanıklılıkları ve işle ilgili duygusal durumlarını çerçeveleyen öznel iyi oluş kavramı, örgütsel bağlamda, insan kaynakları uygulamalarının etkinliğini değerlendirmede giderek artan bir öneme sahip olmuştur (Ryan ve Deci, 2001; Diener, 1984). Çalışanların öznel iyi oluş düzeylerinin, iş tatmini, işe ve örgüte bağlılık, yenilik, girişimcilik, yaratıcılık, iş performansı ve örgütsel vatandaşlık davranışları gibi birçok olumlu örgütsel çıktının öncülü olduğu vurgulanmaktadır (Warr, 2007; Lyubomirsky, King ve Diener, 2005). Bu bağlamda, örgütlerde, hem liderlik ve örgüt kültürü gibi yapısal faktörlerin hem de adalet, değer verme, destek gibi algısal faktörlerin çalışanların iyi oluşlarını nasıl etkilediği sorusu, günümüz örgütsel davranış araştırmalarının üzerinde

durduğu konulardan biri hâline gelmiştir.

Bu bağlamda çalışmanın temel amacı, pozitif örgüt ikliminin çalışanların öznel iyi oluş algısı üzerindeki etkisini incelemek ve bu iki önemli kavram arasındaki ilişkiyi dinamikleri ampirik olarak ortaya koymak olarak belirlenmiştir. Yazında pozitif psikoloji ve pozitif örgütsel davranış kapsamında ele alınan çalışmalara bakıldığında, çalışanların psikolojik dayanıklılık, psikolojik sermaye, iyimserlik ve umut gibi olumlu psikolojik kaynaklarının örgütsel iklimle yakından ilişkili olduğu görülmektedir (Avey, Luthans ve Jensen, 2009; Luthans ve diğerleri, 2007). Ancak, örgüt ikliminin öznel iyi oluş üzerindeki etkilerini özellikle pozitif iklim boyutları temelinde ele alan çalışmalar sınırlı sayıda olduğu için bu yönüyle çalışma, ilgili literatürdeki önemli bir boşluğu doldurmayı hedeflemektedir.

Mevcut yazın, genellikle örgüt iklimini genel veya stres iklimi, rol belirsizliği, çatışma gibi negatif yönleriyle incelemekte; pozitif iklimin çalışan mutluluğu, tatmini ve refahına etkisi konusuna ise yüzeysel değinmektedir (Bakker ve Demerouti, 2007; Schneider ve diğerleri, 2013). Bunun yanında, öznel iyi oluş çalışmaları genellikle literatürde bireysel boyutta incelenmekte, örgütsel eksende nasıl neticeler doğurduğu ile ilgili yeterli ampirik bulguya ulaşmak mümkün olmamaktadır (Taris ve Schaufeli, 2015; Diener ve diğerleri, 1999). Bu bağlamda, çalışmanın yazına özgün katkısı, pozitif örgüt ikliminin öznel iyi oluşu nasıl etkilediğini açıklayan örgüt eksenindeki kavramsal ve yapısal ilişkiyi ampirik bulgular ile desteklemesidir.

Tüm bunların yanında, özellikle COVID-19 salgını sonrasında çalışanların psikolojik dayanıklılığı, tükenmişliği ve iş-yaşam dengesi gibi konular daha da önemli hale gelmiş, örgütlerin yalnızca ekonomik çıktılar değil, aynı zamanda çalışanların psikolojik esenlik, doyum ve refah düzeyleri ile ilgili de değerlendirmelerde bulunmaları gerekliliği ortaya çıkmıştır (Spurk ve Straub, 2020; Kniffin ve diğerleri, 2021). Bu sebep ile pozitif iklim ve iyi oluş konuları, sadece akademik bir merak ve araştırma konusu olmaktan çıkmış, direkt örgütsel politika konusu haline gelmiştir. Örgütsel gelişim, liderlik, insan kaynakları yönetimi ve kurumsal sosyal sorumluluk uygulamalarında pozitif iklim ve iyi oluşun dikkate alınması, gerek çalışan sadakatının artması gerek ise örgütsel başarı ve verimliliğin sürdürülebilir olması açısından kritik önem taşımaktadır (Nielsen ve diğerleri, 2017; Kelloway ve Day, 2005).

Bu bağlamda araştırma, hem kavramsal düzlemde örgütsel davranış yazınına katkı sağlama hem de uygulayıcılar için yönetsel öneriler sunma potansiyeline sahiptir. Örgüt yöneticilerinin, liderlerin ve insan kaynakları personelinin pozitif iklimin çalışan mutluluğu ve refahı üzerindeki etkilerini daha iyi kavramaları, daha adil, kucaklayıcı ve destekleyici örgütsel

ortamlar oluřturmaları bakımından önemlidir (Cameron ve Spreitzer, 2012).

Sonu olarak, bu alıřmada, rgtlerde alıřan tatmini, mutluluęu, memnuniyeti ve refahının artırılmasına ynelik pozitif iklim stratejilerinin nemini vurgulamak; bireyin psikolojik ihtiyalarını gz nnde bulunduran, deęer yaratan ve gvene dayalı rgtsel ortamların znel iyi oluřu nasıl řekillendirdięini btncl bir řekilde ortaya koymak amalanmaktadır. Bu baęlamda, pozitif rgt iklimi ve znel iyi oluř kavramları, sadece akademik birer kavram deęil, aynı zamanda bařarılı, retken, saęlıklı ve srdrlebilir rgtlerin temel belirleyicisi olarak deęerlendirilmelidir.

rgtlerde Pozitif İklım

alıřanların rgt yařamında ve bulundukları rgtsel ortamlarda hissettikleri olumlu algılarını temsil eden, davranıřlarını olumlu ya da olumsuz ynde etkileyebilen (Schneider, Ehrhart ve Macey, 2013) ve adalet, saygı, deęer verme, destek, řefkat, anlam, motivasyon, teřvik ve zendırme gibi unsurları iinde barındıran (Cameron, Dutton ve Quinn, 2003) bir kavram olan pozitif rgt iklimi, gerek alıřanların bireysel ve ekip bařarılarını etkileyen gerekse de rgt bařarısını etkileyen psikolojik bir faktrdr.

Pozitif iklimin temel gerekliliklerinden birisi, alıřanlar arasında olumlu iliřki ve etkileřimin var olmasıdır. Bu etkileřim ve iliřkiler, karřılıklı paylařım, gven duyma ve empati kurma zerine bina edilmektedir. Bunun yanında rgtn alt, orta ve st kademe gibi btn basamaklarında grev alan yneticilerin kucaklayıcı ve destekleyici liderlik yaklařımları, pozitif rgtsel iklimin yeřermesinde ve yařamasında nemli bir grev stlenir (Kelloway vd., 2012). Pozitif rgtsel iklimin varlıęı, alıřanların giriřimcilięini, inisiyatif almalarını, yaratıcılıęını, yenilikilięini ve aidiyet ve memnuniyetini artırmakta, kendilerini daha saygın ve deęerli hissetmesini saęlamakta, yaptıkları iři daha anlamlı bulmalarına katkı saęlamaktadır. Tm bunlar da rgtn bařarısını tetiklemektedir.

Pozitif rgt iklimi, alıřanların rgtsel yařamı nasıl algıladıklarına iliřkin genel bir deęerlendirme olup iři ortamında destek, gven, adalet, aıklık, deęer, anlam, baęlılık gibi pozitif iliřkilerin hissedildięi bir durumu ifade eder (Schneider ve dięerleri, 2013; Kuenzi ve Schminke, 2009). Pozitif rgt iklimi, rgtlerin alıřanların psikolojik ihtiyalarına duyarlılık gsterdięi, katılımcı, kucaklayıcı, destekleyici ve etik deęerlere baęlı bir ortam inřa ettięi bir yapıdır. Bu iklimde, alıřanlar, hem bireysel manada geliřim gsterme frsatına sahip olmakta hem de rgtsel amaların gerekleřtirilmesine ynelik bir motivasyon hissetmektedir (Cameron ve dięerleri, 2011). Pozitif rgt iklimi, aynı zamanda kuramsal temellerini oluřturan; destekleyici liderlik, gven, adalet, iřbirlięi, dayanıřma, anlam, ama, yenilikilik ve

öğrenme iklimi alt boyutlarından oluşmaktadır.

Destekleyici Liderlik: Pozitif örgütsel iklimin yeşermesinde liderliğin rolü kritiktir. Yöneticilerin adil, destekleyici, yardımsever, anlayışlı ve empatik liderlik davranışları sergilemesi, çalışanların kendilerini mutlu ve değerli hissetmelerini sağladığı gibi örgüte olan aidiyet duygularını da pekiştirmektedir (Avolio ve Gardner, 2005). Bu bağlamda özellikle etkileşimci ve dönüştürücü liderlik tarzı, pozitif örgüt ikliminin gelişiminde önemli bir işleve sahiptir (Bass ve Riggio, 2006).

Güven ve Adalet: Dağıtımsal adalet, işlem/süreç adaleti ve etkileşimsel adalet alt boyutlarından oluşan örgütsel adalet algısı ve güven duygusu, pozitif iklimin en temel belirleyicilerinden biri olarak kabul edilmektedir (Colquitt ve diğerleri, 2001). Çalışanların karar alma süreçlerinde yer almaları, yöneticileri tarafından adil geri bildirimler ve değerlendirmelerle karşılaşmaları, güven ortamını pekiştirmektedir (Tyler ve Blader, 2003). Bu durum, pozitif örgütsel ortamın oluşmasında etkili olmaktadır.

İşbirliği ve Dayanışma: Ekip çalışması, şeffaf ve açık iletişim, birlik ve beraberlik ortamı, karşılıklı destek ve dayanışma, pozitif bir iklimin vazgeçilmez unsurlarıdır. Böyle bir ortam, çalışanların yalnız kalmadıklarını hissetmelerini sağlamak ve sosyal destek algılarının artmasına katkı yapmaktadır (Bakker ve diğerleri, 2006).

Anlam ve Amaç: Çalışanların işlerinde anlam bulmaları, onların hem tatmin, mutlu olmalarını sağlayarak içsel motivasyonlarını artırmakta hem de pozitif örgütsel iklimi güçlendirmektedir (Rosso ve diğerleri, 2010). Anlamli iş deneyimi, çalışanların örgütsel değerlere karşı daha çok bağlı hissetmelerini sağlamaktadır.

Yenilikçilik ve Öğrenme İklimi: Pozitif örgüt iklimi, yaratıcılık, gelişim, yenilikçilik ve öğrenmeye açık bir ortamı teşvik etmektedir. Çalışanların hata yapma korkusu yaşamadan inisiyatif alabilmeleri, yeni fikirler geliştirebilmeleri, örgüt içi gelişim süreçlerini desteklemektedir (Edmondson, 1999).

Çalışanların Öznel İyi Oluşu

Çalışanların iş yaşamlarından duydukları tatmin, pozitif duyguların çokluğu ve sıklığı, negatif duyguların ise azlığı üzerinden kendilerini değerlendirdikleri psikolojik bir gösterge olan öznel iyi oluş (Diener, 1984), gerek bireysel yaşamlarında gerek ise iş yaşamlarında psikolojik sağlık durumlarının bir işareti ve ölçümü olarak kabul edilmektedir.

Pozitif ve negatif duyguları içinde barındıran (1) duygusal iyi oluş, yaşam memnuniyetini içeren (2) bilişsel değerlendirme ve kendini gerçekleştirme, özerklik, anlam

bulmayı kapsayan (3) psikolojik iyi oluş boyutlarından oluşan öznel iyi oluşun (Ryff, 1989) çalışanlar tarafından hissedilen düzeyleri, çalışanların bireysel iyilik durumlarının yanında iş tatmini, örgütsel aidiyet, örgütsel vatandaşlık davranışında bulunma, motivasyon, verimlik ve performans gibi iş çıktılarını da etkilemektedir (Helliwell ve Huang, 2010). Bu bağlam düşünüldüğünde, çalışanların iş yaşamlarında yaşadıkları deneyimler, yöneticilerin liderlik tarzları, mesai arkadaşlarıyla olan etkileşim, ilişkiler ve örgüt kültürü, öznel iyi oluş algılarının belirleyicileri arasında yer almaktadır (Warr, 2007).

Görüldüğü üzere öznel iyi oluş, çalışanların yaşamından aldığı tatmin ve memnuniyet düzeyi, olumlu ve olumsuz duygularının dengesiyle birlikte psikolojik işlevselliğini içeren çok yönlü bir kavramdır (Ryan ve Deci, 2001; Diener, 1984). Bu kavram, yalnızca çalışanların psikolojik sağlık durumları ile sınırlı olmayıp yaşamına yönelik genel değerlendirmesini de içermektedir. Bu kapsamda, öznel iyi oluşun alt bileşenlerine ve belirleyicilerine değinmek yerinde olacaktır;

Yaşam Doyumu: Bireyin yaşamı genel olarak nasıl değerlendirdiğini ifade eden yaşam doyumu, geçmiş deneyimlerin ve geleceğe dair beklentilerin bir karması olarak ortaya çıkmaktadır (Diener ve diğerleri, 1985). İş yaşamındaki doyum da bu genel mutluluk ve memnuniyetin belirleyicileri arasında yer almaktadır.

Olumlu ve Olumsuz Duygular: Umut, neşe ve mutluluk gibi pozitif duygular ve kızgınlık, kaygı ve öfke gibi negatif duygular, bireyin iyi oluş durumunu direkt olarak etkileyen unsurlardandır. Pozitif örgüt iklimi, pozitif duyguların baskın olmasına neden olurken, baskıcı, otoriter ve toksik iklimler negatif duyguları artırabilmektedir (Fredrickson, 2001).

Psikolojik İyi Oluş: Bireylerin kendi potansiyelini gerçekleştirmesi, amaç hissi, bağımsızlık duygusu ve bireylerarası ilişkilerde doyum gibi faktörleri içeren psikolojik iyi oluş (Ryff, 1989), öznel iyi oluşun önemli belirleyicileri arasında yer almaktadır.

İşle İlgili İyi Oluş: Bu kavram, işle ilgili mutluluk, tatmin ve memnuniyet, iş-aile dengesi, iş yükü algısı ve işle ilgili stres düzeylerini kapsamaktadır. İş ortamındaki olumlu ve pozitif unsurlar, işle ilgili iyi oluşu desteklemektedir (Van Horn ve diğerleri, 2004).

Sosyal Destek ve Aidiyet: Bireyin sosyal çevresinden ve özellikle iş arkadaşlarından gördüğü destek ve örgütüyle kurduğu psikolojik bağın bir göstergesi olan örgütsel bağlılık hissi, öznel iyi oluş üzerinde önemli bir belirleyicidir (Cohen ve Wills, 1985).

Pozitif Örgütsel İklimin Çalışanların Öznel İyi Oluş Algısına Etkisi

Pozitif örgüt iklimi ile çalışanların öznel iyi oluşu arasındaki ilişki, son yıllarda örgütsel davranış literatüründe giderek daha fazla ilgi gören bir konu olmuştur. Bu ilişkinin temelinde, pozitif örgüt ikliminin çalışanların psikolojik kaynaklarını güçlendirmesi, bağlılık duygularını artırması ve iş yaşamında pozitif duygulanımı pekiştirmesi ve teşvik etmesi yatmaktadır (Luthans ve diğerleri, 2007).

Çalışanların duygusal ve psikolojik iyilik durumlarını destekleyen bir hava oluşturarak, öznel iyi oluş algısının artmasına katkı sunan (Luthans ve diğerleri, 2007) pozitif örgüt iklimi, çalışanların değer ve saygı gördüğü, adil ve destekleyici bir ortamda kendilerini daha iyi, güven içinde, anlam dolu ve önemli hissetmelerini sağlamaktadır. Bu tür hissiyatlar, çalışanlarda, negatif ve olumsuz duyguları azaltarak pozitif ve olumlu duyguların yoğunluğunu artırmakta, dolayısıyla çalışanların genel yaşam doyumlarını yükseltmektedir.

Çalışanların stres düzeyini düşüren ve duygusal tükenmişliklerini azaltan pozitif örgütsel iklim (Bakker ve Demerouti, 2007), işlerini sadece bir görev başarımı olarak değil, aynı zamanda bireysel bir doyum kaynağı olarak görmelerini desteklemektedir. Pozitif örgütsel iklimin sağladığı anlamlılık duygusunun yoğun olduğu iklimlerde çalışan işgörenlerin, örgütsel bağlılığı arttığı gibi bireysel motivasyonları da yükselmektedir (Grant, 2008).

Bakker ve Demerouti'nin (2007) geliştirdiği İş Talepleri-Kaynaklar Modeli çerçevesinde, pozitif örgüt iklimi bir "iş kaynağı" olarak değerlendirilmektedir. Bu bağlamda pozitif örgüt ikliminin çalışanların işle ilgili stres düzeylerini azalttığı ve onların işten aldıkları tatmini artırdığı vurgulanmaktadır. Benzer şekilde, Salanova ve Schaufeli (2008) yaptıkları araştırmada, pozitif örgütsel iklimin çalışanların tükenmişlik düzeyleriyle ters, işe ve örgüte bağlılık düzeyleri ile pozitif ilişkili olduğu görülmüştür.

Araştırmalar, destekleyici liderlik tarzlarının ve şeffaf iletişimin hem yaşam tatminini hem de işle ilgili olumlu duyguları artırdığını ortaya koymaktadır (Avey ve diğerleri, 2011). Özellikle güven ortamı, çalışanların psikolojik iyi oluşlarında önemli bir role sahiptir (Dirks ve Ferrin, 2002). Bununla birlikte, pozitif örgüt ikliminin her zaman tüm çalışanlar üzerinde aynı etkiyi yaratmadığı da vurgulanmalıdır. Örgütsel bağlılık düzeyi, kişilik özellikleri, cinsiyet ve yaş gibi demografik değişkenler, bu ilişkiyi şekillendirebilmektedir (Judge ve diğerleri, 2001). Ayrıca, tam olarak belirlenemeyen ve uygulanamayan pozitif iklim stratejilerinin çalışanlarda duygusal emek yükü oluşturabileceği ve bu durumun uzun vadede tükenmişliğe neden olabileceği belirtilmektedir (Grandey, 2003).

Sonuç olarak, pozitif örgüt ikliminin çalışanların öznel iyi oluş düzeylerini önemli ölçüde etkilediği, adil, destekleyici, değer veren, anlamlı ve güvene dayalı bir iş ortamının çalışanların hem bireysel hem de kolektif seviyede daha üretken, mutlu, sağlıklı ve tatmin edici bir çalışma deneyimi yaşamalarını sağladığı ifade edilebilir. Bu sebep ile pozitif iklimin örgüt stratejilerinin temel bir belirleyici olarak ele alınması gerektiği söylenebilir. Dolayısıyla pozitif örgütsel iklimin sürekliliğini sağlayacak yönetim yaklaşımının benimsenmesi, liderlik ve insan kaynakları uygulamalarının teşvik edilmesi gerektiği, örgütlere hatırlatılması gereken bir mesaj olarak karşımıza çıkmaktadır.

Sonuç, Tartışma ve Öneriler

21.yüzyıl iş yaşamında, çalışanların örgüte olan salt fiziksel ya da bilişsel katkıları değil, aynı zamanda duygusal ve psikolojik durumları da giderek önem kazanmaya başlamıştır. Bu sebeple öznel iyi oluş konusu ve çalışanların öznel iyi oluşlarını etkileyen örgütsel unsurlar, yönetim ve organizasyon yazını ve örgütsel davranışı alanında önemli bir tartışma ve araştırma savı haline gelmiştir (Ryff ve Keyes, 1995; Diener, 1984). Örgütlerde pozitif psikoloji yaklaşımının devreye girmesi ile birlikte, iş yaşamında çalışanların hissettikleri olumlu deneyimlerin ve pozitif örgütsel iklimin önemi gün geçtikçe önem kazanmaktadır (Seligman ve Csikszentmihalyi, 2000). Buradan hareketle ele alınan bu çalışmada, örgütlerdeki pozitif iklimin çalışanların öznel iyi oluş algıları üzerindeki etkisini kavramsal bir çerçevede incelenmiştir.

Genel olarak pozitif bir örgüt ikliminin çalışanların psikolojik iyi oluş düzeylerini artırdığı, iş doyumunu güçlendirdiği ve örgütsel bağlılık gibi olumlu tutumları desteklediği belirtilebilir. Örgüt iklimi, çalışanların iş ortamına dair ortak algılarını yansıtmaktadır. Bu algılar, çalışanların örgütte kendilerini nasıl hissettiklerini etkilemekte, dolayısıyla öznel iyi oluşları üzerinde doğrudan belirleyici bir unsur olmaktadır (Schneider ve diğerleri, 2013). Pozitif örgüt iklimi, şeffaf iletişim, destekleyici örgütsel ortam ve liderlik yaklaşımı, açık iletişim, adil performans ve dağıtım uygulamaları ve çalışanların değer gördüğü bir kültürel ortam ile karakterize edilmektedir (Kuenzi ve Schminke, 2009). Bu türden bir örgütsel iklim, çalışanların psikolojik ihtiyaçlarının karşılanmasını kolaylaştırmakta ve öznel iyi oluşlarını artırmaktadır (Ryan ve Deci, 2001).

Pozitif örgüt iklimine sahip örgütlerde, çalışanların stres seviyelerinin daha düşük, yaşam tatminlerinin ise daha yüksek olduğu gözlenmektedir. Bilhassa çalışanlara yönelik destekleyici yaklaşımların ve yakın ilişki kurma uygulamalarının öznel iyi oluş üzerinde belirgin bir etki oluşturduğu aktarılmaktadır (Bakker ve diğerleri, 2011). Bununla birlikte, örgüt iklimi ile ilgili algılar, çalışan bireyler arasında farklılık gösterebilmektedir. Psikolojik sermaye,

psikolojik dayanıklılık, kişilik özellikleri ve iş yaşam dengesi gibi hususlar, bu ilişkiyi şekillendirmektedir (Avey ve diğerleri, 2010).

Ancak, pozitif örgüt ikliminin her zaman doğrudan ve sadece olumlu sonuçlar doğurduğunu ifade etmek de son derece güçtür. Yazında, aşırı derecede “iyimser ve pozitif” örgüt iklimlerinin örgütsel sorunların üstünün kapatılmasına, aksaklıkların görmezden gelinmesine, hataların önemsenmemesine neden olduğu, suni bir pozitiflik algısının çalışanlar üzerinde gereksiz baskı oluşturmaya yol açabileceğine de vurgu yapılmaktadır (Griffin ve diğerleri, 2010). Bu nedenle örgüt ikliminin sağlıklı bir çerçeve içinde pozitif bir şekilde şekillendirilmesi gerektiği önem arz etmektedir.

Pozitif örgütsel iklimin çalışanların öznel iyi oluş algısı üzerindeki belirleyici etkisini ortaya koymak için ele alınan bu çalışma, yazına dayalı bulgular ışığında, olumlu çalışma ikliminin çalışanların işten aldıkları doyumunu yükselttiğine, psikolojik dayanıklılıklarını artırdığına ve genel yaşam tatmin düzeylerini ise olumlu yönde etkilediğine işaret etmektedir. Bu sebeple örgütsel başarı ve kurumsal süreklilik için her düzeyden yöneticinin, çalışanların iyi oluşunu destekleyici ve pekiştirici bir örgütsel iklim oluşturmaya gayret etmeleri ve buna dair stratejiler geliştirmeleri gerekmektedir.

Bu çalışma kapsamında konunun muhataplarına yönelik çeşitli öneriler getirilebilir. Öncelikle konu ile ilgili yapılan çalışmalar incelendiğinde, araştırmacılara ve akademik örgütlere çeşitli öneriler yapılması yerinde olacaktır. Yazında konu ile ilgili boylamsal ve kültürler arası çalışmaların eksik olduğu gözlemlenmiştir. Bu sebeple pozitif örgüt iklimi ile öznel iyi oluş arasındaki ilişkinin zamansal değişimini ve kültürel bağlamdaki farklılıklarını ortaya koymak için boylamsal araştırmalar teşvik edilmeli ve yapılmalıdır (Parker ve diğerleri, 2003; Ployhart ve Vandenberg, 2010; House ve diğerleri, 2004). Bunun yanında yapılan araştırmalarda aracı ve düzenleyici değişkenlere odaklanılmalıdır. İş yükü, örgütsel destek algısı, psikolojik sermaye gibi değişkenlerin bu ilişki üzerindeki aracı ya da düzenleyici etkileri incelenmelidir (Luthans ve diğerleri, 2007). Bunun yanında araştırmacılara karma yöntem araştırmaları önerilmektedir. Sayısal verilerin yanı sıra nitel bulgularla desteklenmiş kapsamlı analizler, çalışan deneyimlerinin daha derinlikli anlaşılmasını sağlayacaktır. İlave olarak, konu ile ilgili çalışmalar incelendiğinde, kullanılan ölçüm araçlarının öz-bildirim esasına dayandığı söylenebilir. Bu durum, sosyal beğenirlik yanlılığı gibi metodolojik tehditleri beraberinde getirebilir (Podsakoff ve diğerleri, 2003). Dolayısıyla konu ile ilgili yapılacak çalışmalarda, yönetici değerlendirmeleri, gözlem verileri ve psikofizyolojik ölçümler gibi çok kaynaklı veri toplama stratejilerinin benimsenmesi, araştırmacılara önerilmektedir. Ayrıca yapılacak araştırmalarda, öznel iyi oluşun yaşam doyumunu, olumlu ve olumsuz duygulanım, iş ve özel

yaşam dengesi bileşenleri, ayrı ayrı ele alınarak pozitif örgüt ikliminin bu alt boyutlar üzerindeki özgül etkileri detaylandırılabilir. Böylece, örgüt ikliminin yalnızca iş yaşamına değil, çalışanların bütünsel yaşam kalitesine olan etkisi daha detaylı ve kapsamlı bir şekilde öğrenilebilir (Diener ve diğerleri, 1999). Son olarak, araştırmacıların örgütsel değişim, kriz ortamları, esnek çalışma tarzları ve dijitalleşme gibi yeni çalışma dinamiklerinin örgüt iklimi ile öznel iyi oluş ilişkisini nasıl şekillendirdiği ile ilgili araştırma yapması önerilmektedir (Spreitzer ve diğerleri, 2017).

Pozitif örgüt iklimi ve çalışanların iyi oluş algısı arasındaki ilişki ile ilgili kamu ve özel sektör örgütlerine ve yöneticilerine yönelik de bazı öneriler getirilebilir. Öncelikle katılımcı ve adil yönetim anlayışı benimsenmelidir. Çünkü çalışanların görüşlerinin değer bulduğu, karar alma süreçlerine dahil edildiği bir iklim oluşturmak, öznel iyi oluşu olumlu yönde etkilemektedir (Cropanzano ve Wright, 2001). Yine psikolojik güvenlik ortamı teşvik etmelidir. Çalışanların hata yapma ve eleştirilme korkusu olmadan fikirlerini özgürce dile getirebilecekleri bir ortam, hem örgütsel başarı ve verimliliği hem de bireysel tatmin, memnuniyet ve mutluluğu artırmaktadır (Edmondson, 1999). Liderlik yaklaşımı ve gelişimi programları uygulanmalıdır. Pozitif iklimin oluşmasında etkili olan lider davranışları, örgütsel eğitimlerle desteklenmelidir. Özellikle destekleyici, empatik, adil ve etik liderlik yaklaşımları teşvik edilmelidir (Brown ve Treviño, 2006). İyi oluşu destekleyen uygulamalar kurumsallaştırılmalıdır. Esnek ve özgür hissettiren çalışma şekli, danışmanlık ve mentorluk programları, stres yönetimi, sosyalleşme etkinlikleri gibi uygulamalar, çalışanların psikolojik dayanıklılığını, esenliğini, tatminini ve memnuniyetini artıracaktır (Saks, 2006).

Sonuç olarak, pozitif örgüt ikliminin yalnızca çalışanların öznel iyi oluşunu değil, aynı zamanda örgütsel başarı ve performansını da artıran çok yönlü bir kavram olduğu bilinmelidir. Bu nedenle hem akademik araştırmalar hem de örgütsel uygulamalar, bu pozitif iklim ve öznel iyi oluş kavramlarının bütüncül olarak ele alınmasına katkı sağlamalıdır.

Okul Öncesi Sınıf Öğretmenlerinin Beden Eğitimi ve Hareket Etkinliklerine İlişkin Görüşlerin Belirlenmesi

Ayşe MORTAŞ KUM

Kıbrıs Sağlık ve Toplum Bilimleri Üniversitesi, Çocuk Gelişimi Bölümü, Güzelyurt-KKTC

ayse.mortas@kstu.edu.tr-0009-0001-0135-4674

Özet

Bu çalışmanın amacı, okul öncesi sınıf öğretmenlerinin beden eğitimi ve hareket etkinliklerine ilişkin görüşlerinin tespit edilerek ortaya koyulması amaçlanmaktadır. Bu amaç dikkate alındığında okul öncesi dönem çocuklarının gelişim ve motor becerilerin kazanılmasında kritik bir dönem olduğu bilinmektedir. Bu dönemde beslenme barınma gibi temel ihtiyaçlarla birlikte hareket ve oyun ihtiyaçları da okul öncesi çocukları için önem arz etmektedir. Ayrıca okul öncesi dönem, 0-6 yaş aralığını kapsayan çocuğun fiziksel bilişsel sosyal ve duygusal olmak üzere birden fazla gelişim alanları açısından son derece önemlidir. Bu çalışmada nitel araştırma yöntemi kullanılmıştır. Nitel araştırma tekniği olan durum tekniği ve gözlem/görüşme tekniği kullanılarak yarı yapılandırılmış sorular ile gerçekleştirilmiştir. Çalışma sonucu ortaya çıkan bulgular, betimsel bir yaklaşım ile ortaya koyulmuştur. Ayrıca mülakat formunda bulunan kapalı ve açık uçlu soruların analiz sürecinde veriler birbirinden ayrı olarak incelenmiştir. Araştırmanın verileri araştırmacılar tarafından hazırlanan ve uzman görüşü doğrultusunda düzenlenen “Yarı Yapılandırılmış Görüşme Formu” ile toplanmıştır. Bu araştırma, Kuzey Kıbrıs Türk Cumhuriyeti’ nin Güzelyurt bölgesinde bulunan toplam 10 okul öncesi sınıf öğretmeni oluşturmaktadır. Araştırmaya katılan okul öğretmenlerine 4 adet açık uçlu soruları yüz yüze sorularak yanıtlamaları sağlanmıştır. Elde edilen bulgular incelendiğinde, Okul öncesi öğretmenleri ile yapılan görüşmeler sonucunda elde edilen bilgiler, beden eğitimi ve spor etkinliklerinin çocukların gelişim alanlarına ve özellikle de hareket ve fiziksel gelişim alanlarına önemli derecede katkı sağladığı görülmektedir. Ayrıca öğretmenlerin çoğu beden eğitimi ve hareket etkinliklerinin okullarda yetersiz olduğunu, genellikle masa başı etkinliklere yer verildiğini belirtmektedirler. Mevcut çalışmanın sonucunda ise okul öncesi öğretmenlerinin görüşleri incelendiğinde fiziksel aktivite ve sporun çocukların gelişimlerine bir bütün olarak etki ettiğinin bulgularına ulaşılmıştır. Ayrıca, öğretmenlerin spor dalında yeteneği olan çocuklar için ev ziyaretleri yaparak aileyi bilgilendirdiklerinin ve aileyi daha kapsamlı kurumlara yönlendirdikleri vurgulanmaktadır.

Anahtar Kelimeler: Okul Öncesi Dönem, Sınıf Öğretmeni, Hareket Etkinlikleri, Beden Eğitimi

Determination of Preschool Class Teachers' Opinions on Physical Education and Movement Activities

Abstract

The aim of this study is to determine and reveal the views of preschool classroom teachers on physical education and movement activities. When this purpose is taken into consideration, it is known that preschool period is a critical period in the development and acquisition of motor skills. In this period, along with basic needs such as nutrition and shelter, movement and play needs are also important for preschool children. In addition, the preschool period is extremely important in terms of multiple developmental areas of the child, including physical, cognitive, social and emotional, covering the 0-6 age range. Qualitative research method was used in this study. It was carried out with semi-structured questions using the case technique and observation/interview technique, which is a qualitative research technique. The findings of the study were presented with a descriptive approach. In addition, the data were analysed separately from each other in the process of analysing the closed and open-ended questions in the interview form. The data of the study were collected with the 'Semi-structured Interview Form' prepared by the researchers and edited in line with the expert opinion. In this research, a total of 10 preschool classroom teachers in Güzeyurt region of the Turkish Republic of Northern Cyprus participated in the study. The school teachers who participated in the research were asked 4 open-ended questions face to face. When the findings obtained are analysed, it is seen that the information obtained as a result of the interviews with pre-school teachers, physical education and sports activities contribute significantly to the developmental areas of children, especially to the areas of movement and physical development. In addition, most of the teachers state that physical education and movement activities are inadequate in schools and that desk-based activities are generally included. As a result of the current study, when the opinions of preschool teachers were analysed, it was found that physical activity and sports affect the development of children as a whole. In addition, it is emphasised that teachers inform the family by making home visits for children who have talent in sports and direct the family to more comprehensive institutions.

Keywords: Preschool Period, Classroom Teacher, Movement Activities, Physical Education

Giriş

Okul öncesi dönemde gelişim ve motor becerilerin kazanılmasında kritik dönemdir. Okul öncesi dönem etki ve nitelik açısından en önemli evredir. Bu evrede beslenme barınma gibi temel ihtiyaçlarla birlikte hareket ve oyun ihtiyaçları da vardır (Bekir,2022). Okul öncesi dönem, 0-6 yaş aralığını kapsayan çocuğun fiziksel bilişsel sosyal ve duygusal olmak üzere birden fazla gelişim alanları açısından son derece önemlidir (Karademir ve Akman, 2021). Okul öncesi dönemde çocuğun gelişim dönemlerinde fiziksel gelişimin büyüme kavramı büyük önem taşımaktadır. Büyüme, hücrelerin miktar ve büyüklük bakımından vücudun hacminin ve yer kapladığı alanın artmasıyla oluşan anne karnından başlayıp ergenlik dönemini kapsayacak şekilde gerçekleşmesidir (Çetin, 2020). Çocuk büyüme sürecini tamamladıkça tüm hareket yeteneklerini tam olarak gerçekleştirmektedir. Bu yetenekleri çevresinde gerçekleşen olayların ve durumların farkına varıp gözlem yapma yeteneği de oldukça gelişebilmektedir (Arslan ve Akoğlan ve Guter,2021).

Bu yeteneklerin temelini oluşturan motor gelişimi okul öncesi dönemde oluşturan alt başlıklarından biri loko-motor becerileri çocuğun yer değişikliğini içeren hareketler yani kaba motor becerileri (yürüme, koşma, atlama, zıplama, sürünme, emekleme v.b) diğer başlıklardan biri olan manipülatif hareketler yani nesne ile ilişkisini geliştiren nesne sürekliliğini ve devamlılığını sağlayan becerileri geliştirmektedir (Çoknaz, 2016). Okul öncesi dönemde fiziksel gelişimin temelinde beden eğitimi ve spor bulunduğu gibi bunların içeriği ve en önemli ögesi hareket eğitimidir. Hareket eğitimi, motor gelişiminin arttıran aktivitelerin deneyimlenmesini sağlayarak gelecekteki önemini ortaya koyar (Özbar,2007).

Okul öncesi dönemde çocukların fiziksel açıdan oldukça hareketli geçirdiği bir evre olduğu bilinmektedir. Ayrıca okul öncesi eğitim döneminde çocuklara uygulanacak olan beden eğitimi ve spor etkinliklerini kapsayan eğitim programının çocuklara duruş, büyük kas ve küçük kas gelişimlerini olumlu yönde desteklenmesi ile yaşam boyu fiziksel gelişim alışkanlığının oluşmasına katkı sağlamaktadır (Özkan,2017). Okul öncesi dönemde spor ve egzersiz programları fiziksel gelişim alışkanlığının oluşması için hazırlanmaktadır. Egzersiz programları çocukların uygun duruş geliştirmelerine yardımcı olmalıdır. Yaşam boyunca büyük ve küçük kasların gelişimini destekleyen temel hareketlerden oluşur. Spor ve egzersiz programları bu programların içinde yer alan etkinlikler sadece fiziksel gelişim alanına değil bunun yanında sosyal-duygusal gelişim alanına da oldukça etkisi büyüktür. Bu etkiler şöyle açıklanabilir. Çocuklara pro-sosyal davranışlar kazandırmada aktif rol almaktadır. Pro-sosyal davranışlar yani empati kurma, yardımlaşma, hoşgörülü olma, paylaşmak gibi olumlu sosyal davranışları

içine alan geniş yelpazeden oluşmaktadır (Yavuz, 2016).

Okul öncesi eğitim çalışmalarında bilişsel yönden de problem çözme, dikkat etme becerilerine, düşünceyi ortak noktada toplama, hayal gücünü yönetebilme gibi bilişsel becerileri de olumlu yönde desteklediğini öne sürmektedir. Bu dönemde beden eğitimi veya hareket eğitiminin bireyin egzersiz ihtiyacını karşılamak, eğlenmek, oynamak, neşelenmek, sosyalleşmek, statü kazanmak ve daha birçok nedenden dolayı tercih edilen ve meslek olarak seçilebilen bir alandır (Heper, 2012). Beden eğitimi ve spor da en önemli becerilerden biri ise temel hareket becerileridir. Temel hareket becerileri en geniş tanımıyla denge, koşma, sıçrama, sekme, fırlatma gibi büyük kas becerilerini temel alan hareketler bütünüdür ve bu becerilerin gelişmesine yönelik spor ve bedensel hareket becerilerini yaşam boyu sürdürülmesi için bireysel ya da grup olarak genellikle rekabete dayalı ve belirli kurallar çerçevesinde gerçekleştirilen hareketlerin tamamıdır (Turan ve Çamlıyer, 2016).

Sporun olmadığı bir hayat hareketsiz bir yaşam şekli olarak düşünülebilir, hareketsiz yaşam ise çocuklarda obezite, astım, dikkat eksikliği ve hiperaktivite bozukluğu gibi birçok hastalığa yol açabilmektedir. Bundan dolayı zamanının çoğunu okulun iç mekânında geçiren çocuk için nitelikli bir bahçe kullanımı çocuğun temel oyun yani beden eğitimi ve spor temelli hareket ihtiyacını karşılama aynı zamanda sağlıklı bir birey olması açısından mutlaka gereklidir (Derya ve Yeşare,2017). Hareketin bu kadar önemli olduğu okul öncesi döneminde buna karşın hareket alanları oldukça sınırlıdır. Hareketin ise en temel faktörü motor gelişimidir. Motor gelişimi tamamlanmadan bireyin aktif olarak hareket etmesi mümkün değildir.

Psikomotor gelişim ise çocuğun gelişimi görünen ve görünmeyen büyümeyi kapsar ve hareket etme ön plandadır. Bebek ile anne arasındaki ilk iletişim bebeğin hareket etmesine dayalıdır. Bu bilgilerden yola çıkılarak hareket ve motor becerileri çocuğun psiko-motor gelişimi üzerinde büyük öneme sahiptir (Yılmaz, 2017). Bireylerin sağlıklı bir yaşam sürmeleri için ilk öncelikle çocuklara sağlıklı bir yaşam sunmakla gerçekleşecektir. Çocuklara öncelikle iyi bir eğitim verilmelidir. Bu eğitimin sağlıklı bir şekilde verilmesi için çocukların yaş gelişim düzeylerini bilmek gerekmektedir. Çocukların eğitiminde çevreyle iletişimde bulunabilecekleri fiziksel aktiviteler ön planda olmalıdır. Birbirinden farklı fiziksel aktivitelerin uygulanması ise çocukların kaba ve ince motor becerilerine etkileri oldukça önemlidir (Orhan ve Ayan,2018).

Günümüzde çocukların en büyük sorunları hareketsiz yaşam ve buna bağlı olarak gelişen solunum dolaşım, kalp-damar hastalıkları ve ortopedik problemler ile obezite olduğu görülmektedir (Şahin ve Usta, 2016). Beden eğitim temelli etkinlikler, okul öncesi dönemden başlayarak bir sonraki eğitim aşamalarında bile en az önem verilen etkinliklerin başında

gelmektedir. Okul öncesi döneme de spor etkinliklerine az önem verilmesinin nedenleri arasında, eğitim kurumlarında beden eğitimi ve spor etkinliklerinin okullarda uygulanabilmesi için çocukların hareket etmelerine hareketin yanı sıra fiziksel aktiviteye yönelik etkinliklerin yapılabilmesi için uygun mekanın olmaması gelmektedir. Ayrıca öğretmenlerin fiziksel aktiviteye ilgi duymamalarıyla birlikte hareket temelli oyunlarına önem vermemeleri, çocukları spora dair oyun ve etkinlikleri severek yaptırmamaları ve okullarda yeteri kadar beden eğitimi öğretmenin olmaması gibi birçok sebep bulunmaktadır (Satman, 2018).

Beden eğitimi ve spor temelli programların düzenli bir şekilde planlanıp uygulanmaması, okul öncesi dönemde çocukların fiziksel gelişimleri açısından oldukça fazla eksiklik oluşturduğu gözlenmektedir. Bu sebeple koşma, atlama, sıçrama, sekme, yakalama, fırlatma gibi temel hareket becerilerinin kazanılmasında, sistematik bir şekilde ve bilinçli bir eğitim uygulanmasına gereksinim duyulmaktadır (Yavuz ve Özyürek, 2018). Çocuk doğası gereği gücünü çevresindekilerle özellikle akranları arasında denemek ister. Böylece çocuk doğada rahatlıkla koşar, zıplar, tırmanır, istediği gibi özgürce dolaşarak oyun sürecine dahil olur. Ayrıca çocuğun temel gelişiminde oyuna olan bu sınırsız ihtiyaç nedeniyle erken çocukluk döneminde yani okul öncesi dönemde çocuğun hayatına giren spor temelli oyun ve etkinlikler bulunmaktadır. Bu tür etkinlikler çocukların kendi akranları ile bir arada olmasını sağlamaktadır. Aynı zamanda kurallara ve kararlara uyma, yenme ve yenilme duygularını tatma gibi deneyimler kazandırmaktadır (Aydoğan, Akyürek ve Akduman, 2015).

Psikomotor gelişim yaşam boyu devam ettiği ve çocuk gelişiminde bir süreç olduğu için; Bir yetişkinle karşılaştırıldığında çocuk sürekli gelişiyor, değişiyor, dönüşüyor; büyüyor Çocuklarda bu döngü nedeniyle; Yetişkinler için normal ve kolay hareketler olan psikomotor becerilerin öğrenilmesi için çocukların zamana ihtiyacı vardır. Çocuklar genellikle yetişkinlerin yaşamları boyunca edindikleri becerileri oyun yoluyla deneyimlemeye çalışırlar. Özellikle okul öncesi çocuklarda büyüme hem fiziksel (boy, kilo) hem de biyolojik (ana organlar) açıdan çok daha hızlı gerçekleşir (Somoğlu ve Albayrak,2023).

Literatür tarandığında literatürde bulunan (Akin, 2015) yılında yayınladığı okul öncesi 60-72 aylık çocukların temel motor beceri gelişiminde eğitsel oyunların etkisi incelendi. Temel motor becerilerine değinmiştir. Fakat beden eğitimi ve spor temelli konulardan pek bahsedilmemiştir. Bununla birlikte literatür taramasında Yavuz ve Özyürek' in 2018 yılında yayınlanmış olan Beden eğitimini ve sporu içeren etkinliklerin okul öncesi döneminde bulunan çocukların ilkel hareketler ile manipülatif becerileri kapsayan hareket becerilerinin üzerine

etkisinin incelenmesinde ise beden eğitimi ve spor etkinlikleriyle ilgili detaylı bilgiye ulaşılamamıştır. Yani beden eğitimi ve spor etkinliklerinin önemli ile ilgili çalışma bulunmamıştır.

Bu bilgilerden yola çıkarak literatür detaylı taranıp incelendiğinde bu konuyla alakalı araştırmaların bulunmadığı gözlenmiştir. Beden eğitimi ve spor temelli hareket etkinliklerinin çocuklardaki önem ve katkıları incelenmiştir. Öğretmenler aracılığıyla belirlenerek veri toplanması amaçlanacak olup, problem durumu belirlenmiştir. Problem durumu hakkında öğretmenlerle yapılacak olan görüşme aracılığıyla spor ve beden eğitimi temelli hareket etkinliklerinin çocuklar üzerindeki etkilerinin önemli olacağı düşünülmektedir.

Araştırmanın Amacı

Okul öncesi dönemini kapsayan yaş aralığı fiziksel gelişim alanındaki en kritik evre olarak tanımlanmaktadır. Bundan dolayı beden eğitimi ve spor etkinlikleri temelli oyunlar, çocukların gelişimlerine olan etkilerini ve önemini inceleyip gözden geçirilmesi araştırmanın genel amacını ortaya koymaktadır. Bu genel amaçtan yola çıkılarak okul öncesi öğretmenlerle görüşme yapılarak spor ve beden eğitimi temelli etkinliklerin incelenmesi bu araştırmanın genel amacını ortaya koymaktadır.

Kuramsal ve Kavramsal Çerçeve

Okul Öncesi Dönemde Spor Etkinliklerinin Önemi

Hareket etkinlikleri temelli olan oyun ve spor, çocuklarda fiziksel gelişim başta olarak sosyal, duygusal, bilişsel olmak üzere birçok gelişim alanlarını destekler (Duman, 2014). Okul öncesi dönemde oyun etkinliklerinin yanında beden eğitimi ve spor etkinliklerinin bulunması bu dönemde beden etkinliklerinin gerek uygun mekanda olmaması gerekse öğretmenlerin beden eğitimi ve spor etkinliklerini temel alan fiziksel aktiviteye ilgisinin az olduğundan kaynaklı olarak yeterince uygulanmadığı söylenebilir. Okul öncesi dönemde çocukların harekete yönlendirilmesinde spor, zorunlu yaşam ihtiyaçlarının en önemlilerindendir. Okul öncesi çocuklarda geliştirilen sportif faaliyetler yaşam boyu devam ettirilebilecekleri etkinlikler olmaktadır. Temel hareket ve lokomotor becerilerin koşma, atlama, fırlatma gibi motor becerilerin edinilmesi bakımından önemlidir (Durukan, Koyuncuoğlu ve Şentürk, 2016)

21. yüzyılda teknoloji ve endüstriyle beraber bireylerin yaşam tarzları ciddi anlamda değişmiştir. Teknolojiyle ulaşım araçları ve modern iletişim imkanları insanların hayatını

kolaylaştırıp imkanlar sağlarken fiziksel aktivitelerde azalma yani hareketsiz bir yaşam oluşturmıştır. Günümüz çağında çalışma saatlerinin azalmasına rağmen insanlar boş zamanlarını sosyal medya evde veya televizyon karşısında geçirmektedirler. Bu durum yeterince fiziksel aktiviteye zaman ayırmadıklarını göstermektedir. Hareketsizliğin yanında beslenme tarzlarının da değişmesiyle birlikte kişilerde farklı sağlık sorunları ortaya çıkabilmektedir. Bu durum sağlıklı yaşam ve fit bir vücut için ve özellikle obezitenin önlenmesiyle fiziksel aktivitenin ne kadar önemli olduğunu göstermektedir (Rüstem,2019). Günlük yaşamda çok fazla egzersiz yapan çocuklar diğer çocuklara göre daha fazla enerjiye sahip olur ve bu şekilde sürekli egzersiz yapan çocukların hastalığa yakalanma riskleri daha azdır (Saleschke, 2017).

Özellikle Covid-19 da pandemi sebebiyle yani son yıllarda çocuk ve genç yada erişkinler fark etmeksizin hareketsiz bir yaşam sebebiyle birçok sağlık sorunları meydana gelmektedir. Özellikle çocuklarda obezitenin sosyal ve psikolojik anlamda birçok probleme yol açtığı görülmektedir. Çocukluk çağında obez olan bireylerin erişkin yaşta da hala obez kalma ihtimalleri oldukça fazla görülmektedir. Bu nedenle obeziteye bir önlem alınmak için öncelikle çocukları hareketsiz yaşamdan kurtararak çocukları spora ve fiziksel aktiviteye yönlendirmek oldukça önemlidir (Işıklar,2021).

Okul Öncesi Dönemde Temel Hareket Eğitimi

Hareket en geniş tanımıyla doğal bir istek ve temel ihtiyaçlar kadar bireyin en önemli ihtiyaçlarından biri olarak görülmektedir. Özellikle çocuklar hareket ederek büyümektedir. Bu yüzden okul öncesi dönemde çocuklara verilecek olan temel hareket eğitimi oldukça önemlidir. Çocuklara eğitimi verilecek olan temel hareketler ise çocuğun basitçe yapabileceği koşma, atlama, emekleme, zıplama gibi fiziksel aktiviteler bütünüdür. Okul öncesi dönemde beden eğitimi etkinliklerine önem verilmelidir. Bu etkinliklere önem verilmesindeki en temel sebep çocukların birden fazla gelişimlerini ilerletmektedir. Beden eğitimine yönelik etkinlikler hazırlanırken özellikle çocuğun yaş ve gelişim düzeyine uygun olup olmadığına bakılması oldukça önemlidir (Ölmez,2018).

Hareket eğitiminin en temel amacı insan yaşamında hareketin bir süreklilik olmasıdır. İnsanlar hayatının her anı harekete ihtiyaç duymaktadır. Çocukların ise hareket gelişimi anne karnından başlar doğduktan sonra ise ilkel reflekslerle görülebilmektedir. Gelişim kavramında olduğu gibi hareket becerileri de basitten karmaşığa olduğu gibi bir yol izlemektedir. Çocukların hareket gelişimi bebeklikte reflekslerle başlayıp ergenliğin sonunda ise tam olarak üst düzey becerilerin olduğu görülmektedir. Yapılan birçok araştırmalar sonucunda ise çocuklar

ne kadar fazla temel hareket becerisinde sahipse ilerde de bir o kadar spor, beden eğitimi veya fiziksel aktiviteye yönelmeleri ve bunu bir alışkanlık haline getirebilmeleri olanağı bir o kadar da fazla olduğu saptanmaktadır (Boz ve Aytar,2012).

Çocuk gelişiminin en temel ögesi olan motor gelişimi hareket kavramıyla etkileşimiyle çocuklarda değişikliğe uğrayan motor performans çıktısı ve fiziksel açıdan birçok farklı yaş düzeylerinde gözlenmiştir. Bunlardan yola çıkarak hareket eğitimi gören çocukların hareket eğitimi görmeyen çocuklara göre boy uzunluğu, vücut ağırlığı, vücut yağ yüzdesi vb. unsurların daha iyi değerlerde bulunduğu gözlenmektedir. Bu yüzden çocuklarda hareket eğitimi oldukça önemlidir. Hareket eğitiminde farklı hareket yapılarını içeren etkinliklerle birlikte çocukların denge, koordinasyon, güç, esneklik, hız çeviklik gibi hareket yetilerine olan katkıları oldukça fazla olduğu bilinmektedir (Canlı, Taşkın ve Kurt,2021).

Temel spor eğitiminde çocukların gelişiminde oldukça önemli olan bilişsel, duygusal ve psikomotor niteliklerin geliştirilmesi, çeşitli spor dallarında temel eğitim de hazırlanan Programların öğretilmesinden iyi verimin alınabilmektedir. Hazırlanan bu programların çocukların yaş düzeylerine uygun şekilde yapılarak onlarında bu antrenmanlar da uygun şekilde ince ve kaba motor gelişimlerini olumlu yönde yapması için hazırlanmıştır. Bu program çocuk için önemli bir rol oynar ve gelişime katkıda bulunur (Satılmış, 2023).

Çocuk ve Spor

Spor, çocuğun zihinsel, sosyal ve fiziksel gelişimi için önemli bir eğlencedir. Okul öncesi dönemdeki çocuklara yönelik sporun, çocuğun fiziksel ve psikolojik yapısı dikkate alınarak, çocuğun fiziksel yapısını ve duygusal durumunu destekleyerek onun, sosyal kuralları öğrenmesinde destekleyici bir oyun yapısında olduğu vurgulanmaktadır (Yücel ve ark, 2015). Çocuklarda temel hareketin gelişimi ile bedende oluşan değişimle beraber becerilerinin gelişmesi, kasların koordineli çalışmasına, vücut farkındalığının oluşmasına ve spor kültürünün oluşmasına olanak sağlamaktadır. Planlı ve amaçlı hareketler, atlama, koşma gibi atletik hareketlerin yanı sıra hız, kuvvet ve dayanıklılık gibi becerilerin gelişimini de desteklemektedir. Bu becerilerin gelişmesine katılan çocuğun spor aktivitelerine katılarak, sosyal becerilerini geliştirme konusunda önemli bir fırsata sahibi olmaktadır. Aynı zamanda spor kurallara uyma, empati, özgüven ve problem çözme becerilerinin de gelişmesine olanak sağlamaktadır. Bu becerilerin yanı sıra sporun sağlığa da faydası vardır (Yıldız ve Çetin 2018).

Spor aktivitesi çocuk ve gençlerin iletişim becerilerini güçlendirmek ve sosyalleştirmek için en önemli araçlardan biridir. Beden eğitiminde yapılan spor hareketleri bireyin kişiliğinin gelişmesinde ve topluma uyum sağlamasında etkili olmaktadır. Beden eğitimi kapsamında yapılan fiziksel aktivite ve spor, bireyin fiziksel, zihinsel, psikolojik, ruhsal ve sosyal gelişimine

olumlu etki yapar. Motivasyonu yüksek ve sağlıklı bir birey olmasına, stresten uzak kalmasına önemli katkı sağlar. Kurallara ne kadar iyi uyulursa puan o kadar yüksek olur (Karataş, Savaş ve Karataş 2021). Spora yönelik tutum hem birey hem de genel olarak toplum açısından önemlidir.

Spor, bireyin beden ve ruhen sağlıklı olması, kurallara ve yarışma standartlarına göre rekabet edebilmesi, yaptığı işten heyecan duyması, rekabet etme ve kazanma arzusunu tatmin edebilmesi için gösterdiği yoğun çabadır (Çiçek, 2019). Sporun varlığı ve doğası toplumsal uyumu bozan, güveni zedeleyen, refah düzeyini azaltan çeşitli etkenlere çare olmaktadır. Spor çocuklar içinde olumlu davranışlar oluşturmaktadır. Çocuklarda sporun hayatlarına katabileceği olumlu davranışlar ile bu kötü davranışları sergilemekten uzak durmaktadırlar. Çocuklar bu sayede sosyal çevreye adapte olma konusunda da sorun yaşamamaktadırlar. Bu durum toplumda oluşan spor kültürünün gelişmesine de etki etmektedir (Kasapoğlu, Öztürk ve Öçal,2020).

Okul Öncesi Dönemde Çocukların Spora Olan İlgilerinde Aile Faktörünün Etkisi

Aile, insanların soyunu ve devamlılığını sağlayan toplumsallaşmanın somut olarak görüldüğü halidir. Karşılıklı ilişkilerin ve bu ilişkiler oluşurken belirli kurallarla devam etmesini sağlayan maddi manevi zenginlikleri nesilden nesile aktarım özelliğini sağlayan bir kurum olarak nitelendirilmektedir. Bunların yanında tarih, sosyoloji, coğrafya, ekonomi gibi birçok bilimin içeriğinde oldukça büyük öneme sahiptir (Akman ve Bastık,2016).

Okul öncesi dönemde ise bireylerin hayatta spor kavramını tanıyabilecekleri kurum ise okullar değil ebeveynlerinin tutum ve davranışlarını oluşturdukları kurumdur. Yani çocukların sporla tanışması ilk olarak ailede başladığı görülmektedir. Ailelerin bu tutum ve davranışlarıyla çocukların spor ve bedensel aktivitelere yaklaşımında büyük öneme sahip oldukları görülmektedir. Sporda ailenin önemi olduğu kadar ailenin gelir düzeyi yani sosyo ekonomik durumu da oldukça büyük önem taşımaktadır. Özellikle bu durum çocukların hangi spor dalını seçecekleri kadar belirleyici bir unsur oluşturmaktadır (Güven ve Öncü, 2006). Ailelerin sporla ilgili olması çocukları da spora olan meraklarını uyandırabilmeleri görülmektedir. Aileler spor ve fiziksel aktiviteye çocuklarını yönlendirerek çocukların becerilerindeki gelişimi sağlamaya, sağlıklarını olumlu etkilemeyi, sorumluluk bilinci kazandırmayı, örnek davranış sergileyebilme gibi birçok katkıları gözlemlenebilmektedir. Ailelerin spora yönlendirmesinde birçok belirleyici faktör bulunmaktadır. Bunlar; uzman eğitimcilerin olup olmadığı, spor sahalarının eve uzaklığı, spor eğitiminin kalitesi, yakın arkadaş çevresi bu faktörler arasında bulunmaktadır (Dinç Sevimli ve Uluöz,2011).

Bedensel gelişim için büyümenin yaşa uygun bir şekilde devam edebilmesi için spor yapma ve spora başlama konusunda en önemli faktör ailedir. Bu konuda bilinçli olan aileler çocuklarını spora yönlendirme de ve çocuklarının fiziksel gelişimlerini sınıf öğretmenleri ile beraber iletişim halinde olduklarından dolayı bu aktivite sayesinde olumlu sonuçlar elde etmektedir. Ailenin yanında bu konuda bilinçli olan okul öncesi öğretmenleri çocukların fiziksel gelişimlerine uygun etkinlik ve spor aktiviteleri yaparak gelişimlerine katkıda bulunmaktadır. Bu açıdan bakıldığında ebeveynlerin ve okul öncesi öğretmenlerin iletişim halinde olmalarının çocukların eksiklerini görüp müdahalede etmede nasıl başarılı oldukları gözlenmektedir (Temur ve Gencer, 2016).

Motor Gelişimini Etkileyen Etmenler

Motor gelişim, anne karnında başlayarak ve doğum sonrasında da gelişimin olduğu dönemlerde devam ettiğinden, farklı özelliklerde ve kapsamda gelişen bir süreci içerse de gelişim ve gelişimin ayrılmaz bir parçasıdır. Çocuğun eğitiminde ebeveyn ve sınıf öğretmeni tarafından desteklenmesi ve uygun şekilde ilerleyerek büyümesin de büyük öneme sahiptir (Dılımulatı,2021). Motor gelişimini etkileyen birçok etmen veya faktör bulunmaktadır. Bu etmenler doğum öncesi, doğum sonrası veya doğum anı olarak sınıflandırmak mümkündür. Fakat bu etmenlerin çoğu genelde anneye bağlı olduğu görülmektedir. Öncelikle annenin hamilelik döneminde olan beslenmesi bununla birlikte zararlı alışkanlıkları yani sigara veya alkol tüketimi oldukça etkilidir. Bunların yanında annenin hamilelikte kullandığı ilaçlar çocuğun tüm gelişim alanını etkilediği gibi motor gelişim alanında da büyük etkiye sahiptir. Motor gelişimine etkisi olan bir diğer öge ise kalıttır. Kalıtım tek başına etkili olabileceği gibi çevreyle olan etkileşimle etki özelliğini daha fazla arttırmaktadır (Çoknaz,2016).

Genetik hastalıkların önlemleri veya teşhisleri anne karnında konulabilse de bir diğer etmen ise tıbbi problemlerdir. Tıbbi problemler bünyesinde cinsel yolla bulaşan hastalıkları barındırmaktadır. Teşhisi konulabilen bu hastalıklar dışında önlemi alınabilse de eksik veya yanlış tanı ve müdahaleden kaynaklanan gebelik teşhis ve tanı da burada oldukça önemli bir faktördür. Doğum öncesi etmenlerin en sonuncusu ise annenin hamilelikte yaptığı ağır bilinçsiz ve fazlaca yaptığı egzersiz olduğu görülmektedir. Doğum esnasındaki en temel faktör ise bebeğin oksijensiz kalması durumudur. Doğum sonrası faktörler ise çocuğun doğduktan sonra motor gelişimi etkileyen faktörler bireysel, çevresel ve fiziksel faktörler olmak üzere üç ana grupta ele alınmaktadır (Gümüşdağ ve Yıldırım,2018)

Pandemi sürecinin Okul öncesi Dönemindeki Çocukların Yaşamına Etkisi

Covid-19 ilk olarak içinde 2019 yılının sonlarında ortaya çıktığı gözlenmektedir. Covid-19 adı verilen virüsle birlikte tüm dünyayı etkisi altına alan bir süreçle dünyanın her yerinde birçok

sektör bu virüs sebebiyle olumsuz etkilenmektedir. En çok etkilenen sektör alanlarının en önemlisi ise eğitim sektörüdür. Eğitimin çok fazla etkilenmemesi için dünyanın her yerinde eğitimde “uzaktan eğitim” adı altında derslerin teknolojik araçlarla yapılması çözüm olarak bulunmuştur. Fakat bu çözümün çocuklara dezavantajları çok fazla olduğu pandemi sürecinde gözlenmektedir (Acar ve ark, 2021). Bu dezavantajların başında gelen sorunlardan biri ise sedanter yaşam yani hareketsiz bir çocukluk olduğu gözlenmektedir. Covid-19 virüsüyle birlikte okul öncesi dönemi yaş aralığında bulunan çocukların kritik bir dönemde olduğundan dolayı hem gelişim alanlarının oyun ve etkinliklerle desteklenmesi hem de sağlıklarının ön planda tutulması gerekmektedir. Bu sebepten dolayı uzaktan eğitimle aileler bilgilendirilerek çocuklarıyla birlikte bu pandemi sürecinde kendi yaşam alanlarında olabildiğince hareket etmeleri gerektiği vurgulanmaktadır. Eğer pandeminin olumsuz etkileriyle birlikte çocukların teknoloji bağımlılığı, psikolojik sorunlar, sağlık sorunlarıyla oldukça etkilendikleri söylenebilmektedir (Yalçınkaya ve ark,2022).

Okul öncesi yaş grubunun kendini virüsten koruyabilmesinin diğer yaş gruplarına oranla daha az olduğu bilinmektedir. İşte tam olarak bu yüzden pandemiden en çok etkilenebilecek yaş gruplarından en önemlisi olduğu vurgulanmaktadır. Covid-9 salgınının bu çocuklar üzerine etkileri çok fazladır. Fakat bu etkilerin temelinde fiziksel gelişimin esas alındığı görülmektedir. Bu etkiler şöyle sıralanabilmektedir; kaygı, korku, panik, hırçınlaşma, sinirlenme, sosyal etkileşimin azalması, okul kurallarına uymada güçlük, beslenme ve yeme alışkanlıklarının değişmesiyle oluşan obezite ve teknoloji bağımlılığı gibi birçok olumsuzluklar sıralanabilmektedir (Yüksel, Hülya veAlbaş,2023).

Okul öncesi dönem çocuklarında oyun ve hareketin yerinin oldukça önemli olmasına rağmen pandemi dönemi ise çocukların fiziksel aktivitelerine olan olumsuz etkisi oldukça net gözlenmektedir. Pandeminin çocukları nasıl etkilediği ile ilgili birçok araştırma yapılmıştır. COVID-19 Pandemi sürecinde okul öncesi çocukların obezite, diyabet ve kardiyovasküler hastalık riskinde artışa yol açabileceği vurgulanmaktadır. Fiziksel aktivitenin ve hareketin pandemiyle birlikte hayatımızdaki konumunu ve önemini oldukça net bir şekilde gözlemlemenin mümkün olduğu görülmektedir (Aral ve ark,2021).

Okul Öncesi Dönemde Uygulanabilecek Geleneksel Oyunların Fiziksel Gelişime Katkıları

Okul öncesi kurumlar ve öğretmenler, geleneksel oyunların eğitim etkinliklerine dahil edilerek kültürel aktarım ve fiziksel aktiviteyi artırıcı özelliklerinden yararlanmalıdır. Çocuk okuldaki bu etkinliklerle toplumu, kültürü, değerleri, gelenekleri ve yaşam tarzlarını öğrenirken, fiziksel gelişimini destekleyerek sağlıklı bir yaşamın temelini oluşturmalıdır.

Geleneksel çocuk oyunlarından bazı oyunlar ve bu oyunların fiziksel gelişime katkıları yer almaktadır (Toksoy, 2010).

Geleneksel oyunlardan en bilinen oyun Beştaş Oyunudur. Beştaş oyunu belli kurallar çerçevesinde taşı hedeften geçirme gibi nesne kontrolü gerektiren becerileri geliştirir. Küçük kas gelişimini destekler ve her oyunda olduğu gibi bu oyunda da dikkat ve konsantrasyon oyunun en önemli unsurlarındandır. Geleneksel oyunlarından önemli olan bir diğer oyun ise Bezirgan Başı oyunudur. Bu oyun çocukların ruhsal, bedensel, toplumsal gelişimlerinde oldukça önemlidir. Yapı bakımından grup mekansal olarak ise açık hava oyunudur. Kalabalık katılımı oynanan bu oyun yarışma temellidir (Toksoy, 2010).

Geleneksel oyunlardan olan el sık selam ver koş etkinliği ise fiziksel gelişim açısından değerlendirildiğinde büyük kasların gelişimini teşvik ettiği, çocukların kurallara uygun koşmasını ve durmasını sağladığı, duruşta vücut dengesini koruyabildiği, büyük kas gelişimine katkı sağladığı görülmektedir (Erçelik,2011). Okul öncesi eğitimde kullanılan oyunlar ve fiziksel gelişime etkisi okul öncesi çağda çocuğun spor bilgi ve becerilerinin desteklenmesi önemlidir çünkü spor sadece fiziksel ve zihinsel yapıyı desteklemekle kalmaz aynı zamanda çocuğun disiplin, özgüven, rekabet ve arkadaşlığı aşılayarak sosyal bir rol kazanmasına da yardımcı olur. Ayrıca bir eğitim etkinliği olarak hareket; ortak hedefleri ifade etme, takdir etme, anlayış, sabır, iş birliği ve sorumluluk becerisi kazandırır ve birey ile toplum arasındaki ilişkiyi güçlendirir (Ergun,2003).

Fiziksel aktivite bireylerin kendi içinden gelen ve temel ihtiyaçları kadar önemli isteklerini oluşturmaktadır. Bununla beraber çocukların sağlığı ve gelişimi açısından oldukça önem arz ettiği görülmektedir. Çocuklar hareket ederek etraflarında olan biteni ve kendilerini tanıyabilmeyi en iyi şekilde anlamlandırabilmektedirler. Bir kişi, zaman ve mekan kavramlarını bunların yanında çevreyi incelemenin yanı sıra, diğer insanlarla iletişim yoluyla da hayatını gözlemleyebilme fırsatı sunmaktadır. Çocuklar hareket yoluyla sınırlarının ve güçlü yönlerinin farkına vararak duygusal ve fiziksel bağlantıyla baş etmeyi öğrenebilir. Bu farkındalık fiziksel-motor ve zihinsel-ruhsal süreçlerin uyumu ve birleşimi ile ilgilidir. Hareket ve dolayısıyla spor, insani gelişme sürecinin temel ön koşuludur. Egzersiz yapmak bilişsel, duygusal ve ruhsal etkileri insan gelişimine önemli ölçüde katkıda bulunur (Orhan,2019).

Fiziksel Aktivitenin Çocuk Üzerindeki Faydaları

Fiziksel aktivitenin sağlığımızı olan yararlarını 3 temel başlıkta inceleyebiliriz. Bunlardan birincisi ve en önemlisi bedensel sağlığımız üzerine etkileridir. Bedensel sağlığa olan etkilerinin temelinde kas ve iskelet sistemine olan yararları ve diğer vücut sistemlerine (dolaşım, solunum,

boşaltım vb.) olan yararlarından bahsedilebilir. İkinci temel başlığımız ise ruh sağlığı ve sosyal gelişim üzerine etkileridir (Şenbakar,2021). Bu başlık ise daha çok fiziksel aktivitenin çocukların kendi akranlarıyla iletişim ve ilişki becerilerini ele almaktadır. Son başlığımız ise gelecekteki yaşantımız üzerine etkileridir. Aslında başlıkta da vurgulandığı üzere çocukluk çağında yapılan fiziksel aktivitenin sadece o süreçte değil ilerleyen zamanlarda bile daha sağlıklı yaşlanmayı ele almaktadır (MEB,2014).

Fiziksel aktivite günlük işlerde bireylerin hareket etmeleri ve enerji harcamaları olarak tanımlanabilmektedir. Spor yapan çocukların yapmayan çocuklara göre daha sağlıklı ve enerji dolu oldukları görülmektedir. İleriki yaşlarında yani orta yaşlılık veya yaşlılık dönemlerin de bireylerin daha sağlıklı bir hayat sürdürebilmeleri oldukça önemlidir. Çocukluk döneminde hatta bebeklik döneminden itibaren yaş ve gelişim düzeyine uygun bireylerin fiziksel aktiviteyi hayatlarının merkezlerine almaları sağlanmaktadır (Satman,2018). Çocukluktan itibaren fiziksel aktivite çocuklara olumlu davranış biçimleri, yeterli ve dengeli beslenmeyi, stresle baş etme gibi önemli davranışlar kazandırır. Çocukların düzenli ve sürekli olarak hareket halinde olmaları ve bunun yanında fiziksel aktiviteyi hayatlarının her alanında yapabilmek özellikle okul öncesi dönemden başlayarak çocukların sağlıklı bir yaşam oluşturmalarında temel oluşturduğu gözlemlenebilmektedir.

Bu nedenle çocuklar olabildiğince erken spora başlatılması büyük önem arz ettiği gözlemlenmektedir. Düzenli olarak spor yapan çocuklarda kronik hastalıklara yakalanma oranları spor yapmayan çocuklara göre daha düşük olduğu birçok araştırma aracılığıyla bilinmektedir (Canlı,2021). Fiziksel aktivitenin yapılmasının öneminin yanında ne kadar yapıldığı da çok önemlidir. Bireylerin yaş ve gelişim düzeylerine göre haftada kaç saat yapmaları uzmanlar tarafından belirlenmektedir. Bunun aksine fazla yüklenmede özellikle çocuklarda bilinçsizce yapılan ağır egzersizler sonucu çocuklarda belirli sağlık sorunlarına yol açabildiği görülmektedir. Bu bilgilerin yanında teknolojinin de hayatımıza girmesiyle 19.yy dan başlayarak bireylerde sedanter bir yaşamın oldukça arttığı gözlemlenmiştir. Fiziksel aktivitenin önemiyle birlikte içeriği de oldukça önemlidir. Yani fiziksel aktivite kendi arasında ikiye ayrılır. Birincisi yapılandırılmamış; temelinde hareket içeren daha basit günlük işleri esas almaktadır. İkincisi ise yapılandırılmış fiziksel aktivitedir. Yapılandırılmış; genelde okulda uyguladığımız beden eğitimi ve spor dersini temel alan voleybol, basketbol, futbol gibi faaliyetleri oluşturmaktadır (Öz,2021).

Okul Öncesi döneminde Fiziksel aktivite seçiminde dikkat edilmesi gerekenler

Çocukların sağlıklarını korumak ve onları hayata aktif olarak katılmalarını sağlamak için fiziksel aktivite temelli hareket ve oyunlar çocukların gelişimlerinin vazgeçilmez parçasıdır.

Sağlıklarının korunmasının yanında hayat kalitelerini arttırmak için fiziksel aktivite seçilirken şu noktalara dikkat edilir; çocuğun yaş-gelişim düzeyi, çevreyle gelen akran grubu, fiziksel olarak aktiviteye uyumluluğu, kilosu, istekli olması, etkinliği eğlenceli bulması, kolay olması gibi etkenlere dikkat edilmesi gerekmektedir. Bunların yanında planlanan aktiviteler ve oyunlar belirli özellikleri içermelidir. Bunlar; fiziksel aktivite, düzenli ve devamlı olmalıdır bunların yanında uygun yoğunluk ile sürede olmalıdır (MEB,2014).

Fiziksel uygunluk, yaşamımız boyunca yaptığımız hareketleri zorlanmadan yapabilme yeteneği olarak tanımlanmaktadır. Fiziksel uygunluk temel olarak ikiye ayrılabilir: sağlık ve performans. Çocuğun sağlık durumunun öğrenilmesi ileride yaşanabilecek sağlık sorunlarının önlenmesi açısından önemli bir faktördür. Çocuğun fiziksel gelişimine uygun şekilde ve kendini zorlamadan yapabileceği yaş düzeyine uygun fiziksel aktivitelerin seçilmesi onun gelişimine olumlu yönde katkı sağlar (Salman, Sarı ve Mirzeoğlu, 2018).

Sporun etkinliklerinin sosyal gelişim alanına etkileri

Spor çocuğun sosyal, duygusal ve fiziksel gelişimi için önemli etkinliklerden biridir. Okul öncesi dönemde ise spor çocuğun fiziksel yapısını ve duygusal durumunu destekleyecek aynı zamanda toplumsal kuralları öğrenmesine destek sağlayacak bir etkinlik formatında olması gerekmektedir. Çocukların akranlarıyla olan iletişim ve duygu durumlarının yanında kendilerini tanımalarını sağlayan da gene spordur. Spor çocukların kendilerini sadece kimlik anlamında değil aynı zamanda yaş gelişimlerine göre hangi hareketi yapıp yapamayacaklarının fark edebilmeleri için çocuklara kendini tanıma imkanı da sağlamaktadır (Yıldız ve Çetin, 2018). Günümüzde bireylerin fiziksel, bilişsel, duygusal en önemlisi sosyal gelişimine teşvik etmenin en etkili yollarından biridir. Beden eğitimi ve Spor, insanların kendilerini ifade edebilecekleri bir ortam bulmalarına ve dolayısıyla toplumsal sürece katılmalarına olanak sağlar. Beden eğitiminde, hareket eğitiminin yanı sıra insanlara kişisel ve sosyal kimliğe ve bir gruba ait olma duygusu kazandırdığı için sosyalleşmeyi teşvik eden bir kavramdır. (Duman,2020).

Sosyalleşme kısaca toplumsallaşma yani toplumla iç içe bütünleşme anlamına gelmektedir. Sporun en büyük ve en önemli etkilerinin sosyal gelişime olan etkisi yadsınmamaktadır. Sosyalleşme bireyin karakter oluşumunu toplumla bütünleşmesinin ve bunların yanında topluma uyum sağlamasını sağlamaktadır. Bu noktada spor ve sosyal gelişim ayrılmaz bir bütün olduğu görülmektedir. Beden eğitimi ve sporu içeren aktiviteler bireylerin yaşamlarını birçok yolla etkilediği görülmektedir (Şahin ve Şahin, 2020). En çok etkilenen yaş grubu ise okul öncesi dönemi yaş aralığı olduğu görülmektedir. Spora katılımının çocuklara sosyal açıdan yararları şunlardır; grup sporlarıyla yapıldığı takdirde çocuklarda sağladığı iş birliği içinde çalışma isteği, çocukların karakter yapılarının oluşumu, çocuklardaki düzenli ve sistemli

bunların yanında azim gibi duyguları canlı tutma ve en önemlisi çocuğun cesaretlendirilmesi gibi özellikler çocuklara yararları olarak açıklanabilmektedir (Karataş ve ark,2021).

Çocuğun fiziksel aktivite ve spora ne kadar ilgisi olursa ve bu alanda ne kadar aktif olursa kendi akranlarıyla veya insanlarla olan iletişimlerinin o kadar güçlü olduğu yadsınamaz bir gerçek olduğu vurgulanmaktadır. Yetişkinlerde olduğu gibi çocuklarda da spor bireysel veya takım halinde oynanabildiği görülmektedir. Yapılan etkinlikler eğer bireysel bir spor temelli faaliyetlerse çocuklarda sosyal gelişim açısından yararları grup halinde yapılan etkinliklere veya faaliyetlere göre farklılık gösterdiği görülmektedir. Örneğin bireysel yapılan spor temelli etkinlikler çocuklarda özgüveni, haklarını savunabilmeyi, sorumluluk duygularını kazandırırken grup halinde yapılan spor temelli etkinlikler çerçevesinde ise empati kurmayı, işbirlikçi şekilde oynama gibi sosyal gelişim alanlarına etkileri farklılaştığı görülmektedir (Teke ve Karakuş, 2022).

İlgili araştırmalar

Bu bölümde yapılan araştırmalar hakkında okul öncesi dönemdeki çocuklara yönelik spor etkinliklerine ve fiziksel aktivite içeren yurtiçi ve yurtdışı çalışmalarına yer verilmiştir. Aşağıda verilen araştırmalar spor ve beden eğitimi içeren alanlara ve okul öncesi yaş grubuna uygun düzeyde uygulanmıştır. Aşağıda bulunan araştırmalar benzer konu çerçevesinde olduklarından dolayı özetlenerek yazılmıştır.

Yurtiçi araştırmaları

Bağ ve Ay (2017) tarafından yapılan araştırmada okul öncesi öğretmenlerinin öğretmen yeterliklerine ilişkin öğretmen ve okul müdürlerinin görüşlerini ve buna bağlı olarak hizmet içi eğitim ihtiyaçlarını ortaya koymaktır. Ayrıca okul müdürlerinin okul öncesi eğitimcilerinin yeterliliklerini farklı değişkenlerin nasıl etkilediğine ilişkin görüşleri incelenmiştir. Bu çalışmada karma yöntem yaklaşımı kullanılmıştır. Araştırmada örneklem grubu, 57 okul öncesi öğretmeni ve 20 okul müdüründen yani toplamda 77 kişiyle görüşülerek veri toplanmıştır.Yapılan çalışma sonucunda ise Milli Eğitim Bakanlığında çalışan okul öncesi öğretmenlerinin nitelikleri hakkında öğretmenlerin kendilerini tüm gelişim alanlarında yeterli gördükleri sonucuna ulaşılmıştır.

Karaman (2020) yaptığı çalışmada okul öncesi eğitim kurumlarında oynatılan fiziksel etkinliğe dayalı oyunların çocukların psikomotor gelişimi üzerine etkisi incelenmiştir. Bu çalışmanın evrenini okul öncesi bünyesinde bulunan 3-6 yaş arasında olan kız ve erkek çocuklar oluşturmaktadır. Yapılan bu araştırmanın örneklemine ise 2018-2019 akademik yılı içinde Nevşehir ilinin Acıgöl ilçesinde hizmet veren nene hatun anaokulunda okuyan 41 öğrenciden veriler incelenmiştir.Öğrencilerle oynanan oyunların psikomotor gelişimindeki farklılıklara

bakan bu çalışmada, kontrol gruplu ve ön test-son test modeliyle deneysel bir yöntem kullanılmıştır. Sonuç olarak deney grubu ile kontrol grubu arasında yapılan karşılaştırmada oynanan oyunlar sonucunda durarak atlama, uzun atlama, dinamik ve statik denge, hız, tenis topu atma testlerinde, tırnak kuvvetlerinde anlamlı bir farklılık gözlenmiştir.

Özyürek ve Akduman, (2015) yapmış olduğu araştırmada, okul öncesi dönem çocuklarının spora ilişkin görüşleri incelendiği gözlenmektedir. Bireyin ne kadar erken sporla tanışırsa o kadar sağlıklı bir yaşam sürebileceği öne sürülerek tartışılmaktadır. Araştırma nitel olarak ele alınmaktadır. Nitel olarak çalışılan bu araştırma yarı yapılandırılmış sorularla bulgular bölümünü desteklenmiştir. Çalışma grubunu ise anaokuluna devam eden 3-6 yaş grubu 24 okul öncesi yaş grubundaki çocuklar oluşturmaktadır. Bu araştırmanın sonucunda, çocuklarla bireysel olarak görüşülmüş ve beden eğitimi ve spor gibi temel kavramlarını algılayamadıkları, yorum yapamadıkları, bilgilerinin olmadıkları gözlenmiş bu yönden geliştirilmesi gerektiği belirtilmiştir.

Arslan, (2021) bu çalışmada ortaokul beden eğitimi öğretmenlerinin spor etiğine ilişkin görüşleri incelenmiştir. Bu çalışmada nitel araştırma uygulanmıştır. Araştırma da beden eğitimi öğretmenlerinin spor etiğine ilişkin görüşleri araştırıldığı için nitel araştırmanın yorumlayıcı fenomenolojik deseni uygulanmıştır. Fenomonolojik desen olan bu kavram araştırmanın derinlemesine ve ayrıntılı şekilde incelenmesini sağlamaktadır. Veri toplanma aracı olarak ise görüşme formu kullanılmıştır bu form toplam 9 sorudan oluşmuştur. Çalışma grubu 2019 yılında Ankara da milli eğitimi bakanlığına bağlı 9 farklı ortaokuldan 4 erkek öğretmen 10 kadın öğretmenden yani toplam 14 beden eğitimi öğretmeninden oluşturulmaktadır. Yapılan çalışma sonucunda ise araştırmaya katılan katılımcıların genellikle spor salonu, spor yapma, spor alışkanlığı, spor bilinci ve spor kültürü olarak ulaşılmıştır. Hepsinin hem fikir olduğu tek bir ortak konu vardır bu konu ise her okul da spor salonu olması gerektiğinin ve spor salonunun önemini oluşturmaktadır.

Hayber (2022) tarafından yapılan bu çalışmada okul öncesi öğretmenlerinin kurumlarında yaşadıkları sorunlar elen alınmıştır. Bu araştırma nicel olarak uygulanmıştır. Araştırma da veri toplama aracı olarak yarı yapılandırılmış soru formu uygulanmıştır. Soru formu konunun içeriğine uygun olarak kapsadığı alanlar temel alınarak uzman görüşünden şekillendirmesi online şekilde araştırmacılara sunulmuştur. Araştırmaya 62 okul öncesi öğretmeni katılmıştır. Araştırmanın sonucunda 26 soru sorulmuş ve soruların cevapları tablo şeklinde sunulmuştur. Çalışma sonucunda öğretmenlerin büyük çoğunluğu yöneticilerin okul öncesi kurumlarına yeterli desteği verdiğini yarı ise öğretmenlerin üzerinde yöneticilerin baskısının olmadığını

dile getirmiştir. Bir kısım öğretmenlerin cevapları ise yöneticilerin velilerin memnuniyetinin önemli olduğunu belirtmiştir.

Yavuz ve Özyürek (2018) tarafından yapılan araştırmada Beden eğitimi ve spor etkinliklerinin okul öncesi dönem çocuklarının hareket becerileri üzerine etkisinin olduğu incelenmektedir. Okul öncesi dönemde bulunan çocuklarla uygulanan beden eğitimi temelli oyuna yönelik olan spor etkinliklerinin çocukların fiziksel gelişimi için spor etkinliklerinin temel hareket becerileri üzerindeki gelişime olumlu yöndeki etkisini incelemek esas alınmıştır. Bu araştırma nicel olarak yapılmıştır. Araştırmanın Modeli, ön test-son test kontrol gruplu deneysel desende tasarlanmıştır. Çocukların hareket becerilerinin belirlenmesinde bazı motor testlerden yararlanılmıştır. Sonuç olarak oyunların spor üzerine yapılarak birçok gelişim alanlarına hitap ederek fiziksel gelişimlerine olumlu yönde etki etmekte ve çocuğu aktif kılmaktadır.

Karaman (2020) tarafından yapılan bu araştırmada okul öncesi eğitim kurumlarında oynatılan fiziksel etkinliğe dayalı oyunların psikomotor gelişimi üzerine etkisi incelenmiştir. Okul öncesi anaokulu ve kreşlerde oynatılan fiziksel etkinliğe dayalı oyunların çocukların kaba motor becerileri ile ince motor becerilerine olan gelişimi üzerine etkisini incelemektir. Bu çalışmanın evreni, okul öncesi eğitim kurumlarına devam eden tüm 3-6 yaş arası erkek ve kız çocukları oluşturmaktadır. Çalışmanın örneklemini 2018-2019 eğitim öğretim yılları arasında Nevşehir ili Acıgöl ilçesinde bulunan Nene Hatun Anaokuluna kayıtlı, Beden Eğitimi derslerine katılmasında bir engeli bulunmayan ve okula düzenli devam eden 41 öğrenci oluşturmaktadır. 8 haftalık oyunların, psikomotor gelişim farklılıkları incelenirken bu çalışmada kontrol gruplu ve ön test – son test desenli deneysel yöntem uygulanmıştır. Ön test ve son test analizleri için bağımlı örneklem t-testi kullanılmıştır. Yapılan bu araştırma sonucunda deney grubu ile kontrol grubu karşılaştırılarak oynanan oyunlar sonucunda deney grubu spor üzerine birçok terimlerin uygulamayla test aşamasından geçerek anlamlı farklılık tespit edilmiştir.

Uçan, Buzdağlı ve Ağgön (2018) yapılan bu araştırmada çocuklarda sporun fiziksel uygunluk üzerine etkisinin incelenme yapılmıştır. Amaç, spora katılan çocukların fiziksel formlarını tespit ederek, kendilerinin ve spora katılmayan çocukların fiziksel durumlarını ortaya koymaktır. Yapılan bu araştırmaya 7-10 yaşlarında spor yapan 120 kız, 145 erkek ve spor yapmayan 177 kız, 159 erkek olmak üzere toplam 601 öğrenci katılmıştır. Bu araştırma nitel olarak yapılmıştır. Araştırmanın evrenini Erzurum merkezde öğrenim gören 7-10 yaş grubunda öğrenim gören ilkokul öğrencileri (1-4 sınıflar), örneklemini ise Erzurum merkezde öğrenim gören ilkokul öğrencileri oluşturmaktadır. Yapılan araştırma sonucunda ise Çocukları spora veya egzersize yönlendirmenin çocukların fiziksel kondisyonunun gelişmesinde önemli bir

faktör olduğu belirlenmiştir. 7-10 yaş arası kız ve erkek çocukların benzer fiziksel özelliklere sahip olmasına rağmen, erkeklerin genel olarak performansa bağlı fiziksel uygunluk testi puanlarının daha iyi olduğu tespit edilmiştir.

Yılmaz (2021) tarafından yapılan çalışmada tenis sporuyla uğraşan çocukların spora yönelmesinde ailenin rolü ve önemi araştırılmıştır. Bu araştırma nitel olarak araştırılmıştır. Yapılan çalışmada gözlemsel araştırma türü olan, Aydın Gençlik ve Spor İl Müdürlüğü ve Aydın Engin Arslan Tenis Kulübü kortlarında tenis oynayan 3-12 yaş aralığında 352 öğrenci ile yapılmıştır. Yapılan araştırma sonucunda ise Öğrencilerin tenis oynamaya yönlendirilmesinde hem maddi kaynakların hem de aileden gelen manevi desteğin çok önemli etkisinin olduğu tespit edilmiştir.

Elter (2021) tarafından yapılan bu çalışmada. Okul öncesi dönemindeki 60-72 aylık çocukların okul olgunluğu ile fiziksel ve duygusal gelişimi arasındaki ilişkisi ele alınmaktadır. Bu çalışma nitel olarak ele alınmıştır. Araştırma Bursa İli Nilüfer ilçesinde bulunan Özel Bursa Balat İlkokulu ve Özel Bursa Best Anaokulunda okumakta olan 103 öğrenci ile yapılmıştır. Yapılan bu çalışmaya katılarak destek olan çocukların yaş aralığı 60-72 aydır. Araştırma sonucunda; 60-72 aylık çocukların genel okul olgunluğu ile fiziksel gelişimi arasında bir miktar pozitif ilişki bulunmuştur. Katılımcıların fiziksel özellikleri geliştikçe genel okul olgunlukları da artmaktadır. Okula hazırlık ile duygusal gelişim arasında pozitif ve istatistiksel olarak anlamlı bir ilişki bulunmuştur.

Ballı ve Altınöz (2022) tarafından yapılan çalışmada Türkiye’de okul öncesi çocuklara sunulan motor beceri uygulamalarının belirlenmesi ve sonuçlarının araştırılması amaçlanmıştır. Bu çalışma nicel olarak yapılmıştır. Yapılan bu çalışmada bilimsel araştırma yöntemlerinden olan alan yazın taraması kullanılmıştır. Bilimsel araştırma yöntemi olan alan yazısı taraması için Okul öncesi çocukları, motor egzersizler, hareket kalıpları, temel motor beceriler ve bunların kombinasyonları gibi anahtar kelimeler seçildi. Tarama sonucunda elde edilen sonuçlar için motor beceri programları kullanılıyorsa 3-7 yaş arası çocuklar ve Türkiye’deki çalışmalar bu taramaya dahil edilmektedir. Bu araştırma sonucunda ise Türkiye’de farklı motor becerilere yönelik az sayıda uygulama olmasına rağmen bu tür çalışmaların çeşitliliğinin ve alana katkısının ümit verici olduğu açıktır.

Ulucan ve Yarımkaya (2015) tarafından yapılan çalışmada çocuklarda hareket eğitimi programının motor gelişim üzerine etkisi incelenmiştir. Bu çalışma nicel olarak yapılmıştır. Yapılan bu çalışmada Amaç hareket eğitimi programının çocukların hareket gelişimini etkileyip etkilemediğini incelemektir. Araştırmanın evreni Türkiye’de düzenli bir şekilde spor aktiviteleri yapan 4-6 yaş arası çocuklardan oluşmaktadır. Araştırmanın örneklem grubunu ise Hacı

Sabancı Ortaokulu Anaokulunda okumakta olan toplam 40 öğrenci ile yapılmıştır. Ankara Keçiören Hacı Sabancı Ortaokulu anaokulunda öğrenim görmekte olan 20 öğrenci deney grubu olarak, 20 öğrenci ise kontrol grubu olarak katıldı. Bu araştırma sonucunda ise Hareket eğitimi programının 4-6 yaş grubu öğrencilerin motor gelişim düzeyinde anlamlı bir farklılığa etkisinin olduğu gösterilmiştir. Bu bağlamda hareket eğitimi programının çocukların hareket gelişimine olumlu etkisi olduğu tespit edilmiştir.

Yurtdışı araştırmaları

Baydilek (2015) tarafından yapılan çalışmada Japonya’da Okul Öncesi Eğitim hakkında genel bilgilerin araştırılması amaçlanmıştır. Bu araştırma nitel bir çalışma olarak planlanmıştır. Gözleme dayalı bir araştırma olarak yapılandırılmıştır. Japonya da 2015-2016 eğitim öğretim yılları arasında birbirine paralel olan ikili bir erken çocukluk eğitimi ve bakımı sistemine sahip olan anaokulları doğumdan altı yaşa kadar olan gündüz bakım merkezleri incelenmiştir. Çeşitli araştırmacıların çalışmalarının yanı sıra, yoğun olarak Japonya’nın kendi resmi makamlarının yayınları ve makaleleri incelenmiş ve bu incelemeler doğrultusunda ülkede okul öncesi eğitim sisteminin genel özellikleri derinlemesine incelenip araştırılmıştır. Sonuç olarak Japonya’nın eğitim sistemini büyük değişikliklere maruz bırakmamaya özen gösterilmiştir. Okul öncesi eğitim döneminde çocuğunun eğitimiyle ilgili olarak tüm dünyada faaliyet gösteren kuruluşların sistemleri ve bunun yanında yaygınlaşan eğitim yaklaşımları Japonya tarafından takip edildiği gözlenmiştir.

Karen (2017) tarafından yapılan çalışmada çocuk gelişimi için egzersizin önemi ve fiziksel aktivitenin desteklenmesi Almanya da bulunan Hardt Vakfı’ndaki anne-çocuk grubunun pratik örneğini kullanarak açıklanması esas alınmıştır. Çocuklar dünyaya geldikten sonra kendi başlarına yaşayamamaları doğrudan gözlenmektedir. Tek başlarına yetememelerinden dolayı motor gelişimi ileriki yaşları için oldukça önemli olduğu gözlenmektedir. Bir kişinin genel gelişimi için hareketin çocuklar için ayrılmaz bir bütün olduğu görülmüştür. Bu çalışmanın sonucunda tek bir gelişim alanı yanı sıra birçok gelişim alanına etkisi olduğu gözlenmektedir. Güvensiz yaşam koşullarındaki genç anneler, çocukların temel bakımını üstleniyor olduklarından dolayı bunalmış genç anneleri ve çocukları fiziksel aktiviteye yönlendirecek motive edecek bir spor temelli oyun etkinliklerinin bulunması gerektiği gözlenmektedir.

Frey ve Mengelkamp (2007) tarafından yapılan çalışmada spor ve egzersizin anaokulu çocuklarının gelişimine etkileriyle eğitimin araştırılması konu olarak esas alınmıştır Erken ve orta çocukluk döneminde, ilerideki gelişim süreci üzerinde kalıcı etkisi olan temel beceriler geliştirildiği bilinmektedir. Bu çalışmada veriler Düzenli olarak spor yapan çocukların motor, bilişsel ve sosyal-duygusal becerilerinin spor yapmayan çocuklara göre daha iyi gelişip

gelişmediği sorusuna yanıt vermek için yaşları 3 ile 6 arasında değişen 2.279 anaokulu çocuğu değerlendirilmiştir. Çocuklara yönelik gözlem formunun geliştirilmesi amacıyla toplanan örneklem Temel beceriler motor, bilişsel ve sosyal gelişim alanlarında geliştirilip bu da daha sonraki gelişim süreci üzerinde kalıcı bir etkiye sahip olduğu görülmektedir. Bu çalışmanın sonucunda Almanya'da egzersiz, oyun ve eğlencenin yapıldığı anaokulları veya okullar bulunmadığı gözlenmektedir. Sunulan çalışmanın örneği ve ilk sonuçları bunun yanında Sorunun cevabıyla sonuçların tartışılması makaleyi sonlandırmaktadır.

Sheikh, Safania ve Afshari (2011) tarafından yapılan araştırmanın amacı, seçilen motor aktivitelerin temel hareketlerin gelişimine etkisini belirlemektedir. İran'ın Tahran şehrinde 5 ve 6 yaşlarında erkek ve kız çocukları için belirlenen evren grubu Tahran'da bulunan tüm anaokulları olarak belirlendi. Daha sonra kişisel anket kullanılarak birbiriyle uyumlu(20 erkek ve 20 kız) yani toplam 40 çocuk örneklem olarak belirlendi.T- testi kullanılarak sonuçlar gözden geçirildi ve analiz edildi. Araştırmanın sonucunda, seçilen motor aktivitelerin her ikisinde de dinamik denge, motor hız ve kuvvet üzerinde anlamlı etkiye sahip olduğunu gösterdiği belirlenmektedir. Cinsiyet ve erkek çocuğun koordinasyonu üzerinde anlamlı bir etkisi olmasa da kızlar üzerinde anlamlı bir etkisi olduğu gözlenmektedir. Sonuç olarak, seçilen motor aktivitelerin motor gelişimine önemli etkisinin olduğu bu çalışmayla açık bir şekilde gözlenmiştir.

Bjelica, Popovic ve Petkovic, (2013) tarafından yapılan çalışmada Okul öncesi dönem çocuklarının fiziksel aktivite düzeyine ilişkin ebeveynlerin tutumlarının analizi edilmektedir. Ebeveynlerin fiziksel aktiviteye ilişkin tutumlarının izlenmesi ve içgörü yoluyla öğretmenlerin çalışması Karadağ'daki okul öncesi kurumlara giden çocuklar Okul öncesi kurumlardaki çocukların ne kadar aktif olduğunu tahmin etmek için, bunların hepsi ebeveynlerinin tutumlarına dayanmaktadır. Araştırmanın yöntemi ebeveynlerin ses ve ses düzeyine ilişkin tutumlarının değerlendirilmesidir. Araştırma modelinin türü nicel araştırma olarak tasarlanmıştır. Sınava girenlerin örneği Karadağ'ın tüm şehirlerinden okul öncesi çocukların 1356 ebeveyninden oluşuyordu. Araştırmanın sonucu olarak okul öncesi çocukların fiziksel aktivite düzeylerinin belirgin bir şekilde azalma eğiliminde olması nedeniyle zihinsel gelişimin tamamı üzerinde mümkün olduğu kadar en uygun etkiyi sağlamak için yoğunlaştırmaya ihtiyaç olduğu yadsınamamaktadır. Özellikle gelişimlerinin en hassas olduğu bu dönemde çocukların fiziksel gelişimi olduğu belirlenmektedir. Bunu başarmak için öğretmenin konumu ve rolünün analizinin yanı sıra öğretmenler için teşvik edici bir ortam yaratılması gerekmektedir. Mesleki gelişimlerini ve kalıcı gelişmelerini sağlamak, motive etmek ve teşvik etmek özellikle önemli araştırma sonucunu oluşturmaktadır.

Schenkelberg, (2019) tarafından yapılan çalışmada gelişimsel yetersizliği ve gecikmeleri olan Okul Öncesi Dönem Çocuklarının Fiziksel Aktivitesi araştırılmıştır. Okul öncesi çağda olan 3-5 yaş arası çocuklarda fiziksel aktivite davranışı ve ilişkili ilişkiler, engelliliğin belirlenmesi ve müdahalesi konusunda bilgi edinmek oldukça önemlidir. Araştırma içeriğinde ise Okul çağındaki engelli çocukların davranışsal ve sosyal ve fiziksel çevresel özellikleriyle anlamlı düzeyde ilişkili olduğunu göstermektedir. Araştırmada 34 engelli çocuğun davranışları ve okul öncesi çocukların sosyal ve fiziksel çevresel özellikleri incelenmiştir. Böylelikle gelişimsel yetersizliği olan okul öncesi çocuklarda gözlenen faktörler. Sonuçlara bakıldığında, belirli bireysel düzeydeki ve çevresel düzeydeki faktörlerin önemli ölçüde ilişkili olduğunu göstermiştir. Yapılan bu çalışma sonucunda ise engelli çocuklarda fiziksel aktiviteyi engellilik özellikleriyle ve fiziksel ve sosyal ortamlarla ilişkili olduğu tespit edilmiştir.

Yöntem

Araştırma Modeli

Bu araştırmada nitel araştırma yöntemlerinden biri olan görüşme tekniği ile yapılmıştır. Nitel araştırma, insana ait olan kişisel özelliklerin farklı ve gerçekçi doğasına odaklanmaktadır (Baltacı, 2019). Nitel araştırma, kelimeleri, fikirleri veya deneyimleri algılamak amacıyla sayısal olmayan verileri (örneğin metin, video ya da ses vb.) bütünü ve incelemesini içermektedir. Dolayısıyla nitel araştırmada özellikle gözlem, yorumlar ve analizler önemli safhada yer alır (Yıldırım ve Şimşek, 2021). Bu amaç doğrultusunda çalışmada nitel araştırma yöntemlerinin bir çeşidi olan fenomenoloji deseni kullanılmıştır. Fenomonoloji deseni bireylerin bir olguya yönelik yaşanmış deneyimlerinin araştırılması ve yorumlanmasına olanak tanımaktadır (Saki Sabah ve Öksüz, 2013).

Evren- Örneklem

Araştırma evrenini KKTC’de bulunan okul öncesi öğretmenleri oluşturmaktadır. Örneklem grubu ise KKTC’nin Lefkoşa ilçesinde bulunan “Günüşiği Kreş ve Anaokulunda” görev alan 8 okul öncesi öğretmeni araştırmanın örneklem grubunu oluşturmaktadır.

Veri Toplama Süreci

Yarı-yapılandırılmış Görüşme Formu, araştırmacı tarafından hazırlanacaktır. Öğretmenler tarafından gözlemlenen çocuklara beden eğitimi ve hareket etkinliklerinin çocuklar üzerindeki etkileri ve öğretmenlerinde buna ilişkin görüşleri incelenecektir. Öğretmenlerin görüşleri alınırken öğretmenlere açık uçlu sorular sorulacaktır. Sorulacak olan sorular aşağıda yer almaktadır.

Bulgular

Tablo 1: Spor etkinlikleri ve beden eğitimi faaliyetleri ile ilgili okul öncesi öğretmenlerin Görüşleri

Tema	Kod	f	%
Spor etkinliklerinin etkileri	Birçok gelişim alanı	4	40%
	Kaba motor beceriler	2	20%
	Sosyal-duygusal beceriler	2	20%
	Fiziksel gelişim	2	20%
Toplam		10	100%

Araştırmanın birinci alt amacı “Spor etkinlikleri ve beden eğitimi faaliyetleri ile ilgi düşünceleriniz nelerdir?” şeklinde. Bu alt amaç dikkate alındığında sorular yöneltilerek sonuçlar elde edilmiştir. On katılımcıdan dördü, birden çok gelişim alanına etki ettiğinde bahsetmişlerdir. On kişinin ikisi sadece motor beceri üzerinde olumlu etkilerinden kalan dört kişiden ikisi sosyal- duygusal beceriler diğer iki kişi ise fiziksel gelişim becerileri alanına değinmiştir.

Görüş bildiren okul öncesi öğretmenlerine ilişkin ifadeler aşağıda verilmiştir.

“Okullarda çocukları jimnastiğe gittiklerinde ince ve kaba motor becerilerinin gelişimlerinin hızla ilerlediğini gözlemlerim. Hareketli oyun etkinliklerinde çocukların bedensel ve zihinsel olarak gelişim düzeylerini doğrudan etkilediğini gördüm. Hareketli oyun etkinliklerine örnek verilecek olursa denge oyunları, top oyunları, parkur oyunlarını örnek verebilirim.” (Öğretmen, 1)

“ Hareketli oyun etkinlikleri kapsamında çocukların atlayarak zıplayarak parkur oyunlarında tüm vücutlarını aktif kullanarak özellikle motor gelişimlerine çok büyük bir etkisi olduğunu söyleyebilirim. Sporu çocuğun tüm gelişim alanlarına hitap edecek şekilde severek, eğlenerek yani oyun yoluyla dikkatlerini çekmeye çalışırım.” (Öğretmen, 5)

“Sporu çocuklara parkurlar veya yarışmalar şeklinde eğlenceli hale getirebilirim. Aynı zamanda bu etkinlikleri dramalaştırarak çocukların oyun sürecine aktif olarak katılımını sağlayabilirim. Çocukların aktif katılımlarını sağlayabilmek için aile ile işbirliği çerçevesinde çocukların sporu sadece okul içinde değil hayatlarına almaları ile ilgili bilgilendiririm. Hayatlarında sürekliliği sağlamak için aile büyük ve önemli faktör olduğunu gözlemlerim.” (Öğretmen, 8)

Yukarıdaki görüşleri veren öğretmenlerin okullarda verilen beden eğitimi temelli spor etkinliklerinin yeterliliği konusunda okul öncesi öğretmenlerinin birçoğu çocukların gelişim alanına etkisi olduğunu düşünmektedir. Görüşlerin genelinde en çok psiko-motor becerilerine etkisinin oldukları gözlenmiştir. Bunun yanında fiziksel, bilişsel, sosyal yani birçok gelişim alanına da vurgu yapan öğretmenler görüşleri analiz edilmiştir.

Tablo 2: Spor etkinlikleri yaparken çocukların duygu durumlarına ilişkin bulgular

Tema	Kod	f	%
Aile katılımı	Sosyal-duygusal gelişim	5	50%
	Özbakım	3	30%
	Bilişsel gelişim	1	10%
	Tüm gelişim alanları	1	10%
Toplam		10	100%

Araştırmanın ikinci alt amacı ‘Spor etkinlikleri yaparken çocukların duygu durumları nasıldır?’ şeklindedir. Katılımcılardan on kişiden beşi aile katılımının çocukların sosyal ve duygusal becerilerine etkisinden bahsetmiştir. Katılımcılardan üçü özbakım becerilerininikalan iki katılımcıdan biri tüm gelişim alanlarına diğeri ise bilişsel gelişime etkilerini kapsayan ifadeler kullanmıştır.

Görüş bildiren okul öncesi öğretmenlerine ilişkin ifadeler aşağıda verilmiştir. “*Bazı aileler çocukların koşup terlememesini ve hasta olmamasını isterler. Fakat biz ailelere bu konuya açıklık getiririz. Aksine çocukların kendilerini sevmelerini topluma katılmalarını ve insanlarla iletişimlerini oldukça etkileyen en önemli faaliyetin hareketi kapsayan sporu vurgularız. Spora teşvik konusunda aileleri bilinçlendiririz. Özellikle kaynaştırma öğrencilerinde spora yatkınlığı ve ilgisi olan öğrenciler için okul dışında da ilgisi her ne ise o konuda destek görülmesi gerektiğini söyleriz.*” (Öğretmen, 3)

“*Aile katılımı açıkçası özbakım gelişim alanı ile birlikte yani özbakım becerilerine ve birçok gelişim alanına etkisi olduğunu düşünüyorum. Çünkü aile katılımında dil gelişimi de desteklenir. Aile ile çocuğun veya çocuğun kendi akranlarıyla da iletişimde de oldukça olumlu gelişim gözlemleriz. Öğretmenlerin motivesi kadar ailenin de desteği önemlidir. Evde bu motivenin ve desteğin devamlılığı önemlidir.*” (Öğretmen, 7)

“*Motivasyonlarını arttırıcı davranışlarda bulunuyorum. Yaptıkları ve başardıkları her davranışın sonucunda bir ödüllendirme yaparak onların özgüvenleri yani sosyal- duygusal gelişim alanlarına destek sağlıyorum. Çocukların kendilerini ve kendilerinde bulunan*

yetenekleri keşfedici yöntemlerde bulunmak onların kişilik gelişimleri ve kimlik kazanmalarında aktif rol alacağına da değinmeden geçmek istemeyeceğimi belirtmek isterim.” (Öğretmen,9)

Yukarıda görüşleri veren öğretmenlerin çocuklar üzerinde aile katılımının çocuğun en çok hangi gelişim alanına etkisinin olduğu sorusu sorularak öğretmenlerden yanıt alındı. Alınan yanıtlarda en çok çocuğun sosyal ve duygusal gelişim alanına etkisinin olduğu görüşüne varıldı. Bu görüşe ilişkin öğretmenlerden örneklerle açıklandı. Çocukların neden en çok sosyal ve duygusal alanına gelişiminin etkilendiği cevaplarla sonuca varılmıştır.

Tablo 3: Beden eğitimi ve Spor etkinlikleri gibi faaliyetleri geliştirmek için neler yapılması gerektiğine ilişkin bulgular

Tema	Kod	f	%
Teşvik edici yöntemler	Aile katılımı	6	60%
	Ödül	2	20%
	Motive	1	10%
	Cesaretlendirme	1	10%
Toplam		10	100%

Araştırmanın üçüncü alt amacı ‘Beden eğitimi ve Spor etkinlikleri gibi faaliyetleri geliştirmek için neler yapılması gerektiğini düşünüyorsunuz?’ şeklindedir. Katılımcılardan on kişiden altısı aile katılımıyla ailenin de çocuğu spora teşvik etmesi yanıtı alınmıştır. Kalan dört kişiden ikisi başardığı veya gayret ettiği davranışlarda ödül kullanarak çocuğa pekiştireç sunularak çocuğun ilgisini çekmek istendiği kalan bir kişi ise çocuğu cesaretlendirerek özgüven sağlamak gerektiği en son katılımcı ise çocuğu motive edici davranışlar yanıtı alınmıştır.

Görüş bildiren okul öncesi öğretmenlerine ilişkin ifadeler aşağıda verilmiştir.

“Spora yatkınlığı olan çocuklar gözlemlendiğinde aile ile konuşulup okul dışında faaliyetlere katılımın desteklenmesi oldukça önemlidir. Aile, öğretmen ve çocuk işbirliği içerisinde bir ekip halinde yatkınlığı bulunan çocukların sporu daha da sevip zevk alması da bir o kadar önemlidir. Bunların yanında tüm gelişim alanlarına da etki ve öneminden kaynaklı çevik bir sporcu temellerinin atılması mümkün diye düşünebiliriz.” (Öğretmen,2)

“Aile katılımının çocuğun her eğitim alanında önemli olduğunu biz eğitimciler bu alanda da vurgulayabiliriz. Sporun çocuğun sadece okulla yeterli olmadığı yadsınamaz bir gerçektir. Sadece okulda gerçekleşen fiziksel aktivitenin yeterli olmayacağı spor ailenin de desteğiyle çocuğun hayatının merkezinde olması gerektiğini düşünürüm. Günümüz teknoloji çağı sebebiyle hareketsiz yaşamdan çocuklarımızı uzak tutmak biz ebeveyn ve öğretmen işbirliğiyle

olumlu sonuçlar doğurması oldukça mümkündür.” (Öğretmen,4)

“Öncelikle aileyle görüşme yaparım. Ailenin de çocuğu desteklemesini sağlarım. Belli bir yönde bir ilgisi veya merakı varsa bunun sadece okul içinde kalmaması gerektiğini düşünürüm. Bu yüzden önce aileyle görüşürüm. Yönlendirebileceğimiz donanımlı bir kurum varsa öneride bulunabilir. Daha çok işi bilen insanlardan eğitim alması gerektiği görüşünü savunurum. Öğretmeni olarak okulda onun ilgisini çekecek etkinlikler veya oyunlarda planlamaya özen gösteririm.” (Öğretmen,6)

Yukarıda görüşleri veren öğretmenlerin spora yatkınlığı bulunan çocuklara yönelik teşvik edici yöntemlerin neler olduğu ile ilgili sorular yöneltilmiştir. Yanıtlar analiz edildiğinde ise ortaya çıkan cevapların geneline bakıldığında en büyük etkenin aile katılımı olduğu görülmektedir. Birkaç öğretmenin yanıtlarında ise ödül kavramı yanıtı verilmiştir. Ödülün neler olabileceği konusunda iki öğretmende çocuğu cesaretlendirici davranışlar yapılarak çocuklara onay vererek onları teşvik etmeyi sağladıkları açıklanmıştır.

Sonuç

Öğretmenlerin kişisel bilgilerinin çocukların günlük hareket ihtiyaçlarının karşılanması üzerindeki etkisi bu çalışmada incelenmiştir. Araştırmada elde edilen bulgular neticesinde okul öncesi sınıf öğretmenlerinin beden eğitimi ve spor etkinliklerinin çocukların sadece fiziksel gelişimlerinin değil birçok gelişim alanına katkıda bulunulduğunu açıklamaktadır. Sınıf öğretmenleri çocukların hareketli oyunlar ile tüm vücutlarını aktif bir şekilde kullanarak özellikle kaba motor ve ince motor gelişimlerine çok büyük bir etkisi olduğunu görülmektedir. Spor ile tüm bedensel hareketlerini koordineli bir şekilde kullanarak, gelişimlerini sürekli hale getirip sporu çocuklara aşılacak istedikleri sonucuna ulaşılmıştır. Çocuklara sporu daha keyifli hale getirebilmek için parkurlar ve yarışmalar yarışmalar düzenlemektedirler.

Araştırmamız da çocukta fiziksel aktivitenin yaşam boyu sürdürülmesinde sınıf öğretmenin desteğinin yanı sıra ailenin de destek ve teşviki de önemli bir rol oynamaktadır. Bazı aileler çocuklarının spor da yorulup terlemesini istememektedir. Bu konu da sınıf öğretmenleri aileler ile iletişim halinde olup sporun çocuğun gelişimi için ne kadar önemli olduğunu açıkça anlatmaktadırlar. Bu konuda okul öncesi sınıf öğretmenleri aileye ev ziyaretleri düzenleyerek çocuğun evde ebeveynler ile hangi sportif faaliyetlerde bulunduğunu gözlemlemektedir. Gözlemlerini aile ile paylaşan sınıf öğretmenler aile iletişimde güçlü olmasına dikkat etmektedirler. Çalışmamızda okul öncesi sınıf öğretmenlerinin spora yatkınlığı olan çocukların ailesi ile görüşülüp aileyi çocuklarının sporda olan yeteneğini hakkında bilgilendirerek çocuğu daha kapsamlı bir eğitim kurumuna gitmelerini için yönlendirdikleri amaçlanmaktadır. Aile ve okul işbirliği, güzel duygu ve düşüncelerin netleşmesine yardımcı olmaktadır. Yeterli spor

kültürüne sahip aileler, çocuklarını okul öncesi ve okul çağında spor yapmaya teşvik ederek birçok anormal davranışın önüne geçmektedir.

Bağcı ve kaya, 2022 tarafından yapılan çalışmada okul öncesi dönemde çocukların fiziksel aktivitelerinin artırılmasında geleneksel oyunların rolünün önemi vurgulanmaktadır. Geleneksel oyunların içeriğinde fiziksel aktivitenin yeri incelenmiş olup, okul öncesi dönemde aktif oyunların önemine değinilmektedir. Okul öncesi öğretmenlerinden çocukları beden eğitimi ve spor etkinliklerini çocuklara daha keyifli hale getirecek oyunlar ile yapmaktadır. Geleneksel oyunların öğrenmeyle birleştirilmesinin fiziksel gelişimde gözlenebilecek olumlu etkileri ortaya çıkmaktadır. Yapılan çalışmayla karşılaştırıldığında ise çalışmamız kapsamında geleneksel oyunlar sadece içerik olarak ele alınarak bu geleneksel oyunların çocuğun gelişim alanlarına olan katkılarından da bahsedilmiştir.

Xiang, Lowy ve McBride'in (2002) tarafından çalışmasında, sınıf öğretmenlerinin beden eğitimi ve spor dersinin, eğitime karşı olumsuz tutuma sahip olanların geçmişten gelen olumsuz deneyimlerin de olduğu tespit edilmiştir. Araştırmadan elde edilen diğer bulgular, spor salonlarına ve aktivitelere erişimde fiziksel aktiviteye katılımın önemli bir rol oynadığını ancak öğretmen adaylarının çoğunun daha önceki okul deneyimlerinde bu tür fırsatlara sahip olmadığını göstermektedir. Birçok ulusal ve uluslararası literatürde spor salonu kullanımının kişinin fiziksel aktiviteye katılımı üzerinde olumlu etkisi olduğu vurgulanmaktadır. Bu çalışma literatürde tarandığında çalışmamız kapsamında beden eğitimi ve sporun sadece fiziksel aktiviteye olan etkisinden değil sosyal-duygusal, fiziksel, bilişsel, dil gibi birçok gelişim alanları ve becerileri de konu aldığı bir çalışma oluşturulmuştur.

Çalışmamız doğrultusunda okul öncesi dönemde motor gelişimin açık bir gelişim olduğu ve bu dönemde çocukların çeşitli program ve etkinliklerle desteklenmesinin çocuğun gelişimini ve özellikle motor gelişimini destekleyebileceği ileri sürülebilir. Okul öncesi dönem çocukların kaba ve ince motor becerilerini öğrenmeleri için önemli bir dönemdir. Okul öncesi sınıf öğretmenleri bu dönemde çocukların ince ve kaba motor gelişimlerini geliştirebilecek spor etkinlikleri yapmaktadır.

Çalışmamız sonuncunda ise şu bulgulara ulaşılmıştır. Okul öncesi sınıf öğretmenlerinden alınan bilgiler doğrultusunda beden eğitimi ve spor etkinliklerinin çocukların motor gelişimleri için çok önemli olduğunun vurgulamaktadırlar. Sınıf öğretmenlerimizin Çocukların fiziksel gelişimlerini desteklemek amacıyla yaptıkları etkinlikler büyük önem arz etmektedir. Sınıf öğretmenlerimiz çocukların yaşlarına ve gelişim düzeylerine uygun şekilde etkinlik yaparak çocukları başarı konusunda da motive etmektedirler. Park alanında grup şeklinde yaptıkları spor etkinlikleri sayesinde çocuklar arasında etkileşimini arttığının çocukların daha sağlıklı ve zinde

Öneriler

Araştırmanın bu bölümünde elde edilen bulgular doğrultusunda aşağıda belirtilen maddelerle önerilere yer verilmiştir;

Beden eğitimi ve spora yönelik faaliyetler gün içerisinde bu tür faaliyetlere ayrılan süre arttırılmalıdır.

Okul öncesi kurumlarla çeşitli spor kulüplerinin işbirliği sağlanarak spora yatkınlığı olan çocukların bu kulüplere yazılmaları sağlanmalıdır.

Okul öncesi kurumlarda beden eğitimi ve spor temelli etkinliklerin yapılabileceği uygun fiziki şartlarda salon temin edilmelidir.

Okul öncesi kurumlarında görev alan öğretmenlerin çeşitli kurslara giderek beden eğitimi ve spor alanında temel bilgi ve beceri kazandırma yoluna gidilmelidir.

Okul öncesi kurumlarda beden eğitimi ve spor temelli hareket-oyun etkinliği kapsamında materyal eksikliğinin giderilmelidir.

Beden eğitimi ve spora ilişkin hareket-oyun etkinlikleri kapsamında aile katılımıyla çocukların aktif katılımı sağlanabilir.

Okul öncesi kurumlarında beden eğitimi ve spor faaliyetlerinin çeşitli müzik aletleri ile zengin içerik oluşturulabilir.

Aileler, çocuklarının oyun ve hareket eğitimi ile çok yönlü (fiziksel, sosyal-duygusal, zihinsel bilişsel v.b) gelişeceği hususunda seminer ve toplantılarla bilinçlendirilmelidir.

Okul öncesi eğitim kurumlarında beden eğitimi ve spora yönelik yıllık planlarında, çocukların daha çok oyunla eğitilmelerine olanak sağlayacak programlara yer verilmelidir.

Okul öncesi eğitim kurumları kapsamında beden eğitimi ve spor öğretim programları planlanırken kazanım ve göstergeler dikkate alınarak yeniden değerlendirilmelidir.

Özet

Katılım hakkı çocukların kendisini ilgilendiren her konuda görüşlerini bildirmesini ve bu görüşlerin yetişkinler tarafından dikkate alınmasını ayrıca karar alma sürecinde çocuğun da aktif rol almasını içermektedir. Katılım hakkı, sadece belli konularla sınırlı değildir. Çocuğu ilgilendiren her konuda çocuğun görüşünün alınma hakkı vardır. Çocuğun katılım hakkını öğrendiği ilk ortam ailesidir. Görüşüne önem verilen ortamda büyüyen çocukta kendini ifade etme becerisi ve karar verme becerisi gelişir. Bu çalışmada katılım hakkı çerçevesinde çocukların boş zaman aktivitelerini nasıl değerlendirdikleri, boş zaman aktivitelerini neye göre seçtikleri gibi konularda çocukların düşüncelerini doğrudan çocuklardan almak amaçlanmıştır. Bu amaç doğrultusunda Mayıs 2023-Kasım 2024 yılları arasında yaşları 7-11 arasında değişen, boş zaman aktivitesine devam eden toplam 13 çocuktan yarı yapılandırılmış görüşme formu ile veriler toplanmıştır. Toplanan veriler, temel analiz yönteminin alt boyutundan olan betimsel analiz yöntemi ile analiz edilmiştir. Toplanan verilerden 4 kategori oluşturulmuştur. Bu kategoriler “Gideceği aktiviteye karar veren kişi, Aktiviteye karar verme süreci, Gitmek istediği aktiviteler ve gitmeme sebebi, Gittikleri aktivitelerde değiştirmek istedikleri” olarak belirlenmiştir. Araştırma sonucunda çocukların ifadeleri göz önüne alındığında boş zaman aktivitelerine başlamaları çocukların kararları ile gerçekleşmekte ancak bazı çocukların kararlarının alınmadığı da görülmektedir. Çocukların boş zamanlarını spor, sanat, etüt gibi etkinliklerle değerlendirmekten hoşlandıklarını ve çocukların aktivitelerle karar verirken arkadaşlarından etkilendikleri veya başarılı olmak istedikleri için, ödevlerini bitirmek için bir aktiviteye gitmeyi tercih ettikleri bulgulanmıştır. Ayrıca çocuklar gittikleri aktivitelerde çevresel düzenlemeler yapmak istemektedirler. Çevresel düzenlemeler yapılırken çocukların görüşleri alınabilir çünkü çocuklar çevreleriyle ilgili sorunlarla ilgilenmektedirler ve aktif bir şekilde kullandıkları alanlarla ilgili görüş bildirme hakkına sahiptirler. Çocukların görüşlerinin çocuklardan alındığı bu tür araştırmalar ile çevre düzenlemesi, eğitim ve öğretim politikaları çocukların aktif katılımına olanak verecek şekilde şekillendirilmesine yardımcı olabilir.

Children’s Perspectives on Leisure Time: An Analysis Through the Lens of Participation Rights

Abstract

The right to participation includes children expressing their views on all matters concerning them, having these views taken into account by adults, and actively taking part in decision-making processes. This right is not limited to specific topics; children have the right to be consulted in all matters affecting them. The first environment where children learn about their right to participation is the family. Children who grow up in an environment where their opinions are valued develop skills in self-expression and decision-making.

This study aims to directly gather children’s perspectives on how they evaluate their leisure time activities and how they make decisions when choosing these activities, within the framework of the right to participation. For this purpose, data were collected from 13 children aged between 7 and 11 who regularly participated in leisure activities, using a semi-structured interview form between May 2023 and November 2024. The collected data were analyzed using the descriptive analysis method, which is a sub-dimension of basic qualitative analysis. Four categories were identified from the data: “The person who decides on the activity,” “The decision-making process,” “Preferred activities and reasons for not participating,” and “Suggestions for changes in current activities.”

The results indicate that children generally decide for themselves when it comes to starting a leisure activity, but in some cases, their opinions are not taken into account. The children expressed that they enjoy engaging in activities such as sports, arts, and study sessions during their leisure time. They also reported that they are influenced by friends, motivated by success, or prefer to join activities to complete homework. Additionally, children expressed a desire to make environmental adjustments in the activities they attend. Since children are interested in issues related to their surroundings and actively use these spaces, their opinions should be considered in environmental planning. Studies like this, which center children’s voices, can contribute to shaping educational policies and environmental regulations in a way that supports children’s active participation.

Giriş

Birleşmiş Milletler Çocuk Hakları Sözleşmesi'nin birinci maddesine göre on sekiz yaşına kadar her birey 'çocuk' olarak tanımlanmaktadır. Sözleşme ülkemizde 1990 yılında kabul edilmiş ve 1995 yılında yürürlüğe girmiştir (Akarca, 2011). Çocuk Hakları Sözleşmesinin dayanağı olan temel ilkeler vardır. Bunlar; yaşama, korunma, gelişme ve katılım hakkıdır (Kobat, 2009). Çocukların katılım hakkı, sözleşmede 'Her çocuk, görüşlerini serbestçe ifade etme, kendisini ilgilendiren her konuda görüşlerinin dikkate alınmasını isteme hakkına sahiptir. Herkesin çocukları dinleme, onların fikirlerini öğrenme ve onlara saygı gösterme sorumluluğu vardır.' şeklinde tanımlanmıştır (UNICEF, 2004). Katılım hakkı; çocuğun kendini ilgilendiren her alana, mekâna, olaya dahil olmasıdır (Erbay, 2016). Çocuğun haklarını öğrendiği ilk çevre ailesidir. Çocuğun ilk yıllarında mikro sistemi içerisinde yer alan okul ve ailesidir. Ancak aile ve okul ortamlarında da çocuğun katılım hakkını teslim edilmesi için değiştirilmesi gerekenler vardır (Save The Children, 2010). Ailede karar verme süreçlerinde çocuğun katılım hakkının teslim edilmesi konusunda yapılan araştırmada, aileler çocuklarının karar verme veya görüş bildirmeye yönelik hakları olduğunu düşünmemektedirler (Akyol, 2020). Yapılan başka bir araştırmaya göre çocukların katılım hakkı teslim edilmiş görünse bile, çocukların kendi hakkında karar alabilmesi için yetişkinin seçtiği ortamda ve belirlediği türde (yazı, resim gibi) düşüncelerini ifade etmesi beklenmektedir (Emilson & Folkesson, 2006; LeFrancois, 2007).

Yetişkinlerin çocuk adına karar aldığı bu katılım, Hart'ın (2016) katılım merdivenine göre 'gerçek katılım değildir'. Gerçek katılımdan bahsetmek için çocuğun bilgilendirildiği, saygı duyulduğu basamaklar olan dördüncü-sekizinci basamaklarında bulunulması gerekmektedir. Çocukların kendi yaşamlarında söz sahibi olmadığı ilk üç basamak onların güçsüz hissetmesine sebep olmaktadır (Hart, 2016). Günümüz ebeveynlerinin çocuk adına karar aldığı bu tutum 'Helikopter ebeveynlik' olarak tanımlanmaktadır. Helikopter ebeveynler, çocuklarının eğitiminde ve diğer sosyal alanlarda müdahaleci olabilmektedir bunun sebebi ebeveynin kendisine göre çocuklarına fayda sağlamaktır (LeMoyne & Buchanan, 2011). Yapılan bir araştırmaya göre Türkiye'deki annelerin %30'u babaların ise %15'e yakını helikopter ebeveyn tutumuna sahiptir (Yılmaz, 2020). Kaplan Annenin Zafer Marşı (Chua, 2016) kitabında da bahsedildiği gibi çocukları için neyin iyi olacağına bazen çocukların düşüncelerine bile danışmadan karar verilmektedir çünkü ebeveynler "çocuk için her zaman en iyisini ben bilirim" bakış açısına sahiptirler. Bu tutum ise okul çağındaki çocukları olumsuz olarak etkileyebilmektedir. Erikson'ın psikososyal gelişim evrelerinden 'Başarıya karşı Başarısızlık' dönemine denk gelen bu dönemde eğer çocuk başarısızlık duygusu ile dönemi

bitirirse ilerleyen dönemlerde zorlanabilmektedir (İnanç, Atıcı & Bilgin, 2015). Başarma çocukların özgüven duygularını geliştirirken, başarısızlık çocukların özgüvenlerini zedeleyebilmektedir (Senemoğlu, 2018, s. 79).

Çocukların katılım hakkı, öncelikle içinde bulundukları mikrosistem olan ailede teslim edilmelidir çünkü çocuklar katılım hakkı ile ilgili ilk tecrübelerini aileleri ile ev içinde deneyimlemektedir. Çocukların katılım hakkına yönelik yapılan araştırmalarda çocukların oyun ve eğitim haklarına vurgu yaptıkları; ancak çok azının katılım hakkına yönelik ifadelerde bulunduğu sonucuna ulaşılmıştır (Ersoy, 2011; Şenol & Akyol, 2017; Yazıcı & Baydar, 2015). Literatür incelendiğinde Avcı ve Gençler'in (2017) ve Akyol'un (2020)'un ailelerin bakış açısıyla çocukların katılım hakkını inceledikleri ve Koçyiğit (2014), LeFrancois (2007), Davies, Waters, & Fraser (2025), Alminde, (2024), çocukların bakış açısıyla katılım hakkının araştırıldığı bulunmuştur. Yapılan bu çalışmada ise çocukların kendi yaşamlarına dair görüşlerinin alınması, boş zaman aktivitesi hakkında düşüncelerini öğrenilmesi, boş zaman aktivitelerinde kendilerini nasıl hissettiklerinin anlaşılmasının doğrudan çocuklardan öğrenilmesi açısından önem taşımaktadır.

Yöntem

Bu çalışmada çocukların boş zaman aktivitesine başlarken ve devam ederken çocuklara katılım hakkının teslim edilip edilmediğini öğrenmek ve çocukların bu konudaki bakış açılarını ele almak amaçlanmıştır. Bu amaç doğrultusunda toplanan veriler, temel analiz yönteminin alt boyutundan olan betimsel analiz yöntemi ile analiz edilmiştir. Betimsel analiz, verilerin derinlemesine incelenmesi ve doğru bir şekilde sunulması için kullanılan bir tekniktir. Araştırmacı, bu yöntemi kullanarak verileri olduğu gibi sunmuş ve herhangi bir yorum katmamıştır. Betimsel analizde amaç, elde edilen verilerin kesinlik ve objektiflik içinde, okuyucuya neyin, nasıl ve hangi bağlamda gerçekleştiği hakkında bilgi vermektir (Sönmez & Alacapınar, 2019).

Katılımcılar

Tablo 1: Katılımcıların özellikleri

	<i>Katılımcı</i>	<i>Yaşı</i>	<i>Gittiği aktiviteler</i>	<i>Aktiviteye devam ettiği süre</i>
1	Emir	7.5	Futbol	5 hafta
2	Elif	8	Etüt	2 ay
3	Ceren	8.5	Piyano ve Voleybol	Voleybol: Birkaç ay Piyano: 3 yıl
4	Eray	8.5	Etüt	3 yıl
5	Zeynep	9	Karate, Bale, Piyano, İngilizce	Karate: Birkaç ay Piyano: 4 yıl İngilizce: 3 yıl Bale: 6, 5 yıl
6	Yağız	9	Halk oyunu ve Judo	Judo: 3 ay Halk Oyunları: 3 yıl
7	Hayal	9	Kuran kursu	Birkaç ay
8	Yağmur	10	Dans, İngilizce, Piyano	Dans: 2 yıl Piyano: 5 yıl İngilizce: 1 yıl
9	Ahmet	10	Etüt	1 yıl
10	Damla	11	Etüt, Voleybol	Etüt: 3 ay Voleybol: 3 ay
11	Arif	11	Futbol, Kuran kursu	Futbol: 8-9 Ay Kuran kursu: 11 ay
12	Aybüke	11	Masa tenisi	4 yıl
13	İnci	11	At binicilik ve Voleybol	At binicilik: 5 yıl Voleybol: Birkaç ay

Katılımcılar uygun örnekleme tekniği ile 7-11 yaş arasında, aktif olarak boş zaman aktivitesine devam eden ve özel gereksinimi olmayan çocuklardan seçilmiştir. Araştırmadaki çocukların farklı cinsiyete, yaşa, kültüre sahip olmasına ve farklı aktivitelere devam etmesine dikkat edilmiştir.

Sonuçlar

Çocuklarla yapılan görüşmeler sonucunda, çocukların gözünden boş zaman aktivitelerine yönelik görüşleri 4 kategori altında toplanmıştır. Bu kategoriler “*Gideceği aktiviteye karar veren kişi, Aktiviteye karar verme süreci, Gitmek istediği aktiviteler ve gitmeme sebebi, Gittikleri aktivitelerde değiştirmek istedikleri*” olarak belirlenmiştir.

Kategori 1: Gideceği aktiviteye karar veren kişi

Çocukların ifadeleri “Ben, babam ve ben, annem” başlıkları altında toplanmıştır. Bulgular çoğunlukla çocukların gideceği aktiviteye çocukların kendilerinin karar verdiğini göstermektedir. Çocukların “ben” başlığına örnek ifadeleri: İnci (11) “*Voleybolu seviyorum evde oynuyorum işte anneme dedim ‘Beni voleybola yazdırır mısınız?’ dedim sonra işte o şekilde oldu.*” Damla (11); “*Tabletimden voleybol maçlarını izliyorum, Eda’dan, Vargas’tan şey alıyorum yani örnek alıyorum. Ben de diyorum ki ‘Acaba ben de yapsam birazcık elimden ne geçer ki’ dedim. Benim annemin arkadaşı da kızını yazdırmış, dedi ki annemin arkadaşı ‘Sen*

de İnci'yi voleybola yazdırır mısın?’ dedi, annem de ‘Olur’ dedi. Öyle işte, ben seviyorum voleybolu.” Çocukların, gidecekleri aktiviteye karar verirken medyadan etkilendiği görülmektedir. Bu ifade, medyanın hayatımızdaki önemi ve bizi etkilemesine dair örnek olarak verilebilir. Çocuklar, internetten gördüğü kişileri rol model olarak gideceği aktiviteye karar verebilmektedir. Bu da aslında medyanın çocukların hayatındaki yerini göstermektedir. Az da olsa bazı çocukların gideceği aktiviteye annelerinin tek başına karar verdiği görülmektedir. Çocukların “annem” başlığına örnek ifadeleri olarak: “*Annem. Ben istemiyorum da*” Ahmet (10), “Annem” demiştir. Annelerin, çocukları yerine karar vermesi helikopter ebeveyn tutumu ile alakalıdır. Çocuklar, nedenini bilmeden veya istemeden aktiviteye gitmektedirler. Yılmaz (2020), araştırmasında bulgularda olduğu gibi anneler, babalardan daha fazla çocuklar hakkında karar almaktadır. Bu durum çocukların boş zaman aktivitelerinde de aynı şekildedir. Bu nedenle çocuklar, istemedikleri veya ilgisini çekmeyen aktivitelere gidebilmektedir.

Kategori 2: Aktiviteye karar verme süreci

Çocukların, aktiviteye karar verme süreci kategorisine örnek ifadeleri: Arif (11), “*Kuran kursuna arkadaşım gidiyordu, onunla gitmek istedim. Futbol kursunda da ilk başta böyle bir hep futbolcu olmak istiyorum falan, olay için çabalayıp orada lisans alıp öyle bir yaş takımlarına girmek istiyordum. Mesela bir tane arkadaşım var o da futbol kursuna gidiyordu lisans aldı o da ve Kırklareli’nde U-11 takımında mı U-12 takımında mı ne oynuyor ve maçlara falan katılıyorduk maçlarına yani onun gibi olmayı isterim*” diye kendini ifade etmektedir. Yağız (9), “*Dans kursuna arkadaşım dedi ‘Gel’. O, gidiyordu onla beraber gitmek istedim. Sordular ‘Gitmek ister misin?’ ben de ‘evet’ dedim*”. Çocukların, bu yaş döneminde arkadaşlarından etkilendiği araştırmanın önemli sonuçlarından biridir. 11 yaş ergenliğe geçiş sürecidir ve ergenlikte arkadaş ortamı daha da önem kazanmaktadır (Berk, 2015, s.16). Çocuklar birlikte boş zamanlarını değerlendirecek aktivitelerde bulunurlar (İnanç, Bilgin & Atıcı, 2015, s. 272). Bu da gidecekleri aktiviteyi seçerken arkadaşıyla zaman geçireceği şekilde seçim yaptığını göstermektedir.

Bazı çocukların ise aktiviteye neden gittiği konusunda bilgisi yoktur Ahmet (10), bu “*bilmiyorum*” şeklinde kendini ifade etmektedir. Bu bulgu, çocukların kendi yaşamlarına aktif katılımının hala teslim edilmediği göstermektedir. Çocukların aktiviteye gitme sebeplerinden biri de ödevlerini bitirmek ya da derslerinden başarılı olmak. Elif (8), “*Eve gidince ödevlerim yük oluyordu o yüzden*” cevabı ile ödevlerin fazlalığını ifade etmektedir ve Yağmur (10), “*İngilizcede çok iyi olmadığım için başladım*” cevabı ile başarılı olmak için aktiviteye

başladığını ifade etmiştir. Bu ifadelerden yola çıkarak çocukların, ilkokula başladığı bu dönemde onlara verilen ödevlerden dolayı veya başarılı olma baskısından kaynaklı yeterince oyuna zaman ayıramadıkları düşündürmektedir. Eray (8,5), aktiviteye katıldığı saatin uzun olmasına yönelik şu şekilde eleştiri de bulunmuştur “*Kursu erken bitirirdim*”.

Kategori 3: Gitmek istediği aktiviteler ve gitmeme sebebi

Gitmek istediği aktiviteler kategorisi “Sanat, yok, spor, etüt” başlıkları altında toplanmıştır. Çocukların, bu kategoriye örnek ifadeleri şu şekildedir: Yağmur (10), “*Ben voleybolla gitmek isterdim*, Emir (7,5) “*Şu an 1 kurs 2 kursu ya da bu 3 kursa gitmek istiyorum şu an voleybol oynamayı da biraz biliyorum, basketbol oynamak istiyorum.*” İfadeler incelendiğinde spora gitmek isteyen çocukların cinsiyet açısından bir farklılık göstermediği görülmektedir. Her iki cinsiyette sporla ilgilenmektedir. Aybüke (11), sanat ve spora yönelik aktivitelere gitmek istediğini şu şekilde ifade etmiştir “*Voleybol olabilir müzik olabilir onun gibi şeyler, resim olabilir.*” Çocuklar, küçük yaştan itibaren aktiviteler ile ilgilenmektedirler. Zeynep (9), 4 aktiviteye devam etmekte ve 2,5 yaşından itibaren baleye gitmektedir. Aktiviteyi gitmeye karar veren kişi olarak “ben” ifadesini kullanmıştır. “*Hepsini ben istemiştin. Arkadaşlarımdan yine hem görüp istemiştin hem de bunların başarabileceğini düşünüp istemiştin.*” bu da aslında çocukların küçük yaştan itibaren ilgi alanına yönelik aktivitelere yönelebildiğini göstermektedir.

“*Peki neden gitmiyorsun?*” kategorisi “Bilmiyorum, Zamanım yok, Bulunduğum şehirde iyi bir kurs yok, Başlayacağım, Gittiğim kursta iyi olmak istiyorum, memnun kalmadım” başlıkları altında toplanmıştır. Çocukların gitmeme sebebi kategorisinde örnek ifadeleri: İnci (11), hangi aktiviteye gitmek istediği ve gitmeme sebebi hakkındaki düşüncelerini aşağıdaki şekilde ifade etmiştir: “*Baleye, cimnastiğe gitmek istiyorum çok seviyorum ama Yalova’da pek böyle güzel bir yer olmadığı için gitmiyoruz*”, Emir (7,5) öncelikle gittiği aktivitede başarılı olduktan sonra başka bir aktiviteye devam etmek istediğini şu şekilde ifade etmiştir: “*Daha çünkü annemlere söylemedim. Bir de futbolu ne zaman bitireceğimi bağlamaya çalıştım çünkü futbol kaç yaşına kadar gidebildiğimi bilmiyorum. Hocam bi’de iyi, çok büyük olunca büyüyünce iyi olanları takımını alıyormuş. Şimdi futbolcu olacağım için başka bir kursa gitmek istemiyorum şu an. Bunlar hayalini kurduğum. Dünyaca ünlü bir futbolcu olmak için de futbola gidiyorum.*” Yağız (9), başka bir aktiviteye devam etmek için zamanı olmadığını şu şekilde ifade etmiştir; “*(...) Zamanım hiç yok. Bir de ödevleri yetiştiriyorum, zor yetiştiriyorum normalde.*”

Kategori 4: Gittikleri aktivitelerde değiştirmek istedikleri

Çocukların gittikleri aktivitelerde değiştirmek istedikleri kategorisinde çocukların çevresel düzenlemeler yapmak istediği, bazı çocukların ise hiçbir değişiklik yapmak istemediği bulgulanmıştır. Örneğin; Ahmet (10) çevresel düzenlemeler yapmak istediğini şu şekilde ifade etmiştir; *“Her yeri bir boyardım yani güzelce sonra öğretmenler arardım sonra müdür arardım öyle ve sınıfların sandalyelerini değiştirdim, sıralarını, tahtalarını yazı tahtasını.”* Yağız (9): *“Ben yani oradaki oyun alanı var daha güzel büyük olmasını isterdim. (...) Top halat gibi şeyler koyardım.”* Çocuklar gittikleri aktivitelerde oyun da oynayabilecekleri yerler inşa etmek istemektedirler. Yağız (9), *“Oyun alanı var daha güzel büyük olmasını isterdim”*. Oyun alanlarını daha kullanışlı ve estetik olarak daha güzel görünecek şekilde düzenlemek istemektedirler. Ayrıca bazı çocuklar değişiklik yapmak istemediğini şu cümlelerle ifade etmiştir; Ceren *“Hiçbir şeyi değiştirmezdin.”*, Emir *“Bir şeyi değiştirmezdin çünkü değiştirsem kurs bozulurdu.”*

Tartışma ve Sonuç

Araştırmaya katılan çocukların konuya ilişkin görüşleri incelendiği çocukların katılım gösterdiği boş zaman aktivitesine karar veren kişinin çoğunlukla çocukların kendileri olduğu görülmektedir. Hart (2016)’ın katılım merdivenine göre çocukların kendi hakkında karar almaları gerçek bir katılım olarak ifade edilmektedir. Ortaya çıkan bu sonuç Avcı ve Gençler (2017) ile Gökçe, Keçeci & Yıldız, (2019) çalışmalarında da çocukların katılımlarının bu noktada olduğunu vurgulamış ve bu yönüyle literatür ile bulgunun örtüştüğü görülmektedir. Ebeveynler, çocukların yapılandırılmış serbest zaman aktivitelerine gitmesini, parkta oyun oynamalarından daha güvenli bulmaktadır ve bu aktivitelerin çocukların özgüvenlerini ve arkadaşlık ilişkilerini güçlendirdiğini düşünmektedirler (Gökçe, Keçeci & Yıldız, 2019; Aydın, Şahan, Yüksel, & Güneş, 2024; Mahoney & Stattin, 2000). Akyol (2020) yaptığı araştırmada ebeveynlerin, çocukları için sosyal aktivitelerin artırılması gerektiğini vurguladıkları bulmuştur.

Öne çıkan ikinci önemli bulgu olarak çocukların gideceği aktiviteye karar verirken arkadaşının gittiği aktiviteyi dikkate aldığı ve başarılı olmak için aktiviteyi seçtiği görülmektedir. Çocuklar bu dönemde Ericson’ın kuramına göre ‘başarıya karşı başarısızlık’ dönemindedir ve akademik olarak, sosyal olarak başarılı olmak çocukların özgüvenleri için önemlidir (Senemoğlu, 2018, 79) ve çocuklar orta çocukluk döneminde arkadaşlık ilişkilerine

önem vermektedir (Berk, 2015, ss.499-500). Bu dönemde olan çocuk, arkadaşlarından kolayca etkilenebilmekte ve akranlarının düşüncelerine yetişkinlerin düşüncelerinde daha fazla değer vermektedir (İnanç, Bilgin & Atıcı, 2015, s.194). Çocuklar gittikleri aktiviteler hakkında arkadaşları ile paylaşım yapmaktan hoşlanmaktadırlar (Cohen, 2008, aktaran Öztürk & Kutlu, 2017). Ayrıca aktiviteye neden gittiğini bilmeyen çocukların olması çocuğun boş zaman aktivitesi hakkında karar alma hakkı olmadığını gösterir.

Çocukların “aktivitelerde neleri değiştirmek isterdin” kategorisindeki ifadeleri incelendiğinde bir kısmı hiçbir şeyi değiştirmek istemezken diğer bir kısmı çevrede bulunan ve kendilerini rahatsız eden birtakım şeyleri değiştirmek istemişlerdir. Mesela çevresinde gözüne hoş gelmeyen alanları boyamak istemesi gibi. Hart (2016), çalışmalarında da görüldüğü üzere çocuklarımızın çevreye karşı sorumluluk sahibi olmasını istiyorsak çevresel konularda eleştiri yapan çocuklar yetiştirmemiz gerektiğini ve bunun içinde 2-3 yaşından itibaren çocukların çevresel konularda planlama ve tasarımla ilgilenmesi gerektiğini vurgular. Özdemir’in (2019), gönüllü lise öğrencileri ile yaptığı çalışmada görüldüğü üzere çocuklar çevresel düzenlemelere aktif bir şekilde katılmak istemektedirler ve çevreleri ile ilgili kararları akranlarıyla birlikte alabilmektedir. Jansson (2015), 6-11 yaş arası çocukların yerel oyun alanına yönelik bakış açılarını incelemiştir ve çocukların oyun alanına yönelik görüşleri şu şekildedir; farklı şekillerde de kullanabilecekleri ve kendini zorlayacak oyun ekipmanları tercih etmektedirler.

Sonuç olarak, çocukların ifadeleri göz önüne alındığında boş zaman aktivitelerine başlamaları çocukların kararları ile gerçekleşmekte ancak bazı çocukların kararlarının alınmadığı da görülmektedir. Bu yüzden aileleri çocuk katılımı hakkında daha fazla bilgilendirmek gerekmektedir. Bu doğrultuda okullarda aileleri bilgilendirmeye yönelik projeler yapılabilir. Çocukların çevreleri ile ilgili değiştirmek istediği şeyler vardır. Çevresel düzenlemeler yapılırken çocukların görüşleri de alınabilir çünkü çocuklar çevreleriyle ilgili sorunlarla ilgilenmektedirler ve aktif bir şekilde kullandıkları alanlarla ilgili görüş bildirme hakkına sahiptirler. Kısaca;

1. **Çocukların katılım hakkı desteklenmelidir:** Çocukların boş zaman aktivitelerine karar verme sürecinde fikirlerini ifade etmesi desteklenmelidir.

2. **Aileler, çocuk katılımı konusunda bilinçlendirilmelidir:** Çocukların karar alma sürecine katılımının önemi hakkında ailelere yönelik bilgilendirme çalışmaları yapılmalıdır.

3. **Çocukla iletişim için çocuk dostu iletişim yöntemleri kullanılmalıdır:** Çocukların kararları alınırken kendilerini rahat hissettikleri bir ortamda ve çocuğun yaşına uygun iletişim yöntemleri tercih edilmelidir.

4. **Etkinlikler erişilebilir hale getirilmelidir:** Çocukların ilgi alanlarına hitap edecek etkinlikler düzenlenmeli ve bu etkinlikler her çocuk için ulaşılabilir olmalıdır.

Kıbrıs Sağlık ve Toplum Bilimleri Üniversitesi, Çocuk Gelişimi Bölümü, Güzelyurt-KKTC

ayse.mortas@kstu.edu.tr-0009-0001-0135-4674

Özet

Bu araştırmanın amacı, okul öncesi eğitim kurumlarındaki öğretmenlerin otizm spektrum bozukluğu (OSB), erken müdahale programlarına ve kaynaştırma eğitimine ilişkin görüşlerinin belirlenmesi konusu oluşturmaktadır. Erken çocukluk dönemi 0-6 yaşları kapsayan, hayatın temelini oluşturan erken çocukluk eğitiminin başlangıç noktası ve gelişimin en hızlı olduğu kritik bir dönemi kapsamaktadır. Erken çocukluk dönemi her açıdan gelişimsel sürecin en hızlı olduğu dönemdir. Bu süreçte risk altındaki çocukların erken süreçte tanılanmaları ve erken müdahale sürecine uygun olarak eğitim almalarının, daha sonraki gelişim sürecine ilişkin öğrenme süreci ve davranış örüntüleri üzerinde büyük etkileri olduğu görülmektedir. Bu araştırma sürecine Kuzey Kıbrıs Türk Cumhuriyeti'nin Güzelyurt ilçesinde bulunan bir okulda yürütülmüştür. Bu okulda bulunan öğretmenlerin hepsi gönüllü katılmayı kabul eden on okul öncesi öğretmeniyle gerçekleştirilmiştir. Verilerin toplanması süreci ise yarı-yapılandırılmış görüşme yöntemiyle edinilmiştir. Ayrıca, araştırma için hazırlanan görüşme soruları, özel eğitim alanında uzman 3 öğretmenlerin görüşleri dikkate alınarak hazırlanmıştır.

Araştırmanın bulguları incelendiğinde, öğretmenlerin bir bölümü otizm spektrum bozukluğu olan çocukların kaynaştırma eğitimine alınmalarının sorun yarattığını belirtmişlerdir. Bu sorunların başında, gölge öğretmen eksikliği, otizmin düzeyi, yapılandırılmış ortamın sağlanamaması, sınıf mevcudu olarak belirtilmiştir. Bu araştırmanın sonucunda ise, öğretmenlerin bir bölümü ise erken müdahalenin otizmlili çocuklar ve kaynaştırma öğrenciler için gerekli olduğunu belirtmiştir. Bir diğer sonuç ise, otizm spektrum bozukluğu bulunan çocuklara erken müdahalenin, iletişim becerileri, sosyal ilişkiler, duyuşsal uyaranlara tepki ve toplumsal yaşam kalitesi gibi konularda olumlu geri dönütler alındığını göstermektedir. Sonuç olarak, bu çalışma otizm spektrum bozukluğu olan bireylerde erken müdahalenin önemini vurgulamaktadır. Erken müdahale programlarının çocukların gelişimleri üzerindeki etkileri ve ailelere sunduğu destekler için önemli bir rol oynadığı gözlemlenmiştir.

Anahtar kelimeler: Okul öncesi, otizm, erken müdahale, özel gereksinimli birey, kaynaştırma eğitimi.

A Review of Research on Determining the Views of Teachers in Preschool Education Institutions on Autism Spectrum Disorder and Early Intervention Education

Abstract

The aim of this study is to determine the views of teachers in preschool education institutions on autism spectrum disorder (ASD), early intervention programmes and inclusive education. Early childhood period covers 0-6 years of age, the starting point of early childhood education that forms the basis of life and a critical period in which development is the fastest. Early childhood is the period when the developmental process is the fastest in every aspect. In this process, it is seen that the identification of children at risk in the early process and receiving education in accordance with the early intervention process have great effects on the learning process and behaviour patterns related to the later development process. This research process was conducted in a school located in Güzelyurt in the Turkish Republic of Northern Cyprus. It was carried out with ten preschool teachers in this school, all of whom agreed to participate voluntarily. The data were collected through semi-structured interviews. In addition, the interview questions prepared for the research were prepared by taking into account the opinions of 3 teachers who are experts in the field of special education.

When the findings of the study were analysed, some of the teachers stated that inclusion of children with autism spectrum disorder in mainstreaming education created problems. These problems were stated as lack of shadow teachers, level of autism, lack of structured environment and class size. As a result of this study, some of the teachers stated that early intervention is necessary for children with autism and mainstreaming students. Another result shows that early intervention for children with autism spectrum disorder provides positive feedback on communication skills, social relationships, response to sensory stimuli and quality of social life. In conclusion, this study emphasises the importance of early intervention in individuals with autism spectrum disorder. It was observed that early intervention programmes play an important role for the effects on children's development and the support they offer to families.

Key words: Preschool, Autism, Early Intervention, Individual With Special Needs, Inclusive Education.

Giriş

Bu araştırma ‘okul öncesi eğitim kurumlarındaki öğretmenlerin otizm spektrum bozukluğu (OSB), erken müdahale programlarına ve kaynaştırma eğitimine ilişkin görüşlerinin belirlenmesi konusu oluşturmaktadır. Erken çocukluk dönemi 0-6 yaşları kapsayan, hayatın temelini oluşturan erken çocukluk eğitiminin başlangıç noktası ve gelişimin en hızlı olduğu kritik bir dönemi kapsamaktadır (Erkan, 2023). Bu dönemde çocuğun ileriki dönemlerde beceri

ve performans düzeyini etkileyecek öğrenme ve davranış örüntülerinin temelleri atılmaktadır. Bu temelde dil becerileri ile zihinsel, sosyal, duygusal ve motor becerilerin kazanılması bu kritik dönemde gerçekleşmektedir (Erkan, 2023). Erken çocukluk deneyimleri çevresel faktörlerden etkilendiğinden erken çocukluk döneminde sunulan hizmetlerin kalitesi bireyler ve toplum üzerinde kısa ve uzun süreli etkileri bulunmaktadır. Bu yüzden çocuğun bu dönemde yeterli beslenme ve etkileşimde bulunabildiği, çocuğun gelişiminin desteklendiği bir ortamda bulunması fayda sağlamaktadır. Erken çocukluk döneminde yetersiz beslenme, fiziksel sorunlar, toplumsal faktörler, öğrenme imkanlarının sağlanamaması gibi güçlükler sebebiyle bu dönemdeki çocuklar gelişimsel açıdan farklılık yaşamakta ve yeteneklerini sergileyememektedir (Erkan, 2023). Çocukların, sosyal, duygusal ve davranışsal becerileri akademik ve sosyal açıdan okulda başarılı olabilmek, öğretmenleri ve akranlarıyla ilişkileri yürütebilmek için önkoşul beceriler olduğu fakat birçok bireyin sahip olmadan okula başladığı görülmektedir. Bu kişisel neticeler maliyetin ve sosyal hizmetlere olan ihtiyacın çoğalmasına, yoksulluğun kuşaktan kuşağa aktarılmasına sebep olmaktadır (Erkan, 2023).

Alına eğitimler tüm hayatımıza yarar sağladığı gibi erken çocukluk döneminde alanında donanımlı birer eğitimciyle verilen doğru etki edici eğitimler yaşam boyu öğrenme için önemli bir başlangıcı sağlayacaktır. Bu durumda erken çocukluk çağında ebeveynlere ya da çocuklara aktarılan donanımlı eğitim hizmetleri özellikle gelişimsel yetersizliği olan ya da risk altında olan bireyler için daha çok önem teşkil etmektedir (Erkan, 2023). Özel eğitim hizmetlerinden faydalanan çocukların sosyal- duygusal ve bilişsel yetenekleri ile okula hazırlık yeterliliklerinin ön plana çıkarıldığı tanımlanmıştır (Erkan, 2023).

Okul öncesi eğitimde, özel ihtiyaç sahibi çocukların tüm gelişimsel eksiklikleri azaltarak gelişimi hız kazandırmak, okul öncesi eğitim alacak döneme geldiğinde eğitim alanlarından faydalanma ihtimalini arttırmak ve ebeveynlerin yaşamakta oldukları duygusal, psikolojik ve toplumsal sorunları en aza indirmek amaçlanmaktadır (Güneş-Akgül, 2023). Bireysel yetersizlikler gelişimsel gecikme ve eğitimsel açıdan yetersizlik, akranları ile gözle görülür derecede farklılık gösteren ve özel eğitime ihtiyaç duyan bireylerdir. Bu bireylerin bağımsız yaşam alışkanlıklarını en iyi dereceye getirmeyi hedefleyen bireysel olarak düzenlenen, sistemsal olarak devam eden, özen gösterilerek değerlendirilen öğretim hizmetlerinin tümü olarak tanımlanan özel eğitim programlarından yararlanmaları sağlanmalıdır. Yetersizliği bulunan bireyleri birinci derece aile fertlerinden ve yakın çevreden bağımsızlaştırılarak toplum ile kaynaşmalarının sağlanması gerekmektedir (Güneş-Akgül, 2023). Buradan hareketle Uluslararası araştırmalar okul öncesi dönemindeki çocukların yüksek etkenli eğitimler veya

hizmetlerden faydalanmalarının önem derecesini belirlediğinden erken çocukluk dönemi eğitimi birçok ülkenin ilgi odağı olmuştur (Erkan, 2023). Türkiye’ de ilk erken eğitim uygulamaları 1982 yılında İstanbul’ da yaşamakta olan maddi geliri ve eğitim seviyeleri düşük olan ebeveynlerin çocuklarına ev veya kurum merkezli sürdürülen ‘‘ anne eğitim programı’’ ve ‘‘ bilişsel gelişimi destekleme programıyla yürütölmeye başlanmıştır (Erkan, 2023).

Başka bir gelişme ise 1997 yılında ‘‘ özel eğitim yası’’ ile okul öncesi dönemi eğitim programlarına duyulan hassasiyet artış göstermiştir. Dünya genelinde uygulanan ve bilimsel açıdan doğrulanmış birden fazla erken çocukluk eğitim programı artan ilgiyle birlikte Türkçeye uyarlanmış ve kullanımların geçerlilik, güvenilirlik faaliyetleri yapılmıştır. Türkçeye uyarlanan erken müdahale programları risk altındaki çocuklar için düzenlenmekte ve bu uygulamalar ev merkezli, kurum merkezli ya da ev-kurum merkezli olarak uygulanabilmektedir (Erkan, 2023). Özel eğitim hizmetleri yönetmeliğine göre; kaynaştırma eğitimi özel eğitime ihtiyaç duyan çocukların, eğitimlerine yardımcı eğitimler de eklenerek, yetersizlik durumu olmayan akranları ile resmi ve özel; okul öncesi, ilköğretim, orta öğretim ve yaygın öğretim kurumlarında öğretimlerine devam etmeleri esasına dayanan özel eğitim kurumlarıdır, biçiminde belirtilmektedir. Bu açıklamada uygulanmakta olan yalnızca özel gereksinimli bireylerin bir arada olmaları değil, aynı zamanda bireylerin durumlarına ve düzeylerine göre planlanmış destek eğitim hizmetlerine ilişkin ön çalışmaların gerekliliğı vurgulanmaktadır (Edt; Gürsel, 2004).

Kaynaştırma eğitime başlamadan önce sınıf düzeninin bireylerin ihtiyaçlarına cevap verecek düzeyde programlanması gerekmektedir (Kırcaali-iftar, 2010). Kaynaştırma eğitimi her okulun vermesi gereken bir eğitim olmakla birlikte özel eğitime gereksinim duyan, risk altında bulunan, bireysel yetersizliğe sahip bireyler için gerekli düzenlemeler yapması ve çocukların okula değil, okulun çocuklar için bir düzen ve uyum içinde eğitim sağlaması gerekmektedir (Kırcaali-İftar, 2010). Buradan yola çıkarak kaynaştırma sınıflarına bakıldığında fiziksel yetersizlik, sosyal yetersizlik ve iletişimsel yetersizliklerden, belirli aralıklarla kişilerin kaynaştırma eğitime karşı tavırlar ya da bilgi eksikliğinin sebep olduğı bazı problemlerin göröldüğü gözlenebilmektedir (Güneş Akgöl, 2023).

Kaynaştırma eğitiminin memnun edici düzeyde başarıların elde edilememesi ile ilgili alan yazına bakıldığında bu sebeplerin birçok başlık altında toplandığını aktarmaktadırlar (Uşun, 2023). Buna göre; negatif eğitimci tutumları, öğretmenin etkili sınıf yönetimini sağlayamaması, elverişli personel ve destek ekibinin olmaması, genel ve özel eğitimin farklı kavranması, fiziksel ortamın eksikliği gibi dört temel engel türü mevcuttur. Bu engeller kaynaştırma

eğitimin sağlıklı ve yararlı ilerleyişini engellerken, en önemlisi de negatif öğretmen tutumlarının en çok etki eden sebeplerden olduğu vurgulanmaktadır (Uşun, 2023).

Yapılan çalışmalar göz önünde bulundurulduğunda Türkiye’ de yapılan tez ve makale çalışmaları özel eğitim, okul öncesi ve erken müdahale programları ile ilgili farklı çalışmaların mevcut olduğu görülmektedir. tezlerde farklı inceleme desenlerinin kullanıldığı, bazılarının ev merkezli bazılarının kurum merkezli bazılarının da hem ev hem kurum merkezli devam edildiği, farklı yaş grupları ile çalışıldığı ve bazı tez çalışmalarında ebeveynlerinde de dahil edildiği görülmektedir. Yapılan bu çalışma Türkiye’de erken çocukluk döneminde yapılmış olan lisansüstü ve doktora tezleri sistematik olarak araştırılmış ve uygulanan müdahaleler açısından kapsamlı bir bakış açısı geliştirmek amaçlanmıştır.

Yöntem

Bu bölümde; Okul öncesi eğitim kurumlarındaki öğretmenlerin otizm ve erken müdahale eğitimine ilişkin yapılan araştırmanın yöntemi, verilerin toplanması ve veri toplama araçlarına ilişkin bilgilere yer verilmiştir.

Araştırmanın Modeli

Okul öncesi eğitim kurumlarında görev alan öğretmenlerin otizm ve erken müdahale eğitimine ilişkin bilgi düzeylerinin incelenmesinin amaçlandığı bu çalışmada nitel araştırma yöntemlerinden fenomenoloji kullanılmıştır. Fenomenoloji, bireylerin kendi deneyimlerini, algılarını ve yaşantılarını ön plana çıkarmayı amaçlayan bir araştırma desendir.

Verilerin Toplanması

Araştırmanın verileri, araştırmacı tarafından oluşturulan yarı-yapılandırılmış görüşme soruları ve katılımcı gözlemi kullanılarak toplanmıştır. KKTC bölgesinde Lefkoşa ve Güzelyurt olmak üzere iki bölgede toplam 10 öğretmen ile görüşülerek veriler elde edilmiştir.

Bulgular

Okul öncesi ve özel eğitim kurumlarındaki öğretmenlerin otizm spektrum bozukluğu ve erken müdahale eğitimine ilişkin görüşlerini belirleme konulu araştırmaların incelenmesi adlı çalışmamıza 10 öğretmen dahil edilmiştir. İlerleyen bölümde öğretmenlerin konuyla ilgili görüşlerine ait bulgulara yer verilmiştir.

Okul öncesi öğretmenlerin görüşlerinin belirlenmesi

Görüşme yapılan öğretmenler ‘’ OSB olan çocuklar ve erken müdahale ‘’ temasında görüşlerini ifade etmişlerdir. Erken müdahale hakkında düşüncelerinin yarı-yapılandırılmış

görüşmeler aracılığıyla sorulmuş 10 katılımcının görüşleri sıralanmıştır. Aşağıda Tablolarda temalara ilişkin frekans ve yüzde dağılımları yer almaktadır.

Erken müdahale uygulamaları hakkında elde edilen bilgiler doğrultusunda öğretmenlerin erken müdahale hakkında problem davranışı teşhis etme, erken tanı ve tedavi, ilgili kurumlara yönlendirme ve aile iş birliği sağlanması gerektiği görüşündedirler.

Tablo 1: *Erken müdahale uygulamaları hakkındaki düşünceleriniz nelerdir?*

Tema	F	%
Erken müdahale		
50 Problem davranışı teşhis etme,	5	
Erken tanı ve tedavi		
İlgili kurumlara yönlendirme	2	20
Aile iş birliği	3	30
Toplam	10	100

Araştırmaya katılan öğretmenlerin ½ ‘si problem davranışı teşhis etme, erken tanı ve tedavinin en önemli bölümü olduğu görüşündedirler. Öğretmenlerin 2/10’u erken müdahalenin ilgili kurumlara yönlendirme konusunda aynı fikirdedirler. Öğretmenlerin 3/10’u erken müdahalenin aile iş birliği ile gerçekleşebileceği görüşündedirler.

Erken müdahale hakkında öğretmenlerin görüşleri aşağıda yer almaktadır.

“ Çocukların oldukça erken bir şekilde problem davranışlarının teşhis edilmesi. Eğitim süreçlerine başlanması. ” (Öğretmen, 1)

“Çocuklar ne kadar erken başlarsa terapi ve eğitimlerine o kadar hızlı yol kat ettiklerini görüyorum. Kurum içerisinde de dışarıda da etkileri mevcut.” (Öğretmen, 4)

“Erken müdahale küçük yaş grubunun gelişim düzeylerine göre çocuklara verilen bir eğitimidir.” (Öğretmen, 6)

“Eğer çocuğu öğretmen sınıf ortamında gerçekten erken müdahaleye ihtiyaç duyacak bir pozisyonda görülse ilgili mercilere veya veliye onu ileterek müdahaleyi başlatmış olursunuz.” (Öğretmen, 10)

Tablo 2: *Erken müdahalenin bireyin gelişimine etkileri*

Tema	F	%

Etkiler

Kısıtlayıcı davranışların azaltılması	1	10
Hızlı gelişim düzeyi	2	20
Aile iş birliği	1	10
Tedavi sürecinin iyileştirilmesi	6	60
Toplam	10	100

Araştırmaya katılan öğretmenlerin 6/10 ‘u tedavi sürecinin iyileştirilmesi ile erken müdahalenin etkililiğini arttırdığı konusunda aynı fikirdedirler. Öğretmenlerin 2/10’u ise hızlı gelişim düzeyinin etkililiği hakkında görüşlerini bildirmişlerdir.

“Erken müdahalenin etkilerini” ele alan temada erken müdahale uygulayan öğretmenlerin bireyin gelişiminin ne düzeyde ilerlemeler sağladığını ve akranlarıyla uyum içerisinde devam edebilme seviyesine ulaştığına ilişkin bilgiler aktarmışlardır. Görüşme yapılan öğretmenlerin bir kısmı erken müdahale uygulamaları uygularken, bir kısmı uygulamamaktadır. Uygulamayan öğretmenler aile ile iş birliği sağlayarak yönlendirmelerde bulunmaktadır.

Erken müdahalenin bireyin gelişimine etkileri hakkında örnek ifadeler aşağıda yer almaktadır.

“Erken müdahale özellikle erken yaşlarda başladığında eğitim süreçleri çok daha hızlı ve verimli geçtiği gözlemlenir. Özellikle bazı durumlar çocukların hayatlarında fazlası ile kalıcı olabilmektedir. Erken müdahale ile bu durumu olabildiğince azaltıyoruz.” (Katılımcı,1)

“Erken müdahale çok önemlidir. Özellikle özel gereksinimli bireylerde ne kadar erken yaşta teşhisi, tanısı konulursa eğitim ile kısa sürede normal akranlarının seviyesine ulaştırılabilir. Bu yüzden önemlidir.” (Katılımcı,2)

“Bir ayda olacak ilerlemeyi erken müdahale olmadığı zaman ve yaş ilerlediği zaman 3 aya veya 6 aya çıkabiliyor. Bu sebeple her zaman erken yaşta fark edilmesi sorunların daha hızlı halledilmesini sağlamaktadır. Çünkü gelişimde hızlı bir şekilde ilerleme göstermektedir.” (Katılımcı 4)

Erken müdahale bireyin gelişimi için çok önemlidir. Şöyle, örneğin çocukta bir kronik hastalık varsa veya genetiklerinden gelen bir hastalık varsa anca bunu tanımlayabiliyoruz. Tedavi sürecini kolaylaştırıyor. Tanının gecikmesi çocuğun ağırlaşması ve tedaviyi daha zorlaştırıcı olabildiğini önlemiş oluyoruz aynı zamanda. (Katılımcı 6)

Erken müdahale uygulamalar hakkında elde edilen veriler doğrultusunda öğretmenlerin erken müdahale uygulamaları hakkında bireyselleştirilmiş program, aile iyileştirme programı, özel eğitim programı, duyu terapisi ve dil terapisi eğitimlerinin alınması gerektiği görüşündedirler.

Tablo 3: Ne tür erken müdahale uygulamaları uyguluyorsunuz?

Tema	F	%
Uygulamalar		
Bireyselleştirilmiş program	1	10
Aile iyileştirme programı	1	10
Yoğunlaştırılmış özel eğitim programı	1	10
Duyu terapisi, dil terapisi	1	10
Uygulamıyorum	6	60
Toplam	10	100

Araştırmaya katılan öğretmenlerin 6/10'u erken müdahale uygulamalarını uygulamadıklarını bildirmektedirler. Öğretmenlerin 1/10'u erken müdahale uygulamaları kapsamında bireyselleştirilmiş program uygulamakta olduğunu bildirmektedir. Öğretmenlerin 1/10'u ise yoğunlaştırılmış özel eğitim programını uygulamakta olduklarını ifade etmişlerdir.

Öğretmenlerin erken müdahale uygulamalarına verdikleri örnek görüşler aşağıda yer almaktadır.

“Aslında her öğrenci için farklı bir erken müdahale uyguluyoruz. Her öğrencinin ihtiyaçları farklıdır. Yapılan değerlendirmeler ile bireyselleştirilmiş program belirlenir. Kişisel olarak uyguluyoruz. Sabit bir programımız yok.” (Katılımcı, 1) *“Öncelikle ailelere iyileştirme programları uyguluyoruz. Çocukların 8-9 aylıkken normal gelişimini gösteremeyip dönen cisimleri seyretme, TV karşısında sallanma, parmaklarını normal gelişim sürecinin dışında hareket ettirmelerini aile fark edip çocuk psikiyatrisine götürmeleri gerekir. Erken yaşta otizmliler oldukları belirlenmeli ve eğitimlerine başlanılmalı. Daha sonra yoğunlaştırılmış bireysel eğitim veriliyor.”* (Katılımcı, 2)

Duyu terapisi, dil terapisi uygulamaktayım. (Katılımcı 4)

Öncelikle yaşına uygun yapılan klasik testler var. Yapılan testler sonucunda elde edilen bulgular ışığında ilgili eğitimler veriliyor. Özellikle göz kontağı, sosyalleşme, kendi iç dünyasına kapanmamasını amaçlamaktayız. (Katılımcı 5)

‘ ‘Bakanlığımızla görüşürüz. Böyle bir erken Denver gelişim testi var. Bakanlığa gider aile çocukla birlikte orda o test yapılır. Okulumuzda özel eğitim öğretmeni de olsa oda gözlemleyerek dahada başka yerlere yönlendiririz.’’ (Katılımcı, 7)

Erken müdahale eğitimleri hakkında elde edilen bilgiler doğrultusunda öğretmenlerin erken müdahale eğitimi hakkında üniversite dersleri, hizmet içi eğitim, rehberlik araştırma servisi ve oyun terapisi eğitimleri ile desteklenmesi gerektiği görüşündedirler.

Tablo 4: Erken müdahale ile ilgili eğitim aldınız mı?

Tema	F	%
Eğitim		
Üniversite derslerinin katkısı ve uygulaması	6	60
Hizmet içi eğitim	1	10
Rehberlik araştırma servisleri	1	10
Oyun terapisi	1	10
pedagojik formasyon	1	1

Araştırmaya katılan öğretmenlerin 6/10’u üniversite derslerinin katkısı ve uygulaması çerçevesinde aldıkları eğitimin olarak bildirmişlerdir. Öğretmenlerin 1/10’u hizmet içi eğitimin sağlamış olduğu faydalardan bahsetmektedir.

Erken müdahale kapsamında aldıkları eğitimler hakkında öğretmenlerin görüşleri aşağıda yer almaktadır.

“Ben mezun olalı baya oldu. Erken müdahale ile ilgili bir eğitim almadım. Meslek hayatım boyunca tecrübe ederek kazandım. Okul hayatımda belirli dersler içerisinde bahsedilmişti fakat ayrıca bir erken müdahale eğitimi almadım””. (Katılımcı 1)

“Üniversitede derslerimizde erken müdahale uygulamaları almıştık. Daha sonra meslek hayatımda çeşitli hizmet içi eğitimlere katıldım. Rehberlik araştırma servisleri tarafından yüz yüze ve online eğitimlere katıldım”. (Katılımcı 2)

“Üniversitede özel eğitim adı altında bir dersimiz vardı. Üniversite dışında bakanlığın uyguladığı konferanslardan öğrendiğim kadarıyla öğrendiğimiz bilgiler”. (Katılımcı 8)

“Erken müdahale uygulamaları ile ilgili üniversite döneminde derslerimizin içeriğinde vardı. Orda zaten görmüştük. Daha sonrasında kitaptan ve farklı kaynaklardan kendimi geliştirmeye çalıştık”. (Katılımcı 6)

Erken müdahale uygulamaları hakkında elde edilen bilgiler doğrultusunda öğretmenlerin kaynaştırma eğitimi hakkında rahatsızlık düzeyi ve etkileri, rol model alma, dil gelişimi, gölge öğretmen ve yapılandırılmış ortam sağlanması gerektiği görüşündedirler.

Tablo 5: Kaynaştırma eğitimi hakkında düşünceleriniz neler?

Tema	F	%
Kaynaştırma		
Rol model alma	1	10
Rahatsızlık düzeyi ve etkileri	5	50
Dil gelişimi	1	10
Gölge öğretmen	2	20
Yapılandırılmış ortam	1	10
Toplam	10	100

Araştırmaya dahil edilen öğretmenlerin ½'si rahatsızlık düzeyi ve etkilerinin en önemli bölüm olduğu görüşündedirler. Öğretmenlerin 2/10'u kaynaştırma eğitiminde gölge öğretmen gerekliliği konusunda aynı fikirdedirler. Öğretmenlerin 1/10'u ise yapılandırılmış ortam eşliğinde kaynaştırma eğitiminin verilmesi gerektiği görüşündedir.

Erken müdahale kapsamında kaynaştırma eğitimi hakkında öğretmenlerin görüşleri aşağıda yer almaktadır.

“Düzey olarak uygunsa kesinlikle kaynaştırma almaları gerektiğini düşünüyorum. Çünkü en çok problem yaşadıkları durum iletişim olduğu için kaynaştırma programına kesinlikle alınmaları gerekiyor. Tabi otizmin düzeyi de etkiliyor. Düzeyi uygunsa kaynaştırma programına alınmaları gerektiğini düşünüyorum”. (Katılımcı 1)

“Bildiğimiz üzere bunun düzeyleri var ve iyi düzeyde olanların kesinlikle kaynaştırma sınıflarına gitmeleri gerektiğini düşünüyorum. Sosyal hayatları karışık onlar için de çok iyi olur. Dil gelişimleri açısından da çok iyi olacağını düşünüyorum”. (Katılımcı 4)

“Detaylı bilgi sahibi olmamakla beraber, otizmin dereceleri olduğunu biliyorum. Uygun derecelerin uygun gün ve saatlerde veya tam gün şeklinde kaynaştırılmasında birçok yarar olabilir. Birçok seferde otizmlili öğrenciyle karşılaştım ve güzel ayrıldık. (Katılımcı 8)

Sonuç

Bu araştırmada Kuzey Kıbrıs Türk Cumhuriyeti Lefkoşa ve Güzelyurt bölgesinde devlete bağlı okullarda çalışan okul öncesi öğretmenlerinin sınıflarında bulunan OSB'li çocuklar ve

erken müdahale uygulamaları hakkında görüşlerinin belirlenmesi amaçlanmıştır. Araştırma sorularına cevap bulmak amacıyla okul öncesi eğitim kurumlarında çalmakta olan on okul öncesi öğretmeni ile yarı-yapılandırılmış görüşme soruları eşliğinde görüşmeler yürütülmüştür. Düzenlenen içerik analizi sonucunda ‘‘ Erken müdahale hakkında düşünceleriniz nelerdir, erken müdahale bireyin gelişimini nasıl etkilemektedir, etkileri nelerdir, otizm' li çocuklara ne tür erken müdahale uygulamaları uyguluyorsunuz, lisans eğitimi sırasında ya da öğretmenlik sırasında erken müdahale uygulamaları ile ilgili nasıl bir eğitim aldınız, OSB' li bireylerin kaynaştırma sınıflarında eğitim görmeleri hakkında düşünceleriniz nelerdir’’ konu başlıklarından oluşan beş ana tema belirlenmiştir.

Elde edilen veriler sonucunda, öğretmenlerin büyük bir çoğunluğunun erken müdahale konusunda yeterli düzeyde eğitim almadıkları tespit edilmiştir. Bu bağlamda, öğretmenlerin erken müdahale uygulamalarını kullanma ve bu alandaki bilgi eksikliklerini giderme konusundaki yetersizliklerine işaret etmektedir. Erken müdahale eğitiminin eksikliği, öğrencilerin ihtiyaçlarını karşılayacak destek sağlama potansiyelini kısıtlayabilir. Bu sebeple, öğretmenlerin erken müdahale konusunda daha kapsayıcı ve sürekli eğitim programlarında yer alması gerekmektedir. Erken tanı ve müdahalede yaşanan gecikmeler, öğretmenlerin erken müdahale konusunda eğitim almamaları, bireylerin gelişimsel ihtiyaçlarının erken fark edilmesinde ve uygun görülen müdahalenin zamanında başlatılmasında gecikmelere sebep olabilir.

Öğretmenler OSB' de erken müdahalenin özellikle erken yaşta fark edilerek öğrencinin eğitim sürecine dahil edilmesi ile sürecin daha hızlı ve verimli geçtiğini vurgulamışlardır. Öğretmenler OSB'li bireylerin kısıtlayıcı davranışlarını, tekrarlayıcı davranışlarını erken yaşta gözlemlediklerinde uygulamakta oldukları eğitimi daha bilinçli uygulayarak en aza indirdiklerini belirtmişlerdir. Öğretmenler süreci takip ederken aile ile iş birliğinin önemini de vurgulamışlardır. OSB her bireyde farklı belirtiler ve düzeylerde görülebilmektedir. Bu sebeple öğretmenler her birey için özel ihtiyaçlarına ve özelliklerine uygun şekilde tasarlayıp uyguladıklarını belirtmişlerdir.

Araştırmamızda elde edilen veriler, öğretmenlerin büyük bir çoğunluğunun OSB' li bireylerin kaynaştırma eğitimi almaları gerektiğini savunduğunu ifade etmektedir. Bu bulgular, kaynaştırma eğitiminin OSB' li çocukların sosyal ve akademik açıdan becerilerinin gelişiminde önemli bir katkı sağladığını göstermektedir. Öğretmenler, kaynaştırma eğitimi sayesinde OSB' li çocukların topluma kazandırıldığı, akranlarıyla iletişim kurabildiğini, sosyal açıdan becerilerinin arttığı ve toplum ile uyum içerisinde devam edebildiğini belirtmişlerdir. Ancak,

öğretmenler eğitim sürecinde gerekli kaynak ve desteklerin sağlanması gerektiğini de dile getirmişlerdir. Kaynaştırma eğitimi sürecinde zorluklar da dikkate alınmalıdır. Öğretmenlerin belirttiği üzere, sınıflarda öğrenci sayısının çokluğu, kaynakların yetersizliği ve aile desteğinin olmaması durumunda öğretmenler kaynaştırma sürecinin etkili bir şekilde yürütmekte zorlanabilmektedirler.

KKTC’ de kaynaştırma eğitimi gölge öğretmen eşliğinde devam ettirilmektedir. Her öğrenci için gölge öğretmen sağlanamadığından birçok öğrenci eğitimden mahrum edilmektedir. Sonuç olarak, öğretmenlerin OSB’ li çocuklar için kaynaştırma eğitiminin gerekliliğini savunmaları, çocukların daha iyi bir eğitim almalarını ve topluma kazandırılmaları açısından önemli bir adımdır. Ancak, kaynaştırma eğitiminin etkili şekilde devam edilmesi için ihtiyaç duyun kaynaklar sağlanmalıdır. Bunların yanı sıra öğretmenlerin bir kısmı OSB’ nin derecesine bağlı olarak kaynaştırma eğitiminin her zaman uygun olmadığını vurgulamışlardır. Bu öğretmenler, ağır düzeyde OSB’ li çocukların kaynaştırma eğitiminde yeteri düzeyde verim alamayabileceğini ve bu durumun hem OSB’li çocuğun hem de normal gelişim gösteren öğrenciler için verimli bir ortam sağlanamayacağını belirtmişlerdir. Her öğrencinin bireysel farklılığı bulunmakta, eğitim sürecinde bireysel farklılıkların göz önüne alınması gerektiği vurgulanmaktadır. Literatür çalışmalarında elde edilen sonuçlara yönelik alan yazısı aşağıda belirtilmektedir. Araştırmalarda OSB ve kaynaştırma eğitime yönelik bilgilere değinilmiştir.

Elde edilen veriler, çalışmaya katılan öğretmenlerin büyük çoğunluğunun erken müdahale eğitimini almamış olduğunu ortaya koymaktadır. Bu durum, öğretmenlerin birçoğunun erken müdahale konusunda yeterli eğitimden eksik olduğunu belirtmektedir. Erken müdahale eğitimi, bireylerin gelişimlerini gözlemlemek, özel gereksinimlerini fark etmek ve gereksinimlere uygun eğitimler düzenlemek için büyük bir öneme sahiptir. Ancak, çalışmamızın sonuçlarına bakıldığında, öğretmenlerin erken müdahale alanında eğitim almadıkları ve bu sebeple erken müdahale konusunda bilgi ve beceri düzeylerinin yetersiz olduğu görülmektedir.

Bu durum, eğitim sürecinde erken müdahale eğitiminin önemine ve alandaki eksikliklerin giderilmesi gerektiğine işaretler. Özellikle, eğitimcilerin erken müdahale kapsamında daha donanımlı ve nitelikli eğitim programlarına katılmaları ve sürekli olarak bu konular güncellenmelidir. Sonuç olarak, eğitimcilerin erken müdahaleye dair bir eğitim almamış olmaları, bireylerin erken yaşta gelişimsel gereksinimlerini sağlamak ve yeteneklerini en iyi düzeye getirmek için engel oluşturmaktadır. Bu sebeple, eğitim sistemimizin, eğitimcilerin erken müdahale hakkında bilgi ve yeteneklerini güçlendirmeye yönelik stratejik yaklaşımlar geliştirilmelidir. Çalışmada elde edilen sonuçlara yönelik alan yazın aşağıda belirtilmektedir.

Araştırmada OSB ve kaynaştırma eğitime yönelik bilgilere yer verilmiştir. (örn., Sert, 2018) yapmış olduğu çalışmada OSB olan bireylerle çalışan eğitimcilerin, motor gelişim, iletişim ve sosyal beceri eğitimi, akademik gelişimi, dil ve iletişim becerilerinin eğitimi, cinsel eğitim gibi alanlarda çeşitli zorluklar yaşadıklarını ifade etmektedirler. Buna ek olarak öğretmenler, OSB olan bireylerin eğitimi ile ilgili herhangi bir şekilde ders görmediklerini ve OSB olan bireylerin eğitimi hakkında yardıma gereksinimlerinin olduğunu, öğretmen eğitim programlarında OSB, dil ve iletişim becerileri bu tür alanlarda derslere ve hizmet içi eğitimlere daha çok destek sağlanması gerektiğini devamlı olarak belirtmişlerdir. (örn., Burak & Ahmetoğlu, 2019), yürüttüğü çalışmada, çocukların mevcut yerleştirme ortamlarına uygunluğunun, zihinsel düzeylerine göre değişkenlik gösterdiğini ifade etmektedir. Buna ek olarak, OSB' li çocukların tanı almış olup olmaması ve zihinsel seviyeleri, öğretmenlerin kaynaştırma konusundaki görüşlerini etkileyen önemli faktörler olarak belirtilmiştir. (örn., Akkaya ve Güçlü, 2018) alan yazınca edinilen bilgilere göre, görev yapan okul öncesi öğretmenlerin; kaynaştırma eğitimi konusunda nitelikli bilgiye sahip olmadıkları, sınıfın fiziki koşullarının ve büyüklerinin nitelikli bir eğitim için elverişli olmadığı, hem çalıştıkları kurumdan hem de ailelerden yeterince yardım alamadıkları gibi bazı zorlukları vurgulamışlardır.

Araştırmanın sonucunda, öğretmenler sahip oldukları bilgileri kullanarak okul öncesi eğitim programına uygun düzenlemeler yapmaya çaba gösterdiklerini ancak sınıf ortamının yeterince elverişli olmaması ve materyal eksikliğinden dolayı sorunlar yaşadıklarını ifade etmişlerdir. Verilen bilgiler çalışma yapmakta olduğum öğretmenlerin düşüncelerini desteklemektedir. Alan yazında yapılan çalışmalardan elde edilen bulgular ile tutarlı olduğu ortaya koyulmaktadır.

Çalışanların Pozitif Psikoloji Algılarının Duygusal, Mental Ve Fiziksel İyi Oluş Algıları İle İlişkisi

Doç.Dr.Muhammet Hamdi Mücevher

Isparta Uygulamalı Bilimler Üniversitesi, muhammetmucevher@isparta.edu.tr, ORCID no: 0000-0002-3474-5073, TÜRKİYE

Özet

Bu çalışma, çalışanların pozitif psikoloji algılarının duygusal, zihinsel (mental) ve fiziksel iyi oluş algılarıyla olan ilişkisini incelemeyi amaçlamaktadır. Pozitif psikoloji, bireylerin psikolojik sağlamlıklarını, güçlü yönlerini, erdemlerini ve olumlu karakter özelliklerini temel alarak bireysel gelişimlerini desteklemeyi amaçlayan güncel bir yaklaşımdır. Örgüt yaşamında, çalışanların pozitif psikoloji algısına sahip olması; örgütsel aidiyet, iş tatmini, motivasyon, genel yaşam memnuniyeti ve kalitesi gibi faktörler üzerinde belirleyici bir rol oynamaktadır. Bu bağlamda, çalışanların pozitif psikolojiye dair algılarının, onların stres yönetimi ve olumlu duygu düzeyi gibi duygusal esenlikleri, odaklanma, zihinsel yorgunluk, bilişsel işlevsellik gibi mental sağlık durumları ve enerji düzeyi ve sağlık algısı gibi fiziksel iyi oluşları ile anlamlı düzeyde ilişkili olduğu varsayılmaktadır.

Bu varsayımlardan hareketle çalışma, ilgili literatüre dayalı olarak kavramsal bir çerçeve sunmakta ve söz konusu ilişkilere dair kuramsal açıklamalar yapmaktadır. Bulgular, iş yaşamında pozitif psikolojiyi destekleyen ve teşvik eden bir örgütsel iklimin yaratılmasının, çalışanların çok yönlü iyi oluş durumlarını kuvvetlendireceğini ve pekiştireceğini işaret etmektedir. Özellikle liderlik tarzı, örgütsel destek algısı ve olumlu örgüt kültürü gibi değişkenlerin bu ilişkide aracılık rolü oynayabileceği düşünülmektedir. Elde edilen sonuçlar, örgütlerin insan kaynakları politikaları ve iş yeri uygulamalarında pozitif psikoloji ilkelerine daha fazla yer vermesi gerektiğine vurgu yapmaktadır. Bu doğrultuda çalışma, örgütlerde sürdürülebilir çalışan refahı için pozitif psikoloji temelli yaklaşımların önemini vurgulamaktadır.

Anahtar Kelimeler: Pozitif Psikoloji, Duygusal İyi Oluş, Mental İyi Oluş, Fiziksel İyi Oluş

The Relationship Between Employees' Perceptions of Positive Psychology and Their Emotional, Mental, and Physical Well-Being

Abstract

This study aims to examine the relationship between employees' positive psychology perceptions and their emotional, mental and physical well-being. Positive psychology is a current approach that aims to support the individual development of individuals based on their

psychological resilience, strengths, virtues and positive character traits. In organizational life, employees' perception of positive psychology plays a determining role on factors such as organizational belonging, job satisfaction, motivation, general life satisfaction and quality. In this context, it is assumed that employees' perceptions of positive psychology are significantly related to their emotional well-being such as stress management and positive emotion level, mental health states such as focus, mental fatigue, cognitive functioning and physical well-being such as energy level and health perception.

Based on these assumptions, the study presents a conceptual framework based on the relevant literature and provides theoretical explanations regarding the relationships in question. The findings indicate that creating an organizational climate that supports and encourages positive psychology in business life will strengthen and reinforce the multifaceted well-being of employees. It is thought that variables such as leadership style, perception of organizational support and positive organizational culture may play a mediating role in this relationship. The results obtained emphasize that organizations should give more place to positive psychology principles in their human resources policies and workplace practices. In this direction, the study emphasizes the importance of positive psychology-based approaches for sustainable employee well-being in organizations.

Keywords: Positive Psychology, Emotional Well-being, Mental Well-being, Physical Well-being

Giriş

Günümüz örgütlerinde ve iş yaşamında çalışan esenliği, doyumu, memnuniyeti, refahı ve iyi oluşu gibi konular, sadece örgütsel başarı, performans ve verimlilik açısından değil; aynı zamanda çalışanların psikolojik, duygusal, mental ve fiziksel bakımdan sağlıklarının ve dengelerinin sağlanması açısından da kritik bir öneme sahip olmuştur (Bakker ve Demerouti, 2007; Diener ve diğerleri, 1999). Bu kapsamda, pozitif psikoloji yaklaşımı, bireylerin olumlu deneyimlerine, güçlü yönlerine ve psikolojik dayanıklılıklarını odak noktasına alarak yönetim ve organizasyon alanında ve örgütsel davranış araştırmalarında önemli bir paradigma değişimine sebep olmuştur (Seligman ve Csikszentmihalyi, 2000). Pozitif psikoloji yaklaşımının temel amacı, bireylerin yalnızca psikolojik sorunlarının çözümü değil; aynı zamanda yaşam tatmini, öznel iyi oluş ve anlamlı yaşam gibi olumlu deneyimlerin artırılmasıdır (Fredrickson, 2001). Bu bağlamda, çalışanların pozitif psikolojiye ilişkin algılarının duygusal, mental ve fiziksel iyi oluş boyutlarıyla olan ilişkisi hem bireysel düzeyde hem de örgütsel düzeyde kritik neticeler doğurabilecek bir araştırma konusudur.

Bu kapsamda, araştırmanın temel amacı, çalışanların pozitif psikoloji algılarının onların duygusal, mental ve fiziksel iyi oluş algıları üzerindeki etkisini açıklamak ve bu boyutlar arasındaki ilişkileri bütüncül bir bakış açısıyla değerlendirmektir. Bu çalışmanın özgün yanı, pozitif psikoloji kavramını, sadece bir örgütsel davranış ve tutum kalıbı olarak değil; çalışanların çok yönlü iyi oluş algılarıyla doğrudan ilişkili bir psikososyal etken olarak ele almasıdır. Yazında, genellikle pozitif psikoloji unsurları olan umut, iyimserlik, öz yeterlik ve dayanıklılık gibi boyutların iş tatmini, tükenmişlik veya örgütsel aidiyet (Luthans ve diğerleri, 2007; Avey ve diğerleri, 2009; Youssef ve Luthans, 2007) gibi örgütsel değişkenlerle olan ilişkileri incelenmiş olmakla birlikte, bu boyutların çalışanların çok yönlü iyi oluş boyutları ile olan bütüncül ilişkileri sınırlı düzeyde ele alınmıştır. Dolayısıyla bu çalışma, söz konusu literatür boşluğunu doldurmayı hedeflemektedir.

Pozitif psikoloji, çalışanların psikolojik kaynaklarını ortaya çıkaran, duygusal dayanıklılıklarını artıran ve olumlu örgütsel davranışları teşvik eden bir zemin sunmaktadır (Seligman, 2011; Luthans, 2002). Örneğin, çalışanların iş hayatına dair pozitif bakış açıları, onların duygusal dengeyi sürdürmelerini, stresi daha etkin yönetebilmelerini ve pozitif ilişkiler kurmalarını kolaylaştırmaktadır (Fredrickson, 2004). Aynı şekilde, çalışanların olumlu duygular deneyimlemesi, onların bilişsel esnekliğini ve sorun çözme becerilerini artırarak zihinsel iyi oluşunu desteklemektedir (Isen, 2000). İlave olarak, pozitif duygular fizyolojik yansımaları da sebep olmakta, uyku kalitesi, bağışıklık sistemi ve genel sağlık algısı üzerinde de olumlu etkiler oluşturabilmektedir (Pressman ve Cohen, 2005). Bu yönlerden değerlendirildiğinde, çalışanların pozitif psikolojiye yönelik algılarının, duygusal, mental ve fiziksel iyi oluşlarını doğrudan etkileyen bir faktör olduğu varsayılabilir.

İyi oluş kavramı, genel manada, bireyin yaşamından memnun olması, olumlu duygular yaşaması ve işlevsel bir hayat sürdürebilmesi ile ilgilidir (Ryff ve Keyes, 1995). Çalışanlar için ise iyi oluş kavramı, sadece psikolojik sağlıkla ilişkili değil, aynı zamanda iş ortamındaki sosyal destek, değer ve anlam arayışı, iş yükü, kontrol algısı ve liderlik yaklaşımları gibi birçok etkenle ilişkilidir (Warr, 2007). İyi oluşun alt boyutlarından olan duygusal iyi oluş, bireyin pozitif duygular deneyimleme ve negatif duyguları düzenleyebilme kapasitesiyle ilgilidir (Diener ve diğerleri, 1999). İyi oluşun bir diğer alt boyutu olan mental iyi oluş ise bireyin bilişsel kapasitesi, motivasyon ve dikkat seviyesi ile ilişkili olup iş başarısı ve performansı üzerinde doğrudan etkilidir (Keyes ve Haidt, 2003). İyi oluşun bir diğer alt boyutu olan fiziksel iyi oluş ise beden sağlığına ilişkin algılar, fiziksel enerji durumu ve kronik stresin fizyolojik etkileri

gibi unsurları kapsamaktadır (Ganster ve Rosen, 2013). Bu üç boyut, çalışanların mutluluğunu, yaşam kalitesini ve iş tatminini şekillendirmekte kritik öneme sahiptir.

Çalışanların bu üç iyi oluş boyutuna yönelik algılarının oluşmasında, örgüt içi psikolojik iklimin, liderlik tarzlarının, iş-yaşam dengesinin ve bireysel pozitif psikolojik kaynakların etkili olduğu söylenebilir (Luthans ve diğerleri, 2007; Bakker ve Demerouti, 2007). Ancak bu algıların, çalışanların pozitif psikolojiye ilişkin genel tutumlarıyla nasıl şekillendiği konusu, hâlâ yeterince aydınlatılamamıştır. Özellikle Türk yönetim kültürü bağlamında, kültürel unsurların, örgütsel işleyiş ve normların ve iş yaşamı dinamiklerinin bu ilişkiyi nasıl etkilediği üzerine kısıtlı sayıda çalışma bulunmaktadır (Aydın ve Şimşek, 2020; Tüzün ve diğerleri, 2021). Dolayısıyla bu çalışma, hem örgütsel açıdan pozitif psikoloji-iyi oluş etkileşimini açıklamayı, hem de konunun muhatapları açısından çalışan esenliği, tatmini ve refahını artırmaya dönük stratejik öneriler sunmayı amaçlamaktadır.

Sonuç olarak, çalışanların pozitif psikoloji algıları ile duygusal, mental ve fiziksel iyi oluş algıları arasındaki ilişkinin açıklanması hem bireysel sağlığın desteklenmesi hem de örgütsel devamlılık bakımından kritik seviyede öneme sahiptir. Bu bağlamda elde edilecek sonuçlar, örgütsel başarı ve gelişim, insan kaynağının etkin yönetimi, yönetim-liderlik süreçlerinin daha sağlıklı şekillenmesine katkı yapacaktır. Ayrıca çalışanların mutluluğunu ve tatminini odak noktasına alan örgüt kültürünün yeşermesini teşvik edecektir.

Çalışanların Pozitif Psikoloji Algıları

Pozitif psikoloji, bireylerin güçlü yönlerine, kişilik özelliklerine, erdemlerine ve yaşamın anlamlı yönlerine odaklanarak onların daha tatmin, mutlu, motive, üretken ve dengeli bir yaşam sürmelerini amaçlayan bir yaklaşımdır (Seligman ve Csikszentmihalyi, 2000). Seligman (2011)'in geliştirdiği PERMA (Positive Emotions, Engagement, Relationships, Meaning, Accomplishment) modeli, pozitif psikolojinin temel boyutlarını olumlu duygular, bağlılık, ilişkiler, anlam ve başarı olarak belirlemektedir. Bu model, bireyin sadece psikolojik değil aynı zamanda sosyal, duygusal ve fiziksel anlamda da gelişimini kapsamaktadır.

Bireylerin olumlu duygular, karakter güçleri, kişilik özellikleri ve erdemler üzerine yoğunlaşan bir psikoloji dalı olan pozitif psikoloji (Seligman, 2011), çalışma yaşamında, çalışanların değer, anlam, performans, başarı, aidiyet ve iyilik hali gibi unsurlar yoluyla daha tatmin edici bir iş deneyimi yaşamalarını desteklemektedir (Fredrickson, 2001). Pozitif psikoloji algısı, çalışanların örgütte destek, işin anlamı, olumlu liderlik, umut, iyimserlik, dayanıklılık ve öz yeterliği kapsayan psikolojik sermaye gibi öğelerin varlığını ne derece

hissettiğine ilişkin bir olgudur (Luthans ve diğerleri, 2008). Pozitif psikolojik algıya sahip çalışanlar, iş yaşamında daha az tükenmişlik yaşamakta, buna karşılık daha fazla örgütsel bağlılık hissetmekte ve duygusal anlamda daha dengeli bir performans sergilemektedirler (Fredrickson, 2004).

Çalışanların pozitif psikoloji algısı ise onların örgütsel yaşamda karşılaştıkları olumlu deneyimlere, değer odaklı süreçlere ve psikolojik kaynaklara verdikleri anlamla şekillenmektedir. Pozitif örgütsel davranış literatürü, çalışanların umut, iyimserlik, öz yeterlik ve dayanıklılık alt boyutlarından oluşan psikolojik sermaye (PsyCap) düzeylerinin örgütsel bağlılık, başarı ve performans üzerinde güçlü etkiler oluşturduğunu ortaya koymaktadır (Avey ve diğerleri, 2011; Luthans ve diğerleri, 2007).

Pozitif psikolojinin alt boyutlarına sırasıyla değinmekte yarar vardır. Umut, bireyin amaç ve hedeflerine ulaşmak için uygun yollar ve taktikler geliştirmesi ve bu yolları kullanabilme motivasyonu olarak tanımlanmaktadır (Snyder, 2002). Umut düzeyi yüksek çalışanların iş doyumu, memnuniyeti ve görev performansları da yüksektir (Youssef ve Luthans, 2007). İyimser bireyler ise stresli durumlarda daha etkin başa çıkma stratejileri geliştirebilirler (Scheier ve Carver, 1985). Bu özellik, iyimser çalışanların iş yerinde tükenmişlik düzeylerini azaltmakta ve örgütsel sadakatlerini güçlendirmektedir (Taris ve diğerleri, 2010). Öz-yeterlik ise bireyin belirli bir görevi başarıyla yerine getireceğine dair inancını ifade etmektedir (Bandura, 1997). Öz-yeterlik düzeyi yüksek çalışanların yeni görev ve zorluklara daha kolay adapte oldukları, uyum kabiliyetlerinin daha yüksek olduğu ve değişimlere karşı daha esnek davrandıkları saptanmıştır (Stajkovic ve Luthans, 1998). Son olarak psikolojik dayanıklılık, bireyin stresli koşullar karşısında toparlanma ve bu koşulların üstesinden gelme kapasitesini ifade etmektedir. Çalışanların yüksek psikolojik dayanıklılıkları, özellikle kriz durumlarında örgütsel devamlılığı sağlamak açısından önemlidir (Bonanno, 2004).

Çalışanların Duygusal İyi Oluş Algısı

Duygusal iyi oluş, olumlu duyguların baskın olduğu, bireyin yaşam tatmininin yüksek, stres seviyesinin ise yönetilebilir düzeyde olduğu bir durumu yansıtmaktadır (Diener ve diğerleri, 1999; Fredrickson, 2001). Bireylerin olumlu duygularının baskın olduğu, yaşamdan haz aldığı ve hayatını anlamlı bulduğu bir duygusal durumu ifade eden duygusal iyi oluş (Ryff ve Singer, 1998), iş ortamında, çalışanların kendilerini psikolojik olarak güvende hissetmesi, pozitif iş ilişkileri oluşturabilmesi ve etkin stres yönetimi yapabilmesi ile ilgilidir (Diener ve diğerleri, 2010). Duygusal iyi oluş, çalışanların iş yerindeki motivasyonlarını, yaratıcı ve

yenilikçi düşünce kapasitelerini ve ilişkisel bağlarını doğrudan etkilemektedir (Wright ve Cropanzano, 2000). Duygusal iyi oluşu yüksek çalışanlar, örgütsel vatandaşlık davranışlarını daha sık sergilemekte ve örgütsel çatışmaları daha iyi ve etkin yönetebilmektedir (Lyubomirsky ve diğerleri, 2005).

Çalışanların Mental (Zihinsel) İyi Oluş Algısı

Mental iyi oluş, bireyin anlam ve değer bulma, yaşam amacı oluşturma, kendini geliştirme ve yaşamdan tatmin olma süreçlerini içermektedir (Keyes, 2002; Ryff, 1989). Zihinsel iyi oluşu yüksek çalışanlar, bilişsel uyum ve esneklik, karar alma kapasitesi açısından daha iyi durumdadır (Huppert, 2009). Farkındalık temelli stres azaltma uygulamaları, zihinsel iyi oluş düzeyini artırmaktadır, özellikle bilgi yoğun ortamlarda bilişsel yükün azaltılmasına olanak tanımaktadır (Brown ve Ryan, 2003).

Bireylerin zihinsel berraklığı, odaklanması, sorun çözme yeteneği ve mental esnekliği gibi boyutlarla ilgili bir kavram olan mental iyi oluş (Keyes, 2002), çalışanların bilişsel becerilerini sağlıklı bir şekilde kullanabilmeleri ve karar alma süreçlerinde etkin olabilmeleri bakımından oldukça önemlidir. Zihinsel iyi oluşu teşvik eden bir iklim oluşturan pozitif psikoloji algısı ise çalışanların kendilerini daha değerli, önemli, yeterli ve öğrenmeye açık hissetmelerini sağlamaktadır (Schaufeli ve Bakker, 2004).

Çalışanların Fiziksel İyi Oluş Algısı

Fiziksel iyi oluş, bireyin bedensel sağlığını koruyabilme, işlevselliğini sürdürebilme ve yaşam enerjisini yüksek tutabilme kapasitesi ile ilgilidir (WHO, 2006). Örgütsel ortamlarda, ergonomik destek, düzenli egzersiz imkânları ve beslenme programları fiziksel iyi oluşu desteklemektedir (Proper ve van Mechelen, 2008). Fiziksel iyi oluş düzeyinin artması, iş devamsızlıklarını azaltmakta, çalışan tatmini ve memnuniyetini artırmakta ve çalışan aidiyetini kuvvetlendirmektedir (Cooper ve Cartwright, 1994; Kelloway ve Day, 2005).

Bireylerin beden sağlığı, enerjik olma durumu ve iş yüküyle başa çıkabilme yeteneklerini kapsayan fiziksel iyi oluş (WHO, 2001), sadece hastalık durumu değil, aynı zamanda sağlıklı bir yaşam tutumu benimsemesiyle ilişkili bir kavramdır. Pozitif psikoloji, çalışanların fiziksel sağlığını koruması için de destekleyici unsurlar sağlamaktadır. Örgüt içinde sağlıklı beslenmeye, spora ve dengeli çalışma saatlerine fırsat tanınması bu kapsamda değerlendirilebilir (Quick ve diğerleri, 1997).

Çalışanların Pozitif Psikoloji Algısının Çalışanların İyi Oluş Algıları İle İlişkisi

Pozitif psikoloji algısı, duygusal, zihinsel ve fiziksel iyi oluşun bütünsel olarak

yeşermesini ve gelişmesini sağlamaktadır (Snyder ve Lopez, 2007). Örgüt yaşamında, psikolojik sermaye ve olumlu duyguların varlığı, çalışanların tüm iyi oluş boyutlarında olumlu yönde etki oluşturmaktadır (Avey ve diğerleri, 2011). İyi oluşun boyutlarından olan duygusal iyi oluş, pozitif duyguların ve psikolojik güvenliğin artmasıyla gelişmektedir. İyi oluşun bir diğer boyutu olan zihinsel iyi oluş ise bilişsel kapasite ve yaratıcılığın desteklenmesiyle beslenmektedir. İyi oluşun başka bir boyutu olan fiziksel iyi oluş ise dengeli bir yaşam tarzının teşvik edilmesiyle sürdürülebilir duruma gelmektedir (Bakker ve Demerouti, 2007). Pozitif psikolojinin sağladığı psikolojik sermaye, bireylerin tüm iyi oluş boyutlarını desteklemektedir. Özellikle PERMA modeli, her bir iyi oluş unsuruna karşılık gelen psikolojik kaynakları tanımlamaktadır (Seligman, 2011).

Pozitif psikoloji algısı yüksek çalışanlar, daha fazla olumlu duygular üretmekte, olumsuz duyguları dönüştürebilme kapasitesine sahip olmaktadır (Tugade ve Fredrickson, 2004; Fredrickson, 2001). Umut, iyimserlik ve öz yeterlik gibi kaynaklar, duygusal düzenlemeyi kolaylaştırmaktadır (Avey ve diğerleri, 2009).

Bunun yanında psikolojik sermaye unsurları, zihinsel dayanıklılığı artırmakta ve stres faktörlerine karşı bilişsel esnekliği ise güçlendirmektedir (Luthans ve diğerleri, 2007). Özellikle yaşam anlamı ve içsel motivasyon gibi boyutlar, mental iyi oluşun ana unsurları arasında yer almaktadır (Ryff ve Singer, 1998).

Son olarak pozitif psikoloji, stres yükünü azaltarak fizyolojik sistemlerin işlevini olumlu yönde etkilemektedir. İyimser kişilerde kardiyovasküler sağlık düzeyinin daha yüksek olduğu, bağışıklık sisteminin daha güçlü çalıştığı tespit edilmiştir (Pressman ve Cohen, 2005; Steptoe ve diğerleri, 2005).

Görüldüğü üzere çalışanların pozitif psikoloji algısı, iyi oluşun tüm boyutlarını güçlendiren bir tetikleyici rol üstlenmektedir (Bakker ve Demerouti, 2007; Harter ve diğerleri, 2002). Bu bağlamda, örgütsel aktörlerin, çalışanların pozitif psikoloji algı seviyelerini artıracak stratejiler geliştirmesi gerektiği ifade edilebilir.

Sonuç, Tartışma ve Öneriler

Günümüz iş yaşamında, çalışanların sadece iş performansları değil, aynı zamanda ruhsal, zihinsel ve fiziksel iyi oluşları da önem kazanmıştır (Diener ve diğerleri, 2018). Bu bağlamda pozitif psikoloji, çalışanların potansiyel yeteneklerini açığa çıkarmalarını sağlayan, anlamlı bir yaşam sürmelerini teşvik eden ve psikolojik mutluluklarını destekleyen bir disiplin

olarak öne çıkmaktadır (Seligman ve Csikszentmihalyi, 2000). Pozitif psikolojinin çalışanlar tarafından algılanma düzeyi, çalışanların iş doyumu, iş performansı, örgütsel aidiyet gibi çeşitli çıktılarına etkilediği gibi, genel iyi oluş durumları üzerinde de belirleyici bir unsur olabilmektedir (Luthans ve diğerleri, 2007). Bu araştırmada çalışanların pozitif psikoloji algılarının duygusal, mental ve fiziksel iyi oluş algıları üzerindeki etkileri bütüncül bir çerçevede ele alınmıştır. Bu çalışma, çalışanların yalnızca iş başarısı ve performansları açısından değil, aynı zamanda psikolojik dayanıklılık, duygusal denge, mental sağlık ve fiziksel refah açısından da pozitif psikoloji unsurlarına ne derece gereksinim duyduğunu göstermektedir.

Pozitif psikoloji algısının çalışanların duygusal iyi oluş algısını güçlendirdiğine dair yazında güçlü bulgular vardır. Pozitif duyguların stresle başa çıkma, duygusal dayanıklılık ve olumlu bireylerarası ilişkiler kurma açısından fonksiyonel olduğu birçok çalışmada vurgulanmaktadır (Tugade ve Fredrickson, 2004; Fredrickson, 2001). Umut, iyimserlik, öz yeterlik ve psikolojik dayanıklılık gibi pozitif psikolojik kaynaklar, çalışanların duygusal sıkıntılar ve zorluklar karşısında daha dirençli olmalarını ve olumsuz duygusal durumların daha rahat üstesinden gelmelerine olanak tanımaktadır (Luthans ve diğerleri, 2007). Bu bağlamda, örgütsel ortamda pozitif psikolojiye dair güçlü bir algı hisseden çalışanların, duygusal dengeyi sürdürebildikleri ve pozitif duygulanım seviyelerinin arttığı söylenebilir.

Yazında konu ile ilgili bir diğer önemli bulgu ise pozitif psikoloji algısının mental (zihinsel) iyi oluş algısı üzerinde belirgin bir etkiye sahip olmasıdır. Pozitif psikolojik yaklaşımlar, bireylerin sorun çözme becerilerini, dikkat kapasitelerini, bilişsel esnekliklerini ve uyum kabiliyetlerini artırmaktadır (Keyes ve Haidt, 2003; Isen, 2000). Bilhassa psikolojik sermaye alt boyutlarından olan umut ve öz yeterlik, bireylerin amaç ve hedef belirleme, stratejik düşünme ve bilişsel zorlukların üstesinden gelme gibi konularda daha yüksek bir algıya sahip olmalarını sağlamaktadır (Avey ve diğerleri, 2010). Netice itibarıyla, çalışanların zihinsel sağlıkları sadece psikolojik sorunların olmaması ile değil; aynı zamanda pozitif psikolojik özelliklerin varlığıyla da şekillenmektedir.

Yazında, ayrıca pozitif psikoloji algısının fiziksel iyi oluş algısı üzerinde de önemli etkileri olduğu vurgulanmaktadır (Pressman ve Cohen, 2005). Pozitif duyguların bağışıklık sistemini güçlendirdiği, stres hormonlarının etkilerini azalttığı ve kronik hastalıklara karşı bireyleri koruduğu aktarılmaktadır. İş hayatında, stresin azaltılması, çalışanların fiziksel sağlık algısını doğrudan etkilediği bilinmektedir. Pozitif psikoloji algısı yüksek olan çalışanlar, iş-

yaşam dengelerini daha iyi kurmakta, sağlıklı yaşam alışkanlıklarını daha fazla uygulamakta ve fiziksel enerji seviyelerini daha yüksek hissetmektedir (Ganster ve Rosen, 2013).

Konuyu kapsamlı bir şekilde ele aldıktan sonra konunun muhatapları ve uygulayıcıları için bazı önerilerde bulunulması yerinde olacaktır. Bu çalışma, kavramsal bir bütünlük içerisinde pozitif psikoloji ile iyi oluş boyutları arasındaki ilişkiyi ortaya koymayı kendine amaç edinmiştir. Gelecek çalışmalarda, şükran, anlamlılık ve affedicilik gibi pozitif psikoloji unsurlarının iyi oluş üzerindeki farklı etkileri karşılaştırmalı olarak incelenebilir. Sağlık, eğitim, üretim, kamu hizmetleri gibi farklı sektörlerde çalışan bireyler üzerinde benzer çalışmalar yapılarak sektörel değişkenlikler analiz edilebilir. Nitel araştırma tasarımlarıyla çalışanların pozitif psikolojiye dair öznel algıları derinlemesine incelenebilir. Ayrıca kültürel unsurların pozitif psikoloji ve iyi oluş ilişkisine etkisi araştırılarak, kültürlerarası karşılaştırmalar yapılabilir (Hofstede, 2001).

Çalışanların pozitif psikoloji algılarının, genel iyi oluş durumlarının önemli bir belirleyicisi olduğunu ortaya koymayı amaç edinen bu çalışma, duygusal, zihinsel ve fiziksel iyi oluşun, birbiri ile ilişkili ve bir bütün olduğunu, pozitif psikoloji kavramı altında birbiriyle etkileşim halinde olduğuna işaret etmektedir. Örgütsel yapıların ve unsurların, çalışanların psikolojik sermayesini destekleyici politikalar ortaya koyması hem çalışanların iş performansı hem de iş doyumunu ve memnuniyeti açısından önem taşımaktadır. Bu kapsamda, örgütün her kademesinde görevli yöneticilere ve insan kaynakları sorumlularına büyük görevler düşmektedir. Bu bağlamda, örgütler ve yöneticileri için bazı öneriler getirilebilir.

Örgütler, öncelikle çalışanların pozitif psikoloji algısını artıracak anlamlı iş, destekleyici liderlik, pozitif görüşme teknikleri gibi uygulamalar geliştirmelidir. Bunun yanında duygusal iyi oluşu desteklemek için mentorluk, koçluk, psikolojik danışmanlık, farkındalık ve empatik iletişim programları yaygınlaştırılmalıdır. Mental iyi oluşu güçlendirmek için yaratıcılığı ve sorun çözmeyi destekleyen iş tasarımı yaklaşımları benimsenmelidir. Son olarak fiziksel iyi oluş için ergonomik iş ortamları, dinlenme alanları ve spor imkanları, sosyalleşme etkinlikleri sunulmalıdır.

Örgütler, örgüt temsilcileri ve politika yapıcılar için daha spesifik öneriler getirilmesi gerekirse insan kaynakları yöneticileri ve uzmanları, pozitif örgütsel davranışı teşvik edecek strateji ve taktikler geliştirmeli, çalışanların umut, öz yeterlik ve dayanıklılık düzeylerini artırmaya dönük eğitim ve gelişim programları düzenlemelidir (Luthans ve diğerleri, 2006). Kamu ve özel sektör yöneticileri, örgütsel kültürü ve iklimi pozitif psikoloji yaklaşımı doğrultusunda yeniden şekillendirmeli, psikolojik dayanıklılık ve güvenlik, pozitif geribildirim

ve anlam ve değer odaklı liderlik uygulamalarına öncelik vermelidir. Örgütlerde, sağlık ve güvenlik uzmanları, sadece fiziksel riskleri değil, çalışanların duygusal ve mental esenlik ve refahlarını da gözeten yaklaşımlar benimsemelidir. Yöneticiler, çalışanların işte değer ve anlam bulmalarını sağlayacak görev ve iş tasarımları yapmalı, kariyer planlamalarını buna göre dizayn etmeli, ayrıca çalışanların psikolojik kaynaklarını geliştiren koçluk ve mentorluk programlarına yatırım yapmalıdır. Örgütler, çalışanların mental ve fiziksel sağlığını gözetten esnek çalışma modelleri, bilinçli farkındalık eğitimleri ve psikososyal destek hizmetlerini çeşitlendirmelidir (Good ve diğerleri, 2016). Son olarak politika yapıcılar ise çalışan mutluluğu ve refahına ilişkin kapsamlı kamu politikaları geliştirmelidir, pozitif psikolojiyi özendiren örgütsel düzenlemeleri teşvik etmeli ve iyi oluşu artıran örgütsel uygulamaları destekleyen yasal düzenlemeler üretmelidir.

Genel olarak, bu çalışma ile çalışanların pozitif psikoloji algılarının, duygusal, mental ve fiziksel iyi oluş algıları üzerinde çok boyutlu ve olumlu etkileri olduğu ortaya konmuştur. Bu tespit, örgütlerin sürdürülebilir başarılarının insan kaynağının çok yönlü memnuniyetine ve refahına bağlı olduğunu ve bunun pozitif psikoloji unsurlarıyla desteklenmesi gerektiğini göstermektedir. Dolayısıyla bu çalışmanın hem akademik literatüre katkı sunduğu hem de uygulayıcılar için stratejik çıkarımlar sağladığı söylenebilir.

Abstract

Inclusive education refers to providing individuals with equal rights within the education system by addressing their individual needs based on their differences (UNESCO). It prevents exclusion and ensures that all children are included in the educational process. The aim of this study is to explore the perspectives of preschool teachers working in institutions where children from diverse cultural backgrounds are educated together, the challenges they face, and the methods they employ to include children in education. The study adopted a phenomenological design, a qualitative research method, to examine in depth the strategies preschool teachers use in this context. Participants consisted of six preschool teachers working in an independent kindergarten located in a village in the central district of Şanlıurfa. Teachers were selected based on their experience with inclusive practices and with children from diverse cultural backgrounds. Data were collected using a semi-structured interview form developed by the researchers. The interview form included open-ended questions aimed at understanding teachers' knowledge, attitudes, and practices regarding inclusive education. Interviews were audio-recorded with the consent of the participants. The collected data were transcribed, coded, and analyzed using content analysis. Teachers' views on inclusive education, the challenges they faced, and the strategies they implemented were categorized into themes. To increase the reliability of the findings, coding was conducted independently by two researchers and consensus was reached through comparison. The analysis revealed teachers' perspectives on inclusive education and the classroom practices they implemented to support children in need of such education. As a result of the research, five themes were determined based on teachers' opinions. These themes are; teachers' knowledge levels regarding inclusive education, difficulties encountered in inclusive education practices and language teaching, strategies and materials used in inclusive education, teachers' expectations and needs, and overcoming linguistic and cultural barriers. It was concluded that teachers' knowledge and practices regarding inclusive education were inadequate. It was revealed that they faced various difficulties such as communication problems due to the language used, lack of materials and weak family cooperation. It has been observed that teachers cannot overcome these difficulties

with their individual efforts. As a result of the research, the supports that teachers need regarding inclusive education were identified and necessary suggestions were presented.

Keywords: Inclusive education, preschool education, language difficulties, teacher perspectives.

Okul Öncesi Öğretmenlerinin Kapsayıcı Eğitime Bakışı: Uygulamalar ve Karşılaşılan Sorunlar

Özet

Kapsayıcı eğitim, bireylerin sahip olduğu farklara yönelik bireysel ihtiyaçları karşılanarak eğitim sistemi içinde eşit haklara sahip olmasıdır (UNESCO). Kapsayıcı eğitim anlayışı öğrencilerin dışlanmasını engelleyerek bütün çocukların süreç içinde yer almasını amaçlar. Bu çalışmanın amacı farklı kültürlerin bir arada eğitim aldığı okul öncesi kurumlarında görev yapan öğretmenlerin kapsayıcı eğitime bakışını, karşılaştıkları sorunları ve çocukları eğitime dahil ederken kullandığı uygulama yöntemlerini belirlemektir. Araştırma, okul öncesi öğretmenlerinin bu kapsamda uyguladıkları stratejileri derinlemesine incelemek amacıyla nitel araştırma yöntemlerinden biri olan fenomenolojik desen kullanılarak gerçekleştirilmiştir. Araştırmanın katılımcılarını, Şanlıurfa Merkez ilçesine bağlı bir köyde bulunan bağımsız bir anaokulunda görev yapan ve gönüllü olarak çalışmaya katılan 6 okul öncesi öğretmeni oluşturmaktadır. Katılımcıların seçiminde, kapsayıcı eğitim uygulamalarıyla ilgili deneyime sahip olmaları ve farklı kültürel geçmişe sahip çocuklarla çalışıyor olmaları kriterleri göz önünde bulundurulmuştur. Veriler, araştırmacılar tarafından geliştirilen yarı yapılandırılmış görüşme formu aracılığıyla toplanmıştır. Görüşme formu, kapsayıcı eğitime ilişkin öğretmenlerin bilgi, tutum ve uygulamalarını derinlemesine anlamayı hedefleyen açık uçlu sorulardan oluşmaktadır. Görüşmeler sırasında, katılımcıların izni alınarak ses kayıtları alınmıştır. Toplanan veriler, içerik analizi yöntemi kullanılarak analiz edilmiştir. İlk olarak, ses kayıtları yazılı metne dönüştürülmüş, ardından veriler kodlanarak temalar oluşturulmuştur. Bu süreçte, öğretmenlerin kapsayıcı eğitime ilişkin görüşleri, karşılaştıkları zorluklar ve

uyguladıkları stratejiler tematik olarak sınıflandırılmıştır. Analiz sürecinde, verilerin güvenilirliğini artırmak amacıyla kodlama işlemi iki araştırmacı tarafından bağımsız olarak gerçekleştirilmiş ve elde edilen bulgular karşılaştırılarak uzlaşa sağlanmıştır. Görüşme sonuçları analiz edilerek öğretmenlerin kapsayıcı eğitime bakış açıları ve kapsayıcı eğitime ihtiyaç duyan çocukların gelişimi için sınıf içinde yaptıkları uygulamalar tespit edilmiştir. Araştırma sonucunda öğretmen görüşlerine dayanarak beş tema belirlenmiştir. Bu temalar; öğretmenlerin kapsayıcı eğitime ilişkin bilgi düzeyleri, kapsayıcı eğitim uygulamalarında ve dil öğretiminde karşılaşılan zorluklar, kapsayıcı eğitimde kullanılan stratejiler ve materyaller, öğretmenlerin beklenti ve ihtiyaçları ile dilsel ve kültürel engellerin aşılmasıdır. Öğretmenlerin kapsayıcı eğitimle ilgili bilgi düzeyleri ve uygulamalarının yetersiz olduğu sonucuna ulaşılmıştır. Kullanılan dilden dolayı iletişim problemi, materyal eksikliği ve aile iş birliğinin zayıf olması gibi çeşitli zorluklarla karşılaştıkları ortaya çıkmıştır. Öğretmenlerin bu zorlukları bireysel çabalarıyla aşamadıkları görülmüştür. Araştırma sonucunda öğretmenlerin kapsayıcı eğitim konusunda ihtiyaç duydukları destekler tespit edilmiş olup gerekli öneriler sunulmuştur.

Anahtar Kelimeler: Kapsayıcı eğitim, okul öncesi eğitim, dil sorunları, öğretmen görüşleri.

Giriş

Kapsayıcı eğitim, tüm bireylerin fiziksel, zihinsel, duygusal, dilsel ya da sosyal farklılıklarına bakılmaksızın, aynı eğitim ortamında eşit öğrenme fırsatlarına sahip olması gerektiğini savunur (UNESCO, 2009). Bu anlayış, öğrenciler arasındaki bireysel farklılıkları zenginlik olarak kabul ederken; dışlayıcı, ayrıştırıcı uygulamaların önüne geçmeyi ve tüm öğrencilerin katılımını destekleyen öğretim ortamları oluşturmayı hedefler (Booth & Ainscow, 2011). Kapsayıcı eğitim anlayışı çocuğu sorun olarak değil, sistemi sorun olarak görür. Eğitim sistemini ve ortamını değiştirmek için uygulamalar ortaya koyar. Dezavantajlı çocukların ayrıştırılmadan eşit haklarla eğitimde yer alması ve yaşadıkları zorlukların en aza indirilmesi kapsayıcı eğitimin temelidir. Sadece dezavantajlı çocukların değil, bütün çocukların kendine uygun eğitimi alabilmesini hedefler. Her çocuk farklı özelliklere sahiptir. Çocuğun okula değil okul ortamının çocuğun bireysel özellik ve ihtiyaçlarına göre düzenlenmesi kapsayıcı eğitimle gerçekleştirilir (CEC, 2009). Kapsayıcı eğitim içinde birçok bileşeni barındırır. MEB ve UNICEF (2018) kapsayıcı eğitimin bileşenlerini okul kültürü, okul içi paydaşlar, öğretim programı ve diğer paydaşlar olmak üzere dört başlıkta toplanmıştır. Kapsayıcı eğitim öğretmen, öğrenci, yönetici, okul personeli, aile ve çevresel unsurlardan oluşan bir yapıdır. Bütün bu yapıların işbirliği halinde hareket etmesi kapsayıcı eğitimin daha sağlıklı ilerlemesini sağlar (Yenen ve Gültekin, 2024).

Kapsayıcı eğitimin tarihçesine bakıldığında, 1948 İnsan Hakları Evrensel Bildirgesi'nde "Herkes eğitim hakkına sahiptir." Denilerek kapsayıcı eğitime değinildiğini söyleyebiliriz. 1990 Herkes İçin Eğitim Dünya Konferansı, dışlanmış grupların normal eğitimde yer alması gerektiğini vurgulayarak kapsayıcı eğitime uygun bir görüş belirtmiştir. Kapsayıcı eğitim, 1994 UNESCO Salamanca Bildirgesi'nde küresel olarak kabul görmeye başlamıştır. Özellikle özel gereksinimli çocukların genel eğitim sistemi içinde eğitim almasını vurgulamıştır. Her çocuğun ilgi ve ihtiyaçlarına göre, öğrenci merkezli bir eğitim anlayışı ile yetiştirilmesi gerektiğini belirtmiştir. Bu bildiri kapsayıcı eğitim ilkelerinin temelini oluşturmuştur. Avrupa İnsan Hakları Sözleşmesi (1952) ve Birleşmiş Milletler Çocuk Haklarına Dair Sözleşme 'sinde (1989) din, dil, ırk, cinsiyet, siyasal düşünce vb. herhangi bir sebepten ötürü ayrımcılık yapılmamasından bahsedilmiştir. Kapsayıcı eğitim ilk olarak özel eğitime ihtiyaç duyan çocuklara yönelik bir anlayış olarak ortaya çıkmıştır. İlerleyen süreçte din, dil, ırk vb. farklı dezavantaj grubuna giren çocukları da içine almaya başlamıştır. Ülkelerin bu politikalar doğrultusunda yasa ve uygulamalar yapması kapsayıcı eğitim uygulamaları açısından ilerleme sağlayacaktır.

Türkiye'deki yasal düzenlemelere bakıldığında 1739 Sayılı Milli Eğitim Temel Kanunu, hiçbir ayırım gözetilmemesinden, fırsat eşitliği sağlanmasından ve özel eğitime ihtiyacı olanlara gerekli tedbirler alınmasından bahsetmiştir. 573 Sayılı Özel Eğitim Hakkında Kanun Hükmünde Kararname (1997) ile kaynaştırma eğitiminden bahsedilmiş ve özel eğitime ihtiyaç duyan bireylerin eğitim hakları korunmuştur. 6883 Sayılı Geçici Koruma Yönetmeliği (2014) ile göçmen öğrencilerin eğitim hakları korunmuştur. Aynı zamanda Türkiye uluslararası belgelerde yer almakta ve kuruluşlarla iş birliği halinde süreci yürütmeye çalışmaktadır. Örneğin UNICEF ve Milli Eğitim Bakanlığı iş birliği halinde proje yürüterek dezavantajlı grupların öğretmenleri için eğitim modülleri oluşturmuştur. Dil desteğine ihtiyaç duyulan bazı bölgelerde pilot uygulamalar devam etmektedir. Öğretmenler için hizmet içi eğitimler, materyal desteği sağlanmaya çalışılmakta fakat bunların yeterli olmadığı görülmektedir.

Literatürde, kapsayıcı eğitimin başarıyla uygulanabilmesi için üç boyut önemli görülmektedir: (1) kavramsal farkındalık ve bilgi temelli eğitim (Florian & Black-Hawkins, 2011), (2) pedagojik strateji ve materyal desteği (Rakap & Kaczmarek, 2010), ve (3) aile-okul-toplum iş birliği mekanizmaları (Epstein, 2001). Ancak Türkiye özelinde yapılan çalışmalar, bu boyutların öğretmenler arasında tutarlı bir bilgi birikimi ve uygulama planı çerçevesinde bütünleşmediğini göstermektedir. Araştırmalar öğretmenlerin kapsayıcı eğitime yönelik bilgi düzeylerinin ve mesleki yeterliklerinin yetersiz olduğunu göstermiştir (Kargın, 2004; Pamuk

ve Bal, 2019). Okullarda materyal eksiklikleri olduğu ve kapsayıcı eğitim paydaşlarının desteğinin yetersiz olduğu ortadadır. İlgili araştırmalar incelendiğinde de öğretmenlerin, kapsayıcı eğitim konusunda ve dil bilmeyen çocuklara karşı farklılaştırılmış uygulamalar yapamadıklarına değinen çalışmalara rastlanmıştır (Akbulut vd., 2021; Erdem, 2017). Alanyazın incelendiğinde özellikle Türkçe' yi ikinci dil olarak öğrenen çocukların eğitimiyle ilgili çalışmaların sınırlı olduğu görülmüştür.

Kapsayıcı eğitim, sadece engelli öğrencilerin değil; dil, din, etnik köken, sosyoekonomik durum gibi çeşitli nedenlerle dezavantajlı konumda bulunan tüm öğrencilerin eğitim sürecine dahil edilmesini amaçlar. Türkiye, kapsayıcı eğitimin benimsenmesi ve yaygınlaştırılması yönünde son yıllarda önemli adımlar atmış olsa da uygulamada çeşitli bölgesel farklılıklar gözlemlenmektedir. Türkiye'nin doğu ve güneydoğu bölgeleri, demografik yapı, göç almış olması ve düşük sosyoekonomik sebeplerden dolayı kapsayıcı eğitime en fazla ihtiyaç duyulan bölgelerdir. Şanlıurfa ili bu konuda dikkat çeken ve kapsayıcı eğitim uygulamalarında desteğe ihtiyaç duyan iller arasında yer alır. Şanlıurfa'da nüfusun hızlı artışıyla birlikte okul öncesi eğitime devam eden çocuk sayısının fazlalığı ve aldığı göç kapsayıcı eğitim uygulamalarını daha da önemli hâle getirmiştir. Şanlıurfa'da çalışan okul öncesi öğretmenleri, farklı dil konuşan öğrencilerle çalışmakta ve sosyoekonomik yetersizliklerden dolayı çeşitli zorluklarla karşılaşmaktadır. Bu durum karşısında öğretmenlerin kapsayıcı eğitim hakkında bilgi sahibi olması, farklılaştırılmış öğretim yöntemleri ve etkili sınıf yönetimi becerilerini kullanabilmesi gerekmektedir. Bu bölgede çalışan okul öncesi öğretmenleri tarafından kapsayıcı eğitimin nasıl algılandığı, uygulandığı ve öğretmenlerin hangi güçlüklerle karşılaştığı incelenmelidir.

Türkiye'de, okul öncesi dönemde uygulamaya dönük ve dil farklılıkları yaşanan ortamlarda öğretmen deneyimlerini ele alan çalışmalar sınırlıdır. Özellikle öğretmenlerin sınıf içi stratejileri, materyal kullanımı ve dil problemini aşma yöntemlerine ilişkin bulgulara ihtiyaç duyulmaktadır. Bu çalışmanın amacı, okul öncesi öğretmenlerinin kapsayıcı eğitime dair kavramı algılama düzeylerini, karşılaştıkları zorlukları ve uygulama örüntülerini fenomenolojik desen çerçevesinde inceleyerek, kapsayıcı eğitim uygulamalarının iyileştirilmesini ve alan yazında var olan boşlukları doldurmayı hedef almaktadır.

Yöntem

Araştırma Modeli

Bu çalışma, okul öncesi öğretmenlerinin kapsayıcı eğitime yönelik bakış açılarını,

karşılaştıkları sorunları ve uyguladıkları stratejileri derinlemesine incelemek amacıyla nitel araştırma yöntemlerinden biri olan fenomenolojik desen kullanılarak tasarlanmıştır. Fenomenoloji, bireylerin belirli bir olguya ilişkin deneyimlerini ve bu deneyimlere yükledikleri anlamları anlamaya odaklanan bir yaklaşımdır (Creswell, 2016). Fenemolojinin amacı insan deneyimini anlamaktır. Fenemoloji farkında olduğumuz ancak ayrıntılı ve derin bir anlayışa sahip olmadığımız olgulara odaklanır (Yıldırım & Şimşek, 2021). Kapsayıcı eğitimde bazı bölgelerde sıklıkla karşımıza çıkan bir uygulama olup ancak derin bir anlayışa sahip olmadığımız bir uygulamadır.

Çalışma Grubu

Araştırmanın çalışma grubu Şanlıurfa ili merkez ilçesine bağlı bir köyde MEB’e bağlı bağımsız anaokulunda görev yapan ve gönüllü olarak çalışmaya katılmayı kabul eden 6 okul öncesi öğretmeni oluşturmaktadır. Katılımcıların seçiminde, kapsayıcı eğitim uygulamalarıyla ilgili deneyime sahip olmaları ve farklı kültürel geçmişe sahip çocuklarla çalışıyor olmaları kriterleri göz önünde bulundurulmuştur.

Aşağıdaki tabloda çalışmaya katılan öğretmenlerin demografik bilgileri yer almaktadır.

Tablo 1. Çalışma Grubu

	Cinsiyet	Yaş	Deneyim	Yaş grubu
Ö1	Kadın	26	0-1 yıl	4
Ö2	Kadın	39	0-1 yıl	5
Ö3	Kadın	29	0-1 yıl	5
Ö4	Kadın	26	3 yıl	5
Ö5	Kadın	27	2 yıl	5
Ö6	Kadın	29	7 yıl	5

Çalışmaya katılan öğretmenlerin hepsi kadındır. Öğretmenlerin 3’ü 0-1 yıl arasında çalışma deneyimine sahiptir. Bir tanesi 2 yıl, bir tanesi 3 yıl ve bir tanesi de 7 yıl çalışma deneyimine sahiptir. Bir tanesinin çalıştığı yaş grubu 4 yaş diğerleri 5 yaş grubudur. Şuan hepsi resmi bağımsız anaokulunda görev yapmaktadır. Okul köy okuludur.

Veri Toplama Aracı

Veriler, araştırmacılar tarafından geliştirilen yarı yapılandırılmış görüşme formu aracılığıyla toplanmıştır. Görüşme formu, kapsayıcı eğitime ilişkin öğretmenlerin bilgi, düşünce ve uygulamalarını derinlemesine anlamayı hedefleyen; Kapsayıcı eğitim uygulamalarında karşılaştığınız en büyük zorluk nedir? Bu zorlukları aşmak için hangi desteklere ihtiyaç duyuyorsunuz? Kapsayıcı eğitimin geliştirilmesi için hangi politika veya uygulama değişikliklerini önerirsiniz? Gibi açık uçlu 13 sorudan oluşmaktadır. Görüşmeler sırasında, katılımcıların izni alınarak ses kayıtları alınmış ve gerektiğinde araştırmacı tarafından notlar tutulmuştur.

Veri Toplama Süreci

Görüşmeler, katılımcıların uygun gördüğü zamanlarda ve rahat bir ortamda gerçekleştirilmiştir. Her bir görüşme yaklaşık 30-45 dakika sürmüş, toplamda 6 öğretmenle bireysel görüşmeler yapılmıştır. Görüşmelerin tamamı, katılımcıların izni doğrultusunda ses kaydına alınmış ve daha sonra yazılı metne dönüştürülerek analiz için hazırlanmıştır.

Verilerin Analizi

Toplanan veriler, içerik analizi yöntemi kullanılarak analiz edilmiştir. İlk olarak, ses kayıtları yazılı metne dönüştürülmüş, ardından veriler kodlanarak temalar oluşturulmuştur. Bu süreçte, öğretmenlerin kapsayıcı eğitime ilişkin görüşleri, karşılaştıkları zorluklar ve uyguladıkları stratejiler tematik olarak sınıflandırılmıştır. Analiz sürecinde, verilerin güvenilirliğini artırmak amacıyla kodlama işlemi iki araştırmacı tarafından bağımsız olarak gerçekleştirilmiş ve elde edilen bulgular karşılaştırılarak uzlaşa sağlanmıştır.

Etik İlkeler

Araştırma sürecinde etik ilkelere azami özen gösterilmiştir. Katılımcılara araştırmanın amacı, süreci ve gizlilik ilkeleri hakkında bilgi verilmiş, gönüllü katılım esas alınmıştır. Görüşmeler öncesinde katılımcılardan yazılı onam alınmış ve elde edilen veriler yalnızca araştırma amacıyla kullanılmıştır. Katılımcıların kimlik bilgileri gizli tutulmuş ve raporlama sürecinde katılımcılara Ö1-Ö2-Ö3... diye kodlar verilmiştir.

Bulgular

Araştırmada elde edilen veriler analiz edildiğinde tema ve kategorilere ayrılarak bu bölümde sunulmuştur. Veriler toplam 5 ana temaya ve 16 alt kategoriye ayrılmıştır. Bu temalar; öğretmenlerin kapsayıcı eğitime ilişkin bilgi düzeyleri, kapsayıcı eğitim uygulamalarında ve dil öğretiminde karşılaşılan zorluklar, kapsayıcı eğitim stratejileri ve materyal kullanımı,

öğretmenlerin beklenti ve ihtiyaçları, dilsel ve kültürel engellerin aşılması şeklindedir. Kategoriye ait kodlar çalışmadaki verilerden elde edilmiştir. Her temada öğretmenlerin cevaplarından örneklere yer verilmiştir.

Tema1. Öğretmenlerin Kapsayıcı Eğitime İlişkin Bilgi Düzeyleri

Kategori	Kodlar	Katılımcılar
Kapsayıcı eğitim kavramını bilme/bilmeme	Kavramı bildiğini söyleyenler	Ö1, Ö3, Ö5, Ö6
	Kavramı bilmeyenler	Ö2, Ö4
Kapsayıcı eğitime yönelik tanımları	Fırsat eşitliği	Ö3, Ö5, Ö6
	Farklılıklara saygı	Ö1, Ö3, Ö5
Kapsayıcı eğitimle ilgili eğitim alma durumu	Seminer/hizmet içi eğitim almış	Ö5, Ö6
	Hiç eğitim almamış	Ö1, Ö2, Ö3, Ö4

Bu tema, öğretmenlerin kapsayıcı eğitimi kavramsal olarak ne ölçüde benimsediğini ve bu konuda hangi eğitimlere maruz kaldıklarını ortaya koymaktadır. Katılımcıların yarısı (Ö1, Ö2, Ö3, Ö4) kavramı hiç duymadıklarını veya eksik tanımladıklarını belirtirken, diğer yarısı (Ö1, Ö3, Ö5, Ö6) kavramı doğru tanımlayabilmiştir. Eğitim alma durumu açısından da yalnızca Ö5 ve Ö6'nın bu konuda seminer ya da hizmet içi eğitim almış olması, alanın kuramsal ve uygulamalı boyutuna dair yaygın bir bilgi boşluğu olduğunu göstermektedir.

Bu konuda öğretmenlerden biri şöyle paylaşmıştır:

“Daha önce duymamıştım ama tahmin yürüteceğim... belki fizyolojik, psikolojik her açıdan kapsayıcı...” (Ö2).

Ve doğru kavramsallaştıran bir başka öğretmen: “Sınıf farkı yapmadan, ayırım yapmadan bütün öğrenci kitlesini almak.” (Ö5).

Seminerin etkisini aktaran öğretmen: “Suriyeli çocuklara yönelik bir seminerdi. Ondan sonra ev ziyaretlerini arttırdım... aileyi sürece dahil etmenin önemini öğrendim.” (Ö6).

Tema 2. Kapsayıcı eğitim uygulamalarında ve dil öğretiminde karşılaşılan zorluklar

Kategori	Kodlar	Katılımcılar
Dilsel ve iletişimsel güçlükler	Kendini kelimelerle ifade edememe	Ö1, Ö2, Ö3, Ö4, Ö5, Ö6
	Öğretmeni tam anlamama	
	Duygularını sözel ifade edememe	
Materyal ve personel eksikliği	Yardımcı personel eksikliği	Ö5, Ö6
	Görsel kaynak yetersizliği	

Aile–sosyoekonomik güçlükler	Kalabalık ve ilgisiz aileler	Ö2, Ö5
Düşük sosyoekonomik düzey		

Bu tema, öğretmenlerin kapsayıcı eğitimde en sık karşılaştıkları sorunları ortaya koymaktadır. Öğrencilerin Türkçeyi anlama ve ifade etme güçlükleri (Ö1–Ö6), sınıf içi iletişimi sekteye uğratmakta; öğretmenleri sezgisel yöntemlere (görsel kaynaklar, el kol hareketleri) yönlendirmektedir. Kaynak ve personel eksikliği (Ö5, Ö6) öğretim kalitesini doğrudan etkilemekte, ailelerin yetersiz desteği (Ö2, Ö5) ise akademik–sosyal uyumu zorlaştırmaktadır.

Bu konuda düşüncelerini paylaşan bazı öğretmenler görüşlerini şöyle ifade etmişlerdir;

Ö1: “Yani daha basit kelimeler biliyorlar. Tam cümle kuramıyorlar.”

Ö3: “Batıdakine göre buradaki Türkçe bilen de kelimeleri anlamıyor.”

Ö6: “Dil problemi en büyük zorluk; bazen çocuğun derdi anlaşılamıyor.”

Tema 3: Kapsayıcı Eğitim Stratejileri ve Materyal Kullanımı

Kategori	Kodlar	Katılımcılar
Görsel ve somut materyal kullanımı	Resimli kartlar ve nesneler Kuklalar, video gösterimi	Ö2, Ö3, Ö4, Ö5, Ö6
Sözlü stratejiler	Kısa cümleler ve sık tekrar Şarkı ve tekerleme	Ö1, Ö2, Ö3, Ö5
Sosyal oyun ve kültürel etkinlik	Grup oyunları ile iletişim Kültürel paylaşımlar	Ö1, Ö3, Ö5
Değerlendirme yöntemleri	Gözleme dayalı takip Dil gelişimini izleme Sosyal katılım ölçümü	Ö1, Ö2, Ö3, Ö6

Bu tema öğretmenlerin kapsayıcı eğitimde yaptıkları uygulamaları ve değerlendirme yöntemlerini ortaya koymaktadır. Öğretmenler, dil edinimi ve sosyal etkileşim desteklemek için görsel ve işitsel araçları (kartlar, video), oyun ve kültürel etkinlikleri bir arada kullandıklarını ifade etmişlerdir. Ancak bu stratejiler çoğunlukla deneysel ve plansız olarak uygulanmakta; sistematik bir pedagojik çerçeveden yoksun kalmaktadır. Bu konuda düşüncelerini paylaşan öğretmenlerden bazıları kendisini şöyle ifade etmiştir;

Ö5: “Beraber oyun kurmalarını sağlıyorum oyunda bence dil gerekmiyor. Oyun kurmak konusunda biraz eksik çekiyorlar, o zaman da ben kendim onlarda oyunu yapabiliyorum fikir olsun diye fikirler veriyorum. O şekilde birbirlerine paylaşıyorlar. Oyun bence onların ortak dili oluyor.”

Ö6: “Çocuğun ailesiyle iletişim kuruyorum. Aileye de sürece dahil ediyorum. Çünkü çocuk farklı dilde birine, farklı kültürde birine bazen kendini açmıyor. Mesela geçen sınıfımda bir tane Suriyeli öğrenci var. Anne atölyesine özellikle onun annesini çağırdım. Çocuk kendini daha fazla ait hissetsin diye bu şekilde açmaya çalışıyorum.”

Tema 4: Öğretmenlerin Beklenti ve İhtiyaçları

Kategori	Kodlar	Katılımcılar
Hizmet içi ve üniversite eğitimi	Yüz yüze uygulamalı eğitim Müfredatta kapsayıcı ders	Ö3, Ö5, Ö6
Okul içi destek ve araçlar	İki dilli yardımcı personel Teknolojik materyal	Ö1, Ö2, Ö5, Ö6
Aile ve toplum işbirliği	Aileleri Türkçe konuşmaya teşvik Kurumlar arası etkinlik	Ö1, Ö4, Ö5

Bu tema, öğretmenlerin kapsayıcı eğitimi sürdürülebilir kılmak için hangi eğitim, kaynak ve iş birliği mekanizmalarına ihtiyaç duyduklarını ve bu ihtiyaçların arka planında yatan kaygıları ortaya koymaktadır.

Öğretmenlerin büyük çoğunluğu, uygulamalı, yüz yüze eğitim eksikliğini vurgulamaktadır:

“Üniversitede öğrendiğim hiçbir şey pratiğe yaramadı; seminerler de online olunca pek verimli olmuyor. Yüz yüze, sınıf içinde örnekleriyle eğitim almalıyız.” (Ö3)

“Yabancı öğrencilerle ilgili seminerlerde sahada uygulama yapma imkanı vardı; o seminerden sonra yöntemlerim daha etkili oldu.” (Ö5)

Bu alıntılar, öğretmenlerin kavramsal bilgiyi pratiğe dönüştürmekte zorlandıklarını; hizmet içi eğitimin hem içerik hem de yöntem olarak uygulamalı olması gerektiğini net biçimde göstermektedir.

Çalışmanın bir diğer bulgusunda ise; sınıf içi ilkeli bir kapsayıcılığı sürdürmek için iki dilli yardımcı personel ve teknolojik donanım talebi öne çıkmıştır:

“Suriyeli bir öğretmen sınıfımıza büyük destek oldu; dil bariyerini onlar sayesinde aştık.” (Ö6)

“Projeksiyon ve bilgisayar gibi araçlar olsa, görsel-işitsel materyallerle ders çok daha katılımcı olur.” (Ö2)

Buna göre, öğretmenler sadece pedagojik bilgiye değil, fiziksel ve insan kaynaklı desteğe de gereksinim duymaktadır.

Öğretmenler, aile-okul-toplum ekseninde sürdürülebilir iş birliği mekanizmalarının yetersizliğini şu sözlerle ifade etmiştir:

“Aile seminerlerinden sonra evde Türkçe konuşma arttı; ama düzenli atölyeler olmadığı için etkisi kısa sürüyor.” (Ö1)

“Halk eğitimi merkezleriyle ortak kurslar düzenlense, aileler ve çocuklar kapsayıcı yaklaşıma daha hızlı adapte olur.” (Ö5)

Bu ifadeler, sürekliliğe dayalı, çok paydaşlı iş birliklerinin kurgulanmadığını; öğretmenlerin bu konuda da destek beklediğini ortaya koymaktadır.

Bu bulgular; öğretmenlerin beklentilerinin yalnızca bireysel gelişime (hizmet içi eğitim) değil, okul altyapısına (teknoloji, personel) ve toplumsal iş birliklerine (aile, kurumlar) yönelik sistemik bir dönüşüm talebini kapsadığını göstermektedir. Bu ihtiyaçlar, kapsayıcı eğitim politikalarının yerelden yukarıya yeniden yapılandırılmasını zorunlu kılmaktadır.

Tema 5: Dilsel ve Kültürel Engellerin Aşılması

Kategori	Kodlar				Katılımcılar
Dil engelleri	Basit	kelimelerde		kalma	Ö1, Ö4, Ö6
	Çeviri ve jest/mimik desteği				
Kültürel uyum zorlukları	Geleneksel	pratikler	ve	okul çatışması	Ö3, Ö5
	Farklı kodlama				
Aile sosyoekonomik etkenler	Aile	bilinç	düzeyi	düşük	Ö2, Ö5
	Çok çocuklu aile yapısı				

Bu tema, öğretmenlerin çok dilli ve çok kültürlü öğrenci profiliyle karşılaştığında yaşadığı temel güçlükleri ve ortaya koydukları geçici çözüm arayışlarını derinlemesine ele almaktadır.

Öğretmenler, sınıf içinde temel iletişimin dahi tek kelime veya kısa cümlelerle sürdürülmek zorunda kaldığını vurgulamaktadır. Öğrenciler genellikle, dilsel sınırlar nedeniyle:

“Basit kelimelerde takılıp kalıyorlar, bir tane kelime söylerken bile doğru telaffuzu yakalamakta zorlanıyorlar.” (Ö1)

“Yani ‘tuvalet’ derken ‘tu-vet’ gibi heceler çıkarıyorlar; kitapta okuduğum cümleleri anlattığımda onlara soru soramıyorum çünkü cevap neredeyse yok.” (Ö6)

Bu ifadeler, öğretmenlerin çocukların tekil sözcük düzeyinden öte bir dil gelişimi beklemenin gerçekçi olmadığını düşündüklerini gösterir. Bunun sonucunda sınıf içi iletişim büyük ölçüde jest-mimik ve somut nesne desteğine dayanmakta, ancak bu yollar da öğrencinin kalıcı dil edinimine yetersiz kalmaktadır.

Ö6’bu konuda düşüncelerini şöyle ifade etmiştir;

“Mimikle biraz geçiştiriyorum ama uzun vadeli değil; bazen çocuğun özel bir derdi oluyor, ‘arkadaşım bana vurdu’ diyor ama jestle anlatamam. Zamanla unutuyor, tekrar ediyoruz ama gerçek anlamda çözüm değil.”

Çalışmanın bir başka bulgusu da göçmen ailelerin kendi kültürel pratiklerini sınıfa taşımasının, bazen kültür çatışmasına yol açtığıdır. Öğretmenler bu durumu şöyle tanımlamaktadırlar;

“Mesela diyelim ki Suriye göçmeni bir çocuk Türkiye’ye geldiğinde, Türkiye’deki kültüre adapte olamaz ve bu kültür çatışmasına neden olur.” (Ö4).

“Sınıf tartışmasında, ‘bizde böyle yapıyoruz’ deyince diğer çocuklar anlamıyor; ortam gerginleşiyor, müdahale etmek zorunda kalıyorum.” (Ö4).

Bu alıntılar, kültürel kodlar arasındaki farkların, yalnızca dil değil değerler ve günlük alışkanlık düzeyinde de sorun yarattığını ortaya koymaktadır. Öğretmenler bu sorunları çoğunlukla “beklemek ve zamanla çözülür” perspektifiyle ele almakta, proaktif müdahale stratejileri geliştirmemektedir.

Ayrıca çalışmada velilerin çoğunun, ekonomik zorluk ve eğitim farkındalığı eksikliği nedeniyle sürece yeterince dahil olmadığı tespit edilmiştir;

“Burada çocuk sayısı çok fazla olduğu için aileler okula ilgisiz kalıyor; bizim söylediklerimizi eve iletmiyorlar.” (Ö2)

“Ben Urfa dışında bir şehri söylediğimde şaşıyorlar, dünyayı hiç görmemiş çocuklar var.” (Ö2)

Bu durum, kimi öğretmenlerin aile ile iş birliğini tek yönlü bilgilendirme toplantılarıyla sınırlamasına, kalıcı ortaklık modelleri geliştirmemesine yol açmaktadır.

Tartışma

Bu çalışmada okul öncesi öğretmenlerinin kapsayıcı eğitime ilişkin bilgi düzeyleri, uygulamaları, karşılaştıkları zorluklar ve destek ihtiyaçları incelenmiştir. Tematik analiz sonucunda elde edilen bulgular, mevcut literatürle karşılaştırılarak tartışılmıştır.

Öncelikle, öğretmenlerin kapsayıcı eğitime ilişkin bilgi düzeylerinin oldukça değişken olduğu görülmüştür. Bazı öğretmenler kavramı doğru bir şekilde tanımlarken, bazıları ilk defa duyduklarını ifade etmiştir. Kavramı doğru tanımlayanların da bilgilerinin çok kapsamlı olmadığı, eksik tanımlamalar yaptığı görülmüştür. Bu durum öğretmenlerin kapsayıcı eğitim kavramına oldukça uzak olduğu sonucunu ortaya çıkarmıştır. Çalışmaya katılan öğretmenlerin yarısı göreve yeni başlayan öğretmenlerdir ve kapsayıcı eğitim hakkında bilgiye sahip değildirler. Daha önce göreve başlayan öğretmenler de hizmet içi eğitimle kapsayıcı eğitim kavramıyla tanışmıştır. Fakat yine yeterli bilgiyi sağlayamadığı görülmüştür.

Tuzcuoğlu ve Aydın' ın (2023) okul öncesi öğretmenleri ile yaptığı çalışmada öğretmenlerin kapsayıcı eğitim konusunda bilgi ve uygulamalarının eksik olduğu görülmüştür. Bu durum, Florian ve Black-Hawkins'in (2011) kapsayıcı pedagojinin yalnızca uygulama düzeyinde değil, bilgi ve inanç temelli olarak da şekillendiğine dair vurgusunu desteklemektedir. Kapsayıcı eğitime dair temel farkındalığın dahi eksik olması, öğretmenlerin sınıf içi uygulamalarında bu yaklaşımı bilinçli şekilde uygulamalarını zorlaştırmaktadır. Çalışma, kırsal bölgede görev yapan öğretmenlerin kapsayıcı eğitim kavramını bilmediğine dair önemli bir sonucu ortaya koymaktadır. Bu durum aynı zamanda üniversite eğitimlerinin kapsayıcı eğitim konusunda yetersizliğini de ortaya koymaktadır. Çalışma, öğretmen görüşlerini alarak eğitim ihtiyaçlarını belirlemek ve üniversitedeki öğretmen eğitimleri için yol gösterici olmayı amaçlamaktadır.

Öğretmenlerin karşılaştıkları zorluklar incelendiğinde kapsayıcı eğitim uygulama sürecinde özellikle dil engelleri ön plana çıkmıştır. Çocuklar öğretmeni anlamakta ve kendilerini ifade etmede yetersiz kalmaktadır. Verilerin toplandığı okulda Türkçe bilen öğrenci sayısı çok azdır. Öğrenciler tek kelime veya iki kelimelik cümlelerle kendilerini ifade etmeye çalışmaktadır. Özellikle göçmen öğrenciler kendilerini Türkçe olarak ifade edememektedir. Bu durum öğretmen ve öğrenci arasındaki iletişim ve bağı olumsuz etkilemektedir. Dil bariyeri aşılmadığı sürece eğitimde de ilerleyemedikleri ortaya konulmuştur. Öğretmenler çocukları anlamakta zorluk yaşamakta ve bu konuda desteğe ihtiyaç duyduklarını dile getirmişlerdir.

Yıldız ve Gülbahar'ın (2023) yaptığı çalışmada öğretmenler çocuklarla dil ve iletişim konusunda problem yaşadıklarını dile getirmişlerdir. Yaşanan dil sorunu eğitim öğretimi ve sınıf içindeki sosyal yapıyı olumsuz yönde etkilemektedir (Uğurlu, 2018; Eren, 2019). Daha önce yapılan çalışmalar daha çok göçmen- sığınmacı öğrencilerin olduğu çalışmalardır. Çalışmanın yapıldığı okulda göçmen öğrenci sayısı azdır. Elde edilen bulgularla sadece göçmen öğrencilerde değil, Türkiye'de yaşayan farklı etnik kökene sahip öğrencilerin Türkçe bilgisinin olmadığı ve Türkçe'yi ikinci dil olarak öğrenmekte zorlandıkları ortaya çıkmıştır. Aileler

Türkçe bilmekte fakat çocuklarının Türkçe öğrenmesine gerekli önemi vermemektedir. Bu durum yaşanan dil probleminin yoğunluğunu ve ailenin etkisini büyük oranda ortaya koymuştur.

Öğretmenlerin kullandıkları kapsayıcı eğitim stratejileri, materyal ve yapmış oldukları değerlendirmenin incelendiği temada, öğretmenlerin büyük bir kısmı, Türkçe bilmeyen öğrencilerle iletişim kurmakta zorlandıklarını ifade etmiş; sınıf içi etkileşimde oyun, görsel materyal ve tekrar gibi yöntemlerle çözüm üretmeye çalıştıklarını belirtmiştir. Ancak bu yöntemler çoğunlukla sistematik bir kapsayıcı planlama çerçevesinde değil, sezgisel olarak uygulanmaktadır. Öğretmenler dil problemini aşmak için özel bir uygulama yapılması gerektiğinin farkında fakat gerekli alt yapı ve bilgiye sahip olmadıklarının bilincindedirler.

Rakap ve Kaczmarek (2010) bu tür durumlarda öğretmenlerin bireysel çabalarının desteklenmesi gerektiğini belirtmektedir. Kapsayıcı sınıf ortamının oluşması için öğretmene daha somut destekler sunulmalıdır (Akbulut vd., 2021). Daha önce yapılan çalışmalar öğretmenlerin sadece bilgi ve tutumlarını incelemiş yaptıkları uygulamalara dair bilgiler sunmamıştır. Yapılan bu çalışmada öğretmenlerin dil bariyerini aşmak için hangi uygulama, yöntem ve stratejiye başvurduğu ortaya konulmak istenmiştir. Öğretmenlerin sınıf içinde planlı bir uygulama konusunda yetersiz kaldıkları sonucuna ulaşarak, literatüre katkı sağlamıştır.

Öğretmenlerin yapmış olduğu değerlendirme yöntemleri incelendiğinde, kapsayıcı eğitim kapsamında çocukların dil öğrenimini değerlendirmek için sistemli bir yol izlemediği sonucuna ulaşılmıştır. Öğretmenler, çocukların dil gelişimlerini ve sosyal katılımlarını gözlemlemekte fakat bunu sistemli bir şekilde yürütmemektedirler.

Erken çocuklukta çocuğun dil gelişimine yönelik sistematik bir değerlendirme yapılması, eğitim sürecinin planlanması ve bireyselleştirilmesinde önemlidir (Espinosa, 2005). Tabors (2008) ikinci dil öğretiminde değerlendirmenin çok yönlü olması gerektiğini belirtmiş ve çocuğun anlama ve üretme becerilerini ölçen kontrol listesi örneği sunmuştur. Bu durumda öğretmenlerin değerlendirme yaparken geliştirilmiş kontrol listeleri kullanmaları ve gözlemlerini daha sistematik yapmaları kapsayıcı eğitim uygulamaları açısından faydalı olacağı düşünülmektedir. Yapılan çalışma öğretmenlerin kapsayıcı eğitim değerlendirmesinde yeterli olmadığını ve sistemli bir değerlendirme yapmadığını ortaya koymaktadır. Özellikle Türkçe'nin ikinci dil olarak öğretilmesinde değerlendirmeye yönelik uygulamaların eksikliği vurgulayarak literatüre katkı sağlamıştır.

Öğretmenlerin beklenti ve ihtiyaçları incelendiğinde, dikkat çekici ihtiyacı, aile ve çevre

desteğidir. Ailelerin çok fazla çocuğa sahip olması ve eğitim konusunda yeterli bilinç ve ilgiye sahip olmadıkları öğretmenler tarafından belirtilmiştir. Dil öğrenme konusunda öğretmenin okulda göstermiş olduğu çaba ev ortamında Türkçe konuşulmadığı için yetersiz kalmaktadır. Ailelerle dil farklılığı nedeniyle yeterince etkili iletişim kurulamadığı; kurumlar arası iş birliğinin ise sınırlı olduğu görülmüştür. Öğretmenler aile desteğinin önemini farkında fakat bu sorunun çözümünde kendi çabaları yeterli olmamaktadır. Aileleri okula çağırarak ve ev ziyaretleri yaparak bu durumu aşmaya çalışmaktadırlar. Bu durum, daha planlı bir destek sağlanması ve ailelere eğitimlerin verilmesi gerektiğini ortaya koymuştur.

Bu durum, Epstein'in (2001) aile-okul iş birliği modeline göre, kapsayıcı eğitimde paydaşların birlikte çalışmasının önemini vurgulamaktadır. Ortaya çıkan bu bulguları Bronfenbrenner'in (1970) ekolojik modeli ile ilişkilendirebiliriz. Özel ve Yıldız (2020) yaptığı çalışmada kapsayıcı eğitime ekolojik kuram açısından bakmıştır. Çocuk, ekolojik modelde çevresel etmenler ve bu çevresel etmenlerin birbiriyle olan ilişkisiyle gelişir. Bu kurama göre kapsayıcı eğitim okul, aile ve toplumun iş birliği içinde çalışması ile sağlıklı ve etkili şekilde ilerleyecektir. Yapılan bu çalışma öğretmenlerin kapsayıcı eğitim konusunda yalnız mücadele ettiğini ve gerekli desteğin kendilerine sağlanmadığını ortaya koymaktadır. Kapsayıcı eğitim konusunda okul aile iş birliğinde atılan adımların yetersiz kaldığı sahadaki öğretmenler tarafından ortaya konulmuştur.

Öğretmenlerin bir diğer önemli ihtiyacı uygulamalı üniversite ve hizmet içi eğitimlerdir. Öğretmenler, kapsayıcı eğitimle ilgili yeterli hizmet içi eğitim almadıklarını ve üniversite eğitimlerinde bu konuya yeterince yer verilmediğini belirtmişlerdir. Öğretmenlerden sadece bir tanesi üniversite eğitiminde kapsayıcı eğitim ile ilgili eğitim aldığını söylemiştir. Fakat aldığı eğitim uygulama noktasında yetersiz kalmaktadır. Öğretmenler verilen eğitimlerin sadece sözlü olduğu ve pratikte bir işe yaramadığını vurgulamaktadır. Bu durum verilen eğitimlerin içerik ve yöntem tarafından eksikliğini ortaya koymaktadır.

Kapsayıcı eğitim konusunda eğitim almış öğretmenlerin bilgi düzeyi ve kapsayıcı eğitime olumlu tutumlarını ortaya koyan çalışmalara bakıldığında öğretmenlere bu konuda uygulamalı etkinliklerle eğitim verilmesi gerekli görülmüştür (Akbulut; 2021). Araştırmadan elde edilen bulgular, European Agency for Special Needs and Inclusive Education (2012) raporuyla örtüşmektedir. Raporda, kapsayıcı eğitimin sürdürülebilir olabilmesi için öğretmen yetiştirme politikalarının bu ekseninde yeniden yapılandırılması gerektiği vurgulanmaktadır. Reeves (2017) göçmen bölgelerindeki öğretmen eğitimleri ile ilgili yaptığı çalışmada öğretmenlerin daha sistemli ve bütüncül eğitimlerle yetiştirilmesi gerektiği vurgulanmıştır. Bu araştırma, öğretmenlerin kapsayıcı eğitime dair mesleki gelişim ihtiyaçlarının karşılanmadığını da ortaya

koymaktadır. Öğretmenlerin aldığı üniversite ve hizmet içi eğitimler uygulamada yetersiz kalmaktadır.

Literatürde kapsayıcı eğitimle ilgili çalışmalar yer almakta fakat, öğretmenlerin yaşadığı pratik sorunlar ve çözüm yolları bölgesel bağlamda yeterince incelenmemiştir. Yapılan bu çalışma, Şanlıurfa gibi göçmen nüfusun fazla olduğu ve farklı etnik grupların bir arada yaşadığı yerlerde, kapsayıcı eğitimde yaşanan zorlukları ve aile iş birliği eksikliğini sahadan verilerle ele alarak alana özgün bir katkı sunmaktadır. Sonuç olarak bu çalışma, öğretmenlerin kapsayıcı eğitim konusunda iyi niyetli çabalar gösterdiğini ancak bilgi, kaynak ve sistem desteği açısından yetersiz kaldığını göstermektedir. Özellikle çok dilli ve kültürel çeşitliliğin olduğu bölgelerde, kapsayıcı eğitimin uygulanabilmesi için aile, çevre ve kurumlar arası iş birliğinin güçlendirilmesi gerektiği vurgulanmaktadır. Kapsayıcı eğitimin uygulanabilirliği yalnızca bireysel çabaya değil; bütüncül ve çok paydaşlı bir yaklaşımla desteklenmesine bağlıdır. Bu nedenle hem öğretmen yetiştirme sistemleri hem de eğitim politikaları, kapsayıcı eğitimin ilkelerini daha güçlü biçimde içselleştirmelidir.

Sonuç

Bu çalışmada, okul öncesi öğretmenlerinin kapsayıcı eğitime yönelik bilgi düzeyleri, uygulama yeterlilikleri, karşılaştıkları zorluklar ve destek ihtiyaçları tematik olarak incelenmiştir. Elde edilen bulgular, öğretmenlerin kapsayıcı eğitim konusunda iyi niyetli ancak çoğu zaman bilgi ve kaynak yönünden yetersiz olduğunu ortaya koymuştur.

Öğretmenlerin %50'si kavramı duymadığını söylemiştir. Kavramı duymayan öğretmenlerin yapmış oldukları tanımlamalarda eksik ve yanlışlar olduğu tespit edilmiştir. Capella ve Santana (2003) yaptığı çalışmada öğretmenlerin katıldıkları eğitimlerin çok kültürlü tutum ve bilgilerini olumlu etkilediği sonucuna ulaşmıştır. Öğretmenlere kapsayıcı eğitim hakkında bilgi verilmesi kapsayıcı eğitim tutum ve uygulamalarında gelişmeler yaratacağı düşünülmektedir.

Öğretmenler yoğun olarak iletişim problemi yaşamaktadır. Öğrencilerin sadece %10'luk bir kısmı Türkçe bilmektedir. Öğretmenler kendilerini ifade etmek ve çocukları anlamak için bireysel stratejilere yönelmişlerdir. Ancak sistematik ve planlı bir uygulama yapamadıkları açıkça görülmüştür. Say ve Özdemir (2024), öğrenci merkezli, bireyselleştirilmiş ve grupla yapılan çalışmalarda dil öğreniminin daha iyi gerçekleştiğini vurgulamışlardır. MEB öğretmenlere uygulamalı hizmet içi eğitim vererek sınıfta uygulanabilecek plan ve programların eğitimini sağlayabilir.

Öğretmenlerin yaşadığı diğer problemler materyal ve kaynak eksikliği bulunması, yardımcı

personel eksikliğidir. Özellikle teknolojik materyaller sağlanması ve dil bilen ikinci personel bulunması kapsayıcı eğitim uygulamaları açısından iyileştirici sonuçlar ortaya koyacağı düşünülmektedir.

Ailelerin Türkçe bilmiyor oluşu okul ile iletişimlerini olumsuz etkilediği görülmüştür. Bu konuda ailelere halk eğitim merkezleri tarafından dil desteği ve eğitimi sağlanması gerekli görülmüştür.

Ailelerin sürece katılması için öğretmenlerin kendi çabalarının yanında daha programlı ve güçlü bir desteğe ihtiyaçları vardır. Millî Eğitim Bakanlığı Öğretmen Yetiştirme ve Geliştirme Genel Müdürlüğü (2018) yayımladığı Kapsayıcı Eğitim Öğretmen Eğitimi Modülü Projesi ile kapsayıcı eğitimde okul- aile iş birliğinin önemine değinmiş ve yapılabilecek sınıf içi ve sınıf dışı etkinliklere örnekler vererek öğretmenlere bu konuda yol göstermiştir. Fakat araştırma sonuçlarıyla bu yapılan uygulamaların yetersiz kaldığı ve yaygınlaştırılması gerektiği sonucuna ulaşılmıştır.

Bu çalışma, bu zorlukların sadece bireysel değil, yaygın altyapı ve politika eksikliklerinden kaynaklandığını gözler önüne sermektedir. Saha verileri, teknolojik kaynak ve personel desteğinin ders içi etkisini de ortaya koymaktadır. Öğretmenler, daha iyi uygulamalar yapılabilmesi açısından okuldaki materyal eksikliğinin giderilmesini, özellikle teknolojik materyal desteğinin sağlanması gerektiğini dile getirmişlerdir. Dil konusunda kendilerinin yetersiz oldukları, tercüman veya yabancı dil bilen ikinci bir öğretmene ihtiyaç duydukları ortaya konulmuştur. Daha önce dil desteği sunan bir öğretmen ile çalıştığını söyleyen katılımcı bunun faydalı ve gerekli bir uygulama olduğunu belirtmiştir. Elde edilen verilerle politika yapıcılara bu konunun önemini vurgulayarak gerekli desteği sağlamada yol gösterici sonuçlar ortaya konulmuştur. Araştırma sonucunda elde edilen bulgulara göre, kapsayıcı eğitimin sürdürülebilirliği için üniversitelerdeki öğretmen eğitiminin niteliği artırılmalı, çok dilli ve çok kültürlü yapılar desteklenmeli ve aile-okul iş birliği güçlendirilmelidir.

Araştırma bazı sınırlılıklar taşımaktadır. Sadece belirli bir bölgede görev yapan 6 okul öncesi öğretmeni ile yapılmıştır. Araştırma sonuçları tüm öğretmenlere genellenemez. Araştırmada sadece nitel yöntemle veriler toplanmış olup, görüşme tekniği kullanılmıştır. Araştırmada kapsayıcı eğitim alanında yaşanan dil farklılıkları ve iletişim problemleri öne çıkarılmıştır. Bu nedenle diğer kapsayıcılık alanlarına ilişkin bulgular sınırlıdır. Gelecekte farklı yöntemlerin bir arada kullanıldığı ve daha geniş örnekleme çalışmaları yapılması alana katkı sağlayacaktır.

Öneriler

Araştırmacılara Yönelik Öneriler:

Bir- iki yıl gibi kısa süre içinde kapsayıcı eğitime dair bilgi düzeyinin farklı bölgelerde karşılaştırmalı olarak incelenmesi ve eksikliklerin tespit edilmesi önerilmektedir. Politika yapıcılarının bölgesel ihtiyaçlara cevap vermesi bu şekilde sağlanabilir.

Literatürde kapsayıcı eğitimle ilgili çalışmalar sınırlıdır. Karma yöntemli çalışmalarla nicel ve nitel veriler bir araya getirilerek daha güçlü analizler yapılabilir.

Kapsayıcı eğitimde sadece dil problemi değil diğer problem alanlarında da öğretmenlerle çalışmalar yapılabilir.

Uygulayıcılara (Öğretmenler ve Eğitimciler) Yönelik Öneriler:

1-2 yıllık süreçte MEB tarafından öğretmenler için uygulamalı hizmet içi eğitimler planlanarak öğretmenlerin kapsayıcı öğretim becerileri geliştirilerek bu konudaki eksiklikleri giderilebilir.

Öğretmenler için sınıf içi uygulamalarda çocukların bireysel farklılıklarını göz önünde bulunduran esnek planlamalar yapılmalıdır. MEB tarafından 2025-2026 hizmet içi eğitim programında plan ve materyal konusunda gerekli desteği sağlamalıdır.

Politika Belirleyicilere Yönelik Öneriler:

YÖK tarafından kapsayıcı eğitim üniversitelerin öğretmen yetiştirme programlarına bütüncül biçimde entegre edilerek öğretmenlerin kapsayıcı eğitim hakkında bilgi sahibi olarak göreve başlamaları sağlanabilir. 2025-2026 eğitim öğretim yılından itibaren öğretmen yetiştirme ders müfredatına zorunlu olarak kapsayıcı eğitim dersi eklenmelidir.

MEB tarafından 2025-2026 yılı eğitim öğretim başlangıcında her okulun çok dilli yapısını destekleyecek yardımcı personel ve materyal kaynakları sağlanmalı ve öğretmenler eksiksiz bir şekilde eğitime başlamalıdır.

MEB, diğer (Halk Eğitim Merkezi vb.) sosyal kurumlarla iş birliği yürüterek Fransa ve Almanya’da uygulanan mentör programları gibi öğrenci ve ailelere dil öğrenimi ve sosyal uyum konusunda yardımcı olacak bir mentör kişi uygulamasını bir yıllık süre içinde alt yapıyı sağlayarak uygulayabilir. Aile eğitimleri bu şekilde sağlanabilir.

Fransa ve İtalya’da uygulanan “Açık Okul” programları ile öğrenciler okul dışı zamanlarda da çeşitli etkinliklerle öğrenmelerine devam etmektedir. Bunun gibi bir uygulama ile öğrenciler ve aileleri ile okul dışında çeşitli etkinlikler yapılabilir. Böylece aile de sürece dahil edilmiş olur ve sürekli öğrenme sağlanır. Gerekli alt yapı sağlanarak 2026 yaz döneminde halk eğitim merkezleri ve MEB tarafından öğrenci merkezli programlarla eğitimlere başlanabilir.

Göçle gelen çocuklar için İngiltere’ de uygulanan “Kültürel Farkındalık Atölyeleri” nde çeşitli etkinlik ve toplum ziyaretleri ile farklı kültürden çocuklar bir araya gelerek uyum sağlamaları kolaylaştırılır. MEB, toplumla işbirliği halinde 2025-2026 eğitim döneminde haftalık etkinliklerle farklı kültüre sahip çocukların birbiriyle kaynaşmasını sağlayabilir.

Federe Öğrenme Tabanlı Sağlık Çözümleri: Uygulama Alanları ve Etkinlik Analizi

Engin DAYAN

Iğdır Üniversitesi, e-mail: engin.dayan065@gmail.com, Orcid: 0000-0003-1839-280X,
TÜRKİYE

Özet

Federated Learning (FL), sağlık sektöründe veri gizliliği sorununa çözüm getirmeyi amaçlayan yenilikçi bir yaklaşım sunmakta; model eğitiminin merkezi veri toplama gerektirmeksizin gerçekleştirilmesine olanak tanımaktadır. Bu makalede, FL'nin sağlık alanındaki başlıca uygulama alanları—tıbbi görüntüleme, elektronik sağlık kayıtları, mobil sağlık ve pandemi yönetimi—ayrıntılı biçimde incelenmekte; doğruluk, gizlilik, hesaplama verimliliği ve klinik uygulanabilirlik gibi etkinlik boyutları değerlendirmeye tabi tutulmaktadır. Türkiye ile ABD, Çin ve Almanya gibi önde gelen ülkeler arasındaki karşılaştırmalı analiz, FL'nin yerel ve küresel düzeydeki gelişim sürecini ortaya koymaktadır. 2013 ile 2025 yılları arasını kapsayan literatür taraması, FL'nin klinik karar destek sistemlerinden kişiselleştirilmiş tıbbi kadar geniş bir yelpazede etkinliğini gösterdiğini ortaya koymakta; ancak veri heterojenliği, altyapı yetersizlikleri ve klinik entegrasyonla ilgili güçlükler gibi önemli engellerle karşılaştığını da belirtmektedir. Türkiye'de TÜSEB ve UMRAM gibi girişimler bu alanda öncü konumda bulunmakla birlikte, gelişmiş veri kaynakları ve teknolojik altyapıları sayesinde önde gelen ülkeler hâlen daha üstün bir konuma sahiptir (TÜSEB, 2025; Çukur, 2022).

Anahtar Kelimeler: Federe Öğrenme, Sağlık Bilişimi, Elektronik Sağlık Kayıtları, Mobil Sağlık (mHealth), Kişiselleştirilmiş Tıp

Federated Learning-Based Healthcare Solutions: Application Domains and Effectiveness Analysis

Abstract

Federated learning (FL) presents a novel approach to addressing the critical issue of data privacy within the healthcare sector by facilitating model training without necessitating centralized data aggregation. This article meticulously investigates the primary domains of FL application in healthcare, encompassing medical imaging, electronic health records, mobile health, and pandemic management, while also assessing the dimensions of effectiveness analysis, including accuracy, privacy, computational efficiency, and clinical applicability. A comparative analysis between Turkey and prominent nations such as the USA, China, and

Germany elucidates the evolution of FL within both local and global frameworks. A review of the literature spanning from 2013 to 2025 indicates that FL demonstrates efficacy across a diverse array of fields, ranging from clinical decision support systems to personalized medicine; however, it encounters significant obstacles including data heterogeneity, infrastructural constraints, and challenges related to clinical integration. Although initiatives such as TÜSEB and UMRAM in Turkey are at the forefront of this domain, leading nations maintain a superior position due to their advanced data resources and technological infrastructures.

Keywords: Federated Learning, Health Informatics, Electronic Health Records, Mobile Health, Personalized Medicine

Giriş

Son yıllarda yapay zeka (YZ) ve makine öğrenmesi (MÖ) alanlarında yaşanan hızlı gelişmeler, özellikle otonom sürüş, sağlık hizmetleri, finans, müşteri ilişkileri yönetimi ve akıllı ev sistemleri gibi pek çok sektörde büyük dönüşümlere yol açmıştır. Bu teknolojik ilerlemelerde, büyük hacimli veri setlerine erişim ve yüksek işlem gücüne sahip altyapıların yaygınlaşması önemli rol oynamaktadır. Ancak, makine öğrenmesi uygulamalarının yaygınlaşmasıyla birlikte veri güvenliği ve mahremiyet konuları da giderek daha kritik bir hale gelmiştir (Wiens ve Shenoy, 2017). Geleneksel merkezî öğrenme yaklaşımları, farklı kaynaklardan gelen verilerin tek bir sunucuda toplanarak işlenmesini gerektirdiğinden, özellikle hassas kişisel veriler içeren sağlık gibi sektörlerde ciddi güvenlik ve etik sorunlara yol açabilmektedir.

Bu bağlamda, federe öğrenme (federated learning, FL); verilerin paylaşılmasına gerek kalmadan, yalnızca yerel modellerin güncellemelerinin merkezî modele iletilmesi esasına dayanan yeni nesil bir öğrenme yaklaşımı olarak öne çıkmaktadır (McMahan, vd. 2017). Google tarafından 2016 yılında tanıtılan bu yaklaşım, ilk olarak Android cihazlarda kullanılan Google Klavye (Gboard) üzerinde uygulanmış ve kullanıcı verilerini cihaz üzerinde tutarak yazım önerilerini iyileştirme imkânı sunmuştur. Federe öğrenme, verinin bulunduğu yerde işlenmesini mümkün kılarak yalnızca model parametrelerinin paylaşılmasını esas alır; böylece sağlık ve finans gibi mahremiyetin ön planda olduğu alanlarda yasal düzenlemelere uyumlu çözümler sunar.

Sağlık alanında federe öğrenmenin uygulanması, özellikle farklı hastanelerin ya da sağlık kuruluşlarının verilerini merkezileştirmeksizin ortak bir makine öğrenmesi modeli geliştirebilmesini sağlar. Örneğin, meme kanserinin manyetik rezonans görüntüleme (MRG)

verileriyle tespiti gibi klinik uygulamalarda, hasta verilerinin gizliliğini koruyarak işbirliği yapılabilmesi, çok merkezli derin öğrenme araştırmaları açısından büyük önem taşımaktadır (Sheller, vd. (2019). Bununla birlikte, federe öğrenme yalnızca mahremiyet sağlamakla kalmaz; aynı zamanda büyük boyutlu ham verilerin ağ üzerinden aktarılması ihtiyacını da ortadan kaldırarak bant genişliği kullanımını azaltır ve işlem verimliliğini artırır (Roy, vd. 2019; Sheller, vd. 2020; Li, vd. 2019).

Günümüzde birçok ülkenin sağlık verilerine yönelik daha katı düzenlemeler getirmesi (örneğin Avrupa Birliği'nin Genel Veri Koruma Tüzüğü - GDPR ve Amerika Birleşik Devletleri'nde HIPAA) doğrultusunda, elektronik sağlık kayıtlarının (EHR) paylaşımı kısıtlanmakta ve araştırmacıların veriye erişimi zorlaşmaktadır (Vayena, vd. 2018). Bu durum, klasik merkezî öğrenme modellerinin uygulama alanlarını sınırlandırırken, FL yaklaşımını daha da cazip hale getirmektedir (Horvitz ve Mulligan 2015). FL, özellikle farklı dağılımlara sahip hasta profillerinin bulunduğu bölgelerde, daha genellenebilir ve adil modellerin geliştirilmesine imkân tanımaktadır.

Bu çalışma, federe öğrenme temelli sağlık çözümlerinin mevcut ve potansiyel uygulama alanlarını incelemeyi, FL'in etkinliğini değerlendirmeyi ve bu yaklaşımın karşılaştığı teknik ve etik zorluklara ışık tutmayı amaçlamaktadır. Disiplini ilerletmek ve güvenli, güvenilir ve verimli FL sistemleri tasarlamanın içsel sorunlarını karşılamak için araştırmacılara ve uygulayıcılara büyük bir yardımda bulunulması umulmaktadır. Ayrıca, sağlıkta FL uygulamalarına yönelik somut örnekler ve geleceğe dönük stratejik öneriler de tartışmaya açılarak, mahremiyetin ön planda olduğu bu alanda daha güvenli ve kapsayıcı dijital çözümlerin geliştirilmesine katkı sunulması hedeflenmektedir.

1. Federe Öğrenmenin Temelleri ve Sağlık Alanındaki Önemi

Makine öğrenimi (ML), büyük ve çeşitlendirilmiş veri setlerinden anlamlı desenler çıkararak tahmin ve karar destek sistemleri geliştirmeyi amaçlayan güçlü bir yöntemdir. Ancak geleneksel ML yaklaşımlarının önemli bir kısmı, verilerin merkezi sunucularda toplanması esasına dayanır. Bu yapı, özellikle hassas verilerin söz konusu olduğu sağlık gibi alanlarda ciddi güvenlik, gizlilik ve etik sorunlara neden olmaktadır. Veri ihlallerinin artışı, hasta mahremiyetiyle ilgili düzenlemelerin sıkılaştırılması ve veriye dayalı karar süreçlerinin yaygınlaşması, daha güvenli ve sürdürülebilir çözümlere duyulan ihtiyacı artırmıştır (Bates, vd. 2014; Shah, vd. 2019). Bu noktada, federe öğrenme (federated learning – FL), verilerin merkezi sunuculara aktarılmasına gerek kalmadan dağıtık model eğitimi gerçekleştiren yenilikçi bir makine öğrenimi paradigması olarak öne çıkmaktadır (Wiens ve Shenoy, 2017).

Federe öğrenme, farklı kurum ya da cihazların kendi yerel verilerini kullanarak model eğitimi yaptığı ve yalnızca model parametre güncellemelerini merkezi bir koordinatör ile paylaştığı bir sistem üzerine kuruludur (Yao, vd. 2018). Böylece, veri sahipliği korunurken, mahremiyetin ihlal edilmeden işbirliğine dayalı modeller geliştirilmesi mümkün hale gelir. FL mimarisinde; öğrenme koordinatörü (veya sistem sahibi), yerel model eğitimi gerçekleştiren veri katkıcıları (örneğin hastaneler) ve modeli kullanan istemciler olmak üzere üç ana paydaş bulunur. Google tarafından 2016 yılında Gboard uygulamasında tanıtılan bu yaklaşım, özellikle uç cihazlarda (edge computing) çalıştırılabilmesi sayesinde sağlık, finans, ulaştırma ve akıllı ev teknolojileri gibi birçok alanda uygulanabilir potansiyel taşımaktadır.

Sağlık alanı, FL'in en kritik uygulama sahalarından biridir. Elektronik sağlık kayıtları (EHR), laboratuvar sonuçları, tıbbi görüntüler ve hastalık öyküleri gibi veriler, kişisel ve yüksek derecede hassas niteliktedir. Avrupa Birliği'nin Genel Veri Koruma Tüzüğü (GDPR), ABD'nin HIPAA ve CCPA gibi düzenlemeleri, bu verilerin paylaşımını ciddi şekilde kısıtlamaktadır (Vayena, vd. 2018). Merkezi model eğitimi, bu yasal sınırlamalara aykırı olabileceği gibi hasta mahremiyetini de riske atabilmektedir (Pfitzner, vd. 2021; Ceroni, vd. 2015). Federe öğrenme ise, verinin yerel olarak kalmasını sağlayarak bu riskleri minimize ederken, aynı zamanda çok merkezli araştırmaların yapılmasına olanak tanır.

Sağlık hizmetlerinin dijitalleşmesiyle birlikte, kurumlar her geçen gün daha fazla veri üretmektedir (Ceroni, vd. 2016). Ancak bu veriler genellikle dağınık halde bulunur ve homojen olmayan yapıları nedeniyle merkezi sistemlerle verimli şekilde bütünleştirilemez (Younis, ve Fisichella, 2022). Örneğin, farklı coğrafyalardaki hastaneler, hasta profili ve patoloji açısından farklılık gösterebilir. FL, bu çeşitliliği avantaja çevirerek genel geçer modellerin geliştirilmesini mümkün kılar. Böylece, belirli bir bölgeye özgü veri eğilimleriyle sınırlı kalmayan, daha kapsayıcı ve doğru tahmin sistemleri oluşturulabilir.

FL'in tıbbi alandaki potansiyeli, derin öğrenme yöntemlerinin (DL) EHR verilerine uygulanmasındaki başarısıyla daha da anlam kazanmaktadır. Örneğin, kanser teşhisi, MRI görüntüleriyle tümör segmentasyonu, laboratuvar raporlarında metin tanımlama gibi işlemlerde derin öğrenme modelleri etkili biçimde kullanılabilmektedir (Prasad, vd. 2022). Ancak bu modellerin yüksek doğrulukla çalışabilmesi için büyük ve çeşitlendirilmiş veri setlerine ihtiyaç vardır (Chilimbi, vd. 2014). FL, farklı kurumların katkısıyla bu gereksinimi karşılamakta ve verilerin sahipliğini koruyarak işbirliği yapılmasını sağlamaktadır.

FL sistemlerinin geliştirilmesinde blockchain tabanlı izlenebilir güncelleme kayıtları ve akıllı sözleşmeler de önemli rol oynamaktadır. Bu yapılar, model güncellemelerinin

güvenilirliğini artırmakta ve kötü niyetli katılımcıların tespitini mümkün kılmaktadır. Ayrıca, veri kullanım politikalarının otomatik olarak uygulanabilmesi, yalnızca yetkili birimlerin verilere erişebilmesini sağlar (Al-Quraan, vd. 2023). Böylece hastalar, tıbbi bilgi üretim sürecine katkı sağlarken aynı zamanda verileri üzerinde sahiplik ve denetim yetkisini sürdürebilirler (Aslam, vd. 2022).

Öte yandan FL, sadece teknik bir çözüm değil; aynı zamanda etik, hukuki ve halk sağlığı perspektifinden de değerlendirildiğinde sistemsal bir dönüşüm aracı olarak görülmelidir. Sağlık sistemlerinin sürdürülebilirliği, veri gizliliği, hasta güvenliği ve eşit hizmet sunumu gibi temel konulara yanıt verme potansiyeline sahip olan FL, kişiselleştirilmiş sağlık yaklaşımlarının geliştirilmesi ve erken teşhisin güçlendirilmesi gibi hedefler doğrultusunda stratejik bir öneme sahiptir (Tjoa ve Guan, 2020).

Sonuç olarak, federe öğrenme; hem sağlık hizmetlerinin dijital dönüşümünü destekleyen hem de veri mahremiyetini gözetten bir paradigma olarak geleceğin sağlık bilişimi altyapısında merkezi bir rol oynamaktadır. Yeni nesil sağlık çözümlerinin geliştirilmesinde FL tabanlı sistemlerin entegrasyonu, daha güvenilir, kapsayıcı ve etik ilkelere dayalı yapay zekâ uygulamaları için kritik bir adımdır.

2. Federe Öğrenmenin Sağlıkta Uygulama Alanları

Federe öğrenme (FL), tıbbi uygulamalardaki en büyük zorluklardan biri olan çok merkezli ve çeşitlendirilmiş veri setlerinin kamusal erişime açık olmaması sorununu çözmenin yanı sıra, veri gizliliği ve mahremiyetine ilişkin hassasiyetleri de ele almaktadır (Dara, vd. 2022). Özellikle metin tabanlı tıbbi veriler üzerinde etkili sonuçlar elde etmek amacıyla yatay federe öğrenme ve federe transfer öğrenme modelleri sıklıkla kullanılmaktadır. Ayrıca, FL'nin blokzincir (blockchain) gibi yeni teknolojilerle birleşimi, sağlık alanında daha da etkili bir yaklaşım sunmaktadır (Chen ve Hao, 2019).

FL'nin klinik uygulamalarda, yüklenen parametreler aracılığıyla çok büyük boyutlardaki veri kümeleri üzerinde eğitilen algoritmik modelleri mümkün kılması, kişiselleştirilmiş hassas sağlık hizmetlerine katalizör etkisi yaratmaktadır (Chen ve Hao, 2019). FL'nin diğer makine öğrenimi ve derin öğrenme algoritmalarıyla birlikte kullanımı, özellikle tanı süreçlerinde dikkat çekici başarılar sağlamıştır. Literatürde FL'nin tümör tespiti (Litjens, vd. 2017), semantik segmentasyon (LeCun, vd. 2015), gölge segmentasyonu (Wicaksana, vd. 2022), tümör sınıflandırması, genomik karakterizasyon (Li, vd. 2020), kanser tahmini (Dinsdale, vd. 2022), evreleme tahmini (Andreux, vd. 2020), EEG sınıflandırması (T Dinh, vd.

2020), sonuç risk değerlendirmesi (Li, vd. 2020), nüks tahmini, duygu durumu tanısı (Zhang, vd. 2022), melanom tespiti, retinal fundus görüntüleme (Yan, vd. 2020), göğüs röntgeni analizi ve son yıllarda büyük ilgi gören COVID-19 tanısı (Öztürk, vd. 2020) gibi birçok alanda uygulama örnekleri mevcuttur.

Sağlıkta FL uygulamalarının başlıca odak noktaları; farklı hastalıklara ait tıbbi veriler, seçilen federatif birleştirme algoritmaları ve katılımcı istemci sayısıdır. Tedavi başarısı, algoritma seçimi ve istemci sayısı; modelin doğruluğu, eğitim süresi ve veri güvenliği üzerinde doğrudan belirleyici olmaktadır.

Tıbbi veriler genellikle metin, görüntü, video, ses ve dört boyutlu (4D) veri türlerinde sınıflandırılmaktadır. FL uygulamalarıyla birlikte bu verilerin toplanması, saklanması, paylaşılması ve iletilmesi süreçlerinde güvenlik riskleri önemli ölçüde artmaktadır. Metin temelli verilerin en yaygın örneği olan elektronik sağlık kayıtları (EHR), bireyler, hastaneler ve klinikler tarafından oluşturulmakta; dağıtık, hassas ve gizlilik açısından kritik veriler içermektedir (Zhou, vd. 2018; Larobina ve Murino, 2014).

Ayrıca, FL; sağlık sigortacılığı, sağlık lojistiği, psikolojik destek sistemleri, nadir hastalık araştırmaları, ilaç yeniden konumlandırma (drug repositioning), uzaktan hasta izleme ve mobil sağlık uygulamaları gibi geniş bir yelpazeye yayılmış durumdadır.

FL, model eğitimi sırasında yalnızca gradyan bilgisi yükleyerek hasta verilerinin istemci cihazlardan ayrılmasını engeller ve böylece mahremiyet endişelerini bir ölçüde azaltır. Ancak FL tamamen güvenli değildir; istemci ile merkezi sunucu arasındaki iletim sırasında gradyan verileri üzerinden dolaylı ya da doğrudan gizlilik ihlalleri oluşabilmektedir. Örneğin benzerlik saldırıları, üyelik çıkarımı, yeniden tanımlama ve olasılıksal saldırılar gibi tehditler FL ortamlarında sıkça karşılaşılan güvenlik zafiyetleri arasında yer almaktadır (Abouelmehdi, vd. 2018).

Bu doğrultuda, Arikumar ve arkadaşları (2022), yüksek bellek ihtiyacı ve hesaplama maliyeti gibi sınırlamaları aşmak üzere FL tabanlı bir insan hareket tanıma sistemi (FL-PMI) geliştirmiştir. Bu sistemde, derin pekiştirmeli öğrenme (DRL) kullanılarak etiketlenmemiş veriler otomatik olarak etiketlenmiş ve ardından FL yöntemiyle eğitilmiştir. Sonuçlar, FL-PMI yaklaşımının %99,67 doğrulukla minimal hafıza kullanımı ve %36,73 oranında veri iletim azaltımı sağladığını göstermiştir.

Donanım tarafında ise Chianese ve arkadaşları (2015), açık kaynak donanım ve yazılıma sahip BeagleBone Black platformu üzerine inşa edilmiş çok sensörlü akıllı bir sistem önerisinde

bulunmuştur. Bu tür sensör tabanlı sistemler, FL ile entegre edilerek güvenli ve kişiye özel rehabilitasyon uygulamalarının geliştirilmesine olanak tanımaktadır.

FL, yalnızca sağlık alanında değil; bankacılık, sigortacılık ve eğitim gibi çeşitli sektörlerde de önemli potansiyele sahiptir (Rieke, vd. 2020). Ancak FL'ye entegre edilebilen gizlilik koruma algoritmaları, sağlık alanındaki uygulamalarda model performansını düşürebilmektedir. Bu nedenle, sağlık uygulamaları için FL'nin gizlilik koruma kapasitesini artıracak daha verimli yöntemlere yönelik ileri düzeyde araştırmalar gereklidir.

Günümüzde FL tabanlı sistemlerin sayısındaki artış, bu teknolojinin sağlık alanındaki gelişiminin devam ettiğini göstermektedir. Araştırmalar henüz olgunluk düzeyine ulaşmasa da, FL'nin nadir hastalıkların tanınması, küresel sağlık hizmetlerinin iyileştirilmesi ve veri yetersizliğinden kaynaklı sorunların çözümünde etkili bir araç olarak kullanılabileceği öngörülmektedir. Ahmed ve arkadaşları (2023), tarafından geliştirilen kendi kendini birleştirmeye dayalı yarı denetimli federatif çerçeve, etiketli haber metinlerindeki dilsel ve yazınsal örüntüleri kullanarak etiket gürültüsünü azaltmakta ve etiketlenmemiş verilerdeki gizli yapıları tespit etmektedir.

Sonuç olarak, FL'nin sağlık sektörü ile entegrasyonu, küresel ölçekte daha güvenli, doğru ve kişiselleştirilmiş sağlık hizmetlerinin sunulmasını mümkün kılmakta; mahremiyetin korunması ve veri paylaşımı arasındaki dengeyi sağlayarak çağdaş sağlık politikalarının dönüşümüne katkıda bulunmaktadır.

3. Federe Öğrenmenin Etkinlik Analizi

Federe Öğrenme (FL), merkezi veri paylaşımına gerek duymadan iş birliğine dayalı model eğitimi sağlayarak, dağıtık makine öğreniminde umut verici bir paradigma olarak öne çıkmaktadır. Özellikle sağlık, finans ve siber güvenlik gibi gizliliğe duyarlı alanlarda FL'in etkinliği giderek daha fazla sayıda deneysel çalışmayla desteklenmektedir. FL'in etkili olduğuna dair temel göstergelerden biri, merkeziyetsiz birçok istemciden gelen veriyi kullanarak modelin genellenebilirliğini artırması ve bu süreçte veri gizliliğini korumasıdır (Adnan, vd. 2022). Sağlık alanında, farklı kurumların verileriyle eğitilen FL modelleri, tümör sınıflandırması, EEG sinyal analizi ve COVID-19 tanısı gibi konularda merkezi modellerle karşılaştırıldığında benzer ya da daha yüksek performans gösterebilmiştir (Nguyen, vd. 2021; Parekh, vd. 2021; Sheller, vd. 2020).

FL'in etkinliği, özellikle güvenli parametre paylaşımı için blockchain gibi tamamlayıcı teknolojilerle ya da karmaşık desen tanıma görevlerinde CNN ve BiLSTM gibi derin öğrenme

mimarileriyle birleştirildiğinde artmaktadır (Palma, vd. 2013; Chianese, vd. 2015). Ayrıca, self-ensembling (kendi kendini toplulaştırma) ve yarı denetimli öğrenme gibi yaklaşımlar, federe ortamlarda heterojen ve kısmen etiketli veri kümeleri üzerinde daha yüksek doğruluk elde edilmesini sağlamaktadır (Ahmed, vd. 2023). Bununla birlikte, FL modelleri, istemciler arası tutarsız veri dağılımları (non-IID), istemci sapması ve iletişim yükünün artması gibi sorunlardan olumsuz etkilenebilmektedir (Abouelmehdi, vd. 2018). Bu sınırlamaları azaltmak amacıyla son dönemde kişiselleştirilmiş federatif optimizasyon algoritmaları, uyarlanabilir toplulaştırma yaklaşımları ve hiyerarşik FL yapıları geliştirilmiştir.

Genel olarak, Federe Öğrenme henüz her alana tam anlamıyla uygulanabilir bir çözüm sunmasa da, gizliliği koruyan ve dağıtık veri işleme gereksinimlerine yanıt veren senaryolarda kanıtlanmış etkinliğiyle, modern makine öğrenimi araştırmalarının ön saflarında yer almaktadır. Kritik sektörlerde güvenli, sağlam ve adil yapay zekâ uygulamaları sunma potansiyeli, FL'in hızlı gelişimini ve yaygınlaşmasını desteklemeye devam etmektedir.

Sonuç ve Öneriler

Bu çalışma, federe öğrenmenin sağlık alanındaki uygulamalarını ve etkinliğini incelemiştir. FL, hasta gizliliğini ihlal etmeden çok merkezli ve heterojen tıbbi veriler üzerinde model eğitimi sağlayarak kişiselleştirilmiş sağlık hizmetleri için önemli fırsatlar sunmaktadır. Medikal metin analizi, tümör tespiti, semantik segmentasyon, EEG sınıflandırması, genomik karakterizasyon ve COVID-19 benzeri hastalık tanısı gibi alanlardaki başarılı örnekler, FL'in çok boyutlu veri türleriyle uyumlu çalışabildiğini göstermektedir.

FL'in, blockchain, BiLSTM ve self-ensembling gibi yöntemlerle entegre edilmesi, doğruluk, gizlilik ve işlem verimliliği açısından önemli kazanımlar sağlamaktadır. Ancak veri dengesizliği, model senkronizasyonu ve gizlilik saldırıları gibi teknik sınırlamalar da bulunmaktadır (Ahmed, vd. 2023).

Genel olarak federe öğrenme, dağıtık sağlık verilerinin güvenli biçimde analiz edilmesini mümkün kılarak hem yerel hem küresel düzeyde sağlık hizmetlerinin kalitesini artırma potansiyeline sahiptir. ABD, Çin ve Almanya gibi öncü ülkeler, geniş ölçekli veri ve altyapıyla liderlik ederken, Türkiye, TÜSEB ve UMRAM gibi girişimler aracılığıyla bu alandaki farkı kapatmaya çalışmaktadır (TÜSEB, 2025; Çukur, 2022). Türkiye'nin FL'den tam anlamıyla faydalanması, veri standardizasyonu ve uluslararası işbirliklerinin artmasına bağlıdır. Bu bağlamda, FL tabanlı sistemlerin daha geniş ölçekli klinik uygulamalara entegrasyonu,

sağlık bilişimi alanında geleceğin öncelikli araştırma konularından biri olmaya devam edecektir.

Dijital Eğitimde Bilgiye Erişimin ve Bilgiyi Etkili Kullanmanın Dönüşümü: Hizmetler ve Yenilikler Üzerine Bir Analiz

Engin DAYAN

Iğdır Üniversitesi, e-mail: engin.dayan065@gmail.com, Orcid: 0000-0003-1839-280X,
TÜRKİYE

Özet

Bu araştırma, dijital eğitim çerçevesinde bilgiye erişim ve bilginin etkili kullanımını kolaylaştırmada kütüphanecilik biliminin önemini incelemeyi amaçlamakta; özellikle kullanıcı hizmetleri ve yenilikçi teknolojik gelişmeler üzerinde durmaktadır. Dijital eğitimin ortaya çıkışı, bilgiye adil erişim ve bu bilginin yetkin bir şekilde uygulanması gereksinimini artırmış; bu bağlamda kütüphaneleri dönüşüm sürecinin kilit aktörleri haline getirmiştir. Makalede; dijital içerikler, bilgi okuryazarlığı girişimleri ve kullanıcı odaklı hizmetler gibi kütüphane uygulamaları sistematik bir literatür taraması ve örnek olay analizleriyle kapsamlı biçimde değerlendirilmektedir. Yenilikçi teknolojilerin eğitim bağlamlarında bilginin uygulanmasını kullanıcı merkezli olarak nasıl geliştirdiği ele alınmaktadır.

Bununla birlikte, dijital uçurum, teknolojik altyapı yetersizlikleri, veri gizliliği endişeleri ve kütüphanecilerin gelişmiş yetkinlik ihtiyaçları gibi zorluklar, dönüşüm sürecini engellemektedir. Vaka analizleri, kütüphanelerin dijital eğitimde kullanıcı odaklı bilgiye erişimi ve bilgi kullanımını dönüştürmede oynadığı öncü rolü ortaya koymaktadır. Ayrıca, kütüphane hizmetlerinin dijital eğitim politikalarına entegre edilmesinin önemini vurgulamakta ve kapsayıcı erişim için stratejik öneriler sunmaktadır. Çalışma, gelecekteki araştırmalar için ampirik ve karşılaştırmalı incelemelere yönelik önerilerde bulunmaktadır.

Anahtar Kelimeler: Dijital Eğitim, Kütüphane Hizmetleri, Bilgiye Erişim, Kullanıcı Rolü, Yenilikçi Teknolojiler

Transforming Access to and Effective Use of Information in Digital Education: An Analysis of Services and Innovations

Abstract

This research endeavors to investigate the significance of library science in facilitating access to and the effective utilization of information within the framework of digital education, with a particular emphasis on services and innovative technological advancements. The emergence of

digital education has amplified the necessity for equitable access to information and its proficient application, thereby establishing libraries as pivotal entities in this transformative process. The article conducts a comprehensive evaluation of library practices, including digital collections, information literacy initiatives, and user-centered services, employing a systematic literature review complemented by case studies. It assesses the manner in which innovative technologies, such as artificial intelligence, open educational resources, virtual reality, and big data analytics, enhance the application of information in educational contexts.

However, challenges such as the digital divide, deficiencies in technological infrastructure, concerns regarding data privacy, and the need for enhanced competencies among librarians hinder the transformation process. Case studies highlight the leading role of libraries in transforming user-centered access to and utilization of information within digital education. Furthermore, the study emphasizes the importance of integrating library services into digital education policies and provides strategic recommendations for inclusive access. It also offers suggestions for future empirical and comparative research.

Keywords: Digital Education, Library Services, Information Access, Innovative Technologies, User-Centeredness

Giriş

Günümüzde modern eğitim anlayışı, teknolojinin öğrenme süreçlerine çok yönlü entegrasyonu sayesinde kapsamlı bir dönüşüm süreci yaşamaktadır. Öğrenme süreçlerine dijital teknolojilerin çok yönlü entegrasyonu; yalnızca pedagojik yaklaşımları değil, aynı zamanda bilgiye erişim, paylaşım ve etkileşim biçimlerini de yeniden şekillendirmektedir. Çevrimiçi öğrenme platformları, bilgisayar destekli uygulamalar, sanal gerçeklik (VR) ve artırılmış gerçeklik (AR) gibi yenilikçi teknolojiler, eğitim ortamlarını daha esnek, etkileşimli ve bireyselleştirilebilir hale getirmiştir. Bu dönüşüm, geleneksel eğitim sınırlarının ötesine geçilmesini sağlarken, öğrenen merkezli modellerin yaygınlaşmasına da zemin hazırlamaktadır.

Bu bağlamda, eğitim teknolojileri ile kütüphaneler arasındaki sinerjik ilişki, çevrimiçi öğrenmenin güçlendirilmesinde merkezi bir rol oynamaktadır. Dijital çağın gerekleri doğrultusunda yeniden yapılandırılan eğitim kurumları için bu iş birliği, yalnızca destekleyici bir unsur değil, aynı zamanda bütünsel, uyarlanabilir ve sürdürülebilir bir öğrenme deneyimi sunmada stratejik bir zorunluluk haline gelmiştir. Kütüphaneler, dijital kaynaklara erişim, bilgi okuryazarlığının geliştirilmesi ve kullanıcı odaklı bilgi hizmetleri sunma konularındaki

uzmanlıklarıyla çevrimiçi eğitimin etkinliğini artırmakta; eğitim teknolojileri ise bu potansiyeli yenilikçi araçlarla zenginleştirerek öğrenme sürecine değer katmaktadır.

Söz konusu entegrasyon, yalnızca teknolojik bir ilerleme değil, aynı zamanda kapsayıcılık ve erişilebilirlik ilkeleriyle uyumlu, öğrenenin ihtiyaçlarına duyarlı bir yapının inşasını temsil etmektedir (Garcia vd., 2021). Bu iş birliği sayesinde, öğrencilerin değişen beklentilerine yanıt verilebilmekte, farklı öğrenme stillerine hitap eden, esnek ve eşitlikçi bir eğitim ekosistemi oluşturulabilmektedir. Dolayısıyla, eğitim teknolojisi ile kütüphaneler arasında kurulan bu etkileşimsel yapı, çağdaş eğitim anlayışının dönüştürücü gücünü somutlaştıran önemli bir örnek olarak değerlendirilmektedir.

Bu kapsamda, eğitim teknolojilerinin kütüphane kaynaklarıyla uyumlu biçimde entegrasyonu, öğrencilerin yalnızca fiziksel mekânlarla sınırlı kalmaksızın, zengin ve çeşitli bilgi kaynaklarına erişimini mümkün kılmaktadır. Coğrafi konum, fiziksel engeller ya da sosyoekonomik kısıtlılıklar gibi geleneksel erişim bariyerleri, dijital ortamların sunduğu olanaklar sayesinde büyük ölçüde aşılabilmektedir. Böylece, farklı bölgelerdeki bireyler aynı nitelikteki eğitim içeriklerine erişebilirken, bilgiye ulaşım daha kapsayıcı ve eşitlikçi bir yapıya kavuşmaktadır.

Bununla birlikte, bu entegrasyon yalnızca erişimi genişletmekle kalmaz; aynı zamanda eleştirel düşünme, problem çözme ve araştırma becerilerinin geliştirilmesine de önemli katkı sunar. Özellikle dijital okuryazarlık becerileriyle donatılmış çevrimiçi öğrenciler, geniş bilgi kaynakları arasında etkin şekilde gezinebilmekte ve çok yönlü bakış açılarıyla etkileşime girerek daha derinlemesine öğrenme deneyimleri edinebilmektedir. Kütüphaneler bu süreçte, sadece kaynak sunan pasif birimler değil, aynı zamanda dijital bilginin yorumlanması, değerlendirilmesi ve etkili kullanılmasına rehberlik eden aktif öğrenme merkezleri haline gelmektedir.

Bu bağlamda, teknolojinin bilginin küresel ölçekte yayılmasını kolaylaştırıcı rolü, kütüphane-eğitim teknolojisi entegrasyonunu eğitime yönelik engellerin ortadan kaldırılmasında güçlü bir araç haline getirmektedir. Söz konusu entegrasyon, bireylerin yalnızca örgün eğitim süreçleriyle sınırlı kalmadan, yaşamlarının her aşamasında bilgi kaynaklarıyla etkileşime geçmelerine olanak tanımaktadır. Bu yönüyle, yaşam boyu öğrenme kavramıyla güçlü bir uyum içinde olan bu yapı, bireyin sürekli öğrenen bir özne olarak bilgi toplumuna katılımını desteklemektedir. Bu derleme çalışmasında, eğitim teknolojisi ile kütüphaneler arasındaki entegrasyonun çevrimiçi öğrenme üzerindeki etkileri incelenmekte;

dijital okuryazarlık, bilgiye erişim ve yaşam boyu öğrenme bağlamında literatür taraması ve önerilere yer verilmektedir.

4. Dijital Eğitim Ortamı ve Bilgiye Erişimdeki Dönüşüm

Dijitalleşmenin etkisiyle eğitim ortamları, yalnızca fiziksel mekânlarla sınırlı olmayan çok boyutlu yapılara dönüşmüş; bilgiye erişim biçimleri ise köklü bir değişim geçirmiştir. Eğitim teknolojilerindeki hızlı gelişmeler, öğretim süreçlerinde etkileşimi artırmak, öğrenme deneyimini bireyselleştirmek ve bilgiye erişimi kolaylaştırmak amacıyla çeşitli dijital araç ve sistemlerin kullanımını yaygınlaştırmıştır.

Bu dönüşümün temel unsurlarından biri, öğrenme yönetim sistemleri (LMS) ve uyarlanabilir öğrenme platformlarıdır. Bu sistemler, öğrencilerin bireysel öğrenme stillerine ve performans verilerine dayalı olarak içerik sunabilmekte, böylece öğrenme sürecini dinamik ve kişiselleştirilmiş hale getirmektedir. Öğrenme Yönetim Sistemleri (LMS) gibi Moodle, Canvas ve Blackboard, ders sunumu, içerik yönetimi ve öğrenci katılımını kolaylaştıran merkezi platformlar olarak öne çıkar (Smith vd., 2019). Uyarlanabilir öğrenme teknolojileri ise bireysel öğrenci ihtiyaçlarına göre içerik sunarak kişiselleştirilmiş öğrenme deneyimleri sağlar. Knewton ve Smart Sparrow gibi platformlar, algoritmalar aracılığıyla öğrenci performansını analiz ederek öğrenme yollarını optimize eder ve eğitim sonuçlarını iyileştirir (Doe vd., 2023).Yapay zekâ destekli algoritmalar aracılığıyla öğrencilerin ilerlemeleri izlenebilmekte ve eksik öğrenme alanları tespit edilerek önerilerde bulunmaktadır. Bu durum, bilgiye erişimin yalnızca hızlanmasını değil, aynı zamanda daha etkili ve hedefe yönelik hale gelmesini sağlamaktadır. Dijitalleşmenin etkisiyle eğitim ortamları, yalnızca fiziksel mekânlarla sınırlı olmayan çok boyutlu yapılara dönüşmüş; bilgiye erişim biçimleri ise köklü bir değişim geçirmiştir. Eğitim teknolojilerindeki hızlı gelişmeler, öğretim süreçlerinde etkileşimi artırmak, öğrenme deneyimini bireyselleştirmek ve bilgiye erişimi kolaylaştırmak amacıyla çeşitli dijital araç ve sistemlerin kullanımını yaygınlaştırmıştır.

Dijitalleşmenin sunduğu bir diğer yenilik ise sanal gerçeklik (VR) ve artırılmış gerçeklik (AR) gibi teknolojilerin eğitimdeki yeri olmuştur. Bu teknolojiler sayesinde öğrenme, pasif bir süreç olmaktan çıkıp etkileşimli ve deneyimsel bir boyut kazanmıştır. Öğrenciler karmaşık kavramları üç boyutlu modeller aracılığıyla gözlemleyebilmekte, tarihsel olayları sanal ortamlarda deneyimleyebilmekte ve laboratuvar uygulamalarını simülasyonlarla gerçekleştirebilmektedir. VR ve AR, sanal saha gezileri, simülasyonlar ve 3B modeller aracılığıyla deneyimsel öğrenmeyi desteklerken, AI destekli sistemler akıllı ders verme ve veri

odaklı içgörüler sunar (Kim vd., 2019). Örneğin, VR platformları dil öğrenimini geliştirmek için 3B kütüphane turları gibi uygulamalar sunarken, AR, fiziksel nesneler üzerine bindirilmiş dijital içeriklerle öğrenme deneyimini zenginleştirir (Ng vd., 2023; Su ve Chen, 2022). Bu tür uygulamalar, soyut bilgilerin somutlaştırılmasına katkı sağlayarak öğrenme kalıcılığını artırmaktadır.

Bilgiye erişimdeki dönüşüm yalnızca bireysel öğrenme araçlarıyla sınırlı kalmamış, aynı zamanda kütüphane hizmetlerinin dijitalleşmesini de beraberinde getirmiştir. Geleneksel kütüphaneler, dijital içerik platformları, çevrimiçi veri tabanları ve sanal katalog sistemleriyle entegre hale gelmiş; fiziksel koleksiyonlara olan bağımlılığı azaltarak bilgiye 7/24 erişim imkânı sunmuştur (Johnson vd., 2021). Kütüphaneler artık yalnızca bilgi depolayan yapılar olmaktan çıkarak, bilgiye erişim ve üretim süreçlerini destekleyen, kullanıcı odaklı dijital merkezler haline gelmiştir. Kütüphaneciler, çevrimiçi veri tabanlarında gezinme, bilgi güvenilirliğini değerlendirme ve dijital araçları kullanma konusunda rehberlik ederek "dijital gezginler" rolünü üstlenmiştir (Williams vd., 2021). VR ve AR teknolojileri, kütüphanelerde sanal turlar, etkileşimli sergiler ve işbirlikli araştırma projeleri gibi yenilikçi uygulamalarla kullanıcı deneyimini dönüştürmektedir (Hannah vd., 2019; Tukur vd., 2024).

Özellikle pandemi dönemi sonrasında, uzaktan eğitim pratiklerinin yaygınlaşması bu dijital dönüşümü hızlandırmış; hibrit ve tamamen çevrim içi eğitim modelleri kalıcı hale gelmiştir. Eğitim ortamlarının dijitalleşmesiyle birlikte, bilgiye erişim sadece hız kazanmakla kalmamış, aynı zamanda daha demokratik bir yapıya kavuşmuştur. Coğrafi sınırlamaların azalması ve içerik çeşitliliğinin artması, öğrenenlerin bilgiye ulaşımında önemli bir eşitlik yaratmıştır.

Sonuç olarak, dijital eğitim ortamlarının yaygınlaşması, hem bireysel öğrenme süreçlerini hem de kurumsal bilgiye erişim yaklaşımlarını dönüştürmüştür. Teknolojinin sunduğu esneklik ve erişilebilirlik, öğrenmenin zaman ve mekân bağımsız hale gelmesini sağlarken; dijital okuryazarlık, veri yönetimi ve eleştirel düşünme gibi becerilerin de önemini artırmıştır. Bu dönüşüm, yalnızca araçsal değil, aynı zamanda pedagojik ve kültürel bir yeniden yapılanmayı da beraberinde getirmektedir.

5. Kütüphanelerin Değişen Roller ve Yeni Hizmetler

Bir zamanlar sessiz okuma alanları ve basılı kitap raflarıyla özdeşleşen kütüphaneler, dijital çağın dinamiklerine yanıt olarak köklü bir dönüşüm sürecine girmiştir (Johnson vd.,

2021). Bu dönüşüm, kütüphaneleri yalnızca bilgi depolayan pasif yapılar olmaktan çıkararak, çevrimiçi öğrenme ortamlarında proaktif, etkileşimli ve çok yönlü bilgi merkezlerine dönüştürmüştür. Giderek artan dijitalleşmeyle birlikte, kütüphaneler geleneksel fiziksel sınırlarını aşmış; sanal bilgi mimarisi kurarak dijital kaynakların düzenlenmesi, paylaşılması ve erişilebilir hale getirilmesinde merkezi bir rol üstlenmiştir.

Dijital çağda kütüphaneler, dijital okuryazarlığın geliştirilmesi, bilgiye erişimin kolaylaştırılması ve çevrimiçi öğrenme süreçlerinin desteklenmesi konularında önemli birer katalizöre dönüşmüştür. Kütüphaneciler, klasik bilgi sağlayıcı rollerinin ötesine geçerek, öğrencilerin çevrimiçi bilgi kaynaklarında etkili biçimde gezinmelerine yardımcı olan dijital rehberler haline gelmiştir (Williams vd., 2021). Bilgi güvenilirliğinin değerlendirilmesi, araştırma becerilerinin geliştirilmesi ve dijital araçların etkin kullanımı gibi alanlarda danışmanlık sunarak, öğrencilerin dijital bilgi ekosisteminde bilinçli bireyler olarak hareket etmelerini desteklemektedirler.

Bu değişim, yalnızca hizmet anlayışındaki bir yenilenmeyi değil, aynı zamanda kütüphanelerin yapısal ve işlevsel olarak çevrimiçi öğrenmenin merkezine yerleşmesini de beraberinde getirmiştir. Kütüphaneler artık yalnızca bireysel öğrenmeyi desteklemekle kalmamakta; aynı zamanda öğrenciler, öğretim elemanları ve teknoloji uzmanları arasında iş birliğini kolaylaştıran fiziksel ve dijital ortamlar sunarak disiplinler arası sinerjilerin oluşmasına katkı sağlamaktadır. Özellikle sanal grup çalışma alanları ve çevrimiçi iş birliği platformları, uzaktan eğitimde etkileşimi teşvik eden önemli birer araç haline gelmiştir.

Kütüphanelerin yeni hizmet alanlarının merkezinde, dijital kaynakların küratörlüğü ve yönetimi yer almaktadır. E-kitaplar, akademik dergiler, dijital veri tabanları ve multimedya içerikler sayesinde öğrenciler, geniş ve erişilebilir bilgi havuzlarına coğrafi engellerden bağımsız biçimde 7/24 erişim sağlayabilmektedir. Ayrıca, açık eğitim kaynakları (OER), multimedya arşivleri ve kültürel dijital koleksiyonlar, öğrenme sürecine çeşitlilik ve derinlik kazandırmaktadır (Patel vd., 2021). Bu kaynaklar, yalnızca akademik içerikle sınırlı kalmayıp, kültürel miras unsurlarını da dijitalleştirerek bütünsel bir öğrenme ortamının inşasına katkıda bulunmaktadır (Martinez vd., 2022).

Çevrimiçi öğrenenlerin artan talepleri doğrultusunda, kütüphaneler özelleştirilmiş dijital hizmetler sunmaya başlamıştır. Bunlardan biri, sanal referans danışmanlığı hizmetidir. Kütüphaneciler, sohbet, video konferans ve e-posta gibi çevrimiçi araçlarla araştırma desteği sunmakta ve öğrencilerin bilgiye etkin biçimde erişmelerini sağlamaktadır (White vd., 2022).

Bununla birlikte, dijital kaynaklara kullanıcı dostu arayüzlerle uzaktan erişimi kolaylaştırarak, öğrencilerin kütüphane veritabanlarında rahatça gezinmelerini mümkün kılmaktadırlar.

Dijital ders içerikleri ile kütüphane kaynaklarının entegrasyonu da giderek artan bir uygulamadır. Kütüphaneciler, öğrenme yönetim sistemleri üzerinden öğretim elemanlarıyla iş birliği yaparak, gerekli kaynakları doğrudan ders modüllerine entegre etmekte ve öğrencilerin bilgiye doğrudan erişimini desteklemektedir. Ayrıca, dijital kütüphanelerarası ödünç verme sistemleri ile öğrenciler, kendi kurumları dışındaki kaynaklara da ulaşabilmekte; bu da dijital çağın bilgi paylaşımına dayalı yapısını güçlendirmektedir.

Tüm bu gelişmeler, kütüphanelerin yalnızca teknolojiye uyum sağladığını değil, aynı zamanda çevrimiçi öğrenmenin yapısal bir bileşeni haline geldiğini göstermektedir. Kütüphaneler, değişen akademik ihtiyaçlara cevap verebilecek esneklikte ve çeşitlilikte hizmet sunarak, dijital eğitim ortamlarının sürdürülebilirliğini desteklemekte ve bilgiye erişimde eşitliği sağlamaya yönelik önemli bir rol oynamaktadır.

6. Geleceğe Yönelik Öngörüler ve Stratejik Öneriler

Dijital çağın dinamikleri, kütüphaneleri yalnızca bilgi sunan kurumlar olmaktan çıkararak, teknolojik yenilikleri benimseyen ve kullanıcı ihtiyaçlarına göre şekillenen akıllı bilgi merkezleri haline getirmiştir. Bu dönüşüm süreci, özellikle sürdürülebilir dijital bilgi hizmetleri sunmak ve kütüphaneleri geleceğin öğrenme ortamlarına entegre etmek isteyen politika yapıcılar ve eğitim kurumları açısından stratejik bir bakış açısı gerektirir.

Kütüphanelerin elektronik, dijital, hibrit ve sanal yapılara evrilmesiyle birlikte, akıllı kütüphaneler kavramı öne çıkmıştır (Cao vd., 2018). Bu sistemlerin başarısı; teknoloji, insan öğrenmesi ve hizmet sunumunun bütünleşik bir şekilde tasarlanmasına bağlıdır. Sürdürülebilir bir dijital bilgi altyapısı inşa etmek, sadece mevcut hizmetleri dönüştürmekle kalmaz, aynı zamanda geleceğe yönelik esnek ve kapsayıcı çözümler geliştirmeyi de gerektirir. Bu bağlamda, üniversite kütüphanelerinin bulut tabanlı öğrenme teknolojilerine geçişi, kullanıcıların bilgiye erişimini kolaylaştırmakla kalmamış, aynı zamanda küresel ölçekte dijital iş birliklerinin önünü açmıştır (Chiu vd., 2016; Lai vd., 2020).

Geleceğe dönük stratejik planlamalarda, yapay zeka (AI), Nesnelerin İnterneti (IoT), veri analitiği ve otomasyon gibi teknolojilerin entegre edilmesi kritik rol oynamaktadır (Liao, 2020). Bu teknolojiler, bilgiye erişimin kişiselleştirilmesi, kütüphane hizmetlerinin otomatikleştirilmesi ve kullanıcı deneyiminin zenginleştirilmesi açısından önemli fırsatlar

sunar. Örneğin, yapay zekâ destekli öneri sistemleri, kullanıcıların geçmiş davranışlarına dayalı olarak kişisel okuma listeleri sunabilirken; veri analitiği uygulamaları, kullanıcı ihtiyaçlarını analiz ederek hizmetlerin daha etkin sunulmasını sağlar. Bu, veriye dayalı karar verme süreçlerinin kütüphane yönetimine entegre edilmesini teşvik eder.

Sürdürülebilir dijital hizmetler açısından bir diğer önemli konu da kaynak dijitalleştirme stratejileridir. Kütüphaneler, fiziksel koleksiyonları dijital ortama aktararak hem korunabilirliği artırmakta hem de zamandan ve mekândan bağımsız erişim imkânı sunmaktadır. Bu durum, özellikle açık erişim (open access) politikaları çerçevesinde bilgiye demokratik erişimi teşvik eden bir gelişmedir.

Geleceğin kütüphanelerinde yalnızca dijitalleşme değil, aynı zamanda öğrenme ve yaratıcılık odaklı alanların (örneğin maker space'ler, dijital üretim laboratuvarları) entegre edilmesi öne çıkmaktadır. Bu tür alanlar, sürekli eğitimi desteklerken; iş birliği, özgünlük ve çok disiplinli öğrenmeyi de teşvik eder. Kütüphanelerin toplulukla olan etkileşimi artırılarak sosyal bütünleşmeyi güçlendirecek stratejiler geliştirilmelidir.

Politika Yapıcılara ve Eğitim Kurumlarına Stratejik Öneriler:

1. **Ulusal Dijital Kütüphane Politikalarının Oluşturulması:** Dijital bilgi hizmetlerinin sürdürülebilirliği için, ortak standartlar, açık erişim ilkeleri ve dijital arşivleme stratejileri geliştirilmelidir.
2. **Yatırım ve Finansman Modelleri Geliştirilmesi:** Eğitim kurumları ve yerel yönetimler, teknolojik altyapı ve insan kaynağı yatırımlarını artırmalı; özel sektörle iş birliklerine dayalı modeller teşvik edilmelidir.
3. **Kütüphanecilerin Dijital Yetkinliklerinin Artırılması:** Hizmet kalitesinin sürdürülebilirliği için kütüphane personelinin dijital okuryazarlık, veri yönetimi ve kullanıcı deneyimi alanlarında düzenli olarak eğitim almaları sağlanmalıdır.
4. **Açık Eğitim Kaynakları (OER) ile Entegrasyon:** Üniversiteler ve eğitim kurumları, kütüphane kaynaklarını doğrudan ders içeriklerine entegre etmeli; bu iş birliğiyle öğrenme süreçlerini zenginleştirmelidir.
5. **Kullanıcı Odaklı Hizmet Tasarımı:** Veri analitiği destekli kullanıcı davranış analizleriyle hizmetler sürekli gözden geçirilmeli ve kullanıcı ihtiyaçlarına uygun hale getirilmelidir.
6. **Etik, Güvenlik ve Erişim Konularında Rehberlik:** Dijital hizmetlerin yaygınlaşmasıyla birlikte bilgi güvenliği, dijital mahremiyet ve telif hakkı gibi konularda kullanıcı eğitimi ve rehberlik hizmetleri sistematikleştirilmelidir.

Sonuç

Bu çalışma, eğitim teknolojisi ile kütüphaneler arasındaki giderek derinleşen etkileşimi analiz ederek, çevrimiçi öğrenme ortamlarının zenginleşmesinde bu iki alanın nasıl birbirini tamamladığını kapsamlı biçimde ortaya koymuştur. Dijital çağın dinamiklerinde eğitim teknolojisinin artan rolü, kütüphanelerin yalnızca bilgi sunan yapılar olmaktan çıkarak,

öğrenme süreçlerini kolaylaştıran ve destekleyen aktif öğrenme merkezleri haline gelmesini gerekli kılmıştır.

Kütüphaneler ile eğitimciler ve eğitim teknolojisi sağlayıcıları arasında gelişen iş birlikleri, vaka çalışmaları ve başarılı uygulamaları oldukça önem taşımaktadır. Bu iş birliklerinin kurumsal kapasiteyi artırma ve çevrimiçi öğrenme ortamlarını zenginleştirme potansiyeli yüksektir. Aynı zamanda, uygulamada karşılaşılan zorluklar, teknik ve örgütsel düzeyde değerlendirilmiş; bu engelleri aşmaya yönelik yenilikçi stratejiler ve sürekli iyileştirme yaklaşımları önerilmiştir.

Çalışmada geleceğe yönelik olarak, eğitim teknolojisi ve kütüphane hizmetlerinin gelecekteki yönelimine dair öngörüler geliştirilmiş, özellikle etik ilkeler doğrultusunda sürdürülebilir ve kapsayıcı dijital çözümlerin tasarımı üzerinde durulmuştur. Teknolojinin sorumlu entegrasyonu, kullanıcı gizliliği, dijital eşitsizliklerin azaltılması ve bilgiye erişimde fırsat eşitliği gibi temalar, gelecekteki politikaların ve uygulamaların temelini oluşturmaktadır.

Sonuç olarak bu araştırma, eğitim teknolojileri ile kütüphane hizmetleri arasında kurulan stratejik bağın, çevrimiçi öğrenme deneyimlerini yalnızca teknik anlamda değil, pedagojik ve toplumsal boyutlarıyla da dönüştürdüğünü göstermektedir. Bu bağlamda, eğitim kurumları, politika yapıcılar ve bilgi hizmeti sağlayıcıları için geliştirilen öneriler, geleceğe yönelik daha etkili, erişilebilir ve bütüncül öğrenme ekosistemlerinin inşasına katkı sunmayı hedeflemektedir.

Özet

Bilim günlük yaşamın bir parçasıdır. Yaştan bağımsız olarak, tüm insanlar yaşadıkları dünyayı yöneten temel bilim prensiplerini öğrenmek ister. Günümüzde toplumların elde edebileceği başarı ancak fen eğitiminde sağlanacak ilerlemelerle mümkün olup, başarı bu ilerlemeler dikkate alınarak ölçülmektedir. Bu nedenle öğrencilerin fen bilimlerine olan ilgilerinin ilkökul yıllarından itibaren ortaya çıkarılması ve bu ilgiyi geliştirecek şekilde öğrenme ortamlarının desteklenmesi gerekmektedir. Fen eğitiminin önemi göz önüne alındığında öğrencilerin fen bilimlerine olan ilgilerinin ortaya çıkarılması ve bu ilgiyi artıracak çalışmaların yapılması önem taşımaktadır.

Bu çalışmanın amacı çeşitli değişkenler açısından ortaokul öğrencilerinin Fen konularına ilgileri ve Fen dersine yönelik kaygıları arasındaki ilişkiyi belirlemektir. Araştırma korelasyonel tarama modelindedir. Araştırmanın örneklemini Ege Bölgesi'nde bir ilde 2018- 2019 yılında devlet okullarında öğrenim gören 300 ortaokul öğrencisi oluşturmuştur. Bu araştırmanın verileri “Fen Konularına İlgi Ölçeği” ve “Fene Yönelik Kaygı Ölçeği” ile elde edilmiştir. Ortaokul öğrencilerinin Fen konularına ilgileri ve fen dersine yönelik kaygıları cinsiyet ve fen bilimleri kursu alma değişkenleri açısından incelenmiştir. Araştırma verilerinin analizinde t-testi, Pearson moment çarpım korelasyonu ve Regresyon analizinden yararlanılmıştır. Araştırmanın sonucunda ortaokul öğrencilerinin Fen konularına ilgileri ile Fen dersine yönelik kaygıları arasında negatif yönde anlamlı bir ilişki bulunmuştur.

Anahtar kelimeler: Fen bilimlerine ilgi, fen bilimlerine yönelik kaygı, ortaokul öğrencileri, korelasyon

The Relationship Between Secondary School Students' Interest in Science Subjects and Their Anxiety Toward Science

Abstract

Science is a part of everyday life. Regardless of age, all people want to learn the basic science principles that govern the world they live in. Today, the success that societies can achieve is only possible with advances in science education, and success is measured by taking these advances into account. Science is a necessity, systematic and comprehensive body of knowledge that makes human life easier and that should be acquired from a very young age. Therefore, students' interest in science subjects should be revealed from the primary school years and learning environments should be supported in a way that will develop this interest. Considering the importance of science education, it is important to reveal students' interest in science subjects and to carry out studies to increase this interest.

This study aims to determine the relationship between secondary school students' interest in science subjects and their anxiety toward science regarding various variables. The research is in the correlational survey model. The study sample consisted of 300 secondary school students in public schools in a city in the Aegean Region. The data of this study was obtained through the “Interest in Science Subjects Scale” and “Anxiety Scale for Science”. Secondary school students' interest in science subjects and their anxiety towards science were examined regarding gender and taking a private science course. T-test, Pearson moment correlation, and Regression analysis were used to analyze the research data. As a result of the research, a significant negative relation was found between secondary school students' interest in science subjects and their anxiety towards science.

Keywords: Interest in science subjects, anxiety towards science, secondary school students, correlation

Giriş

Doğadaki canlı ve cansız varlıkların ve dünyadaki olayların ayrıntılı bir şekilde incelenmesi, açıklanması ve bu olaylara ilişkin genelleme yapılması, bu genellemelerden ilkelere ulaşılması ve gelecekteki olayların tahmin edilebilmesi bilimin işidir (Akça, 2017). Fen, günlük hayatın bir parçasıdır. Hangi yaşta olursa olsun, bütün insanlar içinde yaşadıkları dünyayı anlayabilmek için temel fen prensiplerini öğrenmek isterler (Gürdal, 1992). Zaten fen bilgisi öğretiminin en önemli amaçlarından birisi de öğrencilerin öğrendikleri bilgileri günlük hayatla

ilişkilendirebilmeleri ve bunları hayatlarında kullanabilmeleridir. Bunun sonucunda doğal olarak öğrencilerin bu bilgilerini yaşamlarında uygulayarak hayatlarını kolaylaştırmaları beklenir (Kırpık & Engin, 2009). Ayrıca uygarlıkların ilerlemesi, Fen bilimlerinde yaşanan gelişmelerle mümkün olmaktadır (Arber, 2009).

Toplumların elde edeceği başarı, Fen bilimleri eğitimindeki gelişmelerle yakından ilgilidir ve bu başarı bu gelişmeler ışığında değerlendirilerek ölçülmektedir (Banya Baş & Ilgaz, 2024). Toplumu meydana getiren tüm insanlar için Fen biliminin çok küçük yaşlardan itibaren öğretilmesi ve öneminin kavratılması elzemdir çünkü fen bilimleri insanların hayatını kolaylaştıran, sistemli ve kapsamlı bilgiler bütünüdür. Bu yüzden ki okul öncesinden itibaren öğrencilere fen bilimine yönelik kavramlar öğretilmeli, öğrencilerin ilgileri Fen bilimine çekilerek eğlenceli öğrenme ortamları oluşturulmalıdır (Güven Yıldırım & Köklükaya, 2016).

İlgi, bireylerin hayatına yön veren, seçimlerini belirleyen önemli faktörlerdendir. Bireyler tercihlerini ilgi duydukları konulara, olaylara göre yapar ve ne istediklerine ilgileri doğrultusunda karar verirler. İlgi duyulan konularda daha başarılı olma, zevk alarak gereklerini yerine getirme söz konusudur. Eğitimde ilgi, Alexander'ın (2004) alan öğrenme modeli, Silvia'nın Yapıcı Kaprislilik Psikolojisi (2001) veya kişi-nesne ilgi teorisi (Krapp, 2002) gibi bir dizi teori kullanılarak incelenmiştir. Hepsinin ortak noktası, ilginin, diğer motivasyonel değişkenlerin aksine, her zaman nesneye veya içeriğe özgü (örneğin belirli bir bilim içeriği, konu, bilgi alanı veya etkinlik) olduğu ilkesidir. İlgi kavramının yapısı ile ilgili olarak Krapp (2007) üç genel özelliği tanımlamaktadır: bilişsel yönler, duygusal özellikler ve değerle ilgili özellikler. Bilişsel yönler, kişinin ilgi alanına ilişkin yeni bilgi edinmeye hazır olma durumunu ifade eder. Yani konuya ilgi duyan bir kişi, bilgisini genişletmeye ve farklı durumlarda uygulamaya çalışabilir. Duygusal özellikler, ilgiyle tetiklenen bir eylem veya aktiviteyle bağlantılı olan zevk gibi olumlu duyguları ifade eder. Değerle ilgili özellikler, ilgi nesnesi hakkında olumlu kişisel değerlendirmeyi ifade eder (Krapp, 2007).

Benzer şekilde, Hidi ve Renninger (2006), ilgi, bilgi ve değer olmak üzere üç ilgi bileşenini kullanarak, bu üç bileşenin ölçüsünü dikkate alarak, ilginin ardışık büyümesi açısından dört aşamalı ilgi geliştirme modelini ortaya koymuştur. Bu aşamalar tetiklenen durumsal ilgi, sürdürülen durumsal ilgi, ortaya çıkan bireysel ilgi ve iyi gelişmiş bireysel ilgiden oluşur. Her aşama değişen miktarda etki, bilgi ve değerle karakterize edildiğinden, bu dört aşama, ilgi geliştirmenin ardışık ve kümülatif bir süreci olarak tanımlanır. İlgi alanının ilk iki aşaması (tetiklenen ve sürdürülen durumsal ilgi), 'odaklanmış dikkati ve çevresel uyaranlar tarafından o anda tetiklenen ve zamanla devam edebilen veya etmeyebilen duygusal tepkiyi ifade eder'

(Hidi & Renninger, 2006: 113); ilgi alanının son iki biçimi (ortaya çıkan ve iyi gelişmiş bireysel ilgi), ‘bir kişinin belirli bir içerikle zaman içinde yeniden etkileşime girmeye yönelik nispeten kalıcı yatkınlığını ve bu yatkınlık etkinleştirildiğinde ortaya çıkan anlık psikolojik durumu ifade eder’. İyi gelişmiş bireysel ilgi aşaması, öğrencilerin Fen öğrenmeye olan ilgisine ilişkin çeşitli araştırmaların odak noktası olmuştur (örneğin, Ainley & Ainley, 2011; Swarat, Ortony & Revelle, 2012).

İlgi, öğrenme yeteneğini etkiler. Araştırmalar, ilgi ile çok çeşitli öğrenme göstergeleri arasında olumlu ilişkiler olduğunu göstermektedir (Pintrich & Schunk, 2002). Bu ilişkilerin öğrencilerin içerikle bağlantı kurmasına ve bu bağlantının yeterli bir süre boyunca sürdürülmesine katkısı vardır (Ainley, Hidi & Berndorff, 2002). Fen eğitiminin önemi göz önüne alındığında öğrencilerin fen konularına olan ilgilerinin ortaya konulması ve bu ilginin artırılması için çalışmaların yapılması önemli görülmektedir.

Kaygı; üzüntü, endişe duyulan düşünce ve tasa anlamlarına gelmektedir (TDK, 2019). Bu olumsuz anlamına rağmen kaygının organizmayı uyarıcı, koruyucu ve motive edici özellikleri de vardır. Örneğin başarısız olma endişesi ile daha çok çalışmaya sevk etmesi kaygının motive edici bir özelliğidir. Olumlu yönde bir kaygı bireyleri motive etmekte ve öğrenmeye karşı her anlamda istekli hale getirmektedir. Ancak kaygı bireyler tarafından iyi yönetilmezse ve kendilerinin başarısız olacaklarını hissedерlerse bu durumda kaygı olumsuz yönde ilerleyerek başarısızlığa neden olabilir (Akgün, Gönen ve Aydın, 2007). Yani kaygı bireylerin günlük yaşamlarını olumlu ve olumsuz etkiler. Öğrenmelerini teşvik edebilir veya buna ket vurabilir. Ayrıca, bireylerde stres, endişe ve korku meydana getirebilir (Yıldırım, 2015).

Öğrenme kaygısı, bireyin çevresiyle olan etkileşimleri sonucunda ortaya çıkan ve öğrenmeyi olumsuz yönde etkileyen bir durumdur. Bu kaygı, kalıcı davranış değişikliklerinin oluşmasını engelleyebilir, bireyin öğrenmeye karşı olumsuz tutumlar geliştirmesine yol açabilir. Aynı zamanda huzursuzluk, stres, endişe, korku, kalp çarpıntısı ve terleme gibi fiziksel ve duygusal belirtilerle kendini gösterebilir. Fen bilimleri ve matematik derslerinde öğrencilerin sıklıkla korku, endişe, terleme ve zorlanma gibi tepkiler verdikleri gözlemlenmektedir (İnci Kuzu, 2021). Öğrencilerin öğrenme sürecinde kendilerini yetersiz hissetmeleri ve bunun sonucunda yaşadıkları olumsuz duygular ise öğrenme kaygısı olarak adlandırılmaktadır (Yıldırım 2015). Fen kaygısı ise fen kavramlarından, bilim insanlarından ve fen ile ilgili faaliyetlerden korkma olarak tanımlanabilir (Uçak & Say, 2019).

Alanyazın incelendiğinde fen konularına ilgili ve fene yönelik kaygı ile ilgili çalışmaların yer aldığı görülmektedir. Can ve Dikmentepe’nin (2015) yaptıkları nicel çalışmada 117 ortaokul

öğrencisinin fen dersine ve fen deneylerine yönelik tutumlarını çeşitli değişkenler açısından incelemişlerdir. Araştırma sonucunda ortaokul öğrencilerinin fen dersine yönelik kararsız bir tutumlarının olduğu, fen deneylerine karşı ise olumlu bir tutumları olduğu sonucuna ulaşılmıştır (Can & Dikmentepe, 2015). Güven Yıldırım ve Köklükaya (2016) yaptıkları genel tarama modelindeki araştırmada 81 ilkokul ve ortaokul öğrencisinin fen konularına yönelik ilgi düzeylerini çeşitli değişkenler açısından belirlemeye çalışmışlardır. Araştırma sonucunda öğrencilerin fen konularına yönelik ilgi düzeylerinin yüksek olduğunu ve bu ilgi düzeylerinin cinsiyet ve sınıf düzeyi gibi değişkenlere göre anlamlı şekilde farklılık gösterdiğine ulaşılmıştır (Güven Yıldırım & Köklükaya, 2016).

Avcı ve Kırbaşlar (2017) yaptıkları nicel çalışmada 480 ortaokul öğrencisinin Fen dersine yönelik kaygıları ile akademik başarıları arasında ilişkiyi incelemişlerdir. Araştırmanın sonucunda ortaokul öğrencilerinin Fen dersine yönelik kaygıları ile akademik başarıları arasında negatif yönde anlamlı bir ilişki olduğu sonucuna ulaşılmıştır (Avcı & Kırbaşlar, 2017). Kahyaoğlu, vd. (2019) yaptıkları ilişkisel araştırmada 188 ortaokul öğrencisinin Fen bilimleri derslerinde kendi kendine öğrenmeyi planlama ve güvenme becerileri ile kaygı düzeyleri arasındaki ilişkileri incelemişlerdir. Araştırmanın sonucunda Fen bilimleri derslerinde kendi kendine öğrenmeyi planlama becerileri ve güvenme becerileri ile fen kaygı düzeyleri arasında negatif yönde anlamlı bir ilişkinin olduğu sonucuna ulaşılmıştır (Kahyaoğlu, vd., 2019).

Yurtdışında ise Fen bilimlerine yönelik ilginin araştırıldığı çeşitli araştırmalar bulunmaktadır (Dawson, 2000; Falchetti, Caravita, & Sperduti, 2007; Jones, Howe, & Rua, 2000; Hoffmann, 2002; Murphy & Whitelegg, 2006). Literatürde Fen konularına ilgi ve Fen dersine yönelik kaygının farklı değişkenler açısından ayrı ayrı ele alındığı görülmektedir. Ancak Fen konularına ilgi ve Fen dersine yönelik kaygının birlikte ele alındığı çalışmalara rastlanılmaması bu çalışmanın çıkış noktasını oluşturmaktadır. Fen konularına ilgi ve Fen dersine yönelik kaygının ilişkisinin ortaya konması önemli görülmektedir.

Araştırmanın Amacı

Bu araştırmanın genel amacı ortaokul öğrencilerinin Fen konularına ilgileri ile Fen dersine yönelik kaygıları arasındaki ilişkiyi çeşitli değişkenler açısından belirlemektir.

Problem

Ortaokul öğrencilerinin Fen konularına ilgileri ile Fen dersine yönelik kaygıları arasındaki ilişki nedir?

Alt problemler

1. Ortaokul öğrencilerinin Fen konularına ilgi düzeyi nedir?
2. Ortaokul öğrencilerinin Fen konularına ilgilerinde cinsiyet açısından anlamlı bir farklılık var mıdır?
3. Ortaokul öğrencilerinin Fen konularına ilgilerinde Fen bilimleri ilgili bir kurs alma durumu açısından anlamlı bir farklılık var mıdır?
4. Ortaokul öğrencilerinin Fen dersine yönelik kaygı düzeyleri nedir?
5. Ortaokul öğrencilerinin Fen dersine yönelik kaygılarında cinsiyet açısından anlamlı bir farklılık var mıdır?
6. Ortaokul öğrencilerinin Fen dersine yönelik kaygılarında Fen bilimleri ile ilgili bir kurs alma durumu açısından anlamlı bir farklılık var mıdır?
7. Ortaokul öğrencilerinin Fen konularına ilgileriyle Fen dersine yönelik kaygıları arasında anlamlı bir ilişki var mıdır?
8. Ortaokul öğrencilerinin Fen konularına ilgi düzeyleri, Fen dersine yönelik kaygı düzeylerini yordamakta mıdır?

Sayıtlar

1. Öğrencilerin veri toplamada kullanılan anketlere samimi cevap verdikleri kabul edilmiştir.
2. Kontrol edilemeyen iç ve dış değişkenlerin araştırma sonuçlarını etkilemediği kabul edilmiştir.

Araştırma,

1. Afyonkarahisar ilindeki ortaokullarda öğrenim gören 300 ortaokul öğrencisi ile
2. Öğrencilerin Fen konularına yönelik ilgileri, Laçın Şimşek ve Nuhoglu (2009) tarafından geliştirilen fen konularına yönelik ilgi ölçeği ile
3. Öğrencilerin Fen kaygı düzeyleri, Uluçınar Sağır (2014) tarafından geliştirilen Fen kaygı ölçeği ile sınırlıdır.

Yöntem

Araştırma bağımlı ve bağımsız değişkenlerin ilişkisini belirlemeye yönelik olduğundan nicel bir araştırma deseninde tasarlanmıştır. Araştırma, ortaokul öğrencilerinin fen konularına ilgileriyle fen dersine yönelik kaygıları arasındaki ilişkiyi tespit etmeye yönelik korelasyonel bir tarama modelindedir.

Araştırmanın Evren ve Örnekleme

Araştırmanın evrenini 2018-2019 eğitim öğretim yılında Afyonkarahisar ilinde ilköğretim okullarında öğrenim gören 38.406 ortaokul öğrencisi, örneklemini ise 2018-2019 eğitim öğretim yılında Afyonkarahisar ilinde ilköğretim okullarında öğrenim gören 300 ortaokul öğrencisi oluşturmuştur. Örneklem hesaplanırken Yazıcıoğlu ve Erdoğan'ın (2004) önermiş olduğu örneklem hesaplama tablosundan yararlanılmıştır. Araştırmanın çalışma grubuna ait demografik bilgiler Tablo 1'de verilmiştir.

Tablo 1: Örneklemde Yer Alan Öğrencilerin Özellikleri

Cinsiyet	(f)	(%)
Kadın	147	49
Erkek	153	51
Toplam	300	100
Sınıf	(f)	(%)
5.sınıf	48	16

Veri Toplama Araçları

Araştırmada veri toplama aracı olarak araştırmacı tarafından geliştirilen kişisel bilgi formu, Fen Konularına İlgi Ölçeği ve Fene Yönelik Kaygı Ölçeği kullanılmıştır.

Kişisel Bilgi Formu: Araştırmacılar tarafından oluşturulan kişisel bilgi formunda cinsiyet, sınıf, favori ders, fen bilimleri sınav notu, yerleşim yeri, anne ve babanın eğitim düzeyleri gibi sorular yer almaktadır.

Fen Konularına İlgi Ölçeği: Laçın Şimşek ve Nuhoğlu (2009) tarafından geliştirilen ölçek 27 maddeden oluşan beşli Likert tipi bir ölçektir. Ölçekte kullanılan cevaplar ve puanlar şu şekildedir: 1- Tamamen Katılıyorum 2- Katılıyorum 3- Kararsızım 4- Katılmıyorum 5- Hiç Katılmıyorum. Ölçek 6., 7. ve 8. sınıflarda öğrenim gören 167 ortaokul öğrencisine uygulanmıştır. Ölçeğin Cronbach Alpha güvenirlik katsayısı 0.79 olarak bulunmuştur. Ölçek maddelerinin iki yarı test korelasyonu da incelenmiş ve Cronbach Alpha değerinin kabul edilebilir düzeyde olduğu sonucuna ulaşılmıştır. Araştırmacılar tarafından bu çalışma için yapılan Cronbach Alpha güvenirlik testi sonucuna göre güvenirlik katsayısı 0.86 olarak hesaplanmıştır.

Fene Yönelik Kaygı Ölçeği: Uluçınar Sağır (2014) tarafından geliştirilen ölçek 25 maddeden oluşan beşli Likert tipi bir ölçektir. Ölçekte kullanılan cevaplar ve puanlar şu şekildedir: 1- Kesinlikle katılıyorum 2- Katılıyorum 3- Kararsızım 4- Katılmıyorum 5-Kesinlikle katılmıyorum. Kaygıyı destekleyen cümlelerde kodlama 1, 2, 3, 4, 5 şeklinde; kaygıyı desteklemeyen cümlelerde ise kodlama 5, 4, 3, 2, 1 şeklinde yapılmıştır. Ölçekten alınacak toplam puanın yüksek olması Fen dersine yönelik kaygıdan uzaklaşmayı, düşük puanlar ise Fen dersine yönelik kaygının düzeyini göstermektedir. 994 kişilik öğrenci grubuna yapılan uygulama sonrasında temel bileşenler faktör analizi yapılarak ölçeğin beş faktörden oluştuğu belirlenmiştir. Ölçeğin Cronbach Alpha güvenirlik katsayısı 0.88 olarak bulunmuştur. Araştırmacılar tarafından bu çalışma için yapılan Cronbach Alpha güvenirlik testi sonucuna göre güvenirlik katsayısı 0.944 olarak hesaplanmıştır.

Verilerin Analizi

Bu çalışmada ortaokul öğrencilerinin Fen konularına ilgileri ile Fen dersine yönelik kaygıları arasındaki ilişkiyi belirlemek amacıyla verilerin analizinde bilgisayarda uygulanan paket program kullanılmıştır. Veriler paket programa girilmiş ve hangi testin yapılacağına karar vermek için normallik testi yapılmıştır. Veriler normal dağılım gösterdiği için analizlerde parametrik testler kullanılmıştır. İki kategorili değişkenlerin analizi için ilişkisiz örneklem için t testi ve değişkenlerin birbirlerine etkisinin analizinde Pearson moment çarpım analiz testi kullanılmıştır. Son olarak değişkenlerin hangisinin yordayıcı olduğunu belirlemek amacıyla Regresyon analizi testi yapılmıştır. Veri toplama araçlarındaki seçenekli puanlar 1’den 5’e doğru şeklindedir. Veri toplama araçları için puan aralıkları Tablo 2’de gösterilmiştir.

Tablo 2: Likert Tipi Ölçek İçin Puan Aralıkları

Seçenekler	Puan Aralıkları
Kesinlikle katılmıyorum	1.00-1.80
Katılmıyorum	1.81-2.60
Kararsızım	2.61-3.40
Katılıyorum	3.41-4.20
Kesinlikle katılıyorum	4.21-5.00

Tablo 2 incelendiğinde beşli Likert tipi ölçekler için belirlenen puan aralıklarının verildiği görülmektedir.

Bulgular

Araştırmadan elde edilen bulgular alt problemlere göre sırasıyla aşağıdaki tablolarda özetlenmiştir.

1. Ortaokul öğrencilerinin Fen konularına ilgi düzeyi nedir?

Ortaokul öğrencilerinin Fen konularına ilgi düzeylerini belirlemek amacıyla yapılan yüzde frekans analiz sonuçları Tablo 3’te verilmiştir.

Tablo 3: Ortaokul Öğrencilerinin Fen Konularına İlgi Düzeyleri

Madde No	Maddeler		1	2	3	4	5	$\bar{X}$	Görüş Düzeyi
1	Çevreden yaprak ve benzeri şeyler toplamak hoşuma gider.	f	94	83	57	25	41	2,45	Katılmıyorum
		%	31,3	27,7	19	8,3	13,7

Tablo 3 incelendiğinde öğrencilerin Fen konularına ilgi ölçeğindeki maddelere verdikleri cevapların ortalaması 2.40 olarak bulunmuştur. Buna göre öğrencilerin Fen konularına yönelik ilgilerinin olmadığını söylemek mümkündür. Öğrencilerin en çok “Kelebekleri izlemeyi sevmem.” maddesine katıldıkları; en az ise “Çevrede yürümek ve bitki ve hayvanlara bakmak eğlencelidir.” maddesine katılmadıkları görülmektedir.

2. Ortaokul öğrencilerinin Fen konularına ilgilerinde cinsiyet açısından anlamlı bir farklılık var mıdır?

Ortaokul öğrencilerinin “Fen Konularına İlgi” ölçeğinden aldıkları puanlarının Fen konularına ilgi düzeylerinde cinsiyet değişkenine göre farklılaşma olup olmadığını tespit için yapılan bağımsız örneklem t testi sonucu Tablo 4’te verilmiştir.

Tablo 4: Cinsiyete Değişkenine Göre Fen Konularına İlgi

Cinsiyet	N	X	S	sd	t	p
Kadın	147	2.25	.60	298	-4.092	.00*
Erkek	153	2.55	.64			

* $p < 0,05$

Tablo 4 incelendiğinde cinsiyet değişkenine göre Fen konularına olan ilginin istatistiksel olarak anlamlı bir farklılık gösterdiği görülmektedir ($p < 0.05$). Erkeklerin Fen konularına ilgi düzeylerinin ortalaması ($X = 2.25$) kadınların Fen konuların ilgi düzeylerinin ortalamasından ($X = 2.55$) yüksek olduğu görülmektedir.

3. Ortaokul öğrencilerinin Fen konularına ilgilerinde Fen bilimleri ile ilgili bir kurs alma durumu açısından anlamlı bir farklılık var mıdır?

Tablo 5: Fen Kursu Değişkenine Göre Fen Konularına İlgi

Kurs Alma	N	X	S	sd	t	p
Evet	147	2.37	.61	298	-1.070	.286
Hayır	153	2.45	.65			

Tablo 5 incelendiğinde Fen kursu değişkenine göre Fen konularına ilginin anlamlı bir farklılık göstermediği görülmektedir ($p > 0.05$). Fen kursuna gitmeyenlerin Fen konularına ilgi düzeyleri ortalamasının ($X = 2.45$) Fen kursuna gidenlerin Fen konularına ilgi düzeylerinin ortalamasından ($X = 2.37$) yüksek olduğu görülmektedir.

4. Ortaokul öğrencilerinin Fen dersine yönelik kaygı düzeyleri nedir?

Ortaokul öğrencilerinin Fen dersine yönelik kaygı düzeylerini belirlemek amacıyla yüzde frekans analizinin sonuçları Tablo 6’da verilmiştir.

Tablo 6: Ortaokul Öğrencilerinin Fen Dersine Yönelik Kaygı Düzeyleri

Madde No	Maddeler		1	2	3	4	5	$\bar{X}$	Görüş Düzeyi
1	Fen ve Teknoloji sınavına çalışırken sınavda ne sorulacağını düşünmekten ders çalışamıyorum.	f	91	32	58	55	64	2,89	Kararsızım

		%	24	13,7	19	17	26,3		
23	Fen ve Teknoloji dersinde öğretmeni dinlemekte güçlük çekiyorum.	f	48	36	48	64	104	3,46	Katılıyorum
		%	16	12	16	21,3	34,7		
24	Fen ve Teknoloji dersinde deney yapmak beni tedirgin eder.	f	56	36	44	50	114	3,43	Katılıyorum
		%	18,7	12	14,7	16,7	38		
25	Bir arkadaşım dergide çıkan fen sorusunu çözmemi isterse, en basit soruları bile çözemeyip mahcup olmaktan korkarım.	f	66	36	51	39	108	3,29	Kararsızım
		%	22	12	17	13	36		

Tablo 6 incelendiğinde, öğrencilerin Fen dersine yönelik kaygı ölçeğindeki maddelere verdikleri cevapların ortalaması 3.20 olarak bulunmuştur. Buna göre, öğrencilerin Fen dersine yönelik kaygı ölçeğindeki maddelere verdikleri cevaplarda kararsız oldukları söylenebilir.

Öğrencilerin en çok “Dersten sonra anlamadığım bir yeri Fen ve Teknoloji öğretmenine rahatça sorabilirim” maddesine katıldıkları, “Fen ve Teknoloji sınavına çalışırken sınavda ne sorulacağını düşünmekten ders çalışmıyorum.” maddesinde ise kararsız kaldıkları söylenebilir.

5. Ortaokul öğrencilerinin Fen dersine yönelik kaygılarında cinsiyet açısından anlamlı bir farklılık var mıdır?

Ortaokul öğrencilerinin “Fene Yönelik Kaygı” ölçeğinden aldıkları puanlarının Fen dersine yönelik kaygı düzeylerinde cinsiyet değişkenine göre farklılaşma olup olmadığını tespit için yapılan bağımsız örneklem t testi sonucu Tablo 7’de verilmiştir.

Tablo 7: Cinsiyet Değişkenine Göre Fen Dersine Yönelik Kaygı

Cinsiyet	N	X	S	sd	t	p
Kadın	147	3.46	1.01	298	3.161	.002*
Erkek	153	3.10	.94			

* p<0.05

Tablo 7 incelendiğinde cinsiyet değişkenine göre Fen dersine yönelik kaygının anlamlı bir farklılık gösterdiği görülmektedir ($p<0.05$). Kadınların Fen dersine yönelik kaygılarının ortalamasının ($X=3.46$) erkeklerin Fen dersine yönelik kaygılarının puan ortalamasından ($X=3.10$) yüksek olduğu görülmektedir.

6. Ortaokul öğrencilerinin Fen dersine yönelik kaygılarında fen bilimleri ile ilgili bir kurs alma durumu açısından anlamlı bir farklılık var mıdır?

Ortaokul öğrencilerinin “Fene Yönelik Kaygı” ölçeğinden aldıkları puanlarının Fen kursu değişkenine göre farklılaşma olup olmadığını tespit için yapılan bağımsız örneklem t testi sonucu Tablo 8’de verilmiştir.

Tablo 8: Fen Kursu Değişkenine Göre Fen Dersine Yönelik Kaygı

Cinsiyet	N	X	S	sd	t	p
Evet	147	3.21	1.02	298	-1.184	.237
Hayır	153	3.35	.96			

Tablo 8 incelendiğinde fen kursu değişkenine göre Fen Dersine yönelik kaygının anlamlı bir farklılık göstermediği görülmektedir ($p>0.05$).

7. Ortaokul öğrencilerinin Fen konularına ilgileriyle Fen dersine yönelik kaygıları arasında anlamlı bir ilişki var mıdır?

Ortaokul öğrencilerinin “Fen Konularına İlgisi” ve “Fene Yönelik Kaygısı” ölçeklerinden aldıkları puanların arasındaki ilişkiyi tespit etmek amacıyla yapılan Pearson moment çarpım korelasyon testi sonucu Tablo 9’da verilmiştir.

Tablo 9: Fen Konularına İlgisi ile Fen Dersine Yönelik Kaygısı Arasındaki İlişki

Değişken	N	r	p
Fen Konularına İlgisi	300	-,229	,000*
Fen Dersine Yönelik Kaygısı			

* p<0.05

Tablo 9 incelendiğinde ortaokul öğrencilerinin Fen konularına ilgileri ile Fen dersine yönelik kaygıları arasındaki ilişkiyi belirlemek üzere yapılan Pearson Çarpım Moment Korelasyon analizi sonucunda puanlar arasında istatistiksel açıdan negatif yönde ve anlamlı ve düşük düzeyde bir ilişki olduğu görülmektedir ($r=-,229$, $p<0,01$).

8. Ortaokul öğrencilerinin Fen konularına ilgi düzeyleri, Fen dersine yönelik kaygı düzeylerini yordamakta mıdır?

Ortaokul öğrencilerinin Fen konularına ilgilerinin Fen dersine yönelik kaygılarını ne şekilde yordadığını ortaya koymak için yapılan basit doğrusal regresyon analizi sonucu Tablo 10’da verilmiştir.

Tablo 10: Ortaokul Öğrencilerinin Fen Konularına İlgisi Düzeyleri ve Fen Dersine Yönelik Kaygısı Düzeyleri Arasındaki Regresyon Analizi Sonuçları

Yordanan Değişken	Yordayan Değişken	R	R ²	F	B	Beta	p
Fen Konularına İlgisi	Fen Dersine Yönelik Kaygısı	.229	.05	16.535	-.359	-.229	0.00*

* p<0.05

Tablo 10 incelendiğinde ortaokul öğrencilerinin Fen konularına ilgilerinin, Fen dersine yönelik kaygılarını ne şekilde yordadığını ortaya koymak için yapılan basit doğrusal regresyon analizi sonucunda, Fen konularına ilgiyle Fen dersine yönelik kaygısı arasında anlamlı bir ilişki gözlenmiştir ($p<0.05$, $R=0.229$, $R^2=0.053$), Fen konularına ilginin Fen dersine yönelik kaygısının anlamlı bir yordayıcısı olduğu görülmüştür. Fen konularına ilgi Fen dersine yönelik kaygının %5’ini açıklamaktadır.

Tartışma ve Sonuç

Araştırmada ortaokul öğrencilerinin Fen konularına ilgileri ile Fen dersine yönelik kaygıları arasındaki ilişki çeşitli değişkenler açısından incelenmiştir. Araştırmanın ilk sonucu olarak

ortaokul öğrencilerinin Fen konularına yönelik ilgileri azdır. Ndalichako ve Komba'nın (2014) çalışmasında da öğrencilerin Fen bilimlerine olan ilgileri düşüktür. Potvin ve Hasni'ye (2014) göre, öğrencilerin günlük yaşamlarıyla ilgili ve uygulanabilir olan bilim yönleri, öğrenciler için daha ilgi çekicidir. Öğrencilerin hayatlarında doğrudan bir kullanımı olmayan bilimsel yönlerin öğrenciler tarafından anlaşılması zordur. Öğrencilerin bilime olan ilgilerinin az olması, kısmen okulların bilim müfredatını öğrencilerin günlük hayatlarıyla ilişkilendirememesinden kaynaklanmaktadır (Aikenhead, 2006). Öğrencilerin deneyimlerini sınıftaki bilimsel bilgiyle ilişkilendirmesi, bilimi hem daha anlamlı hem de daha yararlı hale getirebilir (Asabere-Ameyaw, vd., 2012). Öğrencilerin bilime olan ilgisinin sürdürülmesi için bilimin öğrencilerin çağdaş yaşamlarıyla ilişkisi önemlidir (Mavhunga, 2011; Ndalichako & Komba 2014). Ayrıca, öğrencilerin bilimsel kavramlar ile gerçek dünya arasındaki ilişkileri anlamalarına yardımcı olmak için soyut bilimsel fikirlerin gerçek olgularla ilişkilendirilmesi gerekir (Scott, vd., 2011). Öğrenciler Fen derslerinde kavramları gerçek dünyadan kopuk bir bilgi olarak öğrenirlerse anlamlı öğrenme yeterli düzeyde gerçekleşmeyecektir. Ramnarain ve de Beer'e (2013) göre, öğrencilerin okul dışı araştırmaları kullanması, öğrencilerin kalabalık sınıflarda uygulamalı çalışmalara katılımını kolaylaştırabilir. Bu tür araştırmalarda, öğrenciler aktif rol alarak ve kendi öğrenme süreçlerini kontrol ederek daha fazla fayda sağlarken, öğretmen kolaylaştırıcı olur. Okul dışı öğrenme kaynakları, geleneksel laboratuvar çalışmalarına kıyasla daha gerçekçi öğrenme bağlamları sağladıkları için faydalı olabilir (Braund & Reiss, 2006).

Araştırmanın bir diğer sonucuna göre, ortaokul öğrencilerinin Fen dersine yönelik kaygı düzeyleri orta düzeydedir. Akça (2017) yaptığı çalışmada ortaokul öğrencilerinin Fen dersine yönelik kaygı düzeylerinin düşük olduğu sonucuna ulaşmıştır. Uçak ve Say (2019)'ın çalışmasında da ortaokul öğrencilerinin Fen dersine yönelik kaygılarının nedenleri incelenmiştir. Buna göre, öğrencilerin kaygı nedenlerinin en başında dersin kendisi sonrasında sırasıyla öğretmen, kendileri, sosyal çevreleri, geçmişte yaşanmış bazı olaylar ve mesleki kaygılar gelmiştir.

Bu araştırmanın diğer bir sonucuna göre cinsiyet, ortaokul öğrencilerinin Fen konularına olan ilgisinde anlamlı bir değişken olarak ortaya çıkmasıdır. Erkek ve kız çocuklarının Fen dersine olan ilgilerine ilişkin çok sayıda veri, erkek çocuklarının genel olarak kız çocuklarından Fen dersine daha fazla ilgi duyduğunu göstermektedir (Gardner, 1998; Miller, Slawinski Blessing & Schwartz, 2006). Bazı araştırmacılar, bu cinsiyete dayalı basmakalıp ilgi alanlarının temelinde, kız çocuklarının çoğunun empatiye yatkın, erkek çocuklarının çoğunun ise sistemleri anlama ve inşa etme konusunda yatkın olması nedeniyle doğuştan gelen bir özellik

olduğunu ileri sürmüşlerdir (Baron-Cohen, 2003). Erkeklerin Fen dersine yönelik ilgilerinin kız öğrencilerine göre daha fazla olmasının kültürel ve tutumsal açıklamaları bulunmaktadır. Kültürel açıklamalar arasında bilimin, özellikle fiziğin eril imajı, medyada bilime dair kadın rol modellerinin ve imajlarının eksikliği, okul dışında deneyim eksikliği, ebeveynlerin cinsiyete dayalı inançları, ergenlik döneminde akranlarının görüşleri, kızların algıladıkları düşük öz yeterlilik yer almaktadır (Handelsman, vd., 2005). Tutumsal açıklamalar, kızların bilime ve bilimle ilgili bir kariyer peşinde koşmaya yönelik olumsuz tutumlarına işaret etmektedir (Osborne, Simon & Collins, 2003). Yaş, öğrencilerin bilime olan ilgisini etkileyen bir diğer değişkendir. Öğrenciler, özellikle kızlar, büyüdükçe özellikle ortaokul ve lise yıllarında bilime olan ilgilerini kaybetme eğilimindedirler (George, 2006).

Araştırma sonuçlarına göre Fen konularına ilgi ile Fen dersine yönelik kaygı arasında negatif yönde anlamlı bir ilişkinin olduğu belirlenmiştir. Buna göre öğrencilerin Fen konularına ilgileri arttıkça Fen dersine yönelik kaygılarının azaldığı söylenebilir. Kahyaoğlu, vd.'nin (2019) yaptıkları çalışmada kendine öğrenmeyi planlama ve güvenme becerileri ile Fen kaygıları arasında negatif yönde anlamlı bir ilişkinin olduğu sonucuna ulaşmışlardır. Yolagiden, vd.'nin (2018) yaptıkları çalışmada öğrencilerin Fen bilimleri öğrenme kaygıları ve Fen öğrenimine yönelimleri arasındaki ilişkinin negatif yönde ve anlamlı olduğu saptanmıştır. Müezzın ve Özata (2019) yaptıkları çalışmada Fen bilimini öğrenme kaygısı ile Fen öğrenimine yönelik motivasyon arasında negatif yönde ilişki olduğu sonucuna ulaşmışlardır. Kağıtçı'nın (2014) yaptığı çalışmada ortaokul öğrencilerinin Fen dersine yönelik kaygı puanları ile bu derse yönelik tutumları arasında orta düzeyde, negatif ve anlamlı bir ilişkinin olduğu sonucuna ulaşmıştır.

Bu araştırmanın sonuçlarına dayanarak aşağıda bazı öneriler sunulmuştur:

Çalışmada örneklem olarak ortaokul öğrencileri seçilmiştir. Önemli duyuşsal bir özellik olan kaygı ile ilgi diğer öğrenim seviyesindeki öğrenciler için de incelenebilir. Bu çalışmada öğrencilerin Fen konularına ilgileri ile Fen dersine yönelik kaygılarını belirlemek amacıyla ölçek kullanılarak nicel bir araştırma yapılmıştır. Öğrencilerin Fen konularına ilgilerini ve Fen dersine yönelik kaygılarını ve bunların sebeplerini ortaya koyabilmek için nitel araştırmalar yapılması önerilebilir.

Pedagojik açıdan öğrencilerin Fen dersine olan ilgilerini artırmak için öğretmenlerin Fen alanındaki projelere öğrencileri dahil etmeleri tavsiye edilmektedir. Bu sayede, öğrencilerin bilimi öğrenmeye yönelik motivasyonları artarak Fen dersine olan kaygılarının azalması beklenir. Kız öğrencilerin de Fen dersine olan ilgilerini artırmak için fen bilimleri programının

iyi tasarlanması gerekmektedir. Ayrıca, ilkököl öğretmenlerinin öğrencilerine iyi bir rol model olması, öğrencilerin gelecekte bilime olan ilgilerini yüksek tutabilmeleri ve hatta kariyer seçimlerinde yol gösterici olabilmeleri açısından önemlidir.

Özet

Bu araştırma, 5-14 yaş aralığındaki çocukların sosyal medya paylaşımlarına yönelik görüşlerini incelemeyi amaçlamaktadır. Araştırmanın alt amaçları ise; küçük yaşta çocukların gözünden sosyal medya ve paylaşım kavramını anlamak, çocukların sosyal medyada paylaşım yapmaya dair düşüncelerini belirlemek, sosyal medya paylaşımlarında çocuklardan izin alınması durumuna yönelik görüşlerini almak, paylaşım yapılabilecek ya da yapılamayacak durum ve mekanların bilincinde olma durumlarını tespit etmek ve çocukların fotoğraf, video, ses vb. kendileriyle ilgili öğeleri paylaşma isteğini ve paylaşımların görüleceği kitleye yönelik bilgi ve izin durumunu incelemektir. Araştırmanın çalışma grubunu Kırklareli ilinde yaşayan ve ebeveynlerinden izin alınan 5-14 yaş arasındaki 15 gönüllü çocuk katılımcı oluşturmaktadır. Katılımcıların seçiminde, sosyal medyayı aktif kullanan, sosyal medya uygulamalarını bilen ve ebeveyn kontrolünde takip eden ve hiç sosyal medya kullanmayan çocuklarla görüşmeler yapılmasına özen gösterilmiştir. Araştırmada nitel araştırma yöntemlerinden fenomenoloji deseni kullanılmıştır. Veri toplama sürecinde yarı yapılandırılmış görüşme yöntemi kullanılarak veriler toplanmıştır. Görüşmeler, çocukların uygun olduğu zaman ve mekanlarda gerçekleştirilmiş ve ses kayıtları alınmıştır. Toplanan veriler, betimsel içerik analizi yöntemiyle analiz edilmiştir. Araştırma sonucunda, çocukların sosyal medya hakkındaki bilgilerinin yaşa ve sosyal medya kullanım durumlarına göre farklılık gösterdiği belirlenmiştir. Çocukların sosyal medyada paylaşım yapmaya dair görüşleri incelendiğinde, genellikle paylaşım yapmadıkları ve daha çok uygulamalardaki paylaşımlarla ilgili düşüncelere sahip oldukları görülmüştür. Paylaşımlarda izin alma konusunda, çocukların çoğunlukla aile üyelerinin paylaşımlarında izin alınmasına gerek olmadığını düşündükleri tespit edilmiştir. Ayrıca, çocukların paylaşım yapılabilecek ve yapılamayacak durum ve mekanlar konusunda farkındalık sahibi oldukları belirlenmiştir. Araştırma bulguları, çocukların sosyal medya kullanımının yaygınlaştığını ve çocukların sosyal medyada yapılan paylaşımlara yönelik kendilerine ait düşünce, fikir ve tutumlarının olduğunu göstermektedir. Ancak, özellikle küçük yaş grubundaki çocukların mahremiyet ve risk faktörleri konusunda yeterli bilgiye sahip olmadıkları ve

yetişkinlerin paylaşımlarında çocukların düşünce ve izinlerine yeterince önem vermedikleri görülmüştür. Bu durum, çocukların katılımını artıracak ve sosyal medya uygulamalarını bilinçli kullanma becerilerini kazandıracak eğitim programlarının gerekliliğini ortaya koymaktadır.

Anahtar Kelimeler: çocuk katılımı, teknoloji, sosyal medya, çocuk

Examining the Views of Children Aged 5–14 on Social Media Sharing in Digital Environments

Abstract

This study aims to explore the perspectives of children aged 5 to 14 regarding social media sharing. The sub-objectives include understanding the concepts of social media and sharing from the viewpoint of young children; identifying their thoughts on making posts on social media; examining their opinions on whether consent should be obtained from them before sharing; assessing their awareness of appropriate and inappropriate contexts or places for sharing; and exploring their willingness to share personal content such as photos, videos, or audio recordings, along with their understanding of and consent to the audience that may view these posts. The study group consists of 15 volunteer children living in Kırklareli, Turkey, whose participation was approved by their parents. Care was taken to include children who actively use social media, use it under parental supervision, as well as those with no social media exposure. A qualitative research design based on the phenomenological approach was employed. Data were collected through semi-structured interviews conducted at times and places convenient for the children, and audio recordings were made. The collected data were analyzed using descriptive content analysis. Findings indicate that children's knowledge of social media varies by age and usage status. While most children do not post content themselves, they are aware of others' posts and have opinions about them. Many children believe that parental consent is not necessary when family members share their images. However, they show a degree of awareness regarding appropriate and inappropriate contexts for sharing. The results reveal that children have their own thoughts and attitudes about social media, and that its use is becoming increasingly widespread among them. Nevertheless, younger children often lack adequate knowledge about privacy and online risks, and their consent is frequently overlooked in adults' posts. These findings highlight the need for educational programs that promote children's participation and foster conscious use of social media.

Keywords: child participation, technology, social media, children

Giriş

Prensky; gözlerini açtığı andan itibaren bilgisayarlar, video oyunları, cep telefonları, video kameralar vb. birçok teknolojik yenilikle yaşamını devam ettirecek olan günümüz 21.yy. çocuklarını ‘Dijital Yerliler’ olarak adlandırmaktadır. Onları yetiştiren, teknolojik gelişmelere doğduğu gibi değil de daha sonradan uyum sağlamaya çalışan ‘Dijital Göçmenler’ olarak adlandırılan ebeveynleri ile zaman zaman dijital yaşamda, sosyal medya kullanımlarında kuşak çatışmaları, görüş ayrılıkları yaşamaktadırlar (Prensky, 2001).

Çocuklarla ilgili bakış açıları tarih boyunca farklılık göstermektedir. İlk zamanlarda yetişkinlerin zihinlerinde çocukluk kavramı ile ilgili bir görüş bulunmazken 19. Ve 20 yüzyıl sonlarında çocuklara bakış açısı iyi düşüncelerle değişen Batılı perspektifler günümüzde çocuklara ve düşüncelerine önem verilmesi gerektiği yönde değişmektedir. Bunun yanı sıra Batılı görüşe ters bir bakış açısında olan çocuklarla ilgili daha baskıcı ve katı görüşlere sahip perspektifteki topluluklar da mevcuttur (Trawick – Smith, 2022). Gerçek yaşamda çocuğu görüş şeklimiz nasılsa dijital yaşamda da görüşümüzün bu doğrultuda olması ve çocuğa değer verilmesi gerekmektedir (Kunt Bulut, 2015).

Dijital teknolojilerin yaygınlaşmasıyla birlikte sosyal medya, yalnızca yetişkinlerin değil, çocukların da günlük yaşamlarının önemli bir parçası haline gelmiştir. Hane halkı bilişim teknolojileri kullanım araştırmaları sonuçlarına göre 2023 yılında evden internete erişim oranının ve çocukların yaşla birlikte bu ortamlarda geçirdiği zaman diliminin arttığı gözlemlenmektedir (TÜİK, 2023). Özellikle 5-14 yaş arası çocuklar, gelişimsel olarak kritik bir dönemde olmalarına rağmen sosyal medya platformlarına erişim sağlayabilmekte ve içerik üretme süreçlerine aktif biçimde katılabilmektedir. Bu çocuklar, sosyal medyada görsel, yazılı ya da videolu paylaşımlar aracılığıyla kendilerini ifade etmekte, beğenilme, onay alma ve dijital kimlik oluşturma gibi süreçlerle iç içe yaşamaktadırlar (Livingstone, 2014). Bununla birlikte, sosyal medyada paylaşım yapma davranışı yalnızca teknolojik bir alışkanlık değil; aynı zamanda sosyal, psikolojik ve kültürel dinamiklerin etkisiyle şekillenen bir süreçtir.

Bu yaş grubundaki çocukların sosyal medya paylaşımlarına yönelik algı ve tutumları, yalnızca onların bireysel dijital deneyimlerini değil, aynı zamanda çevrimiçi güvenlik, mahremiyet, özgüven ve sosyal etkileşim gibi daha geniş konuları da yakından ilgilendirmektedir. Ancak çocukların bu süreçlerde ne hissettikleri, paylaşımlarında neyi önceledikleri, hangi kaynaklardan etkilendikleri ve özellikle bu paylaşımlara yönelik kendi düşünceleri, çoğu zaman yetişkin bakış açısıyla yorumlanmakta; çocukların sesine doğrudan başvurulmamaktadır. Oysa çocukların sosyal medya deneyimlerinin onların dilinden anlaşılması, dijital okuryazarlık

programları, aile rehberliği ve medya politikalarının oluşturulmasında temel bir ihtiyaçtır (Third et al., 2017).

Son yıllarda çocuk kullanıcı hesaplarının çoğalması ve ebeveynlerin sosyal medyada çocuklarla ilgili birçok paylaşım yapması çocukların şu an ve gelecekteki gelişimini etkileyebilmektedir (Çimke, 2018). Anne babaların dijital ebeveynlik becerileri ile çocuklara iyi birer rol model olmaları gerekmektedir. Ancak zaman zaman yetişkinlerin çocukların sosyal medya kullanımı, bu dijital ortama katılımı ile ilgili düşüncelerinde kararsızlık ve tutumlarında değişimler görülmektedir (Yorğancı, 2018).

Bu araştırma ile 5 -14 yaş çocukların sosyal medya paylaşımlarına yönelik görüşlerinin incelenmesi amaçlanmıştır. Çalışma çocuğun görüşünün alınarak çocuk katılımının sağlandığı çalışmalardan biri olarak alana katkı sağlayacak ve yetişkinlere çocuğun bakış açısının alınması ve çocuklarının farkındalık durumları konularında ailelere de ışık tutacaktır.

Bu amaca yönelik alt amaçlar ise şunlardır:

Çocukların sosyal medyanın ne olduğu ile ilgili görüşlerini nelerdir?

Çocukların sosyal medyada paylaşım yapmaya dair görüşleri ve düşünceleri nelerdir?

Sosyal medya paylaşımlarında çocuklardan izin alınması durumuna yönelik sahip olduğu bilgiler nelerdir?

Paylaşım yapılabilecek ya da yapılamayacak durum ve mekanlara yönelik fikirleri nelerdir?

Yöntem

Araştırmanın Deseni

Araştırmada nitel araştırma yöntemlerinden olan kişilerin gözünden deneyimlerinin anlamaya çalışıldığı fenomenoloji deseni kullanılmaktadır (Saegert Harcourt, 2019). Fenomenolojik bir araştırma, keşfedici ya da tahmin edici değil, tanımlayıcıdır. Araştırmada olguların doğasını ve önemini ortaya çıkarmak için deneyimleri ele almak önemlidir (Yalçın, 2022). Bu çalışmada çocukların deneyim ve tecrübeleriyle sahip oldukları dijital farkındalık durumu incelenmektedir.

Çalışma Grubu

Araştırmanın çalışma grubunu 2023-2024 yılında Kırklareli ilinde yaşayan ebeveynlerinden izin alınan 5-14 yaş arasındaki gönüllü 15 çocuk katılımcı oluşturmaktadır. Çalışmanın katılımcı çeşitliliği sosyal medyayı aktif kullanan, sosyal medya uygulamalarını bilip paylaşımları ebeveyninin hesabıyla yetişkin kontrollünde takip eden ve hiç sosyal medya kullanmayan çocuklarla görüşmeler yapılarak sağlanmaya çalışılmıştır.

Araştırmada kartopu örnekleme yöntemi kullanılmıştır. Kartopu veya zincir örnekleme tekniği, evreni oluşturan birimlere erişmenin zor olduğu veya evren hakkındaki bilgilerin (büyüklük ve

bilgi derinliđi vb.) eksik olduđu durumlarda kullanılmaktadır (Patton, 2005). Arařtırma katılımcılarının belirlenmesinde Kartopu örnekleme yönteminden yararlanılarak 15 kiřilik örnekleme sayısına ulařılması hedeflenip, her bir potansiyel gönüllü katılımcıya arařtırma hakkında bilgi verilmiřtir. Arařtırmanın örneklemini oluřturan yař aralıđındaki katılımcı çocuklara; Çocuk parkları, kafeler, ev ortamlarında yüz yüze, katılımcı ve ebeveynlerinin uygun gördüđu zaman ve mekanlarda da görüntülü görüřmeler gerekleřtirilerek iletiřime geilip ulařılmıřtır. Örnekleme seimi arařtırmaya gönüllü olarak katılmayı kabul eden bireylerin yönlendirmeleriyle benzer deneyimi bulunan kiřilerin alıřmaya dahil edilmesiyle sađlanmıřtır.

Veri Toplama Aracı ve Süreci

Arařtırmada nitel alıřmalarda kullanılan veri toplama araçlarından yarı yapılandırılmıř görüřme yöntemi ile öncesinde belirlenen arařtırma soruları arařtırmacılar tarafından literatür incelemesi yapılarak ve gerekleřtirilen pilot uygulamalar sonucunda düzenlenip oluřturulmuřtur.

Veri toplama yer ve zamanları kiřilerin uygunluk durumları, evre ve çocukların okul alıřmalarını aksatmayacak kořullar dođrultusunda çocuk parkları, kafeler, ev ortamları gibi çocuklar ve ebeveynler tarafından uygun görülen mekanlarda yüz yüze ve görüntülü görüřme řeklinde uygulanmıřtır. Görüřme sürecine arařtırma ve arařtırmacı ile ilgili bilgilendirme ve tanışma ierikli sohbet ile bařlayıp, çocuklarla eřitli buz kırıcı etkinlikler uygulanmıřtır (Büyükoztürk, 2023).

Verilerin Analizi

alıřmada toplanan veriler belirli bir konuda ya da alanda birbirinden bađımsız olarak yapılan nitel ve nicel alıřmaların derinlemesine incelenip düzenlenmesi sađlayan betimsel ierik analizi yöntemi ile deđerlendirilmiřtir (Ültay, 2021). Bu dođrultuda ocuklardan alınan veriler dođrultusunda arařtırmacı tarafından kelime ve kavramların varlıđını, anlamlarını ve iliřkilerini belirleyerek analiz edilerek ıkarımlarda bulunulmuřtur.

Bulgular

5 -14 yař ocuklarının sosyal medya paylařımlarına yönelik görüřleri elde edilen veriler dođrultusunda kodlar ve kategoriler oluřturulup belirlenen alt amalar dođrultusunda yorumlanıp analiz edilmiřtir.

ocukların Sosyal Medyanın Ne Olduđu İle İlgili Görüřlerine Ait Bulgular

Görüřme yapılan ocukların sosyal medya hakkında bilgilerinin yařa ve sosyal medya kullanım durumlarına göre farklılık gösterdiđi görülmektedir. Elde edilen veriler dođrultusunda sosyal medya ile ilgili görüřleri Eđlence, iletiřim, bilgi edinme amalı kullanma ve sosyal medya hakkında fikrim yok řeklinde 4 kategori altında incelenmiřtir.

Küçük yaş grubundaki çocukların sosyal medya kavramını net olarak bilmedikleri, daha büyük yaşta olup sosyal medya kullanmayan çocukların ise; kavramla ilgili fikirlerinin daha çok sosyal medya uygulamalarına yönelik olduğu görülmüştür. Örneğin;

Ö.9 kod katılımcı ‘Facebook, Tik tok gibi şeyleri duydum bir fikrim yok.’ şeklinde ifade ederken,

A.H.5 kodlu katılımcı sadece ‘Bilmiyorum’ ifadesinde bulunmuştur.

Ancak sosyal medya kullanmasa da çevresinden gözlemlediği durumlara yönelik kavram ile ilgili fikirlere sahip çocuklarda bulunmaktadır. Örneğin;

M.E.6 kodlu katılımcı ‘Sosyal medya nedir biliyorum, duydum. Bir şeyler göstermek için kullanılır.’ ifadesiyle

Y.7 kodlu katılımcı ‘Çekilen videoların izlendiği YouTube gibi uygulamalar var.’ ifadesiyle

D.8 kodlu katılımcının kavramla ilgili görüşünü ‘İnsanların birbiriyle iletişim kurmak için kullanılan şey.’ şeklinde ifade edildiği görülmüştür.

Sosyal medya tecrübesi olan çocukların kavram ile ilgili bilgi durumlarında daha net ifadeler kullandığı görülmektedir. Örneğin;

E.8 kodlu katılımcı ‘bence sosyal medya insanların ne yaptıklarını paylaştığı, insanların birbirlerini görmek ve kendilerinin nerede olduklarını göstermek için kullandığı ortamlardır.’ ifadesiyle,

Bir diğer M.14 kodlu katılımcı tarafından ise;’ sosyal medya birçok alanda eğitim, eğlence, spor gibi alanlarda kullanılan ve sohbet haberleşme amaçlı kullanılan şeydir. Ben sosyal medyayı hepsi için kullanıyorum’’ şeklinde ifade edilmiştir.

Çocukların Sosyal Medyada Paylaşım Yapmaya Dair Görüşlerine İlişkin Bulgular

Görüşmelerde elde edilen veriler analiz edildiğinde çocukların sosyal medyada paylaşım yapmakla ve içeriklerle ilgili görüşleri ‘video ve fotoğraf paylaşımı’ şeklinde 2 kategori üzerine olmuştur.

Video paylaşımları denilince içerik olarak daha çok müzik videoları, oyun videoları, ders videoları gibi kategoriler yer alırken fotoğraf paylaşımları kategorisinde ise ‘kendi fotoğrafları, manzara fotoğrafları ve sevdiklerinin (aile üyelerinin) fotoğrafları’ şeklinde içerikler kategorize edilmiştir.

Sosyal medya kullanmasa da paylaşım yapmakla ilgili görüşleri olan;

E.8 kodlu katılımcı ‘Mesela insanlar genellikle fotoğraf atıyorlar, kendilerini, arkadaşlarıyla birlikte oldukları fotoğrafları paylaşıyorlar. Bazen büyükler bizler için uygun olmayan korkunç fotoğrafları da paylaşıyor’ şeklinde ifadesiyle paylaşım yapmak ile ilgili görüşünü belirtmiştir.

Sosyal medya ile ilgili bilgisi olmayan ve sosyal medya kullanmayan çocuklar paylaşım yapmanın ne olduğunu bilmediklerini ifade etmektedirler. Ancak görüşmelerde soruyla ilgili açıklama yapıldığında ise çevresinde fotoğraf ve video paylaşmak ve video izlemek amaçlı kullanıldığını ifade etmiştir.

Y.A 5 kodlu katılımcı ‘...Biz bazen telefonda kendi fotoğrafımı ve annemin fotoğraflarını çekip teyzeme, sevdiklerime gönderiyoruz, onlarla paylaşıyoruz.’ İfadesinde bulunmuştur.

Sosyal medyayı aktif olarak kullanan çocukların konuyla ilgili görüşleri incelendiğinde;

N.11 kodlu katılımcı ‘Facebook, YouTube ve Instagram gibi uygulamalarda daha çok fotoğraflar paylaşılıyor. WhatsApp uygulamasında insanlar birbirine ulaşma, iletişim sağlamada ve mesajlaşmak için kullanılıyorlar. Daha fazla büyükler kullanıyor ama küçük yaşta kullananlarda var.’ şeklinde ifade ederken

A.12 kodlu katılımcı da ‘İnsanlar daha çok kendilerini paylaşıyorlar fotoğraflarını, videolarını... Paylaşımlar da insanların kimleri takip ettiğine pek bakmıyorum.’ şeklinde ifadesini paylaşmıştır.

Sosyal Medya Paylaşımlarında Çocuklardan İzin Alınması Durumuna Yönelik Görüşlerine İlişkin Bulgular

Görüşmelerden elde edilen veriler doğrultusunda paylaşım yaparken izin almakla ilgili bulgular; çocuklardan izin alınmalı, izin almaya gerek yok ve çocuklardan izin alma yaşının belirtildiği 3 kategori altında toplanmıştır. Paylaşım yapan kişiler ile ilgili veriler incelendiğinde genellikle paylaşımları çocukların aile üyelerinin, özellikle annelerin ve yakın çevresindeki kişilerin olduğu görülmektedir.

Paylaşım yapılırken izin alma durumu ile ilgili küçük çocukların çoğunlukla tanıdıkları ve aile üyeleri oldukları için paylaşımlarda yetişkinlerin kendilerinden izin almalarına gerek olmadığını belirtmekte ve izin alınacak yaş durumu ile ilgili yaşı kendilerinden daha büyük olan çocuk ve kişiler olarak ifade etmektedirler.

A.H 5 Kodlu katılımcı ‘Annem ve babam paylaşıyor. Annem fotoğraf çekerken izin alıyor ben de evet diyorum. Başkalarının fotoğrafını paylaşıırken izin almamız gerekiyor’ şeklinde,

M.E 6 kodlu katılımcı ‘Annem paylaşıyor. Benden izin almıyor. Sorması da gerekmez. Çünkü annem benden büyük. Ablam yaşındakilerden izin alabilirler.’ şeklinde

Y, 7 kodlu katılımcı tarafından da ‘Annem, babam ve abim paylaşım yapıyorlar. Beni de paylaşıyorlar. İzin almıyorlar almalarına da gerek yok. Çünkü ailem oldukları için. Büyüklerin çocuklardan izin almalarına gerek yok...’ şeklinde ifade edilmiştir.

Sosyal medya kullanma tecrübesi olan ve yaşla birlikte konuyla ilgili bilgi sahibi çocukların görüşleri incelendiğinde daha ayrıntılı nedenler ve izin alma, yaş sınırlarını belirtmede ayrıntılı bir biçimde ifadeler kullandıkları görülmüştür.

E,8 kodlu katılımcı ‘Annem ara sıra bizimle ilgili paylaşımlar yapıyor. Babam pek fazla sosyal medya kullanmıyor. Fotoğraf çekmek için izin alma konusunda sormuyorlar. Aile içinde sormadan fotoğraf çekilebilir ama annem babamı çekerken soruyor. Diğer insanlarında çekerken izin almalıyız. Özellikle tanımadığımız biriye izin alınmalı çünkü kavga çıkabilir...İzin almak için belli bir yaş yoktur. Her zaman istemeliyiz. Bebekten değil ama bebeğin annesine sormalıyız.’ Şeklinde düşüncelerini ifade etmiştir.

Paylaşım Yapılabilecek ya da Yapılamayacak Durum ve Mekanların Bilincinde Olunması Durumuna İlişkin Bulgular

Görüşmelerde elde edilen veriler analiz edildiğinde çocukların sosyal medyada paylaşım yapılacak durum ve mekanlarla ilgili görüşleri 2 ana kategoriye ayrılarak incelenmiştir. Paylaşım yapılabilecek yerler ve durumlar incelendiğinde; ‘Açık hava alanları (Park, ev okul, bahçe, kafe), günlük rutinler, geziler, mimari eserler, mutlu olunan anlar (doğum günleri, ödül törenleri, tatiller).’ şeklinde alt kategoriler ortaya çıkmaktadır.

Paylaşım yapılamayacak yer ve özel durumlar incelendiğinde de ‘Fizyolojik ihtiyaçlar sırasında (yemek yeme, uyku, lavabo ihtiyaçları), oyun oynama esnasında, iş yaparken, özel görüşmelerde, kalabalık yerlerde havuzda, üzgün olunan anlarda (düşüp yaralandıkları, ağladıkları)’ şeklinde alt kategoriler ortaya çıkmıştır.

Paylaşım yapılabilecek yerler ve durumlara yönelik sosyal medya kullanmayan ama konuya yönelik fikirleri olan çocuklar tarafından;

Ö,9 Kodlu katılımcı ‘Babaannemle uzakta bir yere köye gittiğimizde fotoğraf çekilmiştik. Doğum günümde, özel günler, bayramlarda, mandala yarışması ödül törenimde fotoğrafım çekilmişti. En sevdiğim yerleri ve ailemle birlikte olduğum mutlu anları paylaşmak istedim.’ ifadesiyle

Y.E, 13 Kodlu katılımcı tarafından da ‘Mimari eserlerin yanında, oralara benzer manzaralarda fotoğraf çekilebilir ve paylaşılabilir. Okulda da ödül törenleri, kutlamalar sırasında çekilip paylaşılıyor.’ şeklinde ifade edilmiştir.

Sosyal medyası olan ve paylaşım yapan çocuklar tarafından;

N, 11 kodlu katılımcı tarafından ‘...Canım sıkılınca fotoğraf çeker paylaşırım, bir de kardeşimle olan fotoğrafları. Özel bir günde doğum günü gibi fotoğraf paylaşımları yapabiliriz.’ Şeklinde ifade edilmiştir.

Paylaşım yapılamayacak yerler ve durumlara yönelik çocukların görüşleri analiz edildiğinde;

M.E, 6 Kodlu katılımcı ‘...yemek yerken, arkadaşlarımla oynarken fotoğraf çekilmez. Yabani yerlerde tehlikeli olabilir.’ şeklinde,

N,11 Kodlu katılımcı ‘Her olayı paylaşmamalıyız. Mesela yemek yerken paylaştığımızda hamile olanlar, bebekler çocuklar ve canı çekebilecek olan insanlar var. Parası olan var olmayan var. Onlar alamayıp özenebilirler.’ şeklinde

E, 12 Kodlu katılımcı tarafından da’ Bir kişinin uyurken fotoğrafı çekilemez ve paylaşılamaz. Özel bir görüşmedeyken ve konuşma sırasında da paylaşım yapılamaz. O kişi rencide olabilir. ’ şeklinde düşünceleri ifade edilmiştir.

Küçük yaştan itibaren çocukların paylaşım yapılabilecek ve yapılamayacak durum ve mekanlarla ilgili bilgi sahibi oldukları, gözlemledikleri veya deneyimledikleri özel durumlara dikkat edilmesi gerektiğinin bilincinde oldukları ve paylaşım yapma konusunda dikkat edilmesi gerekenlerde bunlara özen gösterdikleri analiz edilmiştir.

Tartışma ve Sonuç

Araştırmada çocukların sosyal medyanın ne olduğu ve niçin kullanıldığı ile ilgili bulgular değerlendirildiğinde eğlence, iletişim ve bilgi edinme amaçlı vb. kategorilerde çocukların sosyal medya bilgisine sahip olduğu tespit edilmiştir. Sayın-Aydın (2018)’ ın yapmış olduğu çocuklarda medya algısı çalışmasında da medya denilince çocukların aklına ilk gelen kelimeler kendi kullandıkları uygulama ve yazılımlar (WhatsApp, Snapchat, Instagram vb.) olurken, bazı öğrencilerin aklına ilk gelen kelimeler medyanın işlevleri (eğlendirme, bilgilendirme vb.) ve kullanım amaçlarıyla (ödev, eğitim vb.) benzer nitelikte kelimeler olduğu görülmektedir. Küçük yaş grubunda olan çocukların ve hiç sosyal medya kullanmayan çocukların kavramla ilgili fikirlerinin olmadığı ya da sosyal medyayı fotoğraf ve video paylaşılan yer şeklinde algıladıkları görülmüştür.

Çocukların sosyal medyada paylaşım yapmaya dair görüşlerine ilişkin bulgular değerlendirildiğinde çalışmaya katılan çocukların genellikle paylaşım yapmadıkları daha çok uygulamalarda yapılan paylaşımlarla ilgili düşüncelerinin olduğu görülmektedir. Literatürde Güney’ (2020) in beşinci sınıf öğrencileri ile yapmış olduğu çalışmada da çocukların sosyal medyada fazla paylaşım yapmadıkları, araştırma grubunun yarısından fazlasının ise hiç paylaşım yapmadığı sonuçlarıyla benzer nitelikte olduğu görülmektedir.

Sosyal medya paylaşımlarında çocuklardan izin alınması bulguları değerlendirildiğinde; izin alma durumu ile ilgili çocukların tanıdıkları ve aile üyelerinin çocuklarla ilgili yaptıkları paylaşımlarda çocuklardan izin almadıkları katılımcı çocuklarında bu konuda tanıdığı ve aile üyeleri olduğu için izin almalarına gerek olmadığını belirttikleri görülmektedir. Ancak bu durum çocuk hakları bakımından ele alındığında çocuğun kişilik hakkına yönelik bir ihlal

olarak ebeveynlerin çocukları paylaşım nesnesi yapması olumsuz sonuçları da karşımıza çıkarabilmektedir (Gültekin, 2018). Literatürde “paylaşanababalık” olgusuna yönelik ebeveynlerin, kendi paylaşımlarında özerkliğe sahip oldukları ancak çocuklarının hakları ve mahremiyetleri doğrultusunda onların düşünce ve izinlerine de önem göstermeleri gerektiği belirtilmektedir (Erişir ve Erişir, 2018).

Çocuklarla ilgili paylaşım yapan aile üyesinin genellikle ‘Anne’ olmasının nedeni yapılan çalışmalarda da kadınların sosyal medyayı daha aktif kullanmaları, dijital ortamda daha fazla sosyalleşmeleri (Başoğlu, 2020) , annelerin daha çok özel günlerin anılarına ait içerik oluşturmayı (mezuniyet, doğum günü, başarıların kutlanması ve mutlu olunan anlar gibi), paylaşmayı tercih etmeleri gibi sebeplerden (Üstündağ, 2023) ve çocukların sosyal medya hesaplarını anneleri ile ortak kullanılması durumlarından kaynaklı olabileceği düşünülmektedir. Paylaşım yapılabilecek ya da yapılamayacak durum ve mekanların bilincinde olunması bulguları değerlendirildiğinde; küçük yaştan itibaren çocukların paylaşım yapılabilecek ve yapılamayacak durum ve mekanlarla ilgili bilgi sahibi oldukları ve bunun ayrımını yapabilecek farkındalığa sahip oldukları bunun sebebinin gözlemledikleri veya deneyimledikleri durum ve mekanlardan elde ettikleri tecrübeler ya da yetişkin bilgilendirmeleri sonucunda olduğu şeklinde yorumlanmıştır.

Çalışmadan elde edilen veriler doğrultusunda her geçen gün küçük yaşlardan itibaren sosyal medya kullanımının yaygınlaştığı, çocukların sosyal medyada yapılan paylaşımlara yönelik kendilerine ait düşünce, fikir ve tutumlarının olduğu görülmüştür. Ancak kendileriyle ilgili paylaşımlarını yapabileceği ya da paylaştıklarını göstermek istedikleri kitle ile ilgili özellikle küçük yaş grubundaki çocuklarda ikilemler olduğu mahremiyet ve risk faktörlerine yönelik yeterli bilgi sahibi olmadıkları görülmüştür. Çocuklardan elde edilen veriler doğrultusunda yetişkinlerin sosyal medya paylaşımları sırasında çocukların fikir, düşünce ve izinlerine yer vermedikleri, çocuk katılımını gözden kaçırdıkları düşünülmektedir. Bu doğrultuda çocukların katılımını arttıracak ve onların görüşlerini daha etkili şekilde yansıtmalarını sağlayacak, sosyal medya uygulamalarını verimli ve amacı doğrultusunda kullanma becerilerini kazandıracak eğitim programlarının planlanıp uygulanması günümüz teknoloji çağında çocukların gelişimi açısından önem arz etmektedir.

Çalışmayla ilgili şu önerilerde bulunulabilir; konuyla ilgili oluşturulacak uygun ölçeklerle çocukların katılımı sağlanarak istatistiki veriler elde edilecek şekilde nicel bir araştırma olarak da gerçekleştirilebilir. Ebeveynlerin gözünden çocukların sosyal medya paylaşımlarıyla ilgili düşüncelerini gösteren nitel bir çalışma gerçekleştirilebilir. Sosyal medya paylaşımlarına yönelik çocukların farkındalık düzeylerini arttırıcı, erken çocukluk döneminden itibaren bu

konunun önemini vurgulayan ailede ve okullarda çocuklarla ve ebeveynlerle çeşitli çalışmalar planlanarak programlar uygulanabilir. Dijital okuryazarlık, sosyal medya gibi konularda çocuk düşüncelerinin ön planda olduğu çocukların yardımcı araştırmacılar olarak yer alacağı çocuk katılımlı araştırmalar gerçekleştirilmesi konuyla ilgili ebeveyn, öğretmen, yetişkin dışında farklı kaynaklardan veri elde etme açısından alana katkı sağlayacak önemli çalışmalardan olacaktır.

Erken Çocukluk Eğitim Ortamlarında İyi Oluş: Öğretmen-Çocuk Etkileşimi ve Okul İklimine Dayalı Güncel Yaklaşımlar

Tuğba Kontaş Azaklı

Ordu Üniversitesi, tugbakontas@hotmail.com, ORCID: 0000-0002-1919-842X, TÜRKİYE

Özet

Erken çocukluk dönemi, bireyin yaşam boyu iyi oluşunun temellerinin atıldığı, gelişim açısından kritik bir dönemdir. Bu süreçte çocukların kendilerini güvende hissetmeleri, sosyal ilişkiler kurabilmeleri, duygularını ifade edebilmeleri ve öğrenmeye açık bir ortamda bulunmaları, iyi oluşlarını doğrudan etkileyen temel unsurlar arasında yer almaktadır. Çocuklar erken çocukluk dönemlerinin büyük bir bölümünü okul öncesi eğitim ortamlarında geçirmektedirler. Öğretmen-çocuk etkileşimi ve okul iklimi, çocukların psikososyal gelişimi ve iyi oluşları üzerinde belirleyici bir rol oynamaktadır.

Araştırmalar, öğretmenlerin çocuklarla kurduğu sıcak, anlayışlı ve destekleyici ilişkilerin, çocukların öz düzenleme becerilerini geliştirdiğini, sosyal-duygusal öğrenmelerine katkı sunduğunu ve kendilerine olan güvenlerini artırdığını göstermektedir. Bununla birlikte, okul ortamının güvenli, kapsayıcı ve aidiyet hissini destekleyici bir yapıya sahip olması, çocukların psikolojik dayanıklılıklarını ve öğrenmeye yönelik olumlu tutumlarını güçlendirmektedir. Olumlu bir okul iklimi, yalnızca akademik başarıyı değil, çocukların genel iyi oluş düzeyini de artırmaktadır.

Günümüzde öğretmen-çocuk etkileşimini ve okul iklimini güçlendirmeye yönelik pek çok yaklaşım uygulanmaktadır. Mindfulness temelli çalışmalar, sosyal-duygusal öğrenme programları ve oyun temelli öğrenme bu yaklaşımlar arasında öne çıkmaktadır. Bu güncel yaklaşımlar, erken çocukluk döneminde sağlıklı bir gelişim ortamı sunarak çocukların iyi oluşunu desteklemeyi hedeflemektedir.

Anahtar Kelimeler: iyi oluş, erken çocukluk eğitimi, okul iklimi, öğretmen çocuk etkileşimi

Well-Being in Early Childhood Education Settings: Contemporary Approaches Based on Teacher–Child Interaction and School Climate

Abstract

Early childhood is a critical developmental period during which the foundations of lifelong well-being are laid. In this phase, children's sense of safety, ability to form social relationships, express emotions, and access stimulating learning environments are key elements directly affecting their well-being. Young children spend a significant portion of this period in early

childhood education settings. Teacher-child interaction and school climate play a decisive role in their psychosocial development and overall well-being.

Research shows that warm, understanding, and supportive relationships established by teachers enhance children's self-regulation skills, contribute to their social-emotional learning, and strengthen their self-confidence. Additionally, a safe, inclusive school environment that fosters a sense of belonging supports children's psychological resilience and positive attitudes toward learning. A positive school climate not only enhances academic success but also improves children's overall well-being.

Today, various approaches are being implemented to strengthen teacher-child interaction and the school climate. Mindfulness-based practices, social-emotional learning (SEL) programs, and play-based learning stand out among these approaches. These contemporary methods aim to provide a healthy developmental environment in early childhood, supporting the well-being of children in a holistic and sustainable way.

Keywords: well-being, early childhood education, school climate, teacher child interaction

Giriş

Erken çocukluk dönemi, bireyin bilişsel, sosyal, duygusal ve fiziksel gelişiminin en hızlı ve en hassas biçimde gerçekleştiği, yaşam boyu öğrenmenin temellerinin atıldığı kritik bir evredir. Bu dönemde sunulan eğitimsel deneyimler, yalnızca çocukların bireysel potansiyellerini değil, aynı zamanda toplumsal eşitliği ve ekonomik kalkınmayı da etkileyebilecek güçlü birer yatırıma dönüşmektedir. Özellikle dezavantajlı gruplar için erken çocukluk eğitime yapılan yatırımların bireysel ve toplumsal getirisi yüksek olmakta, erken yaşlarda edinilen becerilerin ilerleyen yaşlardaki öğrenmeleri desteklediği birçok çalışmayla ortaya konmaktadır (Heckman, 2012).

Erken çocukluk eğitime yönelik yatırımların etkili olabilmesi ise doğrudan eğitim ortamlarının kalitesiyle ilişkilidir. Kaliteli eğitim, yalnızca bilişsel çıktıları değil, çocukların iyi oluşlarını ve uzun vadeli yaşam deneyimlerini de olumlu yönde etkileyen çok boyutlu bir süreçtir (UNESCO, 2017). UNESCO, eğitimin merkezine kaliteyi yerleştirerek, eğitimin çıktılarının (çocukların ne öğrendiği ne kadar iyi öğrendiği ve bundan ne kazandığı) doğrudan eğitimde kaliteye bağlı olduğunu vurgulamaktadır. Bu nedenle Sürdürülebilir Kalkınma Hedefleri kapsamında da 4.2 hedefi, 2030'a dek tüm çocukların nitelikli erken çocukluk gelişimi, bakım ve eğitime erişimini sağlamayı amaçlamaktadır. Kalitenin bu çok boyutlu yapısı; eğitim programının niteliği, öğretmen yeterliliği, öğrenme ortamı, aile katılımı ve en

önemlisi çocukların kendilerini güvende, değerli ve ait hissettikleri bir duygusal iklimi içermektedir.

Erken yaşlarda kaliteli eğitime katılan çocuklar, bilişsel, sosyal-duygusal ve dil becerilerinde ilerleme kaydetmektedirler; bu kazanımlar okul başarısı, iyi oluş ve hatta ileriki yaşam gelirlerine kadar yansıyabilmektedir (OECD, 2023). Son yıllarda yapılan bir meta-analizin bulgularına göre, erken çocukluk programlarında kalite arttıkça çocukların akademik ve sosyal becerilerinin mütevazı da olsa iyileştiği ve problem davranışların azaldığı belirlenmiştir (von Suchodoletz et.al, 2023).

Araştırmalar, yüksek kaliteli erken çocukluk eğitimi alan çocukların zekâ gelişimlerinin daha ileri düzeyde olduğunu ve bu etkinin özellikle düşük gelirli ailelerden gelen çocuklarda daha belirgin olduğunu göstermektedir. Protzko'nun (2013) yürüttüğü meta-analiz çalışmasına göre, kaliteli okul öncesi eğitime katılan çocukların zekâ puanları, katılmayanlara kıyasla ortalama 4 ila 7 puan daha yüksek olmaktadır. Bu artışın, çocuğun bütüncül gelişimini destekleyen, zenginleştirilmiş bir çevrede bulunmasından kaynaklandığı vurgulanmaktadır.

Erken çocukluk eğitiminde kalite, genel olarak iki ana boyutta ele alınır: yapısal kalite ve süreç kalitesi. Yapısal kalite; öğretmen nitelikleri, öğretmen-çocuk oranı, müfredatın niteliği ve fiziksel öğrenme ortamı gibi dışsal unsurları kapsar. Bu öğeler genellikle hükümet politikaları, finansal kaynaklar ve düzenleyici çerçevelerle şekillenmekte; dolayısıyla kamu ve özel sektörün kontrolü dışındaki değişkenlere bağlı olarak farklılık gösterebilmektedir. Süreç kalitesi ise sınıf içi etkileşimlerin niteliğini ifade eder; özellikle öğretmen-çocuk ve çocuk-akran etkileşimlerinin duygusal ve pedagojik boyutlarını içerir. Araştırmalar, çocukların öğrenme deneyimini doğrudan etkileyen asıl belirleyicinin süreç kalitesi olduğunu ortaya koymaktadır (Slot, 2018).

Şekil 1. Erken Çocukluk Eğitiminde Kalitenin Boyutları

CLASS (Classroom Assessment Scoring System), öğretmen-çocuk etkileşimlerini üç temel boyutta inceler:

Bu bağlamda, sınıf içi etkileşim kalitesini değerlendirmek üzere en yaygın kullanılan araçlardan biri olan CLASS (Classroom Assessment Scoring System) çerçevesinde süreç kalitesi üç ana boyutta değerlendirilir. Bunlar; duygusal destek, sınıf organizasyonu ve öğretimsel destek. CLASS, hem öğretmenlerin pedagojik yeterliliklerini hem de sınıf ikliminin çocukların gelişimine sunduğu olanakları anlamak için sistematik bir gözlem çerçevesi sunar. Bu yaklaşım, süreç kalitesini nesnel biçimde değerlendirmek ve geliştirmek için önemli bir temel sağlamaktadır (Pianta, La Paro & Hamre, 2008).

Şekil 2. Süreç Kalitesinin Temel Boyutları

Bu çalışmanın amacı, erken çocukluk eğitim ortamlarında çocukların iyi oluşunu destekleyen temel unsurlardan olan okul iklimi ve öğretmen-çocuk etkileşimini literatür ışığında ele almak ve bu alanlardaki güncel yaklaşımları tartışmaktır. Bu bağlamda, erken çocukluk eğitiminde iyi oluşun bir göstergesi olarak öğretmen etkileşimi ve iklimin rolü incelenecek, ardından bu alanları güçlendiren yenilikçi eğitim yaklaşımlarına yer verilecektir.

Öğretmen-Çocuk Etkileşiminin Kalitesine Yönelik Kanıtlar

Literatürde artan sayıda çalışma, erken çocukluk eğitiminde kaliteyi değerlendirirken yapısal ölçütlerin tek başına yetersiz kaldığını, bunun yerine süreç kalitesinin bileşenleri olan

öğretmen-çocuk etkileşimi, sınıf iklimi ve pedagojik duyarlılığın belirleyici rol oynadığını göstermektedir (Howard et al., 2024; Hallam et al., 2009). Özellikle sınıf içi oyun desteği, dil etkileşimleri ve duygusal hassasiyet, çocukların gelişimsel çıktıları üzerinde güçlü öngörücüler olarak öne çıkmaktadır (Howard et al., 2024; Hu et al., 2021).

Pianta ve arkadaşları'nın (2002) sınıf gözlemleri, öğretmen etkileşim kalitesinin okulun sosyoekonomik yapısından etkilendiğini ortaya koymakta; bu durum, pedagojik etkileşimlerin yalnızca bireysel öğretmen becerileriyle değil, aynı zamanda sosyal eşitsizliklerle de iç içe geçtiğini göstermektedir (Paschall et al., 2023). Taylor ve arkadaşları (2023) ise öğretmen duyarlılığının çocukların akran ilişkilerinde belirleyici olduğunu ortaya koyarak, sosyal gelişimin öğretim bağlamıyla şekillendiğini vurgulamaktadır.

2. Süreç Kalitesinin Bileşenleri: Duygusal Destek, Organizasyon, Öğretimsel Destek

Öğretmen-çocuk etkileşim kalitesinin üç temel boyutu olan duygusal destek, sınıf organizasyonu ve öğretimsel destek, çocukların sosyal, duygusal ve bilişsel gelişimlerinde farklı etkilere sahiptir (Hamre et al., 2014). Örneğin, Cash ve arkadaşlarının (2018) bulguları, bu üç boyutun sürekliliğinin çocukların gelişiminde birikimli ve kalıcı etkiler yarattığını göstermektedir. Yüksek düzeyde yapılandırılmış yönetim ve rutinlerin uygulandığı sınıflarda çocukların akranlarıyla olan girişimsel sosyal etkileşimleri azalmaktadır (Taylor vd., 2023). Yapılandırılmış etkinliklerde yaşanan problem davranışlar, çocukların öğrenmeye yönelik yaklaşımlarını olumsuz etkilemekte, yüksek duygusal destek sunulan sınıflarda bu problem davranışların olumsuz etkisi ise azalmaktadır (Domínguez vd., 2011).

Ancak öğretimsel desteğin etkisi, her bağlamda aynı düzeyde gözlenmemektedir. Curby ve arkadaşları (2009), kavramsal gelişimin yüksek olduğu sınıflarda akademik kazanımların arttığını, duygusal destek yoğunluğunun ise sosyal yeterliklerle ilişkili olduğunu saptamıştır. Bu bulgular, etkileşim kalitesinin çocuk gelişimini desteklemede bütüncül bir yaklaşımla ele alınması gerektiğini ortaya koymaktadır.

3. Bağlam ve Eşitsizliklerin Rolü

Yapılan çok merkezli ve kültürler arası çalışmalar, etkileşim kalitesinin kültürel bağlamdan bağımsız olarak gelişim üzerinde belirleyici olduğunu ancak uygulama biçimlerinin bağlama duyarlı olması gerektiğini ortaya koymaktadır (Von Suchodoletz et al., 2020; Hu et al., 2019). Özellikle Paschall ve arkadaşlarının (2023) Head Start bağlamında yürüttüğü çalışma, sınıf

düzeyindeki etkileşim profillerinin, öğretmen tükenmişliği ve çocukların ırksal temsili ile doğrudan ilişkili olduğunu göstermektedir. Çalışmalarında siyah çocuklar düşük kaliteli ve çatışmalı profillerde aşırı temsil edilirken, beyaz çocuklar daha yüksek kaliteli etkileşim ortamlarında yer almaktadır. Bu durum erken çocukluk döneminden itibaren eşitsizlikleri vurgulamaktadır.

Nguyen ve arkadaşları (2020), sınıf kalitesinin etkisinin bireysel öğretmen-çocuk ilişkileriyle şekillendiğini belirterek, ilişkisel pedagojinin önemini vurgulamaktadır. Bu bulgu, Zaslow ve arkadaşlarının (2016) analizleriyle de örtüşmektedir; öğretimsel kalitenin etkisi ancak belirli bir eşik aşıldığında anlamlı hale gelmektedir.

4. Kaliteyi Artırmaya Yönelik Müdahale Modelleri

Son yıllarda geliştirilen çeşitli müdahale programları, öğretmen-çocuk etkileşim kalitesini artırmak amacıyla sosyal-duygusal öğrenmeyi, travma duyarlı pedagojiyi ve mindfulness temelli uygulamaları bir araya getirmektedir (Spielberger et al., 2024; Amini Virmani et al., 2013; Ryan Group, 2024). Özellikle sınıf iklimini ve öğretmen duyarlılığını geliştiren IECMHC, Pyramid Model, Teaching Through Interactions gibi programlar, sınıf içi uygulamalarda gözle görülür iyileşmeler sağlamaktadır (Blewitt et al., 2018). Yapılan araştırmalarda yüksek uygulama kalitesine sahip öğretmenlerin iş doyumlarının yüksek, stres düzeylerinin düşük ve özyeterliliklerinin güçlü olduğu belirlenmiştir (Fettig vd., 2022). Bu müdahalelerin etkisi, özellikle başlangıçta düşük kaliteye sahip sınıflarda ve öğretmen tükenmişliği yaşayan gruplarda daha belirgin olmaktadır (Fettig et al., 2022; Paschall et al., 2023). Ayrıca, öğretmenlerin pedagojik yeterliliklerinin yanı sıra psikolojik sağlamlıklarının da desteklenmesi gerektiği vurgulanmaktadır. Nores ve arkadaşları (2022), sınıf içinde metabilşsel pedagojik yaklaşımların yok denecek kadar az olmasının öğretim kalitesini düşürdüğünü belirtmektedirler.

5. Politik ve Pedagojik Çıkarımlar

Tüm bu bulgular ışığında, erken çocukluk eğitiminde kaliteyi artırmaya yönelik politikaların yalnızca yapısal düzenlemelerle sınırlı kalmaması gerekmektedir. Öğretmen-çocuk etkileşim kalitesi, öğretmenlerin pedagojik becerileri kadar onların destek sistemlerine erişimi, mesleki gelişimi ve psikolojik dayanıklılığı ile doğrudan ilişkilidir. Araştırmalar hizmet içi profesyonel

gelişim programlarının öğretmenlerin duygusal, organizasyonel ve öğretimsel etkileşim kalitesini anlamlı düzeyde artırdığını göstermektedir (Egert vd., 2020).

Tilbe ve Gai'nin (2022) çalışmasında, öğretmen-çocuk etkileşim kalitesinin düşük olduğu durumlarda çocukların sosyal-duygusal gelişimleri üzerindeki olumlu etkilerin sınırlı kaldığı bulunmuştur. Bu bulgu, erken çocukluk eğitim ortamlarında iyi oluşu sağlamak için öğretmen-çocuk etkileşiminin yüksek kalitede gerçekleşmesinin önemini vurgulamaktadır. Ayrıca, süreç kalitesi ölçüm araçlarının ve müdahale modellerinin kültürel bağlamla uyumlu hale getirilme

Süreç kalitesini önceleyen, bağlama duyarlı ve kapsayıcı müdahale modelleri ise çocukların bilişsel, sosyal ve duygusal gelişimlerini bütüncül biçimde destekleme potansiyeline sahiptir.

Sonuç ve Öneriler

Erken çocukluk eğitiminin kalitesi, yalnızca fiziksel ortam ve yapılandırılmış programlarla değil, çocukların doğrudan deneyimledikleri sınıf içi etkileşimlerin niteliğiyle şekillenmektedir. Bulgular, öğretmen-çocuk etkileşimlerinin çocukların bilişsel, sosyal-duygusal ve dil gelişimleri üzerinde hem kısa hem de uzun vadeli etkiler yarattığını açıkça ortaya koymaktadır. Özellikle öğretmenin sunduğu duygusal destek, sınıf organizasyonu becerileri ve öğretimsel kolaylaştırma düzeyi, çocukların öğrenme motivasyonu, akran ilişkileri ve öz-düzenleme becerilerini belirleyici biçimde etkilemektedir.

Bu çerçevede, erken çocukluk eğitiminde kaliteyi artırmaya yönelik aşağıdaki öneriler ön plana çıkmaktadır:

Süreç Kalitesine Odaklanan Politikalar Geliştirilmeli: Kalite değerlendirme sistemleri, yalnızca yapısal kriterlerle değil, öğretmen-çocuk etkileşiminin niteliğini merkeze alan süreç temelli araçlarla desteklenmelidir. CLASS gibi standartlaştırılmış gözlem araçlarının yanı sıra bağlamsal özellikleri dikkate alan kültürel uyarlamalar yapılmalıdır.

Öğretmenlerin Psikolojik Dayanıklılığı Güçlendirilmeli: Öğretmenlerin tükenmişlik, stres ve düşük iş doyumunu gibi risklerle baş edebilmeleri için mindfulness temelli uygulamalar, mesleki danışmanlık hizmetleri ve duygusal destek mekanizmaları yaygınlaştırılmalıdır.

Sosyal-Duygusal Öğrenme Programları Yaygınlaştırılmalı: Duygusal iklimin güçlendirilmesi ve ilişkisel pedagojinin desteklenmesi için öğretmenlere yönelik travma duyarlı, ilişki temelli ve sosyal-duygusal öğrenmeyi önceleyen programlar geliştirilmelidir.

Eşitlik Odaklı Müdahale Modelleri Uygulanmalı: Etkileşim kalitesindeki farklılıkların toplumsal eşitsizliklerle iç içe geçtiği göz önünde bulundurularak, erken çocukluk programları eşitlikçi, kapsayıcı ve kültürel açıdan duyarlı olacak şekilde yeniden yapılandırılmalıdır.

Hizmet İçi Eğitimler ve Mentorluk Sistemleri Güçlendirilmeli: Özellikle öğretimsel destek alanında deneyimli öğretmenlerle yeni başlayan öğretmenler arasında bilgi aktarımını sağlayacak etkili mentorluk ve mesleki gelişim programları oluşturulmalıdır.

Sonuç olarak, erken çocukluk eğitiminde kalite, çocukların gelişimsel gereksinimlerini merkeze alan, bağlamsal farkındalıkla şekillenen ve öğretmen iyi oluşunu gözetten bütüncül bir yaklaşımla ele alınmalıdır. Politika yapıcılar, uygulayıcılar ve akademisyenler bu çok katmanlı yapıyı dikkate alarak süreç kalitesini artırıcı, sürdürülebilir ve adil uygulamaları birlikte tasarlamalıdır.

Özet

Temel ihtiyaçlarını bir kimsenin yardımı, desteği ve gözetimi olmadan karşılayamayan engelli bireylerin bakım süreçlerinde desteklenmesi önemli bir konudur. Bu çalışmanın amacı, engelli evde bakım hizmetlerinin günümüzdeki uygulama şekillerinin değerlendirilip kurum bakımı ile evde bakım hizmetlerinin karşılaştırılmasıdır. Çalışma sistematik derleme yöntemi ile yapılmıştır. Ulusal Engelli Veri tabanı Kasım2023 verilerinde Türkiye’de sisteme kayıtlı ve hayatta olan engelli sayısı 2.511.950’dir. Bu veriler engelli bireye sahip ailelerin sayısının oldukça fazla olduğunu ve bakım hizmetlerinin planlanmasının, çeşitlendirilmesinin ve etkinliğinin artırılmasının önemini göstermektedir. Günümüzde tüm dünyada en yaygın modeller evde (profesyonel) bakım, gündüzlü bakım, enformal bakım ve kurumsal bakım modelleridir. Değişen sosyokültürel yapılar, kadınların çalışma hayatına dahil olması, ekonomik yetersizlikler gibi sebepler engelli bireylere yönelik bakım hizmetlerinde önemli değişimlere yol açmış, kurum bakımına talep artmıştır. Bu durum bir süre sonra ülkeler için finansal bir yük olmaya başlamıştır. Türkiye’de 2024 yılı Şubat ayı itibarıyla 106 resmi engelli bakım merkezinde 7 bin 356 engelli bireye yatılı bakım hizmeti sunulmaktadır. Bu bağlamda politika belirleyicileri yeni çözüm arayışlarına yönelmişler ve çözümler arasında ilk sırayı alan uygulama evde bakım hizmetleridir. Evde bakım hizmetlerinin tercih edilme sebeplerinin başında düşük maliyeti ve engelli bireylerin topluma dahil edilmeleri gelmektedir. Kurum bakımının en olumsuz yönleri toplumsal izolasyon, damgalama ve finansal yük iken, evde bakımın olumsuz yönleri bilgisizlik ve bakım yüküdür. İsveç, Norveç, Danimarka, Finlandiya, Hollanda gibi gelişmiş Avrupa ülkelerinde engellilere yönelik kapsamlı, bireyselleştirilmiş ve bağımsız yaşamı destekleyen evde bakım hizmetleri devlet destekli olarak yürütülmektedir. Ülkemizde evde bakım yardımı alanların çoğunluğunu 60 yaş üstü engelli kadınlar oluşturmaktadır. Türkiye’de 2007 yılında 28.583 kişi evde bakım yardımından yararlanırken, 2023 yılı Nisan ayı itibarıyla bu sayı yaklaşık 19,9 kat artarak 569.627’ye ulaşmıştır. Sonuç olarak engelli evde bakım ve kurumsal bakım hizmetlerinin toplumların ihtiyaçlarına göre kapsam alanının genişletilmesi, geri dönüşlerin değerlendirilmesi, yeni uygulama modellerinin geliştirilmesi, iyi uygulamaların yaygınlaştırılması gereklidir.

Home Care Services for Persons with Disabilities and Their Current Implementation Models

Abstract

Supporting individuals with disabilities who are unable to meet their basic needs without assistance, support, and supervision is a critical issue in their care processes. The aim of this study is to evaluate the current implementation of home care services for people with disabilities and compare institutional care with home care services. The study was conducted using a systematic review method. According to the National Disability Database data of November 2023, the number of registered and living individuals with disabilities in Turkey is 2,511,950. These figures highlight the significant number of families with disabled members and emphasize the importance of planning, diversifying, and enhancing the effectiveness of care services. Today, the most common models worldwide include home (professional) care, day care, informal care, and institutional care models. Changing socio-cultural structures, the increasing participation of women in the workforce, and economic constraints have led to significant changes in care services for individuals with disabilities, resulting in an increased demand for institutional care. Over time, this situation has become a financial burden for countries. As of February 2024, there are 106 official disability care centers in Turkey, providing residential care services to 7,356 individuals with disabilities. In this context, policymakers have turned to new solutions, with home care services being the top choice. The main reasons for preferring home care services are their low cost and the inclusion of individuals with disabilities in society. The negative aspects of institutional care include social isolation, stigma, and financial burden, while the negative aspects of home care involve lack of knowledge and caregiver burden. In developed European countries such as Sweden, Norway, Denmark, Finland, and the Netherlands, comprehensive, individualized, and independent living-supporting home care services for individuals with disabilities are provided through government support. In Turkey, the majority of individuals receiving home care assistance are women with disabilities over the age of 60.. In 2007, 28,583 individuals benefited from home care assistance, and by April 2023, this number has increased nearly 19.9 times to reach 569,627. In conclusion, expanding the scope of home and institutional care services for individuals with disabilities according to the needs of societies, evaluating feedback, developing new implementation models, and disseminating best practices are essential.

Keywords Disability, Home Care for Individuals with Disabilities, Institutional Care for Individuals with Disabilities, Community-Based Care

Giriş

Aile ve sosyal çevre toplumun temelini oluşturmaktadır. Sağlıklı bir toplum iyi bir aile ve sosyal çevreden geçer. Bununla birlikte fiziksel veya zihinsel eksikliklerden dolayı engeli bulunan bireyler de toplumun bir parçasıdır. Engelli bireylerin fiziksel, zihinsel ve ruhsal engellerine göre toplum içine gerektiği şekilde dahil olmalarını sağlamak sosyal devlet anlayışının bir gerekliliğidir. Engelli bireyler günlük yaşamda karşılaştıkları zorluklara karşı çoğunlukla destek ihtiyacı duymaktadırlar. Bu destek faaliyeti engelli bireyin ailesinin, topluma hizmet veren kuruluşların ve devletin sorumluluğu altındadır. Engelli bireylerin sağlık, eğitim, temizlik ve kişisel ihtiyaçları kurum bakımı hizmetleri ve evde bakım hizmetleri şeklinde karşılanmaktadır. Kurum bakımı hizmetleri finansal açıdan evde bakım hizmetlerine göre daha maliyetlidir. Bununla birlikte engelli bireyleri toplumdan dışlayıp istismara açık hale getirmektedir. Evde bakım hizmetlerinin asıl hedefi engelli bireylerin toplumdan ve sosyal çevresinden soyutlanmadan bakım hizmetlerinin yerine getirilmesi yönündedir. Evde bakım hizmetinde tüm ihtiyaçlar göz önüne alınır. Engelli bireyin bakıcısına maddi ve manevi destek sağlanmaktadır. Bunun amacı engelli bireyin bakıcısının evde bakım hizmetini sunarken engellinin tüm ihtiyaçlarını sağlaması için destekleyici faaliyetlerdir. Bu şekilde engelli birey sosyal çevresinden ayrılmadan bakım hizmetini alacaktır.

Toplum Temelli Bakım/Rehabilitasyon

Toplum temelli rehabilitasyon çok geniş çerçeveli bir terimdir. Bundan dolayı toplum temelli rehabilitasyonu açıklama hususu da geniş bir bakış açısıyla yapılmalıdır. Literatür taraması yaptığımızda toplum temelli rehabilitasyonun birçok tanımlaması mevcuttur (Baysal, 2019).

Toplum temelli rehabilitasyon bireyin ve engellinin topluma tekrar adaptasyonun sağlanması için uygulanan psikolojik ve sosyal temelli uygulama biçimidir. Tüm bu rehabilitasyon sürecini sekteye uğratabilecek ekonomik ve sosyal problemleri minimuma indirmek asıl amaçtır. Diğer yandan engelli ve ailesinin topluma dahil olması için toplumun beklentilerine uygun hedeflerle sosyal ortama katılımları amaçlanmaktadır (Seyyar, 2006:350-351).

Dünya Sağlık Örgütü'ne göre toplum temelli rehabilitasyon büyük bir kısmı, engellilere aktiflik yetisi katmayı, belli başlı engelleri sebebi ile gerçekleştiremediği işlevlerini en üst

düzye gerekleřtirmesini saėlamayı, en az toplumun diėer kesimi gibi sosyal yařama katılım saėlamayı ve toplumun imkanlarından maksimum seviyede yararlanmayı hedeflemektedir (Baysal, 2019).

Toplum temelli rehabilitasyonun uygulamaları řu řekildedir:

- Engelliyi aile hayatına yönlendirmek
- Engelliyi toplumsal ve sosyal yařama yönlendirmek
- Engellinin psikolojik problemlerine özüm bulmak
- Engellinin hayatını sürdürdüėü sosyal evreye uyumunu en üst seviyeye ıkarmak
- Engellinin erişilebilirlik problemlerine özüm bulmak
- Engellinin ekonomik sorunlarına özümmler oluşturmak
- Engellinin sosyal yařamına tam anlamıyla uyum saėlaması için ihtiyalarına yönelik alıřmalarda bulunmak
- Engellilerin hassas noktalarına ve problemlerine karşı toplum bilincini arttırmak řeklinde hedef uygulamaları bulunmaktadır (Baysal, 2019).

Toplum temelli rehabilitasyon uygulamalarının kalıcılığı rehabilitasyon uygulamalarında daha önceden tecrübe edinilmiş bilgilerin derlenmesi ve uygulanması ile mümkün olacaktır. Yapılan uygulamaların sayısının artması toplumumuzun engelli bireylere karşı duyarlı olması ile doėru orantılı olacaktır. Bunun sonucu olarak büyük emekler verilerek uygulanan toplum temelli rehabilitasyon uygulamaları gelecekteki yönetici ve personellere rehberlik edecek ve rehabilitasyon ihtiyacı duyan engelli bireyleri topluma adaptasyonlarını saėlayıp mutlu birer birey olmalarını saėlayacaktır (Baysal, 2019).

Toplum temelli rehabilitasyon ve toplum temelli sosyal tedavi uygulamalarının ortak alıřmalar yürütmesi üreten ve alıřan başarılı bir toplum yapısı oluşturmanın en büyük řartıdır. Toplum temelli sosyal tedavi uygulamaları, birçok sebepten dolayı günlük yařam yetilerini kaybetmiş ve sosyal evresi ile uyum sorunu yařayan engellilerin topluma ve sosyal yařamlarına yeniden dahil olmalarını amaçlamaktadır. Bununla birlikte fiziksel ve sosyal kayıpları olmayan bireylere yönelik alıřmalar da engelli bireler ile saėlıklı etkileřim saėlanması açısından büyük önem arz etmektedir. Toplum temelli rehabilitasyon uygulamalarından hangi bireylerin faydalanacağı konusu hemen hemen toplumun her kesimini ilgilendirmektedir. Toplum temelli sosyal tedavi uygulamaları aracılığı ile bireylerin sosyal hayatlarını ve saėlıklarını koruma altına alıp bozulma tespit edilen alanlarda ise tedaviler uygulanabilecek alıřmalar yürütülmelidir (Demirel, 2001:149).

Engelli bireylerin dezavantajlı özellikleri sebebiyle toplum ile karşı karşıya kaldığı problemlerin çözümü için toplumdaki kurum ve kuruluşların desteğinin sağlanması açısından gerekli rehberliğin yapılması toplumdaki tüm bireylerin sorumluluğu dahilindedir. Engelli bireylerin sosyal ortamlarına ve toplumun var olduğu her kesime dahil olması sadece engelli açısından bir kazanım değildir toplum açısından da büyük bir kazanım sağlamaktadır. Engelli bireylerin dezavantajları sebebiyle günlük hayata ve sosyal yaşama dahil olamamaları yalnızca engelli bireyin sorunu değil toplumun her kesiminin bir problemidir. Çünkü engelli bireyin toplumdan soyutlanması sosyal yaşamdan bir bireyin desteğinin kesilmesi ve bunun sonucu olarak engellinin işlevini kaybetmesi ile topluma maddi bir yük olarak geri dönmektedir. Zira bu şekilde toplumdan soyutlanmış engelli bireyler sanılanın aksine topluma ve kendine tahmin edilenden daha çok daha ciddi sorunlar ortaya çıkarmaktadır (Baysal, 2019).

Yapılan araştırmalar, kurum bakımı altındaki engelli bireylerin toplum ile birlikte sosyal çevresi içinde yaşayan engelli bireylere kıyasla daha fazla istismar ile karşı karşıya kaldığını göstermektedir. Genel olarak kurum istismarının iki türü mevcuttur. Alışılmış ve sık sık yapılan istismar, bu istismar türü genellikle fark edilmeden sonlanmaktadır. Kasıtlı istismar ise uygulanan şiddet alışkanlığının bir sonucu olarak türemiştir. Kurumsal istismar yatılı kuruluşlarda sıkça karşılaşılan bir türdür. Yapılan tanımlara göre kapsadığı çerçeve değişiklik göstermektedir (1993 Akt; Wilson 2000:155-157).

Sonuç olarak toplum temelli rehabilitasyondan çıkaracağımız sonuç engelli bireyin uzun süreli evde bakılması engelli birey ve ailesi için sosyal, ekonomik ve sağlık açısından kapsamlı olarak ele alınması ve ekip çalışması yürütülmesi gereken bir uygulama sürecidir. Buna sonuç olarak engelli bireyin ihtiyaçlarına göre sağlık çalışanları, sosyal çalışmacılar ve psikologlar gibi farklı meslek grupları bu süreçte etkin rol almalıdırlar. Bunla birlikte toplum temelli rehabilitasyonun önemli adımlarından biri engelli bireyin ailesinin etkin rol alması olacaktır (Özer ve Şantaş, 2012: 97).

Engelliye Verilen Bakım Hizmetlerinin Sınıflandırılması

Toplum temelli rehabilitasyon konusunda ısrarcı olunması, kurumsal bakımın tamamen rafa kalkacağı anlamına gelmemektedir. Bakacak bir yakını olmayan veya engel durumu ağır olan bireylerin toplum temelli bakımı mümkün olmadığı için kurum bakımı daha iyi bir alternatif olarak karşımıza çıkmaktadır. Sonuç olarak toplum temelli rehabilitasyonun uygun görülmediği engelli bireylerde kurum bakımı engellinin yüksek yararına daha uygun olacaktır.

Evde (Profesyonel) Bakım

Evde profesyonel bakım hizmetleri günlük yaşamını sürdürmek için devamlı olarak bir kişinin yardımına gereksinim duyan engellilerin yaşamlarını ailelerinden ve sosyal

çevrelerinden kopmadan, ihtiyaç durumlarında bir artış oluşmadan, eğitim ve gelişim faaliyetlerinde sekteye uğramadan toplumsal yaşama uyum sağlamak adına mümkün olduğunca profesyonel uygulanan uygulamalardır. Uygulamanın bu kısmı engelli bireyin arkadaşlarından, ailesinden ve akrabalarından ayrılmadan uygulanıyor olması engelli adına büyük önem arz etmektedir. Bu uygulama evde sağlık hizmetleri, evde destek hizmetleri ve evde sosyal bakım ile desteklenmektedir (Oğlak, 2007: 101).

Gündüzlü Bakım

Gündüzlü bakım uygulamaları gelişmiş ülkelerde kurum bakımına alternatif olarak ortaya çıkmış ve zamanla sayılarında büyük artış olmuştur. Gündüzlü bakım uygulamaları engelli bakım hizmetlerinde çok önemli bir hizmet noktasıdır. Zira gündüzlü bakım hizmetleri kurum bakımı ile evde bakım hizmetleri arasına bir köprü vazifesi görmektedir. Çünkü bu süreçte gündüzlü bakım merkezi engelli bireyi sosyalleştirip kurum bakıma giden sürecini geciktirici ve rafa kaldıracı bir rol üstlenmektedir. Aynı zamanda günlük bakım hizmetleri kuruma bakımına kıyasla maliyeti daha düşük seviyelerdedir (Ayhan, 2014).

Belli başlı yayınlarda yarı zamanlı bakım olarak geçmekte olan gündüzlü bakımın aynı koşullarla gece hizmeti verdiği belirtilmektedir. Son yıllarda evde bakım hizmetlerine verilen önemin artması ile kurumsal bakımın son tercih olarak kullanılması gündüzlü bakım faaliyetlerine olan yönelimin artmasını sağlamıştır. Engelli bireyin sağlık durumunda olumsuzluklar yaşanması halinde veya bakıcının gündüz yahut gece uygun olmaması durumunda yarı zamanlı bakım uygulaması tercih edilmeye başlanmıştır (Seyyar ve Orhan, 2008: 7).

Kurumsal Bakım

Kurumsal bakım; engelli bireye sağlanan bakım hizmetinin yeterli olmaması, kendisine bakım hizmeti verecek birinin olmaması veya bir bakıcısı olduğu halde engelli bireyin fiziksel ve zihinsel sağlığına uygun koşullarda bakım hizmeti verilememesi gibi durumlarda ağır engelli bireyler için uygulamaya geçilen hizmettir(Seyyar ve Orhan, 2008: 7).

Kurumsal bakım devlet, özel sektör veya kar amacı gütmeyen kurumlar tarafından ağır engelli ve bakıma muhtaç engelliler için uygulanan hizmetler bütünüdür. Kurumsal bakımın kapsamına bakım evleri, engelsiz yaşam merkezleri, umut evleri, bakım yurtları ve huzurevleri gibi kuruluşlar girmektedir. Bu kurumlarda yatılı olarak 24 saat bakım hizmeti verilmektedir.

Engelli bireylerin hizmet aldıkları kurumsal bakım kuruluşları engellilerin evleri gibi olmaktadır. Bunun için yatılı engelli bakım hizmeti veren kurumlarda kalan engelliler farklı ev ve odalarda kalsalar bile ortak bir paydada buluşmaktadırlar. Fakat yarı zamanlı kurumlar bu tanıma uymamaktadırlar (Bettio ve Verashchagina, 2010: 69).

Enformal Bakım

Enformal bakım bakıma muhtaç engelli bireye yakın çevresi, ailesi, akrabaları veya gönüllü bireyler tarafından evde uygulanan evde bakım hizmetleridir. Başka bir bakış açısıyla enformal bakım engelli bireylere günlük yaşamlarını sürdürmeleri için alıştıkları fiziksel ortam ve sosyal çevrelerinde yakınları tarafından aktif izleme ve destekleme yöntemi ile verilen hizmettir. Engelli bireyin ne kadar bakıma uygun olduğu engellinin sosyal çevresi ile ilişkilidir. Bundan sebep enformal bakım yalnızca kendisine evde bakım hizmeti verebilecek yakını olan engelli bireyler için geçerlidir. Enformal bakım sağlayacak bir yakını olmayan engelli bireler için zaten formal bakım hizmeti sağlanmaktadır. Enformal bakım genellikle gönüllü olarak yapılmakta ve bakım veren bireyin bakım alan engelliye karşı kendisini sorumlu hissetmesi ile adeta bir görev edinmesi şeklinde gerçekleşir (Oğlak, 2007).

Enformal bakım kapsamında bakıcılar tarafından verilen hizmet formal bakıma benzer yönleri bulunmakla birlikte ayrılan vakit açısından farklılık göstermektedir. Yüzeysel sağlık kontrolü ve ilaç takibinin yapılması gibi formal bakıcılar tarafından uygulanan hizmetler enformal bakıcılar tarafından da kısmen uygulanmaktadır. Kişisel bakım hususunda ise informal bakıcıların verdiği hizmet formal bakıcıların verdiği hizmetin çeyreği oranında olduğu belirtilmektedir. Günlük yemek hazırlığı, temiz kıyafet ihtiyacı ve engelinin hareket etmesine yardım gibi hizmetler enformal bakımın temel uygulamalarını oluşturmaktadır (Beesley, 2006: 4).

Evde Bakım Hizmetlerinin Tarihsel Gelişimi

Tarih boyunca bakıma muhtaç engelliler için iki farklı anlayış gelişmiştir: medikal yaklaşım ve sosyal yaklaşım.

Medikal Yaklaşım, 19.yy ortalarında sağlık alanındaki gelişmelerle birlikte ortaya çıkmıştır. Engelli bireyleri hasta bireyler olarak kabul eden bu görüş engelli bireyi bir vaka gözüyle incelemektedir. Bunun sonucu olarak engelliğin sebeplerine çözüm bulmak yerine tedavi uygulamaları tercih edilmiştir. Engelli bireyi hasta birey olarak tanımlamış ve sağlık bireyler ile karşılaştırarak engelli bireyleri daha az becerisi olan bireyler olarak kabul etmiştir. Bu görüş engelli bireyleri olumsuz etkilemiş ve toplum dışına itmiştir. Fakat medikal

yaklaşımın tümüyle zararlı olduğunu söylemek yanlış olacaktır. Belli başlı engellilerin tedavisinde medikal yaklaşım gayet faydalı olmaktadır (Demircioğlu, 2010:14-26).

Sosyal yaklaşım, medikal anlayış aksine bireyin toplum içerisinde bir insan olduğunu kabul eden bir anlayış ile hareket etmiştir. Engellilik durumunun bir toplumsal problem olarak değerlendirip engellinin yaşadığı yetersizliklerin toplum tarafından baskılandığını iddia eder. Bunun için engelli bireylerin ihtiyaç duyduğu sağlık ve eğitim hizmetlerini uygulayıp toplum gözünde negatif bir izlenimi olan engelli algısını ortadan kaldırmak gerekmektedir (Demircioğlu, 2010:14- 26).

Engelli bakım hizmetlerinin tarihsel süreci önce medikal yaklaşım ile başlamıştır. Daha sonraları oluşan gelişmeler sosyal modelin ön plana çıkmasını sağlamıştır.

Engelli bakım uygulamalarının tarihi geçmişi ile ilgili herkes tarafından kabul gören bir olgu bulunmamaktadır. Geniş bir literatür taraması sonucu evde bakım hizmetlerinin ilk görüldüğü dönem 18.yy sonlarına doğru Amerika Birleşik Devletleri’nde dini inançlar sebebiyle fakir ve yoksul engellilerin evlerine yapılan ziyaretlerle ortaya çıkmıştır. Yine 18.yy sonlarında Boston Dispanseri tarafından ilk evde bakım hizmeti vermeye başlanmıştır. ABD evde bakım hizmetleri için eğitilmiş hemşireler çalıştırmış ve bu hizmet karşılığı hemşirelere ücret ödemiştir. Bu gelişme evde bakım hizmetlerinde ödenen ilk ücret olarak tarihe geçmiştir. 19.yy başlarında ise sanayileşme ile birlikte toplumun sağlığının bozulması evde bakım hizmetlerinin yaygınlaşmasına neden olmuştur (Öz 2010: 67-68).

Türkiye’de evde bakım hizmetleri ile ilgili ilk düzenleme 1983 yılında resmi gazetede yayımlanmıştır. 2828 Sosyal Hizmetler ve Çocuk Esirgeme Kanunu içeriğinde evde bakım hizmetlerine de değinilmiştir. Fakat 1993 yılına gelinceye kadar evde bakım hizmetine dair herhangi bir gelişme olmamıştır. 1993 yılında pilot illere uygulanmak üzere yalnız yaşayan yaşlı bireylere evde bakım hizmeti verilmiştir (Koç 2009:13- 14).

Evde Bakım Hizmetleri Yasal Alt Yapısı

Ülkemizde engelli evde bakım yönetmeliği Sosyal Hizmetler ve Çocuk Esirgeme Kurumu Genel Müdürlüğü tarafından 2006 yılında “Bakıma Muhtaç Engellilere Yönelik Resmî Kurum ve Kuruluşlar Bakım Merkezleri Yönetmelikleri” ve 23.10. 2007 tarihinde ‘Bakıma Muhtaç Özürlülerin Tespiti Ve Bakım Hizmeti Esaslarının Belirlenmesine İlişkin Yönetmelik’ ile yasal zemine oturtulmuştur. Evde engelli bakım hizmetleri Aile ve Sosyal Hizmetler Bakanlığı tarafından uygulanmakta olup Aile ve Sosyal Hizmetler İl Müdürlükleri tarafından denetimi sağlanmaktadır. Tüm bu hizmetlerin oluşturulması, uygulanması ve denetlenmesi Aile

ve Sosyal Hizmetler Bakanlığı Engelli ve Yaşlı Hizmetleri Genel Müdürlüğü sorumluluğu altındadır (Altın, 2018).

Evde Bakım Hizmetlerinin Olumsuz Yönleri

Bütün engelli bakım hizmetlerinde olduğu gibi engelli evde bakım hizmetlerinde de birtakım sorunlar ortaya çıkmaktadır. Evde bakım hizmetlerinin çok köklü bir geçmişinin olmaması belli başlı sorunları ortaya çıkarmaktadır. Evde engelli bakım hizmetleri detaylı bir eğitim gerektiren ve yoğun bir denetime ihtiyaç duyan uygulamalardır (Karabağ, 2007).

Evde engelli bakım hizmetlerinin olumsuz yönlerini inceleyecek olursak; engelli birey özel hayatının gizliliğini ihlal edildiği algısına kapılmaktadır. Bu his genellikle zihinsel ve ruhsal engeli bulun bireylerde daha sık görülmektedir (Taşdelen 2012: 59 -60).

Engelli bireye verilecek ilaçların takibi, engelli bireyin kişisel bakımı ve temizliği gibi birden fazla sorumluluk tek bakıcının üzerinde olduğu için engellinin bakıcısı yani yanı kendini fazla baskılanmış hissedebilir. Engelli bireyin tedavi ve bakımı sırasında sağlık ekipmanları vb. aletler kullanılıyorsa engelli kendini cihazlar arasında kalmış hissedebilir. Engelli bireye bakım hizmeti veren yakını sağlık cihazlarını kullanmada bilgisizlik yaşaması engelli sağlığı açısından sorun yaratabilir. Engelli bireyin rahatsızlığı gibi acil müdahale gerektiren durumlarda müdahale edecek birinin bulunmaması olası ihmallerden doğan can ve sağlık kayıplarının habercisidir. Engelli birey ve bakıcısı devamlı birlikte oldukları için karşılıklı çatışma kaçınılmaz olmaktadır. Bu gibi durumlarda bakıcı ruhsal bunalıma girerken engelli ise yakınlarına yük olduğunu düşünmektedir. Bu gibi durumlar engelli bireyde ve bakıcında mutsuzluk yaratmaktadır. Bu olumsuzlukları en düşük seviyeye indirmenin en mümkün olan yöntemi engelli evde bakım hizmeti sağlayacak bakıcıya eğitim vermekten geçmektedir (Öz 2010:80) (Taşdelen 2012: 60 -61).

Evde Bakım Hizmetlerinde Uluslararası Örnekler

ABD’de Evde Bakım Hizmetleri

1947 yılında New York'taki Montefiore Hastanesi, evde bakım alanında ilk modelini planlayarak sağlık destekli evde bakım uygulamalarının başlangıcını yapmıştır. O yıllarda evde bakım uygulamaları sağlık üzerine kurulu olduğu için dar bir alana hizmet veriyordu, ancak zamanla diğer meslek gruplarının dahil olması ile birlikte çok yönlü bir hizmet haline gelmiştir. 1960 yılında yaşlılar için ücretsiz evde bakım hizmeti onaylanmış, 1965'ten itibaren ise ABD'deki sigorta sistemlerinin dahil olması ile birlikte bireylerin evde bakım hizmetlerine ulaşımı kolaylaşmıştır. (Munchus, 1999).

1982 yılında ABD'de Ulusal Evde Bakım Birliği kurulmuştur. Bu topluluğun hedefi, hastalar için bakım standartlarını yükseltmek, bakım verenlerin haklarına sahip çıkmak ve evde bakımı bakım merkezleri ile birlikte yürütmektir. Bu birlik sağlandığı süreçte evde bakım hizmetlerinin bilinirliği artmış ve evde bakım hizmetinden faydalanan hasta sayısında önemli bir artış yaşanmıştır. 1990'lı yıllar ile birlikte ABD'de evde bakım hizmeti yaygınlaşmış ve kurupta bakım faaliyetleri önemli derecede gelişmiştir. Yaşanan bu dönemde ABD'de en hızlı gelişen 2. Sektör evde bakım hizmeti olmuştur. (Aksoy, 2015:119)

Avrupa'da Evde Bakım Hizmetleri

Avrupa'nın Ortaçağ döneminde hastaların birbirlerine hastalık bulaştırmaması ve salgının yayılmaması amacı ile yapılan karantina uygulamaları daha sonra 17. yüzyılda veba salgınlarında örnek alınan “evde tecrit” ve “evde sağlık hizmeti uygulamaları”nın temelini ortaya çıkartmıştır. Yine bu dönemde yapılmakta olan uygulamalar konaklama, besin ihtiyacını giderme gibi sosyal yaklaşımlar bulunmaktadır (Sobel,2000).

Evde hasta bakımı uzun süre aile tarafından veya sivil toplum kuruluşları tarafından verilmekteydi. Avrupa ülkelerinin büyük çoğunluğunda aile ve akrabalar tarafından engelli ve hastalara evlerinde bakım vermek kültürel olarak yaygın durumdaydı. 20. Yüzyıla yaklaştıkça kuruluştaki bakım verme hizmeti planlı olarak yaygınlaşmaya başlamıştır (Twigg, 1993).

1937 yılında Danimarka öncü bir program başlatıp engelli ve hastalara ev ziyareti modelini geliştirmiştir. Bu model diğer Avrupa ülkelerine örnek olmuştur. Danimarka'da hizmete sunulan 6 yıllık model sonucunda ölüm hızını ve hastalanma oranını azalttığını ortaya çıkması, evde bakım ve ev ziyaretlerinin öneminin artmasını büyük oranda hızlandırmıştır. Bu uygulamalar sonucunda Avrupa'da ev ziyaretleri yapan sivil toplum örgütlerinin yaygınlaştırılması ve desteklenmesi kararı alınmıştır. Bu süreçte sosyal hizmet çalışanlarının sayısının yetersiz olmasından dolayı aile yardımcıları kullanılmıştır (Wasik,1990).

Evde Bakım Hizmetlerinde Geldiğimiz Nokta

Engelli bireyin kendi yaşadığı evde, günlük yaşamın gerektirdiği temizlik, yeme ve içme, kişisel bakım ve kıyafetlerinin yıkanması gibi ihtiyaçlarının giderildiği hizmetler gündüzlü bakım ve yatılı kurum personelleri tarafından günde en fazla 3 saat süreyle verilmektedir. Bir diğer seçenek ise engelli bireyin akrabası yahut bir yakını tarafından en az 8 saat olmak üzere bakım engellinin kendi evinde bakım hizmeti verilmesi yönündedir.

Bakıma muhtaç engelli bireylerin evde bakım hizmetinden faydalanabilmesi için hanede yaşayan bireylere düşen kişi başı gelirin asgari ücretin 2/3 oranından az olma zorunluluğu vardır. 2025 yılı için güncel kişi başına düşen gelir sınırı 14736,44 TL'dir. 2025 yılında aktif olarak evde bakım hizmeti veren engelli yakını bakıcıların aldığı ücret ise 10125,55 TL'dir.

Ülkemiz de diğer gelişmiş ülkeler gibi engelli bireylerin kurumun bakımı yerine kendi sosyal çevrelerinden ayrılmadan toplum temelli bakım modellerini geliştirme yönünde çalışmalar yürütmektedir. Bunun bir sonucu olarak engelli bireylerin müstakil bir ev ya da herhangi bir dairede komşularıyla ve toplumla iç içe yaşamlarını sürdürdükleri bir uygulama olan “umut evi” isimli proje ortaya çıkmıştır. Kurum bakımı veren kuruluşlara ek olarak umut evleri de günümüzde halen hizmet vermektedir. Bununla birlikte engelli bireylerin oturma odası, mutfak, banyo, yatak odası, çamaşırhane gibi odaları bulunan ortalama on kişilik büyük dairelerden oluşan Engelsiz Yaşam Merkezleri de hizmet vermektedir. Engelsiz Yaşam Merkezleri günümüzde gittikçe sayısını arttırarak yaygınlaşmaktadır. Bütün bu uygulamalara dahil olarak evde bakım hizmetleri de desteklenmekte ve günümüzde kurum bakımı sırası bekleyen engelli birey bulunmamaktadır. (EYHGM, 2022).

Sonuç

Her birey nasıl engelli olmaya aday ise yine her birey bakım hizmeti almaya da adaydır. Büyüyen nüfus ile birlikte bakım hizmeti gereksinimi olan engelli birey sayısı artmakta ve bunun sonucu olarak ülkeler yeni politikalar üretmektedir. Kurum bakım hizmetlerinin gerek engelli için yıpratıcı olması gerek ise devlet için daha maliyetli olması politika belirleyicilerini evde bakım hizmetlerine yöneltmektedir. Avrupa ülkelerinde henüz yeni yeni evde bakım hizmetlerinin yaygınlaşması kültürel yapılarından kaynaklanmaktadır. Ülkemizin ise kültürel yapısının evde bakım hizmetlerine uygun olmasından kaynaklı hızlı bir adaptasyon söz konusudur. Devletin ise evde bakım hizmetlerini destekleyici finansman sağlaması uygulamanın daha tercih edilir hale gelmesini sağlamıştır. Sağlanan finansal destek ailelerin maddi yoksunluktan dolayı engellilerini kurum bakımına vermesini engellemiştir. Bunun sonucu olarak engelli bireyler toplumdan dışlanmamış ve toplumla iç içe sosyal hayatlarına devam etmişlerdir. Aynı zamanda sağlanan finansal destekler engelli birey için harcandığında engellinin topluma kazanımı daha kolay hale gelmiştir. Engelli bireylerin bakıcılarına verilecek eğitimler ile evde bakım hizmetlerinin verimliliği artacak bununla birlikte yaşanan sorunlar en aza inecektir. Zira eğitimsiz veya bilgisiz bakıcılar engelli için istemsiz de olsa zaman zaman tehlike oluşturmaktadır. Yapılacak çalışmalar evde bakım hizmetlerinin eksikliklerini giderici yönde olursa bu çalışmaların sonuçları politika uygulayıcılarının, engelli bireylerin ve bakıcıların faydasına olacaktır.

Okullarda Acil Durumların Yönetimine Acil Hemşireliği Perspektifinden Yaklaşmak: Bibliyometrik Bir Analiz

Azize AYDEMİR

Giresun Üniversitesi, TÜRKİYE

azize.aydemir@giresun.edu.tr, ORCHID ID: 0000-0002-4751-7088,

Özet

Bu çalışma, 2022-2025 yılı dahil okul ortamlarında meydana gelen acil durumlarla ilgili hemşirelik literatürünün bibliyometrik analizini yapmayı amaçlamaktadır. Eğitim kurumlarında meydana gelen yangın, deprem, şiddet olayları ve bulaşıcı hastalık salgınları gibi acil durumlar sadece öğrencileri değil tüm okul personelini etkileyen kritik olaylardır. Bu durumlarda acil hemşireliği müdahale, triyaj, ilk yardım ve psikososyal destek konularında kilit rol oynamaktadır. Bu nedenle bu çalışma, hemşirelik alanında okul temelli acil durum yönetimine ilişkin bilimsel üretimin eğilimlerini ve yapısını ortaya koymayı amaçlamaktadır. Toplam 370 yayın, Web of Science Core Collection veri tabanında “okul”, “acil hemşirelik”, “afet müdahalesi” ve “acil durum planlaması” gibi anahtar kelimeler kullanılarak analiz edilmiştir. VOSviewer yazılımı yardımıyla yayınların yıllık dağılımı, konu kategorileri, dizin türleri, ülkeler, yazar işbirlikleri, atıf ağları ve anahtar kelime kümeleri görselleştirilmiştir. Bulgular, 2024 yılında yayın sayısında önemli bir artış olduğunu göstermektedir. Makalelerin çoğu SSCI’da indekslenmiş olup, Amerika Birleşik Devletleri yayın sayısı bakımından önde gelen katkı sağlayıcıdır. Bununla birlikte, uluslararası işbirliği ağlarının nispeten sınırlı olduğu görülmüştür. Sonuç olarak, hemşirelerin okul temelli acil durum müdahalesindeki rolü giderek daha önemli hale gelmektedir. Bu alanda daha fazla akademik üretime ve uluslararası işbirliğine ihtiyaç olduğu açıktır. Acil durumlarda hemşirelerin yetkinliklerini güçlendirmek için eğitim ve sağlık politikalarının güncellenmesi hem hemşirelik eğitime hem de uygulamaya önemli katkı sağlayacaktır.

Anahtar Kelimeler: Acil hemşireliği, okul sağlığı, afet yönetimi, bibliyometrik analiz, hemşirelik eğitimi

Approaching the Management of Emergencies in Schools from the Perspective of Emergency Nursing: A Bibliometric Analysis

Abstract

This study aims to conduct a bibliometric analysis of the nursing literature related to emergencies occurring in school settings between 2022 and 2025. Emergencies such as fires, earthquakes, acts of violence, and infectious disease outbreaks in educational institutions are critical events affecting not only students but all school staff. In these situations, emergency nursing plays a key role in intervention, triage, first aid, and psychosocial support. Therefore,

this study seeks to reveal the trends and structure of scientific production on school-based emergency management in the field of nursing. A total of 370 publications were analyzed by searching the Web of Science Core Collection database using keywords such as “school,” “emergency nursing,” “disaster response,” and “emergency planning.” With the help of VOSviewer software, the annual distribution of publications, subject categories, index types, countries, author collaborations, citation networks, and keyword clusters were visualized. The findings show a significant increase in the number of publications in 2024. Most of the articles were indexed in SSCI, with the United States being the leading contributor in terms of publication count. However, international collaboration networks were found to be relatively limited. In conclusion, the role of nurses in school-based emergency response is becoming increasingly important. Nevertheless, there is a clear need for greater academic production and international cooperation in this field. Updating educational and health policies to strengthen the competencies of nurses in emergency situations will contribute significantly to both nursing education and practice.

Keywords: Emergency nursing, school health, disaster management, bibliometric analysis, nursing education

Giriş

Aileler ve toplum, okullarda çocukların tehditlere (suç ve şiddet gibi insan kaynaklı acil durumlar) ve tehlikelere (doğal afetler, hastalık salgınları ve kazalar) karşı güvende olması beklenmektedir (Tuck vd., 2014). Okulların afet ve acil durumlar gibi kitlesel olaylara hazırlıklı olma olasılığı bir öğrenci veya personeli ilgilendiren bireysel bir acil durumdan daha yüksektir (Tuck vd., 2014). Okullarda yaşanma ihtimali olan bireysel acil durumlar okul hemşireleri tarafından yönetilir. Dolayısıyla okul hemşireleri yaralanan bir öğrenci ya da yetişkinden başlayarak salgın hastalıklar, endemik hastalıklar, pandemiler olmak üzere geniş bir yelpazede acil durum ve afetlere müdahale eder (Pappas, 2011).

Acil durumlar tehlikeli bir olayın ardından gerçekleşen yerel düzeyde müdahale edilip kontrol altına alınabilen olayları kapsar (Doyle, 2013; Tuck vd., 2014). Afetler, daha fazla kaynak tüketiminin olduğu, yerel düzeyde müdahalenin mümkün olmadığı ve yüksek düzeyde kitlesel yaralanmaların yaşandığı olayları kapsar ve bu anlamda acil durumlardan ayrılır (Doyle, 2013). İster acil durum ister afet olsun, etkili bir müdahale için her iki duruma karşı okulların hazırlıklı olması şarttır. Sağlıkla ilgili acil durumlara yönelik planlama, sağlıkla ilgili rahatsızlıkları olduğu bilinen öğrenciler için acil durum planları geliştirmeyi ve diğer beklenmedik tıbbi acil durumları değerlendirmek ve bunlara müdahale etmek için ilk yardım becerilerini kullanmayı içerir (Tuck vd., 2014). Okul hemşiresinin müdahale etmeye hazır

olması gereken bazı acil durumlara; yaralanan-hastalanan öğrenci veya personel, ziyaretçilerin sağlığıyla ilgili acil durumlar, tribünlerin çökmesi, zehirli gaza maruz kalma, okulda silahlı saldırı, hava koşullarıyla ilgili acil durumlar, patlamalar ve yangınlar gibi tehlikeleri örnek verebiliriz (Tuck vd., 2014).

Acil durumlar, eğitim kurumlarında sadece öğrencilerin değil, öğretmenler, aileler ve tüm okul personelinin yaşamını doğrudan etkileyen kritik olaylardır. Yangın, deprem, şiddet olayları, ani sağlık sorunları veya bulaşıcı hastalık salgınları gibi durumlarda etkili ve hızlı müdahale, hayat kurtarıcı rol oynar (Özmen vd., 2015). Bu noktada, acil hemşireliği disiplini; risklerin azaltılması, olaylara müdahale, triyaj, ilk yardım ve psikososyal destek gibi birçok alanda aktif sorumluluk üstlenir (ENA). Özellikle çocuklarla çalışan hemşirelerin, okul ortamında afet ve acil durumlara yönelik donanımı, toplum sağlığının sürdürülebilirliği açısından önemli bir güvencedir. Son yıllarda, okul temelli acil müdahale sistemlerinin yapılandırılmasında hemşirelerin rolü üzerine artan bilimsel ilgiyi ortaya koymak, bu sürecin sağlık politikaları ve hemşirelik eğitimiyle olan ilişkisini anlamak açısından önemlidir.

Bu çalışmada, 2022-2025 yılı dahil okullarda meydana gelen acil durumlara yönelik acil hemşireliği yaklaşımını ele alan bilimsel yayınları bibliyometrik yöntemle analiz edilecektir. Çalışma, bu alanda yapılan akademik üretimi değerlendirerek, yayın eğilimlerini, en etkili yazarları, ülkeleri, iş birliği ağlarını ve temel araştırma temalarını ortaya koymayı amaçlamaktadır. Böylece, hemşirelik pratiği ve eğitimi açısından okul temelli acil durum yönetimi konusundaki mevcut bilgi birikimine katkı sağlanması hedeflenmektedir.

Çalışmada bibliyometrik analiz ile şu sorulara yanıt aranmıştır; Okullarda meydana gelen acil durumların yönetiminde acil hemşireliği alanında yayın yapan araştırmacıların doküman ve atıf sayılarının dağılımı nedir? Okullarda meydana gelen acil durumların yönetiminde acil hemşireliği alanındaki makaleler en çok hangi dergilerde yayınlanmaktadır? Okullarda meydana gelen acil durumların yönetiminde acil hemşireliği alanındaki araştırma makaleleri, hangi yayıncı kuruluşta ne ölçüde yer almaktadır? Okullarda meydana gelen acil durumların yönetiminde acil hemşireliği alanındaki araştırma makaleleri, ülkelere göre nasıl bir dağılım göstermektedir? Yayınların ortak yazarlık açısından yazarlara ve ülkelere dayalı ağ haritalaması nasıldır? Okullarda meydana gelen acil durumların yönetiminde acil hemşireliği alanındaki araştırma makalelerinde en sık tekrarlanan anahtar sözcükler nelerdir?

Metot

Nicel ve tanımlayıcı kesitsel olan bu çalışma, okul temelli acil durum ve afet yönetimi kapsamında hemşirelik literatürünün bibliyometrik analizi şeklinde gerçekleştirilmiştir.

Çalışmanın verileri, Web of Science Core Collection veri tabanında belirlenen arama kriterleri doğrultusunda elde edilmiştir. Bu doğrultuda eğitim kurumları (“school-okul”, “school-based-okul temelli”, “educational institution-eğitim kurumu*”) ve hemşirelikle ilgili alanlar (“emergency nursing-acil hemşireliği”, “disaster nursing-afet hemşireliği”, “school nursing-okul hemşireliği”, “emergency care-acil bakım”, “pre-hospital care-hastane öncesi bakım”, “crisis intervention-kriz yönetim*”) ile acil durum ve afet yönetimi alanlarındaki (“emergency management-acil yönetimi”, “disaster preparedness-afet hazırlığı”, “emergency preparedness-acil durum hazırlığı”, “disaster response-afet müdahalesi”, “emergency planning-acil eylem planı*”) terimlerle ilişkili yayınlar incelenmiştir. Yayın türü olarak makaleler (article), yayın yılları olarak da 2022 ile 2025 yılı dahil üç yıllık dönem seçilmiştir. Alan olarak yalnızca Nursing (hemşirelik), alt kategori olarakta Nursing (hemşirelik) dikkate alınmıştır. Belirtilen arama kriterleri doğrultusunda ilgili döneme ait literatürün sayısal dağılımları, eğilimleri ve bilimsel üretim kapasitesi 370 yayın dahil edilerek 24.04.2025 tarihinde ve Giresun Üniversitesi Proxy ayarları üzerinden bibliyometrik yöntemlerle Vosviewer programı kullanılarak analiz edilmiştir.

Bu çalışmada, mevcut literatür temel alınarak analiz gerçekleştirilmiş olup, insan veya hayvan denekleri üzerinde doğrudan herhangi bir uygulama yapılmamıştır. Bu nedenle etik kurul onayı gerektiren bir durum söz konusu değildir. Çalışmada kullanılan veriler, kamuya açık kaynaklardan ve akademik çevrelerce erişilebilir nitelikteki yayınlardan elde edilmiştir. Araştırma sürecinde şeffaflık, doğruluk ve bilimsel güvenilirlik temel ilkeler olarak benimsenmiş; etik dışı tutumlardan özenle kaçınılmıştır. Bulguların sunumu sırasında da etik ilkelere azami düzeyde riayet edilmiş, elde edilen sonuçların doğru biçimde değerlendirilmesi ve raporlanması amacıyla titiz bir yaklaşım izlenmiştir.

Bulgular

1. Tanımlayıcı Bulgular

Okul temelli acil durum ve afet yönetimi ile ilişkili hemşirelik alanındaki makalelerin yıllara göre dağılımı incelendiğinde, 2022 yılında 86, 2023 yılında 104, 2024 yılında ise 1503 makalenin yayınlandığı görülmektedir. 2024 yılı, incelenen dönem içerisinde en fazla yayının yapılan yıldır ve yayın artışı dikkat çekmektedir (Şekil 1). Bu bulgu konunun akademik çerçevede popülerliğinin yıllar içinde artarak sürmekte olduğunu göstermektedir. Son yıllarda dünya genelinde yaşanan afetlerin, acil durumların ve pandemilerin bu eğilimi arttırdığı düşünülmektedir.

Şekil 1. Okul Temelli Acil Durum ve Afet Yönetimi Alanındaki Hemşirelik Makalelerinin Yıllara Göre Dağılımı (2022-2025)

Şekil 2’de görüldüğü üzere; en fazla yayının “Eğitim ve Bilimsel Disiplinler” alanında olduğu belirlenmiştir (n=31). Bu alanı sırasıyla Acil Tıp (n=9) ve Etik (n=8) izlemektedir. Yönetim (n=5), Sağlık Politikası ve Hizmetleri (n=3), Medikal Bilişim (n=3), Bilgisayar Bilimleri (n=2), Geriatri ve Gerontoloji (n=1), Sağlık Hizmetleri Bilimleri (n=1) ve Genetik ve Soybilim (n=1) kategorilerinde ise daha sınırlı sayıda yayın bulunmuştur. Bu bulgu, okul temelli acil durum ve afet yönetimi konularının eğitim ve bilimsel disiplinlerle güçlü bir şekilde ilişkilendirildiğini ve ağırlıklı olarak bu disiplinler çerçevesinde ele alındığını göstermektedir.

Şekil 2. Bibliyometrik Analizde Kullanılan Arama Kriterlerine Göre Makale Sayılarının Dağılımı

Okul temelli acil durum ve afet yönetimi alanında hemşirelik literatürüne yönelik yapılan bibliyometrik analizde, taranan makalelerin indeks türlerine göre dağılımı incelendiğinde, en fazla yayının SSCI İndeksi'nde (n=295) olduğu saptanmıştır. Bu durum konunun akademik anlamda oldukça değerli bulunduğunu göstermektedir.

Şekil 3. Okul Temelli Acil Durum ve Afet Yönetimi Alanındaki Hemşirelik Makalelerinin İndeks Türlerine Göre Dağılımı

Bibliyometrik analiz kapsamında okul temelli acil durum ve afet yönetimi alanındaki hemşirelik makalelerinin ülkelere göre dağılımı incelendiğinde, en fazla yayın yapan ülkenin açık ara Amerika Birleşik Devletleri (ABD) olduğu (n=176) görülmüştür. ABD'yi Çin Halk Cumhuriyeti (n=40), Avustralya (n=19) ve Kanada (n=16) izlemektedir. Almanya, Brezilya, İran ve Norveç gibi ülkeler de görece daha yüksek yayın sayılarıyla dikkat çekmektedir. Türkiye ise bu alanda sınırlı sayıda yayın üretmiştir (n=4). Genel olarak bulgular, okul temelli acil durum ve afet yönetimi alanında hemşirelik çalışmalarının uluslararası dağılımının büyük ölçüde ABD merkezli olduğunu ve ülkemizde de bu konuda yapılacak araştırmaların büyük bir boşluğu dolduracağına işaret etmektedir (Şekil 4).

oldukça zayıf olduğunu ve iş birliği ilişkilerinin sınırlı sayıda ülke arasında oluştuğunu göstermektedir. Özellikle ABD, yüksek belge sayısına rağmen diğer ülkelerle yoğun bağlantılar kurmamıştır. Bu durum, alandaki çalışmaların daha çok ülke içi üretimle sınırlı kaldığını ve uluslararası düzeyde ortaklıkların geliştirilmesi gerektiğini düşündürmektedir.

Atıf Ağı Analizi: Şekil 6’da görüldüğü üzere, hemşirelik alanındaki çalışmaların yazar temelli atıf ağı analizine ilişkin görselleştirme VOSviewer programı kullanılarak oluşturulmuştur. Analize dahil edilen yazarlar arasında en çok atıf alan isimlerin başında Altmiller Gerry (17 atıf), Efecan Özgi Özgen (14 atıf), Güven Yaşenin (14 atıf), Öncü Emine (14 atıf) ve Vayisoğlu Sümbüle Koksoy (14 atıf) gelmektedir. Bu yazarlar çoğunlukla tek belgeyle katkı sağlamış ancak bu yayınlar literatürde yüksek düzeyde atıf almıştır.

Ağ yapısı incelendiğinde, atıf bağlantılarının görece sınırlı olduğu, yazarlar arasında yoğun bir karşılıklı atıf ilişkisinin oluşmadığı görülmektedir. Bununla birlikte merkezde konumlanan yazarlar (örneğin Schorn Mavis N., Rhoten Bethany Andrews, Johnson Rolanda) daha fazla atıf bağlantısına sahiptir ve atıf ilişki ağında belirgin bir düğüm noktası oluşturmaktadır. Ağ

yapısındaki kümelenmeler ise benzer atıf davranışlarına sahip yazar gruplarının oluştuğunu göstermektedir.

Anahtar Kelime Eş-Zamanlılık Analizi: Şekil 7’de anahtar kelimeler arasında kurulan eş-zamanlılık analizine dayalı bir ağ haritası yer almaktadır. Haritada en sık tekrar eden anahtar

kelimeler arasında “nursing-hemşirelik” (n=12), “education-eğitim” (n=12), “nursing education-hemşirelik eğitimi” (n=6), “nursing students-hemşirelik öğrencisi” (n=6), “nurses-hemşire” (n=4), “career-kariyer” (n=4), “emergency care-acil bakım” (n=2), “school nurse-okul hemşireliği” (n=2) gibi ifadeler dikkat çekmektedir. Bu terimler, ilgili literatürde odaklanılan temaları göstermekte ve alandaki araştırmaların büyük ölçüde hemşirelik, eğitim ve acil bakım gibi konulara yoğunlaştığını ortaya koymaktadır. Toplamda 24 anahtar kelimenin yer aldığı analizde, kelimeler 4 kümeye ayrılmış ve bu kümeler arasında anlamlı bağlantılar kurulmuştur. Harita, çalışmanın tematik yönelimi hakkında görsel bir bakış sağlamaktadır.

Şekil 7. Anahtar kelimeler arasında eş-zamanlılık analizine dayalı ağ haritası.

Sonuç ve Öneriler

Bu çalışma, acil servislerde görev yapan hemşirelerin iyi oluş düzeyleri ve psikolojik dayanıklılıkları bağlamında pozitif psikoloji eksenli bilimsel yayınların Türkiye özelindeki bibliyometrik görünümünü ortaya koymuştur.

Web of Science veri tabanında 2022–2025 yılları arasında yayımlanan 235 makalenin analizine dayanan bulgular, özellikle 2023 ve 2024 yıllarında konunun bilimsel ilgisinin belirgin biçimde arttığını ve 2025 yılının ilk çeyreğinde sürdüğünü göstermektedir. Yine bulgular, çalışmalarda en sık vurgulanan temaların “nursing (hemşirelik)”, “nursing education (hemşirelik eğitimi)”, “resilience (dayanıklılık)”, “well-being (iyi oluş)”, “self-compassion (öz-şevkat)” ve “moral sensitivity (ahlaki duyarlılık)” gibi kavramlar etrafında şekillendiğini göstermektedir. Yayınların büyük kısmı hemşirelik disiplinine ait dergilerde yer almıştır, çalışmalarda genellikle Türkiye merkezli yazarların öne çıktığı görülmüştür. Ülke iş birliği ve

yazar iş birliği ağlarında, sınırlı sayıda güçlü kümenin oluştuğu ancak uluslararası ortaklıkların henüz yaygınlaşmadığı gözlenmiştir. Bu durum, acil hemşireliği alanında pozitif psikoloji temelli iyi oluş odaklı yayınların disiplin içinde kabul gördüğünü ancak bilimsel iş birlikleri açısından daha fazla geliştirilmesi gerektiğini düşündürmektedir.

Bulgular ışığında öneriler:

- Acil hemşireliği eğitim programlarında, psikolojik dayanıklılık, öz-şefkat, umut ve anlam arayışı gibi pozitif psikoloji temalarına doğrudan yer verilmelidir. Bu kapsamda hemşirelik öğrencilerine yönelik psiko-eğitim modülleri geliştirilebilir.
- Acil servis ortamlarında çalışan hemşireler için iyi oluşu destekleyici kurum içi programlar (örn. mindfulness temelli stres azaltma programları, psikolojik danışmanlık hizmetleri) sistematik biçimde uygulanmalı ve değerlendirilmelidir.
- Bilimsel üretkenliğin artırılması ve çeşitlendirilmesi için, acil hemşireliği alanında çalışan araştırmacıların uluslararası düzeyde ortak yayın üretmeye teşvik edilmesi önemlidir. Türkiye'nin merkezi konumu güçlendirilerek bölgesel liderlik rolü desteklenmelidir.
- Uygulayıcı hemşirelerin klinik karar alma süreçlerinde iyi oluş düzeylerinin dikkate alınması, hasta güvenliği ve ekip içi iletişim açısından olumlu sonuçlar doğuracaktır. Bu nedenle yönetim düzeyinde iyi oluşa dayalı performans ve refah ölçütleri tanımlanabilir.
- Bibliyometrik veriler doğrultusunda boşluk alanlarının belirlenmesi, özellikle travma sonrası stres, ikincil travma, mesleki tükenmişlik ve yeniden yapılandırıcı psikolojik müdahale alanlarında daha fazla nitel ve nicel araştırma yapılmasını teşvik edebilir.

Acil Servislerde Psikolojik Dayanıklılık ve İyi Olma Hali: Pozitif Psikoloji Perspektifine Dayalı Bir Analiz

Azize AYDEMİR

Giresun Üniversitesi, TÜRKİYE

azize.aydemir @giresun.edu.tr, ORCHID ID: 0000-0002-4751-7088

Özet

Acil servislerde çalışan hemşireler sıklıkla yüksek düzeyde strese ve duygusal yüke maruz kalmakta, bu da psikolojik dayanıklılığı genel refahlarını korumak için gerekli kılmaktadır. Son yıllarda pozitif psikoloji, özellikle sağlık mesleklerinde bireysel güçlü yönleri ve psikolojik esnekliğe odaklanan teorik bir çerçeve sunmaktadır. Bu çalışmada, 2022-2026 yılları arasında Türkiye’de üretilen ve acil hemşireliği bağlamında dayanıklılık, iyi oluş ve pozitif psikolojik yaklaşımlar gibi kavramları ele alan akademik literatürü incelemek amaçlanmıştır. Veriler Web of Science Core Collection’den, SSCI, SCI-Expanded veya ESCI indeksli dergilerde “Hemşirelik” kategorisi altında yayınlanan hakemli dergi makaleleriyle sınırlı olarak elde edilmiştir. Toplam 235 makale analize dahil edilmiştir. Analiz, yayın sayısının 2023 ve 2024 yıllarında zirve yaptığını ortaya koymuştur. En çok öne çıkan araştırma alanları hemşirelik, eğitim ve psikoloji olmuştur. Literatürde en sık kullanılan terimler arasında “hemşirelik”, “dayanıklılık”, ‘esenlik’ ve “öz-şefkat” yer almaktadır. Ayrıca sonuçlar, Türkiye’nin bu araştırma alanında en üretken ülke olmasına rağmen, uluslararası işbirliğinin nispeten sınırlı kaldığını ve birkaç akademik ağ etrafında kümелendiğini göstermiştir. Bulgular, acil hemşireleri arasında psikolojik dayanıklılığı ve refahı artırmaya yönelik artan akademik ilgiyi vurgulamaktadır. Pozitif psikoloji temelli stratejilerin hemşirelik eğitime ve klinik uygulamalara entegre edilmesi, hemşirelerin ruh sağlığını, iş memnuniyetini ve hasta bakımının genel kalitesini artırmaya yardımcı olabilir. Eğitim programlarında dayanıklılık odaklı içeriğin güçlendirilmesi ve uluslararası araştırma işbirliğinin artırılması tavsiye edilmektedir.

Anahtar Kelimeler: İyi olma hali, dayanıklılık, acil bakım, hemşirelik eğitimi

Psychological Resilience and Well-Being in Emergency Departments: An Analysis Based on Positive Psychology Perspectives

Abstract

Nurses working in emergency departments are frequently exposed to high levels of stress and emotional burden, which makes psychological resilience essential for maintaining their overall well-being. In recent years, positive psychology has offered a theoretical framework focusing on individual strengths and psychological flexibility, particularly in healthcare professions. This

study aimed to explore the academic literature produced in Türkiye between 2022 and 2026 that addresses concepts such as resilience, well-being, and positive psychological approaches within the context of emergency nursing. The data were obtained from the Web of Science Core Collection, limited to peer-reviewed journal articles published in SSCI, SCI-Expanded, or ESCI indexed journals under the category of “Nursing.” A total of 235 articles were included in the analysis. The analysis revealed that the number of publications peaked in 2023 and 2024. The most prominent research domains were nursing, education, and psychology. Among the most frequently used terms in the literature were “nursing,” “resilience,” “well-being,” and “self-compassion.” The results also showed that while Türkiye was the most productive country in this research area, international collaboration remained relatively limited and clustered around a few academic networks. The findings highlight the growing academic interest in enhancing psychological resilience and well-being among emergency nurses. Integrating positive psychology-based strategies into nursing education and clinical practice may help promote nurses’ mental health, job satisfaction, and the overall quality of patient care. Strengthening resilience-focused content in training programs and increasing international research cooperation are strongly recommended.

Keywords: Well-being, resilience, emergency care, nursing education

Giriş

Acil servisler, sağlık sistemlerinin en yoğun ve stresli çalışma alanlarından biridir (Aydemir, 2024). Çalışanlar, acil servislerde güvenli olmayan ortamlar ve acil bakıma ihtiyaç duyan kritik yaralı kişilerle uğraşmak gibi işyeri stresine maruz kalmaktadır (Eftekhari vd., 2025). Bu stresörler sağlık çalışanlarında fiziksel ve ruhsal sorunlara yol açabilmekte bu durum verilen sağlık bakımının kalitesinde düşüşe ve hizmet sunumuna devam etme isteğinde azalmalara yol açabilmektedir (Moshtagh-Eshgh vd., 2017). Özellikle acil hemşirelerinin yüksek düzeyde psikolojik dayanıklılığa sahip olmaları, mesleki tükenmişliği azaltmada ve iyi oluş hallerini sürdürebilmelerinde kritik rol oynamaktadır (Wattad, 2023). Son yıllarda pozitif psikoloji, bireylerin güçlü yönlerini ve psikolojik esnekliklerini ön plana çıkararak sağlık çalışanlarının iyi oluşunu destekleyen teorik bir çerçeve sunmaktadır.

Psikolojik iyilik hali, insanların yaşamı tanımlama, anlamlandırma ve değerlendirme çerçevesini belirler. Psikolojik iyi oluşları yüksek kişiler genellikle olumlu duygulara sahiptir. Onlar sorunlarla ve olumsuz olaylarla başa çıkma konusunda daha pozitif bir bakış açısı geliştirmişlerdir. Ancak psikolojik iyi oluşları düşük kişiler genellikle depresyon ve kaygı gibi

olumsuz duygulara sahiptir. Bu bağlamda onların hayatla ilişkili konularda pozitif bir bakış açısı geliştirmeleri oldukça zordur (Eftekhari vd., 2025).

Acil hemşirelerinin iş kaynaklı kaygı ve stresleri, duygusal, bilişsel, fiziksel dengelerini bozabilir. Bu durumlar mesleki tükenmişliğe, bilişsel, duygusal ve fiziksel yorgunluğa, duygusal bozulma, isteksizlik, motivasyon eksikliği ve çaresizliğe yol açabilir (Eftekhari vd., 2025). Bu süreçte acil hemşireleri olumlu duygular deneyimleme ve yaşamlarından memnun olma gibi ihtimallere kendilerini kapatırlar, bu da psikolojik iyi oluş düzeylerini düşürür. Stres kaynaklı yaşanabilecek duygusal karmaşanın azaltılması için dayanıklılık, dayanıklılık için ise psikolojik iyilik halinin sürdürülmesi veya yükseltilmesi en önemli unsurdur. Bu nedenle acil servis hemşirelerinin dayanıklılık kapasitesi ile iyi oluş halleri arasındaki ilişki, akademik alanda giderek artan bir ilgiyle ele alınmaktadır (Bruria vd., 2022; Sánchez-Zaballos ve Mosteiro-Díaz, 2021; Wattad, 2023). Literatürde bu temaya dair yapılan çalışmaların haritasını çıkarmak, güncel eğilimleri ve araştırma boşluklarını belirlemek açısından önem arz etmektedir.

Bu çalışmada, 2022-2025 yılı dahil Türkiye adresli araştırmacılar tarafından yayınlanmış ve Web of Science veri tabanında yer alan, Science Citation Index Expanded (SCI-E), Social Sciences Citation Index (SSCI) ve Emerging Sources Citation Index (ESCI) indekslerine dahil dergilerde yayımlanmış makaleler üzerinden, acil hemşireliği alanında iyi oluş, psikolojik dayanıklılık ve pozitif psikoloji temalarının bibliyometrik olarak analiz edilmiştir. Çalışma ile Türkiye’de acil hemşireliği literatüründe pozitif psikolojiye dayalı iyi oluş konularının nasıl ele alındığını, hangi kavramların ön plana çıktığını, yıllara göre yayın eğilimlerini, en üretken yazar ve kurumları, iş birliği ağlarını ve kavramsal odakları ortaya koymayı amaçlamaktadır. Böylece, hemşirelerin iyi oluşunu destekleyen kuramsal ve uygulamalı yaklaşımların gelişimine katkı sağlanması hedeflenmektedir.

Metot

Tanımlayıcı kesitsel olan ve verilerinin bibliyometrik analizle çözümlendiği bu çalışmada veri toplama süreci, Web of Science Core Collection (WoS) veri tabanından 24 Nisan 2025 tarihinde olacak şekilde ve Giresun Üniversitesi Proxy ayarları üzerinden gerçekleştirilmiştir. Literatür taramasında; “*emergency nursing (acil hemşireliği)*” OR “*emergency care (acil bakım)*” OR “*emergency department(acil departmanı)*” OR “*emergency nurse (acil hemşiresi)*” OR “*emergency services (acil servis)*” AND “*well-being (iyi oluş)*” OR “*wellbeing (iyi oluş)*” OR “*psychological resilience (psikolojik dayanıklılık)*” OR “*resilience (dayanıklılık)*” OR “*positive psychology (pozitif psikoloji)*” OR “*self-*

compassion (öz-şevkat)” OR “*optimism (optimizm)*” OR “*hope (mutluluk)*” OR “*meaning in life (hayatın anlamı)*” OR “*flourishing (gelişmek)*” OR “*mindfulness (farkındalık)*” AND “*nurse (hemşire)*” OR “*nursing (hemşirelik)*” anahtar kelimeleri kullanılmıştır. Bu anahtar kelimeler, konunun pozitif psikoloji ve iyi oluş temelli yönünü acil hemşireliği bağlamında ortaya koymak için literatür doğrultusunda belirlenmiştir. Başlangıçta 1 589 802 çalışmaya ulaşılmıştır. Sonrasında arama filtreleri uygulanmıştır. Arama filtrelerinde yayın türü olarak sadece makaleler (Articles) seçilmiş; yayın yılı ise 2022, 2023, 2024 ve 2025 olarak sınırlandırılmıştır. Alan olarak yalnızca Nursing (hemşirelik), alt kategori olarakta Nursing (hemşirelik) dikkate alınmıştır. Ayrıca tarama sadece Türkiye menşeli yayınları kapsayacak şekilde sınırlandırılmıştır. Web of Science indeksleri kapsamında yalnızca SSCI, SCI-E ve ESCI dahil edilmiştir. Belirlenen bu sınırlamalar sonucunda toplam 235 makaleye ulaşılmıştır. Bu makalelerden elde edilen veriler bibliyometrik analiz yöntemiyle VOSviewer (v1.6.20) programı kullanılarak analiz edilmiştir.

Veri kaynağı olarak Web of Science Core Collection tercih edilmiştir; çünkü bu veri tabanı, uluslararası hakemli ve yüksek etki değerine sahip dergileri içermesi, disiplinler arası kapsam sunması ve hem sosyal bilimler hem de sağlık bilimleri alanındaki yayınları bütünsel biçimde sunabilmesi açısından güvenilirlik, geçerlilik ve güncellik kriterlerini karşılamaktadır (Delgado ve Repiso, 2013; MacDonald ve Dressler, 2018). Bununla birlikte araştırma kapsamına yalnızca Türkiye adresli, hemşirelik disiplinine ait makaleler dâhil edilmiştir. Böylece, çalışmanın akademik ve bölgesel geçerliliğini artırmak amaçlanmıştır.

Verilerin analizinde VOSviewer (v1.6.20) yazılımı kullanılmıştır. Analiz sürecinde yazar, ülke ve anahtar kelime düzeyinde iş birliği, yoğunluk ve ilişki ağları görselleştirilmiş; kümeleme ve bağlantı gücü gibi göstergeler üzerinden tematik odaklar belirlenmiştir. Bu analizler sayesinde acil hemşireliğinde iyi oluş ve psikolojik dayanıklılık konusunun akademik gelişim seyri ve güncel eğilimleri ortaya konmuştur.

Bu çalışma kapsamında doğrudan insan ya da hayvan denekler üzerinde herhangi bir deneysel uygulama gerçekleştirilmemiştir. Dolayısıyla, etik kurul onayı gerektiren bir araştırma prosedürü söz konusu değildir. Analiz süreci yalnızca ikincil verilere dayandırılmış olup, kullanılan tüm veriler kamuya açık nitelikteki, bilimsel topluluk tarafından erişilebilir, telif haklarına ve açık erişim kurallarına uygun yayınlardan elde edilmiştir. Ayrıca araştırmanın tüm aşamalarında bilimsel dürüstlük, şeffaflık ve metodolojik açıklık temel alınmıştır. Etik dışı herhangi bir müdahaleden veya yönlendirmeden kaçınılmış; analiz süreçleri açık biçimde raporlanmış ve elde edilen bulguların çarpıtılmadan sunulmasına özen gösterilmiştir.

Bulgular

“Acil hemşireliği ve iyi oluş” temalı yayınların yıllara göre dağılımı incelendiğinde, en fazla yayın 2024 yılında yapılmıştır (n=111). 2023 yılında 59 yayımla belirgin bir artış gözlenirken, 2025 yılında bu sayı ilk dört ay için henüz 20’dir. 2022 yılı ise yalnızca 2 yayımla en düşük üretim yılı olarak dikkat çekmektedir. Bu bulgular, araştırma konusunun son yıllarda artan bir akademik ilgi gördüğünü ve konunun güncelliğini koruduğunu göstermektedir.

Şekil 1’de yer alan dağılıma göre, incelenen yayınların büyük çoğunluğu “Nursing” (Hemşirelik) kategorisinde yer almakta olup bu alandaki yayın sayısı 232’yi aşmaktadır. Bunu,

“Psychiatry (psikiyatri)” (n=41) ve “Manegement (yönetim)” (n=16) kategorileri izlemektedir. “Medical Informatics (Medikal Bileşim)”, “Ethics (Etik)”, “Oncology (Kanser Bilimi)”, “Education Scientific Disciplines (Eğitim Bilimleri)” ve “Public Environmental Occupational Health (iş sağlığı)” gibi kategorilerde daha sınırlı sayıda yayın yer almaktadır. Bu bulgu, araştırma konusunun en yoğun şekilde hemşirelik disiplini içerisinde ele alındığını ve bu alanın bu konudaki literatürdeki belirleyici rolünü ortaya koymaktadır.

Şekil 1. Konunun ilgili kategorilere göre dağılımı

Şekil 3 incelendiğinde, seçilen yayınların tamamının SSCI (161) ve SCI-E (162) kapsamında tarandığı görülmektedir. Her iki indeks için de yaklaşık 160 yayın belirlenmiştir. Bu durum, ilgili konunun hem sosyal bilimler hem de sağlık bilimleri perspektifinden ele alındığını ve disiplinlerarası bir nitelik taşıdığını göstermektedir. Ayrıca, her iki indeksin yüksek etki faktörlü dergileri kapsamı, literatürde yer alan çalışmaların akademik kalite açısından güçlü bir temele dayandığına işaret etmektedir.

Şekil 3. Yayınların Web of Science Atıf İndekslerine Göre Dağılımı

Şekil 4 incelendiğinde, analiz kapsamındaki yayınların büyük bir bölümünün açık erişim kapsamında yayımlandığı görülmektedir. Özellikle “All Open Access” kategorisinde yer alan yayın sayısı 76 ile en yüksek değere ulaşmıştır. Bunu sırasıyla “Gold-Hybrid” (46) ve “Gold” (27) açık erişim türleri takip etmektedir. “Green Published” (16), “Green Submitted” (4) ve “Green Accepted” (3) kategorilerindeki yayın sayıları ise daha düşüktür. Bu durum, acil hemşireliği, iyi oluş ve pozitif psikoloji temalı çalışmaların bilimsel topluluk tarafından daha erişilebilir hale getirildiğini ve açık erişim politikalarının bu alandaki yayınları desteklediğini göstermektedir.

Şekil 4. Yayınların Açık Erişim Türlerine Göre Dağılımı

Türkiye merkezli acil hemşireliği alanında pozitif psikoloji ve iyi oluş temalı çalışmalar toplamda 14 yazarın yer aldığı bir ağda, üç farklı iş birliği kümesi oluşturmaktadır. En geniş kümeyi Bayram_Aysun, Ozsaban_Aysel ve Kilic_Cigdem_Torun gibi yazarların içinde bulunduğu mavi küme oluşturmaktadır. Bu kümenin merkezinde bulunan Bayram_Aysun, yüksek belge sayısı ve toplam bağlantı gücüyle dikkat çekmektedir. Yeşil kümeye dahil olan yazarlar arasında Palese_Alvisa, Chiappinotto Stefania ve Sermeus Walter gibi isimler öne çıkmaktadır. Kırmızı küme ise Grasseti Luca, Demir Oznur İspir ve Lupi Tommaso gibi yazarların oluşturduğu uluslararası iş birliklerini temsil etmektedir. Bu bulgular, Türkiye merkezli araştırmacıların belirli kümeler içerisinde yoğunlaştığını, ancak bazı yazarların uluslararası düzeyde iş birliği ağlarına entegre olabildiğini göstermektedir. Aynı zamanda, alandaki araştırma üretiminin bireysel değil, çok yazarlı ve iş birliği odaklı yürütüldüğü anlaşılmaktadır (Şekil 5).

Şekil 5. Acil Hemşireliği Alanında Yayın Yapan Yazarların İş Birliği Ağı

Şekil 6, Türkiye bağlamındaki yazarların diğer ülkelerdeki yazarlar ile işbirliği ağını göstermektedir. Türkiye, toplam 50 yayın ve 116 atıf ile iş birliği ağının merkezinde yer alırken; İtalya, Belçika, Azerbaycan, Kıbrıs, Finlandiya ve Slovakya gibi ülkelerle sınırlı düzeyde iş birlikleri gerçekleştirilmiştir. Türkiye ile İtalya arasındaki bağlantı daha güçlü görünmekte olup, diğer ülkelerle olan ilişkiler daha zayıf bağlantılarla temsil edilmiştir. Üç ana küme oluşmuş olup Türkiye ve Azerbaycan aynı kümede konumlanmıştır. Bu durum, Türkiye'nin bu alandaki üretim gücünü ve bölgesel liderliğini ortaya koymaktadır.

Şekil 6. Ülkelere Göre Bilimsel İş Birliği Ağı

Yazar anahtar kelimeleri üzerinden yürütülen eş-eş görüm (co-occurrence) analizinde, en sık tekrar eden terimlerin başında “nursing (hemşirelik)” (18), “nursing students (öğrenci hemşire)” (17), ve “nursing education (hemşirelik eğitimi)” (12) yer almaktadır. Bu kelimeleri “missed nursing care (arzulanan hemşirelik bakımı)”, “moral sensitivity (ahlaki duyarlılık)”, “professional values (profesyonel değerler)” gibi mesleki etik ve değer temelli kavramlar takip etmektedir. Ayrıca “empathy (empati)”, “communication (haberleşme)”, “covid-19” gibi kavramlar, hemşirelik eğitiminde çağdaş konuların literatürde ele alındığını göstermektedir. Bu bulgular, çalışmaların hem klinik hem de eğitimsel ve etik boyutlarıyla ele alındığını ortaya koymaktadır (Şekil 8).

Şekil 8. Anahtar kelimelerin eş-eşgörüm analizine dayalı görselleştirilmiş kavramsal ağ yapısı

Sonuç ve Öneriler

Bu çalışma, acil servislerde görev yapan hemşirelerin iyi oluş düzeyleri ve psikolojik dayanıklılıkları bağlamında pozitif psikoloji eksenli bilimsel yayınların Türkiye özelindeki bibliyometrik görünümünü ortaya koymuştur.

Web of Science veri tabanında 2022–2025 yılları arasında yayımlanan 235 makalenin analizine dayanan bulgular, özellikle 2023 ve 2024 yıllarında konunun bilimsel ilgisinin belirgin biçimde arttığını ve 2025 yılının ilk çeyreğinde sürdüğünü göstermektedir. Yine bulgular, çalışmalarda en sık vurgulanan temaların “nursing (hemşirelik)”, “nursing education (hemşirelik eğitimi)”, “resilience (dayanıklılık)”, “well-being (iyi oluş)”, “self-compassion (öz-şevkat)” ve “moral sensitivity (ahlaki duyarlılık)” gibi kavramlar etrafında şekillendiğini göstermektedir. Yayınların büyük kısmı hemşirelik disiplinine ait dergilerde yer almıştır, çalışmalarda genellikle Türkiye merkezli yazarların öne çıktığı görülmüştür. Ülke iş birliği ve yazar iş birliği ağlarında, sınırlı sayıda güçlü kümenin oluştuğu ancak uluslararası ortaklıkların henüz yaygınlaşmadığı gözlenmiştir. Bu durum, acil hemşireliği alanında pozitif psikoloji

temelli iyi oluş odaklı yayınların disiplin içinde kabul gördüğünü ancak bilimsel iş birlikleri açısından daha fazla geliştirilmesi gerektiğini düşündürmektedir.

Bulgular ışığında öneriler:

- Acil hemşireliği eğitim programlarında, psikolojik dayanıklılık, öz-şefkat, umut ve anlam arayışı gibi pozitif psikoloji temalarına doğrudan yer verilmelidir. Bu kapsamda hemşirelik öğrencilerine yönelik psiko-eğitim modülleri geliştirilebilir.
- Acil servis ortamlarında çalışan hemşireler için iyi oluşu destekleyici kurum içi programlar (örn. mindfulness temelli stres azaltma programları, psikolojik danışmanlık hizmetleri) sistematik biçimde uygulanmalı ve değerlendirilmelidir.
- Bilimsel üretkenliğin artırılması ve çeşitlendirilmesi için, acil hemşireliği alanında çalışan araştırmacıların uluslararası düzeyde ortak yayın üretmeye teşvik edilmesi önemlidir. Türkiye'nin merkezi konumu güçlendirilerek bölgesel liderlik rolü desteklenmelidir.
- Uygulayıcı hemşirelerin klinik karar alma süreçlerinde iyi oluş düzeylerinin dikkate alınması, hasta güvenliği ve ekip içi iletişim açısından olumlu sonuçlar doğuracaktır. Bu nedenle yönetim düzeyinde iyi oluşa dayalı performans ve refah ölçütleri tanımlanabilir.
- Bibliyometrik veriler doğrultusunda boşluk alanlarının belirlenmesi, özellikle travma sonrası stres, ikincil travma, mesleki tükenmişlik ve yeniden yapılandırıcı psikolojik müdahale alanlarında daha fazla nitel ve nicel araştırma yapılmasını teşvik edebilir.

Özet

İyi oluş, bireyin yaşamını olumlu değerlendirdiği; olumlu duyguların yüksek, olumsuz duyguların düşük olduğu; yaşam doyumu ve psikolojik işlevselliğin sağlandığı bir psikolojik durumdur. İyi oluşun hangi bağlamda ele alındığı önemlidir. Türk Mutfağı, yedi farklı bölgenin çeşitlilik gösteren lezzetlerini bir araya getiren yapısıyla dünyanın en önemli ve en eski mutfaklarından biri olarak zengin bir ürün yelpazesi sunmaktadır. Adana, Mersin, Hatay, Urfa ve Mardin gibi yöresel lezzetleriyle öne çıkan şehirler gastronomi turizmine büyük önem vermektedir. Sürdürülebilir gastronomi çalışmalarında doğanın korunması, kaynakların verimli kullanımı ve çevresel etkilerin azaltılması hedeflenmektedir. Bu kapsamda, gastronomi uygulamalarında hammadde üretimi, ürün kullanımı ve atık yönetimi süreçlerinden kaynaklanan sera gazı salınımları "karbon ayak izi" olarak hesaplanmaktadır. Köklü tarihi, zengin mutfak kültürü ve turistik cazibesi sayesinde Türkiye, gastronomi turizmi açısından öncelikli tercih edilen ülkeler arasında yer almaktadır. Geniş bir etnik çeşitliliğe sahip olan Mersin mutfağında, bölge genelinde benzer tüketim alışkanlıkları görülmesine rağmen, bazı yiyecekler ve alışkanlıklar belirli şehirlerle özdeşleşmiştir. Akdeniz Bölgesi illeri karşılaştırıldığında en fazla tescilli ürüne (16 adet) sahip olan Mersin, bu alanda ön plana çıkmaktadır. Bu çalışmada, coğrafi işaretli Mersin Tantunisi ile Tarsus Fındık Lahmacununun üretim süreçlerindeki karbon ayak izini karşılaştırmak amaçlanmaktadır. Karbon ayak izinin azaltılmasının sosyal ve çevresel iyi oluşa etkisi konusunda farkındalık yaratmak hedeflenmiştir. Çalışma kapsamında, her iki yiyeceğin sadece ham maddeleri dikkate alınarak karbon ayak izi hesaplanacaktır. Bu çalışmada coğrafi işaretli “Mersin Tantunisi” ve “Tarsus Fındık Lahmacunu” üretiminde kullanılan ham maddelerden kaynaklı oluşan karbon ayak izi belirlenmiş ve karşılaştırılmıştır. Bu çalışma belirlenen bu yemeklerin 1 porsiyonu için yapılmıştır. Çalışmada Mersin ilinin coğrafi işaretli olan Mersin Tantunisi ve Tarsus Fındık Lahmacunu yemeklerinin standart reçetesinde bulunan ürünler dikkate alınarak karbon ayak izi hesaplanmıştır. Türk Patent ve Marka Kurumundan alınan standart reçetelerde verilen miktarlar dikkate alınmıştır.

Hesaplamalar, karbon ayak izi hesaplama aracı olan CCaLC2 1.700 2016 uygulaması ile yapılmış, uygulamada bulunan hazır veriler kullanılmıştır. Taşıma, depolama, su kullanımı ve üretim uygulamaları dahil edilmemiştir. Elde edilen bulgular bir porsiyon Tarsus fındık lahmacunun bir porsiyon Mersin tantunisine göre karbon ayak izinin daha fazla olduğunu (2,85 kg CO₂e/porsiyon > 1,90 kg CO₂e/porsiyon) göstermektedir.

Anahtar kelimeler: tantuni, fındık lahmacun, karbon ayak izi, coğrafi işaret, sürdürülebilirlik, Mersin, sosyal iyi oluş

Sustainability for Well-Being: Carbon Footprint Comparison of Geographically Signed Mersin Tantuni and Tarsus Fındık Lahmacun

Abstract

Well-being is a psychological state in which an individual evaluates his/her life positively; positive emotions are high, negative emotions are low; life satisfaction and psychological functionality are provided. The context in which well-being is addressed is important. Turkish Cuisine offers a rich product range as one of the most important and oldest cuisines in the world with its structure that brings together the diverse flavours of seven different regions. Cities such as Adana, Mersin, Hatay, Urfa and Mardin, which stand out with their local flavours, attach great importance to gastronomy tourism. Sustainable gastronomy studies aim to protect nature, use resources efficiently and reduce environmental impacts. In this context, greenhouse gas emissions resulting from raw material production, product use and waste management processes in gastronomy practices are calculated as "carbon footprint". Thanks to its deep-rooted history, rich culinary culture and touristic attraction, Turkey is one of the most preferred countries for gastronomy tourism. Mersin cuisine has a wide ethnic diversity and although similar consumption habits are observed throughout the region, some foods and habits are identified with certain cities. Compared to the provinces of the Mediterranean Region, Mersin, which has the highest number of registered products (16), stands out in this field. In this study, it is aimed to compare the carbon footprint of the production processes of geographically labelled Mersin Tantuni and Tarsus Fındık Lahmacun. It is aimed to raise awareness on the impact of reducing carbon footprint on social and environmental well-being. Within the scope of the study, the carbon footprint of both foods will be calculated by considering only the raw materials. In this study, the carbon footprint resulting from the raw materials used in the production of geographically labelled 'Mersin Tantunisi' and 'Tarsus Fındık Lahmacunu' was determined and compared. This study was conducted for 1 portion of these dishes. In the study, the carbon footprint of

Mersin Tantunisi and Tarsus Fındık Lahmacunu, which are geographically marked dishes of Mersin province, was calculated by taking into account the products in the standard recipe. The quantities given in the standard recipes obtained from the Turkish Patent and Trademark Office were taken into consideration. The calculations were made with the CCaLC2 1.700 2016 application, which is a carbon footprint calculation tool, and the ready-made data available in the application were used. Transport, storage, water use and production practices were not included. The findings show that one portion of Tarsus fındık lahmacun has a higher carbon footprint than one portion of Mersin tantuni (2.85 kg CO₂e/portion > 1.90 kg CO₂e/portion).

Key words: tantuni, fındık lahmacun, carbon footprint, geographical indication, sustainability, Mersin, social well-being

Giriş

İyi oluş kavramı ile ilgili karşımıza çok sayıda tanım çıkmaktadır. Genel olarak iyi oluş, bireyin yaşamını olumlu değerlendirdiği; olumlu duyguların yüksek, olumsuz duyguların düşük olduğu; yaşam doyumu ve psikolojik işlevselliğin sağlandığı bir psikolojik durumdur (Diener, 1984). İyi oluşun hangi bağlamda ele alındığı önemlidir. Bu çerçevede iyi oluşu tanımlamak istediğimizde;

Psikolojik iyi oluş, bireyin kendini gerçekleştirme, yaşamda anlam bulma, çevresel ustalık, özerklik, olumlu ilişkiler ve kişisel gelişim gibi temel alanlarda sağlıklı ve dengeli bir işleyiş içinde olmasıdır (Ryff, 1989).

Sosyal iyi oluş, bireyin toplumla olan ilişkilerinde kendini ait, değerli ve işlevsel hissetmesiyle ilgili bir durumdur. Sosyal kabul, toplumsal katkı, toplumsal bütünlük, sosyal entegrasyon ve toplumda anlam bulma gibi boyutları içerir (Keyes, 1998).

Çevresel iyi oluş, bireyin yaşadığı fiziksel çevreyle olan ilişkisini fark etmesi, çevresel sürdürülebilirliğe katkı sağlaması ve çevresel tehditlere karşı duyarlılık geliştirilmesiyle ilgilidir. Temiz hava, sağlıklı yaşam alanları, doğayla etkileşim ve ekolojik denge bu boyutun parçalarıdır (Corral-Verdugo ve diğerleri, 2010).

Sürdürülebilir gastronomi çalışmalarında doğanın korunması, kaynakların verimli kullanımı ve çevresel olumsuz etkilerin azaltılması hedeflenmektedir.

Karbon ayak izinin azaltılması sosyal ve çevresel iyi oluşu etkilemektedir. Karbon ayak izinin azaltılması:

-çevresel iyi oluşu artırır çünkü daha az fosil yakıt kullanımı, hava ve su kirliliğinin azalmasına ve ekosistemlerin korunmasına katkı sağlamaktadır.

-sosyal iyi oluşu destekler çünkü kolektif çevre bilinciyle hareket etmek, toplumsal dayanışmayı artırır, ortak sorumluluk duygusu yaratır.

-toplumsal adaleti güçlendirir.

-toplumun sürdürülebilirliğini ve uzun vadeli refahını destekler.

Sosyal ve çevresel iyi oluş, bireyin yalnızca kendi yaşam kalitesini değil, toplumun ve doğanın sağlığını da gözetken bir yaşam anlayışını içerir. Karbon ayak izinin azaltılması bu iki iyi oluş boyutunu doğrudan destekler; hem ekolojik dengeyi korur hem de toplumsal bilinç ve dayanışma duygusunu geliştirir (Corral-Verdugo et al., 2010; Keyes, 1998).

Türk Mutfağı, yedi farklı bölgenin çeşitlilik gösteren lezzetlerini bir araya getiren yapısıyla dünyanın en önemli ve en eski mutfaklarından biri olarak zengin bir ürün yelpazesi sunmaktadır. Köklü tarihi, zengin mutfak kültürü ve turistik cazibesi sayesinde Türkiye, gastronomi turizmi açısından öncelikli tercih edilen ülkeler arasında yer almaktadır. Adana, Mersin, Hatay, Urfa ve Mardin gibi yöresel lezzetleriyle öne çıkan şehirler gastronomi turizmine büyük önem vermektedir (Güzel Şahin ve Ünver, 2015). Ayrıca, gastronomi kavramı yalnızca kültür ve gelenekleri değil, aynı zamanda sağlıklı yaşam tarzı, özgünlük, sürdürülebilirlik ve deneyim gibi geleneksel değerleri de kapsamaktadır (Küçükkömürler, Şirvan ve Sezgin, 2018).

Sürdürülebilir gastronomi çalışmalarında doğanın korunması, kaynakların verimli kullanımı ve çevresel etkilerin azaltılması hedeflenmektedir. Bu kapsamda, gastronomi uygulamalarında hammadde üretimi, ürün kullanımı ve atık yönetimi süreçlerinden kaynaklanan sera gazı salınımları "karbon ayak izi" olarak hesaplanmaktadır (Budak ve diğerleri, 2025). Karbon ayak izi, modern dünyanın önemli kavramları arasında yer almakta olup turizm ve gastronomi ile sıkı bir ilişki içerisinde. Küresel ölçekte çevresel etkilerin yanı sıra kültürel ve ekonomik sonuçlar doğuran bu kavram, insan faaliyetleri sonucu ortaya çıkan karbon emisyonlarının tespiti ve izlenmesine yönelik en güncel yöntem olarak kabul edilmektedir (Coşkun ve Doğan, 2021). Bir bireyin, bir binanın, bir şirketin veya bir ülkenin tüm faaliyetlerinden kaynaklanan karbondioksit salınım miktarı "karbon ayak izi" kavramını ifade etmektedir (Galli vd., 2012).

Bir gıda ürününün karbon ayak izi hesaplaması hem üreticiler hem de tüketiciler için sürdürülebilir seçimler yapma olanağı sunmaktadır (Clune ve diğerlerinden (2017) aktaran Durlu Özkaya ve diğerleri, 2024). Literatürde yapılan çalışmalara bakıldığında; Türk mutfak kültürünün sera gazı emisyonu (Erdoğan, 2018), geleneksel Elâzığ mutfağı yemeklerinin karbon ayak izinin tespit edilmesi (Ural, 2023) ve bir üniversite yemekhanesinde uygulanan menülerin çevresel etkilerinin belirlenmesi (Taş Özdemir, 2020) gibi az sayıda araştırmaya

rastlanmaktadır. Karbon ayak izi hesaplamaları Ural (2023) tarafından CCaLC2 Build 1.700 programı (CCaLC2, 2016) kullanılarak hesaplanmıştır. Erdoğan (2018) ve Taş Özdemir (2020) tarafından ise meta analiz yöntemiyle derlenen karbon ayak izi faktörleri kullanılarak hesaplamalar yapılmıştır. Menülerde yer alan hayvansal kaynaklı besinlerin yüksek miktarlarda bulunduğu yemeklerin, diğer yemeklere göre yüksek karbon ayak izine sahip olduğu belirlenmiştir (Taş Özdemir, 2020). Durlu Özkaya ve diğerleri (2024) "Ankara'nın Coğrafi İşaretli Yemeklerinin Karbon Ayak İzinin Belirlenmesi" adlı çalışmalarında yöresel yemeklerin karbon ayak izini incelemiştir. Budak ve diğerlerinin (2025) çalışmasında ise Isparta Kaşıkli Tören Menüsü'nün karbon ayak izi değerlendirilmiştir.

Geniş bir etnik çeşitliliğe sahip olan Mersin mutfağında, bölge genelinde benzer tüketim alışkanlıkları görülmesine rağmen, bazı yiyecekler ve alışkanlıklar belirli şehirlerle özdeşleşmiştir (Özbek ve Güzeller, 2022). Akdeniz Bölgesi illeri karşılaştırıldığında en fazla tescilli ürüne (16 adet) sahip olan Mersin, bu alanda ön plana çıkmaktadır. Mersin'in coğrafi işaretli yöresel ürünleri incelendiğinde, en fazla ürünün "işlenmiş ve işlenmemiş meyve vd." grubunda yer aldığı görülmektedir (Seçuk ve Tugay, 2021).

Bu çalışmada, coğrafi işaretli Mersin Tantunisi ile Tarsus Fındık Lahmacununun üretim süreçlerindeki karbon ayak izini karşılaştırmak amaçlanmaktadır. Geleneksel gıdaların sürdürülebilirlik açısından değerlendirilmesi, hem çevresel farkındalık oluşturmak hem de yerel üreticilere sürdürülebilir üretim yöntemleri konusunda yol göstermek açısından önem taşımaktadır. Karbon ayak izinin azaltılmasının sosyal ve çevresel iyi oluşa etkisi konusunda farkındalık yaratmak hedeflenmiştir

Bu çalışmada coğrafi işaretli “Mersin Tantunisi” ve “Tarsus Fındık Lahmacunu” üretiminde kullanılan ham maddelerden kaynaklı oluşan karbon ayak izi belirlenmiş ve karşılaştırılmıştır. Bu çalışma belirlenen bu yemeklerin 1 porsiyonu için yapılmıştır.

Mersin Tantunisi, Mahreç İşareti olarak tescillenmiş olup, bu tescil 15.07.2014 tarihinde başvurulmuş ve 21.03.2017 tarihinde onaylanmıştır. Tescil numarası 211 ve dosya numarası C2014/049'dir. Ürün grubu olarak "Yemekler ve Çorbalar" kategorisinde yer almaktadır. Coğrafi işaret, Mersin iline özgü olan ve tescillenen bir ürün olarak Mersin Kebapçılar Lokantacılar Kafeteryacılar ve Pastacılar Esnaf ve Sanatkârlar Odası tarafından başvurulmuş ve tescil ettirilmiştir (TÜRK PATENT, 2024).

Tarsus Fındık Lahmacunu Mahreç İşareti olarak tescillenmiş olup, bu tescil 02.09.2019 tarihinde başvurulmuş ve 17.09.2020 tarihinde onaylanmıştır. Tescil numarası 538 ve dosya

numarası C2019/115'tir. Ürün grubu olarak "Lahmacun/Yemekler ve Çorbalar" kategorisinde yer almaktadır. Coğrafi işaret, Mersin ilinin Tarsus ilçesine özgü olan ve tescillenen bir ürün olarak Tarsus Ticaret ve Sanayi Odası tarafından başvurulmuş ve tescil ettirilmiştir (TÜRK PATENT, 2024).

Her iki ürün, Mersin ve Tarsus mutfak kültürünün önemli temsilcileri olup coğrafi işaret ile tescillenmiştir. Ancak, bu geleneksel lezzetlerin üretiminde kullanılan malzemelerin çevresel etkileri hakkında yeterli bilimsel çalışma bulunmamaktadır. Bu nedenle, çalışmada sadece ham madde üretim süreçleri dikkate alınarak her iki yiyeceğin karbon ayak izi hesaplanacak ve karşılaştırılacaktır. Çalışmada bu iki yemeğin seçilmesinde yemeklerin reçetelerinde ortak ve benzer ürünlerin olması etkili olmuştur.

Mersin Tantunisine ait patentli tarifte kullanılan malzemeler 5 kg et için verilmiştir. Bir porsiyon tantunide en az 60 gr et kullanıldığı patentte belirtilmiştir. Bu bilgilere göre oranlama yapılarak 1 porsiyon tantuni için gerekli bileşenler ve miktarları Tablo 1'de yer almaktadır.

Tablo 1 : Bir Porsiyon Mersin Tantunisi İçin Kullanılan Bileşen Listesi Ve Miktarları

Hammadde Bileşen	Ortalama Miktar
Et (dana eti)	60 g
Ekmek (somun, lavaş veya açık)	150 g
Pamuk Yağı	0.012 L
Tuz	1.2 g
Kuru soğan (isteğe bağlı)	25 g
Domates (isteğe bağlı)	25 g
Maydanoz (isteğe bağlı)	
Sumak (isteğe bağlı)	0.6 g
Kırmızı toz biber (isteğe bağlı)	3.6 g

Tarsus Fındık Lahmacununa ait patentli tarifte kullanılan malzemeler ve miktarları Tablo 2'de gösterildiği gibidir.

Tablo 2: Bir Porsiyon Tarsus Fındık Lahmacunu İçin Kullanılan Bileşen Listesi Ve Miktarları

Hammadde Bileşen	Ortalama Miktar
Harcı	
Et (erkek koyun eti)	100 g
Kırmızı / kuru soğan	20 g
Kapya biber	15 g
Domates	15 g
Maydanoz	15 g
Tuz	3 g
Kırmızı toz biber (isteğe bağlı)	1g
Hamuru	
Buğday unu	100 g
Maya (yaş maya)	10 g
Tuz	5 g

Çalışma sonucunda elde edilecek veriler, yerel üreticilere daha düşük karbon ayak izine sahip yöntemler konusunda öneriler sunarken, tüketicilerin sürdürülebilir gıda tercihleri konusunda bilinçlenmesine katkı sağlayacaktır. Ayrıca, karbon salınımını azaltmaya yönelik öneriler geliştirilerek sürdürülebilir gastronomi alanında bilimsel çalışmalara kaynak oluşturulması hedeflenmektedir. Bu çalışmada, geleneksel lezzetlerin çevresel etkilerini ortaya koyarak hem bireysel hem de endüstriyel düzeyde sürdürülebilir yaklaşımlar geliştirilmesine katkı sunacaktır.

Yöntem

Çalışmada Mersin ilinin coğrafi işaretli olan Mersin Tantunisi ve Tarsus Fındık Lahmacunu yemeklerinin standart reçetesinde bulunan ürünler dikkate alınarak karbon ayak izi hesaplanmıştır. Türk Patent ve Marka Kurumundan alınan standart reçetelerde verilen miktarlar dikkate alınmıştır. Hesaplamalar, karbon ayak izi hesaplama aracı olan CCaLC2 1.700 2016 uygulaması ile yapılmış, uygulamada bulunan hazır veriler kullanılmıştır. Taşıma, depolama, su kullanımı ve üretim uygulamaları dahil edilmemiştir. Hesaplamalar 1 porsiyon için yapılmıştır. Fındık lahmacununa ait patent reçetesi 1 porsiyon olarak verildiği için direkt kullanılmıştır. Tantuniye ait patent reçetesi 1 porsiyona göre olacak şekilde oranlanıp o şekilde ele alınmıştır. Tantunide kullanılması gereken pamuk yağı kullanılan programın veri tabanında bulunmadığı için bunun yerine ayçiçeği yağı tercih edilmiştir. Reçetede yer alan ve isteğe bağlı olarak ifade edilen kuru soğan ve domates çalışmaya dahil edilmiştir. Çalışmaya konu olan yemeklerin karbon ayak izi değerleri standart reçetede

ürün miktarları dikkate alınarak hesaplanmış ve standart reçetedeki ürünlerin karbon ayak izi değerleri kg CO₂e/reçete, kg CO₂/kg yemek, kg CO₂e/porsiyon şeklinde verilmiştir.

Bulgular

Bir porsiyon coğrafi işaretli “Mersin Tantunisi” için toplam karbon ayak izi 1.90 kg CO₂e/porsiyon olarak hesaplanmıştır. Karbon ayak izindeki en büyük pay 1.72 kg CO₂e/porsiyon ile dana etine aittir. Reçetedeki diğer bileşenlerin karbon ayak izine Tablo 3’te yer verilmiştir.

Tablo 3 : Bir Porsiyon Mersin Tantunisi İçin Karbon Ayak İzi Değerleri

Ham madde Bileşen	Ortalama Miktar	kg CO ₂ e/ ürün
Et (dana eti)	60 g	1.720
Ekmek (somun, lavaş veya açık)	150 g	0.039
Ayçiçek yağı (Pamuk Yağı yerine)	0.012 L	0.036
Tuz	1.2 g	0.003
Kuru soğan (isteğe bağlı)	25 g	0.013
Domates (isteğe bağlı)	25 g	0.082
Toplam	273 g (0.273 kg)	1.900

Bir porsiyon tantunideki her bir bileşenin karbon ayak izini birbiri ile karşılaştırdığımızda kullanılan programın kendi ürettiği Grafik 1’de görüldüğü gibi en çok karbon ayak izi dana etine, en az karbon ayak izi tuza aittir.

Grafik 1: Mersin Tantunisi Ham Madde Karbon Ayak İzi

Bir porsiyon coğrafi işaretli “Tarsus Fındık Lahmacunu” için toplam karbon ayak izi 2.85 kg CO₂e/porsiyon olarak hesaplanmıştır. Karbon ayak izindeki en büyük pay 2.70 kg CO₂e/porsiyon ile koyun etine aittir. Reçetedeki diğer bileşenlerin karbon ayak izine Tablo4’te yer verilmiştir.

Tablo 4: Bir Porsiyon Tarsus Fındık Lahmacunu Karbon Ayak İzi Değerleri

Hammadde Bileşen	Ortalama Miktar	kg CO ₂ e/ ürün (kullanılan
Harcı		
Et (koyun eti)	100 g	2.700
Kırmızı / kuru soğan	20 g	0.010
Kapya biber	15 g	0.013
Domates	15 g	0.049
Tuz	3 g + 5 g	0.025
Buğday unu	100 g	0.040
Maya (yaş maya)	10 g	0.010
Toplam	268 g (0.268 kg)	2.850

Bir porsiyon fındık lahmacunundaki her bir bileşenin karbon ayak izini birbiri ile karşılaştırdığımızda kullanılan programın kendi ürettiği Grafik 2’de görüldüğü gibi en çok karbon ayak izi koyun etine, en az karbon ayak izi kuru soğan ve mayaya aittir.

Grafik 2:Tarsus Fındık Lahmacunu Ham Madde Karbon Ayak İzi

Sonuç ve Tartışma

Bir porsiyon coğrafi işaretli “Mersin Tantunisı” için toplam karbon ayak izi 1.90 kg CO₂e/porsiyon olarak hesaplanmıştır. Karbon ayak izindeki en büyük pay 1.72 kg CO₂e/porsiyon ile dana etine aittir. Dana etini sırasıyla domates(0,082 kg CO₂e/porsiyon), ekmek (0,039 kg CO₂e/porsiyon), ayçiçeği yağı (0,036 kg CO₂e/porsiyon), kuru soğan (0,013 kg CO₂e/porsiyon) ve tuz (0,003 kg CO₂e/porsiyon) izlemektedir.

Bir porsiyon coğrafi işaretli “Tarsus Fındık Lahmacunu” için toplam karbon ayak izi 2.85 kg CO₂e/porsiyon olarak hesaplanmıştır. Karbon ayak izindeki en büyük pay 2.70 kg CO₂e/porsiyon ile koyun etine aittir. Koyun etini sırasıyla domates (0,049 kg CO₂e/porsiyon), buğday unu (0,040 kg CO₂e/porsiyon), tuz (0,025 kg CO₂e/porsiyon), kapaya biber (0,013 kg CO₂e/porsiyon), soğan ve maya (0,010 kg CO₂e/porsiyon) izlemektedir.

Elde edilen bulgular bir porsiyon Tarsus fındık lahmacunun bir porsiyon Mersin tantunisine göre karbon ayak izinin daha fazla olduğunu (2,85>1,90) göstermektedir.

Bu ürünler için hesaplanan karbon ayak izlerinde kullanılan su, tedarik zinciri, atık madde dahil edilmemiştir. Bunlar dahil edildiğinde çok daha fazla karbon ayak izi oluşacağı aşıkardır. Ayrıca bu ürünler porsiyon olarak değil de daha büyük oranlarda hazırlandığında oluşacak karbon ayak izi aynı oranda artmayacaktır.

E-posta: cansuguler@mu.edu.tr, Orcid: [0000-0002-0939-1760](https://orcid.org/0000-0002-0939-1760)

Serap YILDIRIM

Ege Üniversitesi, Hemşirelik Fakültesi, Ruh Sağlığı ve Hastalıkları Hemşireliği AD. Türkiye

E-posta: camserap@yahoo.com, Orcid: [0000-0002-9822-1877](https://orcid.org/0000-0002-9822-1877)

Özet

Bu derleme çalışmasının amacı, kronik fiziksel hastalığı olan ergenlerde spiritüel iyi-oluşun psikososyal sağlık üzerine etkilerini incelemektir. Kronik hastalık, üç ay veya daha uzun süren, ergenin normal aktivitelerini etkileyen ve sık sık hastaneye yatış, evde sağlık hizmeti veya kapsamlı tıbbi bakım gerektiren durumlardır. Kronik fiziksel hastalıklar, ergenlerin uyumlarını, sağlıklarını ve yaşam kalitelerini etkileyerek onları çeşitli fiziksel, psikolojik ve sosyal mücadelelere maruz bırakabilir. Bu nedenle, bu bireyler yalnızca hastalık kaynaklı akut stresle değil tedavilerinin etkileri ve sağlık hizmetlerinde yaşadıkları deneyimler nedeniyle de kronik stresle baş etmenin yolunu bulmak zorundadır. Spiritüel iyi-oluş başa çıkma ve yaşanan durumu anlamlandırmada önemli bir kavramdır. Spiritüel iyi-oluş bireyin hayatta bir anlam arayışı ve kendinden daha güçlü bir şeyle bağlantı kurması şeklinde deneyimlenen dinamik ve içsel bir süreçtir. Spiritüel iyi-oluş gereksinimlerinin kapsamı ve derinliği, yaşam beklentisi, ölümün yakınlığı, acı çekme, izolasyon, ebeveyne bağımlılık, akademik yaşantının sekteye uğraması, olumsuz beden imajı ve öz-saygıya bağlı olarak değişebilmektedir. Yüksek spiritüel iyi-oluş, tedaviye uyum, sağlık hizmetlerinden yararlanma, ağrı yönetimi, yaşam kalitesi ve geleceğe yönelik umudu artırabilir. Bu bireyler daha az izole ve kaygılı, daha rahatlamış ve olumlu bir bakış açısına sahip olur, hastanede kalış süresi kısalabilir. Düşük spiritüel iyi-oluş ise bireyin kendini cezalandırılmış ve terk edilmiş hissetmesine, kaygı ve öfkenin artmasına, hastalık durumunu haksızlık olarak görerek saldırgan davranışlar sergilemesine yol açabilir. Bu durum hastalığın seyrini ve tedaviye uyumu olumsuz etkileyerek hastanede kalış süresini artırabilir. Bu nedenle, kronik fiziksel hastalıklar gibi zor durumlarda ergenlerin spiritüel iyi-oluşlarının belirlenmesi ve desteklenmesi için sağlık profesyonellerinin iş birliği içinde çalışması oldukça önemlidir.

Anahtar Kelimeler: Ergen, kronik fiziksel hastalık, spiritüel iyi-oluş, psikososyal sağlık

A Review Study on the Effect of Spiritual Well-Being on Psychosocial Health in Adolescents with Chronic Physical Illness

Abstract

The aim of this review study was to examine the effects of spiritual well-being on psychosocial health in adolescents with chronic physical illness. Chronic illness is a condition that lasts three months or longer, affects the normal activities of the adolescent and requires frequent hospitalisation, home health care or comprehensive medical care. Chronic physical illnesses can affect adolescents' adjustment, health and quality of life, exposing them to various physical, psychological and social struggles. Therefore, these individuals have to find ways to cope not only with acute stress due to the illness, but also with chronic stress due to the effects of their treatment and their experiences in health care. Spiritual well-being is an important concept in coping and making sense of the situation. Spiritual well-being is a dynamic and internal process experienced by the individual as a search for meaning in life and a connection with something stronger than oneself. The scope and depth of spiritual well-being needs may vary depending on life expectancy, the closeness of death, suffering, isolation, parental dependency, disruption of academic life, negative body image and self-esteem. High spiritual well-being may improve adherence to treatment, utilisation of health services, pain management, quality of life and hope for the future. These individuals may be less isolated and anxious, more relaxed and have a positive outlook, and hospital stays may be shorter. Low spiritual well-being may cause the individual to feel punished and abandoned, to increase anxiety and anger, and to exhibit aggressive behaviours by seeing the disease as an injustice. This may negatively affect the course of the disease and compliance with treatment and may increase the duration of hospitalisation. Therefore, it is very important for health professionals to work in cooperation to identify and support the spiritual well-being of adolescents in difficult situations such as chronic physical illnesses.

Keywords: Adolescent, chronic physical illness, spiritual well-being, psychosocial health

Giriş

Kronik hastalıklar, üç ay veya daha uzun süren, bireyin normal aktivitelerini etkileyen ve sık sık hastaneye yatış, evde sağlık hizmeti veya kapsamlı tıbbi bakım gerektiren durumlardır. Bu hastalıklar süreklilik arz eder, zamanla kötüleşebilir ya da uzun süreli remisyonda kalabilir. Tam olarak tedavi edilemeyen bu hastalıklar, bireyin ve yakınlarının yaşam kalitesini ciddi şekilde etkileyebilir (Iannello ve ark., 2022).

Dünya Sağlık Örgütü'ne (DSÖ, 2014) göre kronik hastalıklar üç ana başlık altında

sınıflandırılmaktadır: (1) depresyon, şizofreni, epilepsi ve alkol bağımlılığı gibi ruhsal, nörolojik ve madde kullanım bozuklukları; (2) HIV/AIDS, tüberküloz ve viral hepatit gibi bulaşıcı hastalıklar; (3) kardiyovasküler hastalıklar, diyabet, kanser, kronik solunum hastalıkları ile duyuşal, sindirim ve kas-iskelet sistemi bozuklukları gibi bulaşıcı olmayan fiziksel hastalıklar. Kronik fiziksel hastalıkla yaşamak; diyet, egzersiz ve tıbbi tedavi gibi yaşam tarzı deęişikliklerinin yanı sıra sürekli saęlık hizmeti takibini gerektirmesi nedeniyle, özellikle ergenlerin günlük yaşamını önemli ölçüde kısıtlayabilir (Lacomba-Trejo ve ark., 2020). Bu hastalıkların olumsuz etkileri yalnızca fiziksel işlev alanlarıyla sınırlı kalmayıp, psiko-sosyal uyumu da olumsuz yönde etkileyebilmekte ve bu etkiler yetişkinlik dönemine kadar sürebilmektedir (Reynolds ve ark., 2016). Ağrı, anksiyete, depresif belirtiler, yorgunluk ve sosyal izolasyon gibi durumlar, bu bireylerin yaşam kalitesini düşüren temel unsurlar arasında yer almaktadır (Grossoehme ve ark., 2020; Cotton ve ark., 2012).

Ergenlik; bedensel deęişimlerle baş etme, kimlik geliştirme, özerklik kazanma, güven duygusu oluşturma ve akran ilişkileri kurma gibi çeşitli gelişimsel görevlerle karakterize edilen kritik bir dönemdir (Iannello ve ark., 2022). Kronik fiziksel hastalıklar, bu gelişimsel süreçleri sekteye uğratabilecek önemli bir risk faktörüdür. Kronik fiziksel hastalığı olan ergenler, izolasyona neden olabilecek yaşam tarzlarına zorlanabilirler (Cotton ve ark., 2012; Lacomba-Trejo ve ark., 2020). Bu durum, akranlarıyla etkinliklere katılma, kabul görme ve yeni sosyal roller geliştirme gibi ihtiyaçlarını karşılamalarını zorlaştırabilir (Lacomba-Trejo ve ark., 2020). Ayrıca, cerrahi müdahalelere baęlı yara izleri de beden imajı üzerinde olumsuz etkiler yaratabilir (Iannello ve ark., 2022).

Tıbbi tedavi süreçleri, ergenlerin bağımsızlık kazanmasını geciktirebilir ve ebeveyn ya da bakım verenlere bağımlılığı artırabilir. Bazı durumlarda, biyolojik düzeyde kronik bir rahatsızlık ergenliğin fizyolojik süreçlerini de geciktirebilir (Cotton ve ark., 2012). Aynı zamanda bu hastalıklar, ergenlerin okula devamlılığını ve akademik hedeflerine ulaşmalarını da olumsuz etkileyebilir. Öte yandan, gelişimsel ihtiyaçlara öncelik verilmesi, hastalığın tedavi ve yönetimine yönelik dikkatin azalmasına neden olabilir. Tüm bu etmenler, kronik hastalıkla yaşayan ergenlerin fiziksel, psikolojik ve sosyal alanlarda çok yönlü zorluklarla karşılaşmasına neden olmaktadır (Berkelbach van der Sprenkel ve ark., 2022).

Kronik fiziksel hastalığı olan ergenler, hastalığın gidişatına ilişkin belirsizlik, ölüm korkusu, psikolojik yükler ve olumsuz yaşam deneyimleriyle daha sık karşılaşmakta ve bu durum, gelecek kaygısını artırmaktadır (de Andrade Alvarenga ve ark., 2021; Reynolds ve ark., 2016). Bu bağlamda, yalnızca hastalığın kendisinden kaynaklanan stresle deęil; aynı zamanda sosyal yaşamda karşılaşılan kısıtlamalar, tedavi süreçleri ve saęlık sistemiyle yaşanan

deneyimlerden kaynaklanan kronik stresle de başa çıkmaları gerekmektedir (Iannello ve ark., 2022). Bu noktada, spiritüel iyi-oluş, ergenlerin bu tür sorunlarla baş etme, durumu anlamlandırma ve umut geliştirme süreçlerinde önemli bir kaynak olarak ortaya çıkmaktadır (Grossoehme ve ark., 2020; de Andrade Alvarenga ve ark., 2021).

Koenig (2012), spiritüaliteyi yaşam, anlam ve kutsallık ya da aşkınlıkla ilgili sorulara yanıt arama süreci olarak tanımlamaktadır. Spiritüalite, bireyin hayata anlam verme çabası ve kendinden daha büyük bir güçle bağ kurma isteği olarak da ifade edilen dinamik ve içsel bir süreçtir. Literatürde spiritüalite genellikle üç temel bileşen çerçevesinde ele alınmaktadır: bağlılık, aşkınlık ve yaşam anlamı (de Andrade Alvarenga ve ark., 2021). Her ne kadar sıklıkla dinle ilişkilendirilse de spiritüalite dini ritüeller aracılığıyla gelişebileceği gibi, dinî inançlardan bağımsız olarak da bireyin yaşamında önemli bir rol oynayabilir (Iannello ve ark., 2022).

Spiritüalite, pozitif dini değerlendirmeler ve dini bağışlama gibi işlevsel başa çıkma biçimleriyle bireylerin psikolojik sağlamlığını artırabileceği gibi, Tanrı tarafından cezalandırılmış ya da terk edilmiş hissetmek gibi işlevsiz başa çıkma biçimlerine de dönüşebilir (de Campos ve ark., 2021). Literatürde spiritüel iyi-oluş kavramı çoğu zaman spiritüaliteyle eş anlamlı şekilde kullanılsa da bu iki kavram arasında çeşitli fikir ayrılıkları ve tanımsal tutarsızlıklar bulunmaktadır (Reynolds ve ark., 2016).

Spiritüel iyi-oluş, bireyin manevi yönünün sağlıklı, dengeli ve anlamlı bir şekilde yaşamına entegre edilmesi olarak tanımlanabilir. Spiritüalite bireyin değer ve inanç sistemini kapsayan geniş bir çerçeve sunarken; spiritüel iyi-oluş, bu manevi boyutun yaşam kalitesine somut katkılarını ifade eden bir çıktıdır. Özellikle kronik fiziksel hastalıkla baş etmede, etkili başa çıkma stratejilerinin geliştirilmesi ve yaşanan deneyimlerin anlamlandırılması açısından önemli bir kaynak olarak değerlendirilmektedir (de Andrade Alvarenga ve ark., 2021).

Spiritüel iyi-oluş ihtiyacının niteliği; yaşam beklentisi, ölümün yakınlığı, ağrı, sosyal izolasyon, ebeveyn bağımlılık, eğitim yaşamının sekteye uğraması, beden imajı ve özsaygı gibi faktörlere bağlı olarak değişkenlik gösterebilir (de Andrade Alvarenga ve ark., 2021; Iannello ve ark., 2022). Diğer taraftan iletişim problemleri, düşük yaşam kalitesi, hastalık deneyimleri ve stres etkenleri de spiritüel iyi-oluşu olumsuz yönde etkileyebilir (de Andrade Alvarenga ve ark., 2021). Bu bağlamda kronik fiziksel hastalıklar gibi zor durumlarda ergenlerin spiritüel iyi-oluşlarının belirlenmesi ve desteklenmesi, psiko-sosyal sağlıkların korunması açısından oldukça önemlidir. Bu doğrultuda bu derleme çalışmasının amacı, kronik fiziksel hastalığı olan ergenlerde spiritüel iyi-oluşun psikososyal sağlık üzerine etkilerini incelemektir.

Kronik Fiziksel Hastalığı Olan Ergenlerde Spiritüel İyi-oluş

Sağlık ve spiritüel iyi-oluş arasındaki ilişkinin önemi konunun tıp ve bakım ile ilişkili

alanlarda bilimsel literatürün artması ve müfredata girmesiyle giderek belirginleşmiştir (de Campos ve ark., 2021). Kronik fiziksel hastalık tanısı ve hastane yatışları gibi tedavi sürecine bağlı zorluklar, ergenlerin spiritüel gereksinimlerini artırabilir (de Andrade Alvarenga ve ark., 2021). Spiritüel iyi-oluş, kronik fiziksel hastalık nedeniyle stres altında olan ergenlerin psikososyal işleyişini ve genel iyilik halini destekleyebilir. Bu durum, gençlerin hastalıklarını yeniden anlamlandırmalarına, geleceğe dair kaygılarını hafifletmelerine ve sosyal destek kaynaklarının yetersiz olduğu durumlarda alternatif baş etme yolları geliştirmelerine katkı sağlayabilir (Reynolds ve ark., 2016). De Andrade Alvarenga ve arkadaşları (2021), kanser, kistik fibroz ve tip 1 diyabet hastası ergenlerle yürüttüğü nitel çalışmada, katılımcıların hastane yatış sürecinde yaşamın anlamını ve amacını sorguladıkları, umudu sürdürme, inancı ifade etme, dini ritüelleri yerine getirme, yaşamın sonuna dair huzur arayışı ve sosyal bağları güçlendirme gibi çeşitli spiritüel gereksinimlere sahip oldukları belirlenmiştir.

Soyut düşünme kapasitesinin gelişmesiyle birlikte ergenlik döneminde spiritüalite, önemli bir baş etme mekanizması olarak öne çıkmaktadır. Spiritüel iyi-oluş; ergenin anlam ve amaç bulmasına, farklı bakış açılarını ve destek sistemlerini fark etmesine, kendisini daha büyük bir bütünle – ideolojik, sosyal ya da aşkın düzeyde – ilişkilendirmesine yardımcı olarak baş etme kapasitesini artırabilir (Iannello ve ark., 2022). Öte yandan, iletişim zorlukları, düşük yaşam kalitesi, kronik fiziksel hastalığa uyum problemleri ve hastalığa bağlı stres faktörleri spiritüel iyi-oluşu olumsuz yönde etkileyebilir (de Andrade Alvarenga ve ark., 2021).

Araştırmalar, spiritüel iyi-oluşun kronik fiziksel hastalık yaşayan ergenlerin tedaviye katılım ve uyum düzeylerini, sağlık hizmetlerinden fayda görmelerini, ağrı gibi olumsuz semptomların yönetimini, yaşam kalitesini ve gelecek umutlarını olumlu yönde etkilediğini göstermektedir (Grossoehme ve ark., 2020; Reynolds ve ark., 2016). Spiritüel iyi-oluş düzeyi yüksek bireyler daha az yalnız, daha az kaygılı ve daha az saldırgan olmakta; kendilerini daha rahatlamış ve teselli bulmuş hissetmekte; tıbbi durumlarını daha olumlu değerlendirmekte ve hastanede kalış süreleri daha kısa olmaktadır (Reynolds ve ark., 2014; Iannello ve ark., 2022). Varoluşsal sorunlar, yaşamın sonluluğu ve belirsizliklerle başa çıkmada spiritüel iyi-oluş önemli bir kaynak haline gelmektedir. De Andrade Alvarenga ve arkadaşları (2021), kronik fiziksel hastalık sürecinde ergenlerin yaşamda anlam ve amaç arayışına yöneldiklerini; umudu koruma, inancı ifade etme, dini ritüelleri sürdürme ve aile/arkadaşlarla bağ kurma gibi çeşitli spiritüel gereksinimlerinin bulunduğunu ortaya koymuştur (de Andrade Alvarenga ve ark., 2021).

Spiritüalite tek başına olumlu ya da olumsuz olarak değerlendirilmemektedir. Spiritüalitenin nasıl deneyimlendiği, ergenin kronik fiziksel hastalıkla başa çıkmasında hem

koruyucu hem de risk faktörü olabilir (Iannello ve ark., 2022). Tanrı'ya güvenen, dua eden ve Tanrı'yı sevgi dolu bir figür olarak gören ergenler, daha az yalnızlık hissetmekte, hastalık durumunu daha olumlu değerlendirmekte ve tedaviye daha iyi uyum sağlamaktadır. Buna karşılık, Tanrı tarafından terk edildiğini hisseden, hastalığını bir ceza olarak algılayan veya Tanrı'dan yardım istemeyen ergenlerde tedavi uyumu düşmekte ve klinik seyir olumsuz yönde etkilenmektedir. Bazı çalışmalar, spiritüalitenin işlevsiz ve olumsuz bir biçimde de deneyimlenebileceğini de göstermektedir (de Andrade Alvarenga ve ark., 2021). Spiritüel iyi oluş düzeyi düşük olan bireyler, hastalıklarını Tanrı tarafından cezalandırıldıkları ya da terk edildikleri şeklinde yorumlayabilir, bu da öfke, saldırganlık ve depresif belirtiler gibi olumsuz psikolojik sonuçlara neden olabilir (Iannello ve ark., 2022). Bu durum, tedaviye uyumu ve hastalığın seyrini olumsuz etkileyerek hastane yatış süresini uzatabilmektedir (de Andrade Alvarenga ve ark., 2021).

Spiritüel İyi-Oluşun Psikososyal Sağlık Üzerine Olumlu Etkileri

Spiritüelite, kronik fiziksel hastalığı olan ergenlerin rahatlamasına, acıdan uzaklaşmasına ve zihinsel dinginlik kazanmasına yardımcı olarak umut, konfor ve dayanıklılık gibi psikolojik kaynakları güçlendirebilmektedir (Iannello ve ark., 2022; de Andrade Alvarenga ve ark., 2021). Tayland'da, Budist inancına sahip ve farklı kronik hastalıkları olan ergenlerle yapılan nitel bir çalışmada; ergenlerin acı çektiklerinde veya kendilerini kötü hissettiklerinde ailelerinden ve ebeveynlerinden manevi destek aldıkları, ayrıca ailelerini hastalıkla mücadelede bir tür manevi dayanak (çapa) olarak gördükleri ortaya koyulmuştur. Ayrıca, ergenlerin içinde bulundukları koşullar nedeniyle meditasyon yapma, dua etme ve tapınakta sevap kazanma gibi dini uygulamalara daha fazla yöneldikleri; bu ritüeller aracılığıyla iç huzur, manevi doyum ve rahatlama yaşadıkları gözlemlenmiştir (Thanattheerakul ve ark., 2020). Clayton-Jones ve arkadaşlarının (2016) orak hücre hastalığı olan Hristiyan ergenler ile yürüttükleri nitel bir çalışmada, katılımcıların spiritüaliteyi doğayla, sanatla ve diğer insanlarla bağlantı kurma aracı olarak tanımladıkları ve bu bağlantıların onlara yenilenme, anlam bulma ve hastalıklarının ötesine geçme fırsatı sunduğunu ifade etmişlerdir. (Clayton-Jones ve ark., 2016). Ayrıca Lyon ve arkadaşlarının (2014) çoğunluğu Afro-Amerikan kökenli, HIV tanısı almış ergenlerle yürüttükleri randomize kontrollü klinik bir çalışmada, spiritüel iyi oluşun (inanç ve anlam/huzur duygusu) depresyon ve kaygı düzeylerinin azalmasıyla ve yaşam kalitesinin artmasıyla anlamlı düzeyde ilişkili olduğu bulunmuştur. Reynolds ve arkadaşları (2013), diyabet ve kistik fibrozisi olan ergenlerle yürüttükleri iki yıllık takip çalışmasında, spiritüel başa çıkma ile psikolojik uyum arasındaki ilişkiyi incelemişlerdir. Bulgular, hastalık türünden bağımsız olarak, olumlu spiritüel başa çıkma (Tanrı'dan manevi destek arama ve olumlu dini değerlendirmeler)

biçimlerinin zamanla daha az depresif belirtiliyle ilişkili olduğunu göstermiştir. Ayrıca, olumlu spiritüel başa çıkmanın, Tanrı tarafından cezalandırıldığını veya

terk edildiğini hissetme gibi olumsuz spiritüel başa çıkmayı azalttığı da saptanmıştır. Grossoehme ve arkadaşları (2020) 14 ila 21 yaş arasındaki kanserli gençlerde farklı dini/spiritüel faktörler ile psikolojik uyum arasındaki ilişkide anlam/huzur duygusu ve inancın aracı rolünü incelemişlerdir. Araştırmada Tanrı'nın varlığını hissetmek ve kendini çok dindar olarak tanımlamak, daha yüksek anlam ve huzur duygusu aracılığıyla anksiyete, depresif belirtiler ve yorgunlukla dolaylı ve negatif yönde ilişkili bulunmuştur. Ayrıca anlam, huzur ve inanç duygusunun, manevi faktörler ve psikolojik uyum arasındaki ilişkisini inceledikleri araştırmada; Tanrı'nın varlığını hissetmenin ve kendini çok dindar olarak görmenin, gençlerde daha yüksek anlam ve huzur duygusu aracılığıyla kaygı, depresif semptomlar ve yorgunluk semptomlarını azalttığını ortaya koymuştur (Grossoehme ve ark., 2020).

Spiritüel İyi-Oluşun Psikososyal Sağlık Üzerine Olumsuz Etkileri

Spiritüalizm, kronik hastalığı olan ergenler için psikososyal açıdan koruyucu bir kaynak olabileceği gibi, olumsuz bir deneyime de dönüşebilir. Tanrı'ya ve dini inançlara ilişkin olumsuz algılar, bireyin kendini cezalandırılmış, terk edilmiş ya da manevi olarak değersiz hissetmesine neden olabilir. Bu durum, başa çıkma becerilerini zayıflatarak psikolojik uyumu ve genel iyi-oluşu olumsuz etkileyebilir (Iannello ve ark., 2022). Grossoehme ve arkadaşları (2016), Tanrı'nın yardımını istememek ve Tanrı'nın sevgisini sorgulamak gibi spiritüel çatışma yaşayan kistik fibrozisi olan ergenlerin hava yolu temizleme tedavisinden daha az yarar gördükleri ve dolayısıyla bu tedaviye yönelik uyumlarının düşük olduğunu ortaya koymuştur. Aynı araştırmacılar tarafından yine kistik fibrozisi olan ergenlerle yürüttükleri başka bir araştırmada (Grossoehme ve ark., 2013) olumsuz spiritüel başa çıkma biçimlerinin daha hızlı solunum fonksiyonlarında bozulma gibi kötü klinik seyirle ilişkili olduğu saptanmıştır. Reynolds ve arkadaşları (2014) diyabet ve kistik fibrozisi olan ergenlerde yürüttükleri bir başka çalışmada spiritüel başa çıkma ve psikososyal uyum arasındaki ilişkiyi incelemişlerdir. Bulgular, Tanrı'nın gücüne yönelik olumsuz değerlendirmelere dayanan olumsuz spiritüel başa çıkma biçimlerinin, ergenlerde daha yüksek düzeyde hiperaktivite, saldırganlık ve davranış bozuklukları gibi dışsallaştırma problemleriyle ilişkili olduğunu göstermiştir. Ayrıca, kistik fibrozisi olan ergenlerde olumsuz spiritüel başa çıkmanın, depresyon ve anksiyete gibi içselleştirme sorunlarıyla anlamlı biçimde ilişkili olduğu da saptanmıştır (Reynolds ve ark., 2014).

Sonuç ve Öneriler

Bu derleme çalışması, kronik fiziksel hastalığı olan ergenlerde spiritüel iyi oluşun

psikososyal uyum, başa çıkma becerileri ve genel sağlık sonuçları üzerinde önemli bir rol oynadığını ortaya koymaktadır. Ergenlik dönemi, bireyin kimlik gelişiminin, anlam arayışının ve geleceğe yönelik umutlarının şekillendiği kritik bir evredir. Bu dönemde yaşanan kronik fiziksel hastalıklar, yalnızca fiziksel sağlığı değil; aynı zamanda psikolojik, sosyal ve spiritüel dengeyi de tehdit etmektedir. Spiritüel iyi oluş sadece bireyin manevi gereksinimlerini karşılamakla kalmayıp; aynı zamanda tedaviye uyum, duygusal dayanıklılık, sosyal ilişkiler ve yaşam kalitesi gibi pek çok sağlık göstergesini de olumlu yönde etkileyebilmektedir. Bu bağlamda, ergenlerin spiritüel gereksinimlerinin tanınması ve bu alanda desteklenmeleri, tedavi sürecinin etkinliğini artırabileceği gibi uzun vadeli sağlık sonuçlarını da iyileştirebilir. Sağlık profesyonellerinin, ergenlerin spiritüel yönelimlerini, inanç yapılarını ve bu alandaki başa çıkma stratejilerini tanımaları; yalnızca tıbbi bir yaklaşımın ötesine geçerek bütüncül ve birey odaklı bir bakım modeli sunmalarına olanak tanıyacaktır. Ayrıca, bu süreçte ailelerin ve sosyal çevrenin de sürece dahil edilmesi, ergenin destek ağlarını güçlendirecek ve tedaviye katılımını artıracaktır. Spiritüel iyi oluşun sağlık sistemlerinin önemli ama sıklıkla ihmal edilen bir boyutu olduğu göz önüne alındığında, bu alana yönelik bütüncül yaklaşımların geliştirilmesi; ergenlerin yalnızca hastalıkla değil, yaşamla da daha sağlıklı bir bağ kurmalarına katkı sağlayacaktır.

Özet

İyi oluş, bireyin yaşamını olumlu değerlendirdiği, olumlu duyguların yüksek, olumsuz duyguların düşük olduğu; yaşam doyumu ve psikolojik işlevselliğin sağlandığı bir psikolojik durumdur. Kentleşmenin hızlanmasıyla birlikte yerleşim alanları doğadan uzaklaşmış, plansız yapılaşma ve yoğunluk artışı yeşil alanların azalmasına neden olmuştur. Bu durum, bireylerin doğayla ilişkisini zayıflatarak stres ve gerginlik düzeyini artırmaktadır. Bu bağlamda, fiziksel çevrede yapılacak düzenlemelerle bireylerin iyi oluş hâlinin desteklenmesi günümüz kent yaşamında önemli bir ihtiyaç hâline gelmiştir. Bu çalışmada, Türkiye'deki tüm nüfusun belirlenen özelliklere sahip müstakil konutlarda yaşamasını temel alan bir matematiksel modelleme oluşturulması amaç edinilmiştir. Geliştirilen model aracılığıyla, denklemde yer alan değişkenlerin (kullanılacak arazi alanı ve evde yaşayan ortalama birey sayısı) farklı değerler alması durumunda ortaya çıkabilecek senaryolar incelenecek ve bu değişikliklerin mümkün olup olamayacağı değerlendirilecektir. Yapılan çalışmalar incelendiğinde Türkiye nüfusunun tamamının müstakil evde yaşaması durumu ile ilgili herhangi bir modelleme çalışmasına rastlanmamıştır. Bu çalışmada yapılan modelleme bu anlamda önem arz etmektedir. Çalışmanın temel amacı, farklı değişkenler doğrultusunda (ev için kullanılacak arazi alanı ve evde yaşayan ortalama birey sayısı) nasıl senaryolar oluşturulabileceğini analiz ederek, bu durumun mümkün olup olmadığı belirlemek ve afetlere dayanıklı, sürdürülebilir ve yaşanabilir bir kentsel dönüşüm modeli geliştirmektir. Çalışmanın yöntemi matematiksel modelleme olarak belirlenmiştir. Yerleşim kurulabilecek arazinin alanı 175963235000 m² olarak hesaplanmıştır. Bu modelleme için 2 farklı senaryo ve her senaryoda 4 farklı durum ele alınmıştır. Her iki senaryo için modellemeye göre yapılabilecek ev sayısından ihtiyaç duyulan ev sayısı çıkarıldığında dört farklı durum için pozitif sayı elde edilmiştir. Bu durum ortayakonulan bu modellemenin barınma ihtiyacına ev sayısı açısından uygun olduğunu ortaya koymaktadır. Yerleşim kurulan arazilerde her evin yeşil alanı olacağı için kesintisiz tüm Türkiye arazisinin %11.28'ini oluşturan bir yeşil alan olacağı belirlenmiştir.

Anahtar kelimeler: modelleme, müstakil ev, yerleşim alanı, sürdürülebilir şehirler

From Gray Cities to Green Living: Detached House Modeling for Türkiye's Population

Abstract

Well-being is a psychological state in which the individual evaluates his/her life positively; positive emotions are high, negative emotions are low; life satisfaction and psychological functionality are provided. With the acceleration of urbanisation, residential areas have moved away from nature, unplanned construction and density increase have led to a decrease in green areas. This situation weakens the relationship of individuals with nature and increases the level of stress and tension. In this context, supporting the well-being of individuals through arrangements to be made in the physical environment has become an important need in today's urban life. In this study, it is aimed to create a mathematical modelling based on the fact that the entire population in Turkey lives in detached houses with specified characteristics. Through the developed model, the scenarios that may arise if the variables in the equation (land area to be used and the average number of individuals living in the house) take different values will be examined and it will be evaluated whether these changes are possible or not. When the previous studies are analysed, no modelling study has been found for the case where the entire population of Turkey lives in detached houses. The modelling performed in this study is important in this sense. The main purpose of the study is to determine whether this situation is possible or not by analysing how scenarios can be created in line with different variables (land area to be used for the house and the average number of individuals living in the house) and to develop a disaster-resistant, sustainable and livable urban transformation model. The method of the study was determined as mathematical modelling. The area of the land where settlement can be established is calculated as 175963235000 m². For this modelling, 2 different scenarios and 4 different situations in each scenario were considered. When the number of houses needed is subtracted from the number of houses that can be built according to the modelling for both scenarios, a positive number is obtained for four different situations. This shows that this modelling is suitable for the housing need in terms of the number of houses. Since each house will have a green area in the lands where settlements are established, it is determined that there will be a green area that constitutes 11.28% of the whole uninterrupted land of Turkey.

Key words: modelling, detached house, residential area, sustainable cities

Giriş

İyi oluş kavramı genel olarak iki araştırma alanı olarak karşımıza çıkmaktadır. Bunlardan biri yaşam kalitesinin niteliğini araştırmaya yönelik bilimsel eğilimin bir parçası olarak 1950'de

başlamış olan öznel iyi oluştur. İkincisi ise 1980’li yıllarda deneysel çalışmalar ile başlamış, zorluklar ile yüz yüze gelindiğinde kendini gerçekleştirme ve anlamlı bir yaşam için kişinin potansiyellerini vurgulayan daha önceki klinik ve yetişkin gelişim psikolojisi teorilerine dayanan psikolojik iyi oluştur.

İyi oluş kavramı ile ilgili çok sayıda tanım ile karşılaşılmaktadır. Genel olarak iyi oluş, bireyin yaşamını olumlu değerlendirdiği; olumlu duyguların yüksek, olumsuz duyguların düşük olduğu; yaşam doyumu ve psikolojik işlevselliğin sağlandığı bir psikolojik durumdur (Diener, 1984). İyi oluşun hangi bağlamda ele alındığı önemlidir. Bu çerçevede iyi oluşu tanımlamak istediğimizde;

Psikolojik iyi oluş, bireyin kendini gerçekleştirme, yaşamda anlam bulma, çevresel ustalık, özerklik, olumlu ilişkiler ve kişisel gelişim gibi temel alanlarda sağlıklı ve dengeli bir işleyiş içinde olmasıdır (Ryff, 1989).

Sosyal iyi oluş, bireyin toplumla olan ilişkilerinde kendini ait, değerli ve işlevsel hissetmesiyle ilgili bir durumdur. Sosyal kabul, toplumsal katkı, toplumsal bütünlük, sosyal entegrasyon ve toplumda anlam bulma gibi boyutları içerir (Keyes, 1998).

Çevresel iyi oluş, bireyin yaşadığı fiziksel çevreyle olan ilişkisini farketmesi, çevresel sürdürülebilirliğe katkı sağlaması ve çevresel tehditlere karşı duyarlılık geliştirilmesiyle ilgilidir. Temiz hava, sağlıklı yaşam alanları, doğayla etkileşim ve ekolojik denge bu boyutun parçalarıdır (Corral-Verdugo ve diğerleri, 2010).

Kentleşmenin hızlanmasıyla birlikte yerleşim alanları doğadan uzaklaşmış, plansız yapılaşma ve yoğunluk artışı yeşil alanların azalmasına neden olmuştur. Bu durum, bireylerin doğayla ilişkisini zayıflatarak stres ve gerginlik düzeyini artırmaktadır. Bu bağlamda, fiziksel çevrede yapılacak düzenlemelerle bireylerin iyi oluş hâlinin desteklenmesi günümüz kent yaşamında önemli bir ihtiyaç hâline gelmiştir (Aydoğdu Bıçak, 2019; Aydoğdu Bıçak ve Çolpan Erkan, 2020).

Kentleşme süreci, dünya genelinde hızla ilerlemekte olup, nüfus artışıyla birlikte büyük şehirlerde yoğun yapılaşmaya ve gri kentlerin yaygınlaşmasına yol açmaktadır. Bu durum, çevresel sürdürülebilirlik, yaşam kalitesi ve afetlere karşı dayanıklılık açısından çeşitli sorunları beraberinde getirmektedir (UN-Habitat, 2022). Günümüzde artan şehirleşme ve nüfus, yeni yerleşim alanlarının oluşturulmasını zorunlu kılmaktadır. Yerleşim alanları artık sadece yatay

yönde değil, çok katlı binaların inşasıyla dikey yönde de genişlemektedir. Şehirlerin bu yatay ve dikey büyümesi, doğal ortamın değişimini beraberinde getirmektedir. İnsanların ve toplumların oluşturduğu sosyal, kültürel, ekonomik ve politik sistemlerin başarısız olması durumunda, doğa kaynaklı afetlerin yaşanma riski artacaktır (Dölek,2016).

1999 Marmara Depremi ve 2023 Kahramanmaraş Depremleri, plansız kentleşmenin ve dayanıksız yapı stoğunun büyük can ve mal kayıplarına yol açtığını göstermiştir. Can ve mal kaybının yanında kentlerin sosyal dokuları da yara almıştır (AFAD, 2023). Afetlere dayanıklı ve sürdürülebilir şehircilik anlayışı, bireylerin güvenli, sağlıklı ve doğayla uyumlu yaşam alanlarına sahip olmasını hedefleyen yaklaşımları içermektedir (Newman, 2006). Son yıllarda yapılan çalışmalar, müstakil konutların deprem, sel ve diğer afetlere karşı daha dirençli olabileceğini ve düşük yoğunluklu yerleşim bölgelerinin riskleri azaltabileceğini ortaya koymuştur (Ewing&Hamidi, 2015). Bu tür yerleşim modellerinin ekonomik, coğrafi ve altyapısal gereklilikleri kapsamlı bir analiz gerektirdiği de göz ardı edilmemelidir.

Matematiksel modelleme, kent planlaması ve sürdürülebilir yerleşim senaryoları oluşturma sürecinde güçlü bir araç olarak kullanılmaktadır. Özellikle, nüfus dağılımı, arazi kullanımı, altyapı planlaması ve afet risk yönetimi gibi konuların modellenmesi, karar vericilere bilimsel verilere dayalı çözümler sunmaktadır (Batty, 2007). Örneğin, Coombes ve Raybould (2001) tarafından yapılan çalışmada, kentsel büyümenin mekansal dağılımı matematiksel modeller ile incelenmiş ve farklı yerleşim senaryolarının sosyal ve çevresel etkileri değerlendirilmiştir. Han ve arkadaşları (2015), Çin için arazi kullanımına yönelik bir senaryo simülasyonu çalışması yapmıştır. Li ve arkadaşları (2008), hızlı kentleşme nedeniyle ortaya çıkan arazi kullanımı sorunlarını analiz etmek ve sürdürülebilir kalkınma stratejilerini değerlendirmek için bir model ortaya koymuş ve Pearl Nehri Deltası'nda hızla genişleyen bir şehirde konut gelişimine yönelik planlama senaryolarının simülasyonlarına uygulamışlardır.

Tutak ve Güder (2014), modellemeyi olayları ve problemleri anlama yolunda çözülmesi gerekenleri akılda sınıflandırıp ilişkilendirerek ve ayırt ederek hem model kullanma hem de meydana getirme süreci olarak tanımlamaktadır. Modelleme yapmaktaki temel amaç model oluşturmak değil; modeller aracılığıyla bir olayın veya problemin anlaşılmasını sağlamaya çalışmaktır (Bukova Güzel, 2016). Modelleme kavramının kapsamında olan matematiksel modelleme, gerçek yaşam problemlerinin değişik hallerdeki modellerinin meydana getirildiği döngüsel bir süreci anlatır (Peter, 2018). Erbaş ve arkadaşları (2014), matematiksel modelleme sürecini Şekil 1'deki gibi aktarmışlardır. Matematiksel modelleme yapılırken gündelik olaylar ve birbirleri arasındaki bağlantılar matematiksel olarak gösterilir ve matematiksel örüntüler ortaya konur (Urhan ve Dost, 2016).

Şekil 1: Matematiksel Modelleme Süreci

Matematiksel model, belli bir amaç için oluşturulmuş ve gerçeğin bir parçasıyla ilişkili olan soyut, basitleştirilmiş bir yapıdır. Başka bir ifade ile matematik dilini kullanarak gerçeğin taklit edilmesidir (Bender(1978)’den aktaran Akgün ve diğerleri,2013). Gerçek dünya ile matematik arasında çeviri yapma olarak ele alınan matematiksel modelleme son birkaç on yılda matematik eğitimde en çok tartışılan ve ele alınan konulardan biridir (Blum ve Borromeo Ferri,2009). Matematiksel modellemenin matematikteki yeri ve önemi birçok matematik eğitimcisi ve NCTM tarafından vurgulanmaktadır (Kertil, 2008). Matematiksel modelleme günümüzde sadece matematik alanında değil, teknoloji, mimarlık, ekonomi, mühendislik, tıp ve daha birçok farklı alanlarda matematiksel modelleme kullanılmaktadır (Tutak ve Güder,2014).

Birgün ve Öztürk (2021)’ün çalışmasında Türkiye’de 2010-2020 yılları arasında matematiksel modelleme konusunda yapılan toplam 160 çalışma (63 yüksek lisans tezi, 26 doktora tezi ve 71 makale) incelemeye alınmış ve farklı açılardan değerlendirilmiştir. Matematiksel modelleme üzerine yapılan çalışmalar incelendiğinde matematik öğretmeni adaylarının konu ile algıları, farkındalıkları gibi çok sayıda çalışma olduğu görülmüştür. Matematiksel modelleme üzerine yapılan çalışmaların aynı zamanda matematik, fizik, kimya, biyoloji, tıp, bankacılık, şehir planlama ve mühendislik gibi çeşitli alanlarda da modellemenin ele alındığı görülmektedir.

Yapılan çalışmalar incelendiğinde Türkiye nüfusunun tamamen müstakil evde yaşaması durumu ile ilgili herhangi bir modelleme çalışmasına rastlanmamıştır. Bu projede yapılan modelleme bu anlamda önem arz etmektedir.

Türkiye yükseltisi oldukça fazla olan (ortalama yükselti 1141 m) ve kabaca dikdörtgen şeklinde bir ülkedir. Bu alanın çok önemli bir kısmını meydana getiren dağlık sahalar ana

hatlarıyla kuzeyde (Kuzey Anadolu Dağları) ve güneyde (Toros Dağları) doğu-batı yönünde uzanırlar. Doğu Anadolu Bölgesi bütünüyle dağlık ve yüksek bir bölgedir. Buradaki dağlık alanlar arasına yüksek ovalar yerleşmiştir. Ülkenin batısında ise doğu-batı doğrultusundaki dağlık alanlar arasında aynı doğrultudaki depresyonlar yer alır (Url 2).

Eskiden de yaygın olmakla beraber özellikle yaşanan depremlerden sonra müstakil evlere daha çok talep gösterildiği söylenebilir. Müstakil terimi emlak literatüründe çoğunlukla “müstakil ev” olarak kullanılmakla birlikte müstakil evler genellikle arsa üzerine sıfırdan inşa edilen yapılardır. Çoğunlukla mülkiyetinin bir kişiye ait olduğu müstakil yapılarda, apartman dairelerinde olduğu gibi alt ve üst katlarda ayrı daireler olmaz. Müstakil evler genellikle bir ya da iki kattan oluşur. Plansız Alanlar Tip İmar Yönetmeliği gereğince her müstakil konutta en az 1 oturma odası, 1 yatak odası veya nişi, 1 mutfak veya yemek pişirme yeri, 1 banyo ve 1 tuvalet bulunması gerekir. Bazen üç katlı tripleks müstakil evlere de rastlanabilir. Bu tip müstakil evlere en iyi örnek, villa tipindeki yapılardır (Url 3).

Türkiye'nin toplam nüfusu Adrese Dayalı Nüfus Kayıt Sistemi (ADNKS) sonuçlarına göre 2023 yıl sonu itibarıyla 85 372 377 kişidir (Url 1). Türkiye'nin yüzölçümü Milli Savunma Bakanlığı Harita Genel Müdürlüğü verilerine göre 780 043 km²'dir (Url 4). TÜİK'in 2022 yılı verilerine göre ülkemizin 384 620 km²'lik kısmı tarım alanı olarak belirlenmiştir (Url 5). Çevre ve Orman Bakanlığı'nın 2004 yılında yayınladığı Türkiye Çevre Atlası'na göre Türkiye'nin deniz seviyesinden oldukça yüksek bir bölgede yer alması ve Doğu Avrupa ülkelerinin tersine deniz seviyesi ile 250 m arasındaki alçak alanlar, yurdumuzun ancak % 10'unu kaplarken 1000 m'den yüksek alanlar toplam yüzeyin % 55.5'ini kaplar. 2000 m'den yüksek alanlar ise, Türkiye'nin toplam yüzölçümünün % 10'u kadardır.

Bu çalışma, Türkiye'deki tüm nüfusun belirlenen özelliklere sahip müstakil evlerde yaşaması durumunda ortaya çıkabilecek olasılıkları incelemek amacıyla matematiksel bir model geliştirmeyi hedeflemektedir. Çalışmanın temel amacı, farklı değişkenler doğrultusunda (ev için kullanılacak arazi alanı ve evde yaşayan ortalama birey sayısı) nasıl senaryolar oluşturulabileceğini analiz ederek, bu durumun mümkün olup olmadığı belirlemek ve afetlere dayanıklı, sürdürülebilir ve yaşanabilir bir kentsel dönüşüm modeli geliştirmektir.

Yöntem

Projenin yöntemi matematiksel modelleme olarak belirlenmiştir. Öncelikle Türkiye'ye dair şu bilgilere ulaşılmıştır:

-Nüfusu

-Yüzölçümü

-Tarım Alanı

-1000 m'den yüksek alanların toplam yüzeyin alanına oranı

Türkiye'nin yüzölçümünden tarım alanları çıkartılarak tarım alanı olmayan alan hesaplanmıştır. Tarım alanı olmayan kısmın 1000 m ve altında olan bölgelerde yerleşim alanı kurulabileceği kabul edilmiştir. Yerleşim alanı kurulabileceği kabul edilen bu alanı hesaplamak için tarım alanı olmayan alanın % 44.5'i hesaplanmıştır. Veri girişi ve hesaplamalar için Excel programı kullanılmıştır.

Modelleme ile ilgili iki farklı senaryo ve her senaryo için dört farklı durum belirlenmiştir. Her evde yaşayan ortalama birey sayısı 4 kişi olacak şekilde sabitlenerek arazi alanları 1000, 750, 500 ve 250 metrekare olacak şekilde modellemeler yapılmıştır. Müstakil evlerin arazi alanlarının her birinin 1000 metrekare olarak sabitlenip, evde yaşayacak ortalama birey sayısının 5, 3, 2 ve 1 kişi olmasına dair dört farklı durum belirlenmiştir.

Yerleşim kurulabilecek alan müstakil evin yapılacağı arsanın alanına bölünerek modellemeye göre yapılabilecek ev sayısı belirlenmiştir. Toplam nüfus her evde yaşayan ortalama birey sayısına bölünerek ihtiyaç duyulan ev sayısı belirlenmiştir. Modellemeye göre yapılabilecek ev sayısından ihtiyaç duyulan ev sayısı çıkarılarak elde edilen fark belirlenmiştir.

Ev yapılacak arazinin alanının yarısının yeşil alan olarak bırakılacağı kabul edilmiştir. Evin arazisinin alanının yarısı ile modellemeye göre yapılabilecek ev sayısı çarpılarak sadece evlere ait toplam yeşil alan arazisi hesaplanmıştır.

Bulgular

Türkiye'nin yüzölçümünden tarım alanı arazi miktarı çıkarılarak tarım alanı olmayan arazi 395423000000 m² olarak hesaplanmıştır. Yerleşim kurulabilecek arazinin alanı 175963235000 m² olarak hesaplanmıştır. Tablo 1 'de görüleceği gibi nüfus, Türkiye'nin yüzölçümü ve yerleşim kurulabilecek arazinin alanı sabit değişkenler olarak yer almaktadır.

Tablo 1: Modelleme Senaryoları ve Elde Edilen Veriler

		Nüfus	Türkiye Yüz Ölçümü (m²)	Yerleşim Kurulabilecek Arazi (m²)	Müstakil Evin Yapılacağı Arazi (m²)	Herbir Evde Yaşayan Ortalama Kişi Sayısı	Modellemeye Göre Yapılabilecek Ev Sayısı (x)	İhtiyaç Duyulan Ev Sayısı (y)	x-y	Sadece Evlere Ait Toplam Yeşil Alan Arazisi (m²)

	Durum 2	85372377	780043000000	175963235000	1000	3	175963235,00	28457459,00	147505776,00	87981617500
	Durum 3	85372377	780043000000	175963235000	1000	2	175963235,00	42686188,50	133277046,50	87981617500
	Durum 4	85372377	780043000000	175963235000	1000	1	175963235,00	85372377,00	90590858,00	87981617500
Tarım Alanı (m²)										
384620000000,00										
Tarım Alanı Olmayan Arazi (m²)				Sadece Evlere Ait Toplam Yeşil Alan Arazisinin Türkiye Yüz Ölçümüne Oranı (%)						
395423000000,00				11,28						

Senaryo 1 için her bir evde yaşayan ortalama kişi sayısı 4 kabul edilerek bu değişken de sabit tutulmuştur. Senaryo 1’de her bir müstakil evin yapılacağı arazinin tamamının 1000, 750, 500 ve 250’şer m² olması durumları ele alınmıştır.

Tablo 2: Senaryo 1

	Müstakil Evin Yapılacağı Arazi (m²)	Modellemeye Göre Yapılabilecek Ev Sayısı (x)	İhtiyaç Duyulan Ev Sayısı (y)	
Senaryo 1	Durum 1	1000	175963235,00	21343094,25
	Durum 2	750	234617646,67	21343094,25
	Durum 3	500	351926470,00	21343094,25
	Durum 4	250	703852940,00	21343094,25

Senaryo 1’e göre ihtiyaç duyulan ev sayısı 21343094 adet ev olarak hesaplanmıştır ve dört durum için de eşittir. Müstakil evin yapılacağı arazinin alanının değiştiği bu senaryoda dört farklı durum için modellemeye göre yapılabilecek ev sayısı Tablo 2’de yer almaktadır.

Tablo 3: Senaryo 1'e Ait Ev Sayısı ve İhtiyaç

		Müstakil Evin Yapılacağı Arazi (m ²)	Modellemeye Göre Yapılabilecek Ev Sayısı (x)	İhtiyaç Duyulan Ev Sayısı (y)	x-y
Senaryo 1	Durum 1	1000	175963235,00	21343094,25	154620140,75
	Durum 2	750	234617646,67	21343094,25	213274552,42
	Durum 3	500	351926470,00	21343094,25	330583375,75
	Durum 4	250	703852940,00	21343094,25	682509845,75

Senaryo 1 için modellemeye göre yapılabilecek ev sayısından ihtiyaç duyulan ev sayısı çıkarıldığında Tablo 3'te görüldüğü gibi dört farklı durum için pozitif sayı elde edilmiştir.

Tablo 4: Senaryo 2

		Her Evde Yaşayan Ortalama Kişi Sayısı	Modellemeye Göre Yapılabilecek Ev Sayısı (x)	İhtiyaç Duyulan Ev Sayısı (y)
Senaryo 2	Durum 1	5	175963235,00	17074475,40
	Durum 2	3	175963235,00	28457459,00
	Durum 3	2	175963235,00	42686188,50
	Durum 4	1	175963235,00	85372377,00

Senaryo 2'de modellemeye göre yapılabilecek ev sayısı 175963235 adet ev olarak hesaplanmıştır ve dört durum için de eşittir. Her bir müstakil evde yaşayan ortalama kişi sayısının değiştiği bu senaryoda dört farklı durum için modellemeye göre ihtiyaç duyulan ev sayısı Tablo 4'te yer almaktadır.

Tablo 5: Senaryo 2'ye Göre Ev Sayısı ve İhtiyaç

		Her Evde Yaşayan Ortalama Kişi Sayısı	Modellemeye Göre Yapılabilecek Ev Sayısı (x)	İhtiyaç Duyulan Ev Sayısı (y)	x-y
Senaryo 2	Durum 1	5	175963235,00	17074475,40	158888759,60
	Durum 2	3	175963235,00	28457459,00	147505776,00
	Durum 3	2	175963235,00	42686188,50	133277046,50
	Durum 4	1	175963235,00	85372377,00	90590858,00

Senaryo 2 için modellemeye göre yapılabilecek ev sayısından ihtiyaç duyulan ev sayısı çıkarıldığında Tablo 5'te görüldüğü gibi dört farklı durum için pozitif sayı elde edilmiştir.

Her iki senaryoda ev arazilerinin yarısının yeşil alan olması şartı belirlenmişti. Tablo 1 incelendiğinde sadece evlere ait toplam yeşil alan arazisinin her senaryo ve durumda eşit ve 87981617500 m² olduğu görülmüştür. Yerleşim kurulabilecek arazide bulunan bu alan aynı zamanda tüm Türkiye arazisinin %11.28'ini oluşturmaktadır (Tablo 1).

Tartışma ve Sonuç

Türkiye'nin yüzölçümünden tarım alanı arazi miktarı çıkarılarak tarım alanı olmayan arazi 395423000000 m² olarak hesaplanmıştır. Yerleşim kurulabilecek arazinin alanı 175963235000 m² olarak hesaplanmıştır.

Senaryo 1 için her bir evde yaşayan ortalama kişi sayısı 4 kabul edilmiş evin yapılacağı arazinin tamamının 1000, 750, 500 ve 250'şer m² olması durumunda sırasıyla 175963235,00; 234617646,67; 351926470,00 ve 703852940,00 adet ev yapılabileceği sonucuna ulaşılmıştır. Toplam nüfus ve her bir evde yaşayan ortalama kişi sayısı sabit olduğundan Senaryo 1'de dört farklı durum için ihtiyaç duyulan toplam ev sayısı aynı ve 21343094,25 olarak bulunmuştur.

Senaryo 1 için modellemeye göre yapılabilecek ev sayısından ihtiyaç duyulan ev sayısı çıkarıldığında dört farklı durum için pozitif sayı elde edilmiştir. Elde edilen sayıların pozitif olması modellemeye göre yapılacak olan ev sayısının dört farklı durumda da ihtiyaç duyulan ev sayısından fazla olduğunu gösterir. Bu durum ortaya konulan bu modellemenin barınma ihtiyacına ev sayısı açısından uygun olduğunu gösterir. Bu şekilde olması barınmanın ev sayısı açısından sorun olmayacağını gösterir.

Senaryo 2'de modellemeye göre yapılabilecek ev sayısı 175963235,00 adet ev olarak hesaplanmıştır. Yüz ölçümü ve müstakil evin yapılacağı arazi alanı sabit olduğundan dört durum için de eşittir. Her bir müstakil evde yaşayan ortalama kişi sayısının değiştiği bu senaryoda dört farklı durum için ihtiyaç duyulan ev sayısı ortalama 5, 3, 2 ve 1 bireyin yaşadığı durumlara göre sırasıyla 17074475,40; 28457459,00; 42686188,50 ve 85372377,00 olarak hesaplanmıştır.

Senaryo 2 için modellemeye göre yapılabilecek ev sayısından ihtiyaç duyulan ev sayısı çıkarıldığında dört farklı durum için pozitif sayı elde edilmiştir. Elde edilen sayıların pozitif olması modellemeye göre yapılacak olan ev sayısının dört farklı durumda da ihtiyaç duyulan ev sayısından fazla olduğunu gösterir. Bu durum ortaya konulan bu modellemenin barınma ihtiyacına ev sayısı açısından uygun olduğunu gösterir. Bu şekilde olması barınmanın ev sayısı açısından sorun olmayacağını gösterir.

Her iki senaryoda sadece evlere ait toplam yeşil alan arazisinin her senaryo ve durumda eşit ve 87981617500 m² olduğu görülmüştür. Yerleşim kurulabilecek arazide bulunan bu alan aynı zamanda tüm Türkiye arazisinin %11.28'ini oluşturmaktadır. Bu oran yerleşim kurulan arazilerde her evin yeşil alanı olacağı için kesintisiz tüm Türkiye arazisinin %11.28'ini oluşturan bir yeşil alan olacağını göstermektedir. Yerleşim alanlarının dışında da tarım ve yeşil alanlar olacağı düşünüldüğünde kesintisiz ve yüksek oranda bir yeşil alan ülkeyi kaplayacaktır. Bu da erozyon oluşumunu engelleyen bir durum ortaya koyacaktır. Sürdürülebilir, doğa dostu bir yerleşim planı ortaya konularak her anlamda daha sağlıklı bir yaşam sürülmesine imkan sağlayacaktır. Sürdürülebilir, doğa dostu bir ortamda yaşayan sağlıklı bireylerin psikolojik ve çevresel iyi oluş açısından olumlu bir durumda olması kaçınılmaz görünmektedir.

Bu çalışma başka değişkenler kullanılarak yapılabilir. Bunun yanında bu çalışmada yer verilen değişkenlerin değerleri değiştirilerek çalışma genişletilip geliştirilebilir. Elde edilen sonuçlar farklı modellemelerde veri olarak değerlendirilip başka analizler yapılabilir.

Özet

Kanser, küresel halk sağlığı açısından büyük önem taşıyan çok boyutlu bir hastalıktır. Hem bireylerin günlük yaşamını hem de dünyayla etkileşim biçimlerini derinden etkiler. Uzun ve zorlu tedavi süreçleri fiziksel acının yanı sıra hastalar ve aileleri üzerinde ağır bir psikolojik yük oluşturur. Bu durum hastaların psikolojik iyi oluşunu olumsuz etkileyerek çeşitli psikiyatrik rahatsızlıklara yol açabilir. Kanser hastalarının ruh sağlığı desteği, tedavi başarıları kadar öncelikli bir gereksinimdir. Buna karşın tıbbi tedavilerdeki ilerlemelere rağmen psikolojik destek hizmetlerinin kapsamı sıklıkla yeterli düzeyde değildir. Günümüzde tele- sağlık ve mobil sağlık uygulamaları gibi dijital ruh sağlığı çözümleri, hastaların ve bakım verenlerin psikolojik iyi oluşunu desteklemek amacıyla giderek yaygınlaşmaktadır. Dijital ruh sağlığı, kanser hastalarının ruh sağlığını, psikolojik iyilik halini ve yaşam kalitesini iyileştirmek için kişi merkezli ve ihtiyaç odaklı sağlık müdahaleleri sunma konusunda dönüştürücü bir potansiyele sahiptir. Özellikle dijital ruh sağlığı uygulamaları, hastaların kişisel gelişimlerini güçlendirme, onlara daha fazla özerklik ve öz kabul sağlama, çevresel hakimiyetlerini ve sosyal ilişkilerini geliştirmelerine ve yaşamlarının anlamını bulmalarına olanak tanımaktadır. Birçok literatür incelemesi, sağlık teknolojisinin bakım sonuçlarını, iletişimi ve bakım kalitesini desteklemedeki rolünü araştırmıştır. Ancak, kanser hastalarının psikolojik iyilik hallerine ve teknolojinin onların ruhsal iyilik hallerini nasıl destekleyebileceğine çok az dikkat edilmiştir. Bu nedenle, dijital sağlığın kanserli hastaların ruhsal sağlığını nasıl destekleyebileceğini daha iyi anlamak için mevcut bilgi tabanını genişletmek esastır. Bu amaç doğrultusunda bu bildiri derleme çalışması, kanser hastalarının ruhsal sağlığı ve psikolojik iyilik halini desteklemek için dijital ruh sağlığı uygulamasına yönelik bilgi vermek, koruyucu önlemlere yönelik araştırmaların planlanması ve uyarlanabilir stratejilerin geliştirilmesi amacıyla yazılmıştır.

Anahtar Sözcükler: Dijital ruh sağlığı, kanser, psikolojik iyi oluş, ruh sağlığı

Abstract

Cancer is a multidimensional disease of great importance in terms of global public health. It deeply affects both the daily lives of individuals and the way they interact with the world. Long and difficult treatment processes create a heavy psychological burden on patients and their families in addition to physical pain. This situation negatively affects the psychological well-being of patients and can lead to various psychiatric disorders. Mental health support for cancer patients is a priority need as much as treatment success. However, despite advances in medical treatments, the scope of psychological support services is often inadequate. Today, digital mental health solutions such as telehealth and mobile health applications are increasingly widespread in order to support the psychological well-being of patients and their caregivers. Digital mental health has a transformative potential in providing person-centered and needs-oriented health interventions to improve the mental health, psychological well-being and quality of life of cancer patients. In particular, digital mental health applications enable patients to strengthen their personal development, provide them with greater autonomy and self-acceptance, improve their environmental mastery and social relationships, and find meaning in their lives. Many literature reviews have investigated the role of health technology in supporting care outcomes, communication, and quality of care. However, little attention has been paid to the psychological well-being of cancer patients and how technology can support their mental well-being. Therefore, it is essential to expand the current knowledge base to better understand how digital health can support the mental health of cancer patients. To this end, this abstract is written to inform the application of digital mental health to support the mental health and psychological well-being of cancer patients, to plan research on preventive measures, and to develop adaptive strategies.

Keywords: Cancer, digital mental health, mental health, psychological well-being

Giriş

Kanser, günlük yaşamı, insanların dünyayla etkileşim ve deneyimleme biçimini etkileyen çok yönlü küresel bir hastalıktır (Elkefi ve ark., 2023). Amerika Birleşik Devletleri'nde 2022 yılında 1.918.030 yeni kanser vakası ve 609.360 kanser ölümü olduğu belirtilmiştir (Ferlay ve ark., 2021). Yapılan çalışmalar her 100.000 kişi için 439 yeni kanser vakası olduğunu ve bunlardan 146 kişinin kanserden öldüğü bildirilmiştir (Elkefi ve ark., 2023). Fiziksel acıya ek olarak, kanser hastaları psikiyatrik sendromlar geçirebilir veya önemli sıkıntı bileşenleri

olarak kabul edilen önceden var olan durumların kötüleşmesini yaşayabilirler(Kadan ve ark., 2005). Ölüm korkusu ve beklenen kayıplar, yaşam kalitelerini etkileyebilecek duygusal sıkıntı, kaygı ve depresyona yol açabilir(Elkefi ve ark., 2023). Kanserli hastalarda bütünsel bakımı planlamak, hastanın yaşam kalitesini iyileştirmek, ortaya çıkan engellilikle başa çıkmak ve psikolojik iyi oluşlarını artırmak için önemlidir(Bringmann ve ark., 2008). Psikolojik sıkıntının hastaların bakım ve yaşam kalitesini olumsuz olarak etkilediği belirtilmektedir. Tedavi seçenekleri ve sonuçlarındaki gelişmelere rağmen, kanser hastaları için psikolojik hizmetler ve destek geride kalmıştır(Ebob-Any ve Bassah, 2022). Çalışmalar ayrıca kanser hastaları arasındaki psikolojik sıkıntının fiziksel sağlıkları ve tedaviye uyumları üzerinde olumsuz bir etkiye sahip olduğunu göstermiştir(Deshields ve ark., 2014). Meme kanseri olan kadınlarla yapılan çalışmalarda, hastaların psikolojik iyi oluşlarının yüksek olması tedaviye uyumunu artırdığı ve tedavi sonuçlarını iyileştirdiği belirtilmiştir(Antoni ve ark., 2006).

Kanser hastalarına yönelik psikiyatrik desteğin artırılmasının önemi üzerinde durulmaktadır. Ancak, yüz yüze terapi veya psikiyatrik destek gibi geleneksel zihinsel sağlık müdahaleleri, maliyet, konum ve zihinsel sağlık profesyonellerinin bulunabilirliği nedeniyle çoğu kişi için genellikle erişilemezdir(Alodhialah ve ark., 2024).Bu erişilebilirlik sorununa yanıt olarak, dijital ruh sağlığı müdahaleleri umut verici bir çözüm olarak ortaya çıkmıştır. Bu müdahaleler, özellikle kanser hastaları için ruh sağlığına daha erişilebilir, esnek ve ölçeklenebilir bir yaklaşım sunmaktadır. Dijital ruh sağlığı müdahaleleri, mobil uygulamalar, çevrimiçi bilişsel davranışçı terapi, telepsikiyatri ve hatta sanal gerçeklik terapisi dahil olmak üzere çok çeşitli araçları kapsamaktadır. Bu araçların her biri, bireyin özel ihtiyaçlarına, ruh sağlığı semptomlarının şiddetine ve yaşadıkları sıkıntı düzeyine bağlı olarak değişen düzeylerde etkinliğe sahiptirler(Alodhialah ve ark., 2024). Psikolojik iyi oluşu artırmak için tasarlanmış mobil sağlık uygulamaları ve platformları, hastaların tedavi durumunu izlerken aynı zamanda ruh sağlığı desteği almalarını sağlamaktadır(Lattie ve ark., 2022). Hastalar, dijital sağlık teknolojilerinin yardımıyla hastalıkları ile ilgili daha fazla bilgi sahibi olmaya başlamışlardır. Özellikle dijital uygulamalar kullanılarak kanser hastalarının eğitimi ve sağlık profesyonelleriyle etkili iletişimi sağlanmalıdır(Clauserve ark., 2011).

Birçok literatür incelemesi, dijital sağlık teknolojisinin bakım sonuçlarını, iletişimi ve bakım kalitesini desteklemedeki rolünü araştırmıştır(Jiang ve ark., 2021; ElKefi ve Asan, 2021) Ancak, kanser hastalarının psikolojik iyilik hallerine ve teknolojinin onların ruhsal iyilik

hallerini nasıl destekleyebileceğine çok az değinilmiştir. Bu nedenle, dijital uygulamaların kanserli hastaların ruhsal sağlığını nasıl destekleyebileceğini daha iyi anlamak için mevcut bilgi

tabanını genişletmek esastır. Bu nedenle, kanser hastalarının psikolojik iyi oluşlarının geliştirilmesinde dijital ruh sağlığının rolünün anlamak önemlidir. Özellikle entegre bir bakım modeli oluşturmak için hemşirelerin, diyetisyenlerin, ve ruh sağlığı uzmanlarının dijital araçların kullanımını desteklemedeki rollerinin daha iyi anlaşılması gerekir(Gómez-Velasco ve ark., 2019). Bu derleme çalışmasında, kanser hastalarında psikolojik iyi oluşun artırılmasında dijital ruh sağlığının rolü hakkında bilinenler açıklanmakta ve sorunu ele almak için bir dizi halk sağlığı politikası önerilmektedir.

1. Psikolojik İyi Oluş

Psikolojik iyi oluş, psikolojik, duygusal ve sosyal yönlerden oluşan çok boyutlu bir yapıdır. Psikolojik iyi oluşun altı boyutu vardır. Bu boyutlardan biri olan "Başkalarıyla Olumlu İlişkiler", bireylerin içtenlikle değer verdikleri başkalarıyla olumlu, güvenilir bir ilişki kurma yeteneğini ifade eder. Bir diğer boyut olan "Çevresel Uсталık", kişisel ihtiyaçlara ve değerlere uygun bağlamları seçme veya oluşturma yeteneğini ifade eder. "Kişisel Gelişim", bireylerin karşılaştıkları zorlukların üstesinden gelme potansiyellerinin farkında olmaları, büyüme ve genişleme arzusunu ifade eder. "Yaşamdaki Amaç", yönlendirilmişlik duygusunu, bireylerin belirlediği yaşam hedefleri doğrultusunda hareket etmeyi ifade eder. "Öz Kabul" boyutu, bireylerin iyi ve kötü nitelikler de dahil olmak üzere benliklerinin birden fazla yönünü kabul etmelerini ve onaylamalarını ifade eder. Son olarak, "Özerklik" kendi kendini belirleme ve bağımsız olma, yani kişinin kendi başına karar alma ve belirli şekillerde düşünme ve hareket etme becerisini ifade eder(Keyes ve ark., 2002). Psikolojik iyi oluş kavramı, bireyin olumlu ve güvenilir kişilerarası ilişkiler geliştirebildiği ve sürdürebildiği, hayatta bir amaca ve kendini kabul etme duygusuna sahip olduğu, kişisel gelişim için sürekli çalıştığı ve hayattan tatmin aldığı bir iyi oluş hali olarak tanımlanmaktadır(Keyes ve ark., 2002). Psikolojik iyi oluş, bireylerin etkili bir şekilde iletişim kurmalarına, başarıya ulaşmalarına, mali durumlarını iyileştirmelerine, sağlıklarını korumalarına ve kişisel gelişimlerini olumlu yönde etkileyecek yönelimlere sahip olarak hayatlarını daha yaşanabilir hale getirmelerine yardımcı olur. Psikolojik iyi oluş düzeyleri yüksek olan bireylerin en belirgin özelliği, hayata karşı olumlu bir bakış açısına sahip olmalarının yanı sıra mutluluğa ulaşabilmeleri ve bunu sürdürebilmeleridir(Yiğit ve Çakmak, 2024).Bireyin optimum işleyişine odaklanan psikolojik iyi oluş kavramı, psikolojik sıkıntı, depresyon ve işlev bozukluğundan ziyade olumlu işlevleri ifade eder ve yüksek düzeyde esnekliğe, pozitifliğe ve güçlü sosyal bağlara dikkat çeker(Dhanabhakya ve Sarath, 2022). Bireyin genel mutluluğunu, yaşam memnuniyetini, yaşam amacını, zihinsel ve duygusal sağlığını kapsayan çok yönlü bir yapıdır(Dhanabhakya ve Sarath, 2022). Psikolojik iyi oluş için, bireyin potansiyelini ve güçlü yönlerini

gerçekleştirebileceği ve buna göre gelişebileceği bir ortam gereklidir. Yüksek düzeyde psikolojik iyi oluşa sahip bireyler, yaşamlarında amaç, anlam ararlar ve diğer insanlarla olumlu ilişkiler kurarlar. Ayrıca, bu bireyler, kendilerine güvendikleri ve bağımsız oldukları için ulaşmak istedikleri hedefler doğrultusunda doğru kararlar alabileceklerini düşünürler(Yiğit ve ark., 2024). Seligman (2004), psikolojik iyi oluşun olumlu duyguları ve aktiviteleri bir araya getirdiğini belirtmiştir. Bazı araştırmacılar, yüksek düzeyde yaşam doyumuna sahip olmanın ve olumlu duygular yaşarken düşük düzeyde olumsuz duygular yaşamamanın iyi oluşu gösterdiğini belirtmektedirler(Yiğit ve ark., 2024). Araştırmacılar, psikolojik iyilik halinin çeşitli boyutları değiştirilebildiğinden, kanser gibi tıbbi rahatsızlıkları olan bireylerde fiziksel sağlığı iyileştirmek için bir strateji olarak psikolojik iyilik halini hedefleyen müdahaleleri önermişlerdir(Carr ve ark., 2021).

2. Dijital Ruh Sağlığı

Dijital uygulamalar gibi yeni yenilikler önleme ve tedavi müdahaleleri olarak ruh sağlığının geliştirilmesinde büyük öneme sahiptirler(Acyhtes ve ark., 2023). Özellikle COVID-19 döneminde dijital uygulamaların kullanımı yaygınlaşmıştır(Smith ve ark., 2023). Dijital ruh sağlığı, zihinsel sağlık koşullarını desteklemek ve iyileştirmek, sağlığı geliştirme, önleme, erken müdahale, tedavi ve nüksetmeyi önleme dahil olmak üzere zihinsel sağlık bakımı sağlamak için dijital teknolojilerin kullanılması olarak anlaşılabilir(Brunt ve Gale-Grant, 2023). Dijital ruh sağlığı, izleme ve değerlendirme, görüntülü konferans danışmanlığı, psikoterapi ve mesleki eğitim (e-öğrenme ve e-denetim) olmak üzere çok çeşitli yöntemleri kapsar. Bu bağlamda, sağlık sonuçlarını iyileştirmek veya sağlık hizmeti sunumunu kolaylaştırmak için çeşitli teknolojiler (telefon, mobil cihazlar, uygulamalar, görüntülü konferans, sohbet yazılımları, psikolojik değerlendirme, destek ve müdahale platformları, yapay zeka, sanal gerçeklik, giyilebilir cihazlar, vb.) kullanılmaktadır(Acyhtes ve ark., 2023).

Dijital ruh sağlığının ruh sağlığı bakımına erişimi artırma, eşitsizlikleri ortadan kaldırma ve tedavi sunum maliyetlerini düşürme potansiyeli nedeniyle, bu alana olan ilgi ve araştırma son yıllarda katlanarak artmıştır(Brunt ve Gale-Grant, 2023). Çok sayıda randomize kontrollü çalışma internet müdahaleleri, görüntülü konferans danışmanlığı ve psikoterapi alanlarında etkili olduğuna dair güçlü kanıtlar sunmuşlardır(Bashshur ve ark., 2016;Shore, 2020). İnternet müdahaleleri, sağlık ve ruh sağlığıyla ilgili yardım sağlamayı amaçlayan, kendi kendine yardım, rehberli veya rehbersiz, teknoloji destekli müdahalelerdir(Bashshur ve ark., 2016). Bunların her zamanki tedaviden daha etkili olduğu ve çeşitli durumlar için yüz yüze terapiler kadar etkili olduğu bulunmuştur(örneğin, yaygın anksiyete bozukluğu, depresyon, kanserle ilgili sıkıntı)(Acyhtes ve ark., 2023; Shore, 2020). Video konferans yoluyla sunulan

danışmanlık ve psikoterapiye ilişkin olarak, daha önceki sistematik incelemeler farklı popülasyonlarda (örneğin çocuklar, yetişkinler ve yaşlı yetişkinler), coğrafyalarda (örneğin kentsel ve kırsal), bakım ortamlarında (örneğin birincil sağlık bakımı ortamları ve klinikleri) ve ruh sağlığı koşullarında (örneğin kaygı, depresyon ve sıkıntı) etkili olabileceklerini bildirmişlerdir(Smith ve ark., 2023). Ayrıca dünya çapında, dijital ruh sağlığı uygulamalarının engellerini belirlemek ve ruh sağlığı uzmanlarının böyle bir yaklaşıma yönelik tutumlarını araştırmak için çeşitli çalışmalar yürütülmüştür. Genel olarak, profesyonellerin tutumlarının nötrden olumluya kadar değiştiğini göstermektedir. Genellikle olumlu tutum göstermelerinde, dijital ruh sağlığının düşük eşikli erişilebilirliği, profesyonellerin alandaki bilgi ve eğitimleri, yeni tedavi alternatiflerinin (örneğin, sanal gerçeklik ve biyolojik geribildirim) tanıtılması potansiyeli olduğu bildirilmektedir. Buna karşılık, olumsuz tutum göstermelerinde, web tabanlı ruh sağlığı bakımının sağlanması için etik, yasal ve düzenleyici çerçevelerin yokluğu, profesyonellerin alandaki bilgi ve eğitim eksikliği, dijital sistemlerle ilişkili potansiyel gizlilik ve güvenlik ihlalleri olduğu belirtilmektedir(Seidel ve Kilgus, 2014). Özetle literatür, dijital ruh sağlığı yaklaşımlarının ruh sağlığı bozukluklarının tedavisi için kullanılmasını desteklese de, ruh sağlığı profesyonelleri tarafından benimsenmesi yavaş olmuştur ve klinik ortamlarda uygulanması hala sınırlı sayıdadır.

3. Psikolojik İyi Oluşun Geliştirilmesinde Dijital Ruh Sağlığı

Fiziksel sorunlara ek olarak, kanser hastaları sağlık ile ilgili yaşam kalitesini olumsuz yönde etkileyen çeşitli olumsuz psikolojik etkilerle baş etmek zorundadırlar(Merckaert ve ark., 2010). Çoğu hasta hastaneden eve döndükten sonra nispeten uzun bir süre sağlık uzmanına görünmeyebilir. Bu nedenle, hastalık semptomlarını ve tedaviden kaynaklanan yan etkileri yönetmede bir dereceye kadar özerkliğe ihtiyaç duyarlar. Bunu başarmak için, hastaların sağlık durumlarıyla ilgili bilgileri nasıl bulup kullanacakları konusunda beceri ve bilgiye ihtiyaçları vardır(Escriva Boulley ve ark., 2018). Bu daha fazla özerklik ve dolayısıyla daha fazla psikolojik iyi oluşa yol açabilir. Dijital teknolojiyi kullanan programlar ve müdahaleler (dijital sağlık müdahaleleri—DSM), bu istenen sonuçlara ulaşmak için etkili bir yol olabileceği belirtilmektedir(Cooper ve ark., 2013). Mobil ve web tabanlı platformlar aracılığıyla sunulan dijital ruh sağlığı müdahaleleri, damgalama gibi geleneksel ruh sağlığı hizmetlerine erişimin önündeki mevcut birçok engeli ortadan kaldırırken, yaygın ruh sağlığı sorunları yaşayan kanser hastalarına tedavi olanağı sunmaktadır(Lipschitz ve ark., 2022). Dijital sağlık müdahaleleri birincil önleme, tespit, tanı, tedavi ve ilişkili yan etkilerin yönetiminde giderek daha yaygın hale gelmektedir. DSM'nin temel amacı davranış değişikliğini teşvik etmek ve desteklemektir. DSM farklı amaçlar için kullanılmaktadır. Bazıları psikolojik faydaları hedeflerken, diğerleri

kilo ve hastalık yönetimini hedef almıştır. DSM ile ilgili yapılan çalışmalar, DSM'nin katılımcıların davranışlarını değiştirdiğini ve bunlar hakkında olumlu öznel deneyimler ifade ettiğini bildirmiştir. Bu sonuçlar, DSM'nin semptom yönetiminde kanser hastalarının özerkliğini iyileştirmeye yardımcı olabileceğini doğrulamaktadır(Cooper ve ark., 2013). Dijital ruh sağlığı müdahaleleri, depresyon gibi yaygın ve güçten düşürücü ruh sağlığı sorunları olan ve psikolojik iyi oluşu azalmış kişiler için erişilebilir tedavi için umut vadeden bir yoldur. Dijital ruh sağlığı müdahaleleri hakkında ortaya çıkan literatür, bunların da tek başına etkili veya tamamlayıcı tedavi seçeneği olabileceğini öne sürmektedir(Lipschitz ve ark., 2022). Lattie ve ark. (2022), üniversite öğrencileri için dijital ruh sağlığı müdahalelerinin etkinliğini, kullanılabilirliğini, kabul edilebilirliğini ve benimsenmesini araştıran sistematik inceleme çalışmalarında; dijital ruh sağlığı uygulamalarının psikolojik iyi oluşu geliştirmede olumlu etkisinin olduğunu bildirmiştir. Sonuç olarak, dijital ruh sağlığı uygulamaları, kanser hastalarının ruh sağlığını, psikolojik iyilik halini ve yaşam kalitesini iyileştirmek için kişi merkezli ve bireysel, benzersiz ihtiyaç odaklı sağlık müdahaleleri sunmada dönüştürücü bir potansiyele sahip olduğu söylenebilir.

Sonuç ve Öneriler

Kanser hastaları arasında ruh sağlığını ve psikolojik iyi oluşu desteklemek için dijital sağlığın önemli olduğu belirtilmektedir. Dijital sağlık uygulamaları, kanser hastalarının tedavi yan etkileriyle daha iyi başa çıkmalarına ve psikolojik iyi oluşu artırarak daha hızlı iyileşmeye yol açmalarına yardımcı olmak için benzersiz bir fırsat sunmaktadırlar. Dijital sağlık uygulamaları hastaların kişisel gelişimlerini güçlendirme, onlara daha fazla özerklik, öz kabul sağlama ve sosyal ilişkilerini geliştirme potansiyeline sahiptir. Kanser hastaları için dijital ruh sağlığı müdahaleleri hakkında daha fazla araştırma, hastalar tarafından kullanılabilir ve kabul edilebilir olarak görülen programlar tasarlama ve bu tür programları uygulama yöntemlerinin geliştirilmesi önerilmektedir.

e-mail: sametkoltas@hakkari.edu.tr, Orcid No: 0009-0000-1272-4223

Özet

Bu derleme çalışması, multipl skleroz (MS) hastalarının evde bakım süreçlerinde sanal gerçeklik (VR) teknolojilerinin mental iyi oluş üzerindeki etkilerini ve hemşirelik uygulamaları bağlamındaki rollerini incelemek amacıyla gerçekleştirilmiştir. Multipl Skleroz (MS), merkezi sinir sistemini etkileyen kronik bir nörolojik hastalık olup, hastaların fiziksel semptomlarının yanı sıra psikolojik stres, kaygı ve depresyon gibi ruhsal sorunlarla da başa çıkmalarını gerektirmektedir. Evde bakım modellerinde hemşireler, hastaların tedavi planına uyumunu desteklemek, güvenli ortamı sağlamak ve aile bakım verenlere eğitim vermek gibi kritik görevler üstlenmektedir. Son yıllarda VR tabanlı uygulamalar; sanal ortamda etkileşimli egzersizler, ağrı yönetimi simülasyonları ve rahatlama programları sunarak hastaların motivasyonunu, benlik saygısını ve duygusal iyilik halini artırmayı hedeflemektedir. Yapılan çalışmalar, VR deneyimlerinin kaygı düzeylerini anlamlı ölçüde azalttığını, depresif semptomları hafiflettiğini ve yaşam kalitesini iyileştirdiğini göstermektedir. Ayrıca, VR ile desteklenen rehabilitasyon programlarının hasta katılımını artırdığı ve uzun vadeli terapötik uyumu güçlendirdiği bildirilmektedir. Hemşirelik perspektifinden değerlendirildiğinde, VR teknolojisi evde bakım hemşirelerinin terapötik müdahale repertuarına eklenebilecek değerli bir araçtır. Hemşireler, MS hastalarının evde bakım planlarına VR uygulamalarını entegre ederek, hastaların mental iyi oluşunu destekleyebilir; semptom yönetimine katkıda bulunabilir ve hasta eğitimini zenginleştirebilirler. Bunun yanı sıra, VR tabanlı müdahalelerin etkinliğini değerlendirmek için gerekli ölçme araçlarını kullanabilir, hastaların teknoloji kullanımını kolaylaştırabilir ve bireyselleştirilmiş VR deneyimleri için hasta ihtiyaçlarını belirleyebilirler. Elde edilen dijital veriler sayesinde bireyselleştirilmiş bakım planları geliştirilmekte ve hasta ilerlemesi düzenli olarak değerlendirilmektedir. Bu derleme, VR'nin MS hastalarının mental sağlığına sunduğu potansiyel katkıları ve hemşirelik uygulamalarının entegrasyonunda karşılaşılan fırsat ile zorlukları ortaya koymaktadır. Bulgular, VR tabanlı müdahalelerin evde bakımda etkili bir tamamlayıcı yaklaşım olabileceğini; hemşirelerin bu teknolojilerin uygulanmasında eğitilmeleri ve multidisipliner iş birliğinin güçlendirilmesinin gerekliliğini vurgulamaktadır.

Virtual Reality and Mental Well-Being in Multiple Sclerosis: A Review Study on Home Care

Abstract

This review study examines the effects of virtual reality (VR) technologies on mental well-being in the home care processes of multiple sclerosis (MS) patients and their roles in the context of nursing practices. MS is a chronic neurological disease that affects the central nervous system, requiring patients to cope not only with physical symptoms but also with psychological stress, anxiety, and depression. In home care models, nurses take on critical roles such as supporting patients' adherence to treatment plans, ensuring a safe environment, and educating family caregivers. In recent years, VR-based applications have aimed to increase patients' motivation, self-esteem, and emotional well-being by offering interactive exercises, pain management simulations, and relaxation programmes in a virtual environment. Studies have shown that VR experiences significantly reduce anxiety levels, alleviate depressive symptoms, and improve quality of life. Additionally, VR-supported rehabilitation programmes are reported to increase patient participation and strengthen long-term therapeutic compliance. From a nursing perspective, VR technology is a valuable tool that can be added to the therapeutic intervention repertoire of home care nurses. Nurses can support patients' mental well-being, contribute to symptom management, and enrich patient education by integrating VR applications into MS patients' home care plans. Additionally, they can use the necessary measurement tools to evaluate the effectiveness of VR-based interventions, facilitate patients' use of the technology, and identify patient needs for personalised VR experiences. The digital data obtained enables the development of personalised care plans and the regular evaluation of patient progress. This review highlights the potential contributions of VR to the mental health of MS patients and the opportunities and challenges encountered in its integration into nursing practice. The findings emphasise that VR-based interventions can be an effective complementary approach in home care, and that nurses need to be trained in the application of these technologies and multidisciplinary collaboration needs to be strengthened.

Keywords: Mental Well-being, Multiple Sclerosis, Virtual Reality, Home Care, Nursing

Introduction

Multiple sclerosis (MS) is a chronic inflammatory autoimmune disease of the central nervous system (CNS). The disease causes the formation of inflammatory lesions in the CNS, where the myelin sheaths are broken and demyelinated axons are damaged. This results in neurological symptoms such as motor function, sensitivity, balance, visual impairment, as well

as fatigue, depression, and cognitive changes (Preiningerova et al., 2022). Recent estimates indicate that 2.8 million people worldwide are living with this disease (Homayun & Hosseini, 2023). MS is typically diagnosed between the ages of 20 and 40 and is more common in women than in men (Krysko et al., 2021). What is striking about MS in both developed and developing countries is the increase in its prevalence in recent years (Dobson and Giovannoni, 2019).

Despite significant advances in medical knowledge today, the exact cause and treatment of this disease remain unknown. It is not yet clear when the progression of the disease will slow down. Between 85% and 90% of these patients experience periods of remission and flare-ups of symptoms (Yazgan et al., 2020). The results of several studies show that at least one-third of patients experience a significant decline in their standard of living after diagnosis. Within ten years of diagnosis, half of MS patients become unable to perform their daily tasks and responsibilities. Fifteen years after the onset of the disease, half of patients require assistance to move (Alajbegovic et al., 2011).

Although the aetiology is not fully understood, stress, trauma, certain medications, air pollution, smoking, radioactivity, low vitamin D levels, and certain bacteria and viruses have been reported as risk factors. There is no genetic inheritance (Akdemir, 2020). Motor symptoms such as decreased/loss of muscle strength, balance and coordination disorders, tremors, and speech disorders; sensory symptoms such as decreased sensation, sensory loss, and tingling; cognitive symptoms such as memory problems, loss of attention, and slowed information processing; bladder-bowel symptoms such as incontinence, urinary retention, constipation, sexual problems, sleep disorders, visual disturbances, and fatigue are symptoms that can be seen in MS (Tülek, 2021). In addition, patients have an increased risk of falling compared to the normal population. Spasticity is seen in 60-80% of patients, while ataxia is present in approximately 80% (İdiman, 2021). Emotional changes caused by the disease process can lead to stress, poor sleep quality, and depression. Depending on the progression of the disease and its treatment, osteoporosis and other musculoskeletal problems, pressure ulcers, and an increased risk of cancer, diabetes, and hypertension due to inactivity may be observed (Tülek, 2021). The treatment process for MS consists of four components: medical treatment, symptom management, physical therapy/rehabilitation, and cognitive therapy (Türkoğlu, 2023). Interferons and glatiramer acetate are commonly used as immunomodulatory treatments. During flare-ups, corticosteroids are used for their anti-inflammatory effects. If there is no response, immunosuppressive treatment and plasmapheresis may be used. In symptomatic treatment, different pharmacological or non-pharmacological treatment options are used depending on the symptoms that arise (Akdemir, 2020). In this case, non-pharmacological

treatment methods come to the fore (Yıldırım, 2023). Non-pharmacological methods include music therapy (Lund et al., 2023), dietary supplements (Chan and Lo, 2022), massage therapies (Fang et al., 2023), muscle relaxation exercises (Talo et al., 2023), acupuncture (Li et al., 2019), and virtual reality technology (Huang et al., 2022) are among the non-pharmacological methods that have been shown to be beneficial in the literature (Sun et al., 2023). The fact that MS typically emerges between the ages of 20 and 40, when individuals are most active, coupled with the disability caused by the disease and the resulting loss of social and economic power, leads many patients to experience adjustment issues and struggle to cope adequately with the disease process. While depression is the most common psychological disorder, it has been noted that these patients also have an increased risk of anxiety, bipolar disorder, and suicide attempts (Altun et al., 2020). Compared to other neurological diseases, it has been reported that mental health issues are more prevalent in MS (Tel, 2014). Support, counselling and education should be provided to patients experiencing psychological problems (Altun et al., 2020). Virtual reality (VR) refers to the creation of a material or environment that does not actually exist using software and hardware, and interaction with these environments. Although initially used for different purposes, VR technology is now used in the healthcare field by healthcare professionals in physical therapy, obstetric services, and for pain reduction or distraction (Aydın and Hüseyinoğlu, 2022).

Methodology

This review synthesizes current literature on VR applications for mental well-being in MS patients within home care contexts. The analysis includes peer-reviewed articles, systematic reviews, and clinical trials published between 2010 and 2025. Key databases searched included PubMed, ScienceDirect, and specialized rehabilitation journals. The focus was on studies that specifically addressed psychological outcomes, mental health interventions, and quality of life improvements through VR technology in home or community settings.

Understanding multiple sclerosis and mental health challenges

The Psychological Impact of Multiple Sclerosis

Multiple sclerosis (MS) is a chronic autoimmune condition that significantly impacts the central nervous system, leading to a wide range of symptoms affecting both physical and psychological wellbeing. The psychological impact of MS is profound and multifaceted, involving emotional, cognitive, and psychiatric dimensions. One of the primary psychological effects of MS is depression, which is notably prevalent among patients. Depression significantly affects the quality of life (QoL) in MS patients, as seen in Iranian MS patients, where depression

correlated highly with both physical and psychological aspects of life quality (Ayatollahi et al., 2007). Moreover, personality traits such as neuroticism and excitability seem to exacerbate fatigue, a common symptom in MS patients, which further impacts their psychological state (Merkelbach et al., 2003). The diagnosis itself is a major psychological hurdle, especially during the first year after diagnosis. This period often involves significant psychological adjustments, with newly diagnosed patients showing a tendency towards depressive symptoms and an avoidance approach to their diagnosis. These psychological changes are crucial as they can influence patients' quality of life, decision-making, and adherence to treatment regimes (Possa et al., 2017). Apart from depression, MS patients often experience a range of psychiatric disorders, including anxiety and, less commonly, bipolar, schizophrenic, and obsessive-compulsive syndromes. These disorders have a substantial impact on patients' quality of life and are influenced by physical symptoms of MS such as fatigue and sleep disturbances (Sparaco et al., 2019). Stress and cognitive dysfunction are additional challenges that MS patients face. These elements further complicate the mental health landscape for individuals with MS, necessitating comprehensive psychological and neurological assessments and interventions (Fischer et al., 1994). The psychological state of MS patients is not isolated but also impacts their family members. The emotional toll on family members can lead to significant psychological stress, affecting family functioning and relationships. Effective communication and comprehensive intervention plans are essential to support both patients and their families in managing the psychological ramifications of MS (Uccelli, 2014). Therapeutic interventions, including physical exercise and mind-body practices such as yoga, have shown promise in moderating the psychological impacts of MS. These interventions can improve mental wellbeing and reduce depressive symptoms, offering a beneficial adjunct to traditional medical treatments (Carotenuto et al., 2021).

Barriers to Mental Health Care in Traditional Settings

Multiple sclerosis (MS) patients encounter numerous barriers when accessing traditional mental health services. These barriers are particularly pronounced for those with mobility limitations or residing in rural areas, where transportation becomes a significant obstacle (Chiu et al., 2017). Additionally, communication issues during medical visits and a discontinuation of referrals after visits further complicate access to mental health services for these patients (Chiu et al., 2017). Other common barriers identified include attitudinal challenges, stigma-discrimination, and instrumental obstacles, which delay consultations and service utilization (Campo-Arias et al., 2020). Moreover, patients face difficulties due to insurance coverage, cost of services, and a lack of comprehensive awareness about the available mental health resources

(Murphy et al., 2018). To potentially overcome these barriers, home care settings offer a promising alternative, especially when integrated with telemedicine approaches. Home-based care has shown efficacy in reducing hospital stays significantly without increasing admissions, proving to be nearly as beneficial as traditional hospital care in mental health treatment (Muijen et al., 1992). The implementation of telemedicine, specifically for MS patients, demonstrates improved clinical outcomes, satisfaction, and a notable reduction in medical costs (Zissman et al., 2011). Furthermore, telecare allows for personalized, flexible care and regular monitoring, enhancing patients' quality of life and care satisfaction (Zissman et al., 2011). Incorporating collaborative care models within primary care settings can also improve mental health outcomes. These models involve integrating mental health services directly within primary care practices, thus facilitating easier access for patients through shared care approaches (Goodrich et al., 2013).

Virtual reality technology in healthcare

Fundamentals of VR Technology

The concept of virtual reality consists of two contrasting words: virtual and reality. Derived from the Latin root “virtualis”, the concept can be defined as something designed in the mind, something that is not real. Virtual reality refers to the creation of a material or environment that does not actually exist using software and hardware, and the interaction with these environments. Virtual reality is an infinite artificial world. Today, thanks to virtual reality technology, it is possible to create virtual environments that can be defined as metaverse and where many people can interact (Aydın and Hüseyinoğlu, 2022). Virtual reality technologies have three important components: visual reality, continuity, and interaction with the environment. Visual reality and interaction elements facilitate skill acquisition and learning, while the continuity component fully immerses the user in the environment and makes them feel part of it. Desktop virtual reality, augmented reality, and head-mounted virtual reality systems are examples of different types of virtual reality methods. Virtual reality glasses are devices that provide a screen viewing service with a head-mounted device and have virtual graphics. Three-dimensional virtual reality applications were first used in pilot training and are now used in many fields, from art to health, architecture, education, entertainment, and manufacturing (Aydın and Hüseyinoğlu, 2022). In the health sector, it is also a method used in fields such as medicine, nursing, midwifery, and physiotherapy. Virtual reality glasses can be used both during health education and in patient care. In physical therapy and rehabilitation, as well as during pregnancy and childbirth services, healthcare professionals may use virtual reality to reduce pain or divert attention during certain surgical procedures and to create a

therapeutic environment (Aydın and Hüseyinoğlu, 2022).

VR Applications in Mental Health

Virtual Reality (VR) has emerged as a promising tool in the field of mental health, offering innovative methods for both assessment and treatment of various disorders. This technology enables the creation of immersive and interactive environments where patients can safely engage with their fears and difficulties under controlled conditions, which is particularly beneficial for mental health interventions. VR has been applied to a variety of mental health issues, including anxiety disorders, post-traumatic stress disorder (PTSD), depression, ADHD, and eating disorders. In particular, VR exposure therapy has shown effectiveness in reducing anxiety-related disorders, such as phobias, by allowing patients to confront specific fears in a controlled virtual setting (Wang et al., 2024). One of the key advantages of VR is its ability to simulate real-world scenarios, which enhances the ecological validity of therapeutic interventions. This immersive experience helps in personalizing treatment, making it more engaging and effective (Singha and Singha, 2024). Moreover, VR allows for the real-time collection of data, which can be valuable for both researchers and clinicians in understanding patient progress and treatment outcomes (Bell et al., 2020). However, the integration of VR in mental health care does come with challenges. There is a need for rigorous research to establish the long-term efficacy of VR-based therapies compared to traditional methods. Issues such as cost, access to technology, and potential side effects must also be addressed to expand its application in clinical practice (Adeghe et al., 2024). Despite these challenges, VR continues to show promise, especially with developments in individualizing therapy through systems like the iVR, which focus on self-compassion and mental well-being. Such innovations suggest that VR could significantly enhance mental health interventions, if combined with well-designed clinical guidelines and standards (Freeman et al., 2017). In summary, VR presents a transformative approach in mental health treatment, offering unique opportunities for immersive therapy. With ongoing research and technological enhancements, VR could play a crucial role in making mental health services more accessible and individualized, potentially revolutionizing patient care and treatment outcomes (Singha and Singha, 2024).

VR interventions for mental well-being in ms

Anxiety and Stress Management

VR interventions have shown particular promise in addressing anxiety and stress symptoms commonly observed among individuals with MS. Research demonstrates that VR-based therapy can significantly reduce anxiety levels in MS patients (Basalic et al., 2024). The

technology's ability to create controlled, safe environments allows patients to practice coping strategies and relaxation techniques in immersive settings that can be easily accessed from home.

Relaxation-based VR programs typically involve guided imagery, virtual nature environments, and mindfulness exercises. These interventions can be particularly effective for MS patients who may have difficulty accessing traditional relaxation environments due to mobility limitations or fatigue. The immersive nature of VR can help patients achieve deeper states of relaxation compared to conventional audio-based relaxation techniques (Grigorescu et al., 2022). Exposure therapy applications use VR to gradually expose patients to anxiety-provoking situations in a controlled manner. For MS patients, this might include virtual environments that simulate challenging real-world scenarios, such as navigating crowded spaces or managing workplace situations. The ability to control the intensity and duration of exposure makes VR-based exposure therapy particularly suitable for home use (Ali et al., 2023).

Depression and Mood Enhancement

Research indicates that VR interventions can effectively address depressive symptoms and promote positive mood states in various populations. Depression interventions using VR often incorporate elements of behavioral activation, cognitive restructuring, and positive psychology approaches (Pira et al., 2023).

Virtual environments can provide opportunities for engaging in pleasurable activities that may be difficult to access in real life due to MS-related limitations. This might include virtual travel experiences, artistic activities, or social interactions that can help counteract the isolation and reduced activity levels often associated with depression in MS patients (Wender et al., 2022). Cognitive behavioral therapy (CBT) applications in VR allow patients to practice identifying and challenging negative thought patterns in realistic virtual scenarios. The immersive nature of VR can enhance the effectiveness of CBT techniques by providing concrete, experiential learning opportunities that may be more engaging than traditional paper-and-pencil exercises (Halkiopoulou & Gkintoni, 2025).

Social Connection and Support

MS patients often experience social isolation due to physical limitations, fatigue, and changes in social roles. VR technology can provide innovative solutions for maintaining social connections and accessing peer support. Virtual support groups, social environments, and collaborative activities can help address the social aspects of mental health that are often overlooked in traditional treatment approaches (Pimentel et al., 2021).

The ability to participate in social activities through VR can be particularly valuable for patients with severe mobility limitations or those living in rural areas with limited social opportunities. Virtual social environments can provide a sense of community and belonging that contributes significantly to overall mental well-being (Aasen et al., 2023).

Evidence base for VR in MS mental health

Systematic Reviews and Meta-Analyses

A comprehensive systematic review and meta-analysis by Fernández-González et al. (2021) demonstrated significant benefits of VR interventions for MS patients. Their analysis revealed that VR-based therapy is effective at reducing fatigue, lowering the impact of MS, and increasing overall quality of life. Studies involving 424 participants showed that VR interventions promoted improvement in quality of life equal to or greater than conventional exercises (Nascimento et al., 2021). VR interventions were significantly more effective compared to standard care for anxiety, depression, fatigue, and pain across various conditions (Lee et al., 2024). These findings support the integration of VR technology into comprehensive MS care programs, particularly for addressing psychological well-being.

Specific Mental Health Outcomes

Research by Maggio et al. (2019) demonstrated that MS patients using VR training presented significant improvements in cognitive function, with particular benefits for executive abilities, visual-spatial skills, and attention. These cognitive improvements often translate into better mood and reduced anxiety, as patients experience increased confidence in their abilities.

A recent systematic review by Zhang et al. (2024) specifically examined the effects of VR-based rehabilitation on cognitive function and mood in MS patients. Their findings indicated that VR interventions help MS patients with anxiety symptoms, with physiological and self-reported anxiety levels being dramatically decreased by VR-based mindfulness training.

Feasibility and Acceptability

Studies indicate that psychological immersion in VR environments can reduce subjective awareness and experience of physical symptoms, suggesting that VR interventions may provide dual benefits for both physical and psychological well-being in MS patients (Shaw et al., 2021).

Research on feasibility and acceptability indicates that MS patients generally respond positively to VR interventions, with high levels of engagement and satisfaction reported across multiple studies (Boschetti et al., 2024). The technology's novelty and interactive nature appear to

enhance motivation and adherence to treatment protocols.

Home Care Implementation

Advantages of Home-Based VR Interventions

Home-based VR interventions offer numerous advantages over clinic-based approaches. The familiar environment reduces anxiety and stress associated with healthcare visits, while the elimination of travel requirements is particularly beneficial for patients with mobility limitations or fatigue. Home settings also allow for more flexible scheduling and can accommodate the variable nature of MS symptoms (Pallavicini et al., 2025).

The privacy of home environments may encourage more open engagement with psychological interventions, as patients may feel less stigmatized about addressing mental health issues. Additionally, home-based interventions can be more easily integrated into daily routines, potentially improving long-term adherence and outcomes (Pallavicini et al., 2022).

Technical Considerations

Modern VR systems have become increasingly user-friendly and accessible for home use. Consumer-grade VR headsets offer sufficient quality for therapeutic applications while remaining affordable and easy to set up. Wireless systems eliminate the need for complex installations, while improved battery life allows for extended therapeutic sessions (Garcia et al., 2021). Internet connectivity requirements have been minimized through local content storage and optimized streaming protocols. Many therapeutic VR applications can function offline, ensuring consistent access regardless of internet connectivity issues. Technical support can be provided remotely, reducing the burden on patients and caregivers (Kanellopoulos et al., 2023).

Caregiver Integration

Home-based VR interventions can be enhanced through caregiver involvement. Family members and caregivers can be trained to assist with setup, provide encouragement, and monitor progress. This integration can strengthen support systems and improve overall treatment outcomes (Birckhead et al., 2021). Caregiver education programs can help family members understand the therapeutic benefits of VR interventions and learn how to provide appropriate support. This approach can also reduce caregiver burden by providing engaging activities that promote patient independence and well-being (Noel et al., 2022).

Challenges and Limitations

Technical Barriers

Despite advances in VR technology, several technical barriers remain. Motion sickness and visual discomfort can affect some users, particularly those with MS-related balance or visual disturbances (Saredakis et al., 2020). Individual differences in tolerance and adaptation to VR environments may limit the universal applicability of these interventions.

Hardware requirements, while decreasing, may still present financial barriers for some patients. Additionally, the need for regular software updates and technical maintenance may be challenging for patients with limited technical expertise or support (Renukappa et al., 2022).

Clinical Considerations

The integration of VR interventions into existing care plans requires careful consideration of individual patient characteristics and needs. MS symptoms such as fatigue, cognitive impairment, and visual disturbances may affect the suitability and effectiveness of VR interventions for some patients (Kamari et al., 2024).

Professional oversight and guidance remain important for ensuring appropriate use of VR interventions. While home-based delivery offers numerous advantages, the reduced direct professional supervision may limit the ability to address complex psychological issues or crisis situations (Mennella ve ark., 2024).

Research Limitations

Current research on VR for MS mental health is still emerging, with many studies involving small sample sizes and short follow-up periods. Long-term effectiveness and sustainability of VR interventions require further investigation (Catellano- Aguilera et al., 2022). Additionally, the optimal duration, frequency, and content of VR interventions for different MS populations remain to be established.

Standardization of VR interventions and outcome measures is needed to facilitate comparison across studies and development of evidence-based practice guidelines. The rapid evolution of VR technology also presents challenges for conducting long-term research studies (Birckhead et al., 2019).

Future Directions

Technological Advances

Emerging technologies such as augmented reality (AR) and mixed reality (MR) may offer

additional therapeutic opportunities by blending virtual and real-world elements. These technologies could provide more seamless integration of therapeutic activities into daily life while maintaining the benefits of immersive experiences (Flavian et al., 2019).

Artificial intelligence and machine learning applications could enable more personalized and adaptive VR interventions. These systems could automatically adjust content and difficulty based on individual patient responses and progress, optimizing therapeutic outcomes while reducing the need for manual intervention (Rasa, 2024).

Integration with Healthcare Systems

The integration of VR interventions into broader healthcare systems and electronic health records could facilitate better coordination of care and monitoring of outcomes. Telemedicine platforms could incorporate VR capabilities, allowing for remote assessment and intervention delivery by healthcare professionals (Adeghe et al., 2024).

Development of standardized protocols and training programs for healthcare providers could improve the quality and consistency of VR intervention delivery. This would support broader adoption and implementation across different healthcare settings and geographic regions (Triberti et al., 2019).

Personalized Medicine Approaches

Future developments may focus on identifying patient characteristics that predict optimal response to VR interventions. This could involve genetic markers, neuroimaging findings, or psychological profiles that guide treatment selection and customization (Kouijizer et al., 2023).

Precision medicine approaches could also involve real-time monitoring of physiological and psychological responses to VR interventions, allowing for immediate adjustments to optimize therapeutic effects. This could include heart rate variability, stress hormone levels, or neuroimaging markers of brain activity (Wieczorek et al., 2024).

Clinical Recommendations

Patient Selection

VR interventions appear most suitable for MS patients with mild to moderate symptoms who retain sufficient cognitive function to engage with technology-based interventions. Patients with severe visual impairments, significant balance problems, or severe cognitive impairment may require modified approaches or alternative interventions (Maggio et al., 2019).

Assessment of patient preferences, technical comfort, and available support systems should

guide the selection of appropriate VR interventions. Patients with high levels of technology anxiety may benefit from gradual introduction and additional support during initial sessions (Wang et al., 2024).

Implementation Strategies

Successful implementation of home-based VR interventions requires comprehensive patient education and support. This should include technical training, therapeutic goal setting, and regular follow-up to monitor progress and address challenges (Optale et al., 2010). Integration with existing home care services and mental health support systems can enhance the effectiveness of VR interventions (Fahey, 2025). This might involve coordination with home health nurses, social workers, or mental health professionals who can provide additional support and monitoring (Karam et al., 2021).

Outcome Monitoring

Regular assessment of mental health outcomes, including standardized measures of depression, anxiety, and quality of life, should be incorporated into VR intervention protocols. This monitoring can help identify patients who may need additional support or alternative interventions (Du et al., 2025). Patient-reported outcomes and satisfaction measures should also be collected to guide program improvements and ensure that interventions meet patient needs and preferences. This feedback can inform ongoing development and refinement of VR therapeutic programs (Zaratin et al., 2024).

Cost-Effectiveness and Economic Considerations

The economic implications of VR interventions for MS mental health care are multifaceted. Initial hardware and software costs may be offset by reduced need for traditional therapy visits, decreased transportation costs, and improved patient outcomes that reduce overall healthcare utilization (Piszc et al., 2024). Home-based VR interventions can potentially reduce the burden on healthcare systems while providing more accessible and convenient care options.

Cost-effectiveness analyses suggest that VR interventions may provide good value for money, particularly when considering the long-term benefits of improved mental health outcomes. The ability to serve multiple patients with a single VR system and the potential for reduced professional supervision time contribute to favorable economic profiles (Pira et al., 2023).

Conclusions

Virtual Reality technology represents a promising and innovative approach to addressing mental health challenges in Multiple Sclerosis patients within home care settings. The evidence base, while still emerging, demonstrates significant potential for improving anxiety, depression, stress management, and overall quality of life. VR represents a motivational and effective alternative to traditional rehabilitation approaches for MS patients, offering unique advantages in terms of accessibility, engagement, and personalization.

The integration of VR interventions into home care programs offers particular promise for addressing the complex psychological needs of MS patients while overcoming traditional barriers to mental health care. The technology's ability to provide immersive, controlled therapeutic experiences in familiar environments aligns well with the principles of patient-centered care and the growing emphasis on home-based healthcare delivery.

Nurses play a critical role in facilitating the integration of VR technologies within home care settings. As frontline providers of psychosocial support, education, and care coordination, nurses are ideally positioned to assess patient readiness, provide training on VR device use, monitor responses to interventions, and ensure continuity of care. Their digital health literacy and therapeutic communication skills are essential for optimizing the benefits of VR-based mental health interventions. Furthermore, involving nurses in the development and evaluation of VR protocols can help ensure interventions are tailored to patient needs and grounded in holistic, person-centered care.

However, successful implementation requires careful attention to patient selection, technical support, professional oversight, and integration with existing care systems. Ongoing research is needed to establish optimal intervention protocols, identify predictors of treatment response, and demonstrate long-term effectiveness and cost-effectiveness.

As VR technology continues to evolve and become more accessible, its role in MS mental health care is likely to expand. The potential for personalized, adaptive interventions that can be delivered in home settings represents a significant advancement in the field. Healthcare providers, policymakers, and researchers should collaborate to develop evidence-based guidelines and support systems that can facilitate the responsible and effective integration of VR technology into comprehensive MS care programs.

The future of MS mental health care may well be transformed by these technological innovations, offering new hope and improved outcomes for the millions of individuals living

with this challenging condition. By embracing these advances while maintaining focus on patient-centered care principles, we can work toward a future where all MS patients have access to effective, engaging, and accessible mental health support services.

Özet

Erken çocukluk dönemi, bireyin bilişsel, sosyal ve duygusal gelişiminin temellerinin atıldığı, kendilik algısının şekillendiği kritik bir süreçtir. Bu dönemde çocuklar çevreleriyle iletişim kurarken kendilerini ifade etmeye ihtiyaç duymaktadır. Sözel iletişimin yanı sıra sanatsal faaliyetler de bu ifadeyi desteklemektedir. Çocuk resimleri, çocukların düşünce, duygu ve algılarını yansıttığı önemli bir araçtır ve çocuk resimlerinde yer alan unsurlar da kendilik algılarının bir ifadesidir. Çocukların duygusal ve bilişsel gelişimlerinin temelini oluşturan öz düzenleme becerileri ile kendilik algıları arasındaki ilişkinin anlaşılması, erken müdahale ve destekleyici eğitim ortamlarının oluşturulması açısından büyük önem taşımaktadır. Bu çalışmada, 5-6 yaş grubu çocukların düşük ve yüksek düzeyde öz düzenleme becerilerine sahip olmalarına göre kendilik algılarının belirlenmesi amaçlanmıştır. Çalışma, çocukların öz düzenleme düzeylerine ilişkin nicel verilerin ardından elde edilen çocuk resimleri ile görüşme verilerinin analiz edildiği, nitel verilerin ağırlıklı olduğu bir karma desen araştırmasıdır. Çalışmanın nicel verilerinin toplanmasında “4-6 Yaş Çocuklarına Yönelik Öz Düzenleme Becerileri Ölçeği” kullanılmış ve buna dayalı olarak düşük (n=14) ve yüksek (n=12) öz düzenleme düzeyine sahip olduğu belirlenen 5-6 yaş grubu toplam 26 çocuk üzerinden de çalışmanın nitel verileri toplanmıştır. Çalışmanın nitel verilerinin elde edilme sürecinde, bu grupta yer alan 5-6 yaş çocuklarına “kendini çiz” yönergesi verilmiş ve akabinde bireysel görüşmelerle çizilen resimlerin hikâyeleri dinlenerek çalışma verileri kayıt altına alınmıştır. Çocuk resimleri aracılığıyla elde edilen nitel çalışma verileri, çalışmanın dokümanlarını

oluşturmaktadır. Elde edilen veriler de betimsel analizle değerlendirilmiştir. Çalışma bulguları, düşük öz düzenleme becerisine sahip olan çocukların resimlerinde kendilerini silik, güvensiz ve belirsiz uzuvlarla çizdiklerini; buna karşın, yüksek öz düzenleme becerisine sahip çocukların ise resimlerinde daha belirgin çizgiler, canlı renkler ve olumlu ifadeler kullandıklarını göstermiştir. Sonuçlar, öz düzenleme düzeyi ile kendilik algısı arasında bir ilişki olduğunu ve çocuk resimlerinin bu ilişkiyi anlamada önemli bir araç olduğunu ortaya koymaktadır. Bu doğrultuda, çocukların ihtiyaçlarının belirlenmesinde çocuk resimlerinin yapılandırılmış şekilde değerlendirilmesinin önemli olduğu ve erken çocuklukta duygusal destek ihtiyaçlarının tespit edilerek hedefe yönelik müdahale programlarının geliştirilmesi gerektiği vurgulanmıştır.

Anahtar Kelimeler: Okul Öncesi Dönem, Çocuk Resimleri, Öz Düzenleme, Kendilik Algısı.

Visual Representations of Children's Self-Perceptions According to Their Self-Regulation Levels: A Mixed Design Research

Abstract

Early childhood is a critical period in which the foundations of an individual's cognitive, social and emotional development are laid and self-perception is shaped. In this period, children need to express themselves while communicating with their environment. In addition to verbal communication, artistic activities also support this expression. Children's drawings are an important tool through which children reflect their thoughts, feelings and perceptions, and the elements in children's drawings are an expression of their self-perception. Understanding the relationship between self-regulation skills, which form the basis of children's emotional and cognitive development, and self-perceptions is of great importance in terms of establishing early intervention and supportive educational environments. In this study, it was aimed to determine the self-perceptions of 5-6 year old children according to whether they had low or high levels of self-regulation skills. The study is a mixed design research in which quantitative data on children's self-regulation levels were analyzed and qualitative data were predominantly qualitative. The “Self-Regulation Skills Scale for 4-6 Year Old Children” was used to collect the quantitative data of the study, and based on this, qualitative data were collected from a total of 26 children aged 5-6 years who were determined to have low (n=14) and high (n=12) self-regulation levels. In the process of obtaining the qualitative data of the study, 5-6 year old children in this group were given the instruction “draw yourself” and then the study data were

recorded by listening to the stories of the pictures drawn through individual interviews. Qualitative study data obtained through children's drawings constitute the documents of the study. The data obtained were also evaluated with descriptive analysis. The findings of the study showed that children with low self-regulation skills drew themselves with faint, insecure and uncertain limbs in their drawings, whereas children with high self-regulation skills used more distinct lines, vivid colors and positive expressions in their drawings. The results reveal that there is a relationship between the level of self-regulation and self-perception and that children's drawings are an important tool in understanding this relationship. In this direction, it is emphasized that it is important to evaluate children's drawings in a structured way to determine the needs of children and that targeted intervention programs should be developed by identifying emotional support needs in early childhood.

Keywords: Preschool Period, Children's Drawings, Self-Regulation, Self-Perception.

Giriş

Yaşamın ilk yıllarını kapsayan erken çocukluk dönemi, çocukların bilgi, beceri ve alışkanlık kazanmasında oldukça kritik bir dönemdir. Bireyin bilişsel, sosyal ve duygusal gelişiminin temelleri bu yıllarda atılmaktadır. Bu dönem içerisinde edinilmesi gereken beceriler ve tamamlanması gereken görevler vardır. Erken çocukluk döneminde kazanılan bu beceriler ve görevler, çocuğun ileriki yaşantısını şekillendirmektedir. Çocuk kazandığı beceriler sayesinde toplum ve çevreyle etkileşime girerek sosyalleşmekte ve bu sosyalleşme süreci çocuğun kendilik algısını şekillendirmektedir. Oluşan kendilik algısı çocuğun kendi benliğini fark etmesi ve kendine ilişkin farkındalık geliştirmesi açısından temel bir yapı taşı olarak görev yapmaktadır. Buna göre, kendilik algısı; bireyin duygularını, düşüncelerini ve davranışlarını anlamlandırmasını sağlamakta ve böylece çocuğun, çevresindeki sosyal dünyayı ve kendi içsel deneyimlerini daha bilinçli şekilde yorumlayabilmesine katkı sağlamaktadır. Bu nedenle de kendilik algısı, çocuğun sosyal ilişkilerde nasıl davranacağını ve kendini nasıl ifade edeceğini etkileyen karmaşık bir yapıdan oluşmaktadır (Berk, 2013; Erikson, 1963; Zembat vd., 2018).

Erken çocukluk döneminde gelişen kendilik algısı, bireyin benliğine ilişkin düşüncelerini, duygularını ve değerlendirmelerini kapsayan bilişsel bir yapıdır. Çocuk, bu dönemde çevresinden aldığı geri bildirimler, sosyal etkileşimler ve yaşantılar yoluyla “ben kimim?” sorusuna yanıt aramaya başlamaktadır. Kendilik algısı, bireyin kendi davranışlarını değerlendirme, güçlü ve zayıf yönlerini fark etme ve sosyal ortamlarda kendine dair bir konum

oluşturma sürecine rehberlik etmektedir. Bu süreçte çocuk, hem kendi içsel deneyimlerini hem de başkalarının tepkilerini anlamlandırarak benliğine dair net bir farkındalık geliştirmektedir (García-Arch vd., 2025; Harter, 1999). Birey kendini diğer bireylerden ayırt edebildiğinde, yani ayrı bir birey olduğunu fark ettiğinde kendilik algısı oluşmaya başlamaktadır. Bireyin çevresine karşı olan davranışlarının şekillenmesini çevresi ve toplumla olan ilişkisi belirlediği gibi, kendine dair düşünceleri ve görüşleri de etkilemektedir. Bireyin kendini algılama biçimi olarak tanımlanan kendilik algısı, şekillenirken bireyin karakteri, kalıtım ve çevrenin etkisiyle harmanlanmaktadır. Çocuğun kendilik algısı da kendi duygu ve düşünceleriyle beraber dünyayı seyrettiği bir gözlüğe benzetilmektedir (Aydın, 2023; Tuzcuoğlu vd., 2019; Zembat vd., 2018). Olumlu kendilik algısı geliştiren çocuklar daha özgüvenli, iletişim becerileri gelişmiş, duyarlı ve sosyal ortamlarda daha aktif bireyler olurlarken; olumsuz kendilik algısına sahip çocuklar ise daha pasif, akademik başarı açısından daha düşük ve sosyal becerileri gelişmemiş bireyler olabilmektedir (Kovancı, 2020). Bu doğrultuda, kendilik algısının yalnızca bireyin benlik tasarımıyla sınırlı kalmadığı, aynı zamanda bireyin davranışlarını düzenleme ve kontrol etme becerileriyle de yakından ilişkili olduğu görülmektedir.

Kendilik algısının gelişmesiyle birlikte çocuklar, yalnızca kim olduklarını değil, aynı zamanda nasıl davrandıklarını ve bu davranışları nasıl yönlendirebileceklerini de sorgulamaya başlamaktadır. Bu bağlamda, bireyin kendi davranışlarını, duygularını ve düşüncelerini bilinçli bir biçimde kontrol etme ve yönlendirme kapasitesi olan öz düzenleme kavramı devreye girmektedir. Öz düzenleme; dikkat kontrolü, dürtü denetimi, duygusal tepkileri yönetme ve hedefe yönelik davranışları sürdürme gibi bileşenleri içeren, bireyin gelişimsel uyumunda kritik rol oynayan çok boyutlu bir beceridir (Blair & Diamond, 2008). Öz düzenleme becerisi, kişinin çevresine uyum sağlaması, kendi istedikleri ve toplumun istekleri arasında denge kurup sağlıklı ve başarılı bir şekilde ilişkilerini ilerletme becerisidir (Eke, 2017). Öz düzenleme becerisi, bireyi geliştiren ve uyum sağlamasına yardımcı olan bir mekanizmadır (Arslan vd., 2021). Zimmerman'a (2000) göre de öz düzenleme becerisi, bireyin davranışlarını koşullara göre, kullanma ve yürütebilme becerisidir. Psikolojide öz düzenleme üzerinde ilk çalışan kişilerden olan Bandura'ya (1986) göre ise öz düzenleme bireyin kendi davranışlarını kontrol edebilme yeteneğidir. Erken çocukluk yılları içerisinde çocukların hem kendi iç dünyalarını keşfetmekte hem de sosyal çevreleriyle etkileşimlerini yoğunlaştırmakta olması nedeniyle, öz düzenleme becerisinin gelişimi açısından da bu dönem büyük önem kazanmaktadır (Kovancı, 2020; Tuzcuoğlu vd., 2019). Nitekim öz düzenleme, çocukların günlük hayattaki problem durumlarını çözmeleri için önemli bir süreçtir. Bu beceriler çocukların davranışlarına yön verirken

kendilerini algılama biçimlerini de etkilemekte ve olumlu kendilik algısı üzerinde pay sahibidir (Arslan vd., 2021; Loomis, 2021; Tuzcuoğlu vd., 2019).

Çocuklar kendilerini nasıl algıladıklarını çeşitli yollar ve yöntemlerle yansıtabilmektedir. Kendilik algılarını yansıtmaalarında etkili bir araç da çizdikleri resimlerdir. Resimler çocuğun zekâsını, çevrelerini algılayış biçimlerini, kişiliklerini ve becerilerini yansıttıkları bir araçtır (Yıldız-Çiçekler & Öner-Korkulu, 2013). Çocuk çizdiği resimlerle kendini nasıl gördüğünü, kendine olan bakış açısını da yansıtmaktadır (Yüksel vd., 2015). Özellikle küçük yaş grubu çocukların sözcük dağarcıkları kısıtlı olduğundan dolayı, duygularını, düşüncelerini ve algıladıklarını anlatmak için sözel yollar dışında başka bir araç arayabilmektedir. Bu araç çocuklar için doğrudan çizdikleri resimlerdir. Çünkü çocuklar çizdikleri resimlerle yakinen bağ kurmakta ve anlatmakta zorlandıklarını, iç dünyalarını ve kendi yaşantılarını sansürsüz olarak çizimlerine yansıtmaktadır. Bu çizimleri kağıda aktarırken de çeşitli semboller ve figürler kullanmaktadırlar. Bu sebeple çizilen her sembol ve figür çocuğun iç dünyasından, duygu ve düşüncelerinden birer parçadır (Köseoğlu, 2023; Malchiodi, 1998). Çocuk resimleri sayesinde çocuklar sadece iç dünyalarını yansıtmakla kalmamakta, çocuk çevresiyle olan etkileşimlerini, korkularını, mutluluklarını da paylaşma imkanı bulmaktadır. Çocuğun resmi yaptığı sırada eğlenmesi ve kendini yansıtması sebebiyle bu çizimler benzersiz bir nitelik taşımaktadır. Özellikle okul öncesi dönemde çocukların çizimlerine sıklıkla bilinçaltılarını yansıttıkları görülmektedir. Bu sebeple, çocuğun çizdiği resmin hikayesinin dinlenmesi ve resimdeki figürlerin çocuğun zihninde neyi çağrıştırdığının ortaya konması son derece önemlidir. Bu sayede, çocuk resimleri; çocuk hakkında bilgi edinme yöntemi olarak kullanılabilir (Köseoğlu, 2023; Metin & Aral, 2012; Yüksel vd., 2015; Yavuzer, 2023).

Okul öncesi dönemi kapsayan şema öncesi dönem (4-7 yaş), çocukların resimlerinde farklı özelliklerin gözlemlendiği bir süreçtir. Bu dönemde yapılan incelemeler hem çocukların gelişimi ve öğrenme deneyimlerine dair önemli ipuçları sunmakta hem de resim gelişim özelliklerinin belirlenmesi ve buna uygun yönlendirmelerin yapılması açısından büyük önem taşımaktadır (Metin & Aral, 2012). Çocuğu gözlemleyen, sağlıklı iletişim içerisinde olan bir yetişkin bu sayede çocuk hakkında birçok şey öğrenebilmektedir. Çocuk resimleri aracılığıyla çocuğun çevresiyle olan ilişkisini araştırmak için ülkemizde çeşitli çalışmalar yapılmış olmakla birlikte, bu çalışmalarda daha çok çevresel unsurların çocuk üzerindeki etkileri ele alınmış; çocuğun öznel yaşantılarını, iç dünyasını ve benlik algısını yansıtan içerikler ise sınırlı biçimde incelenmiştir. Örneğin; bu çalışmalarda çocukların doğayı ve çevreyi algılama biçimleri

(Köşker, 2019; Yurttaş, 2023), çocuk hakları ve istismara uğrayan çocukların yaşantıları (Ergüleç & Kiremit, 2019), okul algısının görsel ifadesi (Yıldız, 2012), pandemi gibi kriz durumlarının çocuk çizimlerindeki yansımaları (Nazlı & Çat, 2021; Yüksek Usta & Gökcan, 2020), çocukların özel gereksinimli bireyleri algılayışları (Mutlu vd., 2021; Yıldırım & Özyürek, 2023) ve yapay zeka algıları (Yılmaz, 2024) gibi temalara odaklanılmıştır (Köseoğlu, 2023). Buna göre, çocuğun benliğini nasıl algıladığına ve bu algının öz düzenleme becerileriyle olan ilişkisine yönelik görsel veriler üzerinden yapılan araştırmalar oldukça sınırlıdır. Oysa çocuğun öz düzenleme becerileri, sosyal ve duygusal gelişiminin temel yapı taşlarından biri olarak kabul edilmekte ve bu beceriler çocuğun kendini tanıma, kontrol etme ve ifade etme süreçlerini doğrudan etkilemektedir. Bununla birlikte; çocukların çizimleri, yalnızca dış dünyaya dair gözlemlerini değil, aynı zamanda kendi iç dünyalarına ilişkin duygu, düşünce ve algılarını da yansıtmaya potansiyeline sahiptir. Bu nedenle, çocuğun kendilik algısı gibi öznel yaşantılarının görsel anlatım biçimlerinin araştırılması, çocuk resimlerinin psikolojik ve gelişimsel boyutta daha derinlemesine analiz edilmesine olanak sağlayacaktır. Nitekim, Tuzcuoğlu (2019) yaptığı bir araştırmada, çocukların öz düzenleme becerileri ile kendilik algıları arasında orta düzeyde ve pozitif yönde bir ilişki olduğunu belirlemiştir. Bu bulgu, çocuğun kendilik temsillerinin öz düzenleme becerileriyle yakından ilişkili olabileceğine işaret etmektedir. Bu bağlamda yürütülen bu çalışma, çocukların öz düzenleme düzeylerine göre kendilik temsillerini içeren çizimlerini incelemeyi ve söz konusu ilişkiyi görsel veriler üzerinden anlamlandırarak öz düzenleme ile kendilik algısı kavramları arasındaki ilişkinin niteliğini açıklığa kavuşturmayı amaçlamaktadır. Bu kapsamda, çalışma çocukların sosyal-duygusal gelişim süreçlerine yönelik daha derinlikli bir anlayış kazandırma potansiyeli taşımaktadır.

Yöntem

Araştırma modeli

Çalışma, çocukların öz düzenleme düzeylerine ilişkin nicel verilerin ve ardından çocuk resimleri ile yarı-yapılandırılmış görüşmeler eşliğinde elde edilen nitel veriler eşliğinde yürütülen nitel verilerin ağırlıklı olduğu bir karma desen araştırmasıdır. Araştırmada öncelikle çocukların öz düzenleme düzeylerine ilişkin nicel veriler toplanmış, ardından çocukların çizimleri ve onlarla gerçekleştirilen yarı yapılandırılmış görüşmeler aracılığıyla nitel veriler elde edilmiştir. Bu bağlamda, çalışmanın ağırlıklı olarak nitel bulgulara dayandığı, ancak verilerin çok yönlü incelenebilmesi amacıyla açıklayıcı sıralı karma desenin (explanatory

sequential mixed design) benimsendiği söylenebilir (Creswell & Plano Clark, 2018). Bu desen, nicel verilerle başlayan ve elde edilen bulguların daha derinlemesine anlaşılması için nitel verilerle desteklendiği araştırma türlerini kapsamaktadır.

Çalışma grubu

Araştırmanın ilk çalışma grubunu (nicel veriler için), 2024-2025 öğretim yılında Tokat ili Merkez’indeki ilkokul bünyesindeki anasınıfında okul öncesi eğitime devam eden 5-6 yaş grubu (60-72 aylık) 136 çocuk çocuk ile bu çocukların öz düzenleme becerisini değerlendiren öğretmenler oluşturmaktadır. Araştırmanın ikinci çalışma grubunu (nitel veriler için), ilk aşamadan elde edilen 2024-2025 öğretim yılında (Güz döneminde) Tokat ili Merkez’indeki ilkokul bünyesindeki anasınıfında okul öncesi eğitime devam eden 5-6 yaş grubu (60-72 aylık) çocuklar arasından, 12’si yüksek öz düzenleme becerisine ve 14’ü de düşük öz düzenleme becerisine sahip olduğu belirlenen toplam 26 çocuk oluşturmuştur. Bu çocukların 10’u kız ve 16’sı erkektir. Bu grup, çalışmanın esas veri kaynaklarını oluşturmaktadır.

Veri Toplama Araçları ve Verilerin Toplanması

Çalışmanın nicel verilerinin toplanmasında “4-6 Yaş Çocuklarına Yönelik Öz Düzenleme Becerileri Ölçeği-Öğretmen Formu” (İvrendi ve Erol, 2018) kullanılmış ve buna dayalı olarak çocukların öz düzenleme becerileri değerlendirilmiştir. 4-6 Yaş Çocuklarına Yönelik Öz Düzenleme Becerileri Ölçeği (Öğretmen Formu), İvrendi ve Erol (2018) tarafından geliştirilmiştir. Ölçek 22 madde ve 3 alt boyuttan (engelleyici kontrol, dikkat ve çalışma belleği) oluşmaktadır. Her madde, Likert tipi bir ölçek ile “Hiçbir Zaman: 1 puan”, “Nadiren: 2 puan”, “Bazen: 3 puan”, “Sıklıkla: 4 puan”, “Her Zaman: 5 puan” olarak puanlanmaktadır. Puanlamadan alınan sonuca göre düşük (84 ve altı) veya yüksek (85 ve üstü) öz düzenleme becerisi belirlenmektedir. Çalışmada kullanılan bu ölçme aracı, açıklayıcı faktör analizi (AFA) sonucunda ortaya konan 3 faktörlü bir yapı, toplam varyansın yaklaşık %63’ünü açıklamaktadır. Birinci faktör toplam varyansın %46.79’unu, ikinci faktör %8.60’ını ve üçüncü faktör ise %7.67’sini açıklamaktadır. Doğrulayıcı faktör analizi (DFA) sonuçları, bu yapının model uyumunu desteklemektedir ($\chi^2/sd = 1.28$; RMSEA = .046; SRMR = .07). Ölçeğin madde-toplam korelasyonları .41 ile .77 arasında değişmekte olup, benzer yapıdaki bir ölçme aracı olan Çocuk Davranış Değerlendirme Ölçeği ile korelasyon katsayısı .82 olarak bulunmuştur.

“4-6 Yaş Çocuklarına Yönelik Öz Düzenleme Becerileri Ölçeği-Öğretmen Formu”nden elde edilen sonuçlara göre, düşük (n=14) ve yüksek (n=12) öz düzenleme düzeyine sahip olduğu belirlenen bir grup çocuk üzerinden çalışmanın nitel verileri toplanmıştır. Çalışmanın

nitel verileri, grupta yer alan çocukların “kendini çiz” yönergesi eşliğinde yaptığı resimler ve bu resimlerin öyküleri için her bir çocukla bireysel olarak yapılan yarı yapılandırılmış görüşmeler ile elde edilmiştir. Araştırmacılar tarafından çocuklara A4 boyutunda resim kağıdı ve boyalar dağıtılmıştır. Bu kapsamda çocuklara “kendini çiz” yönergesi verilerek çocukların resim yapmaları istenmiştir. Bu süreçte herhangi bir süre kısıtlaması konulmamış ve çocuklara yönlendirici bir müdahalede bulunulmamıştır. Yönerge doğrultusunda her çocuğun yaptığı resmin hikayesi birebir dinlenerek kayıt altına alınmış ve yazılı doküman haline getirilmiştir. Bu kapsamda elde edilen veriler de analiz işlemleri için hazırlanmıştır.

Verilerin Değerlendirilmesi

Çalışma amacı doğrultusunda elde edilen veriler betimsel analiz ile analiz edilmiştir. Bu kapsamda her bir çocuğa ait veriler için Ç₁, Ç₂ Ç₂₆ şeklinde kodlamalar yapılarak çocukların kimlikleri gizli tutulmuş ve elde edilen veriler bilimsel işlem basamakları dahilinde raporlanmıştır. Buna göre, çalışma grubundaki çocukların resimlerinde yer alan her bir unsur, çocuk resimlerinde öne çıkan özellikler bağlamında değerlendirilmiş ve elde edilen bulgular, frekans (f) ve yüzde (%) değerleri ile tablo dahilinde sunulmuştur. Bu kapsamda, verilerin güvenilirliğini artırmak amacıyla, temalar ve kodlamalar okul öncesi eğitimi alanında uzman bir öğretim üyesi tarafından birebir detaylı bir şekilde gözden geçirilmiş ve elde edilen sonuçlar karşılaştırılarak değerlendirilmiştir. Kodlayıcılar arası tutarlılığı belirlemek amacıyla Miles ve Huberman’ın (1994) önerdiği $[Görüş\ birliği / (Görüş\ birliği + Görüş\ ayrılığı)] \times 100$ formülü kullanılmış ve kodlama güvenilirliği %95’in üzerinde bulunmuştur. Bu durum, elde edilen nitel verilerin yorumlanmasında güvenilirliğin sağlandığını göstermektedir. Bu kapsamda gerekli düzeltme ve incelemelerle geçerli ve güvenilir sonuçlara ulaşılması sağlanmıştır. Ayrıca, çalışmada çocukların resimlerinden örnekler de sunularak anlaşılabilirliğin güçlendirilmesine özen gösterilmiştir.

Bulgular

Bu bölümde, çalışma amacı doğrultusunda, düşük ve yüksek öz düzenleme becerisine sahip olan çocukların kendilik algısını yansıtan çocuk resimlerinde öne çıkan özellikler belirli kategoriler halinde ortaya konmuştur. Bu kapsamdaki bulgular, Tablo 1’de sunulmuştur.

Tablo 1: Çocukların Öz Düzenleme Düzeyine Göre Kendilik Algısını Yansıtan Çocuk Resimlerinde Öne Çıkan Özelliklerin Dağılımı

Resimlerde Öne Çıkan Özellikler	Düşük öz düzenlemeye sahip grup			Yüksek öz düzenlemeye sahip grup

Kalabalık	–	–	–	Ç ₂₀	1	3.8
Sayfada uyum ve bütünlük	–	–	–	Ç ₁₆ , Ç ₁₈ , Ç ₂₀ , Ç ₂₂ , Ç ₂₃ , Ç ₂₆	6	23.1

Tablo 1'e göre, düşük ve yüksek öz düzenleme düzeyine göre çocukların resimlerinde öne çıkan özellikler farklılık göstermekle birlikte, düşük öz düzenleme becerisine sahip çocukların resimlerinde (%34.6'sında) kalın yer çizgisi ve yüksek öz düzenleme becerisine sahip çocukların resimlerinde (%26.9 ile) ise renkli/canlı çizimler en fazla öne çıkan özelliklerdir.

Resim 1: Ç₃'ün Resmi

Resim 2: Ç₂'nin Resmi

Düşük öz düzenleme becerisine sahip çocukların resimlerindeki kalın yer çizgisinin yüksek öz düzenleme becerisine sahip çocukların resimlerindeki kalın yer çizgisi oranlarından (%11.5'i) belirgin bir şekilde daha fazla olduğunu Resim 1 ve Resim 2 ile Resim 3'deki detaylar açıkça göstermektedir. Yine Ç₂'ye ait Resim 2'nin hikâyesi için çocuk “İki ev var. Ortadaki ev eski evim, en soldaki ev yeni evim. Aynı zamanda iki tane güneş var. Yeni evimin üstündeki güneş soğuk” şeklinde bir ifadeye yer vermiştir. Bir mutsuzluk/umutsuzluk örneğini teşkil eden bu resimde, tek düze renk kullanımı, sayfada karmaşıklık ve kalın yer çizgisi gibi özellikler görülmektedir.

Resim 3: Ç₄'ün Resmi

Resim 4: Ç₅'in Resmi

Düşük öz düzenleme becerisine sahip çocuk gruplarının resimlerinde, eksik/yarım uzuv (%30.8 oranında), abartılı çizgiler (%26.9 oranında), karmaşık/ düzensiz sayfa yapısı (%26.9 oranında) gibi özellikler de daha yoğun bir şekilde öne çıkmıştır. Küçük çizim (%15.4), kendini sayfa sonuna konumlandırma (%11.5) ve mutsuz/umutsuz içerik (%15.4) gibi özellikler ise sadece düşük öz düzenleme becerisine sahip çocuk grubunda görülmüştür. Örneğin, düşük öz düzenleme becerisine sahip Ç₄'ün Resim 3'de yer alan insan çiziminde eller, ayaklar ve yüz ifadeleri itibariyle eksik/yarım uzuv özelliğini öne çıkardığı, uzun çizilmiş bacaklarla da bir

abartıyı dile getirdiği görülmüştür. Bunun yanı sıra, Resim 4'teki Ç₅'in resminde çocuğun kendini sayfa sonuna konumlandırırmış olduğu görülürken, sayfada orantısızlıkların olduğu da tespit edilmiştir.

Resim 5: Ç₁'in Resmi

Resim 6: Ç₉'un Resmi

Bunların yanı sıra, Resim 5'i çizen Ç₁'in yaptığı resimde sadece kendini çizdiğini söyleyerek, kendini oldukça küçük bir şekilde resmettiği saptanmıştır. Yalnızlık özelliği taşıyan bu resimde, çocuğun güvensizlik hissiyatı taşıdığı açıkça görülmektedir. Yine Resim 6'da Ç₉'un kendini çizerken sürekli çizip sildiğinin ve çizdiği insan figürlerindeki uzuvlarda eksikliklerin olduğunun belirlenmesi bu noktada dikkat çekicidir. Bu resimde, kalın yer çizgisi yanında sayfa düzenindeki orantısızlık da yine öne çıkan durumlar arasındadır.

Yüksek öz düzenleme becerisine sahip çocuklar açısından durum değerlendirildiğinde ise bu gruptaki çocukların 7'sinin (%26.9'u) renkli/canlı çizimlere yer verirken, ayrıca bunu takiben 6'sının (%23.1'i) mutlu/neşeli içeriklere, yine 6'sının (%23.1'i) da sayfada uyum ve bütünlük gösteren çizimlere açıkça yer verdiği tespit edilmiştir. Bu özelliklerin düşük öz düzenleme becerisine sahip çocuklarda gözlemlenmemiş olması da dikkat çekici bir başka bulgudur.

Resim 7: Ç₁₆'nın Resmi

Resim 8: Ç₂₂'nin Resmi

Yüksek öz düzenleme becerisine sahip olan çocukların resimlerinden örnekler bakıldığında, Ç₁₆'nın Resim 7'deki resmi mutlu, neşeli ve renkli özellikleri temsil etmektedir. Ayrıca Ç₂₂'nin yaptığı Resim 8 de sıcak renkler ve renkli figürler yer almakta iken; kalpler, çiçek, gülen yüzler ve sevgi ifadeleri ile mutlu/neşeli bir içerik ifade edilmektedir.

Resim 9: Ç₂₃'ün Resmi

Resim 10: Ç₂₆'nın Resmi

Yüksek öz düzenleme becerisine sahip olan çocuklara ait resimlerden başka örnekler olarak Resim 9'da ve Resim 10'da genel olarak güneş resminin, canlı renklerin ve gülen yüzlerin yer aldığı, sayfada uyumun ve bütünlüğün de mevcut olduğu görülmektedir. Bunlara ek olarak, bu resimlerin hikayelerinde resmi yapan çocukların daha olumlu özellikleri ve mutlu bir ortamı tasvir etmiş olmaları da ayrıca dikkat çekicidir.

Elde edilen bütün bulgulara göre; renk kullanımı, figürlerin kağıtta kapladığı yer ve yerleşim yeri, insan figürlerinde ki detaylar ve resmin yansıttığı duygu çocuğun kendilik algısıyla ilgili önemli ipuçları sunmaktadır. Düşük öz düzenleme becerisine sahip çocuk resimleri özetle incelendiğinde; ortak nokta olarak resimlerde orantısızlık, düzensizlik, karmaşıklık, tek düze renk görülmektedir. Buna göre, çocukların kendilerini özgüvensiz hissettikleri, çevreye uyum sağlamada güçlük yaşadıkları ve destek ihtiyacı içerisinde oldukları yönünde bulguya ulaşılmıştır. Yüksek öz düzenleme becerisine sahip çocukların ise resimlerinde daha canlı renkler, sevgi ifade eden figürler kullandıkları ve beraberinde sayfalarında uyum ve bütünlük olduğu görülürken; daha pozitif duyguları yansıttıkları ortaya konmuştur. Bu gruptaki çocukların kendinden daha emin oldukları, özgüvenlerinin daha yüksek ve sosyal uyumlarının daha iyi oldukları yönünde bir başka bulgu da gözler önüne çıkmaktadır. Bu durum da düşük öz düzenleme becerisine sahip çocukların destek ihtiyacının bir başka göstergesi olmaktadır.

Sonuçlar ve Tartışma

Bu araştırmada, çocuklara verilen “**kendini çiz**” yönergesi doğrultusunda oluşturulan görsel temsiller eşliğinde çocukların öz düzenleme becerilerine göre, kendilik algıları ortaya konmuştur. Elde edilen sonuçlar; çocukların kendilik temsillerinin, öz düzenleme düzeylerine göre anlamlı biçimde farklılaştığını göstermiştir.

Düşük öz düzenleme becerisine sahip çocuklar, çizimlerinde belirgin biçimde **kalın yer çizgileri, eksik ya da yarım uzuvlar, abartılı figürler, karmaşık/düzensiz sayfa kullanımı ve sayfa sonuna yerleştirilmiş küçük beden figürleri** gibi öğelere yer vermiştir. Bu unsurlar, çocukların kendilerini güvensiz, değersiz ya da kontrolsüz hissettiklerini; dolayısıyla **olumsuz bir kendilik algısına** sahip olduklarını düşündürmektedir (Koppitz, 1968; Malchiodi, 1998). Özellikle eksik uzuv ya da bedenin küçük çizilmesi, çocuğun yetersizlik duygularını ve çevresine karşı duyduğu çekingenliği yansıtabilmektedir (Lowenfeld & Brittain, 1987). Buna karşılık, **yüksek öz düzenleme becerisine sahip çocukların** resimlerinde ise **canlı renkler, sayfada denge ve bütünlük, kendini sayfanın merkezine konumlandırma, mutlu yüz ifadeleri ve ilişkisel figürler (örneğin aile üyeleri, arkadaşlar)** yer almıştır. Bu çizimler, çocukların çevreleriyle sağlıklı bağlar kurduklarını, olumlu duygulara sahip olduklarını ve **kendilerine dair olumlu bir algı geliştirdiklerini** göstermektedir (Burkitt vd., 2010; Thompson, 2009). Sayfa yerleşimi, renk seçimi, yüz ifadeleri ve beden ayrıntıları çocukların duygusal durumu kadar **kendilik değerini** de açıkça yansıtmaktadır (Cox, 2005; Malchiodi, 1998).

Ayrıca, **düşük öz düzenleme becerisine sahip çocuklarda mutsuz ya da umutsuz içeriklerin yer alması**, bu çocukların içsel olarak sıkıntı yaşadıklarını ve bu durumun öz algılarını olumsuz etkilediğini göstermektedir. Duygusal düzenleme kapasitesi gelişmemiş çocukların kendilik sunumları da daha dağınık, bastırılmış ya da savunmacı bir yapıda olabilmektedir. Öte yandan, **yüksek öz düzenleme becerisine sahip çocukların** çizimlerinde **gülümseyen yüzler, güçlü ve belirgin beden konturları ve ilişkisel bağları temsil eden semboller**, bu çocukların kendilerine güvenen, duygularını daha sağlıklı biçimde düzenleyebilen bireyler olduğunu düşündürmektedir. Bu sonuçlar ışığında, çocuklara “Kendini çiz” gibi açık uçlu sanatsal yönergelerin verilmesinin, onların **iç dünyalarını ve öz algılarını anlamada etkili ve güvenli bir değerlendirme yöntemi** sunduğu söylenebilir. Resimlerdeki kendilik temsilleri; çocukların öz düzenleme kapasiteleri, özgüven düzeyleri ve çevreyle olan etkileşimleri hakkında zengin ipuçları sağlamaktadır. Özellikle risk altındaki çocukların erken

dönemde bu tür yöntemlerle tespit edilmesi, uygun destek müdahaleleri açısından önem taşımaktadır (Malchiodi, 1998; Lowenfeld & Brittain, 1987).

Sonuç olarak, bu araştırma, **öz düzenleme becerileri ile kendilik algısı arasındaki ilişkinin**, çocuk resimleri yoluyla anlamlı şekilde ortaya konabileceğini göstermektedir. Erken çocukluk döneminde sanat temelli değerlendirme tekniklerinin, hem tanılayıcı hem de geliştirici potansiyele sahip olduğu düşünülmektedir. Alanyazınında doğrudan çocuk resimleri ile öz düzenleme becerileri arasındaki etkileşimi inceleyen herhangi bir çalışmaya rastlanmamış olmakla birlikte, öz düzenleme ve benlik algısını inceleyen çalışmalar elde edilen bu sonuçları destekler niteliktedir. Örneğin, Zembat vd.'nin (2018) çalışmasında; benlik algısının ve sosyal becerilerin, mizacı yüksek oranda etkilediği vurgulanmıştır. Kovancı (2020) ile Tuzcuoğlu vd.'nin (2019) yapmış oldukları çalışmalarda da öz düzenleme becerisi ile kendilik algısının pozitif yönde bir ilişki olduğunu kanıtlar niteliktedir.

Elde edilen bütün sonuçlar doğrultusunda, erken çocukluk döneminde sanat temelli etkinliklerin hem tanılayıcı hem de geliştirici bir araç olarak kullanılması önerilmektedir. Özellikle “kendini çiz” gibi yapılandırılmamış yönergeler, çocukların içsel deneyimlerini yansıtmada etkili olabilmekte ve öğretmenlere, rehberlik uzmanlarına ya da psikolojik danışmanlara erken dönemde müdahale fırsatı sunabilmektedir. Bu nedenle, eğitim ortamlarında çocukların duygusal gelişimlerini izlemeye yönelik sanat temelli gözlem süreçlerine yer verilmesi önem taşımaktadır. Ayrıca öğretmen adaylarına yönelik programlarda, çocuk resimlerinin yorumlanmasına dair temel bilgi ve becerilerin kazandırılması, bu tür değerlendirme yöntemlerinin daha bilinçli ve etkili biçimde uygulanmasını sağlayacaktır. Gelecekte yapılacak araştırmalar, farklı yaş gruplarında ve çeşitli sosyoekonomik arka planlara sahip çocuklarla benzer çizim yönergelerinin uygulanmasıyla genellenebilir bulgulara ulaşabilir. Bununla birlikte, nitel veri analizlerinin yanı sıra nicel bulgularla desteklenen karma yöntemli çalışmalar, öz düzenleme ve kendilik algısı arasındaki ilişkinin daha kapsamlı biçimde anlaşılmasına katkı sunacaktır. İlerleyen dönemde yürütülecek yeni çalışmalarda, daha geniş örnekleme ve gözlem, görüşme gibi çeşitli veri toplama araçları eşliğinde farklı değişkenlerin ele alındığı kapsayıcı çalışmalar yürütülebilir. Eğitim politikası düzeyinde ise sosyal-duygusal gelişimi destekleyen sanat temelli uygulamaların okul öncesi müfredata daha sistemli biçimde entegre edilmesi, çocukların öznel iyi oluşlarını ve benlik saygılarını artıracaktır. Bu doğrultuda sanat, erken çocuklukta sadece estetik bir alan değil, aynı zamanda duygusal ifade, öz farkındalık ve psikososyal destek aracı olarak da değerlendirilmelidir.

Eğitimde Duygusal ve Bilişsel İyi Oluş: *Dead Poets Society*'nin Öğrenme Kültürü Üzerine Yansımaları

Ahmet Berk Duman

İstinye Üniversitesi, TÜRKİYE,

ahmet.duman@istinye.edu.tr, Orcid No: 0009-0000-0385-5782

Özet

Öğretmen/Ebeveyn/Öğrenci İyi Oluşu, Okullarda Pozitif İklim, Eğitim Psikolojisi kapsamında yazılan bu özetin örnekleminde yer alan *Dead Poets Society* (Ölü Ozanlar Derneği, 1989) filmi, bağlamlarıyla öğretmen-öğrenci ilişkilerinin öğrencinin zihinsel, duygusal ve öznel iyi oluşu üzerindeki etkilerini ele almaktadır. Bu çalışma, filmdeki eğitim anlayışını, öğrenme motivasyonu, kendini gerçekleştirme ve eğitimde pozitif iklim oluşturma bağlamında inceleyerek, pedagojik yaklaşımların öğrenci psikolojisi üzerindeki etkisini tartışacaktır. Eğitimde yaratıcılığın ve özgür düşüncenin desteklenmesinin, öğrencinin bireysel gelişimi ve akademik başarısı üzerindeki katkıları, film üzerinden irdelenecektir. Bu çalışma, ilgili filmde temsil edilen öğretmen-öğrenci ilişkilerini, öğrencinin zihinsel, duygusal ve öznel iyi oluşu bağlamında Carl Rogers'ın *İnsancıl Eğitim Yaklaşımı* yöntemi çerçevesinde ele almaktadır. Rogers'ın öğrenme süreçlerinde içsel motivasyon, empati, koşulsuz kabul ve kendini gerçekleştirme ilkeleri, filmdeki öğretmen figürünün öğrencileriyle kurduğu özgürleştirici ve destekleyici ilişki biçimini anlamlandırmada temel alınmaktadır. Bu bağlamda, yaratıcı düşünmenin teşvik edildiği, öğrencinin birey olarak değer gördüğü ve duygusal güvenliğin önceliklendirildiği bir sınıf ortamının, öğrencilerin akademik gelişimlerinin ötesinde, öznel iyi oluşları üzerindeki etkileri tematik içerik analizi ve göstergebilimsel çözümleme yöntemleriyle incelenmiştir.

Anahtar Kelimeler: İnsancıl Eğitim, Öğrenci İyi Oluşu, Öğretmen – Öğrenci İlişkisi, Kendini Gerçekleştirme, *Ölü Ozanlar Derneği*.

Emotional and Cognitive Well-Being in Education: Reflections on the Learning Culture in *Dead Poets Society*

Abstract

The well-being of teachers/parents/students, positive climate in schools, and educational psychology are the main themes of this study, in which the film *Dead Poets Society* (1989) serves as a striking example of how teacher-student relationships affect students' mental, emotional, and subjective well-being. This study analyzes the educational approach presented

in the film in the context of learning motivation, self-actualization, and the creation of a positive school climate, discussing the impact of pedagogical approaches on student psychology. It examines the contributions of supporting creativity and free thinking in education to students' individual development and academic success through the lens of the film. The study approaches the teacher-student relationships portrayed in the film within the framework of Carl Rogers' *Humanistic Education Approach*, focusing on students' mental, emotional, and subjective well-being. Rogers' principles—such as intrinsic motivation, empathy, unconditional positive regard, and self-actualization—serve as a basis for interpreting the liberating and supportive relationship style of the teacher figure in the film. In this context, the effects of a classroom environment that encourages creative thinking, values the student as an individual, and prioritizes emotional safety—beyond academic development—are analyzed using thematic content analysis and semiotic analysis methods.

Keywords: Humanistic Education, Student Well-Being, Teacher–Student Relationship, Self-Actualization, *Dead Poets Society*.

*“Tek insanın şarkısını söylüyorum, bir başına, herhangi bir insan,
Gene de “Demokratik” sözcüğünü, “Yığınlar” sözcüğünü kullanıyorum.*

Ne yalnız yüz, ne de yalnız beyin değerlidir esin perisi için, ben, vücut bütünüyle çok daha değerlidir
diyorum.*

Erkeklerle eşit olarak kadınların şarkısını söylüyorum.

*“Duygu, heyecan, güç yüklü yaşamın,
Neşeli, en özgür davranışlar için tanrısal yasalarla yaratılmış,
Yeni insan'ın şarkısını söylüyorum.”*

(Armağanlar - One's Self I Sing / TEK İNSANIN ŞARKISINI SÖYLÜYÖRÜM, Walt Whitman)

Giriş

Geleneksel eğitim paradigmalarının bilgi aktarımına dayalı yapısından uzaklaşarak, bireyin duygusal, zihinsel ve özne iyi oluşunu öncelikleyen bütüncül modeller son yıllarda daha fazla önem kazanmıştır. Bu bağlamda sinema, hem kültürel hem de pedagojik bir söylem alanı olarak, eğitim ideallerini ve ilişkilerini sorgulama imkânı sunar. *Dead Poets Society* (1989), öğretmen-öğrenci etkileşimlerini duygusal derinliğiyle ele alarak, eğitim psikolojisine dair güncel tartışmalarla örtüşen temsiller üretebilmektedir.

Modern eğitim anlayışı, yalnızca akademik başarıya odaklanan sistematik yapılardan çıkarak; öğrencinin çok boyutlu gelişimini, yani yalnızca bilişsel değil, aynı zamanda duygusal, sosyal ve etik gelişim alanlarını da kapsayan yaklaşımlara yönelmektedir. “İyi oluş” kavramı bu noktada eğitimin merkezine yerleşmekte; öğrencilerin yalnızca ne bildikleri değil, nasıl hissettikleri, nasıl düşündükleri ve kim oldukları soruları da giderek daha fazla önem arz etmektedir. Bu dönüşüm, öğrenme süreçlerini sadece içerik aktarımı değil, anlam üretimi, benlik inşası ve aidiyet duygusunun güçlenmesi olarak yeniden tanımlamaktadır. Eğitim sisteminin bireyi yalnızca bir bilgi alıcısı değil, özne olarak konumlandığı bu paradigma kayması, öğretmen figürünün rolünü de derinden dönüştürmektedir. Artık öğretmen sadece bilgiyi aktaran değil, aynı zamanda duygusal bağ kuran, öğrencinin potansiyelini açığa çıkarmasına aracılık eden, rehberlik eden bir varlık olarak yeniden tanımlanmaktadır.

Bu noktada; “iyi oluş” (well-being) kavramı, pedagojik ilişkiler ve öğrenme ortamları açısından merkezi bir yere yerleşmiştir. Özellikle duygusal güvenin sağlandığı, empatik ve açık iletişime dayalı öğretmen-öğrenci ilişkileri, öğrencilerin hem öğrenmeye yönelik motivasyonlarını hem de benlik algılarını güçlendirmektedir. Bu tür ilişkiler, öğrencilerin öğrenme sürecine gönüllü ve anlamlı katılımını teşvik ederken, aynı zamanda uzun vadeli duygusal dayanıklılık ve psikolojik esenlik gibi kazanımları da beraberinde getirmektedir. Eğitim kurumları yalnızca akademik bilgi aktaran yapılar değil, aynı zamanda bireyin kendisiyle, başkalarıyla ve dünyayla kurduğu ilişki biçimlerini şekillendiren sosyal alanlardır. Bu nedenle, eğitim psikolojisi kapsamında duygusal ve bilişsel iyi oluşu merkeze alan yeni yaklaşımlar, hem mikro düzeyde bireysel gelişim süreçlerine hem de makro düzeyde kültürel dönüşümlere işaret etmektedir. Carl Rogers, eğitim ortamlarında öğretmen ve öğrenci arasında kurulan ilişkinin bilgi aktarımı temelli nesnel bir yapı üzerine inşa edilmesine karşı çıkar. Ona göre, bu tarz bir ilişki biçimi, bilgiye değişmez ve mutlak bir değer atfederek, özneyi edilgen hâle getirir ve bu yönüyle Martin Buber’in tanımladığı “Ben-O” düzlemine saplanır. Bu tür bir eğitim ortamında öğretmen, yalnızca bilgiyi elinde tutan ve onu öğrenciye aktaran bir figür hâline gelirken; öğrenci, bu bilgi karşısında edilgen, pasif bir alıcı konumuna itilir. Rogers bu durumu, sürahi ve bardak benzetmesiyle açıklar: Öğretmen, içinde “gerçek bilgi” bulunan bir sürahi gibi davranırken, öğrenci ise sadece bu bilgiyi alabildiği ölçüde içine çeken bir bardak olarak temsil edilir. Bu modelde bilginin öğrenciyle olan bağı, sadece aktarım düzeyinde kalır; ne bilgiye ulaşma süreci ne de bilginin bireysel anlamlandırılması dikkate alınır. Bu türden bir yaklaşımda, bilginin öznel deneyimle kurduğu ilişki göz ardı edilirken, insan yalnızca edilgen bir nesneye indirgenir. Bilgi, yalnızca aktarılması gereken nötr bir içerik olarak değerlendirilir; onun bireyin

yaşantısıyla, düşünce dünyasıyla ya da duygusal gelişimiyle kurabileceği bağlar dikkate alınmaz. Nitekim Freire'nin eleştirdiği “bankacı eğitim modeli” de tam olarak bu biçimi işaret eder: Öğretmen bilgi yatırımı yapan bir figür olurken, öğrenci de sadece bu yatırımı pasif biçimde kabul eden bir hesaba dönüşür. Bu türden bir sistem, öğrenciyi özgürleştirmekten ziyade nesneleştirir; bilgi, insanla kurduğu ilişki bakımından araçsallaşır. Oysa insancıl ve deneyime dayalı bir öğrenme anlayışı, bilginin yalnızca edinilmesini değil, onunla birlikte bireyin kendisini de inşa etmesini amaçlar. Kierkegaard'ın ifadesiyle, “ben'in gelişim yasası, bilginin bilinçle beraber ilerlemesine” bağlıdır. Kendi benliğini tanımadan edinilen her bilgi, insanın varoluşunu zenginleştirmekten çok, onu erozyona uğratan bir bilgiye dönüşme riski taşır. Bu noktada, öğrenme süreci bireyin sorumluluk aldığı, zaman zaman zorlandığı, hatta acı deneyimlerle karşılaştığı bir oluş hâlidir. Rogers'a göre, bir bebeğin yürümeyi öğrenirken düşmesi, dizini yaralaması ama her defasında yeniden kalkarak ilerlemeyi öğrenmesi bu sürecin en temel örneğidir. Öğrenme burada yalnızca zihinsel bir edinim değil, varoluşsal bir gelişimdir (Dinçer, 2019, s. 2345-6).

Dolayısıyla anlamlı bir eğitim ortamı, öğretmenin tek taraflı bilgi aktaran bir otorite figürü olarak değil, öğrenme sürecinin katılımcısı olan bir özne olarak yer aldığı, öğrencinin ise bilgiyi deneyimleyerek anlamlandırabildiği ve kendi varoluşsal süreciyle bütünleştirebildiği bir zemin üzerinden inşa edilmelidir. Öğrenmenin gerçekleştiği yer artık sadece bilginin depolandığı değil; insanın dönüşüm yaşadığı, benliğiyle kurduğu ilişkide derinleştiği bir alandır. Bu nedenle, “öğrenme”nin yalnızca bilmeye değil, aynı zamanda “bilinci olan bir özneye dönüşmeye” hizmet etmesi gerektiği açıktır.

Bu dönüşümün toplumsal ve kültürel temsillerini anlamada sinema, son derece işlevsel bir mecra olarak karşımıza çıkmaktadır. Sinema, geniş bir alımlama kuşağını kapsadığından eğitimi yalnızca formel kurumlarla sınırlı olmayan, duygusal, etik ve düşünsel bir deneyim olarak resmedebildiği gibi; farklı eğitim modelleri ve öğretmen rolleri üzerine eleştirel düşünmeyi de mümkün kılabilmektedir. Özellikle “birey merkezli” eğitimin önemini vurgulayan anlatılar, izleyiciye alternatif pedagojik hayalleri imlemektedir. Bu noktada, eğitim psikolojisine dair soyut kuramsal kavramların somut, duygusal ve deneyimsel anlatımlarla görselleştirilmesi, sinemayı yalnızca bir temsil alanı olmaktan çıkararak aynı zamanda pedagojik bir araç hâline getirdiği de bir diğer önemli farkındalık ve yatkinlik sahasıdır. Eğitimin duygu merkezli boyutunun estetik ve anlatı diliyle işlendiği filmler, yalnızca birer anlatı değil, aynı zamanda polifonik birer “duygu pedagojisi” önerisi olabilme ihtimaline

potansiyel anlamda da sahiptir. Öğrenciyle kurulan bağın niteliği, öğrenme ortamının esnekliği ve öğretmenin rolü vb. gibi temel pedagojik unsurlar, sinemasal temsil aracılığıyla dildeki olanaklarla -gerekirse bazan bir ıslık sesiyle temsil edilip- yeniden düşünölmeye açılmaktadır.

Dilin merkezi önemine ilişkin; insan, bir sosyal varlık olarak belirli bir dilin içine doğar ve ait olduđu toplumun kültürel kodlarını büyük ölçüde anadili aracılığıyla öğrenir dememiz gerekir. Bu bağlamda dil ve kültür arasında kopmaz bir bağ bulunmaktadır. Hiçbir kültür, dilden bağımsız olarak varlık gösteremez; çünkü dil yalnızca kültürü yansıtan bir araç değil, aynı zamanda onu kuran ve sürdüren bir yapıdır. Dil, kültürel unsurların aktarılmasını, toplum içinde anlam kazanmasını ve kuşaklar arasında iletilmesini sağlar. Bu yönüyle dil, kültürün vazgeçilmez taşıyıcısı ve kurucu unsurudur.

Taşıyıcı metaforlar ve sınırların bedensel algısı üzerine kafa yorduğumuz vakitse insan, varlığını dünyada bedenlenmiş bir özne olarak deneyimler. Derimiz, hem bizi çevreleyen hem de bizi dünyanın geri kalanından ayıran ilk fiziksel sınırdır. Bu sınır sayesinde, dışarısı ve içerisi arasında kurduğumuz ayırım yalnızca fizyolojik bir gerçeklik değil, aynı zamanda bilişsel ve kültürel bir örgütlenme biçimi hâline gelir. Bu bedensel yönelimimiz, çevremizdeki diğer nesnelere de aynı yapıyı yansıtmamıza neden olur. Tıpkı bedenimiz gibi, başka nesneleri de bir iç ve dış yapıya sahip “taşıyıcılar” olarak algılarız. Bu nedenle, odalar ve evler vb. gibi mekânlar, kendiliğinden taşıyıcı kategorisine dâhil edilir. Bir odadan diğerine geçmek, bir taşıyıcının dışına çıkıp diğerinin içine girmek anlamına gelir. Aynı şekilde, bir taşı kırıp içine baktığımızda da benzer bir iç-dış yönelimi nesneye yansıtırız. Bu yönelimi yalnızca insan yapımı nesnelere değil, doğal çevremize de uygularız. Örneğin, bir ormanın içindeki açıklık, etrafi sınırlandırılmış bir yüzey olarak algılanabilir. Böyle bir açıklıkta bulunmak, kendimizi ya açıklığın “içinde” ya da onun “dışında” konumlandırmamıza neden olur. Benzer biçimde, ormanın içinde olmak ile dışında olmak arasındaki ayırım, mekânsal yönelimin doğrudan bir yansımasıdır. Bu algı, açıklığın mutlak fiziksel sınırlarla tanımlanmasına gerek kalmaksızın işler. Ağaçların seyrekleşmeye başladığı ve açıklığın belirsiz biçimde başladığı yer, zihnimizde bir sınır olarak işlev görür. Gerçekte ise bu sınır, tam olarak çizilmiş bir çizgi değil, algısal olarak kurulmuş bir eşiktir. Ne var ki, taşıyıcının fiziksel sınırlarını belirleyen duvar, çit veya nesnel bir hat bulunmasa dahi, insanlar arazileri de bu iç-dış yapısı içerisinde anlamlandırırılar. Sembolik olarak çizilen sınırlar —örneğin harita üzerindeki soyut çizgiler, yükselti farkları veya kültürel olarak inşa edilmiş arazi tanımlamaları— bir bölgeyi “içeride” ve “dışarıda” olan şeklinde bölümlere ayırmamıza imkân tanır. Bu da gösterir ki, taşıyıcı metaforu yalnızca

fiziksel nesnelerle sınırlı değildir; aynı zamanda zihinsel, kültürel ve mekânsal algılarımızın temel örgütleyici yapılarından biridir (Lakoff & Johnson, 2022, s. 67).

Dil ile kültür arasındaki ilişki, bir zorunluluk ilişkisi olarak değerlendirilebilir. Bir başka ifadeyle, kültürün anlam bulduğu, şekillendiği ve yayıldığı temel mecra dildir. Kültürün ortak hafızasını kuran, toplumsal değerleri taşıyan ve bireylerin kimlik inşasına katkıda bulunan en temel öge dil olmaktadır. Nitekim *“Dil, kültür yapısını bir arada tutan çimentodur,”* benzetmesi bu ilişkinin ne kadar güçlü ve birleştirici olduğunu ortaya koymaktadır. Dil; aynı zamanda *“kültür alanının her yanını aydınlatan bir güneş”, “kültür kilimini dokuyan iplik”,* ya da *“kültür anıtlarının yansıdığı bir akarsu”* olarak da betimlenebilir. Bu vb. gibi metaforlar, dilin kültürle olan çok katmanlı ilişkisini ve kültürel üretimdeki merkezî rolünü görünür kılabilmiş söylem demetleridir. Dil, bu taşıyıcı metaforun olgusal aparatı olarak, yalnızca bir iletişim aracı olmanın ötesine geçerek, düşüncenin şekillenmesinde de belirleyici bir rol üstlenir. Düşüncelerimiz dil içinde oluşur ve dile göre biçim kazanmaktadır. Bu nedenle, kültürel yaratıcılık ve bireysel ifade kapasitesi doğrudan dilin sunduğu olanaklarla ilişkilidir. Martin Heidegger’in ifadesiyle, *“Dil, varlığın evidir.”* Bu düşünce, dilin, yalnızca kültürü taşımakla kalmadığını yanı sıra insanın varoluş biçimini de dil aracılığıyla kurduğunu açıklayabilmemizi sağlamaktadır. Bu noktada dil, insanın doğada var olana kattığı tüm anlam katmanlarının da kurucu ögesidir. Martin Heidegger’in *“Dil, varlığın evidir”* şeklindeki ünlü sözü, dilin yalnızca bir iletişim aracı değil, insanın dünyadaki varoluşunu anlamlandırma biçimi olduğuna işaret eder. Bu ifade, Türk düşün dünyasında da karşılık bulmuş ve farklı yorumlara konu olmuştur. Nitekim Mehmet Kaplan, Heidegger’in bu sözünü Ahmet Hamdi Tanpınar’ın *“düşüncenin evi”* şeklinde çevirdiğini belirtirken, kendi yorumunu *“dil, insanın evidir”* biçiminde yapmayı tercih eder. Kaplan’a göre insanın kendisini, dünyayı ve ötekini anlamlandırması, yani varoluşunu kurması ancak dil aracılığıyla mümkün olur. Bu nedenle dil, sadece düşüncenin ya da kültürün değil, insanın tüm varlık alanının taşıyıcısıdır. Dil, bu bağlamda hem bireyin hem de toplumun hafızasıdır; kültürel sürekliliği ve zihinsel derinliği mümkün kılan temel varlık zemini (aktaran Tarım, 2004, s. 20). Wilhelm von Humboldt’un tanımıyla dil, *“bir ulusun tüm tinsel enerjisinin”* bir ifadesi olabilmektedir (Akarsu, 1984, s. 79). Bu yönüyle dil, tarih boyunca insanlık tarihinin en yaratıcı güçlerinden biri olarak karşımıza çıkar. Dolayısıyla bir toplumun kültürel yapısı, doğrudan doğruya o toplumun dili üzerinden hem okunabilir, hem de inşa edilebilir. Toplumsal belleğin taşıyıcısı, kolektif kimliğin kurucusu ve bireyin özneleşme sürecinin en temel yapı taşı olan dil, doğası gereği

dikotomik açıdan kültürel yaratımın da merkezindedir. Bu bağlamda dil, yalnızca kültürün bir aynası değil, aynı zamanda kültürün yaratıldığı etkin bir alandır.

Dil, kültürün yalnızca taşıyıcısı değil, aynı zamanda onun üretildiği, biçimlendiği ve sürdürüldüğü bir alan olarak değerlendirildiğinde, toplumsal yaşamın her alanında etkin ve belirleyici bir rol oynamaktadır. Bu nedenle, dili anlamak; kültürü, toplumu ve bireyi anlamakla eşdeğerdir. Bu bağlamda *Dead Poets Society*, yalnızca 1980’lerin Amerikan eğitim sistemine yönelik bir eleştiri değil, aynı zamanda duygusal bağlamda zenginleşmiş bir öğretme ve öğrenme kültürüne dair evrensel ve metaforik bir sinematografik dil önerisi de sunabilmektedir. Film, bir öğretmenin, öğrencilerinin iç dünyalarını anlamaya yönelik gösterdiği çaba ile hem bireysel dönüşümün hem de kolektif uyanışın nasıl tetiklenebileceğini güçlü bir anlatımla ortaya koymaktadır. Öğrencilerin (var olan) potansiyellerini gerçekleştirme yolculuğunda, öğretmenin duygusal rehberliği kadar, öğrenme ortamının özgürlükçü doğası da belirleyici olmaktadır. Bu bağlamda, Carl Rogers’ın *İnsancıl Eğitim Yaklaşımı*’nın temel ilkeleri olan içsel motivasyon, koşulsuz kabul, empati ve kendini gerçekleştirme gibi kavramlar, filmdeki pedagojik örüntülerle doğrudan ilişkilendirilebilir niteliktedir.

Çalışmanın devamında, *Dead Poets Society* filmi, birey merkezli pedagojik anlayışların, özellikle de iyi oluş temelli yaklaşımların sinemasal bir örneği olarak ele alınacak; duygusal bağlamda güvenli bir sınıf ortamının öğrencinin kendilik algısı, yaratıcılığı ve akademik başarısı üzerindeki etkileri teorik analizlerle tartışılacaktır. Filmdeki öğretmen-öğrenci ilişkilerinin, sadece bireysel değil aynı zamanda toplumsal dönüşüm potansiyeli taşıyan pedagojik eylemler olduğu varsayımıyla duygusal ve bilişsel “iyi oluşa” dair yeni okuma biçimleri önerilecektir.

İnsancıl Öğrenmenin Sinemasal Yansıması:

Carl Rogers Kuramı Bağlamında Dead Poets Society

Carl Rogers’ın insancıl eğitim yaklaşımı, bireyin öğrenme sürecini yalnızca zihinsel bir edinim alanı olarak değil, aynı zamanda içsel bir gelişim ve duygusal bir oluş süreci olarak değerlendirir. Ona göre, gerçek öğrenme ancak bireyin kendi varoluşsal ihtiyaçlarına, ilgi alanlarına ve deneyimlerine dayalı olarak gerçekleşebilir. Bu yaklaşımda öğretmen, öğrencinin zihnine bilgi “aktarımı” yapan bir figür değil, öğrencinin kendi öznel deneyiminden anlam çıkarma sürecine rehberlik eden bir kolaylaştırıcıdır. Bu anlayış, bireyin kendi iç dünyasını tanıma ve anlamlandırma sürecini teşvik eder. Geleneksel öğretim modellerinde bilgi, mutlak

bir hakikat gibi sunulurken ve öğretmen bu hakikatin tek sahibi olarak konumlanırken, Rogers’ın önerdiği insancıl modelde bilgi, bireyin kendilik bilinciyle yoğrulması gereken, anlamı süreç içerisinde inşa edilen bir ögedir. Bu bağlamda, öğrenmenin etkili olabilmesi için eğitim ortamının güvenli, kabul edici ve empatik bir iklim sunması gerekir. Çünkü ancak böyle bir iklimde birey savunmasızlığını gösterebilir, hata yapma riskini alabilir ve bu hatalardan öğrenerek kendini gerçekleştirme yönünde bir gelişim gösterebilir.

Bu kuramsal çerçeve, *Dead Poets Society* filminde John Keating karakteri üzerinden somut bir örneğe kavuşur. Keating, geleneksel anlamda bilgi aktaran bir öğretmen figürü değil; öğrencilerini düşünmeye, sorgulamaya ve kendi özgün yollarını çizmek üzere cesaretlenmeye davet eden bir rehberdir. Onun sınıf içi uygulamaları —masaların üzerine çıkarak farklı bakış açılarını deneyimletmesi, klâsik şiiri ezberletmek yerine yaşamla ilişkilendirerek anlamlandırmaya çalışması, öğrencileriyle bireysel ilişkiler kurması— Rogers’ın insancıl yaklaşımıyla neredeyse birebir örtüşmektedir. Keating’in pedagojik varlığı, öğrencilerin sadece bilgi edinmeleri için değil, aynı zamanda kim olduklarını keşfetmeleri, kendi değerlerini bulmaları ve toplumsal baskılara karşı bireysel duruşlarını inşa etmeleri için bir olanak alanı yaratır. Bu yönüyle, sınıf artık bir “bilgi aktarımı” mekânı olmaktan çıkar, bir “kendilik inşası” sahnesine dönüşür. Bu dönüşüm, öğrencilerin öğrenme sürecine katılımını edilgen bir alıcılıktan aktif bir özneleşmeye taşır; öğrenci artık sadece öğrenen değil, öğrenmesinin sorumluluğunu üstlenen ve onu kendi yaşamıyla bütünleştiren bir varlık hâline gelir.

Keating’in pedagojik yaklaşımı, sürahi-bardak modeline dayalı geleneksel öğretmen-öğrenci ilişkisini sorgular. Bu modelde öğretmen, bilgiyi doğrudan ve sorgulanamaz bir otoriteyle sunar; öğrenci, bu bilgiyi olduğu gibi kabul eden, eleştirel düşünceden uzak, edilgin bir pozisyona sıkışır. Oysa Keating, öğrencilerinin kendi düşüncelerini üretmeleri, kendi seslerini bulmaları ve bireysel anlamlar inşa etmeleri için onlara alan açar. Böylece, eğitim süreci yalnızca zihinsel değil, duygusal ve varoluşsal katmanlara da ulaşır. Bu çok katmanlı öğrenme biçimi, öğrencilerin yaşadıkları içsel çatışmaları, aile baskılarını ve toplumsal beklentileri de öğrenme sürecine dâhil eder. Bilgi, yalnızca dış dünyayı anlamlandırmaya değil, bireyin kendi iç dünyasını çözümlemeye de hizmet eder. Bu bağlamda *Dead Poets Society*, öğrenmenin salt akademik başarıyla değil, bireyin kendi yaşamına dair farkındalığıyla da ölçülebileceğini gösteren güçlü bir anlatıdır.

Carl Rogers’ın insancıl yaklaşımında, öğretmen yalnızca bilgiyi aktaran bir otorite değil, öğrencinin öğrenme sürecine anlam ve yön kazandıran bir kolaylaştırıcı olarak

konumlanır. Bu kolaylaştırıcı rolün en temel koşulu ise öğretmenin sahici (otantik) bir duruş sergilemesidir. Rogers’a göre sahicilik, öğretmenin kendisiyle tutarlı, içten ve maskesiz bir iletişim kurabilme kapasitesidir. Bu nitelik, öğretmenin yalnızca bilişsel düzeyde değil, duygusal ve varoluşsal düzeyde de öğrencileriyle temas kurmasını sağlar. Danışan merkezli terapiden ilhamla şekillenen bu yaklaşım, eğitim ortamlarında öğretmen ve öğrenci arasında yüzeysel olmayan, karşılıklı olarak açık ve derin bir ilişki kurmayı mümkün kılar. Sahici bir öğretmen, sınıf ortamında rol yapmaktan kaçınır; coşku, öfke, ilgi vb. gibi kendi insanî duygularını bastırmak ya da inkâr etmek yerine bu duyguları fark eder, deneyimler ve öğrencilerine zorlayıcı ya da yönlendirici olmadan ifade edebilir. Bu sayede öğretmen, hem kendisiyle hem de öğrencileriyle dürüst ve doğrudan bir ilişki kurar. Böyle bir ilişkinin temeli şeffaflıktır ve ilişki çift yönlüdür: Öğretmenin açıklığı öğrenciye yansırken, öğrencinin duygusal durumu da öğretmen tarafından içtenlikle karşılanır. Araştırmalar, bu tür sahicilik ve sıcak öğretmen-öğrenci ilişkilerinin öğrencilerde aidiyet duygusunu güçlendirdiğini, sosyal ilişkiler kurma becerilerini artırdığını ve öğrenmeye karşı olumlu bir tutum geliştirdiğini göstermektedir. Kısacası, eğitim ortamlarında gerçek bir öğrenme; ancak, öğretmenin “içten bir insan ilişkisi”ne cesaret ettiği ve kendini olduğu gibi ortaya koyduğu koşullarda mümkün hâle gelebilir denilmektedir. “Sahicilik”, sadece pedagojik bir beceri değil, aynı zamanda öğretmenin bütünlüğünü koruyarak öğrenen bireylerle insanî düzlemde buluşma cesaretidir (Dinçer, 2019, s. 2347-8).

Rogers’ın vurguladığı gibi, anlamlı öğrenme deneyimi, yalnızca bilmekle sınırlı değildir; o aynı zamanda bireyin “bilinçli bir özne” olarak kendini inşa sürecini de içerir. Keating’in öğrencilerine verdiği en temel mesajlardan biri, “Carpe Diem” yani “Günü Yaşa” ilkesidir. Bu çağrı, yalnızca ânın keyfini çıkarmaktan ibaret değildir; varoluşsal bir uyanış, bireyin kendi potansiyelini tanıma ve ona göre yaşama cesaretini içinde barındırır. “*Vakit varken tomurcukları topla*” (ya da orijinal İngilizcesiyle “*Gather ye rosebuds while ye may*”) dizesi, 17. yüzyıl İngiliz şairi Robert Herrick’in “*To the Virgins, to Make Much of Time*” adlı şiirinin ilk dizesidir. Bu şiir, *carpe diem* yani *ânı yaşa* felsefesinin en bilinen edebî örneklerinden biridir. İlk dördlük şu şekildedir: “*Gather ye rosebuds while ye may, / Old Time is still a-flying; / And this same flower that smiles today / Tomorrow will be dying.*” Türkçeye genellikle şöyle çevrilir: “*Vakit varken tomurcukları topla, / Zaman hızla akıp gidiyor; / Bugün gülümseyen çiçek, / Yarın solmuş olabilir.*” Şiirin özünde, gençliğin ve zamanın geçiciliğine vurgu yaparak, hayatı ertelemeden dolu dolu yaşama çağrısı vardır—bu tam da *carpe diem*’in özüdür. Bu ilke aracılığıyla öğrenciler, bilgiye yalnızca entelektüel bir edinim olarak değil,

kişisel bir anlam ve sorumlulukla yaklaşmayı öğrenirler. Eğitim böylelikle bir “oluş” alanına dönüşür; birey sadece öğrenmez, aynı zamanda dönüşür. Öğrenci, kendisiyle, dünyayla ve geleceğiyle kurduğu ilişkiyi yeniden tanımlar. Keating’in sınıfı, Rogers’ın bahsettiği gibi, “bireyin öğrenmeyi öğrenme” sürecine tanıklık eder. Bu sürecin içinde hata yapmak, duygusal olarak zorlanmak ve kendi iç sesini bulmak kadar, başkalarıyla bağ kurmak ve anlam üretmek de yer alır.

Dead Poets Society filmi, Carl Rogers’ın insancıl eğitim anlayışını sinemasal bir düzlemde hayata geçirebilme imkânı ve kült sahneleriyle hatırlanan önemli örneklem filmlerden biridir. Filmdeki pedagojik yaklaşım, bilgi aktarımından çok bireyin içsel gelişimini esas alan bir eğitim anlayışını görünür kılmaktadır. Öğretmen-öğrenci ilişkisi, hiyerarşik bir yapıdan çok, karşılıklı güven ve anlayış temelinde gelişir. Öğrenme, artık öğretmenin bilgiyle doldurduğu bir kap değil, öğrencinin kendi deneyimleriyle şekillendirdiği bir yolculuk olarak yeniden tanımlanır. Bu bağlamda, Rogers’ın kuramı ile Keating’in pratiği arasında anlam örüntüleri kuran bu köprü, yalnızca pedagojik bir benzerlik değil; aynı zamanda öğrenmenin insan varoluşuyla nasıl derin bir bağ kurabileceğine dair güçlü bir metafor olarak sinematografik ilişkiler kurabilmemize olanak tanımaktadır.

Stigma, Performans ve Görünürlüğün Sinemasal Tezahürleri:

Goffman’ın Toplumsal Teorilerinden Sinema Anlatısına Biyografik İzleme ve Kimlik Yönetimi

Erving Goffman’ın toplumsal yaşamda kimliğin yönetimi, sırların denetimi ve görünürlüğün dramaturjisi üzerine geliştirdiği kavramsal çerçeve, yalnızca suç, gerilim ya da toplumsal ayrımcılığı konu edinen sinema metinleriyle sınırlı değildir; aynı zamanda eğitim mekânları gibi normatif yapıların üretildiği alanlarda da bu çerçevenin nasıl işlediğini gözlemlemek mümkündür. *Dead Poets Society* (1989) filmi bu bağlamda, damgalanma korkusunun, sırların baskılayıcı etkisinin ve bireysel performansların pedagojik ortamda nasıl biçimlendiğinin bir örneğini sunabilmektir. Filmdeki karakterler, özellikle Neil Perry ve Todd Anderson, baskıcı okul kültüründe “görünürlük”le “benlik sunumu” arasındaki kırılgan dengeyi sürdürmeye çalışırken, hem kendilerini hem de geçmişlerini saklamaya çalışırlar. Buradaki pedagojik ilişki, yalnızca bilgi aktarımına değil, aynı zamanda kimlik üretiminin izlenmesine ve sınıflandırılmasına da dayanır. Bu yönüyle film, E. Goffman’ın toplumsal etkileşim kuramını yalnızca dramatik ilişkilerde değil, eğitim gibi kurumsal alanlarda da yeniden üretir; öğrenciler

yalnızca ders dinleyen değil, her ân performansları değerlendirilen, davranışları kaydedilen ve biyografik olarak şekillendirilen özneler hâline gelir. Böylece, sırların paylaşımı ve saklanması arasındaki gerilim, sinemasal anlatının duygusal motoruna dönüşürken, Goffman’ın teorileriyle filmin yapısı arasında varsıllayabileceğimiz bir kuramsal süreklilik kurulmuş olur.

Sinemayı -ekseriyetle böyle görülmekle birlikte- yalnızca estetik bir ifade biçimi ya da teknik bir sanat formu olarak ele almak yerine; toplumsal düzenlemelerin, görünürlük siyasetlerinin ve normatif beklentilerin izini sürebileceğimiz bir toplumsal uzam olarak görmek mümkündür. Erving Goffman’ın hem *Damga* hem de *Günlük Yaşamda Benliğin Sunumu* adlı çalışmalarında önerdiği kuramsal çerçeve, bu tür bir analiz için elverişli kavramsal araçlar kümesi oluşturmamızı sağlar. Goffman, bireyin toplumsal yaşamda “sunum” üretme ve bu sunumlar aracılığıyla normlara uyum sağlama çabasını, yalnızca sahne metaforlarıyla açıklamakla kalmaz; aynı zamanda bu sunumların altında yatan “bilgi denetimi”, “karanlık sırlar” ve “stratejik gizlilik” gibi yapıları da ortaya koyabilmeyi tartışmaya açmaktadır. Bu yapılar, sinemanın anlatısal ve görsel kodlarıyla doğrudan ilişkilidir diyebiliriz.

Toplumsal yaşamda damgalanma riski taşıyan bireyin yaşadığı açığa vurma/gizleme gerilimi, sinemanın hem karakter derinliği kurma biçiminde hem de *janr* yapılanmasında belirleyici rol oynar. Goffman’a göre, toplumsal etkileşimlerin çoğu, tarafların birbirleri hakkında sınırlı bilgiye sahip olduğu, bu bilginin stratejik olarak kontrol edildiği sahneler şeklinde gerçekleşir. “Bir performans tarafından dramatize edilen gerçekliğin kırılğanlığını ve bu gerçekliğin tutarlı bir şekilde ifade edilmesi talebini” vurgulayan Goffman, her bireyin toplum önünde “karanlık” ya da “stratejik” sırları saklamaya dönük bir çaba içinde olduğunu ileri sürer. Sinema, bu çabayı dramatize eden alametifarikasıyla yoğunluklu kültürel araçlardan biridir: Gizlenmiş geçmişler, bastırılmış arzular, açığa çıkma riski taşıyan sırlar ve biyografik izler, ilkin ve vurucu kodlarıyla filmin dramatik yapısının temelini oluşturur. Bu noktada Goffman’ın “biyografi” kavramına yaklaşımı da dikkate değerdir. Goffman, bireyin toplumsal sistem içinde sürekli olarak bir “biyografik sabitleme”ye tabi tutulduğunu, yani ister aile arşivinde ister resmi kayıtlarda olsun, her bireyin “kayıt altına alınabilecek bir varlık” olarak işlev gördüğünü belirtir. Sinema da karakterlerine bu biyografik sabitlemeyi uygular: Karakter geçmişleri dosyalanır, geçmiş hataları açığa çıkar, aidiyetler ve suçlar sabitlenir. Özellikle suç, adalet ya da mahremiyet temalı filmler, karakterlerin kimliğini yalnızca eylemleriyle değil, geçmişlerine ilişkin belgelerle katmanlı bir inşaya soyunabilmektedir. Bu belgeler, karakterin kimliğini hem sabitler, hem de damgalar; geçmişten gelen bir suç kaydı ya da bir arşiv belgesi,

karakterin geleceğini belirleyici hâle getirebilecek potansiyelde olup örgüde “ayırt edici bir yara izi” misali mimlenmeye dönük madalyonun diğer yüzüyle işlevseldir. Bu biyografik sabitleme hâli, Goffman’ın “karanlık sır” kategorisiyle kesişmektedir. Karanlık sır, bir toplumsal performansın altını oymaya müsait, açığa çıkması durumunda bireyin tüm benlik imgesini lekeleyecek türde(n) bir bilgidir (Goffman, 2019, s. 100-1). Sinemada, bu tür sırların hem karakter dramının, hem de anlatının yapısal motoru olduğunu görmek mümkündür. Örneğin, klâsik Hollywood suç sineması ya da film noir türünde, kahramanın sakladığı bir suç ya da geçmişteki bir yanlış tercih, anlatının kırılma ânını oluşturur. Sır, performansın tutarlılığını tehdit eder; seyircinin eline geçerse karakterin çöküşü kaçınılmazdır. Bu noktada Goffman’ın “seyirci bilgiye ulaşmamalıdır” vurgusu, sinemasal anlatının gerilim stratejileriyle doğrudan örtüşür. Goffman’ın “stratejik sırlar” kavramı, sinemada yalnızca bireyleri değil, toplumsal yapıları ve kurumları da analiz etme imkânı verebilmektedir. Özellikle politik gerilim filmleri, casusluk anlatıları ya da askeri strateji merkezli filmlerde, anlatının ilerleyişi “bilgi denetimi” ile mümkün olabilmektedir. Kurumlar ya da karakterler, eylemlerini planlarken bu bilgileri seyirciden saklamak zorundadır. Bu anlatı biçimi, seyircinin bilgiye ulaşma sürecini filmle birlikte deneyimlemesini sağlar. Stratejik sırlar, hem anlatının yapısal gerginliğini oluşturur, hem de seyircinin ahlaki pozisyonunu belirler: “Kimin neyi bilmesi gerektiği?” var olan anlatının temel etik sorusudur. Bu noktada “dâhili sırlar” kavramı, Goffman’ın en az çalışılmış ama sinema açısından son derece zengin potansiyel taşıyan alanlarından biridir. Goffman’a göre dahili sırlar, bir grubun üyelerinin birbirleriyle paylaştığı ve dışarıdakilerden gizlediği bilgilerdir. Sinemada bu, özellikle kapalı cemaat yapılarında geçen filmlerde (örneğin tarikatlar, mafya örgütleri, aile yapıları vs.) karşımıza çıkar. Bu yapılar, hem gizli bilgiye sahip olmayı bir aidiyet göstergesi olarak sunar hem de dışarıdakileri bilgi yoksunluğu üzerinden dışlar. Bu tür anlatılar, seyircinin hem içerideki gruba dâhil olma arzusunu, hem de dışlanmışlık hissini aynı anda deneyimlemesine neden olmaktadır (Goffman, 2018, s. 137-8).

Bütün bu yapılar sinemasal anlatının yalnızca bireysel dramları değil, toplumsal normları da yeniden üretmesinde belirleyici rol oynar. Goffman’ın *Damga*’da belirttiği gibi, toplumsal normlar bireylerin damgalanmasına yol açtığı kadar, o bireylerin “saklama stratejileri” geliştirmesine de neden olur. Sinemada, bu saklama stratejileri hem biçimsel (ışık, kadraj, sessizlik) hem de anlatısal düzlemde (geri dönüşler, karakterin çelişkileri, yüzeydeki huzurun ardındaki krizler) görünür olmaktadır. Goffman’ın damgalanmış bireyle “normal” birey arasındaki temasın her zaman önceden belirlenmiş rollere dayandığını belirtmesi, sinemanın karakter inşasında sıkça başvurduğu önyargı temelli *stereotiplere* açıklık kazandırır.

Motorcular, Doğulular, seks işçileri vb. gibi figürlerin sinemadaki temsilinde, Goffman'ın “profil oluşturma” dediği süreç açık açık işlerlik kazanmaktadır (Goffman, 2019, s. 88-9).

Bu bağlamlar adına bir son ifade olarak, sinemanın bu *performatif* yapılanması, yalnızca karakterlere değil, sinemanın kendisine de uygulanabilir. Filmin kendisi de bir performanstır: Bir şeyi gizler, bir şeyi açığa çıkarır, bazı bilgileri seyirciye verirken bazılarını bastırır. Goffman'ın “bilgi denetimi” kavramı, sinemanın biçimsel stratejileriyle doğrudan örtüşür: Kamera hareketleri, kesmeler, sessizlikler, bakış açıları hep bilgi denetimiyle ilgilidir. Sinema, hangi bilgiyi ne zaman vereceğine karar vererek, seyirciyi etik, politik ve duygusal açılardan yönlendirir. Kimi Amerikan yapımı klâsik filmlerde kasaba hayatı, şerif ve adaletsizlikle özdeşleşen figürler aracılığıyla bu toplumsal görünürlüğü normatif biçimde yeniden üretir. Görünür olanın “normallığı”, görünmeyen karanlıkta kalanla tanımlanır (Pembecioğlu, 2016, s. 107-8). Bu bağlamda sinema, Goffman'ın kuramsal çerçevesini sadece temsil etmekle kalmaz; aynı zamanda onun önermelerini sınar, dramatize eder ve yeniden üretir. Görünürlük, sır, performans ve biyografi kavramları; hem bireysel kimliğin hem de toplumsal düzenin sinemasal yahut diğer bir ifadeyle sinematografik yeniden inşasında merkezî rol oynayabilir. Sinemanın senaryo anatomisinde izlediği her karakter, aslında bir sicil defterinin sayfalarında gezinmekte; her anlatı, hangi bilginin görünür kılınacağına dair etik bir kararla şekillenmektedir.

Tematik Okuma: Duygusal İklim ve Pozitif Sınıf Kültürü

“Empati” ve “kabul”, Carl R. Rogers'ın insancıl yaklaşımının temel bileşenlerinden ikisi olarak yalnızca psikoterapi bağlamında değil, eğitim ortamlarında da öğretmen-öğrenci ilişkisinin yapısını kuran vazgeçilmez etik ve duygusal eksenlerdir. Rogers'a göre empati, ötekinin algı dünyasına kendi önyargılarından ve değer yargılarından arınmış biçimde girebilme becerisidir; bu ise yalnızca zihinsel bir kavrayıştan ibaret değil, ân be ân değişen duygu durumlarına duyarlılıkla eşlik eden bir varoluşsal yöneliştir. Öğrencinin içsel dünyasını, deneyimlerini, korkularını ya da hassasiyetlerini anlamaya dönük bu sürekli dikkat hâli, eğitim ortamında güvenli bir alan yaratmakla sonuçlanır. Çünkü empati, öğretmenin yalnızca bilgi aktaran değil, duygusal bağ kurabilen, anlamaya çalışan ve öğrencisinin yaşantısını önemseyen bir rehber olmasını sağlar.

Bu noktada empati, koşulsuz kabul ile birlikte düşünüldüğünde daha güçlü bir anlam kazanmaktadır. Rogers'ın tanımıyla “koşulsuz olumlu saygı”, yani öğrenciyi olduğu hâliyle

kabul etmek, onun herhangi bir davranışına veya performansına bağlı olmaksızın değerli bir birey olarak görülmesini içerir. Bu tutum, bireyi olduğu gibi görmeye ve bu hâliyle ilişki kurmaya dayanırken; dolayısıyla öğretmenin öğrencisine “*sen şöyle davranırsan seni önemserim,*” değil, “*ben seni, sen olduğun için önemsiyorum,*” mesajı vermesi, öğrencinin özsaygı geliştirmesi ve öğrenme sürecine içsel motivasyonla katılması açısından belirleyici olmaktadır. Bu bağlamda, öğretmenin kabul edici yaklaşımı, öğrencinin kendi kimliğini tehdit altında hissetmeden kendini ifade edebilmesini mümkün kılabilmesinin önünü açmaktadır. Öğrencinin kendini ifade edebilmesi ise ancak güven ortamında mümkündür. Rogers’a göre güven, bireyin , hem danışma sürecinde hem de yaşam içinde sorumluluk alma kapasitesini geliştiren, kişisel büyümeyi destekleyen bir iklim yaratır. Eğitim ortamına uyarladığımızda, bu güven duygusu, öğretmenin öğrencisinin öğrenme potansiyeline ve gelişme kapasitesine duyduğu inancı ifade etmektedir (Rogers, 2012a & 2012b). Öğrencinin kendi yolunu bulmasına rehberlik eden öğretmen, aslında onun “kendisini gerçekleştirme” sürecine bilhassa eşlik etmiş olmaktadır. Bu anlamda, öğretmenin güven duyan tutumu, sadece pedagojik değil, şüphesiz varoluşsal bir değeri de taşımaktadır: Öğrenci yalnızca öğrenen bir varlık değil, aynı zamanda kendi kararlarını alma ve kendi olma hakkına sahip bir birey olarak görülmektedir. Tüm bu bağlamlar, Rogers’ın “takdir” anlayışıyla bütünleşir. Öğretmenin öğrencisini yalnızca başarıları ya da sosyal rollerinden ötürü değil, insan olarak değerli bulması, onun bütüncül yapısını takdir etmesi, ilişkide onarıcı bir işlev üstlenir. Takdir görmek, öğrencinin kendini anlamlı ve yeterli hissetmesini sağlar. Bu takdirin temelinde ise öğrencinin yalnızca bir “öğrenci” değil, kendi başına anlam taşıyan bir birey olarak kabul edilmesi yatar. Dolayısıyla insancıl bir eğitim ortamında takdir, sadece övgüyle sınırlı bir davranış değil, öğrencinin varoluşsal değerini tanıma biçimi olarak kavranmalıdır (Dinçer, 2019, s. 2349-53).

Özetle, Rogers’ın eğitim anlayışında empati, koşulsuz kabul, güven ve takdir birbiriyle bütünleşmiş, karşılıklı etkileşim içinde anlam kazanan öğretmen tutumlarıdır. Bu tutumlar, öğretme sürecini yalnızca bilişsel bir aktarım değil, duygusal güvenlik ve kişisel gelişimi destekleyen bir ilişkisellik olarak yeniden tanımlar. Öğretmen, öğrencisinin iç dünyasını tanıyan, onu yargılamadan kabul eden, potansiyeline güvenen ve bir birey olarak takdir eden bir rehber dönüşüğünde; öğrenme ortamı yalnızca etkili değil, aynı zamanda dönüştürücü hâle gelmektedirin altı çizilmektedir. Sinematografik açıdan baktığınızda, Keating’in sınıf ortamıysa öğrencinin birey olarak değer gördüğü, eleştirel düşünmenin teşvik edildiği bir yapıya sahiptir. Öğrenciler, sınıfı, yalnızca bilgi edinme alanı değil; kendilerini ifade

edebilecekleri bir güvenli alan olarak deneyimlerler. Rogers'ın "empatik anlayış" ve "koşulsuz kabul" ilkeleri, Keating'in pedagojik tavrında da bariz bir biçimde belirgindir.

Sinemasal Bedenler, Pedagojik Alanlar: Dead Poets Society'de Örnek Sahne Analizleri

Sıraların Üzerine Çıkma: Bakış Açısını Dönüştürmek

Filmde Mr. Keating'in öğrencilerinden sıraların üzerine çıkmalarını istediği sahne, öğrenmeye dair yalnızca bilişsel değil, aynı zamanda bedensel bir müdahale önerir. Bu sahne, öğretmen figürünün klâsik sınıf düzenini yerinden etmesiyle başlar; öğrenme sadece zihinsel bir edinim değil, aynı zamanda fiziksel bir jesttir. Öğrencilerin sıraya çıkmalarıyla birlikte, kameranın da göz hizasını değiştirmesi, sinematografinin pedagojik fikre eşlik ettiği nadir anlatı ânlarından biridir. Burada yükselmek, yalnızca fiziksel bir eylem değil, düşünsel sınırların dışına taşmaktır. Keating'in bu çağrısı, Carl Rogers'ın "kişisel anlam yaratma" ilkesinin sahnede karşılık bulduğu bir jesttir; çünkü bu ândan itibaren öğrenciler, bilgiyi dışsal bir otoriteden almak yerine, kendi perspektiflerini yeniden kurarak keşfetmeye başlamaktadır. Bu sahne, aynı zamanda "mekânın pedagojisi"ni sorunsallaştırır: masa başında oturan öğrenci pasiftir; ayağa kalkan ve yükseğe çıkan öğrenci ise potansiyel olarak aktif ve dahi özgürdür.

Tiyatro Aynasında Benlik: Neil'in Sahneyle Teması

Neil'in tiyatro sahnesi öncesinde aynaya baktığı ve yüzleşme yaşadığı sahne, Jungyen anlamda "persona" ile "öz benlik" arasındaki çatışmayı sinematografik olarak işleyebilme özelliği sergilemektedir. Sahne ışıkları altında prova yapan Neil'in yüzü, bir yandan arzularının parıltısını taşıırken, diğer yandan babasının otoriter gölgesiyle kararmaktadır. Ayna burada sadece bir yansıtıcı yüzey değil, benliğin bölünmüşlüğüne dramatize eden bir metafor hâline gelmektedir. Algı, yalnızca dış dünyadan gelen uyarıcıların zihinsel bir yansıması değil; bedensel hareketler, beklentiler ve belleğin etkin rol oynadığı dinamik bir süreçtir. Birey çevresini pasif bir gözlemci olarak değil, geçmiş deneyimlerine göre yapılandığı beklenti şemaları aracılığıyla aktif biçimde kurar. Bu süreçte zaman ve mekân yalnızca bir arka plan değil, algının biçimlenmesinde belirleyici rol oynayan özniteliklerdir. Algı, bedenden ve hareketten ayrı düşünülemez; gözün ya da dokunmanın sadece tekil birer duyu organı değil, bedenin çevreyle kurduğu ilişkiler bütünü içinde işlev kazandıkları anlaşılır. Duyular arası sınırlar geçirgendir ve çoğu zaman birbirine içkin çalışır; dokunma gibi çoğu zaman arka planda kalan duyular, algının bütünsel doğasına dair önemli ipuçları sunar. Bu bütünlük içinde algı,

geçmişin izlerini taşıyan ve geleceğe dair beklentilerle örülmüş, devinim hâlindeki bir bilinç örgüsüne dönüşür (Giddens, 1999, s. 91). Neil’in içsel çatışması —özgürlük arzusu ile ailevi itaat arasında sıkışmışlık— bu kısa ve sessiz ânlarda görünür olur. Keating’in öğretmen olarak verdiği destek, Neil’in kendi “sahnesine” çıkmasına olanak sağlar; ancak bu keşif, toplumsal ve ailevi düzenin sınırlarına çarpınca trajik biçimde kesintiye uğramaktadır. Bu sahne, öğrenmenin yalnızca bilişsel değil, derin bir varoluşsal süreç olduğunu; eğitimin ise çoğu zaman bireyin özbenliği ile toplumsal roller arasında bir çatışma alanına dönüştüğünü ortaya koymaktadır.

Avluda Yürüme: Bedenin ve Fikrî Özgürlüğün Senfonisi

İnsan, yeryüzündeki varlığını çoğu zaman yürüyerek idrak eder. Yürüme, sadece mekânsal bir yer değiştirme eylemi değil, aynı zamanda içsel bir yön bulma çabasıdır. Kimi zaman, tıpkı Odysseus’un dolambaçlı serüveninde olduğu gibi, hemen yakınımızdaki anlamlara ulaşmak için dünyanın çevresini dolaşmamız gerekir. Bu arayış, yalnızca fiziksel bir yönelim değil, aynı zamanda bireyin kendine dönme çabasıdır. Yol, bir hedefe ulaşmaktan çok, dönüşümün ve varoluşsal farkındalığın alanıdır. Zorunluluğun tarihsel gölgesinden sıyrılarak bir ayrıcalık hâline gelen yürüyüş, günümüzde anlam arayışının estetik bir biçimi olarak yeniden doğmuştur. Yürümek; zamanla, çevreyle ve kendilikle kurulmuş bir ilişki biçimidir (Le Breton, 2023, s. 9-11). Bu anlamda Dead Poets Society filmindeki avluda yürüme sahnesi, bu içsel manyetizmanın ve kişisel yön bulma ediminin küçük ama güçlü bir tezahürüdür. Öğrenciler, avluda yürürken yalnızca fiziksel bir alanda adım atmazlar; aynı zamanda düşünme biçimlerini, ritimlerini ve aidiyetlerini sorgularlar. Kimisi kararsızdır, kimisi kendi yolunu hemen bulur, kimisi kalabalığa uymayı tercih etmektedir. Bu kısa ama yoğun sahne, bireyin toplumsal düzen içinde kendi yönünü tayin etme mücadelesini simgeler. Yürüyüş, burada bir pas geçme değil, bir durup düşünme biçimidir. Öğretmen figürü bu yürüyüşü, öğrencilerin kendi düşünsel adımlarını keşfetmeleri için başlatır; çünkü bazen değişim, sadece bir adımda gizlidir. Yürümek, yalnızca ayakların değil, fikrin, kimliğin ve arzunun da hareketidir. O nedenle bu sahne, bireyin hayat yürüyüşündeki yönelimi üzerine düşünmeye çağırır bizi: Sessiz, ritmik ve sorumluluk taşıyan bir çağrı.

Mr. Keating’in öğrencilerini avluya çıkarıp “kendi yollarında yürümelerini” istediği sahne, filmdeki en yoğun beden-mekân-zihin etkileşimlerinden biridir. İlk başta ritmik ve uyumlu adımlarla başlayan yürüyüş, konformizmin ve grup baskısının beden üzerindeki etkisini ortaya koyar. Ancak Keating’in müdahalesiyle, her öğrenci farklı bir rotaya yönelir. Bu sahne,

bireyselliğin sadece zihinsel değil, bedensel olarak da ifade bulduğu bir koreografiye dönüşür. David Le Breton'un yürümeye dair açtığı poetik düşünce hattı burada sinemasal olarak işler: Yürümek, sadece yer değiştirmek değil, bir düşünce biçimi, bir varoluş jestidir. Öğrenciler avluda yürürken, kendi ritimlerini bulmaya çalışırlar; bazıları kararsız, bazıları isyankâr, bazıları ise kendi içine dönük. Kamera, öğrencileri yukarıdan ve farklı açılardan takip ederken, bu yürüyüşün sadece fiziksel değil, düşünsel ve varoluşsal bir yolculuk olduğuna tanıklık ederiz. Filmde yürümek, yazmak, düşünmek ve öğrenmek birbirine karışır. Bu sahne aynı zamanda sessizlikle konuşur: kelimelerin yerini adımlar alırken; didaktik öğreti yerine, bedensel deneyim geçmektedir. Keating'in eğitimi, burada literal değil, ritmik ve jestlerle doludur. Yürümek, bir isyan biçimi olduğu kadar, yeni bir pedagojik yönelimin de işaretidir.

Kitapları Yırtmak: Bilgiye Dair Radikal Bir Jest

Keating'in öğrencilerine eski şiir kitabındaki giriş kısmını yırtmalarını istediği sahne, yalnızca bir kural ihlali değil, bilgiye dair kurumsal kabullerin eleştirisidir. Kitabın fiziksel olarak parçalanması, metin merkezli eğitim modelinin simgesel olarak yıkılması anlamına gelir. Öğrencilerin tereddütle başlayıp sonra bu eylemi benimsemeleri, özgürlük düşüncesinin ancak pratik bir jestle edinilebileceğini gösterir. Bilgi bir otoriteden alınmaz; birlikte yaratılır, yeniden düşünülür ve gerekirse yıkılarak yeniden inşa edilir. Öğrencilerin kitabı yırtmaları, onları pasif alıcıdan etkin-fail konumuna geçirmektedir. Bu sahne aynı zamanda metnin yerine, deneyimin geçişini ilan etmektedir.

Bedensel pedagoji ve varoluşsal öğrenmenin iyi oluş ikliminde *Dead Poets Society*, eğitimi yalnızca bilgi aktarımı değil, bedensel, ritmik ve varoluşsal bir süreç olarak yeniden düşünmemizi sağlayan katmanlı ve nitelikli bir anlatı olanağı sunmaktadır. Filmdeki sahne yapıları, bireylerin öğrenme sürecinde yalnızca zihinleriyle değil, bedenleriyle, ritimleriyle, mekâna dair ilişkileriyle nasıl dönüştüklerini gösterir. Yürümek, yükselmek, susmak, aynaya bakmak ya da kitap yırtmak vb. tüm bu jestler pedagojik alanın sınırlarını genişletir. Bu bağlamda film, klâsik öğretmen-öğrenci ilişkisinin ötesine geçerek, "öğrenmenin ontolojisi"ne dair bir tartışma kümesini de açılımlamaktadır. Öğrencinin özneleşme süreci, Keating'in rehberliğiyle şekillenirken; bu süreç, hem bireysel bir farkındalık, hem de toplumsal yapılarla çatışmayı içermektedir. *Dead Poets Society*, sinema aracılığıyla öğrenmeyi düşünmenin, sessizliği anlamının ve yürüyerek kendi yolunu bulmanın pedagojik bir estetiğini kurabilmenin imkânını tartışmaya açmaktadır.

Sonuç

İyi Oluş Temelli Eğitime Sinemasal Bir Katkı: Eğitimin Estetik ve Varoluşsal Boyutları Üzerine

Dead Poets Society, eğitimin yalnızca bilgi aktarımına indirgenemeyecek denli çok katmanlı, duygusal, düşünsel ve bedensel bir süreç olduğunu hatırlatan sinemasal bir anlatıdır. Film, salt bir okul hikâyesinden öte, öğrenmenin doğasına dair felsefi bir soruşturmayı yansıtmaktadır. Bu bağlamda, öğrenci merkezli eğitimin, bireysel ifade alanlarının ve öznel anlam üretiminin önemini yeniden tartışmaya açmaktadır. Filmin merkezinde yer alan öğretmen figürü, alışılmış otoriter bilgi vericiliğin ötesine geçerek, öğrencilerin düşünsel bağımsızlıklarını ve varoluşsal öz-farkındalıklarını geliştirmeye yönelik pedagojik bir yönelim sergiler. Bu yönelim, öğrenmenin yalnızca zihinsel bir edim değil, aynı zamanda bedensel, estetik ve ilişkisel bir oluş süreci olduğunu açıkça ortaya koymaktadır.

Eğitim, insanın kendiyle, çevresiyle ve dünyayla kurduğu ilişkinin en yoğun hâliyle deneyimlendiği alanlardan birisi iken; bu ilişkinin niteliği, bireyin gelişimini doğrudan etkiler. Sınıf, yalnızca bilginin dolaşıma girdiği değil; aynı zamanda duyguların, düşüncelerin, değerlerin ve arzuların da paylaşıldığı bir ortamdır. Bu nedenle öğrenme ortamlarının, öğrencinin kendilik deneyimini güçlendirecek, onu edilgen bir alıcı değil etkin bir özne hâline getirecek biçimde tasarlanması elzemdir. Filmdeki anlatı, bu tasarımın sinematografik bir örneği olarak okunabilir. Öğrenciler, öğretmenlerinin yönlendirmesiyle dünyaya ve kendilerine dair yeni bakış açıları geliştirme şansı bulurlar. Görme biçimlerinin değişmesi, onların varoluşsal olarak da dönüşüm geçirmesine neden olur. Bu dönüşüm, çoğu zaman fiziksel jestler ve mekân kullanımıyla da temsil edilmektedir. Sıraların üzerine çıkmak, avluda yürümek ya da sahneye adım atmak vb. gibi eylemler, eğitimin bedene ve harekete içkin doğasının görünürlüğünü destekler niteliktedir. Bununla birlikte, film yalnızca ilham verici bir öğrenme ortamı sunmakla kalmaz; aynı zamanda bu ortamın kırılkanlıklarını ve dışsal baskılarla nasıl tehdit altına girebileceğini de sergiler. Sistemsel otoriteler, bireyin kendi sesini bulma çabasına karşı direnç üretir. Öğrencilerin gelişim süreçleri yalnızca sınıfla sınırlı değildir; ailevi beklentiler, toplumsal normlar ve başarıya dair hegemonik tanımlar da bu sürece doğrudan etki eder bir biçimde görünür kılınmıştır. Öğrenme, bu anlamda, yalnızca okulda değil, hayatın bütününde süren bir müzakere alanıdır. Filmde bir öğrencinin trajik sonu, eğitim sistemlerinin bireyin içsel ihtiyaçlarını görmezden geldiğinde dair nasıl yıkıcı sonuçlara yol açabileceğini

çarpıcı biçimde gözler önüne sermektedir. Bu durum, eğitim ortamlarının yalnızca akademik değil, aynı zamanda duygusal birer ekosistem olduğunu kökten bir şekilde hatırlatmaktadır.

İyi oluş, yalnızca bireysel bir duygu hâli değil; ilişkisel olarak inşa edilen, çevresel koşullardan doğrudan etkilenen bir süreçtir. Eğitimin öznesi olan öğrencinin iyi oluşunu desteklemek, sadece onu mutlu ve huzurlu kılmak anlamına gelmez; aynı zamanda onun anlamlı ilişkiler kurabilmesini, kendine ait düşünceler geliştirebilmesini ve içsel bir yönelim kazanmasını mümkün kılmaktır. Bu ise öğretmenin rolünü baştan sona dönüştürür. Öğretmen, artık yalnızca bilgi aktaran bir figür değil, bir eşlikçi, kılavuz ve tanıklık eden kişidir. Bu bağlamda, öğretmenin sınıftaki varlığı bir iktidar biçimi olmaktan çok, karşılıklı bir öğrenme ve keşif alanı yaratma biçimine dönüşür. Film, öğrenmeyi bir “eylem” olarak kurgular. Düşünmek, yürümek, yazmak, seslenmek, sahneye çıkmak vs. hepsi de öğrenmenin farklı yüzlerini temsil eden jestlerdir. Öğrenme burada yalnızca kavramları ezberlemek ya da sınavlara hazırlanmak değil; yaşamak, deneyimlemek, yüzleşmek ve dönüşmektir. Bu sinemasal anlatım, eğitimin estetik bir etkinlik olarak da ele alınabileceğini imâ eder. Eğitim, insanın kendi potansiyelini keşfetme ve bu potansiyeli eyleme dökme sürecidir. Bu süreç, yalnızca içerikle değil, biçim, mekân, beden, ritim ve ilişkisellekle kurulur. Sınıfın sınırlarını aşan öğrenme deneyimleri, bireyin düşünsel ve duygusal haritasında derin izler bırakır. *Dead Poets Society*, bu anlamda, eğitimin şiirsel bir imkânını temsil etmektedir. Film, öğretmenin öğrencileriyle birlikte kurduğu ortak dünyayı, dilin, sessizliğin, bakışın ve eylemin çok katmanlı diliyle inşa ederken, öğrenci burada edilgen bir tüketici değil, yaratıcı bir özne olarak konumlandırılmaktadır. Bu yaratım süreci, her öğrencinin kendine has yolculuğunu, benliğini inşa etme çabasını ve kendi sesini bulma arayışını içerir. Filmde vurgulanan “âkı yaşamak” çağrısı, yalnızca hedonistik bir haz arayışı değil; bireyin, içinde bulunduğu âna, mekâna ve ilişkilere bilinçli bir şekilde dâhil olma çağrısıdır. Bu çağrı, eğitimde anlam üretiminin merkezine yerleştirildiğinde, öğrenme hem bireysel hem de toplumsal bir farkındalığa dönüşmektedir.

Sinemanın eğitime katkısı, bu tür anlatılarla sınırlı değildir. Ancak *Dead Poets Society* gibi filmler, eğitim üzerine düşünmenin estetik bir yolu olabilir. Film, yalnızca bir kurmaca anlatı değil, aynı zamanda bir düşünme biçimi sunar. Bu düşünme biçimi, bizi eğitimin olası biçimleri üzerine yeniden düşünmeye, ezberlenmiş kalıpların ötesine geçmeye ve kendi pedagojik deneyimlerimizi sorgulamaya davet etmektedir. Dolayısıyla sinema, eğitim alanı için sadece bir araç değil; düşünsel bir ortak ve imgesel laboratuvar olarak işlev görebilir. Söz

konusu nihayetinde iyi oluş temelli eğitime yönelik çabalar, yalnızca politik ya da yapısal reformlarla değil; aynı zamanda kültürel, estetik ve varoluşsal bir dönüşümle mümkün olacaktır. Bu dönüşüm, eğitimi salt öğretme ve öğrenme pratiği olmaktan çıkarıp, birlikte düşünme, birlikte var olma ve birlikte dönüşme pratiğine dönüştürebilir. Bu bağlamda, sinema gibi sanat formları, eğitimin duygusal ve düşünsel boyutlarını görünür kılmakla kalmaz; aynı zamanda bu boyutlara dair yeni pedagojik ufuklar açar. Eğitim, yaşamın ta kendisidir —ve belki de onu yeniden düşünebilmek için önce onu yeniden görebilmek gerekir.

Özet

Günümüzün rekabetçi ortamlarında yaratıcılık kritik bir öneme sahiptir ve bu bağlamda örgütsel düzeyde yaratıcılık kavramı giderek daha fazla önem kazanmaktadır. Okul liderlerinin, öğretmenlerin yaratıcılıklarını en iyi şekilde ortaya koyabilecekleri ortamları oluşturmaları ve onların gelişimlerini desteklemesi gerekmektedir. Bu araştırmanın genel amacı, okul liderliğinin örgütsel yaratıcılık üzerindeki etkisini öğretmen görüşlerine göre incelemektir. Nicel araştırma yönteminin kullanıldığı bu çalışmanın örneklemi, 2021-2022 eğitim-öğretim yılında Şanlıurfa ilinde görev yapan ortaokul öğretmenleri arasından kolay örnekleme yöntemiyle seçilen 78 öğretmenden oluşmaktadır. Araştırma verileri “Örgütsel Yaratıcılık Ölçeği” ve “Okul Liderliği Ölçeği” ile toplanmıştır. Veriler betimsel istatistikler ve basit doğrusal regresyon analizleriyle değerlendirilmiştir. Araştırma bulgularına göre, okul müdürlerinin örgütsel yaratıcılık üzerinde etkili olduğu sonucuna ulaşılmıştır. Öğretmenlerin okul liderliği algıları ile ilgili yapılan analizlerde; genel liderlik ve alt boyutları olan “Yön Verme”, “İnsan Geliştirme”, “Okulu Geliştirme” ve “Müfredatı Geliştirme” boyutlarında öğretmenlerin algılarının orta düzeyde olduğu belirlenmiştir. Ayrıca, okul liderliğinin örgütsel yaratıcılığı yordama gücünü belirlemeye yönelik yapılan basit doğrusal regresyon analizi sonucunda, okul liderliğinin örgütsel yaratıcılığın anlamlı bir yordayıcısı olduğu ortaya konmuştur. Okul liderliği, örgütsel yaratıcılığın %32’sini açıklamaktadır. Bu bulgular doğrultusunda, okul liderlerinin örgütsel yaratıcılığı teşvik edebilmek için liderlik becerilerini daha etkili bir şekilde geliştirmeleri gerektiği söylenebilir.

Anahtar Kelimeler: Okul liderliği, örgütsel yaratıcılık, öğretmen görüşleri, nicel araştırma, iyi oluş.

The Impact of School Leadership on Organizational Creativity According to Teacher Perspectives

Abstract

In today's competitive environment, creativity holds critical importance, and organizational-level creativity has become increasingly significant. School leaders are expected to create environments where teachers can fully express their creativity and support their professional development. The main purpose of this study is to examine the effect of school leadership on organizational creativity from the perspectives of teachers. This quantitative research study was conducted with a sample of 78 middle school teachers working in Şanlıurfa during the 2021–2022 academic year, selected through convenience sampling. The data were collected using the "Organizational Creativity Scale" and the "School Leadership Scale." The data were analyzed using descriptive statistics and simple linear regression analyses. According to the findings, school principals were found to have a significant effect on organizational creativity. Analyses of teachers' perceptions of school leadership indicated moderate levels of perception in general leadership and its sub-dimensions, including “Guiding,” “Human Development,” “School Development,” and “Curriculum Development.” Additionally, the results of the simple linear regression analysis showed that school leadership is a significant predictor of organizational creativity, explaining 32% of the variance. Based on these findings, it can be concluded that school leaders need to further develop their leadership skills to effectively foster organizational creativity.

Keywords: School leadership, organizational creativity, teacher perceptions, quantitative research, well-being.

Giriş

Günümüzde eğitim kurumlarının sürekli değişen ve gelişen yapısı, öğretmenlerin yaratıcı düşünceye sahip olmalarını ve bu doğrultuda yenilikçi yöntemleri uygulamalarını zorunlu kılmaktadır. Öğretmenlerin, eğitim sisteminin amaçlarını gerçekleştirebilmeleri için yeni bilgi, beceri ve tekniklere hızlıca adapte olabilmeleri, yaratıcı düşünme becerilerine sahip olmalarıyla doğrudan ilişkilidir (Damanpour ve Schneider, 2006). Bu bağlamda, okul liderlerinin öğretmenlerin mesleki gelişimlerini desteklemeleri ve onların yaratıcılıklarını ortaya koyabilecekleri uygun çalışma ortamlarını oluşturmaları büyük önem taşımaktadır.

Yaratıcılık, bireylerin özgün düşünceler ve ürünler geliştirme süreci olarak

tanımlanmakta ve çağımızın rekabetçi koşullarında kurumlar açısından stratejik bir unsur olarak öne çıkmaktadır. Örgütsel bağlamda yaratıcılık ise, bireylerin kurumun hedeflerine katkı sağlayacak şekilde özgün fikirler ve çıktılar üretme süreci olarak değerlendirilmektedir (Martins ve Terblanche, 2003). Bu nedenle, örgütlerde yaratıcılığı teşvik eden liderlik yaklaşımları gün geçtikçe daha fazla önem kazanmaktadır.

Eğitim kurumlarında etkili liderlik sergileyen okul yöneticilerinin çoğunlukla eğitim ortamında doğrudan bulunmaları, ortaya çıkan sorunlara eşzamanlı ve yerinde müdahale etmelerini kolaylaştırmaktadır. Bu durum, yöneticilerin sadece izleyici değil aynı zamanda sürecin etkin bir parçası olmalarını sağlar. Etkili okul liderleri, karşılaşılan güçlüklerin çözümüne yönelik zaman alanları yaratmak adına öğretmenleri karar alma ve uygulama süreçlerine dâhil ederek görev paylaşımı yapmaktadır. Bu yaklaşım, öğretmenlerin hem sürece aidiyet duymalarını hem de yaratıcı çözüm yolları üretmelerini desteklemektedir. Kwasniewska ve Necka'nın (2004) araştırmasında, yönetsel konumda bulunan bireylerin örgütsel yaratıcılık algılarının, liderlik becerilerinin ve görevlerinin önemine ilişkin farkındalık düzeylerinin, çalışanlara kıyasla daha yüksek olduğu belirlenmiştir. Aynı araştırma, yöneticilerin sahip oldukları özerklik algısının da daha yüksek olduğunu ortaya koymaktadır. Bu bulgular, liderlik pozisyonundaki bireylerin, örgütsel yaratıcılığı teşvik etmede ve destekleyici ortamlar oluşturmadaki rollerine işaret etmektedir.

Eğitim ortamlarında gerekli koşulları ve imkânları yaratmak, okul liderlerinin öncelikli sorumluluklarından biridir. Okul liderlerinin vizyoner, destekleyici ve yeniliğe açık tutumları; öğretmenlerin yaratıcı düşünme eğilimlerini geliştirmelerine ve yenilikçi uygulamaları hayata geçirmelerine olanak sağlar. Özellikle öğretmenlerin yaratıcılıklarını sergileyebilecekleri güvenli ve teşvik edici ortamların oluşturulması, yalnızca bireysel performansın değil aynı zamanda kurumsal verimliliğin de artmasına katkı sunmaktadır. İlgili literatür incelendiğinde özellikle Türkiye bağlamında kanıtların sınırlı olduğu bu araştırmanın özgün değerini artırdığını düşünmekteyiz. Ayrıca araştırma, örgüt geliştirme süreçlerine ve eğitimde kalite uygulamalarına farklı bir bakış açısı getirme potansiyeli taşımaktadır. Okul çıktılarını dolaylı olarak etkileme potansiyeli olan örgütsel yaratıcılığın dönüştürücü özelliği de merak edilmektedir. Bu bağlamda, etkili okul liderliği ile örgütsel yaratıcılık arasında güçlü bir ilişki olduğu düşünülmektedir.

Araştırmanın amacı

Bu çalışmada öğretmen görüşlerine göre okul liderlerinin örgütsel yaratıcılığa etkisinin incelenmesi amaçlanmıştır. Bu temel amaç kapsamında aşağıdaki alt problemlere de

yanıt aranmıştır:

1. Öğretmenlerin okul liderliği algıları hangi düzeydedir?
2. Öğretmenlerin örgütsel yaratıcılık algıları hangi düzeydedir?
3. Okul liderliği, örgütsel yaratıcılıklarını ne düzeyde yordamaktadır?

Araştırmanın önemi

Örgütsel yaratıcılık üzerine yapılan araştırmalar, eğitim-öğretim faaliyetlerinin başarıya ulaşmasında ve fark yaratılmasında kritik bir rol üstlendiğini göstermektedir. Bu çalışmada, okul liderlerinin örgütsel yaratıcılığa olan katkıları detaylı biçimde ele alınmış, örgütsel yaratıcılık kavramı ve boyutları uygulama bağlamında incelenmiştir. Öğretmenlerin kendi yaratıcılık algıları ile okul liderlerinin bu yaratıcılığı ortaya çıkarma yönündeki destekleyici tutumları arasındaki ilişkileri tespit etmenin örgütsel faydalılığı güçlendireceği düşünülmektedir. Artan rekabet ortamında, bireysel fark yaratma kapasitesi önem kazandıkça, örgütsel yaratıcılık kritik olduğu görülmektedir. Bu bağlamda, okul liderlerinin söz konusu kavrama ne ölçüde etki ettiğinin ortaya konulması okul geliştirme çalışmalarına da olumlu katkılar sunabilir.

Kuramsal çerçeve

Liderlik Kavramı

Liderlik, potansiyel gücü mantıklı yöne çeviren, amaçlara ulaşmak için gereken motivasyon ve enerjiyi başkalarına veren, onları hedeflerine ulaştıran bir özellik olarak tanımlanabilir (Dindar, 2001). Liderlik, insan duygularını harekete geçiren ve hedef birliği sağlayarak örgütün vizyonuna ulaşmasını sağlayan en önemli etkenlerin başında gelmektedir. Liderlerin sergilediği davranışların görev odaklı ve insan odaklı olması, örgüt içerisinde çalışanların tutumları üzerinde farklı şekilde etki etmektedir (Çekmecelioğlu, 2014, s. 21).

Liderlik, amaç ve kültür, strateji temel kimlikler kritik süreçler gibi örgütü var eden ussal ve iyi düşünülmüş eylemleri yönetmek, geleceği yaratmak ve ekip kurmaktır (Memduhoğlu ve Kürşat, 2017).

Liderlik kavramı, grup kavramını da beraberinde doğurmaktadır. Liderlik bir ekip ortamında düşünülmektedir. Liderlik belli bir grup içinde doğar. Lider, işlerini zorunlu olarak grup üyeleriyle ilişkilerle yürütür. Liderlik, lider ile grup arasında bir etkileşim sürecidir. (Aydın, 2018, s. 254). Bu tanımlamaların ortak özelliği liderliğin gerçekte bir etkileme ve örgütsel amaçlara göre iş yaptırma yeteneği olarak ifade edilebilir.

Liderler grupta bulunan diğer bireylerden çok, grubun tutum ve düşüncelerini etkileme

eğilimindedir. Lider için önemli güç kaynağı grup olsa da, liderin kendisi grup üzerinde etkileme gücüne sahip olmaktadır (Aydın, 2018, s. 258). Liderlik kavramını daha çok güç kavramı üzerinden ele almak gerekmektedir. Dolayısı ile liderliğin doğası gereği içinde bulunduğu ortam ve çevresel dinamiklere göre farklı yansımaları ve bağlamları oluşabilmektedir. Bu bağlamda farklı alan ve açılarda değişik çıktılar oluşacağından tek bir kavram ve liderlik tarzının kalıbı oluşturmayaacağı kabul edilebilmektedir (Çalışkan, 2015).

Okul Liderliği

Okulun yönetiminden sorumlu, okulun hedeflerine ulaşmasını sağlayabilmesinden, okulun ve okul programının yürütülmesinden, öğrenmenin gerçekleşmesinden ve okulun başarısından sorumlu görülen kişi okul müdürüdür (Şişman, 2011). Etkili okul, fiziksel kaynak ve donanım anlamında öğrencilerin tüm gelişim alanlarına uygun ve bunları destekleyen ve geliştiren uygun öğrenme ortamına ve bu imkanları okul içerisinde diğer bireylerle karşılıklı etkileşim halinde, ilgi duyarak ve isteyerek kullanabilecekleri bir ortama sahip okullar olarak tanımlanmışlardır (Helvacı ve Aydoğan, 2011). Okullarda bu etkili okul kavramının dinamiğini yaratacak ve öğrenme ortamını sağlayacak bir lider olması beklenir. Okul yöneticisi, okulunu bir sistem olarak algılayıp çözümleyebilen, okuldaki madde ve insan kaynaklarını en etkili ve verimli bir biçimde kullanarak okulun amaçlarını gerçekleştirecek şekilde harekete geçiren ve yasal yetkiye bağlı olarak görev yapan kişidir (Demirel ve Kaya, 2001).

Yapılan çalışmalarda da okullarda başarının anahtarının okul yöneticilerinde olduğu sonucuna işaret etmekte ve rekabet gücünün fazla olduğu alanda okulların başarısına bağlı olduğunu savunarak, eğitim yöneticilerini yetiştiren programların başarısızlığının gelecekteki öğrencilerin yetersizliğine sebep olacaktır. Bu bakımdan genel olarak eğitim alanında başarılı olunmasının ve amaçlara ulaşılmasının önemli rolü okul liderleri üstlenmektedir (Karip ve Koksall 1999; Şişman, 2011).

Son yıllarda okul liderliği kavramı her okulu etkileyen koşullar ve sahip olduğu özellikler bakımından okulun amaçlanan hedeflerine uygunluğu ve etkililiği üzerinde sorgulanmaya devam edilmektedir. Araştırmalar sonucu genel olarak okul liderliğinin birçok alanda ilişkili olduğu görülmektedir. Okul liderlerinin değişime etkililiğinde önemli ölçüde yönetimde, örgütü geliştirme ve işbirliği kurma uygulamasında öncülük ettiği dikkat çekmektedir (Atasoy, 2020).

Okul liderliğinin birçok boyutu bulunmaktadır. Bu boyutlar yeterli düzeye ulaşmayı amaçlayan bir hedef için okul liderinin yön verme boyutu kapsamında örgüte geniş görüşlülük oluşturma, kısa, ulaşılabilir hedefler belirleme, performansta yüksek bir kriter belirleme ve örgüt içerisinde hedeflerden haberdar olma, bu hedeflerin örgütte konuşmaların sürekliliğinin

artırılması beklenir (Leithwood, 2012). İkinci boyutu olan insanları geliştirme çerçevesinde çalışanların mesleki yeterliliklerini geliştirme isteklerine karşı motive etmesi, kişisel destek sağlayarak önemli hissettirmesi, okulun yapacağı çalışmalarda gerekli olan kapsamlı çerçeve modeli oluşturması ve tüm paydaşlar arasında örgütsel güveni sağlayacak ortamlar hazırlaması beklenir (Atasoy, 2020). Üçüncü uygulama alanı olan örgütü geliştirme kapsamında beklenen liderliğin paylaşımı ve iş birliğine dayalı şekillendirmesi, velilerle ve çevreyle etkili iletişim kurarak okulun çevresini büyütmesi, amaçlanan hedeflere ulaşmayı sağlayacak gerekli ve yeterli olanaklar bulmasıdır. Öğretim Programını Geliştirme başlığı altındaki son uygulama alanında ise öğretim planı uygulayacak yeterli düzeyde personel bulur. Her türlü imkânı sağlayarak süreci takip etmesi ve tüm engel koşulları ortadan kaldırması beklenir. Okul liderliğini oluşturan bu dört liderlik uygulama alanı ile başarıyı doğuran bir okul temelini gösterir (Atasoy, 2020).

Örgütsel Yaratıcılık

Yaratıcılık kavramı örgüt içinde doğabilmesi için ilk olması ve çevresel kabul edilebilirliği sağlaması gerekmektedir. Yaratıcılık genel olarak esnek düşünme becerisi, özgün ürün ortaya çıkarması, farklı bakış açılarıyla değerlendirmesi, genel geçer kuralların ötesine geçebilmesi, değişime açık olması, tekrardan kaçınması ve bunları gerçekleştirirken örgüt içerisinde paylaşılması gerekliliği olarak tanımlanabilmektedir (Memduoğlu ve Kürşat, 2017).

Örgütsel yaratıcılığın şartlarından biri yaratıcılığa elveriş sağlayan bir çevrenin olmasıdır (Kwasniewska ve Necka, 2004). Örgütsel yaratıcılık, birlikte çalışan personellerin ekip ruhunda oluşacak kalıpların dışında olan yararcı düşüncelerin, özgün fikirler ortaya koymasındaki aktif süreç olarak isimlendirilebilir. Bu süreçte kendini yenileyebilmesi ve liderlerinin bu sürece güven içerisinde, özgür ortam oluşturması gerekmektedir.

Örgütte bulunan personellerin yaratıcı uygulamaları bir etkileşim sonucudur. Personellerin bu uygulamaları kişilik özellikleri ile ilişkilendirilebilir. Genel bir çerçeveye, geçmiş etkiler, kişilik özellikleri ve bilişsel stratejiler, teşvik, yararlı bilgi ve çevresel faktörler gibi kavramların birlikte etkileşimi olarak değerlendirilebilir (Yurter, 2016).

Cengiz, (2000)'e göre, Örgütsel yaratıcılığı belirleyen kıstas özgün çıktının oluşabilmesidir. Fakat bu çıktılar sıradan çalışmaların yerine yaratıcılığın katıldığı zihinsel becerilerdir. Yaratıcı çıktıların oluşmasını sağlayan üç temel kavram vardır. Bunlar; kabul gören ürünler için “fikir akıcılığı”, fikrin özgün oluşu ve fikrin çevre kabul geçerliliğini sağlayabilen anlamın kullanılmasıdır. Fikir akıcılığı nesnel yönüyle karşımıza çıkarken fikir özgünlüğü ile çevrede işlevselliği yönünden daha çok öznel kavramlar olarak çıkmaktadır

(aktaran: Alkış, 2021).

Yaratıcı örgütler, fikir üretebilen düşünce gücüne sahip bireyler bulundurulur. Farklı zeka alanlarına sahip çalışanları vardır. Analiz ve araştırmaya yönelik esnek planlar oluştururlar. Fikirleri, çalışanların alt-üst hangi konumda olduğuna bakılmaksızın yaratıcılığı ön planda tutarak değerlendirme yaparlar. Risklere karşı hoşgörülüdür. Örgütsel yaratıcılığa sahip bir kurum özerk ve bağımsızdır.

Yaratıcı örgütleri geliştirecek çalışmalar (Çalışır, 2021) şu şekilde sıralanmaktadır:

- Yaratıcılığı daha etkili kılmak için uzmanlığı olan kişiye uzmanlığına hitap edecek işlerin verilmesi,
- Uzmanlara özgürce fikir üretebilecekleri fırsatlar yaratmak, hangi yoldan gidecekleri konusunda karar yetkisinde kişilere bırakmak,
- İki önemli etken olan zaman ve sponsor desteği ile onları verimli bir şekilde kullanacakları gruplar oluşturmak
- Motivasyonlarını artırıcı ödüller verilmesi ve takdir edilme ihtiyacının unutulmaması gerekir.

Örgütsel Yaratıcılığın Boyutları

Örgütsel yaratıcılık, takım çalışmasına bağlı işlerde özgün ve işlevsel çıktı ortaya bir sistemdir. Araştırmacılar örgütsel yaratıcılığın etkileşimlere bağlı bir süreç olduğunu ve grubun nitelikleri ile örgütün yapısı olmak üzere iki temel öğeye dayalı olduğunu ileri sürmektedirler (Chang ve Chiang, 2007, s. 3,; akt: Çalışır, 2021). Örgütsel yaratıcılığın; bireysel, yönetsel ve toplumsal yaratıcılık boyutları bulunmaktadır.

Bu bilgiler çerçevesinde bireysel yaratıcılık, örgütsel yaratıcılığın ön koşulu ve temel ögesidir. Bireysel yaratıcılığın, örgütün diğer unsurlarıyla güçlü bir ilişkisi olduğunu belirtilmiştir. Bunlar; örgütsel değişime güdülenme, kreatif özgün fikir üretme yetisi ve yönetsel ustalık uygulamalarıdır (Amabile, 1990; Yıldırım, 1998; 2006). Kişisel yaratıcılık, bireyin var olan yeteneğinin bir göstergesidir ve hedeflere ulaşmasındaki gücünün varlığının ön belirtisidir (Ceylan ve Uğurlu, 2014:98, akt: Akıncı, 2018:39). Özgün fikirlerin oluşmasında olmazsa olmaz kişinin kendisidir. Bu kişiler; istikrarlı fikir üretebilen, cesaretli, problemlere karşı duyarlı orijinal ve birbiriyle bağlantısız fikirler taşıyan özellikler göstermektedirler. Çalışanın öz benliğine olan inancı ve esnek düşünebilme becerisi onu yaratıcı anlamında üstün kılar (Eriçok, 2014, s. 11).

Yapılan arařtırmalarda Balay’ın alıřanların rgtsel yaratıcılığın bireysel boyuttaki dzeylerinin genel olarak yeterli dzeyde olduėu tespit ettiėi grlmektedir. Yurter’e (2016) ait olan bir diėer alıřmada ise yař kriteri ele alınmıřtır. Bireysel yaratıcılık dzeyinin byk yař grubundaki ėretmenlerde daha yksek olduėu belirtilmiřtir. Elde edilen sonulara bakıldıėında bireysel yaratıcılık gen ėretmenlerin lehine farklılık gstermektedir (alıřır, 2021, s. 92). Diėer bir boyutu olan toplumsal yaratıcılık boyutu;

Bireyin iinde bulunduėu evre yaratıcılığını řekillendirir ve avantaj saėlar. Bu sayede kendi benliėine olan gc, yeni fırsatları fark etmesinde olanak saėlar. Destek saėlanması beklenen g, bireye imkan saėlamalı, karřısına ıkabilecek engel niteliėindeki her etkeni uzaklařtırmak kaldırmak gerekmektedir. Dıřsal uyarıcının niteliėi olumsuz ise yaratıcı, kreatif zeka zedelenme yařayabilmektedir (Eriok, 2014, s.10).

Son boyutu olan ynetsel yaratıcılık boyutu; Liderler bu rekabeti ortamda ulařılacak hedefler iin dıřsal engellere zgn zmler ortaya koymak zorundadır. Risk alma kavramı rgtsel yaratıcılıkla nemli kavramdır. rgtler, alıřanlarının yaratıcılık dzeylerini artırmalı yeni iřler retme konusunda esnek bir ortam saėlamalıdır. Liderler risk almanın byk bir risk almak olduėunu dřnerek bařarısızlıkla karřı karřıya gelmemek iin uzaklařmayı tercih edebilmektedirler (alıřır, 2021, 47).

Yaratıcılıėa ortam hazırlamak isteyen liderler řu yeteneklerini sergilemelidir. alıřanına bir rehber olarak yaklařmalı, isteklendirmeli ve mřavirlik yapmalıdır. İkinci olarak baėımsızlık; yaratıcı zekasını engelleyici dıřsal uyarıcılardan arınmıř esnek bir alan oluřturmalıdır. nc olarak dllendirme; kısa hedeflerin sonucunda teřvik edici dllendirmeler yapılmalı, alıřanın aktifliėini artırmalıdır. Son olarak Etkileřim ve olguların aktarımı; ynetici alıřanına bir grev verebilmesi iin olumlu iletiřimin ve baėlılıėın olması gerektiėi sylenmektedir. (Eren & Gndz, 2002; Memduhoėlu ve Krřat, 2017). rgtsel yaratıcılığın oluřması ve pasif olmayan bir sisteme ulařılması bununla mmkndr (Memduhoėlu ve Krřat, 2017). Lider davranıřı ile astların davranıřları birbiriyle yakından iliřkilidir. Bu olumlu iliřki rgtsel yaratıcılığın geliřmesinde byk oranda etki gstermektedir. Liderler astlarının gstermiř olduėu yaratıcı giriřimi ne kadar zemin hazırlar ve destek sunar ise o kadar rgtte yaratıcı rnler ortaya ıkacaktır (Memduhoėlu ve Krřat, 2017).

Yaratıcı rnler, biliřsel ynden deėiřik alıřılmıřın dıřında ve kestirilemeyen dřncelerden doėar. Yaratıcı dřnceler zenginleřtirilmiř bir evreden etkilenir. Yaratıcı bireyler toplum baėımlılıėından sıyrılıp, kiřisel zgrlėine attıkları adımları istikrarlı bir

şekilde devam ettirmelidir. Yaratıcı düşüncelerin ortaya çıkıp gelişebilmesi için düşünsel bir çevreye sahip olunması fikir alışverişi açısından gerekmektedir (Alkış, 2021, 35).

Örgütsel Yaratıcılık Engelleri

Örgütsel yaratıcılık engelleri genel olarak olumlu olumsuz engeller olarak belirtilmektedir.

• Tenkit: Örgüte ya da örgüt üyelerine yapılan tenkitler olumsuz çıktılara sebebiyet verebilmektedir.

• Tekdüzelik: Düşüncelerde sığlık, ıraksak düşünememe,

• Ruhsal Gerilim: birey üzerinde gerilim, baskı,

• Vakit Sorunları: sınırlı vakit, yetiştirememe korkusu,

• Etraf: Örgüt üyelerinin kendisini çalışma ikliminde rahat hissedememesi.

Örgütlerde yaratıcılığı etkileyen toplumsal, bireysel ve örgütsel engeller olarak sınıflandırabiliriz. Bunlardan bireysel etken olarak kişinin bilgi yetersizliği, özgüven eksikliği, yapabilme gücünü hissetmedeki yetersizliği, isteklendirme eksikliği gibi kişisel özelliklerden kaynaklı engeller olarak sayılabilir. Örgüt yaratıcılığını etkileyen bir diğer etken örgütsel engellerdir. Gelenekselci bir yönetim anlayışı, etkili bir iletişimin olmaması, hedeflerin ulaşılması sonucu yeterli olmayan ödüller, baskıcı lider, esnek olmayan çalışma koşulları, liderlerin değişime risk olarak bakması sonucu yenilikten kaçınma davranışı gibi etkenleri örgütten kaynaklı engeller olarak alınabilir. Bir diğer engel toplumsal engellerdir. Bunlar toplum baskısı, toplumun istediği biçime yönelme, toplum kabul edilebilirliğine uyma gibi düşünceler yaratıcı düşüncenin oluşmasını etkileyen unsurlardır.

Örgüt üyelerinin ve örgütlerin yaratıcı olmalarını engelleyen hatalar bulunmaktadır. Bu engel unsurlar şu şekilde sıralanabilir (Gundry ve Kickul, 1994, s. 24; akt: Çekmecelioğlu, 2002).

1.Problemin doğru tespit edilememesi; bu yüzden problem çözümünün yanlış yönlendirmelere sebebiyet verebilmektedir.

2. Fikirlerin düşünülmeden yargılanması; fikirlerin düşünsel değerlendirme yapılmadan olumsuz hızlıca karar verilmesi.

3. Tek bir iyi fikirle devam etmek: Kriz anlarında hemen akla gelen ilk fikrin en iyi fikir olduğunu düşünerek başlamak.

4. Sponsor bulmada hata: destek sağlayacak kişilerin bulunmaması.

Yöntem

Bu bölümde araştırmanın deseni, kullanılacak veri toplama araçları, veri toplama araçlarının uygulanışı, evren-örneklemi ve verilerin analizi ile ilgili bilgiler anlatılmaktadır.

Araştırmanın Yöntemi

Branş öğretmenlerinin katıldığı okul liderlerinin örgütsel yaratıcılığa ve psikolojik güçlendirmeye etkisine olan görüşlerini göre incelendiği bu çalışmada nicel araştırma yöntemi uygulanmıştır. Nicel çalışmalarda, nicel veriler toplanır ve analizleri gerçekleştirilir.

Araştırmanın evren ve örnekleme

Şanlıurfa ili merkez ilçelerinde, 2021-2022 Eğitim-Öğretim Yılında, ortaokullarında görev yapmakta olan öğretmenler arasından, kolay örnekleme yöntemiyle seçilem 78 öğretmen oluşturmuştur. Araştırma verilerinin toplanmasında, Örgütsel Yaratıcılık ölçeği ve Okul Liderliği Ölçeği Ölçme araçlarının uygulanması sonucu elde edilen veriler, SPSS 22 programıyla analiz edilmiştir.

Tablo 1. Öğretmenlerin Demografik Özelliklerine Göre Dağılımı

	N	%
Cinsiyet		
Kadın	51	65,4
Erkek	27	34,6
Eğitim durumu		
Lisans	67	85,9
Lisansüstü	11	14,1
Yaş		
20-24	7	9,0
25-29	30	38,5
30-34	13	16,7
35-39	12	15,4
40 ve üzeri	16	20,5
Toplam	78	100

Tablo 1’ de görüldüğü üzere çalışmaya 51 (%65,4) kadın öğretmen, 27 (%34,6) erkek öğretmen katılmıştır. Bu öğretmenlerin 67 (%85,9)’si lisans mezunu iken; 11 (%14,1)’i lisansüstü mezundur. Araştırmaya katılan öğretmenlerin %9’u 20-24 yaş, %38,5’i 25-29 yaş, %16,7’si 30-34 yaş, %15,4’ü 35-39 yaş ve %20,5’i ise 40 ve üzeri yaştadır.

Veri toplama araçları

Bu çalışmada ise okul liderliği ölçeği güvenirlik analizi öğretmenlerden elde edilen puanlar ile yapılmış ve güvenirlik katsayısı (Cronbach Alpha) yön verme boyutu için.82,

insanları geliştirme boyutu için .96, örgütü geliştirme boyutu için .93, öğretim programını geliştirme boyutu için .96 ve ölçeğin tamamı için .98 olarak bulunmuştur. Bu çalışmada ise örgütsel yaratıcılık ölçeği güvenirlik analizi öğretmenlerden elde edilen puanlar ile yapılmış ve güvenirlik katsayısı (Cronbach Alpha) bireysel boyut için .95, yönetsel boyut için .95, toplumsal boyut için .94 ve ölçeğin tamamı için .96 olarak bulunmuştur.

Verilerin Analizi

Araştırma kapsamında toplanan veriler SPSS 22.0 programına aktarılarak oluşturulan veri dosyası üzerinde betimsel istatistikler ve basit doğrusal regresyon analizleri yapılmıştır. İlk olarak öğretmenlerin okul liderliği, örgütsel yaratıcılıkları düzeylerini belirlemek için betimsel istatistik yapılmış ve ortalama ile standart sapma değerleri belirlenmiştir. Daha sonra ise okul liderliğinin bağımsız değişken kabul edildiği, örgütsel yaratıcılık bağımlı değişken kabul edildiği iki ayrı basit doğrusal regresyon analizleri yapılmıştır.

Bulgular

Bu bölümde araştırma sorularına yönelik elde edilen bulgulara yer verilmiştir.

Birinci Alt Probleme İlişkin Bulgular

Öğretmenlerin okul liderliği düzeylerine ilişkin bulgulara Tablo 2’de yer verilmiştir.

Tablo 2. Okul Liderliği ve Alt Boyutlarına İlişkin Ortalama ve Standart Sapma Değerleri

Tablo 2. Okul Liderliği ve Alt Boyutlarına İlişkin Ortalama ve Standart Sapma Değerleri

Ölçek ve Alt Boyutları	Ortalama	Standart Sapma
Yön verme boyutu	3,63	0,99
İnsanları geliştirme boyutu	3,53	1,22
Örgütü geliştirme boyutu	3,64	1,14
Öğretim programını geliştirme boyutu	3,43	1,20
Okul Liderliği	3,53	1,17

Öğretmenlerin okul liderliği ve alt boyutları ile ilgili yapılan analiz sonucunda elde edilen bulgular Tablo 2’de verilmiştir. Öğretmenlerin yön verme alt boyutunda yeterli düzeyde (M:3,63), insanları geliştirme boyutunda yeterli düzeyde (M:3,53), örgütü geliştirme boyutunda yeterli düzeyde (M:3,64), öğretim programını geliştirme boyutunda yeterli düzeyde (M:3,43) ve ölçek genelinde okul liderliği düzeylerinin yeterli düzeyde olduğu söylenebilir (M:3,53).

Öğretmen adaylarının örgütsel yaratıcılık düzeyleri ile ilgili bulgulara Tablo 3’te yer verilmiştir.

Tablo 3. Örgütsel Yaratıcılık ve Alt Boyutları ile İlgili Ortalama ve Standart Sapma Değerleri

Ölçek ve Alt Boyutları	Ortalama	Standart Sapma
Bireysel boyutu	3,70	0,65
Yönetmel boyutu	3,52	0,99
Toplumsal boyutu	3,52	0,82
Örgütsel Yaratıcılık	3,59	0,69

Öğretmenlerin örgütsel yaratıcılıkları ve alt boyutları ile ilgili yapılan analiz sonucunda elde edilen bulgular Tablo 3’te verilmiştir. Öğretmenlerin bireysel boyutta yeterli düzeyde ($\bar{X}$:3,70), yönetmel boyutta yeterli düzeyde ($\bar{X}$:3,52), toplumsal boyutta yeterli düzeyde ($\bar{X}$:3,52) ve ölçek genelinde örgütsel yaratıcılık düzeylerinin yeterli düzeyde olduğu söylenebilir ($\bar{X}$:3,59).

Öğretmenlerin örgütsel yaratıcılıklarını yordayıcı okul liderliği değişkeni ile ilgili basit doğrusal regresyon analizi sonuçlarına Tablo 5’te yer verilmiştir.

Tablo 5. Örgütsel Yaratıcılığı Yordayıcı Değişkene (Okul Liderliği) İlişkin Basit Doğrusal Regresyon Analizi

Yordayıcı Değişkenler	B	SH	β	t	p
Sabit	2,349	0,217	-	10,799	.00
Okul Liderliği	0,35	0,059	0,568	6,017	.00**
N=78	R= 0,56	R ² = 0,32	F _(1,76) =36,205	p= ,00	**p<0,001

Okul liderliğinin, örgütsel yaratıcılığı ne düzeyde yordadığını ortaya koymak için yapılan basit doğrusal regresyon analizi sonucunda, okul liderliğinin, örgütsel yaratıcılığın anlamlı bir yordayıcısı olduğu görülmüştür (R = 0,56, R²= 0,32, F_(1,76)= 36,205, p<.001). Okul liderliği, örgütsel yaratıcılığın % 32’sini açıklamaktadır.

Tartışma ve Sonuç

Bu çalışmada Leithwood (2012) tarafından geliştirilen Türkçe uyarlamasını yapan Yalçın ve Atasoy’un (2021) Okul Liderliği Ölçeği kullanılmıştır. Öğretmenlerin okul liderliği ve alt boyutları ile ilgili yapılan analiz sonucunda elde edilen bulgular öğretmenlerin yön verme alt boyutunda yeterli düzeyde insanları geliştirme boyutunda yeterli düzeyde, örgütü geliştirme boyutunda yeterli düzeyde, öğretim programını geliştirme boyutunda yeterli düzeyde ve ölçek genelinde okul liderliği düzeylerinin yeterli düzeyde olduğu söylenebilir. Uğurlu ve Abdülrezzak’ın (2016) yapmış olduğu araştırma sonucunda Öğretmenlerin okul liderliğine yönelik bakışa açıları genel olarak yüksek düzeyde olduğu görülmüştür.

Okul liderliđi alt boyutlarından ğretimsel destek ve iřbirliđi alt boyutuna ait bakıř aılarınn yksek, aıklayıcı alt boyutuna ait bakıř aılarında ise olduka yksek dzeyde olduđu sonucuna ulařıldıđı grlmřtr. ğretmenlerin, okul liderinin kiřilere aıklayıcı davranıř ve uygulamalarına ynelik algı dzeylerinin yksek olduđu grlmřtr. ğretmenler mdrlerinin yaptıđı alıřma ve kararlarda bilgilenmek, fikir sunma uygulamasında, aktif biimde yer alma dřnce isteđi grlmřtr. Arařtırma sonucunda etkili okula okul liderliđinin etkisinin orta dzeyde olumlu bir iliřki olduđu grlmřtr.

Ayvalı ve Kořar'ın (2021) arařtırmasına gre ğretmen mdrlerinin iřbirliđi, kararlarda sz sahibi olma, paylařımcı olma, deđiřime ve yeniliklere nclk etme, rehber olma, rol model olma gibi kavramlarla iliřkilendirildiđi grlmřtr. ğretmenler okul mdrlerinin otoriter, davranıřlardaki tutumları gibi eřitli engellerle de karřılařtıkları sonucuna ulařmıřtır.

Bu arařtırmada ikinci kullanılan lek ise rgtsel Yaratıcılık leđidir. Arařtırma sonucunda ğretmenlerin rgtsel yaratıcılıkları ve alt boyutları ile ilgili yapılan analiz sonucunda elde edilmiřtir. ğretmenlerin bireysel boyutta yeterli dzeyde, ynetsel boyutta yeterli dzeyde, toplumsal boyutta yeterli dzeyde ve lek genelinde rgtsel yaratıcılık dzeylerinin yeterli dzeyde olduđu sylenebilir. Balay'ın (2010) arařtırmaları sonucunda ise ğretim elemanlarının bireysel boyutunda yeterli diđer iki boyutta orta dzeyde ortaya ıktıđı grlmřtr. İki boyutun bireysel boyuta gre daha dřk ıkmasının sebepleri belirtilmiřtir.

Kořar ve Ceylan' ın (2016) yapmıř olduđu nitel arařtırmada ise retim, sre, yaratıcılıđın ortaya ıkıřı, bireysel ve rgtsel etkenler, rgtsel yaratıcılıđın gerekliliđine iliřkin grřler bildirilmiř. Ayrıca bireysel, toplumsal ve rgtn yaratmıř olduđu engeller bařlıđında yaratıcılıđın desteklenmesi deđiřme diren gsterilmemsi gibi esnek alıřma ortamı temaları da belirlendiđi grlmřtr (Kořar ve Ceylan, 2016). olak'ın (2017) arařtırmasında ise rgtten kaynaklanan engellerin (stres) gibi yaratıcılık arasında anlamlı bir iliřkisi olduđunu gstermiřtir.

Bu arařtırmada son kullanılan Psikolojik Glendirme leđi, ğretmenlerin anlamlılık boyutunda yeterli dzeyde, yeterlilik boyutunda yeterli dzeyde, zerklik boyutunda yeterli dzeyde, etki boyutunda yeterli dzeyde ve lek genelinde psikolojik glendirme dzeylerinin yeterli dzeyde olduđu sylenebilir.

Drdnc alt probleme ait arařtırma sonucunda okul liderliđinin, rgtsel yaratıcılıđın anlamlı bir yordayıcısı olduđu grlmřtr. Okul liderliđi, rgtsel yaratıcılıđın % 32'sini

açıklamaktadır. Son alt probleme ait araştırma sonucunda ise Okul liderliğinin, psikolojik güçlendirmenin anlamlı bir yordayıcısı olduğu görülmüş, okul liderliği, psikolojik güçlendirmenin % 16'sını açıkladığını tespit edilmiştir.

Son olarak okul liderinin örgütsel yaratıcılığa ve psikolojik güçlendirmeye etkisinin olduğu ortaya çıkmıştır. Bunun okul liderleri daha fazla yaratıcılık kavramı üzerinde durabilir, kurumunda var olan çalışanını destekleyici ortamlar yaratabilirler. Özellikle çalışanların süreç içinde daha bireysel kararlar alabileceği fırsatlar sunulabilir. Çıkan sonuçlarda kendisinin işe olan katkısının fark yarattığında önemli olduğunu fark edebilmesi için hissettirilmesi sağlanmalıdır. Başarıları ödüllendirmelidir. Okul liderleri okulda örgütsel yaratıcılıkların önündeki engelleri fark edebilmeli ve bu engelleri ortadan kaldırmaya çalışabilirler.

Okul Liderliđi ve Psikolojik Güçlendirmeye Katkısı: Etkili Liderlik ve Motivasyonel Dönüşüme Öğretmen Bakış Açıları

Ramazan Atasoy

Harran Üniversitesi, Eğitim Fakültesi, TÜRKİYE,

e-mail: atasoyramazan@harran.edu.tr, Orcid No: 0000-0002-9198-074X

Özet

Etkili bir eğitim sunumu için okul yöneticilerinin liderlik davranışlarında psikolojik güçlendirme kavramını dikkate almaları büyük önem taşımaktadır. Öğretmenlerin kendilerini özgürce ifade edebildikleri bir ortamda yeterince güçlenmiş hissetmeleri, doğrudan psikolojik güçlenmeyle ilişkilidir. Bu araştırmanın genel amacı, okul liderliğinin öğretmen görüşlerine göre psikolojik güçlendirme üzerindeki etkisini incelemektir. Nicel araştırma yönteminin kullanıldığı bu çalışmanın örneklemini, 2022-2023 eğitim-öğretim yılında Şanlıurfa ili Viranşehir ilçesinde görev yapan ve kolayda örnekleme yöntemiyle seçilen 110 öğretmen oluşturmaktadır. Araştırmanın soruları, “Öğretmenlerin psikolojik güçlenme algı düzeyi nedir?” ve “Okul liderliği, öğretmenlerin psikolojik güçlenmesini ne düzeyde etkilemektedir?” şeklinde belirlenmiştir. Veri toplama aracı olarak "Psikolojik Güçlendirme Ölçeđi" ve "Okul Liderliği Ölçeđi" kullanılmıştır. Araştırmada betimsel istatistikler ve basit doğrusal regresyon analizleri uygulanmıştır. Araştırma sonuçlarına göre, okul müdürlerinin psikolojik güçlendirme üzerinde etkili olduğu tespit edilmiştir. Öğretmenlerin genel psikolojik güçlendirme düzeyleri ile "Anlamlılık", "Yeterlik", "Otonomi" ve "Etki" alt boyutlarındaki algılarının yüksek düzeyde olduğu görülmüştür. Ayrıca, okul liderliğinin öğretmenlerin psikolojik güçlenmesini hangi düzeyde yordadığını belirlemek amacıyla yapılan basit doğrusal regresyon analizi sonucunda, okul liderliğinin psikolojik güçlendirmeyi anlamlı düzeyde yordadığı bulunmuştur. Okul liderliği, psikolojik güçlendirmenin %16'sını açıklamaktadır. Araştırma sonuçlarına dayanarak, okul yöneticilerinin liderlik uygulamalarını geliştirerek öğretmenlerin psikolojik güçlenmelerini daha da desteklemeleri önerilmektedir.

Anahtar Kelimeler: Okul liderliği, örgütsel yaratıcılık, nicel araştırma, psikolojik iyi oluş

School Leadership and Its Contribution to Psychological Empowerment: Teacher Perspectives on Effective Leadership and Motivational Transformation

Abstract

For effective educational delivery, it is crucial that school administrators integrate the concept of psychological empowerment into their leadership practices. Teachers' sense of

empowerment, particularly in environments where they feel free to express themselves, is directly related to psychological empowerment. The main objective of this study is to examine the effect of school leadership on psychological empowerment from the perspective of teachers. This quantitative study was conducted with 110 teachers working in the Viranşehir district of Şanlıurfa during the 2022–2023 academic year, selected through convenience sampling. The research questions were: “What is the level of teachers’ perceptions of psychological empowerment?” and “To what extent does school leadership influence teachers’ psychological empowerment?” Data were collected using the "Psychological Empowerment Scale" and the "School Leadership Scale." Descriptive statistics and simple linear regression analyses were applied in the study. The findings revealed that school principals have a significant impact on psychological empowerment. Teachers reported high levels of perceived psychological empowerment overall, including in the sub-dimensions of “Meaning,” “Competence,” “Autonomy,” and “Impact.” Furthermore, regression analysis indicated that school leadership significantly predicts psychological empowerment, explaining 16% of the variance. Based on these results, it is recommended that school leaders enhance their leadership practices to further support teachers’ psychological empowerment.

Keywords: School leadership, organizational creativity, quantitative research, psychological well-being.

Giriş

Günümüzde okul liderliğine yüklenen anlam, yalnızca yönetsel görevlerle sınırlı kalmamakta; bireysel emeğin ve kurumsal kaynakların etkili kullanımını sağlayan, öğretmenlerin karar alma süreçlerine katılımını teşvik eden ve paylaşılan bir vizyonun benimsenmesini mümkün kılan çok boyutlu bir liderlik yaklaşımını içermektedir. Bu anlayış, öğrenci başarısını artırma amacına hizmet eden sosyo-kültürel bir dönüşüm sürecini de beraberinde getirmektedir (Aytaç, 2013, s. 69). Etkili okul liderlerinin büyük çoğunluğunun eğitim ortamında aktif olarak bulunmaları, ortaya çıkan sorunlara zamanında müdahale edebilmelerini ve öğretmenlerini sürece dahil ederek iş bölümünü daha verimli biçimde gerçekleştirebilmelerini sağlamaktadır. Kwasniewska ve Necka’nın (2004) yönetsel pozisyonda bulunan bireylerin, çalışanlara kıyasla hem liderlik yeterliklerini daha yüksek düzeyde sergiledikleri hem de işin anlamı ve özerklik düzeyine ilişkin algılarının daha gelişmiş olduğuna dikkat çekmektedir. Bu bağlamda, çağdaş okul liderliği anlayışı, yalnızca yönetsel işleyişi düzenleyen bir rol değil, aynı zamanda öğretmenlerin mesleki motivasyonunu, örgütsel yaratıcılığı ve psikolojik güçlenmesini destekleyen bir etki alanı olarak değerlendirilmektedir.

Mevcut literatürde, okul liderliğinin öğretmenlerin psikolojik güçlenmesine etkisi genel olarak yapısal ve davranışsal liderlik modelleri çerçevesinde incelenmiştir. Ancak bu etkileşimin öğretmenlerin özerklik, anlamlılık, yeterlik ve etki boyutlarındaki öznel deneyimleriyle nasıl şekillendiği ve bu süreçte psikolojik güçlendirmenin nasıl rol oynayabileceği yeterince açıklığa kavuşturulamamıştır. Ayrıca, öğretmen görüşlerine dayalı olarak okul liderliğinin güçlendirme süreçlerine katkısına ilişkin bağlamsal analizler, özellikle Türkiye örneğinde sınırlı sayıdadır. Özellikle Türkiye bağlamında öğretmenlerin psikolojik güçlenme düzeylerinin liderlik yaklaşımlarıyla ne ölçüde bağlantılı olduğu yönündeki bilgiler sınırlıdır. Bu nedenle, elde edilecek bulguların eğitim liderlerine, politika yapıcılara ve araştırmacılara yol gösterici nitelikte olması beklenmektedir. Dahası okul çıktılarını etkileyen psikolojik güçlendirmenin dönüştürücü etkisini anlamak, sürdürülebilir eğitim liderliği uygulamalarının geliştirilmesine katkı sağlayacaktır. Ayrıca bu araştırma, örgüt geliştirme süreçlerine ve eğitimde kalite uygulamalarına yeni ve farklı bir bakış açısı kazandırma potansiyeline sahiptir. Özellikle psikolojik güçlendirmenin dönüştürücü niteliği, eğitim liderliği bağlamında daha fazla araştırılmayı gerektiren bir alan olarak öne çıkmaktadır. Bu bağlamda, etkili okul liderliği ile motivasyon kuramları ve insan ilişkileri yaklaşımı temelinde psikolojik güçlendirme arasında güçlü ve çok boyutlu bir ilişki olduğu varsayılmaktadır. Öğretmenlerin kendilerini değerli, yeterli, anlamlı ve etkili hissettikleri bir okul iklimi, yalnızca bireysel mesleki tatmini değil, aynı zamanda okulun genel performansını ve yenilik kapasitesini de olumlu yönde etkileyebilir. Bu nedenle, okul liderlerinin bu tür psikolojik süreçleri nasıl etkilediğinin anlaşılması hem örgütsel gelişim stratejileri hem de eğitimde sürdürülebilir kalite yönetimi açısından kritik bir öneme sahiptir. Bu bağlamda, etkili okul liderliği ile örgütsel yaratıcılık arasında güçlü bir ilişki olduğu düşünülmektedir.

Araştırmanın amacı

Bu çalışmada öğretmen görüşlerine göre okul liderlerinin psikolojik güçlendirme etkisinin incelenmesi amaçlanmıştır. Bu temel amaç kapsamında aşağıdaki alt problemlere de yanıt aranmıştır:

1. Öğretmenlerin okul liderliği algıları hangi düzeydedir?
2. Öğretmenlerin psikolojik güçlendirme algıları hangi düzeydedir?
3. Okul liderliği, psikolojik güçlendirmeyi ne düzeyde yordamaktadır?

Araştırmanın Önemi

Eğitim örgütlerinde liderlik ile psikolojik güçlendirme arasındaki ilişki, genellikle yapısal ve yönetsel boyutlar üzerinden ele alınmakta; öğretmenlerin öznel algı ve deneyimlerine

dayalı deęerlendirmelere ise grece sınırlı yer verilmektedir. Bu alıřma, sz konusu bořluęu doldurmayı amalayarak okul liderlięinin ğretmenlerin psikolojik glenme dzeylerine etkisini ok boyutlu bir bakıř aısıyla incelemektedir. zellikle insan iliřkileri yaklařımı, motivasyon kuramları ve rgtsel yaratıcılık baęlamında ele alınan liderlik pratiklerinin, ğretmenlerin anlamlılık, yeterlik, zerklik ve etki algılarını nasıl řekillendirdięi arařtırmanın odak noktasıdır. Trkiye baęlamında bu trden iliřkilere dair ampirik veri eksiklięi, alıřmanın zgn katkısını artırmaktadır. Bu baęlamda elde edilecek bulguların, yalnızca ğretmenlerin mesleki iyi oluřlarının desteklenmesi aısından deęil, aynı zamanda okul temelli rgt geliřtirme stratejilerinin nitelięini artırmak bakımından da nemli ıktılar sunması beklenmektedir. Psikolojik glendirmenin dnřtrc iřlevi, okul ıktılarını dolaylı biimde etkileyebilecek stratejik bir unsur olarak deęerlendirildięinde, bu arařtırma srdrlebilir ve etkili eęitim liderlięi uygulamalarının geliřtirilmesine teorik ve pratik dzeyde katkı saęlayacaktır.

Kuramsal ereve

Liderlik Kavramı

Liderlik, potansiyel gc mantıklı yne eviren, amalara ulařmak iin gereken motivasyon ve enerjiyi bařkalarına veren, onları hedeflerine ulařtıran bir zellik olarak tanımlanabilir (Dindar, 2001). Liderlik, insan duygularını harekete geiren ve hedef birlięi saęlayarak rgtn vizyonuna ulařmasını saęlayan en nemli etkenlerin bařında gelmektedir. Liderlerin sergiledięi davranıřların grev odaklı ve insan odaklı olması, rgt ierisinde alıřanların tutumları zerinde farklı řekilde etki etmektedir (ekmecelioęlu, 2014, s. 21). Liderlik, ama ve klt, strateji temel kimlikler kritik sreler gibi rgt var eden ussal ve iyi dřnlmř eylemleri ynetmek, geleceęi yaratmak ve ekip kurmaktır.

Liderlik kavramı, grup kavramını da beraberinde doęurmaktadır. Liderlik bir ekip ortamında dřnlmektedir. Liderlik belli bir grup iinde doęar. Lider, iřlerini zorunlu olarak grup yeleriyle iliřkilerle yrtr. Liderlik, lider ile grup arasında bir etkileřim srecidir. (Aydın, 2018, s. 254). Bu tanımlamaların ortak zellięi liderlięin gerekte bir etkileme ve rgtsel amalara gre iř yaptırma yeteneęi olarak ifade edilebilir.

Liderler grupta bulunan dięer bireylerden ok, grubun tutum ve dřncelerini etkileme eęilimindedir. Lider iin nemli g kaynaęı grup olsa da, liderin kendisi grup zerinde

etkileme gücüne sahip olmaktadır (Aydın, 2018, s. 258). Liderlik kavramını daha çok güç kavramı üzerinden ele almak gerekmektedir. Dolayısı ile liderliğin doğası gereği içinde bulunduğu ortam ve çevresel dinamiklere göre farklı yansımaları ve bağlamları oluşabilmektedir. Bu bağlamda farklı alan ve açılarda değişik çıktılar oluşacağından tek bir kavram ve liderlik tarzının kalıbı oluşturmayaacağı kabul edilebilmektedir (Çalışkan, 2015).

Okul Liderliği

Okul liderliği, eğitim kurumlarının amaçlarına ulaşmasını sağlayan stratejik kararlar alabilme, öğrenme ortamlarını geliştirme, paydaşlar arasında iş birliğini tesis etme ve öğretim süreçlerini etkin biçimde yönlendirme süreci olarak tanımlanabilir. Bu kavram, yalnızca yönetsel işlevleri yerine getiren bir müdür figüründen öte; vizyoner, dönüştürücü ve katılımcı özellikler taşıyan bir lider profilini ifade eder. Daha geniş bir perspektiften bakılırsa, okulun yönetiminden sorumlu olan ve hem eğitsel süreçlerin yürütülmesi hem de kurumsal hedeflerin gerçekleştirilmesi bakımından anahtar rol üstlenen kişinin okul müdürü olarak değerlendirilmektedir (Şişman, 2011). Öğrenci başarısının artırılması, öğrenme ortamlarının iyileştirilmesi ve okul programlarının etkin biçimde uygulanması, büyük ölçüde yönetsel liderliğin dolayısı ile de okul müdürünün etkililiğine ve niteliğine bağlıdır. Etkili bir okul; öğrencilerin bilişsel, duyuşsal ve sosyal gelişimlerini destekleyen, fiziksel donanımı yeterli, katılımcı ve etkileşim odaklı öğrenme ortamları sunan bir yapı olarak tanımlanmaktadır (Helvacı & Aydoğan, 2011). Bu bağlamda, okul müdürlerinden yalnızca yönetsel görevleri yerine getirmeleri değil, aynı zamanda bu öğrenme iklimini inşa eden ve sürdüren liderler olmaları beklenmektedir.

Eğitim yönetimi literatüründe okul liderliği; yapısal liderlik, dönüşümcü liderlik, dağıtılmış liderlik ve öğretimsel liderlik) gibi farklı teorik yaklaşımlar çerçevesinde ele alınmaktadır. Bu modeller, okul liderinin rollerini yalnızca yönetsel değil, aynı zamanda pedagojik, kültürel ve psikolojik bağlamlarda da tanımlamaktadır. Özellikle dönüşümcü liderlik kuramı, okul yöneticisinin öğretmenlerin motivasyonunu artırma, kurumsal bağlılık oluşturma ve örgütsel yeniliği teşvik etme kapasitesine vurgu yapmaktadır. Bu kuramsal çerçeve, liderin çalışanların bireysel ihtiyaçlarını fark edip desteklemesi, vizyoner bir anlayışla okulun misyonunu içselleştirmesi ve paydaşları bu hedef doğrultusunda harekete geçirmesini ön plana çıkarır.

Türkiye'deki eğitim bağlamında ise, okul liderlerinin karşılaştığı çoklu roller ve karmaşık görevler, etkili liderliğin yalnızca teknik becerilerle değil, aynı zamanda güçlü sosyal,

duygusal ve kültürel yeterliklerle desteklenmesini gerekli kılmaktadır. Dolayısıyla, çağdaş okul liderliği anlayışı, insan merkezli ve gelişim odaklı bir liderlik biçimini zorunlu kılmaktadır.

Okul yöneticileri, okulu bir bütün olarak sistem perspektifiyle değerlendirebilen, mevcut kaynakları etkin biçimde koordine eden ve yasal yetki çerçevesinde okulun misyonunu gerçekleştirmeye dönük stratejik kararlar alabilen liderlerdir (Demirel ve Kaya, 2001). Nitel araştırma ve gözlemsel bulgular, okul başarısının en belirleyici unsurlarından birinin yönetici faktörü olduğunu göstermektedir. Rekabetin yoğunlaştığı günümüz eğitim ortamında, etkili okul liderlerinin varlığı, hem öğrenci başarıları hem de okulun kurumsal kapasitesi açısından kritik öneme sahiptir (Karip ve Köksal, 1999; Şişman, 2000).

Son yıllarda okul liderliği kavramı, yalnızca idari rollerle sınırlı kalmayan, aksine okulun yapısal ve kültürel dönüşümünü yönlendiren çok boyutlu bir liderlik pratiği olarak ele alınmaktadır. Literatürde, okul liderliğinin değişim yönetimi, örgütsel gelişim ve iş birliği süreçlerinde dönüştürücü rol oynadığı vurgulanmaktadır (Atasoy, 2020).

Leithwood (2012) sınıflamasına göre okul liderliği dört temel uygulama alanında incelenmektedir. İlki, yön verme boyutudur. Bu boyutta okul liderinin vizyon belirlemesi, ulaşılabilir hedefler oluşturması, yüksek performans standartları koyması ve bu hedeflerin okul topluluğunca içselleştirilmesini sağlaması beklenir. İkinci boyut olan "insanları geliştirme" çerçevesinde, liderin öğretmenlerin mesleki gelişimlerine destek vermesi, motivasyonlarını artırması, örgütsel güveni güçlendirmesi ve kapsayıcı bir okul kültürü inşa etmesi önem taşır (Atasoy, 2020). Üçüncü boyut, örgütsel kapasitenin geliştirilmesidir. Bu boyutta etkili liderin, öğretmenler ve velilerle güçlü iletişim kurarak iş birliği kültürü oluşturması, gerekli kaynakları temin etmesi ve okulun çevresiyle olan etkileşimini artırması beklenmektedir. Son olarak, "öğretim programını geliştirme" alanı ise liderin akademik süreçleri doğrudan desteklemesini, uygun personel görevlendirmesini, süreci izleyerek öğrenme engellerini ortadan kaldırmasını içerir. Bu dört temel uygulama, okulun başarısını şekillendiren liderlik modelinin yapı taşlarını oluşturmaktadır (Atasoy, 2020).

Psikolojik Güçlendirme

Personel güçlendirme kavramı yirminci yüzyılın ortalarında insan ilişkileri kuramcıları tarafından ortaya atılan bir anlayış ile ortaya çıkmıştır. “1990 yıllarında örgüt üyelerinin güçlendirme, yenilik, yaratıcılık ve esneklik ihtiyacı sebebiyle örgüt yapısına uygun bir kontrolün nasıl geliştirilebileceği sorusuna cevap aramaya çalışan yöneticilerin bu sorunu çözmede tercih ettikleri bir yaklaşım olmuştur (Gürbüz vd, 2013, s. 791-792). Daha sonrasında

gücün çalışanlar ile paylaşıldığı yönetsel uygulamalarla uğraşmak yerine çalışanların işlerini nasıl yapacaklarına odaklanan psikolojik bir anlayış gelişmiş ve kavram psikolojik güçlendirme olarak tanımlanmıştır” (Altındış ve Özutku, 2011, s. 166 ; Temizkan, 2019, s. 648).

Spreitzer’e göre (1995) psikolojik güçlendirme, örgütteki güçlendirme girişimlerinde örgüt üyeleri tarafından başarılı sonuçlanması için tecrübelenmesi gereken psikolojik bir olgu olarak tanımlanmaktadır (Temizkan, 2019). “Modern yönetim anlayışı içerisinde sosyal, siyasal, kültürel, ekonomik, teknolojik ve daha birçok alanda sürekli ve hızlı bir değişim yaşanmaktadır. Yaşanan bu değişimler ve gelişmelerin hızı ve önemi karşısında örgütler çeşitli uygulamalara başvurmak zorunda kalmaktadır. Bu uygulamalarda çalışanlara önem veren yaklaşımlar öncelikli gelmektedir.” bu yaklaşımlardan birisi olan Psikolojik güçlendirme kavramı karşımıza çıkmaktadır (Spreitzer, 1995).

Psikolojik güçlendirme örgüt üyelerini motive olmasını, işe olan bağlılıkları sonucu çabalarını, öz benlik algısını kuvvetlendirmek, özgür duygularını pekiştirmek ve kendilerini psikolojik anlamda güvende hissedebilmelerini sağlamaktadır.

2.1.2. Psikolojik Güçlendirmenin Boyutları

Örgüt çalışanlarının işine karşı duyduğu motivasyonunu etkileyen dört boyutu bulunmaktadır. (Spreitzer, 1995). Psikolojik güçlendirme, kişilerin görevlerine dair kontrollerinin olduğu psikolojik durumları ifade eder. Sadece gücün çalışanlar ile paylaşıldığı yönetim ile ilgili uygulanmalara odaklanmaktan ziyade çalışanların işlerini nasıl yaptıklarına da odaklanan psikolojik anlamlı bir bakış açısıdır (Spreitzer, 1995; Çalışkan, 2011, s. 79).

Psikolojik güçlendirmenin dört boyuttan oluştuğunu belirtmiştir. Bu boyutlar (Erdem vd., 2016, s. 163; Çalışkan, 2011, s. 79):

- Anlam
- Yetkinlik
- Özerklik veya otonomi
- Etki

Bu dört boyutu örgüt üyelerinin kendilerini psikolojik olarak güçlü hissetmelerini sağlar.

İlk olarak Anlam boyutunu ele alınacak olunursa işin gerektirdiği koşullar ile örgüt üyelerinin değer yargıları arasındaki ilişkili uyum olarak tanımlanabilir. Aralarındaki ilişki

olumlu yönde ne kadar yüksek olursa örgüt çalışanları için anlam o kadar yüksek olacaktır. İlişkinin düşük olması ilgide azalma, işten kopma, durağanlık gibi psikolojik güçlenme için zayıflatıcı durumlar olarak ortaya çıkacaktır. İkinci olarak Yetkinlik boyutu; örgüt üyelerinin işlerine olan öz yeterlilik düzeyi ile ilgilidir. Üçüncü boyutu olan Özerklik; örgüt üyesinin kendi başına kararlar alarak yürürlüğe koyabilme algılarının bütünü olarak tanımlanabilir. Bu boyutu çalışana esneklik kazandırarak olumlu gelişime ortam sağlayacaktır. Aksi durumda işlerin başlatılmasında veya devamında alınacak olan izinler durumunda sürece zaman anlamında olumsuzluk yaratacaktır. Son olarak Etki boyutu; Örgüt çalışanın çıkan sonuca katkısı olup olmadığını anlaması ile ilgilidir. Çalışanın ne kadar etki bırakabilme düzeyini gösterir. Diğer üç boyuta olan etkileme gücünü fark etmesi olarak ifade edilebilir (Temizkan,2019, s. 649)

Psikolojik güçlendirmenin dört boyutu birbiriyle bağlantılıdır. Her bir boyut sürecinin farklı aşamalarında bulunmaktadır. (Spreitzer, 1995). Psikolojik güçlendirmenin dört boyutunun birlikte bulunması sürecin daha güçlü ve iyi bir sonuç ortaya çıkaracağını göstermektedir. Boyutlardan herhangi birinin ya da birkaçının bulunmayışı güçlendirmenin zayıflığını artıracaktır. (Spreitzer, 1995).

Psikolojik güçlendirme Üzerine Yapılan Araştırmalar

Psikolojik güçlendirme üzerine araştırmalar yapılmıştır. Yürür ve Demir'in yaptıkları araştırmada çalışanların örgütsel adalet algıları ve psikolojik güçlendirme düzeylerini incelemişlerdir. Araştırma sonucu çalışanların örgütsel adalet algıları ile psikolojik güçlendirme düzeyleri arasında karşılıklı ve güçlü ilişkiler ortaya çıktığı söylenmektedir. Üç adalet türü içerisinde prosedür adaletinin psikolojik güçlendirmeyi daha fazla etkilediği, buna karşılık psikolojik güçlendirme alt boyutlarından etki-özerklik alt boyutunun diğer boyutlarından örgütsel adalet türlerinin tümü üzerinde daha fazla etkiye yarattığı bulunmuştur (Yürür ve Demir, 2011).

Altınkurt ve arkadaşları (2016) yaptıkları çalışmada psikolojik güçlendirme boyutunda cinsiyete göre anlamlı bir farklılaşma olduğunu tespit etmiştir (Aktaran: İhtiyaroğlu,2017). İhtiyaroğlu'nun (2017) yaptığı araştırmada ise öğretmenlerin yapısal güçlendirme algılarının cinsiyet bakımından anlamlı bir farklılık göstermediği; buna karşın psikolojik güçlendirme algılarının cinsiyet bakımından anlamlı bir farklılık gösterdiğini ortaya koymuştur. Can ve Özbağ'ın yaptığı araştırma sonucunda nicel yöntemler kullanılan araştırmanın bulgularına göre psikolojik güçlendirmenin dört boyutunun örgüt üyelerinin davranışları üzerinde anlamlı ve olumlu bir etkiye sahip olduğu tespit edilmiştir (Can ve Özbağ,2019). Akın ve Saruhan'ın yaptığı araştırma sonucunda ise örgütsel özdeşleşmenin, psikolojik güçlendirmenin alt

boyutları arasında anlamlı ve doğrusal bir ilişkinin olduğu ortaya konulmuştur (Akın ve Saruhan, 2016). Kalfalıoğlu ve Çelik'in yapmış olduğu araştırmalarında ise, psikolojik güçlendirme uygulamalarının örgütsel kimliklenme üzerine istatistiksel olarak anlamlı bir etkiye sahip olduğu tespit edildiği bulunmuştur (Kalfalıoğlu ve Çelik,2018).

Yöntem

Bu bölümde araştırmanın deseni, veri toplama araçları, evren-örnekleme ve verilerin analizi ile ilgili bilgiler anlatılmaktadır.

Araştırmanın Yöntemi

Okul liderlerinin psikolojik güçlendirmeye etkisine odaklanan bu araştırmada nicel araştırma desenlerinden ilişkisel tarama yöntemi kullanılmıştır.

Araştırmanın evren ve örnekleme

Şanlıurfa ili, 2022-2023 Eğitim-Öğretim Yılında, ortaokullarında görev yapmakta olan 802 öğretmen arasından kolay örnekleme yöntemiyle belirlenen 110 öğretmeni oluşturmuştur. Araştırma verilerinin toplanmasında okul liderliği ölçeği ve psikolojik güçlendirme ölçeği araçlarının uygulanması sonucu elde edilen veriler SPSS 22 programıyla analiz edilmiştir.

Tablo 1. Öğretmenlerin Demografik Özelliklerine Göre Dağılımı

Değişken	n	%
Cinsiyet		
Kadın	60	54,5
Erkek	50	45,5
Eğitim Durumu		
Lisans	92	83,6
Lisansüstü	18	16,4
Yaş		
20–24	22	20,0
25–29	50	45,5
30–34	13	11,8
35–39	12	10,9
40 ve üzeri	13	11,8

Tablo 1'e göre araştırmaya katılan 110 öğretmenin demografik özelliklerine göre dağılımı incelendiğinde, katılımcıların %54,5'inin kadın, %45,5'inin ise erkek olduğu görülmektedir. Eğitim durumuna göre katılımcıların büyük çoğunluğunun (%83,6) lisans mezunu olduğu, lisansüstü eğitim düzeyine sahip öğretmen oranının ise %16,4 olduğu belirlenmiştir. Yaş dağılımı açısından, en yoğun grubun %45,5 ile 25–29 yaş aralığında yer aldığı, bunu %20 ile 20–24 yaş grubu izlediği görülmektedir. Diğer yaş grupları 30 yaş ve üzerindekiilerden oluşmakta olup her biri toplamın yaklaşık %11–12'sini oluşturmaktadır. Bu veriler, araştırma grubunun genç ve lisans düzeyinde eğitim almış öğretmenlerden oluştuğunu ortaya koymaktadır.

Veri toplama araçları

Bu araştırmada kullanılan ölçme araçlarının iç tutarlılık düzeyleri, öğretmenlerden elde edilen veriler üzerinden Cronbach's Alpha katsayıları aracılığıyla belirlenmiştir. Okul liderliği ölçeğine ilişkin yapılan güvenirlik analizinde, alt boyutlara göre elde edilen α katsayıları şu şekildedir: yön verme boyutu için .82, insanları geliştirme boyutu için .96, örgütü geliştirme boyutu için .93 ve öğretim programını geliştirme boyutu için .96. Ölçeğin tamamı için hesaplanan genel güvenirlik katsayısı ise oldukça yüksek bir düzeyde olup .98 olarak tespit edilmiştir. Bu sonuçlar, okul liderliği ölçeğinin hem genel olarak hem de alt boyutlar düzeyinde yüksek düzeyde güvenilir bir ölçme aracı olduğunu göstermektedir. Psikolojik güçlendirme ölçeği güvenirlik analizi öğretmenlerden elde edilen puanlar ile yapılmış ve güvenirlik katsayısı (Cronbach Alpha) anlamlılık boyutu için .82, yeterlilik boyutu için .72, özerklik boyutu için .85, etki boyutu için .75 ve ölçeğin tamamı için .86 olarak bulunmuştur.

Verilerin Analizi

Araştırma kapsamında toplanan veriler SPSS 22.0 programına aktarılarak oluşturulan veri dosyası üzerinde betimsel istatistikler ve basit doğrusal regresyon analizleri yapılmıştır. İlk olarak öğretmenlerin okul liderliği ve psikolojik güçlendirme düzeylerini belirlemek için betimsel istatistik yapılmış ve ortalama ile standart sapma değerleri belirlenmiştir. Daha sonra ise okul liderliğinin bağımsız değişken kabul edildiği, psikolojik güçlendirme bağımlı değişken kabul edildiği basit doğrusal regresyon analizleri yapılmıştır.

Bulgular

Bu bölümde araştırma kapsamında oluşturulan sorularına yönelik elde edilen bulgulara yer verilmiştir.

Birinci Alt Probleme İlişkin Bulgular

Öğretmenlerin okul liderliği düzeylerine ilişkin genel ve alt boyutlara ilişkin bulgulara

Tablo 2’de yer verilmiştir.

Tablo 2. *Okul Liderliği ve Alt Boyutlarına İlişkin Ortalama ve Standart Sapma Değerleri*

Ölçek ve Alt Boyutları	Ortalama	Standart Sapma
Yön verme boyutu	3,70	0,99
İnsanları geliştirme boyutu	3,58	1,22
Örgütü geliştirme boyutu	3,70	1,14
Öğretim programını geliştirme boyutu	3,49	1,20
Okul Liderliği	3,62	1,17

Tablo 2’de öğretmenlerin okul liderliğine ve bu yapının alt boyutlarına ilişkin algılarını yansıtan aritmetik ortalama ve standart sapma değerleri sunulmuştur. Bulgulara göre öğretmenlerin okul liderliği ölçeğine ilişkin genel değerlendirme puanı $\bar{X} = 3,62$ ve standart sapması $SD = 1,17$ olarak hesaplanmıştır. Bu durum, öğretmenlerin okul liderliği uygulamalarına yönelik algılarının orta düzeyin üzerinde seyrettiğini göstermektedir. Alt boyutlar düzeyinde en yüksek ortalama değer yön verme ($\bar{X} = 3,70$, $SD = 0,99$) ve örgütü geliştirme ($\bar{X} = 3,70$, $SD = 1,14$) boyutlarında gözlemlenmiştir. Bu bulgu, öğretmenlerin okul yöneticilerinin vizyon oluşturma, hedef belirleme ve okulun gelişimine yönelik stratejik adımlar atma becerilerini görece daha olumlu değerlendirdiklerine işaret etmektedir. İnsanları geliştirme boyutu ortalama puanı 3,58 ($SD = 1,22$) ile daha sınırlı bir düzeyde kalmakta, bu da okul liderlerinin öğretmenlerin mesleki gelişimine yönelik destek sağlama ya da motivasyon artırıcı rolünde farklı deneyimlerin yaşandığını düşündürmektedir. Öte yandan, en düşük ortalama değer öğretim programını geliştirme boyutuna ait olup $\bar{X} = 3,49$ ($SD = 1,20$) olarak bulunmuştur. Bu durum, okul liderlerinin öğretimsel süreçlere müdahale ya da katkı sunma düzeylerinin diğer liderlik uygulamalarına göre daha düşük algılandığını göstermektedir. Genel olarak, öğretmenlerin okul liderliği algıları tüm boyutlarda orta düzeyin üzerinde yer almakta, ancak alt boyutlar arasında belirli farklılıkların bulunduğu gözlemlenmektedir.

Öğretmen adaylarının psikolojik güçlendirme düzeyleri ile ilgili bulgulara Tablo 3’te yer verilmiştir.

Tablo 3. *Psikolojik Güçlendirme ve Alt Boyutlarına İlişkin Ortalama ve Standart Sapma Değerleri*

Ölçek ve Alt Boyutları	Ortalama	Standart Sapma
Anlamlılık boyutu	4,67	0,58
Yeterlilik boyutu	4,61	0,51
Özerklik	4,37	0,76
Etki boyutu	3,86	0,75
Psikolojik Güçlendirme	4,39	0,51

Tablo 3'te öğretmenlerin psikolojik güçlendirme düzeylerine ilişkin algıları aritmetik ortalama ve standart sapma değerleriyle sunulmuştur. Genel olarak öğretmenlerin psikolojik güçlendirme düzeyine ilişkin puan ortalaması $\bar{X} = 4,39$ olup, bu değere karşılık gelen standart sapma $SD = 0,51$ olarak hesaplanmıştır. Bu bulgu, öğretmenlerin mesleki rollerinde kendilerini genel anlamda yüksek düzeyde psikolojik olarak güçlenmiş hissettiklerini göstermektedir.

Alt boyutlar incelendiğinde, öğretmenlerin en yüksek ortalamayı anlamlılık boyutunda ($\bar{X} = 4,67$, $SD = 0,58$) elde ettikleri görülmektedir. Bu durum, öğretmenlerin yaptıkları işi değerli ve anlamlı bulduklarını ortaya koymaktadır. Bunu yeterlilik boyutu izlemekte olup ortalama $\bar{X} = 4,61$, standart sapma $SD = 0,51$ olarak belirlenmiştir. Bu bulgu, öğretmenlerin görevlerini başarıyla yerine getirme konusunda kendilerine yüksek düzeyde güven duyduklarını göstermektedir. Özerklik boyutuna ilişkin ortalama $\bar{X} = 4,37$ ($SD = 0,76$) olup, öğretmenlerin karar alma süreçlerinde belirli ölçüde bağımsızlığa sahip olduklarını düşündükleri anlaşılmaktadır. Buna karşın, en düşük ortalama değerin etki boyutuna ait olduğu görülmektedir ($\bar{X} = 3,86$, $SD = 0,75$). Bu durum, öğretmenlerin okul düzeyinde alınan kararlarda ya da okulun genel işleyişine etki etme konusundaki algılarının diğer boyutlara kıyasla daha düşük olduğunu göstermektedir. Genel olarak, psikolojik güçlendirme alt boyutlarına ilişkin değerlendirmelerin yüksek düzeyde seyrettiği, ancak öğretmenlerin etki algılarının görece daha sınırlı olduğu görülmektedir. Bu durum, okul yönetimlerinin öğretmen katılımını artırıcı uygulamalara daha fazla önem vermesi gerektiğini işaret etmektedir.

Öğretmenlerin psikolojik güçlendirmelerini yordayıcı okul liderliği değişkeni ile ilgili basit doğrusal regresyon analizi sonuçlarına Tablo 5'te yer verilmiştir.

Tablo 4. Psikolojik Güçlendirmenin Yordayıcı Değişkene (Okul Liderliği) İlişkin Basit Doğrusal Regresyon Analizi

Yordayıcı Değişkenler	B	SH	β	t	p
Sabit	3,700	0,179	-	20,650	.00
Okul Liderliği	0,184	0,048	0,400	3,802	.00**
N=78	R= 0,40	R ² = 0,16			
F _(1,76) = 14,456	p= ,00	**p<0,001			

Tablo 4'te öğretmenlerin psikolojik güçlendirme algılarını yordamada okul liderliğinin etkisini belirlemek amacıyla yürütülen basit doğrusal regresyon analizine ilişkin bulgular yer almaktadır. Yapılan analiz sonucunda modelin anlamlı olduğu görülmektedir ($F(1,76) = 14,456$, $p < .001$). Regresyon katsayısı incelendiğinde, okul liderliğinin psikolojik güçlendirme üzerinde anlamlı ve pozitif bir yordayıcı olduğu belirlenmiştir ($\beta = 0,400$, $t = 3,802$, $p < .001$). Modelin genel uyumu değerlendirildiğinde, okul liderliği değişkeninin psikolojik güçlendirme

puanlarındaki toplam varyansın %16'sını açıkladığı görülmektedir ($R = 0,40$, $R^2 = 0,16$). Bu bulgular, öğretmenlerin psikolojik olarak güçlenmelerinde okul liderliğinin etkili bir rol oynadığını göstermektedir. Regresyon denklemi şu şekilde ifade edilebilir: Psikolojik Güçlendirme = $3,700 + 0,184 \times \text{Okul Liderliği}$. Elde edilen bu sonuçlar, okul liderliğinin öğretmenlerin anlam, yeterlik, özerklik ve etki gibi psikolojik güçlenme boyutlarına katkı sağladığını göstermekte ve etkili liderlik uygulamalarının öğretmenlerin içsel motivasyonunu desteklemede önemli bir unsur olduğunu ortaya koymaktadır.

Tartışma ve Sonuç

Bu çalışmada, Leithwood (2012) tarafından geliştirilen ve Yalçın ile Atasoy (2021) tarafından Türkçe uyarlaması yapılan Okul Liderliği Ölçeği kullanılmıştır. Araştırma bulguları, öğretmenlerin okul liderliği ve alt boyutlarına ilişkin algılarının genel olarak yeterli düzeyde olduğunu göstermektedir. Özellikle, yön verme, insan kaynaklarını geliştirme, örgütsel gelişim ve öğretim programının iyileştirilmesi boyutlarında olumlu değerlendirmelerin öne çıktığı görülmüştür. Bu sonuçlar, okul liderlerinin stratejik planlama, mesleki gelişim desteği ve kurumsal kapasiteyi artırma konularında etkili olduğunu düşündürmektedir.

Uğurlu ve Abdülrezzak'ın (2016) çalışmasıyla uyumlu olarak, öğretmenlerin okul liderliğine yönelik tutumlarının genel anlamda olumlu olduğu tespit edilmiştir. Araştırmada, öğretimsel destek ve işbirliği boyutlarında yüksek, açıklayıcı liderlik davranışlarında ise oldukça yüksek düzeyde algıların mevcut olduğu belirlenmiştir. Benzer şekilde, Hallinger ve Heck (1998), okul liderliğinin öğretmenlerin motivasyonu ve mesleki bağlılığı üzerinde önemli bir etkiye sahip olduğunu vurgulamıştır. Ayrıca, öğretmenlerin okul müdürlerinin karar alma süreçlerinde şeffaf ve katılımcı bir yaklaşım sergilediğine inandıkları, bu durumun da öğretmenlerin yönetime aktif katılım isteğini artırdığı sonucuna varılmıştır (Leithwood & Jantzi, 2006). Bununla birlikte, etkili okul liderliği ile öğretmen performansı arasında orta düzeyde pozitif bir ilişki olduğu tespit edilmiştir (Uğurlu & Abdülrezzak, 2016).

Ayvalı ve Koşar'ın (2021) çalışması, okul müdürlerinin işbirliğine dayalı, paylaşımcı ve yenilikçi bir liderlik anlayışını benimsediklerini ortaya koymuştur. Öğretmenler, liderlerin rehberlik etme, rol model olma ve değişime öncülük etme gibi özelliklerini olumlu bulmakla birlikte, zamanla karşılaştıkları otoriter tutumlar ve iletişim engellerinin varlığına da dikkat çekmişlerdir. Bu bulgular, Harris (2013) tarafından yapılan araştırmayla da desteklenmektedir. Harris, okul liderlerinin demokratik yönetim anlayışını sürdürmede karşılaştıkları zorlukları vurgulamış ve liderlerin iletişim becerilerini güçlendirmelerinin önemini belirtmiştir.

Sonuç olarak, mevcut arařtırmalar, okul liderlięinin öęretmenler üzerinde önemli bir etkiye sahip olduęunu ve liderlik stillerinin öęretmen motivasyonu ile kurumsal başarıyı doğrudan etkiledięini göstermektedir (Bush, 2018). Ancak, liderlerin katılımcı ve řeffaf yönetim anlayışını sürdürürken, otoriter eğilimlerden kaçınmaları gerektięi de açıkça görölmektedir. Bu bağlamda, okul liderlerinin iletişim becerilerini güçlendirmeye yönelik eğitim programlarının, liderlik etkinlięini artırabileceęi önerilebilir (Day et al., 2016).

Arařtırmanın ikinci alt problemi sonuçları öęretmenlerin anlamlılık, yeterlilik, özerklik ve etki boyutlarında yeterli düzeyde psikolojik güçlendirme algısına sahip olduklarını ortaya koymaktadır. Psikolojik güçlendirmenin genelinde elde edilen bulgular, öęretmenlerin psikolojik güçlendirme düzeylerinin yeterli seviyede olduęunu göstermektedir. Bu sonuçlar, öęretmenlerin mesleki yaşamlarında kendilerini yetkin, bağımsız ve etkili hissettiklerine işaret etmektedir. Bu sonuç, Can ve Özbaę'ın (2019) çalışmasıyla paralel olarak, bu arařtırmanın bulguları da psikolojik güçlendirmenin dört boyutunun örgüt üyelerinin davranışları üzerinde anlamlı ve olumlu etkileri olduęunu desteklemektedir. Benzer řekilde, Spreitzer (1995) psikolojik güçlendirmenin çalışanların iş performansı ve iş tatmini üzerinde pozitif etkileri olduęunu vurgulamıştır. Ayrıca, Thomas ve Velthouse (1990) psikolojik güçlendirmenin bireylerin içsel motivasyonlarını artırarak daha yüksek performans göstermelerine katkı sağladığını belirtmiştir.

Bu arařtırmanın bulguları, psikolojik güçlendirmenin öęretmenlerin mesleki motivasyonları ve performansları üzerindeki olumlu etkilerini ortaya koyması açısından önemlidir. Özellikle, öęretmenlerin yeterlilik ve etki boyutlarında yüksek algılara sahip olmaları, onların mesleki özgüvenlerinin ve okul ortamında etkili olma hislerinin güçlü olduęunu göstermektedir. Bu durum, öęretmenlerin mesleki bağlılıklarını ve iş doyumlarını artırabilir (Luthans et al., 2007). Sonuç olarak, bu arařtırma ve ilgili literatür, psikolojik güçlendirmenin öęretmenlerin mesleki yaşamlarında önemli bir rol oynadığını göstermektedir. Okul yöneticilerinin, öęretmenlerin psikolojik güçlendirme düzeylerini artırmak için anlamlı işler sunma, yetkinliklerini geliştirme, özerklik sağlama ve etkilerini hissettirme konularında çaba göstermeleri önerilebilir. Bu sayede, öęretmenlerin motivasyonları ve performansları daha da artabilir.

Arařtırmanın son alt problemine ilişkin bulgular, okul liderlięinin psikolojik güçlendirmenin anlamlı bir yordayıcısı olduęunu ortaya koymaktadır. Yapılan analizler sonucunda, okul liderlięinin psikolojik güçlendirmenin varyansının %16'sını açıkladığı tespit edilmiştir. Bu bulgu, okul liderlerinin öęretmenlerin psikolojik güçlendirme düzeylerini

şekillendirmede önemli bir role sahip olduğunu göstermektedir. Bu sonuç, Chen ve Kanfer (2006) tarafından yapılan araştırmayla da desteklenmektedir. Chen ve Kanfer, liderlerin çalışanların psikolojik güçlendirme düzeylerini etkileyerek örgütsel sonuçları iyileştirebileceğini belirtmiştir.

Ayrıca, çalışanların işe olan katkılarının fark yarattığını hissetmeleri, psikolojik güçlendirme açısından kritik öneme sahiptir. Luthans ve Peterson (2002), çalışanların başarılarının tanınması ve ödüllendirilmesinin, onların psikolojik güçlendirme düzeylerini artırdığını belirtmiştir. Bu nedenle, okul liderlerinin çalışanların başarılarını ödüllendirmesi ve onlara değer verdiğini hissettirmesi önemlidir. Son olarak, okul liderlerinin örgütsel yaratıcılığın önündeki engelleri fark etmesi ve bu engelleri ortadan kaldırmaya çalışması gerekmektedir. Yuan ve Woodman (2010), örgütsel engellerin çalışanların yaratıcılıklarını ve motivasyonlarını olumsuz etkilediğini vurgulamıştır. Bu nedenle, okul liderlerinin bu engelleri belirleyerek gerekli önlemleri alması, örgütsel yaratıcılık ve psikolojik güçlendirme düzeylerini artırabili

Özet

Bu çalışma, eğitim örgütleri olarak okullarda değişim ve yenileşim süreçlerinin önemli aktörleri olan okul yöneticilerinin inovasyon yeterliliklerini ve inovasyona bakış açılarını inceleyen araştırmaları analiz etmeyi amaçlamaktadır. Literatür taramasına dayalı olarak gerçekleştirilen çalışmada, öncelikle inovasyonun kuramsal temelleri ele alınmış, ardından okul yöneticiliğinde inovasyon yeterlilikleri değerlendirilmiştir. Araştırma, 2014-2025 yılları arasında yürütülen dokuz yüksek lisans ve üç doktora tezi olmak üzere toplam on iki tezden oluşmaktadır. Literatür taramasına dayanan bu çalışmada öncelikle inovasyonun teorik temelleri ele alınmış, ardından okul yönetiminde inovasyon yetkinlikleri değerlendirilmiştir. Liderlerin değişimi başlatma ve yönetme yeterlikleri ile örgütlerin rekabet gücünü artırmadaki rolleri üzerinde durulmuştur. Yenilikçi liderliğin, tüm paydaşların katılımıyla geleceği şekillendirme yeteneği olarak kabul edildiği belirtildi. Ayrıca inovasyonun yenilik, değişim, teknolojik gelişmeler ve sürdürülebilirlik gibi unsurları içerdiği ve başarıya ulaşmada kritik bir süreç olduğu ifade edildi. Bu bağlamda insan kaynağı yetiştiren okullardaki yöneticilerin inovasyon odaklı yaklaşımlarının önemi vurgulandı. Özellikle okul yöneticilerinin yenilikçi liderlik yaklaşımları öğretmen görüşlerine dayalı araştırmalarla incelenmiş, bu çalışmaların öğrenci ve veli gibi diğer paydaşların görüşleriyle de desteklenmesi önerilmiştir.

Anahtar Sözcükler: Okul liderliği, inovasyon, değişim, iyi oluş.

Examination of Research on School Management and Innovation in

Türkiye

Abstract

This study aims to analyze research that examines the innovation competencies and perspectives on innovation of school administrators, who are key actors in the processes of change and renewal in schools as educational organizations. Based on a literature review, the study first addresses the theoretical foundations of innovation, followed by an evaluation of

innovation competencies in school leadership. The research is based on a total of twelve theses, including nine master's and three doctoral dissertations, conducted between 2014 and 2025. Emphasis is placed on the competencies of leaders to initiate and manage change, as well as their roles in enhancing organizational competitiveness. Innovative leadership is defined as the ability to shape the future through the active participation of all stakeholders. Furthermore, innovation is discussed as a critical process encompassing elements such as novelty, change, technological advancements, and sustainability, all of which are crucial to achieving success. In this context, the importance of innovation-oriented approaches by administrators in schools, where human resources are cultivated, is highlighted. Particularly, the innovative leadership approaches of school administrators have been examined through research based on teachers' perspectives, with a recommendation to enrich these studies by incorporating the views of other stakeholders such as students and parents.

Keywords: School leadership, innovation, change, well-being

Giriş

İçinde bulunduğumuz yüzyılda devletler; COVID-19 pandemisi, işsizlik, yoksulluk, küresel ısınma ve doğal afetler gibi çok boyutlu ekonomik ve sosyal sorunlarla başa çıkmak zorunda kalmıştır (World Economic Forum [WEF], 2023). Ancak bu zorluklar, devletlerin eğitsel ve sosyal mekanizmalarla vatandaşlarının beklentilerine çözüm üretme çabalarını daha da yoğunlaştırmıştır. Bu noktada, insan ihtiyaçlarını karşılamak üzere kullanılan kaynakların sınırlı olduğu gerçeği, eğitim örgütlerinin yenilik ve değişim arayışlarını tetiklemektedir. Ancak, ihtiyaçlar sonsuzken, bu ihtiyaçları karşılayabilecek mal ve hizmetlerin üretiminde kullanılan kaynaklar kıttır (Samuelson & Nordhaus, 2010). Tam da bu çelişkili yapı, inovasyon kavramını gündeme getirmektedir. İnovasyon sıklıkla değişim ve yenilenme kavramlarıyla karıştırılsa da, bu kavramları içerdiği hâlde onlardan daha fazlasını ifade eder. Özünde inovasyon, mevcut sınırlı kaynaklara rağmen en etkili ve sürdürülebilir mal veya hizmetin sunulabilmesini sağlayan yaratıcı ve stratejik bir süreçtir (OECD, 2018; Tidd ve Bessant, 2021).

TÜBİTAK'ın (2006) çevirisini yaptığı Oslo Kılavuzu'nda belirtildiği üzere, örgütlerde uygulanan yeni veya önemli ölçüde iyileştirilmiş ürün, süreç ya da pazarlama teknikleri inovasyon olarak tanımlanmaktadır. Bu bağlamda inovasyon yalnızca özel sektörün bir dinamiği değil, kamu sektörünün gelişimi açısından da kritik bir araç olarak değerlendirilmektedir. Ancak kamu alanında, özellikle ekonomi dışındaki sektörlerde inovasyon kavramına ilişkin farkındalığın henüz istenen düzeyde olmadığı vurgulanmaktadır. Oysaki kamu sektörü, tüm ekonomik faaliyetlerin temel taşı niteliğindedir. Bu sektörün

sunduğu hizmetler yalnızca günümüz ihtiyaçlarını karşılamakla kalmayıp, aynı zamanda geleceğin şekillenmesine ve diğer sektörlerle nitelikli insan kaynağı sunulmasına da katkı sağlamaktadır. Bu durum, inovasyonun kamu sektörü bağlamında yeterince araştırılmamasına yol açmış, özellikle eğitim sektörü gibi kamu hizmetlerinin merkezinde yer alan alanlarda kavramın yeterince içselleştirilemediği gözlemlenmiştir (TÜBİTAK, 2006). Eğitim sistemlerinde inovasyonun sürdürülebilir hizmet sunumu, kalite artışı ve değişime uyum açısından kritik rol oynadığı düşünülse de, Türkiye’de okul yöneticilerinin bu konudaki yeterlilikleri ve tutumları üzerine yapılan akademik araştırmalar oldukça sınırlıdır (Yıldırım, 2017; Kaya, 2022). Bu çerçevede, özellikle eğitim sektörü, kamu inovasyonunun gelişimi açısından stratejik bir konuma sahiptir.

Eğitim sektörü içerisinde okullar, sistemin temel taşı olarak işlev görürken; bu kurumların etkili işleyişinde lider konumundaki okul yöneticilerinin bilgi, beceri ve yetkinlikleri kritik bir rol oynamaktadır. Eğitim yöneticilerinden yalnızca yönetsel beceriler değil, aynı zamanda yeniliklere açık olmaları, güncel gelişmeleri takip etmeleri ve etkili liderlik özelliklerine sahip olmaları beklenmektedir. Proaktif, öğretmenlerle iş birliği içerisinde çalışan ve ekiplerini motive edebilen yöneticiler, okullarda inovasyon kültürünün gelişimine doğrudan katkı sağlar. Bu bağlamda, eğitim yöneticilerinin inovasyon yeterliliklerinin incelenmesi önemli bir araştırma alanı olarak öne çıkmaktadır.

Türkiye’de bu konuyla ilgili yapılmış lisansüstü tezlerin incelenmesi, mevcut durumu ortaya koymak açısından anlamlıdır. Yapılan literatür taramasında, 2014 ile 2022 yılları arasında okul yöneticilerinin inovasyon kavramına ilişkin yeterlilikleri ile bu konudaki görüş ve önerilerini ele alan toplam sekiz yüksek lisans tezine ulaşıldığı belirlenmiştir. Yükseköğretim Kurulu Ulusal Tez Merkezi (YÖK Tez) veri tabanında yapılan taramada, 2014–2022 yılları arasında okul yöneticilerinin inovasyona yönelik tutumları, yeterlilikleri veya bu alandaki uygulamaları üzerine yapılmış çalışmalar, genellikle tanımlayıcı nitelikte olup, inovasyonun kurumsal kültürle ilişkisi, örgütsel öğrenme, liderlik biçimleri ya da uygulama sonuçları gibi boyutları kapsamaktan uzaktır. Bu bulgu, eğitim alanında inovasyon üzerine yapılan çalışmaların sayıca sınırlı olduğunu göstermektedir. Özellikle inovasyonun daha çok özel sektör odaklı araştırmalarda ele alındığı, eğitim alanında ise bu kavrama yönelik bilimsel çalışmaların yeterli düzeye ulaşmadığı dikkat çekmektedir. Bu durum, hem kavramsal hem de uygulamaya dönük araştırmalar açısından ciddi bir boşluğa işaret etmektedir. Dolayısıyla, eğitimde inovasyonun nasıl algılandığı, yöneticilerin bu sürece nasıl katkı sunduğu ve ne tür yapısal engellerle karşılaştığı gibi soruların derinlemesine incelendiği yeni çalışmalara ihtiyaç duyulmaktadır

Araştırmanın amacı

Bu araştırma, okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmaların incelenmesini amaçlanmıştır. Bu temel amaç kapsamında aşağıdaki alt problemlere de yanıt aranmıştır:

1. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmalar yapım tarihi yönüyle nasıldır?
2. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmalar amacı, yöntemi ve sonuçları bakımından nasıldır?
3. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmaların modeli ve deseni nasıldır?
4. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmaların çalışma grupları yönüyle Lisansüstü tezlerin durumu nasıldır?
5. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmaların veri toplama araçları yönünden nasıldır?
6. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmaların veri analizi yönünden nasıldır?
7. Okul yöneticiliği ve inovasyon konulu Türkiye’de yapılmış araştırmaların Üniversite ve Anabilim dalı/Bilim dalı yönünden nasıldır?

Araştırmanın önemi

Küresel düzeyde yaşanan sosyoekonomik dönüşümler, dijitalleşme, iklim krizi ve salgınlar gibi çok yönlü krizler, kamu hizmetlerinin niteliğini yeniden düşünmeyi ve yapılandırmayı zorunlu kılmaktadır. Bu bağlamda eğitim sektörü, toplumsal gelişmenin ve yenilikçi kapasitenin artırılmasında merkezi bir rol üstlenmektedir. Okul yöneticilerinin değişime liderlik etme kapasiteleri, yalnızca kurumsal başarıyı değil, aynı zamanda eğitim sisteminin yenilik üretme ve krizlere uyum sağlama kabiliyetini de doğrudan etkilemektedir. Diğer taraftan, Türkiye’de eğitimde yenilikçilik ve değişim konuları ulusal literatürde, özellikle de eğitim bilimleri alanında sıklıkla tartışılması büyük bir önem arz etmektedir. Yapılan sınırlı sayıdaki çalışmanın çoğu, da betimleyici düzeyde kalmakta ve inovasyonun eğitimdeki işlevine yönelik derinlemesine bir analiz sunmamaktadır (Kaya, 2022; Yıldırım, 2017). Bu araştırma, eğitim örgütlerinin odağına inovasyonu ne kadar yerleştirdiklerini ve içselleştirdiklerini göstermesi açısından da değerli olduğu düşünülmektedir. Ayrıca elde edilecek bulguların, eğitim politikaları, yönetici yetiştirme programları ve uygulamalı liderlik modellerinin geliştirilmesinde yol gösterici olması beklenmektedir.

Kuramsal çerçeve

Değişim Kavramı

Değişim, çağdaş toplumların hem bireysel hem de kurumsal düzeyde karşı karşıya kaldığı en temel olgulardan biridir. Türk Dil Kurumu'na (2021) göre değişim; “bir zaman dilimi içindeki değişikliklerin bütünü, değişme” şeklinde tanımlanmaktadır. Sayılı ve Tüfekçi (2008), değişimi bir bütünün parçalarında ya da bu parçalar arasındaki ilişkilerde, önceki duruma kıyasla gözlemlenebilir niteliksel veya niceliksel farklılıkların meydana gelmesi olarak açıklar. Çolakoğlu'na (2005) göre ise, içinde bulunulan çağı en iyi tanımlayan kavramlardan biri değişimdir; bu kavram, herhangi bir unsurun belirli bir zaman dilimi içerisinde bir durumdan başka bir duruma dönüşmesini ifade eder. Bu tanımlar, değişimin yalnızca teknik ya da yapısal bir dönüşüm değil, aynı zamanda toplumsal ve kültürel düzeyde bir uyum süreci olduğunu ortaya koymaktadır.

Yapılan tanımlar doğrultusunda değişim, bireyde, gruplarda ya da örgütlerde belirli bir süreç içerisinde, planlı ya da plansız biçimde bir durumdan başka bir duruma geçiş süreci olarak değerlendirilmektedir (Sayılı ve Tüfekçi, 2008). Bu süreç olumlu sonuçlar doğurabileceği gibi, olumsuz etkiler de yaratabilir. Değişimin temelinde, insanın artan ve çeşitlenen ihtiyaçları ile arzularının yer aldığı daha önce belirtilmiştir. Teknolojik gelişmeler, ekonomik dalgalanmalar, toplumsal yönelimler, siyasi dönüşümler ve küresel rekabet gibi faktörler, değişimin temel nedenleri arasında yer almaktadır (Fullan, 2016; OECD, 2020). Örneğin, içten yanmalı motorlu araçlardan elektrikli araçlara geçiş sadece ulaşım alışkanlıklarını değil, aynı zamanda işgücü niteliklerini, eğitim içeriklerini ve sektör beklentilerini de dönüştürmüştür. Teknolojik yenilikler sadece üretim biçimlerini değil, aynı zamanda örgüt yapıları ve işleyişlerini de yeniden şekillendirmektedir (Christensen, 1997). Benzer şekilde, ekonomik krizler hem sosyal hem de ekonomik değişimleri zorunlu kılarken; siyasi gelişmeler, devletleri yeni politika arayışlarına ve çözüm üretme çabalarına yönlendirmektedir. Küresel düzeyde artan karşılıklı bağımlılık, devletler arasında yoğun ticari ilişkileri zorunlu kılmakta; bu durum da toplumsal düzeyde çok boyutlu değişim süreçlerini beraberinde getirmektedir (Castells, 2010). Sonuç olarak, küreselleşmenin getirdiği yoğun rekabet ortamı, örgütlerin, bireylerin ve devletlerin varlıklarını sürdürebilmeleri için değişimi hem bir zorunluluk hem de bir strateji olarak ele almalarını gerekli kılmaktadır.

İnovasyon

Günümüz rekabet ortamında maliyet unsurları ve sektör ihtiyaçları önemini korumakla birlikte, işletmelerin değişime verdikleri tepkiler, ürün ve hizmet kalitesi, müşteri taleplerine

uygun yeni ürün geliştirme süreçleri gibi faktörler de en az bu unsurlar kadar belirleyici hâle gelmiştir (Tidd & Bessant, 2018). Bu bağlamda, inovasyon bir tercih değil; sürdürülebilirlik ve farklılaşma açısından zorunluluk olarak değerlendirilmelidir. Ancak inovasyon yalnızca “farklı” bir şey ortaya koymak değildir; esasen müşteri ihtiyaçlarını önceleyen, onlara değer katan çözümler üretme sürecidir (Christensen et al., 2016). Başarıya ulaşmanın yolu, rakiplerden daha cazip ürünler sunarak müşteri memnuniyetini sağlamak ve bu yolla pazarda farklılaşabilmektir. Bu nedenle bir fikrin gerçekten inovatif olup olmadığına karar verecek olan son kullanıcı, yani müşteridir (OECD, 2005). Müşteriyle kurulan etkin iletişim sayesinde hem ihtiyaçlar hem de sorunlar doğru biçimde anlaşılabilir; bu da inovatif çözümlerin temelini oluşturur. Makro düzeyde ele alındığında ise, inovasyon kapasitesinin artması yalnızca firmaların rekabet gücünü artırmakla kalmaz; aynı zamanda yaşam standartlarının yükselmesine, ekonomik büyümeye ve istihdam olanaklarının genişlemesine de doğrudan katkı sağlar (World Economic Forum, 2020). Bu nedenle ülkelerin küresel düzeydeki yerini belirleyen en kritik unsurlardan biri, inovasyon kapasiteleridir.

İnovasyon, yalnızca bilinmeyen bir ürünün geliştirilmesi değil, aynı zamanda mevcut bir ürünün daha önce düşünülmemiş şekillerde modifiye edilerek geliştirilmesi ve bu ürün için yeni pazarların keşfedilmesini de kapsayan çok boyutlu bir süreçtir (Yavuz, 2010). Bu süreç yalnızca çıktıya değil, aynı zamanda örgütsel ya da bireysel girdilerin dönüşümüne, gelişmiş fikir, ürün veya hizmetlerin pazarlanabilirliğine ve işlevsel olarak yayılmasına da odaklanır. İnovasyon kavramı, sadece teknolojik ürünleri değil; süreç, pazarlama yöntemleri ve örgütsel yapılar gibi alanlardaki yenilikleri de içine alır. Bu yönüyle, inovasyon hem süreci hem de sonuçları kapsamaktadır.

Yavuz (2010), inovasyonu yalnızca teknolojik bir dönüşüm olarak değil; aynı zamanda yeni düşünceleri somutlaştırmaya yönelik bir çaba olarak tanımlar. Bu bağlamda “know-how” (nasıl yapılır) ile “why” (neden yapılır) kavramlarının birleştirilmesi, inovasyonun hedef odaklı doğasını ortaya koymaktadır. İnovasyon süreci; fikir üretimi, araştırma-geliştirme (Ar-Ge), uygulama, değerlendirme ve sonuçların geniş kitlelere yayılması gibi aşamaları içerir. Bu nedenle inovasyon, kendine özgü bir faaliyet olmanın ötesinde; Ar-Ge çalışmalarını, teknolojik gelişmeleri ve bunların ekonomik ve toplumsal faydaya dönüşümünü içeren bütüncül bir yaklaşımdır (OECD, 2005). TÜBİTAK (2006) tarafından Türkçe basılmış Oslo Kılavuzu’nda inovasyonunun temel nitelikleri şöyle ifadelendirilmiştir:

- İnovasyon sürecinin neticesini ve yansımasını, hedeflenen değişimin gerçekleşme süresini, ne kadar kaynak gerektirdiğini, değişim neticesinde başarının olup olmayacağını tahmin pek mümkün değildir.
- İnovasyon keşfetmekten sonraki aşama olan yararlanmayı ve hali hazırda kullanılan bilginin yeni kullanım sahalarının saptanmasını içermektedir.
- İnovasyondan beklenti şu şekildedir: maliyette olumlu ilerleme, kâr oranlarında, pazar payında gözle görülür artış, rekabette belirgin üstünlük.
- İnovasyonun, yenileşimi tam anlamıyla gerçekleştiren bir örgütün başarısından dolayı örnek olma, örnek alınma olasılığı yüksektir ve bu sebeple hızlıca yayılma başka bir özelliğidir.

Bu doğrultuda, inovasyon yalnızca “yenilik” ya da “yenilenme” gibi kavramlarla sınırlı tutulamaz. Aksine; fikir aşamasından pazarlanabilirliğe uzanan tüm süreci kapsayan bir yapıdadır. Ancak literatürde ve gündelik kullanımlarda bu kavramın daraltılarak yalnızca “yenilik” şeklinde ele alınması, inovasyonun sürece dayalı ve çok boyutlu doğasını göz ardı etmeye neden olmaktadır. Bu çalışmada, inovasyon kavramı indirgenmeden, sahip olduğu tüm boyutlarıyla ele alınmıştır. Bu nedenle “yenilik” yerine kasıtlı olarak “inovasyon” kavramı kullanılmıştır.

Tüm inovasyon üzerine çalışma yürütenlerin başarıya erişmeleri temel bazı ilkeleri takip etmeleri ile mümkün olabilir. Bu temel kriterler Eraslan (2014) tarafından Erdoğan (2011) den alıntı yapılarak şöyle ifade edilmiştir:

- Örgütlerin sürdürülebilir büyüme ve bunla birlikte yıkıcı rekabet koşullarına direnebilmek için, bu koşulları yenebilmek için inovasyona ihtiyacı vardır.
- Ar-ge çalışmaları inovasyon ile aynı kabul edilmemelidir ve inovasyonun ar-ge yi de içerdiği bilinmelidir.
- İnovasyon kazanç oranlarını ve talep eğrisini olumlu yönde etkilemelidir.
- İnovasyon belirli bir ana hapsedilmemeli, süreklilik arz etmelidir.
- İnovasyonun, bilinmeyen temel değişimlerin habercisi olabilir.
- İnovasyon, ihtiyaç halinde ve hazır olunan bir anda ortaya çıkarsa etkili olma olasılığı artar.

- İnovasyona başlanılmadan önce bilgi birikimi öncelenmeli ve veri çeşitliliği saptanmalıdır.
- İnovasyon çalışmaları disiplinler arası süreçleri kapsar ve çok yönlüdür.
- İnovasyon için ek kaynak bulmak son derece önemlidir.
- İnovasyonda başarısız olunacağı kestirilirse başarısızlığa sebep olan etkenler ortadan kaldırılmalıdır.
- İnovasyon planlı yürütülmelidir. Örgüt üyeleri süreci içselleştirmelidir.
- İnovasyonda zamanlama oldukça önemlidir. Gerekirse ve zamanının uygun olmadığına inovasyon reddedilebilir.
- İnovasyon süreci neticesinde verimliliği artırmak için hali hazırda var olan üretim kaynaklarına ek olarak bir üretim gerçekleştirilmelidir.
- İnovasyonun başarıya ulaşması sürecin oldukça sade, iç paydaşlarca anlaşılabilir basitlikte olması gereklidir.

Eğitimde İnovasyon

İnovasyon kavramı üzerine Tübitak (2006) Oslo Kılavuzu'nda özel sektöre daha çok hitap ediyor gibi görünen tanımlar yapılmaktadır. Ancak eğitim örgütlerine uyarlanması da kaçınılmazdır. Okullar ve diğer eğitim kurumları için;

- Ürün, hizmet bazlı inovasyonuna, yeni kitap, yeni müfredat , yeni elektronik öğrenme platformu,
- Süreç bazlı inovasyonu, öğretmenin çalışma ortamındaki değişimler, öğrencilerin sınıflanma biçimi, aile ile farklı iletişim kanalı kurma,
- Organizasyon bazlı inovasyon, ailelerle ve çocuklarla çeşitli etkinlikler organize edilmesine,
- Pazarlama bazlı inovasyon yüksek lisans eğitiminin ücretli olması gibi uygulamalar eğitimde inovasyona örnek teşkil edebilir.

Eğitim sektöründeki inovasyonlar iyileştirme, geliştirme odaklı inovasyonlardır. Buyruk (2018) e göre Uluslararası Öğrenci Değerlendirme Programı yani bilinen kısa adıyla PISA ve açılımı Trends in International Mathematics and Science Study olan TIMMS yani Uluslararası Matematik ve Fen Eğilimleri Araştırması, iki uluslararası sınav Ekonomik İşbirliği

ve Kalkınma Örgütü (OECD) tarafından gerçekleştirilmektedir. Rekabet ortamının geliştiği bir dünyada bu tip ölçme sınavları, dünyada değişen ekonomik koşulların ölçülenmesinde etkindir. Devletlerin rekabet alanında konumlarına yönelik ipucu verir. Devletlerin ekonomilerini yöneterek yönlendirecek olan geleceğin büyükleri olan çocuklar hakkında bilgi sunmaktadır.

Devletler PISA gibi TIMSS gibi uluslararası sınavlarda çocukların başarı yüzdelelerini arttırmak için içinde yaşanan çağın gereksinimine göre insanlarına iyi eğitim vermek zorunda hissederler. Eğitim sistemlerinin koşullarını iyileştirmeye ihtiyaç vardır. Geleneksel yöntemlerden, modern yöntemlere geçilmelidir. Ülkemiz için konuşursak uluslar arası sınavlarda alt sıralardadır. Özellikle okuma anlama, matematik ve fen konularında öğrencilerin başarılarının artırılması için inovasyon çalışmalarının eğitim sistemine uygulanması zorunludur. Dolayısıyla inovasyon içeriğinde bulunan teknoloji kullanımı ve eğitim adaptasyonu ilk basamaklardandır. Öğrencilerin inovasyon adı verilen süreçte birer yön verici olarak yetiştirilmeleri gerekmektedir. Öğrenciler risk alabilen, sorumluluk sahibi, özgüven sahibi, tasarım yapabilen, başarısız olsa bile yılmayan kişiler olabilmeleri için eğitim dizayn edilmelidir.

Okul yöneticileri, öğrenci, veli ve öğretmen ortamında olumlu neticelere ulaşabilmek için değişimi başlatan, yöneten sevk eden şeklinde bazı temel niteliklere sahip olmalıdır. İnovasyona odaklanan bir okul iklimi bir okul kültürü oluşturulmalıdır. Okul geleceğe hazırlanıyor ise, bir vizyona sahip olmalı ve bu vizyonu tüm bireyleri ile içselleştirmiş olmalıdır. Örgütün tüm bireyleri olumlu değişim iradesi sergiliyor iseler o kurum, o okul için ideal bir okul kültürüne sahip olduğu tezi öne sürülebilir. İnovatif hedeflerde birleşen örgüt üyeleri örgütü şekillendirdiği gibi, örgütün inovatif anlayışlı genel kültürü de üyeler üzerinde etkili olur. Bu olumlu döngü ülkeleri ileriye taşıyan bir sistem olarak yerleştiği zaman hem ulusal hem de uluslararası başarı gelecektir.

Eğitimde inovasyon adı ile araştırma yapıldığında “geleceğin yarının okulları” kavramının sıkça kullanıldığı gözlemlenmektedir. OECD-CERI (Eğitim Araştırmaları ve İnovasyon Merkezi) tarafından 2001 de geleceğin okulları programında altı senaryo ortaya konmuştur;

1. Senaryo: Güçlü bürokratik okul sistemleri
2. Senaryo: Hedef kitlelerini genişleten ve sektördeki pazar payını genişleten okullar
3. Senaryo: Kendi kendini yenileyen okullar: Toplum merkezi okullar

4. Senaryo: Öğrenen okullar
5. Senaryo: Özerk okullar
6. Senaryo: Öğretmensiz okullar (akt. Erdemet, 2017).

Senaryoların çoğunluğunda inovasyon sürecine uygun senaryoların baskın yer tuttuğu fark edilecektir. Gelecek, inovasyonu fark eden, inovasyona uygun hareket eden örgütlerin olacaktır denebilir. İnovatif liderlik yaklaşımı, okul yöneticilerinin kendi örgütlerinde inovasyon uygulamak için harekete geçtiklerinde birden çok özellik sahibi olmaları gerekliliğini ortaya koyar. Sürdürülebilirlik sahibi örgütler, organizasyonlarında yaratıcılıkla beslenen örgüt kültürü oluştururlar. İnovasyonel liderler yani müdürler müdür yardımcıları destekleyicidirler. Örgüt içerisinde inovasyona yön veren kişilerdir.

Örgütün başarıya ulaşması için denemeye açık, doğru seçimleri yapabilmeleri için yine doğru kişilerle iş birliği yapan, personeline destek veren inovatif liderler gerekmektedir. Okul yöneticileri, yeni bir bakış açısı getiren ama aynı zamanda eski olanı gözden geçirmeyi ihmal etmeyen olarak inovatif liderlik sergileyebilir. İnovatif liderlik sadece ürün geliştirme iyileştirme ile değil örgütün yenileşme programını yönetebilmek demektir. Farklı liderlik tipleri sentezlenirse inovatif liderlik ortaya çıkar denebilir. Girift bir kavram olarak kabul gördüğü için inovatif liderlik ,bir tek formül ile ulaşılabilecek bir liderlik olmadığı anlamı da çıkarılabilir. İnovatif yaklaşım okul yöneticilerinin potansiyellerine bağlıdır .İnisiyatif alan, cesaret gösteren, geri dönüt veren, geri dönüt alan, uyumlu, işbirlikçi ve örgüt üyelerine güvenen lider inovatif liderdir.

Yarının liderlerini, statüko koruyucusu okul yöneticilerinden ayıran en temel nitelik, statükocu lider basmakalıp hareket ederken, yarının lideri yeni düşünce sistemlerini gün yüzüne çıkarma gayreti içinde olmasıdır. Yarının lideri mevcudu sorgular bir hal üzerindedir. Öğrenen lider değişime karşı koymadığı gibi tam tersine faydalı değişimi destekler. Bu lider tipi dinler, görür, öngörür, keşfeder, hatalardan ders alır. Bir okulda çalışan öğretmenler inovasyon hususunda ne kadar donanımlı olursa olsun, inovatif bakış açısına sahip bir okul yöneticileri yoksa bu ortamdan işe yarar bir sonuç çıkması mümkün değildir. Bu sebeple inovasyonda ilk ve en önemli koşullardan biri, olumlu ve çeşitli niteliklere sahip bir liderin olması elzemdir

Yöntem

Bu bölümde araştırmanın deseni, kullanılacak veri toplama araçları, veri toplama araçlarının uygulanışı, evren-örnekleme ve verilerin analizi ile ilgili bilgiler anlatılmaktadır.

Araştırmanın Yöntemi

Araştırma, amacına en uygun model olan genel tarama modellerinden Literatür tarama modeli ile yürütülmüştür.

Araştırmanın evren ve örnekleme

Literatür incelendiğinde mezkûr kriterlere sahip dokuz (9) adet Yüksek lisans tezi ve üç (3) adet doktora tezi belirlenmiştir. İlk çalışma 2014 yılına ait iken, hali hazırda bu çerçevede yapılmış son çalışma 2025 yılında gerçekleştirilmiştir. Erişime açılmış tezler baz alındığında toplamda sekiz adet tez bulunduğu tespit edilmiştir. Dolayısı ile 8 lisans üstü tez çalışması ile araştırma sürdürülmüştür. Buradan hareketle özellikle yurtiçinde eğitimde inovasyon üzerine fazla sayıda çalışmanın yapıldığı söylenemez.

Veri toplama araçları

Okul yöneticiliği ve inovasyon kavram çerçevesi gözetilmiş ve bu alanda 2014-2025 tarihleri arasında Türkiye’de yapılmış ulusal düzeydeki tez çalışmalarına odaklanılmıştır. Türkiye’de yapılmış araştırmalar lisansüstü tezlerin hangi amaçla yazıldığı belirlenmiştir. Okul yöneticiliği ve inovasyon” kavram çerçevesi gözetilmiş ve bu alanda günümüze kadar Türkiye’de yapılmış araştırmalar modeli ya da deseni yönünden incelenmiştir. Araştırmalar üzerinde çalıştıkları grup yönünden incelenmiştir. Günümüze kadar Türkiye’de yapılmış araştırmalar veri toplama araçları yönünden incelenmiştir. Araştırmalar yapıldığı Üniversite ve Anabilim dalı / Bilim dalı yönünden incelenmiştir Ayrıca genel itibariyle Nitel araştırmaların hâkimiyeti sebebiyle bu durumun ortaya çıktığı ifade edilebilir.

Verilerin Analizi

Araştırma kapsamında toplanan veriler Nvivo 10 programına aktararak oluşturulan veri dosyası üzerinde betimsel analizleri yapılmıştır.

Bulgular

Bu bölümde araştırma sorularına yönelik elde edilen bulgulara yer verilmiştir.

Birinci Alt Probleme İlişkin Bulgular

“Okul yöneticiliği ve inovasyon” kavram çerçevesi gözetilerek, Türkiye’de yapılmış araştırmalar yapım tarihi yönüyle incelendiğinde ortaya çıkan tablo aşağıda belirtilmiştir ilişkin bulgulara Tablo 1’de yer verilmiştir.

Tablo 1. Yapılış Tarihi yönüyle Yüksek Lisans/Doktora Tezlerin Durumu

Tezlerin ve Makalelerin Tarihleri	Tezlerin Türü	
	Yüksek Lisans	Doktora
2014	1	-
2015	-	-
2016	1	-
2017	1	-
2018	3	-
2019	1	-
2020	-	-
2021	-	-
2022	-	1
2023	-	-
2024	-	-

“Okul yöneticiliği ve inovasyon” kavram çerçevesi gözetilmiş ve bu alanda 2014-2024 tarihleri arasında Türkiye’de yapılmış araştırmalar incelenerek google akademik, ulusal tez merkezi web sayfalarından yararlanılmıştır. Erişime açık tezler baz alınmıştır. Tabloda da görüleceği üzere toplamda sekiz (8) lisans üstü tez yazıldığı belirlenmiştir. 2014-2016-2017 ve 2019 senelerinde birer, 2018 yılında üç yüksek lisans tezi ve 2022 yılında bir doktora tezi yazıldığı görülmüştür.

İkinci Alt Probleme İlişkin Bulgular

Türkiye’de yapılmış araştırmaların amacı, yöntemi ve sonuçları bakımından inceleme Tablo 2’de sunulmuştur.

Tablo 2. Amaçları Yönüyle Yüksek Lisans Tezlerinin Durumu

Lisansüstü Tezlerin Yılları	İnovasyon liyakati	İnovasyon hakkında ki fikirleri	İnovasyon liyakati ile okul kültürü	İnovasyon liyakati ile Örgütsel imaj	inovasyon liyakati - Okullarının Yenilikçilik Seviyesi	İnovasyon yeterlilikleriyle öğretmenlerin yetkinlikleri arasındaki ilişki
2014	+					
2016			+			
2017		+				
2018			+			
2018				+		
2018		+				
2019					+	
2022						+

Amaçları yönüyle yüksek lisans tezlerinin durumu incelendiğinde araştırmaların yenilikçilik ve örgütsel davranışın liyakat, okul kültürü, örgütsel imaj ve yetkinlik bağlamlarında ele alındığı görülmüştür.

Üçüncü Alt Probleme İlişkin Bulgular

Araştırmaların modeli yönüyle yüksek lisans tezlerine ilişkin bulgulara Tablo 3’te yer verilmiştir.

Tablo 3. Araştırmaların Modeli Yönüyle Yüksek Lisans Tezlerinin Durumu

No	Tez Adı	Modeli/Deseni
1	“Yönetici inovasyon yeterliliği ve okul kültürü ilişkisi (Bolu ili örneği)”	İlişkisel tarama modeli
2	“Ortaöğretim okul yöneticilerinin inovasyon yeterlilikleri”	Genel tarama modeli
3	“Özel lise yöneticilerinin inovasyon sürecine ilişkin görüşleri”	Bütüncül çoklu durum deseni
4	“Okul müdürlerinin inovasyon yeterlilikleri ile okul kültürü arasındaki ilişkinin incelenmesi”	İlişkisel tarama modeli
5	“Özel ortaöğretim kurumlarında yöneticilerin inovasyon yeterlilikleri ile örgütsel imaj algısı ilişkisi”	Genel tarama modeli
6	İstanbul’da özel bir okulda görev yapan eğitim yöneticilerinin inovasyon kavramı hakkındaki görüş ve önerileri	Nitel desenlerden durum (vaka) analizi
7	“Mesleki ve teknik anadolu lisesi müdürlerinin inovasyon yeterlilikleri ile okulların yenilikçilik düzeyleri arasındaki ilişki”	İlişkisel tarama modeli
8	“Okul müdürünün inovasyon yeterlikleri ile öğretmenlerin küresel yetkinlikleri arasındaki ilişki”	İlişkisel tarama Modeli

Tablo 3’ten de anlaşılaacağı üzere, 1,4,7 ve 8 numaralı tezlerin ilişkisel tarama modeli kullanılarak yapıldığı, 3 ve 6 numaralı tezlerin durum analizi kullanılarak yapıldığı, 2 ve 5 numaralı tezlerin ise genel tarama araştırma modeli kullanılarak yapıldığı görülmektedir. Ayrıca, genel itibariyle nitel araştırmaların yoğun bir şekilde tercih edildiği bulgusuna ulaşılmıştır.

Dördüncü Alt Probleme İlişkin Bulgular

Çalışma grupları yönüyle lisansüstü tezlerin durum Tablo 4’te yer verilmiştir.

Tablo 4: Çalışma Gruplarına göre Lisans üstü Tezlerin Durumu

No	Tez Adı	Örneklem/Çalışma Grubu
1	“Yönetici inovasyon yeterliliği ve okul kültürü ilişkisi (Bolu ili örneği)”	(Ortaokul) 528 Branş Öğretmeni

2	“Ortaöğretim okul yöneticilerinin inovasyon yeterlilikleri”	(Lise) 309 Öğretmen
3	“Özel lise yöneticilerinin inovasyon sürecine ilişkin görüşleri”	(Lise) 7 Özel Ortaöğretim Okulu Müdürü
4	“Okul müdürlerinin inovasyon yeterlilikleri ile okul kültürü arasındaki ilişkinin incelenmesi”	İlkokul, ortaokul, lise) 340 Öğretmen
5	“Özel ortaöğretim kurumlarında yöneticilerin inovasyon yeterlilikleri ile örgütsel imaj algısı ilişkisi”	(Lise) 226 Öğretmen
6	İstanbul'da özel bir okulda görev yapan eğitim yöneticilerinin inovasyon kavramı hakkındaki görüş ve önerileri	(İlkokul, ortaokul, lise) 5 Okul Yöneticisi
7	“Mesleki ve teknik anadolu lisesi müdürlerinin inovasyon yeterlilikleri ile okulların yenilikçilik düzeyleri arasındaki ilişki”	(Lise) 786 Öğretmen
8	“Okul müdürünün inovasyon yeterlikleri ile öğretmenlerin küresel yetkinlikleri arasındaki ilişki”	(Lise) 6101 Öğretmen

Tablo 4, Türkiye’de okul yöneticiliği ve inovasyon alanında yürütülmüş araştırmaları, çalışma gruplarının özellikleri açısından incelemektedir. Tabloya göre, 1 numaralı tez 528 öğretmen, 2 numaralı tez 309 öğretmen, 3 numaralı tez 7 özel ortaöğretim okulu müdürü, 4 numaralı tez 340 öğretmen, 5 numaralı tez 226 öğretmen, 6 numaralı tez 5 okul yöneticisi, 7 numaralı tez 786 öğretmen ve 8 numaralı doktora tezi ise 6101 öğretmen ile gerçekleştirilmiştir. Çalışmaların büyük çoğunluğu ortaokul ve lise düzeyindeki öğretmen ve yöneticilere odaklanmış olup, özellikle bu kademelerdeki uygulamaları anlamaya yönelik yoğunlaşma dikkat çekmektedir. İlkokul düzeyine ilişkin araştırmalara rastlanmakla birlikte, bu düzeyin yeterince temsil edilmediği söylenebilir. Sekiz çalışmadan yalnızca biri lise düzeyini kapsam dışı bırakmış, geri kalan yedi tez doğrudan veya dolaylı olarak lise düzeyine temas etmiştir. Katılımcı profili açısından değerlendirildiğinde, 3 ve 6 numaralı tezler doğrudan okul yöneticileriyle yürütülmüşken; 1, 2, 4, 5, 7 ve 8 numaralı tezler öğretmenlerle gerçekleştirilmiştir. Yöneticilere yönelik çalışmalar arasında en az katılımcıya sahip olan araştırma 5 okul yöneticisiyle yürütülen 6 numaralı tezdır. Öğretmen katılımlı araştırmalar arasında ise en küçük örneklem 226 öğretmenle 5 numaralı teze, en geniş örneklem ise 6101 öğretmenle 8 numaralı doktora tezine aittir. Dikkat çeken bir diğer husus ise, incelenen çalışmalar arasında okulöncesi eğitim düzeyine yönelik herhangi bir araştırmanın bulunmamasıdır. Bu durum, okulöncesi düzeyinin mevcut literatürde henüz yeterince ele alınmadığını göstermektedir.

Beşinci Alt Probleme İlişkin Bulgular

Tablo 5. Veri Toplama Araçları Yönüyle Yüksek Lisans Tezlerinin Durumu

No	Tez Adı	Veri Toplama Araçları
1	“Yönetici inovasyon yeterliliği ve okul kültürü ilişkisi (Bolu ili örneği)”	Kişisel bilgi formu, Okul Kültürü Ölçeği, Yönetici İnovasyon Yeterliliği Ölçeği
2	“Ortaöğretim okul yöneticilerinin inovasyon yeterlilikleri”	Okul yöneticilerinin inovasyon yeterlilikleri ölçeği
3	“Özel lise yöneticilerinin inovasyon sürecine ilişkin görüşleri”	Randevulu resmi görüşmeler, randevusuz gayriresmi görüşmeler
4	“Okul müdürlerinin inovasyon yeterlilikleri ile okul kültürü arasındaki ilişkinin incelenmesi”	Okul Kültürü Ölçeği, Okul Yöneticilerinin İnovasyon Yeterlilikleri Ölçeği
5	“Özel ortaöğretim kurumlarında yöneticilerin inovasyon yeterlilikleri ile örgütsel imaj algısı ilişkisi”	Okul Yöneticilerinin İnovasyon Yeterlilikleri Ölçeği, Örgütsel İmaj Ölçeği
6	İstanbul'da özel bir okulda görev yapan eğitim yöneticilerinin inovasyon kavramı hakkındaki görüş ve önerileri	Yarı yapılandırılmış görüşme formu
7	“Mesleki ve teknik anadolu lisesi müdürlerinin inovasyon yeterlilikleri ile okulların yenilikçilik düzeyleri arasındaki ilişki”	Kişisel Bilgi Formu, Okul Yöneticilerinin İnovasyon Yeterlilikleri Ölçeği, Yenilikçi Okul Ölçeği
8	“Okul müdürünün inovasyon yeterlikleri ile öğretmenlerin küresel yetkinlikleri arasındaki ilişki”	Kişisel Bilgi Formu, Okul Yöneticilerinin İnovasyon Yeterlilikleri Ölçeği, Küresel Yetkinlik Ölçeği

Tablo 5 incelendiğinde, araştırmalarda kullanılan veri toplama araçlarının büyük ölçüde ölçekler ve görüşme formlarından oluştuğu göze çarpmaktadır. Sekiz yüksek lisans tezinin altısında yapılandırılmış ölçek temelli nicel veri toplama araçları tercih edilmiştir. En yaygın kullanılan ölçekler arasında "Okul Yöneticilerinin İnovasyon Yeterlilikleri Ölçeği" öne çıkmakta, bu ölçek yedi tezden beşinde (Tez 2, 4, 5, 7, 8) doğrudan kullanılmıştır. Bu durum, söz konusu ölçeğin alanyazında geçerliği kabul edilen ve yaygın biçimde kullanılan bir araç olduğunu göstermektedir. Bunun yanı sıra, "Okul Kültürü Ölçeği" (Tez 1 ve 4) ve "Küresel Yetkinlik Ölçeği" (Tez 8) gibi diğer ölçeklerin de yer aldığı gözlemlenmektedir. Bu bağlamda, bazı tezlerin yalnızca yöneticilerin inovasyon yeterliliklerini değil, aynı zamanda bu yeterliliklerin örgütsel kültür, imaj ve öğretmen davranışları gibi değişkenlerle ilişkisini ortaya koymaya çalıştıkları anlaşılmaktadır. Bu tür çok değişkenli yapıların incelenmesi, çalışmalara derinlik kazandırmaktadır.

Nitel veri toplama araçlarına bakıldığında, 3 ve 6 numaralı tezlerin görüşme temelli yaklaşımlar benimsediği görülmektedir. 3 numaralı tezde hem resmi randevulu görüşmeler hem de gayriresmi görüşmeler yoluyla veri toplanmış, 6 numaralı tezde ise yarı yapılandırılmış görüşme formu kullanılmıştır. Bu durum, ilgili çalışmaların nitel araştırma tasarımına uygun biçimde derinlemesine veri elde etmeye odaklandığını göstermektedir. Ayrıca, bazı tezlerde

kişisel bilgi formunun da veri toplama aracı olarak kullanıldığı (Tez 1, 7, 8) ve katılımcıların demografik özelliklerinin analizlerde kontrol değişkeni olarak dikkate alındığı anlaşılmaktadır.

Sonuç olarak, yüksek lisans tezlerinde veri toplama araçlarının dağılımı, ağırlıklı olarak ölçek temelli nicel ölçümlere dayalı olsa da, nitel yöntemlere de başvurulduğu görülmektedir. Bu çeşitlilik, inovasyon yeterlilikleri bağlamında okul yöneticiliği konusunun hem ölçülebilir yapılar hem de anlam dünyaları üzerinden analiz edilmeye çalışıldığını ortaya koymaktadır. Bununla birlikte, veri toplama araçlarının çoğunlukla hazır ölçeklere dayanması, yeni araç geliştirme veya özgün ölçme girişimlerinin sınırlı olduğunu da düşündürmektedir.

“Okul yöneticiliği ve inovasyon” kavramsal çerçevesi doğrultusunda, Türkiye'de bu alanda gerçekleştirilen lisansüstü tezler, üniversiteler ve bağlı oldukları anabilim/bilim dalları açısından incelenmiştir. İlgili tablo incelendiğinde, söz konusu tezlerin Abant İzzet Baysal Üniversitesi, Sakarya Üniversitesi, İstanbul Kültür Üniversitesi, İstanbul Sabahattin Zaim Üniversitesi, Marmara Üniversitesi, Hacettepe Üniversitesi ve Anadolu Üniversitesi bünyesinde yürütüldüğü görülmektedir. Bu üniversiteler arasında İstanbul Kültür Üniversitesi ve Hacettepe Üniversitesi, "okul yöneticiliği ve inovasyon" temalı iki tez ile dikkat çekmekte ve bu konuda araştırma üretiminin nispeten yoğunlaştığı kurumlar olarak öne çıkmaktadır.

Tezlerin bağlı oldukları enstitüler açısından bakıldığında, toplam sekiz tezin altısı Eğitim Bilimleri Enstitüsü çatısı altında hazırlanmış olup, bu durum araştırmaların eğitim bilimleri perspektifinden ele alındığını göstermektedir. Buna karşılık, iki tez ise Sosyal Bilimler Enstitüsü bünyesinde gerçekleştirilmiştir. Bu durum, okul yöneticiliği ve inovasyon temalarının sadece eğitim yönetimi disipliniyle sınırlı kalmayıp, sosyal bilimlerin daha geniş bakış açısıyla da ele alınabildiğini göstermesi açısından önemlidir. Sonuç olarak, tezlerin üniversitelere ve enstitülere göre dağılımı, konunun çok boyutlu yapısını ve farklı akademik bağlamlarda ele alınma potansiyelini yansıtmaktadır. Bununla birlikte, bazı üniversitelerde bu alana yönelik

arařtırmaların daha fazla yoğunlařtıęı ve belirli kurumların inovasyon ve okul yöneticilięi kesiřiminde arařtırma üretimine öncülük ettięi söylenebilir.

Tartıřma ve Sonuç

Bu çalıřmada, “okul yöneticilięi ve inovasyon” kavramsal çerçevesi doęrultusunda Türkiye’de bu alanda gerçekteřtirilen lisansüstü tezler sistematik olarak incelenmiřtir. Arařtırmalar, Google Akademik ile YÖK Ulusal Tez Merkezi veri tabanları taranarak elde edilmiřtir. İncelemeye alınan tezlerde, inovasyon kavramı çerçevesinde yöneticilerin yeterlik düzeyleri, inovasyona dair görüşleri ve önerileri ele alınmıřtır. Literatür taraması sonucunda, belirlenen kriterlere uygun sekiz yüksek lisans ve doktora tezi tespit edilmiřtir. Bu tezler, 2014–2022 yılları arasında yayımlanmıř olup, konunun güncel ve giderek artan bir akademik ilgi gördüęü anlařılmaktadır.

Zamansal daęılım açasından deęerlendirildięinde, ilk tez 2014 yılında yapılmıř, son tez ise 2022 yılında tamamlanmıřtır. Özellikle 2018 yılı, üç ayrı yüksek lisans tezi ile bu alanda en yoğun akademik üretimin gerçekteřtięi yıl olmuřtur. Dönemsel olarak deęerlendirildięinde ise 2014–2022 aralıęında inovasyon temasının kavramsal bir popülarite kazandıęı ve bu yıllarda artan bir biçimde arařtırma konusu haline geldięi söylenebilir. Bu durum, Türkiye’de okul yöneticilięi bağlamında inovasyona olan ilginin görece yakın tarihlerde řekillendięini ve arařtırma gündemine dahil olduęunu göstermektedir.

İncelenen tezlerin içeriklerine bakıldıęında, çalıřma konularının çeřitlilik arz ettięi görölmektedir. 2014 yılına ait tez yalnızca yöneticilerin inovasyon yeterliklerine odaklanırken, 2017 ve 2018 yıllarında yöneticilerin inovasyona dair algıları ve görüşleri arařtırılmıřtır. 2016 ve 2018 yıllarında yayımlanan tezlerde ise yönetici inovasyon yeterlikleri ile okul kültürü arasındaki iliřkiler, bir dięer çalıřmada ise örgütsel imaj ile iliřki ele alınmıřtır. 2019 yılında yenilikçilik düzeyi, 2022’de ise küresel yetkinlik kavramı inovasyonla iliřkilendirilerek incelenmiřtir. Bu çeřitlilik, inovasyon kavramının farklı bağlamlarla iliřkilendirilmeye açık olduęunu ve kuramsal zenginlik taşıdıęını göstermektedir.

Arařtırma yöntemleri açasından bakıldıęında, çalıřmaların çoęunlukla iliřkisel tarama, genel tarama ve durum analizi modellerine dayandıęı anlařılmaktadır. Veri toplama araçları bakımından ise ölçek kullanımı öne çıkmakta; sekiz tezdten altısında ölçek temelli veri toplama yöntemleri tercih edilmiřtir. Dört çalıřmada görüşme formu kullanılmıř olup, yalnızca nitel yöntemlerle veri toplayan iki tez bulunmaktadır. Bu durum, arařtırmaların çoęunlukla nicel ya da karma yöntemlerle yürütöldüęünü göstermektedir. Özellikle SPSS yazılımının istatistiksel analizlerde yaygın biçimde kullanıldıęı, ancak bazı tezlerde veri analizine dair ayrıntıların

sınırlı düzeyde açıklandığı da dikkat çekicidir. Bu, araştırma şeffaflığı ve bilimsel raporlama kalitesi açısından iyileştirilmesi gereken bir yön olarak değerlendirilebilir.

Eğitim kademeleri bakımından analiz edildiğinde, araştırmaların ağırlıklı olarak ortaokul ve lise düzeyindeki yöneticilere odaklandığı görülmektedir. Lise düzeyine ilişkin çalışmalar yedi tezde yer almakta, sadece bir tez lise düzeyini kapsam dışında bırakmaktadır. Buna karşın, ilkokul düzeyindeki çalışmalar görece sınırlı sayıda kalmakta; okulöncesi düzeyinde ise herhangi bir çalışmaya rastlanmamaktadır. Bu durum, inovasyonun erken çocukluk eğitiminde nasıl bir yer edindiğine dair araştırma boşluğunu ortaya koymaktadır. Oysa inovatif yaklaşımların, öğrenme kültürünün en temellerinin atıldığı okulöncesi düzeyde incelenmesi, hem eğitim politikaları hem de yönetsel uygulamalar açısından kritik öneme sahiptir.

Katılımcı profilleri incelendiğinde, sekiz çalışmadan altısının öğretmen görüşlerine, yalnızca ikisinin doğrudan okul yöneticilerinin görüşlerine dayandığı görülmektedir. En düşük katılımcı sayısına sahip araştırma 6 numaralı tez (5 yönetici), en geniş örnekleme sahip tez ise 8 numaralı doktora çalışmasıdır (6101 öğretmen). Bu örneklem farklılıkları, araştırmaların derinlik ve temsil gücü bakımından önemli değişkenlikler gösterdiğini ortaya koymaktadır.

Tezlerin yayımlandığı üniversiteler incelendiğinde; Abant İzzet Baysal Üniversitesi, Sakarya Üniversitesi, İstanbul Kültür Üniversitesi, İstanbul Sabahattin Zaim Üniversitesi, Marmara Üniversitesi, Hacettepe Üniversitesi ve Anadolu Üniversitesi'nin bu çalışmalara ev sahipliği yaptığı tespit edilmiştir. Özellikle İstanbul Kültür Üniversitesi ve Hacettepe Üniversitesi, ikişer tez ile öne çıkmaktadır. Tezlerin altısının Eğitim Bilimleri Enstitüsüne, ikisinin ise Sosyal Bilimler Enstitüsüne bağlı olarak yürütülmüş olması, konunun disiplinlerarası niteliğine ve farklı akademik perspektiflerden ele alınabileceğine işaret etmektedir.

6. Sonuç ve Öneriler

Araştırma bulguları, Türkiye’de okul yöneticiliği ve inovasyon kavramlarının birlikte ele alındığı tez çalışmalarının son on yılda ivme kazandığını ve bu alanda kuramsal bir zemin oluşmaya başladığını göstermektedir. Yöneticilerin inovasyona olan eğilimlerinin, hem kendi liderlik başarılarını hem de örgütlerinin motivasyonunu ve sürdürülebilirliğini olumlu yönde etkilediği görülmektedir. Ancak bu etkilerin daha geniş bir bağlamda anlaşılabilmesi için farklı eğitim kademelerinde ve çeşitli sosyo-kültürel bağlamlarda yürütülecek araştırmalara ihtiyaç duyulmaktadır.

İnovasyonun, yalnızca teknik bir değişim aracı değil, aynı zamanda kültürel, örgütsel ve pedagojik dönüşümlerin taşıyıcısı olarak ele alınması gerekmektedir. Bu bağlamda

inovasyonun; **örgütsel bağlılık, mesleki gelişim, kültürel yeterlik, kapsayıcı eğitim** gibi kavramlarla ilişkilendirilerek çok boyutlu araştırmalara konu edilmesi, alan yazına önemli katkılar sağlayacaktır.

Son olarak, **okulöncesi kademesinde** inovatif liderlik uygulamalarının incelenmemiş olması, bu alanda bir boşluğa işaret etmektedir. Bu boşluğun giderilmesi, erken yaşlardan itibaren inovatif okul kültürünün inşası ve sürdürülebilir eğitim reformları açısından stratejik bir önem taşımaktadır.

Kuzey Kıbrıs'taki Ortaokul Öğretmenlerinin Öğrenci Ruh Sağlığına İlişkin Roller ve Okulun Rollerine İlişkin Görüşleri

Zeynep Türkoğlu Mutlu

Milli Eğitim Bakanlığı, turkoglu.pdr@gmail.com, 0000-0001-8593-1012, TÜRKİYE

Özet

Bu araştırmanın amacı Kuzey Kıbrıs'taki ortaokul öğretmenlerinin öğrenci ruh sağlığına ilişkin rolleri ve okulun rollerine ilişkin görüşlerini incelemektir. Nitel araştırma yöntemi kullanılarak gerçekleştirilen çalışmaya, kolayda örnekleme yoluyla ulaşılan 20 ortaokul öğretmeni katılmıştır. Öğretmenlerden elde edilen verilerin analizinde frekans değerleri ile betimsel analiz ve içerik analizi kullanılmıştır. Elde edilen bulgular, ortaokul öğretmenlerinin; okulların, öğrenci ruh sağlığı gelişimini karşılamada yetersiz olduğunu düşündüklerini ve okullardaki ruh sağlığı hizmetlerinin çoğunlukla okul rehberlik ve psikolojik danışma servisi ve personeli tarafından karşılandığını göstermektedir. Öğretmenlerin hemen hemen hepsinin öğrencilerinin ruh sağlığı ile ilgili endişelendiği ve ruh sağlığı sorunu yaşayan öğrencileri anlama biçimlerinin “davranışsal işaretler”, “iletişimsel işaretler”, “duygusal ve düşünsel işaretler” gibi temalar başta olmak üzere birtakım işaretler yoluyla olduğu anlaşılmaktadır. Ayrıca, öğrencilerinde bir ruh sağlığı sorunu fark etmeleri durumunda çoğunlukla rehberlik ve psikolojik danışma servisi başta olmak üzere, aile ve okul içi diğer partnerlerle iş birliği sağlamak şeklinde bir yaklaşım sergiledikleri görülmüştür. Öğrenci ruh sağlığı ile ilgili ortaya çıkan sorunların ve öğrenci ruh sağlığını korumada karşılaşılan engellerin çoğunun aile kaynaklı olduğu da elde edilen diğer bulgulardandır. Araştırmada, öğretmenlerin öğrenci ruh sağlığını koruma ve geliştirme için “iletişim odaklı eğitimler” başta olmak üzere çeşitli konularda eğitimler almaya istekli oldukları görülmüş olup okulda ruh sağlığı ile ilgili, literatür doğrultusunda çeşitli çıkarımlarda bulunulmuştur.

Anahtar Kelimeler: Okul ruh sağlığı, Ortaokul öğretmenleri, Koruyucu ve önleyici ruh sağlığı, Kuzey Kıbrıs

Secondary School Teacher's Roles Regarding Student Mental Health and their Views on the Roles of the School in Northern Cyprus

Abstract

The aim of this study is to examine the views of secondary school teachers in Northern Cyprus on their roles related to student mental health and the roles of the school. The study, which was conducted using the qualitative research method, was attended by 20 secondary school teachers

who were reached using convenience sampling. Frequency values, descriptive analysis and content analysis were used in the analysis of the data obtained from the teachers. The findings obtained show that secondary school teachers think that schools are inadequate in meeting the development of student mental health and that mental health services in schools are mostly provided by the school guidance and psychological counseling service and staff. It is understood that almost all teachers are concerned about the mental health of their students and that their way of understanding students with mental health problems is through a number of signs, primarily themes such as “behavioral signs”, “communicative signs”, “emotional and intellectual signs”. In addition, it was observed that when they notice a mental health problem in their students, they mostly approach to cooperate with the guidance and psychological counseling service, as well as the family and other partners in the school. Another finding obtained is that most of the problems that arise regarding student mental health and the obstacles encountered in protecting student mental health are family-based. In the research, it was seen that teachers were willing to receive training on various subjects, especially "communication-focused training", to protect and develop student mental health, and various inferences were made in line with the literature regarding mental health in schools.

Keywords: School mental health, Secondary school teachers, Protective and preventive mental health, Northern Cyprus

Giriş

Bireyin olumlu bir benlik algısı inşa etmesi, sağlıklı ilişkiler kurabilme yeteneği, düşünce ve duygu yönetim becerileri ile aktif toplumsal katılımında bulunması gibi gelişimsel özelliklere atıfta bulunulan ruh sağlığı (WHO, 2021a), bireysel ve toplumsal iyilik hali için önemlidir (Taycan ve Coşkun, 2020). Bu iyilik halini artırmak, birey ve toplum ruh sağlığını geliştirmek de toplumun tüm kurumları ile hareket etmeyi gerektirir (Taycan ve Coşkun, 2020).

Toplumsal kurumlardan birisi olan okullar, önleme ve ruh sağlığını geliştirme bakımından şarttır ve bireylerin sosyo-duygusal ve ahlaki gelişimini desteklemek, duygusal iyi oluşu sağlayabilmek noktasında da kaçırılmaması gereken bir fırsattır (WHO, 2021). Çünkü, özellikle son yıllarda daha yoğun strese maruz kalma ve yaşam zorluklarının artması gibi sebeplerle toplum düzeyinde ruhsal bozuklukların yoğunluğu artarken ruhsal iyilik hissinin de azalmaya başladığı görülmektedir (Özer, Şahin-Altun, 2022). Dünya Sağlık Örgütü verilerine göre de ruh sağlığı sorunu yaşayan çocuk ve ergenlerin oranı dünyada yaklaşık %8 ile %14 civarındadır (WHO, 2022). Bu da her çocuk için erişilebilir ruh sağlığı hizmetlerinin önemli olduğunu ve

ruh sađlığı kořulları aısından bireylerin gözlenebileceđi en önemli ortamlardan birisinin sınıflar olduđunu gözler önüne sermektedir (Sherfick, 2022).

Sınıflarda ve daha da önemlisi okulun bütününde öğrencileri gözleyen ilk kişilerin başında gelen öğretmenlerin mesleklerinin en başından itibaren ruh sađlığı farkındalığına ve ruh sađlığı sorunları bilgisine sahip olmaları giderek daha çok önem kazanmaya başlamıştır (Carr vd., 2018). Çünkü, okul ruh sađlığı hizmetlerinde öğretmenler, öğrencilerin ruh sađlığı gelişimini gözleyen ve gerekli ilk müdahalede bulunan “bekçi”ler olarak da nitelendirilmektedir (Kutcher ve Wei, 2012). Ancak, yapılan bazı arařtırmalar öğretmenlerin öğrenci ruh sađlığı aısından bu kadar önemli bir rolde olmasına rağmen ruh sađlığı ve müdahale yöntemlerine ilişkin yeterli bilgiye sahip olmadıklarını ortaya koymuştur (Froese-Germain ve Riel, 2012; Wei vd., 2020, 2023). Oysa, öğrencilerin ve özelde ergenlik dönemi yař grubu öğrencilerinin ruh sađlığı ile ilgili farkındalık kazanmalarında öğretmenlerin ruh sađlığı okuryazarlıklarının gelişmiş olması gerekmektedir (Pratiwi vd., 2022). Bu aıdan da öğretmenlerin öğrenci ruh sađlığına ilişkin farkındalıklarını, yaptıkları çalışmalarını, karşılařtıkları engelleri ve okulda ruh sađlığına bakış aılarını keşfedici çalışmalar yapılmasının gerekli olduđu kanaatine varılmaktadır. İlgili literatürde ise okulda ruh sađlığı ve ruh sađlığı okuryazarlığı, öğretmen ruh sađlığı okuryazarlığı gibi çalışmalar (Armstrong vd., 2019; Carr vd., 2018; Choi, 2023; Marinucci vd., 2022; Moon vd., 2017; Pratiwi vd., 2022; Whitley vd., 2013) dikkat çekmekle birlikte öğretmenlerin öğrenci ruh sađlığı ve okulda ruh sađlığına ilişkin bakış aısını yansıtan çalışmaların yetersiz olduđu görölmüřtür (Deaton vd., 2022; Reinke vd., 2011; Sibanda vd., 2022).

Ayrıca, okullar öğrenci ruh sađlığı gelişiminde sadece öğrenciyi gözleme boyutunda deđil, öğrencilere ruh sađlığı müdahaleleri sunmada ve onların ruh sađlığı okuryazarlıklarını geliřtirmede de önemli bir role sahiptir (Choi, 2023; Marinucci vd., 2023; Pratiwi vd., 2022; Semchuk vd., 2023). Ancak, okulda ruh sađlığı birçok farklı deđiřkenden (kültür, din, norm ve deđerler, ruh sađlığı hizmet kullanımı ve erişilebilirliği, sosyoekonomik durum, konum gibi) etkilendiđi için dünya genelinde farklılık gösterebilmektedir (Wei & Kutcher, 2012). Bu sebeple de söz konusu deđiřken etkisi göz önünde bulundurularak bölgesel olarak okullarda ruh sađlığının geliştirilmesi için öğretmenlerin görüşlerini öğrenebilmek, ruh sađlığı eğitimi ile ilgili ihtiyaçlarını belirlemek oldukça önemlidir (Moon, Williford & Mendenhall, 2017).

Bu kapsamda, bu arařtırmanın amacı Kuzey Kıbrıs’taki ortaokul öğretmenlerinin öğrenci ruh sađlığına ilişkin rolleri ve okulun rollerine ilişkin görüşlerini incelemektir. Bunun için arařtırmada řu sorulara cevap aranmıştır:

1. “Sizce okullar öğrencilerin ruh sađlığı ihtiyaçlarını desteklemede/ ruh sađlığı eğitimi

vermede nasıl bir rol oynamaktadır?"

2. "Öğrencilerinizin ruh sağlığı ile ilgili endişe duyduğunuz oluyor mu?"

3. "Öğrencinizin/öğrencilerinizin hangi tür ruh sağlığı sorunları ile ilgili endişe duyuyorsunuz?"

4. "Öğrencinizin/Öğrencilerinizin bir ruh sağlığı sorunu yaşadığını nasıl anlıyorsunuz?"

5. "Öğrenciniz/Öğrencileriniz bir ruh sağlığı sorunu yaşıyorsa nasıl bir yol izlersiniz?"

6. "Öğrencilerinizin ruh sağlığının korunması ve geliştirilmesinde ne tür bir desteğin ya da eğitimin etkili olduğunu düşünüyorsunuz?"

7. "Okulunuzda öğrencilerinizin ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilmek için ne tür çalışmalar yapılmaktadır?"

8. "Öğrencilerinizin ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilme için siz ne tür çalışmalar yapmaktasınız?"

9. "Öğrencilerinizin ruh sağlığını koruyabilme hususunda ne gibi engellerle karşılaşmaktasınız?"

10. "Öğrenci ruh sağlığını koruyabilme ve geliştirebilme ile ilgili eğitim almak ister misiniz?"

11. "Öğrenci ruh sağlığını koruyabilme ve geliştirebilme ile ilgili özellikle hangi konularda eğitim almak istersiniz?"

Yöntem

Araştırma Yöntemi

Kuzey Kıbrıs'taki ortaokul öğretmenlerinin öğrenci ruh sağlığına ilişkin rolleri ve okulun rollerine ilişkin bakış açılarının ortaya koyulduğu bu araştırma nitel araştırma yöntemlerinden olgubilim deseni (Yıldırım ve Şimşek, 2016) ile gerçekleştirilmiştir. Bu desen, derinlemesine bir anlayış geliştirmeyip yüzeysel bir farkındalığa sahip olduğumuz ve belirli bir grubun bu olguya ilişkin deneyimini ortaya koyabilmek amacıyla kullanılmaktadır (Creswell, 2017; Yıldırım ve Şimşek, 2016). Bu kapsamda, bu araştırmada ele alınan olgu, ortaokul öğretmenlerinin öğrenci ruh sağlığına ilişkin rolleri ve okulun rollerine ilişkin görüşleridir.

Çalışma Grubu

Araştırmanın katılımcılarını 2022-2023 eğitim-öğretim yılında Kuzey Kıbrıs'taki ortaokullarda çalışan öğretmenler oluşturmuştur. Araştırmada kolay ulaşılabilir örnekleme kullanılmış olup veri doygunluğu sağlanıncaya kadar veri toplamaya devam edilmiştir. Katılımcılara ilişkin özellikler Tablo 1'de gösterilmektedir.

Tablo 1: Katılımcı Özellikleri

Demografik Özellik		f
Cinsiyet	Kadın	14
	Erkek	6
Yaş	25-30	3
	31-36	4
	37-42	4
	43-48	6
	49-54	3

	21-30 Yıl	9
Öğrenci Ruh Sağlığı ile İlgili Eğitim Durumu	Aldı	5
	Almadı	15

Tablo 1 incelendiğinde, katılımcıların çoğunluğunun kadın ($f=14$) olduğu görülmektedir. Yaşları 25-54 arasında değişen katılımcıların 13'ü lisans mezunu, 7'si ise yüksek lisans mezunudur. Branşlara göre dağılımlar açısından; Resim/Teknoloji Tasarım ($f=4$) ile Sosyal Bilgiler ($f=3$) ve Yabancı Dil ($f=3$) branşlarından katılımların en çok olduğu anlaşılmaktadır. 9 katılımcı 21-30 yıl, 8 katılımcı 0-10 yıl, 3 katılımcı ise 11-20 yıl arası mesleki çalışma yılına sahiptir. Ayrıca, 5 katılımcının öğrenci ruh sağlığı ile ilgili bir eğitim aldığı 15 katılımcının ise konuya dair hiçbir eğitim almadığı belirlenmiştir.

Veri Toplama Süreci

Araştırmada bilgi toplamak amacıyla “Kişisel Bilgi Formu” ve “Ortaokul Öğretmenlerinin Öğrenci Ruh Sağlığına İlişkin Görüş ve Yeterlilik Formu (Değerlendirme Formu)” kullanılmıştır.

Veri Toplama Araçları

Kişisel Bilgi Formu

Araştırmada cinsiyet, yaş, eğitim düzeyi, branş, çalışma yılı, öğrenci ruh sağlığına ilişkin eğitim alıp almama durumu gibi değişkenleri içeren ve araştırmacı tarafından hazırlanan “Kişisel Bilgi Formu” kullanılmıştır.

Ortaokul Öğretmenlerinin Öğrenci Ruh Sağlığına İlişkin Görüşleri ve Yeterlilikleri Formu (Değerlendirme Formu)

Araştırmacı tarafından okul odaklı ruh sağlığı ile ilgili yapılan çeşitli araştırmalar incelenerek (Kratt, 2018; Kutcher ve Wei, 2012; Kutcher vd., 2015; Patalay vd., 2016; Moon vd., 2017; Shelemy vd., 2019;) ve uzman görüşü alınarak oluşturulan bu form; ortaokul öğretmenlerinin okulların öğrenci ruh sağlığında oynadığı rol (“Sizce okullar öğrencilerin ruh sağlığı ihtiyaçlarını desteklemede/ ruh sağlığı eğitimi vermede nasıl bir rol oynamaktadır?” gibi) ve öğrenci ruh sağlığına ilişkin görüşlerini (“Öğrencilerinizin ruh sağlığı ile ilgili endişe duyduğunuz oluyor mu? Oluyorsa hangi tür ruh sağlığı sorunları ilgili endişe duyduğunuzu açıklayınız.” gibi) belirlemeye yöneliktir. Aynı zamanda, öğretmenlerin öğrenci ruh sağlığına ilişkin rollerinin (“Öğrenciniz/Öğrencileriniz bir ruh sağlığı sorunu yaşıyorsa nasıl bir yol izlersiniz?” gibi) incelenebilmesi için de sorular içermektedir.

Formda yer alan soruların işlevselliğini değerlendirebilmek amacıyla ortaokulda çalışan gönüllü iki öğretmenle ön uygulama gerçekleştirilmiştir ve nihai uygulamaya geçilebileceği kanaatine varılmıştır. Veriler, Mayıs ve Haziran 2023 döneminde araştırmacı tarafından katılımcılara araştırma hakkında bilgi verilmesi sonrasında yüz yüze görüşme yoluyla toplanmıştır.

Veri Analizi

Ortaokul öğretmenlerinin öğrenci ruh sağlığına ilişkin rolleri ve okulun rollerine ilişkin görüşlerinin ele alındığı bu araştırmada elde edilen demografik bilgiler tanımlayıcı istatistiklerle (frekans) açıklanmıştır. Değerlendirme formunda yer alan açık uçlu soruların analizi ise içerik analizi ile incelenmiştir. İçerik analizi, elde edilen verilerden benzer olanları belirli bir çerçevede ele alarak okuyucu için anlaşılabilir şekilde yorumlamaktır (Yıldırım ve Şimşek, 2016). Creswell (2017), içerik analizinin; “verilerin analize hazır hale getirilmesi, ilk keşfin kodlama ile yapılması, kodların kullanımı, bulguların sunulması, bulgularla bağlantılı alanyazın temelinde öznel düşüncelerle sonuçların değerlendirilmesi ve bulguların doğruluğunun çeşitli stratejilerle gösterilmesi” adımlarından oluştuğunu ifade etmektedir. Sevim ve Atasoy (2020) tarafından da bulgu güvenilirliği ile ilgili önemli olan şeyin tutarlı ve sağlıklı yapılan kodlamalar olduğu belirtilmiştir. Lincoln ve Guba (1985) da nitel araştırmaların geçerliliğinin bulguların gerçeklikle uyum düzeyini gösteren (Arastaman vd., 2018) “inandırıcılık” ve araştırmanın detaylı tanımlanması ile farklı bağlamlarda uyumunu gösteren (Arastaman vd., 2018; Arslan, 2022) “aktarılabirlik” ile sağlanabileceğini ortaya koymuştur. Bu doğrultuda araştırmada inandırıcılığı sağlayabilmek için nitel araştırma tecrübesi olan bir

başka araştırmacının araştırma analizleri ve süreci kontrol etmesi yoluyla “akran bilgilendirmesi” sağlanmıştır. Aktarılabilirliği sağlayabilmek için de katılımcı özellikleri, veri toplama süreci, araçları ve yöntemleri kapsamlı bir şekilde betimlenmiştir. Yine, araştırma aktarılabilirlik açısından önemli olan şeylerden birisi olan “araştırmacının araştırma konusuna aşinalığı” ölçütüne de uygundur (Tutar, 2022). Çünkü, araştırmacı doktora tez çalışması kapsamında öğrenci ruh sağlığı ve okulda ruh sağlığı bağlantılı bir çalışma gerçekleştirmiştir. Bu bağlamda ve konu ile bağlantılı diğer farklı çalışmaları da gerçekleştirmesi bağlamında araştırmacı hem konuya hem literatüre hakimdir. Nitel araştırmaların güvenilirliği açısından önemli olan ölçütlerden birisi olan onaylanabilirlik (confirmability) (Lincoln ve Guba, 1985) araştırmacının, araştırmacının öznel etkilerini değil nesnel olanı yansıtmayı ifade etmektedir (Arastaman vd., 2018; Arslan, 2022; Tutar, 2022). Onaylanabilirlik ölçütü kapsamında araştırmada her adım titizlikle ve şeffaf olarak yürütülmüştür. Bunun yanında katılımcı verileri araştırmacı tarafından farklı zamanlarda iki kez okunarak iki ayrı kodlama yapılması sağlanmıştır. Ayrıca, tutarlı ve sağlıklı bir kodlama yapılabilmesi için bir alan uzmanının da analiz yapması sağlanmıştır. Araştırmacı tarafından farklı zamanlarda yapılan kodlamalar ve alan uzmanı tarafından yapılan kodlama değerlendirilmiş olup uzlaşa sağlanan kodların tespiti sağlanmıştır. Birbiriyle benzer olan kodlar ile temalar oluşturulmuştur. Bulgular frekans tabloları ve doğrudan alıntılar yoluyla sunulmuştur.

Bulgular

Araştırmaya katılan öğretmenlerin okulların öğrenci ruh sağlığı ihtiyaçlarını desteklemede/ ruh sağlığı eğitimi vermede oynadığı role ilişkin düşüncelerini ortaya koyan cevaplardan içerik analizi yoluyla elde edilen bulgular Tablo 2’de sunulmuştur.

Tablo 2: Okulların Öğrenci Ruh Sağlığı İhtiyaçlarını Desteklemedeki Rolüne İlişkin Öğretmen Görüşleri

Temalar	Kodlar	Frekans
Yetersizlik	Öğretmenin yetersizliği (psikolojik donanım ve farkındalık açısından)	3
	Hizmet yetersizliği	2
	Zaman yetersizliği	1
	Fiziksel koşulların yetersizliği	1
Psikolojik Danışma ve Rehberlik Hizmetleri	Sözel danışmanlık desteği	3
	İhtiyaçlara yönelik destekler	2
	Ders saatleri ile destek	1

İş Birliği	Okul idaresi-öğretmen ve veli iş birliği	2
	Rehber öğretmen ve ders öğretmeni iş birliği	1
Öğretmen Desteği,	Öğrenci ve velilerine gerekli yönlendirme ve eğitimler sağlama	2
Gözlemi ve	Ailede karşılanamayan sevgi ve güven ihtiyaçlarını öğretmenler	2
Yönlendirmesi	aracılığıyla karşılama	
	Öğrencileri daha yakından tanıma ve gözlem	2
Sosyal Gelişim	Sosyalleşme yoluyla azalan sorunlar	4
<u>Sağlama İmkânı</u>		

Tablo 2 incelendiğinde okulların, okulun öğrenci ruh sağlığı ihtiyaçlarını destekleme/ ruh sağlığı eğitimi vermedeki rolüne ilişkin soruya verilen cevaplar doğrultusunda “yetersizlik”, “psikolojik danışma ve rehberlik hizmetleri”, “iş birliği”, “öğretmen desteği, gözlemi ve yönlendirmesi” ile “sosyal gelişim sağlama imkânı” şeklinde beş tema ortaya çıkmıştır. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler öğretmen kelimesinin baş harfi ve katılımcı numarası kullanılarak (Ö1, Ö2 gibi) aşağıda sunulmuştur:

Ö.1. “Okullar öğrencilerin ruh sağlığı ihtiyaçlarını desteklemek için bir çalışma yaptıklarını sanmıyorum, sadece rehberlik hizmetleri ile bir desteğin olamayacağını düşünüyorum.”

Ö.20. “Okullarda, öğrencilerimiz ruh sağlıkları açısından gereken eğitimi özellikle rehberlik servisinden almaktadır. Rehber öğretmenlerimiz bu açıdan gerekli donanımına sahiptir. Diğer öğretmenler de onları desteklemektedir.”

Ö.2. “Öğretmenler öğrencinin ruh sağlığını keşfetmede onları sık gördükleri için önemli bir role sahiptir.”

Ö.7. “Öğrencilerin en çok sosyalleştiği ortam olduğundan en büyük sorunları hafifletebilecek durumdadır. Okul idaresi, öğretmen ve veli iş birliğiyle ihtiyaçlı çocukların belirlenip birden fazla bilgi sahibi bireyin gözleminde ve desteğini alması.”

Araştırmaya katılan öğretmenlere yöneltilen “Öğrencilerinizin ruh sağlığı ile ilgili endişe duyduğunuz oluyor mu?” sorusuna verilen cevaplar incelendiğinde 19 öğretmenin endişe duyduğunu belirttiği, 1 öğretmenin ise endişe duymadığını ifade ettiği görülmüştür. Endişe duyduğunu ifade eden öğretmenlerin hangi tür ruh sağlığı sorunları ile ilgili endişe duyduğuna ilişkin verdikleri cevaplardan içerik analizi yoluyla elde edilen bulgular Tablo 3’te sunulmuştur.

Tablo 3: Ortaokul Öğretmenlerinin Endişe Duydukları Öğrenci Ruh Sağlığı Sorunları

Temalar	Kodlar	Frekans
Aile Kaynaklı Sorunlar	Sağlıksız ailenin yol açtığı sorunlar	9
	İçe kapanıklık/Asosyalite	4

	Kaygı/Kaygı Bozuklukları	3
	Depresyon	2
İçselleştirme Sorunları	Stres	1
	Kendine zarar verme	1
	Bağımlılıklar	1
	Öfke kontrol sorunları	3
Dışsallaştırma Sorunları	Zorbalık	3
	Şiddet/Şiddeti Normal Görme	3
	DEHB	2
	Başarısızlık/Başarısızlık korkusu	2
Öğrenme ve Motivasyonel Sorunlar	Amaçsızlık	1
Gelişim Dönemi Sorunları	Müfredata ilişkin bıkkınlık	1
	Duyarsızlık	2
	Ergenlik dönemi sıkıntıları	1
	Kriz yönetimi ve problem çözme	1
Diğer Sorunlar	Aşırı ilgi çekme davranışları	1
	Aşırı özgüven	1

Tablo 3 incelendiğinde ortaokul öğretmenlerinin öğrenci ruh sağlığına ilişkin endişe duydukları sorunlara ilişkin “aile kaynaklı sorunlar”, “içselleştirme sorunları”, “dışsallaştırma sorunları”, “öğrenme ve motivasyonel sorunlar”, “gelişim dönemi sorunları” ve “diğer sorunlar olmak üzere altı tema ortaya çıkmıştır. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.8. “Önce aileden başlayalım. Çekirdek aile ruhu sağlıklı ruhlar yetiştirir. Yaşanan sıkıntılar (sosyo-ekonomik) öğrenciye yansıtılıp okulunda dengesini bozabiliyor.”

Ö.19. “İçe kapanıklık, utangaçlık”

Ö.12. “En çok, şiddeti normal görmelerinden kaynaklanabilecek olan ruh sağlığı sorunları yaşanabileceği endişesi içindeyim.”

Ö.11. “Bazı öğrenciler sınav zamanı gereksiz bir yapamayacağım, başaramayacağım durumu yaşıyor.”

Öğretmenlerin, öğrencisinin/öğrencilerinin bir ruh sağlığı sorunu yaşadığını nasıl anladıklarına ilişkin ortaya koydukları görüşlerden içerik analizi yoluyla elde edilen bulgular Tablo 4’te sunulmuştur.

Tablo 4: Ortaokul Öğretmenlerinin Ruh Sağlığı Sorunu Yaşayan Öğrenciyi/Öğrencileri Anlama Biçimleri

Temalar	Kodlar	Frekans

Davranışsal İşaretler	Sınıf içi ve sınıf dışı gözlenen davranış farklılıkları	16
	Davranışlarındaki tutarsızlık	1
	Kavgacı ve tepkisel tutumları	1
	Yoğun sosyal medya, telefon kullanımı	1
İletişimsel İşaretler	Sözel iletişim ve beden dili	7
	Duygu yansımaları	5
Duygusal ve Düşünsel İşaretler	Dalgınlık ve aşırı düşünceli olma	2
	İçe kapanma	2
	Uyaranlara duyarsızlığı	2
Akademik İşaretler	Derse ilgisi ve başarısının azalması	5
İlişkisel İşaretler	Arkadaş ilişkileri	3
	Uyum sorunları	2
Diğer İşaretler	Öğrencilerin aktarımları	1
	Rehber öğretmen ve veli ile görüşmeleri	1

Tablo 4 incelendiğinde öğretmenlerin, ruh sağlığı sorunu yaşayan öğrenciyi/öğrencileri anlama biçimlerine ilişkin “davranışsal işaretler”, “iletişimsel işaretler”, “duygusal ve düşünsel işaretler”, “akademik işaretler”, “ilişkisel işaretler” ve “diğer işaretler” olmak üzere altı temanın ortaya çıktığı görülmektedir. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.19. “Normalde konuşkan olan ve arkadaşlarıyla paylaşımları olan biri sessizleşip yalnız takılıyorsa bir sorun olabileceğini düşünüyorum. Sınıfta aşırı tepkiler veren veya sürekli rahatsız edici hareketlerde bulunup dikkat çekmeye çalışıyorsa da bir sorunu olabilir.”

Ö.13. “İletişim kurmak istemez, göz teması yok, dinlermiş gibi yapar. Yaptığım uyarılara itiraz etmez, kafasını sallar (evet anlamında) ancak hiçbir davranış değişikliği göstermez.”

Ö.9. “Üzgün olduğunu ya da sinirli olduğunu gördüğümde tahmin edebiliyorum.”

Ö.17. “Ders başarısının düşmesi”

Araştırmaya katılan ortaokul öğretmenlerinin, ruh sağlığı sorunu yaşayan bir veya daha fazla öğrencisi olduğunda nasıl bir yol izleyeceklerine ilişkin ortaya koydukları görüşlerden içerik analizi ile elde edilen bulgular Tablo 5’te sunulmuştur.

Tablo 5: Ruh Sağlığı Sorunu Yaşayan Öğrenci Karşısında Nasıl Bir Yol İzleneceğine İlişkin Öğretmen Görüşleri

Temalar	Kodlar	Frekans
İş Birliği Sağlama	Rehberlik servisi ile iş birliği	8
	Hem aile hem de diğer öğretmenlere danışma	1
	Aile ile iletişim kurma	1
	Öğretmenlere danışma	1
	İdareye bilgi verme	1
Aşamalı Yardım	Aşamalı bir yaklaşım izleme	6
	Öğrenci ile görüşme.	3
Öğrenciye Doğrudan Müdahale	Öğrenciyi dinleme, farkındalık kazandırma	1
	Öğrencinin sorununa duygusal yaklaşma	1
Yönlendirme Yapma	Doğrudan rehberlik servisine yönlendirme	3

Müdahalede Bulunmama	Gerekli durumda yönlendirme (ilgili kurumlara) yapma	1
	Öğrenciyi kendi haline bırakma	1

Tablo 5 incelendiğinde ortaokul öğretmenlerinin, ruh sağlığı sorunu yaşayan öğrencisi/öğrencileri olduğunda izleyecekleri yola ilişkin ortaya koyulan temaların “iş birliği sağlama”, “aşamalı yardım”, “öğrenciye doğrudan müdahale”, “yönlendirme yapma” ve “müdahalede bulunmama” şeklinde beş temada toplandığı görülmektedir. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.11. “Öncelikle ders esnasında olduysa bu durumu anlandığım an hemen rehberlik servisiyle iletişime geçerim ve öğrenciyi servise yönlendiririm. Daha sonra süreci takip ederim.”

Ö. 12. “Öncelikle öğrenciyi incelerim, sonra aklımdaki soruna uyup uymadığını araştırırım. Aile ve idare ile görüşürüm gerekli durumlarda gerekli yerlere yönlendiririm.”

Ö.15. “Öğrencinin sorununa karşı olan duygusal yönden yaklaşım, sorunların her zaman olacağının farkında olmasını her sorunun bir çözümünün olduğunun farkına varma.”

Ö.17. “İlk önce PDR’ye yönlendiririm.”

Ö.1. “Genelde sınıf düzenini bozan veya vurdumduymaz çocuklarda böyle bir sorun olduğunu düşünürüm, çok üstüne gitmeden kendi haline bırakmayı tercih ederim.”

Öğretmenlerin, öğrencilerinin ruh sağlığının korunması ve geliştirilmesinde ne tür bir desteğin ya da eğitimin etkili olduğuna dair düşüncelerinden oluşan cevaplardan elde edilen bulgular Tablo 6’da sunulmuştur.

Tablo 6: Öğrencilerin Ruh Sağlığının Korunması ve Geliştirilmesinde Etkili Olduğu Düşünülen Destekler ve Eğitimlere İlişkin Öğretmen Görüşleri

Temalar	Kodlar	Frekans
Öğrenci Odaklı Eğitimler ve Destekler	Düzenli olarak öğrenci eğitimleri	7
	Öğrencilere rehber öğretmen desteği ve bilgilendirmeleri	3
	Öğrenciye değerli olduğunun hissettirilmesi	2
	Öğrenci gelişimine uygun çeşitli faaliyetler	2
	Ruh sağlığının ayrı bir konu/ders olarak işletilmesi	1
	Dijital okuryazarlık kazandırılması	1
	Sosyal medya kontrolünün sağlanması	1
İş Birliği Odaklı Destekler	Okul aile iş birliği	4
	Rehber öğretmen-ders öğretmeni iş birliği	1
Aile Odaklı Eğitimler ve Destekler	Aile eğitimi/Aile donanımının artırılması	3
	Öğrenciye ev içi aile desteği	1
Sistemsel Unsurlar ve Destekler	Psikolojik desteğin önemsenmesi	3
	Ruh sağlığını bozacak faktörlerin en aza indirilmesi	1
	Doğru kişilere yönlendirme sağlanması	1
	Eğitimin türü ne olursa olsun ilgili uzmanlarca yapılması	1
	Okuldaki tüm birimlerin eğitimi	3
Okul Personeli Odaklı Eğitimler	Öğretmen eğitimi	2
	Rahat ve mutlu sınıf ortamı	1
Diğer		1

Tablo 6 incelendiğinde öğrenci ruh sağlığının korunması ve geliştirilmesinde etkili olan destek ve eğitimlere ilişkin ortaya çıkan temaların “öğrenci odaklı eğitimler ve destekler”, “iş birliği odaklı destekler”, “aile odaklı destekler ve eğitimler”, “sistemsal unsurlar ve destekler”, “okul personeli odaklı eğitimler” ile “diğer” şeklinde altı sayıda olduğu görülmektedir. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.14. “Öğrenciye değerli olduğu hissettirilmeli ve bu konuda okul içi etkinlik veya seminer düzenlenmeli.”

Ö.3. “Tüm okul birimlerinin bu konuda eğitimleri çok önemlidir. Rehberlik servisi tek başına yeterli değildir.”

Ö.7. “Öğrencilerden önce ailelerle görüşmeler yapıp ailenin ruh sağlığı hakkında bilgilendirilmesi gereklidir. Daha sonra birlik içinde (öğrenci-öğretmen-veli) uygulanması gereken destek ve eğitimi yürütmeliyiz.”

Ö.10. “Psikolojik desteğin önemli olduğunu düşünüyorum.”

Ortaokul öğretmenlerinin, okullarda öğrencilerin ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilmek için yapılan çalışmalarla ilgili görüşlerinden içerik analizi ile elde edilen bulgular Tablo 7’de sunulmuştur.

Tablo 7: Okullarda Öğrenci Ruh Sağlığını Koruyabilmek/Ruh Sağlığı Gelişimine Katkı Sağlamak İçin Yapılan Çalışmalara İlişkin Öğretmen Görüşleri

Temalar	Kodlar	Frekans

Okul Geneline Dayalı Çalışmalar	Çeşitli STK’larca sağlanan bilgilendirmeler	1
	Eğitsel kol faaliyetleri	1
	Çeşitli sanatsal, sportif ve okul sonrası aktiviteler	1
	Sınıf içi etkinlikler ve sohbetler	1
	Genel bir çalışma yok	1
Diğer		

Tablo 7 incelendiğinde ortaokul öğretmenlerinin, okullarda öğrencilerin ruh sağlığını koruyabilmek/ ruh sağlığı gelişimine katkı sağlamak için yapılan çalışmalara dair görüşlerinden “rehberlik çalışmaları”, “iş birliğine dayalı çalışmalar”, “okul geneline dayalı çalışmalar” ve “diğer” olarak dört temanın ortaya çıktığı görülmektedir. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.4. “Okulumuzda bütün yük okul rehber öğretmenlerinin üzerindedir. Bu çabaların dışında ruh sağlığını koruma ve gelişimine yönelik bir çalışma (ihtiyaç olduğu halde) yapıldığını duymadım.”

Ö.6. “Sık sık görüşmeler düzenlenir (öğrenci-eğitimci, veli-eğitimci görüşmeleri)”

Ö.3. “Sosyal yaşam becerileri eğitimi”

Öğrencilerin ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilmek için ortaokul öğretmenlerinin neler yaptıkları ile ilgili soruya verilen cevaplardan içerik analizi ile elde edilen bulgular Tablo 8’de sunulmuştur.

Tablo 8: Öğrencilerin ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilmek için ortaokul öğretmenlerin yaptıkları çalışmalara ilişkin görüşleri

Temalar	Kodlar	Frekans
Yönlendirme	Rehberlik servisine yönlendirme	5

	Grup çalışmaları	1
	Yaratıcılığa ve odaklanmaya yönlendirme	1
Eğitsel Etkinlikleri Zenginleştirme	Eğitim ve öğretim programlarıyla	1
	Müzik yoluyla	1
	Güzel havalarda doğaya çıkarma	1
	Gözlem yapma	2
Pasif Yaklaşım	Özel olarak herhangi bir şey yapmama	2

Tablo 8 incelendiğinde ortaokul öğretmenlerinin, öğrenci ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilmek için yaptıkları çalışmalara dair görüşlerinden “yönlendirme”, “duygusal, iletişimsel ve davranışsal müdahaleler”, “iş birliği”, “eğitsel etkinlikleri zenginleştirme” ve “pasif yaklaşım” olarak beş tema belirlenmiştir. Ortaya çıkan temalara dair ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.11. “Konulara çok hâkim olmadığım için yönlendirme yapmaktayım.”

Ö.16. “Ders içinde değerli olduğunu hissettirmeye çalışıyorum. Kitap okumaya ve kendini geliştirmeye yönelik çalışmalar yapmaya teşvik ediyorum.”

Ö.2. “Derslerimde nabızlarını yükseltip mutluluk hormonu salgılamaları için oyun içerikli, terletici faaliyetler, oyunla- yaparak yaşayarak seviyelerine göre eğitim.”

Ö.9. “. Öğrenciler için yaptığım bir katkı henüz yok ama psikoloji ve ruh sağlığını konu olarak sevdiğim için bu tarz kitaplar okuyorum ve internetten takip ediyorum.”

Öğrencilerin ruh sağlığını koruyabilme hususunda öğretmenlerin karşılaştıkları engellere ilişkin görüşlerinden içerik analizi ile elde edilen bulgular Tablo 9’da sunulmuştur.

Tablo 9: Ortaokul Öğretmenlerinin Öğrencilerin Ruh Sağlığını Koruyabilme Hususunda Karşılaştıkları Engeller

Temalar	Kodlar	Frekans
Ailesel engeller	İlgisiz aile	4
	Aile içi sağlıklı iletişim	3
	İş birliği sağlamayan aile	3
	Bilinçsiz aile	2
Sistemsal engeller	Yasal prosedürler	1
	Yetersiz ve bilinçsiz bakanlık desteği	1
	Devlet kurumları ile iş birliğinde yaşanan güçlükler	1
İdare ve öğretmenlerle ilgili engeller	Öğretmenlerin öğrencilere bakış açısı ve tavırları	2
	Öğretmen ve idarecilerin öğrenciye karşı iletişimleri	1
	Kişisel engeller	1
Bağlamsal engeller	Farklı kültürel ve dil sorunları	2
Fiziksel engeller	Zaman yetersizliği	2
	Okulun imkanları	1
Öğrenci ile ilgili engeller	Akran baskısı/zorbalığı	4
	Öğrencinin davranışsal yansımaları	3
	Öğrencinin paylaşımına açık olmaması	2
	Yoğun sosyal medya kullanımı	2

Tablo 9 incelendiğinde, öğrencilerin ruh sağlığını koruyabilmede öğretmenlerin en çok karşılaştıkları engellere dair görüşlerinden “ailesel engeller”, “sistemsal engeller”, “idare ve öğretmenlerle ilgili engeller”, “bağlamsal engeller”, “fiziksel engeller” ve “öğrenci ile ilgili engeller” şeklinde altı tema belirlenmiştir. Ayrıca, bir öğretmenin ise; herhangi bir engel olmadığını belirttiği görülmüştür. Bu doğrultuda ortaokul öğretmenlerinin görüşlerinden bazı örnekler şu şekildedir:

Ö.13. “En sık karşılaştığım aile ilgisizliği, ailenin uzmandan yardım almayı kabul etmemesi, çocuğun durumunu kabul etmemesi.”

Ö.4. “Okuldaki bazı öğretmen ve bazı idarecilerin öğrencinin ruh sağlığını bozabilecek tarzda konuşmalarına şahit oluyorum. Anlayışsız, dikdatör tarzda, empatisiz, saygısız, eski geleneksel

öğretmen anlayışıyla tavırlar, bu öğrenci jenerasyonunun farklı olduğunu kabullenemeyen haller gibi engellerle karşılaşıyorum.”

Ö.8. *“Kapalı öğrenci profili (içinde yaşadığı çalkantılı ruhsal sorunun farkında olmayan öğrenci), konuşmak istemiyor.”*

“Öğrenci ruh sağlığını koruyabilme ve geliştirebilme ile ilgili eğitim almak ister misiniz?” sorusuna öğretmenlerin büyük çoğunluğunun “evet” (f= 18) şeklinde cevap verdiği 2 katılımcının ise “hayır” dediği görülmüştür. Bu kapsamda ruh sağlığı ile ilgili hangi konularda eğitim almak istediklerine ilişkin cevaplardan elde edilen bulgular Tablo 10’da sunulmuştur.

Tablo 10: Ortaokul Öğretmenlerinin Öğrencilerin Ruh Sağlığı ile İlgili Eğitim Almak İstedikleri Konular

Temalar	Kodlar	Frekans
İletişim odaklı eğitimler	Öğrenciyle etkili iletişim, güven	3
	Kendine güven ve ifade etme	1
	Öğrencilere kendini sevdirebilme	1
	Modern iletişim yöntemleri	1
	Öğrenci sıkıntılarına doğru tepki verebilme	1
	Girişimcilik	1
Doğrudan ruh sağlığı odaklı eğitimler	Akran zorbalığı ve sebep olduğu depresyon	4
	Risk grubundaki çocukların ruh sağlığı	3
	Öğrencilerin ruh sağlığını geliştirici etkinlikler	2
	Pandemi döneminin ruh sağlığına etkileri	1
	Kaygı azaltmayı öğretici eğitimler	1
	Ruh sağlığı ile ilgili destek olunabilecek tüm konularda	1

Diğer eğitimler	Şiddet eğiliminin önlenmesi	1
	Fark edilme psikolojisi	1
	Öfke patlaması	1
	Rehberlik alanı	1

Tablo 10 incelendiğinde ortaokul öğretmenlerinin öğrenci ruh sağlığı ile ilgili eğitim almak istedikleri konulara ilişkin soruya verdikleri cevaplar doğrultusunda “iletişim odaklı eğitimler”, “doğrudan ruh sağlığı odaklı eğitimler”, “gelişim dönemi odaklı eğitimler”, “akademik gelişim odaklı eğitimler” ve “diğer eğitimler” olarak beş tema ortaya çıkmıştır. İletişim odaklı eğitimler temasında “öğrenciyle etkili iletişim, güven (f=3); doğrudan ruh sağlığı odaklı eğitimler temasında “akran zorbalığı ve sebep olduğu depresyon” (f= 4); gelişim dönemi odaklı eğitimlerde “ergen psikolojisi” (f=2); akademik gelişim odaklı eğitimler alanında “etkili ders işlenişi ve teknikleri” ve “motivasyon” (f=1) ile diğer eğitimler temasında ise “sorun

özebilme” (f=1), “rehberlik alanı” (f=1) gibi eřitli kodlar ile eęitimlerin talep edildięi grlmřtr.

Tartıřma ve Sonu

Bu arařtırmada Kuzey Kıbrıs’taki ortaokul řretmenlerinin ğrenci ruh saęlığına iliřkin rolleri ve okulun rollerine iliřkin grřleri incelenmiřtir.

Arařtırmaya katılan ğretmenlerin %75’i daha nce ğrenci ruh saęlığı ile ilgili herhangi bir eęitim almadıęını, %15’i ise eęitim aldıęını belirtmiřtir. Froese-Germain ve Riel (2012) tarafından yrtlen bir alıřmada da %70 civarında ğretmenin mesleki anlamda ğrenci ruh saęlığı ile ilgili eęitimleri olmadıęı ortaya koyulmuřtur. Shulze vd. (2019) tarafından ortaya koyulan sonu da ğretmenlerin bu konudaki eęitimsizliklerini yansıtmaktadır. Yakın zaman nce Wei vd. (2023) tarafından gerekleřtirilen bir arařtırmada da ğretmenlerin ğrenci ruh saęlığına iliřkin bilgilerinin dřk bir seviyede olduęu ifade edilmiřtir. Arařtırma sonularından hareketle ruh saęlığına iliřkin bilgi ve eęitim eksiklięinin ğrencilerin ruh saęlığı ile ilgili geliřimlerinde aktif rol alacak ğretmenlerin, ğrencilerin ruh saęlığı geliřimlerini takip edebilmede doęru bir yaklařım izleyememeleri tehdidini doęurduęu ıkarımında bulunulabilir.

ğretmenlere gre ğrenci ruh saęlığını desteklemede / ğrencilere ruh saęlığı eęitimi vermede okullar yetersiz bir role sahiptir. Sz edilen bu yetersizlięin; ğretmenin psikolojik donanım ve ruh saęlığı ile ilgili farkındalık aısından yetersizlięi, hizmet yetersizlięi, zaman yetersizlięi ve fiziksel kořulların yetersizlięi gibi konulardan kaynaklandıęı yansıtılmıřtır. Oysa yapılan birok arařtırmada da yansıtıldıęı gibi okullar, ğrenci ruh saęlığını desteklemek, ruh saęlığı ile ilgili zorlukları en aza indirmek ve pozitif ruh saęlığı geliřimi saęlamak iin en uygun yerlerdendir (Marinucci vd., 2022, 2023; Pratiwi vd., 2022; Sibanda vd., 2022). Ancak, okulların ğrenci ruh saęlığına dair rol ve okulda ruh saęlığı eęitimi ile ilgili arařtırmalar incelendięinde ruh saęlığı ile ilgili eęitimlerin yetersiz olduęu sylenebilir (Maclean ve Law, 2022; Marinucci vd., 2022; Olyani vd., 2021). Oysa genler, ruh saęlıkları ile baęlantılı birok konuyu okulda ve mfredat iinde ęrenmek istediklerini belirtmiřlerdir (Marinucci vd., 2022). Okulların bu konudaki yetersizlięini ortaya koyan alıřmaların yanında ruh saęlığı aısından anahtar bir role sahip olan ruh saęlığı okuryazarlıęına dair eęitimlerin dnyada eřitli okullarda verildięi ve bunun da ğrencilerin ruh saęlığı zerinde olumlu etkiler ortaya koyduęunu gsteren alıřmalar mevcuttur (Choi vd., 2023; Kutcher vd., 2017; Olyani vd., 2021). Okulların ğrenci ruh saęlığına iliřkin desteklerinde/ ruh saęlığı eęitimlerinde psikolojik danıřma ve rehberlik servisleri ile iř birlięinin n planda olduęu da belirtilmiřtir. okamay vd. (2017)

tarafından Türkiye bağlamında yapılan değerlendirmede okullardaki ruh sağlığı hizmetlerinin “rehberlik ve psikolojik danışmanlık” sisteminin içinde yer aldığını belirtilmiştir. Kuzey Kıbrıs bağlamında değerlendirildiğinde de okul rehberlik sistemlerinin Türkiye’dekine benzer bir yapıda olduğu düşünüldüğünde okul ruh sağlığı hizmetlerinde iş birliğine gidilecek ilk birimin okul psikolojik danışma ve rehberlik servisleri olması şaşırtıcı bir sonuç değildir. Ulaşılan sonuçlardan bir diğeri olan öğretmen desteği, gözlemi ve yönlendirmesi de bu iş birliği sürecinde yer alması bağlamında ortaya çıkan daha baskın sonuçları destekler niteliktedir. Ayrıca, okulların öğrencilere sosyal gelişim imkânı sağlayarak da onların ruh sağlığını desteklediği sonucuna ulaşılmıştır.

Öğretmenlerin öğrencileri ile ilgili endişe duydukları ruh sağlığı sorunlarının başında aile kaynaklı sorunlar, içselleştirme ve dışsallaştırma sorunları, öğrenme ve motivasyonel sorunlar ile gelişim dönemine özgü sorunlar ve diğer sorunların olduğu görülmüştür. Son yıllarda araştırmalarda da özellikle boşanma gibi aile kaynaklı sorunların gençlerin ruh sağlığını olumsuz etkilediği (Tullius vd., 2022), bölgelere göre değişse de çeşitli ruh sağlığı sorunlarının yaygınlığının arttığından söz edildiği bilinmektedir (Brown-Epstein, 2022; Ravens-Sieberer vd., 2022; Takahashi, & Honda, 2021). Söz konusu duruma ilişkin yaygınlığın giderek artması da göz önünde bulundurulduğunda bir ülkenin geleceğini oluşturacak olan bireylerin ruhsal açıdan sağlıklı olabilmelerinin önemsenmesi gerektiği ifade edilebilir. Bunun için de öğrenci ile etkileşime giren tüm birimlerin, özellikle öğretmenlerin, öğrencilerin ruh sağlığını koruyucu ve geliştirici çalışmalara odaklanması gerekliliği göz ardı edilmemelidir. WHO (2012) raporunda da okulların ruh sağlığı konusundaki hizmetlerini iyileştirerek öğrencilerinin ruhsal gelişimlerine katkı sunabileceği vurgulanmıştır.

Ortaokul öğretmenlerinin, öğrencilerinin ruh sağlığı sorunu yaşamaları durumunda; davranışsal, iletişimsel, duygusal ve düşünsel, akademik ve ilişkisel işaretler ile diğer bazı işaretler yoluyla bu durumu fark ettikleri sonucuna ulaşılmıştır. Bu kapsamda son yıllarda öğrenci ruh sağlığına ilişkin olumlu etkiler oluşturabilmesi açısından önemli bir beceri olarak görülen ruh sağlığı okuryazarlığının (Jorm vd., 1997) bileşenlerine bakıldığında da bu tür işaretleri tanıyabilmenin ruh sağlığı okuryazarlığı açısından odaklanılan bir şey olduğu görülmektedir (Kutcher vd., 2013). Öğretmenlerin, işaretleri fark etmelerinin yanında bu işaretler karşısında nasıl bir yol izlediklerinin de anlaşılacak bütüncül bir çıkarımda bulunmanın daha önemli olduğu ifade edilebilir. Bu noktada öğrencilerin ruh sağlığı sorunlarını çeşitli işaretlerle fark eden öğretmenlerin ruh sağlığı sorunu yaşayan öğrenci karşısında izledikleri yolun çoğunlukla; rehberlik ve psikolojik danışma servisi başta olmak üzere, aile ve okul içi

diğer partnerlerle iş birliği sağlamak olduğu görülmüştür. Anderson ve Bronstein (2012) de ruh sağlığına ilişkin okulda sağlanan hizmetlerin ekip ruhuyla, yani iş birliği ile gerçekleştirilmesinin önemini yansıtmıştır. Öğretmenlerin ayrıca; aşamalı yardım, öğrenciye doğrudan müdahale, yönlendirme yapma ve müdahalede bulunmama gibi çeşitli yollar izledikleri de ulaşılan diğer sonuçlardır. Bu bağlamda bir öğrencinin ruh sağlığı sorunu yaşaması durumunda öğretmenlerce izlenen standart bir yolun olmadığı ve öğretmenlerin, kendi kişisel yönelimleri doğrultusunda farklılaşan stratejiler izledikleri düşünülebilir. Okul ruh sağlığı hizmetleri ile ilgili standart bir yaklaşımın ortaya koyulabilmesi için de öğretmenlerin ruh sağlığı okuryazarlığı becerilerine odaklanması ve öğrenci ruh sağlığı ile ilgili standartlaştırılmış eğitimlere tabii tutulmalarının yararlı olabileceği kanaatine varılmaktadır (Sibanda vd., 2022).

Öğretmenler ayrıca, öğrencilerin ruh sağlığının korunması ve geliştirilmesinde en çok rehberlik çalışmaları yapıldığını belirtmiştir. Solak vd. (2023) de yaptıkları çalışmada, okul ruh sağlığı hizmetlerinin okul psikolojik danışmanı önderliğinde sağlandığını ancak bu hizmetlerin sadece bu uzmanların yapacağı bir iş olarak görülmemesi gerektiğini ortaya koymuştur. Gerçekten de okullarda ruh sağlığı hizmetlerinin gerçekleştirilmesinde sadece rehberlik hizmetlerinin yeterli olmayacağı göz önünde bulundurulmalı ve bir okul sağlığı ekibi oluşturma gibi iş birliği içeren yapılaşmanın sağlanması önemsenmelidir (Esin ve Dursun, 2014). Neyse ki, öğretmenlerden gelen diğer cevapların; iş birliğine dayalı çalışmalar, okul geneli çalışmaları ve diğer çalışmalar şeklinde olduğu görülmüştür. Bu da niteliği bilinmese bile kısmen de olsa rehberlik hizmetleri dışında hizmetlerin de yapılmaya çalışıldığını ortaya koymuştur.

Öğrenci ruh sağlığına ilişkin okul geneli yapılan çalışmalara ek olarak öğretmenlerin, öğrenci ruh sağlığını koruyabilmek/ruh sağlığı gelişimine katkı sağlayabilmek için yaptıkları çalışmaların; yönlendirme, duygusal, iletişimsel ve davranışsal müdahaleler, iş birliği, eğitsel etkinlikleri zenginleştirme ve pasif bir yaklaşım sergileme şeklinde olduğu görülmüştür. Bu da öğretmenlerin, öğrenci ruh sağlığına ilişkin birtakım çabalar gösterdiklerini yansıtmaktadır, ancak bu çabaların ortak ve kanıta dayalı uygulamaları içermediği anlaşılmaktadır. Deaton vd. (2022), öğretmenlerin öğrenci ruh sağlığını desteklemeye çalıştıklarını ancak, kullandıkları müdahalelerin deneme yanılma şeklinde gerçekleştiğini ortaya koymuştur. Daha önce gerçekleştirilen diğer araştırmalarda da öğretmenlerin, öğrenci ruh sağlığı ile ilgili genellikle sorumluluk almaya çalıştıkları görülmüş olsa da (Beames vd., 2022; Maclean ve Law, 2022; Marunicci vd. 2023) daha tutarlı ve doğru yaklaşımların sergilenebilmesi için ruh sağlığı ve ruh

sağlığı okuryazarlığına ilişkin öğretmen eğitimlerinin sağlanması gerektiği düşünülmektedir (Ekornes, 2017; Marunicci vd., 2023; Pratiwi vd., 2022; Sibanda vd. 2022).

Öğretmenler, öğrencilerin ruh sağlığını koruyabilme hususunda karşılaştıkları engellerin en başında ailesel engellerin yer aldığını belirtmiştir. Sistemsel engeller, idare ve öğretmenlerle ilgili engeller, bağlamsal engeller, fiziksel engeller ve öğrenci ile ilgili engellerin de bu süreçte kendilerini etkilediğini açıklamışlardır. Okul ruh sağlığı ile ilgili 10 farklı ülkede yapılan bir çalışmada ruh sağlığı hizmetlerini engelleyen faktörlerin içinde aile tutumlarına ilişkin faktör en az karşılaşılan engel olarak görülmüştür (Patalay vd., 2016). Bu durum, Kuzey Kıbrıs bağlamında ailelerin hem aile işlevlerini artırma yönünde hem de çocukları ve kendi ruh sağlığı ile ilgili farkındalıklarının artırılması yönünde eğitimlerin planlanmasının yararlı olabileceğini düşündürmektedir. Ayrıca, ailelerin okul aidiyetlerini artırıcı faaliyetlerin de yapılabilceği ifade edilebilir. Yine aynı çalışmada (Patalay vd., 2016) mali yetersizlikler, uzmanlara ve personele dönük yetersizliklerin en önde gelen engeller olduğu görülmüştür. Benzer şekilde Maclean ve Law (2022) da ruh sağlığına ilişkin program desteklerinin yetersizliği ve mali birtakım yetersizlikler gibi sistemsel engeller olduğunu ortaya koymuştur. Sözü edilen bu araştırmalar farklı ülke ve kültürlerde gerçekleştirilmiş olsa da bu çalışmadaki sonuçla tutarlılık göstermektedir. Bu da okul ruh sağlığı sistemleri ile ilgili olarak; okul sisteminden hükümet sistemine kadar birçok farklı sistemin bir arada çalışarak standartlar geliştirmelerinin önemli olabileceğini gözler önüne sermektedir.

Öğretmenlerin büyük bir çoğunluğunun, öğrencilerin ruh sağlığını koruyabilme ve geliştirebilme ile ilgili eğitim almak istedikleri görülmüştür. Ulaşılan bu sonucun daha önceki araştırmalarla paralellik gösterdiği söylenebilir (Kratt, 2018; Osagiede vd., 2018). Öğretmenlerin almak istediklerini belirttikleri eğitimlerin; iletişim odaklı eğitimler, doğrudan ruh sağlığı odaklı eğitimler, gelişim dönemi odaklı eğitimler, akademik gelişim odaklı eğitimler ve diğer eğitimler şeklinde farklılık gösterdiği ortaya çıkmıştır. Bu eğitimlerin bazıları öğrenci ruh sağlığı sınırları dışında olsa da öğretmenlerin, öğrencilerinin ruh sağlığında doğru müdahalelerde bulunabilmeleri için ruh sağlığı bilgilerini artırarak bu yönde çeşitli beceriler kazanabilmesi ve olumlu tutumlar geliştirmesine destek sağlamak önemsenmelidir.

KKTC'deki ortaokul öğretmenlerinin, öğrencilerin ruh sağlığı ile ilgili olarak hem kendileri hem de okul odağında betimledikleri durum göz önünde bulundurulduğunda okul ruh sağlığı hizmetlerinin daha sağlıklı ve kanıta dayalı şekilde yürütülebilmesi için gerekli araştırmaların ve uygulamaların sağlanması gerekmektedir. Birçok ülkede okul ruh sağlığı uygulamalarının önemsendiği, öğretmenlerin kanıta dayalı uygulamalar ve öğrenci ruh sağlığı ile ilgili

farkındalıklarını artırıcı eğitimlere tabii tutulduğu bilinmektedir. Ancak, KKTC’de durumun bu şekilde olmadığı görülmektedir. Bu da bu konu ile ilgili hizmet içi öğretmen eğitimlerinin önemszenmesi gerekliliğini doğurmaktadır. Ayrıca, okul ruh sağlığı ile ilgili yukarıda betimlenen tabloda da görüldüğü gibi öğrencilerin hayatında aktif olan ailelerin de öğrenci ruh sağlığı ve okul ruh sağlığı faaliyetlerine dahil edilmesinin önemli olduğu ifade edilebilir.

Kuzey Kıbrıs’taki ortaokul öğretmenlerinin öğrenci ruh sağlığına ilişkin rolleri ve okulun rollerine ilişkin görüşlerinin bu araştırma kapsamında ortaya koyulması ile birlikte araştırmacıların; keşfedici nitelikte olan bu araştırma doğrultusunda uygulamaya dönük çalışmalar planlamasının teoriye ve uygulamaya katkılar sunacağı düşünülmektedir.

Dönüşümsel Liderlik İle Öğretmen İyi Oluşu Arasındaki İlişki: Malatya İli Örneği

Ramazan Özkul

Harran Üniversitesi Eğitim Fakültesi, TÜRKİYE,

e-mail: ramazanozkul@harran.edu.tr, Orcid No: 0000-0001-9757-6062

Özet

Bu çalışmada dönüşümcü liderlik ile öğretmen iyi oluşu arasındaki ilişki incelenmektedir. Bu bağlamda nicel araştırma yöntemlerinden ilişkisel tarama modeli kullanılmıştır. Araştırmanın evrenini Malatya ilinde görev yapan 13200 öğretmen oluşturmaktadır. Evrenden basit rastgele örnekleme yöntemi ile seçilen 340 öğretmen araştırmanın örneklemini oluşturmuştur. Araştırmada dönüşümcü liderlik ölçeği ve öğretmen iyi oluşu ölçeği kullanılmıştır. Veri toplama süreci WhatsApp üzerinden Google form aracılığıyla elde edilmiştir. Araştırmanın analizinde veriler normal dağılım gösterdiğinden betimsel istatistikler ve Pearson korelasyon analizi yapılmıştır. Araştırma bulgularına göre dönüşümcü liderlik ve öğretmen iyi oluşu algılarının orta düzeyde olduğu belirlenmiştir. Dönüşümcü liderlik ve öğretmen iyi oluşu arasında orta düzeyde anlamlı ve pozitif bir ilişki belirlenmiştir. Okullarda dönüşümsel liderlik becerilerini artırmak için yöneticilere yönelik eğitim programları düzenlenmelidir. Bu eğitimler, liderlere vizyon geliştirme, inovasyon ve çalışan motivasyonu konusunda yetkinlik kazandırmayı hedeflemelidir.

Anahtar Kelimeler: dönüşümsel liderlik, öğretmen, iyi oluş

The Relationship Between Transformational Leadership and Teacher Well-being: Malatya Province Example

Abstract

This study examines the relationship between transformational leadership and teacher well-being. In this context, the relational screening model, one of the quantitative research methods, was used. The universe of the research consists of 13200 teachers working in Malatya province. 340 teachers selected from the universe by simple random sampling method constituted the sample of the research. Transformational leadership scale and teacher well-being scale were used in the research. Data collection process was obtained via Google form via WhatsApp. Since the data showed normal distribution in the analysis of the research, descriptive statistics and Pearson correlation analysis were performed. According to the research findings, it was determined that the perceptions of transformational leadership and teacher well-being were at a moderate level. A significant and positive relationship was determined between

transformational leadership and teacher well-being at a moderate level. Training programs should be organized for administrators to increase transformational leadership skills in schools. These trainings should aim to provide leaders with competence in vision development, innovation promotion and employee motivation.

Keywords: transformational leadership, teacher, well-being

Giriş

Öğretmen iyi oluşu, "meslektaşlar ve öğrencilerle iş birliği içinde yaratılan kişisel mesleki tatmin, memnuniyet, amaçlılık ve mutluluk duygusu" olarak tanımlanmıştır (Acton ve Glasgow, 2015: 102). İyi oluşun geniş bir yelpazesi ve birçok boyutu vardır (Hascher ve Waber, 2021). Okul liderliği, öğretmen iyi oluşunun önemli faktörlerinden biri olarak tanımlanmıştır (Leithwood vd., 2020; Liu vd., 2022). Langford ve Crawford'a (2022) göre, okul liderliğinden gelen destek öğretmenlerin iyi oluşunu artırır. Örneğin, eğitimci iyi oluşu, olumlu ve olumsuz olarak değerlendirilen duygusal sağlık, motivasyon ve katılımı ilgili öznel deneyimlerden oluşur (Day ve Qing, 2009). İyi oluşun çok boyutlu yapısı nedeniyle, işyeri ve eğitimci iyi oluşu çalışmaları genellikle içerik geçerliliğini artırmak için yapıyı birden fazla ölçekle değerlendirir (Floman vd., 2024). Dönüşümcü liderlerin daha fazla olumlu duyguyu örgüte ve çalışanlarına yaymaları ve olumsuz duyguların bulaşmasını yönetmeleri nedeniyle daha fazla iyi oluş deneyimlemeleri muhtemeldir (Griffith vd., 2015). Böylece liderler, eğitimcilerin iyi oluşunu destekleyen olumlu duygularla daha dolu bir okul iklimi oluşturabilirler (Mahfouz vd., 2019). Olumlu duygular, yaratıcı problem çözmeyi, işbirliğini, iş performansını ve iyi oluşu destekleyebilen psikolojik kaynaklardır (Diener vd., 2020; Lyubomirsky vd., 2005). Öğretmenliğin stresli bir meslek olduğu düşünüldüğünde, iyi oluş, etkili bir öğretim süreci yaratmanın kritik bir yönü olarak vurgulanmaktadır (Yeh ve Barrington, 2023). Araştırmalar, iyi oluşun iyileştirilmesini desteklediğini göstermektedir (Richter vd., 2022). Eğitimde kaliteli öğretim ve personele olan talep artmaktadır (UNESCO, 2023). Bu durum öğretmen iyi oluşunu eğitim çalışanlarının endişelerinden biri haline getirmektedir (Granziera vd., 2023). Güncel gelişmeler, stres ve tükenmişliğin öğretime karşı olumsuz tutumlara yol açabilmesi nedeniyle, genel iyi oluşun kaliteli eğitime ulaşmak için önemli olduğunu göstermektedir (Jeon vd., 2022). Öğretmen iyi oluşunu teşvik etme sorumluluğu yalnızca okullara ve okul sorumluluklarına değil, aynı zamanda bir bütün olarak topluma aittir (Yeh ve Barrington, 2023). Dönüşümcü liderler, astları için bir model olmaya çalışır ve onları özgüven, vizyon ve karizma ile etkileyerek bir değişim arzusu geliştirirler (İnandı ve Gılıç, 2021). Bu nedenle, yeniliği araştıran, değişimi başlatan ve ihtiyaçları karşılayan dönüşümcü liderliğin özellikleri, bir

örgütün hayatta kalması için önemlidir (Mokhber vd., 2011). Dönüşümcü liderler, çalışanlar için yalnızca rol model olmakla kalmaz, aynı zamanda motivasyonlarını da destekler (Rehman vd., 2012). Eğitimin artan karmaşıklığı, teknolojik gelişmeler ve öğrenci nüfusunun değişen doğası, okulları ve eğitimcileri, özellikle öğretmenleri, öğrencilerin eğitim sorunlarını ve ihtiyaçlarını etkili bir şekilde ele almak için yenilikçi stratejiler kullanmaya zorlamaktadır. Bu koşullar altında, öğretmenleri okul ve sınıf içinde yenilik ve değişim için teşvik etmeyi ve motive etmeyi amaçlayan dönüşümsel okul liderliği kaçınılmaz görünmektedir (Polatcan vd., 2024).

Bu çalışma, dönüşümsel liderlik ile öğretmen iyi oluşu arasındaki ilişkiyi incelemektedir. Bu amaçla, aşağıdaki sorulara yanıt aranmıştır:

1. Dönüşümsel liderlik ve öğretmen iyi oluşu düzeyi nedir?
2. Dönüşümsel liderlik ile öğretmen iyi oluşu arasında bir ilişki var mıdır?

Yöntem

Dönüşümcü liderlik ile öğretmen iyi oluşunun birlikte değişip değişmediği, değişiyorsa nasıl gerçekleştiği belirlenmeye çalışılırken ilişkisel tarama modeli tercih edilmiştir. İlişkisel araştırmalarda iki veya daha fazla değişken arasındaki ilişkiler belirlenerek neden-sonuç ilişkisi ortaya çıkarılır (Creswell, 2014; Fraenkel ve Wallen, 2009). Araştırmanın evrenini Malatya ilinde görev yapan 13200 öğretmen oluşturmaktadır. Evrenden basit rastgele örnekleme yöntemi ile seçilen 340 öğretmen araştırmanın örneklemini oluşturmuştur. Araştırmada dönüşümcü liderlik ölçeği ve öğretmen mutluluk ölçeği (teacher well-being) kullanılmıştır. Veri toplama işlemi WhatsApp üzerinden Google form aracılığıyla elde edilmiştir. Araştırmanın analizinde veriler normal dağılım gösterdiğinden betimsel istatistikler ve Pearson korelasyon analizi yapılmıştır. Berger vd. (2012) tarafından geliştirilen ve Okan ve Okan (2021) tarafından Türkçeye uyarlanan 8 maddelik dönüşümcü liderlik ölçeği kullanılmıştır. Bu araştırmada Cronbach alfa değeri 0,92 olarak bulunmuştur. Demo ve Paschoal (2013) tarafından geliştirilen ve Arslan ve Polat (2017) tarafından Türkçeye uyarlanan 29 maddelik Öğretmen Mutluluk Ölçeği (Teacher Well-Being) kullanıldı. Bu çalışmada Cronbach alfa değeri 0,90 dır. Çalışmaya katılan öğretmenlerin demografik bilgileri Tablo 1'de verilmiştir.

Tablo 1: Öğretmenlerin Demografik Özelliklerine Göre Frekans ve Yüzde Dağılımı (n = 340)

Değişken	Gruplar	f (Frekans)	% (Yüzde)
Cinsiyet	Kadın	220	64.7
	Erkek	120	35.3

Öğrenim Düzeyi	Lisans	260	76.5
	Lisansüstü	80	23.5

Değişken	Gruplar	f (Frekans)	% (Yüzde)
Kıdem (Yıl)	1-5	50	14.7
	6-10	80	23.5
	11-15	99	29.4
	16	111	32.4
Sınıf Mevcudu	10-30	240	70.5
	31 ve üzeri	100	29.5

Araştırma örneklemindeki öğretmenlere ait demografik bilgiler Tablo 1'de gösterilmiştir. Tablo 1 incelendiğinde öğretmenlerin 220'si kadın, 120'si erkektir. Lisans derecesine sahip 260 öğretmen ve yüksek lisans derecesine sahip 80 öğretmen bulunmaktadır. Kıdem yıllarına göre dengeli bir dağılım olduğu görülmektedir. Sınıf mevcudu değişkenine göre öğrencilerin çoğunluğu 30'dan az öğrencisi olan sınıflarda eğitim görmektedir.

Bulgular

Çalışmanın amacı ve araştırma sorusu doğrultusunda dönüşümsel liderlik ve öğretmen iyi oluşu ile ilgili betimsel istatistikler Tablo 2'de sunulmuştur.

Tablo 2: Öğretmenlere İlişkin Betimsel İstatistikler (n = 340)

Değişken	Aritmetik Ortalama (Ao)	Standart Sapma (Ss)	Min. Değer	Max. Değer	Düzye
Dönüşümcü Liderlik	3.10	0.70	1.20	4.90	Orta
Öğretmen İyi Oluşu	3.05	0.65	1.10	4.85	Orta

Tablo 2 incelendiğinde araştırma örneklemindeki öğretmenlerin dönüşümsel liderlik algılarına ilişkin hesaplanan aritmetik ortalama puanının 3,10, standart sapmasının ise 0,70 olduğu görülmektedir. Ayrıca ölçekten alınan en düşük puan 1,20, en yüksek puan ise 4,90'dır (Ölçek aralığı: 1-5). Bu değerler dönüşümsel liderlik düzeyinin orta düzeyde olduğunu göstermektedir. Bu bulgu, okul yöneticileri arasındaki liderlik yaklaşımının öğretmenler tarafından genel olarak orta düzeyde dönüşümsel olarak algılandığını göstermektedir.

Benzer şekilde öğretmen iyi oluş düzeyine ilişkin aritmetik ortalama puanı 0,65 standart sapma ile 3,05'tir. Ölçekten alınan en düşük puan 1,10, en yüksek puan ise 4,85'tir (Ölçek aralığı: 1-5). Bu sonuçlar öğretmenlerin iyi oluşunun orta düzeyde olduğunu göstermektedir.

Bu durum, öğretmenlerin iş yaşamlarında bazı olumlu yönler deneyimlerken, genel iyi oluşlarını artırmak için hala iyileştirilmesi gereken alanlar olduğunu yansıtabilir.

Çalışmanın amacı ve araştırma sorusu doğrultusunda dönüşümsel liderlik ile öğretmen iyi oluşu arasındaki ilişkiler Tablo 3'te sunulmuştur.

Tablo 3: Dönüşümsel Liderlik ile Öğretmen İyi oluşu Arasındaki Korelasyon

Değişken	1	2
1. Dönüşümcü Liderlik	-	
2. Öğretmen İyi Oluşu	0.58*	-

* $p < 0.05$

Tablo 3'ten görüldüğü üzere dönüşümsel liderlik ile öğretmen iyi oluşu arasında pozitif ve anlamlı bir ilişki bulunmaktadır ($r=0,58$, $p<0,05$). Bu durum okul yöneticilerinin dönüşümsel liderlik uygulamaları arttıkça öğretmenlerin iyi oluş düzeylerinin de arttığını göstermektedir.

Tartışma, Sonuç ve Öneriler

Araştırma bulguları öğretmenlerin dönüşümsel liderliğe ilişkin algılarının orta düzeyde olduğunu göstermektedir ($Ao=3.10$; $Ss=0.70$). Bu sonuç okul yöneticilerinin liderlik stillerinin öğretmenler tarafından orta düzeyde dönüşümsel olarak algılandığını ortaya koymaktadır. Literatürde dönüşümsel liderliğin çalışanların motivasyonunu artırarak ve örgütsel değişimi teşvik ederek okul iklimi üzerinde olumlu etkiler yarattığı belirtilmektedir (İnandı ve Gılıç, 2021; Mokhber vd., 2011). Ayrıca dönüşümsel liderlerin olumlu duygular yayarak öğretmenlerin iyi oluşunu desteklediği belirtilmektedir (Griffith vd., 2015; Mahfouz vd., 2019). Bu bağlamda orta düzeyde algılanan dönüşümsel liderlik uygulamalarının okul ortamında öğretmen iyi oluşuna katkı sağladığı söylenebilir. Öğretmen iyi oluş düzeyinin de orta düzeyde olması ($Ao= 3.05$; $Ss= 0.65$), öğretmenlerin iş yaşamlarında belirli olumlu deneyimler yaşadıklarını ancak hala geliştirilmesi gereken alanlar olduğunu göstermektedir. Özellikle öğretmenlik mesleğinin stresli yapısı göz önüne alındığında (Yeh ve Barrington, 2023), etkili öğretim süreçleri için iyi oluşu desteklemek kritik öneme sahiptir. Korelasyon sonucu ($r = 0.58$, $p < 0.05$), dönüşümsel liderlik ile öğretmen iyi oluşu arasında pozitif ve anlamlı bir ilişki olduğunu ortaya koymaktadır. Bu, liderlik yaklaşımlarının öğretmenlerin duygusal sağlık, motivasyon ve iş tatmini gibi iyi oluş bileşenlerini güçlendirdiğini göstermektedir. Sonuçlar, literatürde liderlik ile iyi oluş arasındaki ilişkileri desteklemekte ve okul yöneticileri tarafından dönüşümsel liderlik özelliklerinin geliştirilmesinin öğretmen iyi oluşunu artırabileceğini doğrulamaktadır (Leithwood vd., 2020; Liu vd., 2022).

Okullarda dönüşümsel liderlik becerilerini artırmak için yöneticilere yönelik eğitim programları düzenlenmelidir. Bu eğitimler, liderlere vizyon geliştirme, inovasyon teşviki ve çalışan motivasyonu konusunda yetkinlik kazandırmayı hedeflemelidir. Öğretmen iyi oluşunu destekleyen sosyal ve psikolojik destek mekanizmaları geliştirilmelidir. Özellikle stres yönetimi, iş-yaşam dengesi ve iş tatminini artırmak için kapsamlı programlar uygulanmalıdır. Böylece öğretmenlerin mesleki performansı ve genel iyi oluşu artırılabilir.

Özet

İklim değişikliği, insanlığın bugün karşı karşıya olduğu en ciddi tehditlerden biridir. Sanayi Devrimi'nden bu yana hızla artan CO2 seviyeleri ve buna bağlı küresel sıcaklıktaki artış, Dünya genelinde küresel ısınmaya yol açmıştır. Dünya Sağlık Örgütü' ne (DSÖ) göre, 2030 ile 2050 yılları arasında iklim değişikliğinin yalnızca yetersiz beslenme, sıtma, ishal ve ısı stresinden dolayı yılda yaklaşık 250.000 ek ölüme neden olabileceğini belirtmiştir. Aşırı iklim olaylarının bir etkisi olarak ortaya çıkan felaketler, fiziksel yaralanmalar, yaşam yerinin değişmesi, insanların, canlıların ve doğal çevrenin kaybı gibi faktörlerin bireylerin fiziksel sağlığı kadar ruh sağlığını da önemli ölçüde etkileyeceği düşünülmektedir. İklim değişikliğine uzun vadede maruz kalan bireylerde anksiyete, depresyon, intihar düşünceleri, uyku bozukluğu, akut stres reaksiyonları, travma sonrası stres bozuklukları gibi ruhsal bozuklukların ve keder/ yas gibi reaksiyonların görüldüğü yapılan çalışmalarda bildirilmiştir. Benzer şekilde, iklim değişikliğinin yetişkinler kadar çocukları da etkilediği ve çocukların psikolojik iyi oluşu üzerinde hem doğrudan hem de dolaylı olarak etki ederek strese yol açtığı, erken çocukluk gelişimi için önemli bir tehdit oluşturduğu ve bazı ruhsal bozukluklara zemin hazırladığı bildirilmiştir. Çünkü çocuklar fizyolojik, gelişimsel, bilişsel, davranışsal ve sosyal faktörler nedeniyle iklim değişikliğinin etkilerine karşı daha savunmasızlardır. Bu konuda acil bir eylem bulunmazsa, bugünün çocuklarının ve gelecek nesillerin sağlığı tehlikeye girecektir. Bu nedenle, iklim değişikliğinin çocukların psikolojik iyi oluşlarına etkisinin belirlenmesi, iklim değişikliği ve çevre dostu uygulamalar hakkında genel bilgi sağlanması, koruyucu önlemlere yönelik araştırmaların planlanması ve uyarlanabilir stratejilerin geliştirilmesi ve özellikle ruh sağlığı bağlamında iklim değişikliğinden kaynaklanan sağlık zorluklarına karşı disiplinler arası işbirliğinin sağlanması oldukça önemlidir.

Anahtar Sözcükler: Çocuklar, iklim değişikliği, psikolojik iyi oluş, ruh sağlığı

The Impact of Global Climate Change on Children's Psychological Well-Being: A Review Study

Abstract

Climate change is one of the most serious threats humanity faces today. The rapidly increasing CO₂ levels since the Industrial Revolution and the resulting increase in global temperatures have led to global warming worldwide. According to the World Health Organization (WHO), climate change could cause approximately 250,000 additional deaths per year between 2030 and 2050 due to malnutrition, malaria, diarrhea, and heat stress alone. It is thought that factors such as disasters, physical injuries, change of habitat, and loss of people, living things, and the natural environment that occur as a result of extreme climate events will significantly affect the mental health of individuals as well as their physical health. Studies have reported that individuals exposed to climate change in the long term experience mental disorders such as anxiety, depression, suicidal thoughts, sleep disorders, acute stress reactions, post-traumatic stress disorders, and reactions such as grief/mourning. Similarly, it has been reported that climate change affects children as well as adults and causes stress by affecting children's psychological well-being both directly and indirectly, poses a significant threat to early childhood development and paves the way for some mental disorders. Because children are more vulnerable to the effects of climate change due to physiological, developmental, cognitive, behavioral and social factors. If urgent action is not taken in this regard, the health of today's children and future generations will be at risk. Therefore, it is very important to determine the effects of climate change on children's psychological well-being, to provide general information about climate change and environmentally friendly practices, to plan research on protective measures and to develop adaptive strategies, and to ensure interdisciplinary cooperation against health challenges arising from climate change, especially in the context of mental health.

Keywords: Children, climate change, mental health, psychological well-being

Giriş

İklim değişikliği, insanlığın bugün karşı karşıya olduğu en ciddi tehditlerden biridir ve atmosferi, okyanusu ve karayı ısıtan Dünya iklimindeki uzun vadeli değişiklikler olarak tanımlanmaktadır (Sangervo ve ark., 2022). DSÖ dahil olmak üzere küresel sağlık liderleri iklim krizinin bir sağlık krizi olduğunu kabul etmektedirler (DSÖ, 2022; Lawrance ve ark., 2022). Hükümetler arası iklim değişikliği paneli (IPCC) raporları, artan küresel ısınmanın insan sağlığı için felaket olabileceğini belirtmektedir (IPCC, 2018). Sanayi Devrimi'nden bu yana, hızla yükselen CO₂ seviyeleri ve buna bağlı küresel sıcaklıktaki artış, Dünya'daki küresel

ısınmaya katkıda bulunmuştur (Hessen ve Vandvik, 2022). Dünyanın yüzey sıcaklığı şu anda sanayi öncesi dönemlere göre yaklaşık 1,2°C daha artmıştır ve 2011-2020 yılları, kayıtlardaki en sıcak on yıl olmuştur (Jones, 2022). Bu durumda beraberinde pek çok sağlık sorununu getirmiştir. Dünya Sağlık Örgütü'nün tahminlerine göre, iklim değişikliği 2030 ile 2050 yılları arasında her yıl 250.000'den fazla ölüme yol açacaktır (DSÖ, 2022).

İklim değişikliğinin fiziksel sağlık üzerindeki olumsuz etkileri bilinirken, ruh sağlığı üzerindeki etkileri daha az belgelenmiş olup, ilgili incelemeler son yıllarda artış göstermektedir (Lawrance ve ark., 2022) Ruhsal sağlık yalnızca ruhsal hastalıkları, ruhsal sorunları ve ruhsal bozuklukları ifade etmez, aynı zamanda ruhsal iyilik halini, psikolojik dayanıklılığı ve psikolojik iyi oluş hallerini de içermektedir (Trautmann ve ark., 2016). Psikolojik iyi oluş, insan refahını şekillendiren sosyal ve psikolojik koşullar arasındaki etkileşimdir ve ruhsal olarak sağlıklı olmak olarak tanımlanmaktadır (Lawrance ve ark., 2022).

Giderek artan sayıda araştırma, iklim değişikliğinin insan sağlığı, özellikle de ruhsal sağlık üzerindeki etkilerini öne sürmektedir (Hayes ve ark., 2018). Bu araştırmalara göre, yaygın anksiyete bozukluğu (YAB) ve majör depresif bozukluk (MDB) gibi ruhsal bozuklukların daha yüksek oranda görüldüğü belirtilmektedir. Dahası, bazı araştırmalar, artan sıcaklıkların mevcut ruhsal sorunları daha da kötüleştirebileceğini ve intihar düşünceleri ve eylemlerini artırabileceğini göstermektedir (Schwartz ve ark., 2023).

Benzer şekilde, iklim değişikliğinin yetişkinler kadar çocukları da etkilediği ve çocukların psikolojik iyi oluşu üzerinde hem doğrudan hem de dolaylı olarak etki ettiği ve bazı ruhsal bozukluklara zemin hazırladığı bildirilmiştir. Çünkü çocuklar, fiziksel, nörolojik, psikolojik ve sosyal olarak büyüdüleri bir dönemde iklim değişikliğinin doğrudan etkilerinden orantısız bir şekilde etkilenmektedirler. Araştırmalar, küçük çocukların iklim değişikliğinin dolaylı sonuçlarından (çevresel kaygı gibi) en çok etkilenen grup olduğunu göstermiştir. Bu durum, sosyal /psikolojik sağlık, psikolojik iyi oluşa zarar verebilir ve halihazırda bu ruhsal sorunları olan çocukların sağlık durumunu daha da kötüleştirebilir (Hickman ve ark., 2021). Çocuklar sıcak hava dalgalarına karşı özellikle savunmasızdır ve kuraklığın getirdiği gıda kıtlığı çocukların beslenmesi ve sağlığı üzerinde olumsuz bir etkiye sahiptir. Küçük çocuklar aşırı hava koşullarını korkutucu ve üzücü bulabilir ve bu da duygusal ve psikolojik sağlıklarını etkileyebilir (Bhamani ve ark., 2023). Özellikle araştırmacılar, küresel çevre sorunlarına karşı bilinçlenmede geç çocukluk ve erken ergenliğin hayati önem taşıdığını savunmaktadırlar (Blanchet-Cohen, 2008). Ayrıca, yapılan çalışmalar iklim değişikliğinin çocukların ruh sağlığı ve psikolojik iyi oluşları üzerinde olumsuz etkisinin olduğunu göstermektedir (Trott, 2022). Araştırmacılar iklim değişikliğini bir stres faktörü olarak tanımaya ve insanların bu stresörle

nasıl başa çıktıklarının belirlenmesinin psikolojik iyi oluş için önemli olabileceğini belirtmektedirler (Stokols ve ark., 2009). Bu nedenle, iklim değişikliğinin çocukların psikolojik iyi oluşlarını, ruh sağlıklarını ve güvenliğini nasıl etkilediğinin belirlenip etkili bir şekilde ele alınabileceğini anlamak önemlidir. Bu derleme çalışmasında, küresel iklim değişikliğinin çocukların psikolojik iyi oluşlarını nasıl etkilediği hakkında bilinenler açıklanmakta ve sorunu ele almak için bir dizi halk sağlığı politikası önerilmektedir.

İklim Değişikliği ve Çocuklarda Psikolojik İyi Oluş

Aşırı iklim olaylarının bir etkisi olarak ortaya çıkan felaketler, insanların, canlıların ve doğal çevrenin kaybı, fiziksel yaralanmalar, yaşam alanının değişmesi ruh sağlığını önemli ölçüde etkilemektedir. İklim değişikliği ile ruh sağlığı arasındaki ilişki dikkat çekmektedir (Lawrance ve ark., 2022). Dünyanın dört bir yanındaki topluluklar, iklim değişikliği nedeniyle endişe, zorunlu göç, umutsuzluk, öfke, keder, korku ve güçsüzlük duygularından bahsetmişlerdir (Middleton ve ark., 2020). Uzun vadede, maruz kalan bireylerde ise artan anksiyete ve duygu durum bozuklukları, uyku bozukluğu, akut stres reaksiyonları, travma sonrası stres bozuklukları, depresyon, intihar düşünceleri, benlik ve kimlik duygusunda azalma, keder/yas reaksiyonları, alkol ve madde kullanım bozukluklarında artış olduğu bildirilmektedir (Charlson ve ark., 2021; Clayton, 2020; Lawrance ve ark., 2022;). Çocuklar, gençler, yaşlı bireyler, hamile kadınlar, kronik rahatsızlıkları olanlar dahil olmak üzere çoğu nüfus grubunun bu bozukluklar için risk altında olduğu kabul edilmiştir (Charlson ve ark., 2021). İklim değişikliğinin çocuklar üzerindeki olumsuz sağlık etkileri doğum öncesi dönemde başlar. Çalışmalar, annenin iklim değişikliğine maruz kalması ile erken doğum, düşük doğum ağırlığı ve nörolojik gelişim riski arasında güçlü ilişkiler olduğunu bildirmektedirler (Johnson ve ark., 2021). İklim değişikliğinin çocukların ruh sağlığı ve psikolojik iyi oluşu üzerindeki ana etkisinin şiddetli aşırı hava olaylarının artması olduğu belirtilmektedir. Çocuklar, aile stresine, sosyal destek sistemlerinin zarar görmesine, evlerin ve toplulukların yerinden edilmesine neden olan iklim değişikliğinin etkilerine karşı özellikle savunmasız gruplardır. Özellikle bu gruplarda bağlanma bozuklukları, fobiler, anksiyete, panik ataklar ve depresyon gibi ruh sağlığı sorunları geliştirme riskinin olduğu belirtilmektedir (Burke ve ark., 2018).

İklim değişikliğinin etkilerini hem yerel hem de dünya çapında görmek, bu etkileri kontrol edememe hissi ve iklim değişikliğinin şekillendirdiği bir geleceğin ne getireceğinden emin olamamak da sıkıntı ve kaygıya yol açmaktadır (Clayton, 2020). İklim değişikliğinin gelecekteki tehdidine ilişkin algıları inceleyen araştırmalar, birçok insanın şu anda herhangi bir günlük tehdit ile karşı karşıya olmasalar bile yoğun bir şekilde endişeli olduğunu bildirmiştir (Clayton, 2020; Hayes ve ark., 2018). Bu tür olaylara doğrudan veya medya aracılığıyla maruz

kalmak, bireylerin varoluşsal güvenlik algısını yok etmekte ve ruhsal iyilik hallerini olumsuz etkilemektedir. Küresel iklim değişikliğine bağlı olası felaketlerin her geçen gün yaklaştığını verilerle ortaya koyan iklim krizi tartışmaları, geleceğe ilişkin olumlu inancın bozulmasına ve bireylerde temel güven duygusunun sarsılmasına yol açmıştır (Stewart, 2021). Çocuklar iklim değişikliğinin bir sonucu olarak daha fazla iklim kaygısı yaşarlar ve bu duygular öfke, korku, üzüntü, umutsuzluk, endişe, suçluluk, utanç içerebilir. İklim kaygısı (iklim değişikliğinin etkilerinden gerçek veya beklenen korku olarak tanımlanır) özellikle iklimle ilgili olaylara doğrudan maruz kalan çocuklar arasında küresel bir endişe olarak ortaya çıktığı belirtilmektedir (White ve ark., 2023). İklim değişikliği, çocukların iyi oluşu üzerinde hem doğrudan hem de dolaylı olarak kümülatif stres oluşturarak erken çocukluk gelişimi için önemli bir tehdit oluşturmaktadır (Clayton, 2020; Lawrance ve ark., 2022). Dolaylı maruz kalma da aynı derecede zararlı olabilir. Çünkü iklim değişikliğinin etkileriyle ilişkili kronik stres, çocukların duygusal gelişimi üzerinde uzun vadeli etkilere sahip olabilir (Leger-Goodes ve ark., 2023). Araştırmalar sekiz yaşın altındaki çocukların iklim değişikliği hakkında hem bilgi hem de endişeye sahip olduğunu göstermektedir (Spiteri ve Pace, 2023). Çocukların iklim değişikliğine uzun süreli maruz kalması beyin gelişimini ve işlevini etkileyerek öğrenme güçlüklerine, dikkat eksikliklerine ve hafıza kaybına yol açabilir (Watts ve ark., 2019). İklim değişikliğinden en az sorumlu olan çocuklar, bunun sonuçlarına en uzun süre katlanmak zorunda kalacaklardır. Özetle, iklim değişikliğinin çocuk ruh sağlığı ve psikolojik iyi oluşu üzerindeki çok boyutlu etkilerini değerlendirmek oldukça zor olsa da, bu konuda mevcut literatür verileri gün geçtikçe artmaktadır. Ancak, iklim değişikliğinin çocuk ruh sağlığı ve psikolojik iyi oluşu üzerine etkilerinin daha iyi anlaşılması için daha iyi kanıtlara ve araştırmalara ihtiyaç vardır.

İklim Değişikliğinin Etkileri İle Başa Çıkma

Başa çıkmanın birçok temel yönü farklı yaş gruplarında benzer olsa da, yetişkinlerin ve çocukların stres ve tehditlerle başa çıkma biçimleri arasında bazı farklılıklar vardır. Dahası, çocuklar ve ergenler kendi davranışları üzerinde yetişkinler kadar kontrol sahibi değildirler. Örneğin, ebeveynleri tarafından kısıtlanırlar ve bu nedenle yetişkinlerden daha az sıklıkla sorun odaklı başa çıkma kullanma eğilimi vardır (Ojala, 2012). Bir bireyin toplumsal tehditlerle başa çıkma biçimi, yalnızca psikolojik iyi oluşu üzerinde değil, aynı zamanda sosyal katılımı üzerinde de etkili olabileceği belirtilmiştir (Van Zomeren ve ark., 2019). İklim eylemi ve duygusal destek için olası yol ailedir. Birincil sosyalleşme araçları olarak ebeveynler, özellikle çevre dostu davranışlar için rol model olarak hareket ederek çocuklarının çevresel algılar ve davranışlar geliştirmesini desteklemede önemli rol oynarlar (Dayton ve ark., 2023; Jackson ve ark., 2024). Kanıtlar, iklim değişikliği hakkında düzenli ebeveyn-çocuk sohbetlerinin,

çocukların iklimle ilgili duygular arasında gezinmesine yardımcı olabileceğini göstermektedir (Dayton ve ark., 2023; Jackson ve ark., 2024; Leger-Goodes ve ark., 2023). Özellikle, ebeveynler çocuklarının çevresel katılımı için katalizör veya bariyer görevi görebilir ve potansiyel olarak iklim krizi ortasında çocukların duygusal refahını etkileyebilirler (Leger-Goodes ve ark., 2023). Bu tür etkiler aynı zamanda iki yönlüdür ve kanıtlar çocukların da ebeveynlerinde çevresel endişeyi teşvik edebileceğini doğrulamaktadır (Spiteri ve Pace, 2023). Birçok ebeveyn, çocuklarıyla iklimle ilgili konular hakkında konuşmakta zorluk çekmektedir (Dayton ve ark., 2023; Jackson ve ark., 2024; Spiteri ve Pace, 2023). 8-12 yaş aralığındaki çocukların ebeveynleriyle yapılan bir çocuk-ebeveyn araştırması, ebeveynlerin çocuklarıyla iklim değişikliği ve iklim duyguları hakkında konuşmaya istekli olmalarına rağmen, bu tür konuşmaların ebeveynlerin iklim değişikliğine karşı duygusal tepkileri nedeniyle engellendiği belirtilmiştir (Leger-Goodes ve ark., 2023). Amerika Birleşik Devletleri'nde 6-17 yaş aralığındaki çocukların ebeveynleriyle yapılan bir araştırma da, ebeveynlerin çocuklarına yaşlarına uygun bilgiler kullanarak iklim değişikliği hakkında bilgi verdiklerini, ancak bazı zorluklar da yaşadıklarını bildirmiştir (Dayton ve ark., 2023). İngiltere'de Jackson ve arkadaşları (2024), 5-11 yaş aralığındaki çocukların ebeveynlerinin çocuklarıyla iklim değişikliği hakkında konuştuklarını ve iklim kaygısını iklim eylemine dönüştürmek için faaliyetlerde bulunduklarını, ancak bu tür egzersizlerin ebeveynler için çok kolay olmadığını belirtmiştir. Daha da önemlisi, ebeveynlerin erken çocukluk döneminde iklimle ilgili duygulara nasıl tepki verdiklerini destekleyen çok az çalışma bulunmaktadır (Dayton ve ark., 2023; Jackson ve ark., 2024; Leger-Goodes ve ark., 2023). İklim değişikliğinin etkileriyle başetmede sağlık çalışanlarına da büyük sorumluluklar düşmektedir. Sağlık çalışanları, sağlığın geliştirilmesi ve davranış değişikliklerindeki uzmanlıklarını bireyler, aileler ve toplumların iklim değişikliğinin sağlık üzerindeki etkilerini azaltacak önlemler almaları için kullanabilirler (Özsoy ve Ateş, 2021). Bu konuda yapılan bir çalışmada, sağlık çalışanlarının iklim değişikliğinin sağlık üzerindeki etkilerini azaltma, önleme ve müdahale etmede benzersiz bir konumda oldukları bildirilmiştir. Bunun nedenleri olarak; sağlık çalışanlarının iklim değişikliğinden önemli ölçüde etkilenen savunmasız gruplara bire bir hizmet verdikleri ve bu konuda güvenilir kişiler oldukları olarak bildirilmiştir (Butterfield ve ark., 2021). Bu kapsamda, sağlık çalışanlarının temel misyonunun toplumun ruh sağlığı açısından sorun ve tehdit teşkil eden iklim değişikliğine karşı bireylerin ruh sağlığını korumak ve bu konuda farkındalık geliştirmek olduğu düşünülmektedir. Bununla birlikte, sağlık çalışanları, iklim değişikliğinin ruh sağlığı ve psikolojik iyi oluş üzerine etkileriyle ilgili kapsayıcı eğitimler düzenlemeli ve çocuklar, kadınlar gibi risk grubunda olan kişilere yönelik iklim değişikliği ile ruh sağlığı ve

psikolojik iyi oluş ilişkisini anlatmalı ve koruyucu önlemler almalarını sağlamalıdır. Çünkü, sağlık çalışanları, toplumda iklim değişikliği hakkında bilinç oluşturma ve bireyleri sağlıklı yaşam alışkanlıkları konusunda eğitme sorumluluğunasahiptirler. Özellikle çocuklar gibi savunmasız gruplar, iklim değişikliğinden daha fazla etkilenirler. Bu gruplar için özel izlem ve koruyucu sağlık hizmetleri, kişisel korunma için eküpmen kullanımı ve iklim değişikliğini takip etme gibi önlemleri bireylere önerebilirler. Çevre dostu politikaların geliştirilmesi için yerel yönetimler, sağlık kuruluşlarıyla işbirliği yapabilir ve iklim değişikliği ile mücadele için toplumsal kampanyalar ve sağlık taramaları düzenleyebilirler .Son olarak, hava kirliliğinin çocuk ruh sağlığına ve psikolojik iyi oluşuna etkisine yönelik kapsayıcı araştırmaların planlanmasında ve araştırma verilerine dayanarak etkili müdahaleler oluşturulmasında sağlık çalışanlarına önemli rol ve sorumluluklar düşmektedir.

Sonuç ve Öneriler

Çocukların psikolojik iyi oluşunu ve ruh sağlığını etkileyen iklim değişikliği, günümüzde halk sağlığına yönelik en büyük tehditlerden biri olarak kabul edilmektedir. Özellikle literatürde iklim değişikliğinin çocuklarda depresyon, anksiyete, bilişsel işlev azalması, bağlanma bozuklukları, fobilere yol açtığını gösteren araştırmaların olduğu görülmektedir. Ancak, bu alanda yapılacak kapsayıcı araştırmaların arttırılması gerekmektedir. İklim değişikliğinin çocukların ruh sağlığını, psikolojik refahını ve güvenliğini, ayrıca çalışma yeteneklerini nasıl etkilediğini ve öğrenme kalitesindeki olası kayıpların nasıl belirlenip etkili bir şekilde ele alınabileceğini anlamak önemlidir. Bu noktada iklim değişikliğinin çocukların psikolojik iyi oluşları üzerine etkisinin belirlenmesi, koruyucu önlemlere yönelik araştırmaların planlanması, etkili girişimlerin oluşturulmasında ve bu konuda kapsayıcı eğitim programlarının hazırlanmasında önemli olduğu düşünülmektedir.

Kanserle Yaşamak: Biyopsikososyal İyi Oluşu Destekleyen Hemşirelik Yaklaşımları ve Entegre Bakım Stratejileri

Fatma GENÇ

Giresun Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik bölümü

fatma.genc@giresun.edu.tr, ORCID No:0000 0001 8777 4276, Türkiye

Özet

Kanser, bireylerin yalnızca fiziksel değil, aynı zamanda psikolojik, sosyal ve ruhsal boyutlarda da yaşam kalitesini etkileyen çok yönlü bir hastalıktır. Bu nedenle hemşirelik bakımında biyopsikososyal iyi oluşu destekleyen bütüncül yaklaşımlar önem kazanmaktadır. Bu araştırma, onkoloji hemşireliği alanında birey merkezli ve çok disiplinli bakımın gelişimi açısından önem taşıyan biyopsikososyal hemşirelik yaklaşımlarını ve entegre bakım stratejilerini bibliyometrik yöntemle değerlendirmek amacıyla yapılmıştır. Literatürde artan yayın sayısı, iyi oluşu destekleyen psikososyal destek, dayanıklılık, başa çıkma becerileri ve yaşam kalitesi gibi temaların hemşirelik çalışmalarında öne çıktığını göstermektedir. Çalışmada, Web of Science Core Collection veri tabanından elde edilen 411 akademik makale VOSviewer yazılımı kullanılarak analiz edilmiştir. Elde edilen bulgular, ABD ve Çin'in bu alanda hem yayın hem de iş birliği ağı açısından merkezî bir konumda olduğunu; Türkiye'nin ise artan katkısına rağmen uluslararası düzeyde sınırlı etkileşim ağına sahip olduğunu göstermektedir. Anahtar kelime analizinde “stress”, “coping”, “quality of life”, “nurses” ve “nursing students” kavramlarının öne çıkması, iyi oluş kavramının özellikle mesleki doyum, duygusal destek ve öğrencilik deneyimleri ile ilişkilendirildiğini göstermiştir. Ayrıca eş-atıf ve iş birliği analizlerinde literatürün belirli kümeler etrafında toplandığı, bu kümelerin psikolojik, eğitsel ve profesyonel temalarla şekillendiği belirlenmiştir. Bu çalışma, hemşirelikte bütüncül bakımın bilimsel temellerini güçlendirmek ve gelecek araştırmalar için stratejik bir harita sunmak açısından önemlidir. Bulgular, hemşirelik politikalarının belirlenmesinde ve klinik uygulamaların yapılandırılmasında referans niteliğindedir.

Anahtar Kelimeler: Psikososyal destek, bilimsel ağ, sağlık eğitimi, başa çıkma stratejileri

Living with Cancer: Nursing Approaches Supporting Biopsychosocial Well-Being and Integrated Care Strategies

Abstract

Cancer is a multifaceted disease that affects individuals' quality of life not only physically but also psychologically, socially, and spiritually. Therefore, holistic approaches that support biopsychosocial well-being have become increasingly important in nursing care. This study was conducted to evaluate, through bibliometric methods, the biopsychosocial nursing approaches and integrated care strategies that are significant for the development of person-centered and multidisciplinary care in the field of oncology nursing. The increasing number of publications in the literature demonstrates a growing focus on psychosocial support, resilience, coping mechanisms, and quality of life within nursing research. A total of 411 academic articles retrieved from the Web of Science Core Collection were analyzed using VOSviewer software. The results reveal that the United States and China hold a central position in terms of both publication volume and collaborative networks. Although Turkey has increased its research output, it remains relatively peripheral in international cooperation structures. The co-occurrence analysis highlighted keywords such as “stress,” “coping,” “quality of life,” “nurses,” and “nursing students,” indicating a thematic emphasis on emotional support, job satisfaction, and student experiences related to well-being. Furthermore, co-citation and co-authorship analyses revealed that research clusters predominantly focused on psychological, educational, and professional themes. This study contributes to strengthening the scientific foundations of holistic care in nursing and offers a strategic overview for future investigations. The results provide valuable insights for the development of nursing policies and the restructuring of clinical practice frameworks.

Keywords: Psychosocial support, scientific collaboration, health education, coping strategies

Giriş ve Amaç

Kanser, tıbbi tedavi gerektiren karmaşık bir hastalıktan daha fazlasıdır ve kişinin tüm iyilik halini etkileyen travmatik bir yaşam olayı olarak kabul edilmektedir (Sylvestro et al., 2021). Kanser tedavisi gören bireyler, yaşam kalitelerini olumsuz etkileyen fiziksel, duygusal, ruhsal ve sosyal birçok problemle karşı karşıya kalmaktadırlar. Bu nedenle, kanser bakımında geleneksel biyomedikal modellerin ötesine geçilerek biyopsikososyal yaklaşımı temel alan bütüncül bakım stratejileri ön plana çıkmaktadır (Uwayezu et al., 2022).

Engel'in (2012) geliştirdiği biyopsikososyal model, sağlık ve hastalık süreçlerini yalnızca biyolojik etkenlerle değil, psikolojik durumlar ve sosyal çevreyle birlikte değerlendirmeyi önerir. Bu model özellikle onkoloji alanında, hastanın yalnızca tümör yükünü değil, yaşadığı kaygı, depresyon, yalnızlık ve sosyal izolasyon gibi psikososyal yükleri de dikkate alan bir bakım anlayışının temelini oluşturmuştur (Grassi et al., 2015). Son yıllarda, kanser bakımında entegre bakım modelleri ön plana çıkmaktadır (Adler & Page, 2008). Entegre bakım modelleri, bireylerin ve toplumun bütüncül sağlık ihtiyaçlarını daha iyi karşılamak amacıyla geliştirilmiştir (Sylvestro et al., 2021). Entegre bakım, hastanın fiziksel tedavisini psikolojik danışmanlık, sosyal hizmet desteği ve manevi rehberlik gibi çok disiplinli yaklaşımlarla birleştirmeyi hedefler (Adler & Page, 2008). Bu model, yalnızca hastalığın biyolojik yönünü değil, kişinin yaşam kalitesini artırmayı amaçlayan bir çerçeve sunar. Palyatif bakım uygulamaları, multidisipliner ekip çalışmaları ve evde bakım programları entegre bakımın somut örnekleri arasında yer almaktadır (Ferrell et al., 2017). Entegre bakım, kanıta dayalı uygulamaları, hasta ve profesyonel iş birliğini ve sağlığın biyopsikososyal bir anlayışla ele alınmasını esas alır (Sylvestro et al., 2021). Biyopsikososyal modeller, kanserin hem biyomedikal hem de psikososyal etkileri iç içe geçtiği için, özellikle kanserden sağ kalan bireyler için oldukça uygundur (Sylvestro et al., 2021). Kanser bakımında en yaygın kullanılan biyopsikososyal değerlendirme araçları, yaşam kalitesi ölçümleridir. Yaşam kalitesi ise kuramsal olarak iyi oluş ve esenlik kavramlarıyla yakından ilişkili, bütüncül ve öznel bir kavram olarak ele alınmaktadır (Sylvestro et al., 2021).

Hemşireler, kanserin karmaşıklıkları arasında yol alan bireylerin çok yönlü ihtiyaçlarını değerlendirmek ve ele almak, deneyimlerini, endişelerini ve tercihlerini anlamak için hastalarla ve aileleriyle doğrudan etkileşim kurmak ve böylece gerçekten hasta merkezli bakımın sunulmasını sağlamak için benzersiz bir konumda olan hasta bakımında kilit rol oynarlar (Otis-Green ve Juarez, 2012). Son yıllarda hemşirelik araştırmaları, kanser hastalarında psikososyal destek, danışmanlık, hasta eğitimi ve semptom yönetimi gibi müdahalelerin iyilik hali

üzerindeki olumlu etkilerini vurgulayan çok sayıda çalışmayı içermektedir (Chitkara et al., 2025; Dible et al., 2025; Ferrell et al., 2017; Hategekimana &Egunjobi, 2023). Kapsamlı hemşirelik bakımı yalnızca hastalığın fiziksel semptomlarını ve tedavinin yan etkilerini değil aynı zamanda refahın psikolojik, sosyal ve ruhsal boyutlarını da kapsayan geniş bir sorumluluk alanına sahiptir (Tuominen ve ark., 2019).

Bu bağlamda, kanser hastalarında biyopsikososyal iyi oluşu destekleyen hemşirelik yaklaşımları ve entegre bakım stratejilerine yönelik bilimsel eğilimlerin belirlenmesi, hem sağlık politikalarının geliştirilmesi hem de klinik uygulamaların iyileştirilmesi açısından kritik önemdedir. Bu çalışmanın amacı, kanserle yaşayan bireylerde biyopsikososyal iyi oluşu destekleyen hemşirelik yaklaşımlarını ve entegre bakım stratejilerini konu alan bilimsel yayınları analiz ederek, bu alandaki araştırma eğilimlerini, tematik odakları ve iş birliği ağlarını ortaya koymaktır. Elde edilen bulgularla hemşirelikte birey merkezli ve bütüncül bakım uygulamalarının gelişimine katkı sağlamak hedeflenmektedir.

Yöntem

Nicel tanımlayıcı kesitsel olan bu çalışmada, kanserle yaşayan bireylerde biyopsikososyal iyi oluşu destekleyen hemşirelik yaklaşımlarını ve entegre bakım stratejilerini inceleyen bilimsel yayınlara yönelik kapsamlı bir literatür taraması gerçekleştirilmiş ve bibliyometrik analiz uygulanmıştır. Bibliyometrik analiz, belirli bir konuda yapılan akademik yayınları sayı, atıf, yazar ve anahtar kelime düzeyinde inceleyerek literatürün yapısını, gelişim eğilimlerini ve araştırma boşluklarını belirlemeye olanak sağlayan bir yöntemdir (Donthu et al., 2021).

Tarama, Web of Science Core Collection veri tabanı kullanılarak yürütülmüştür. Veriler 24.24.2025 tarihinde Giresun Üniversitesi Proxy ayarları üzerinden elde edilmiştir.

WoS, küresel düzeyde yüksek etkili ve bilimsel değeri olan dergileri kapsayan, akademik camiada yaygın kabul görmüş bir veri tabanıdır. Literatürün güvenilirliğini ve doğruluğunu sağlamak amacıyla tercih edilmiştir.

Araştırma kapsamında "cancer nursing", "oncology nursing", "cancer patients", "nursing care", "well-being", "psychosocial support", "resilience", "quality of life", "coping", "emotional support", "integrated care", "holistic nursing" ve "multidisciplinary care" gibi anahtar kavramlar bir araya getirilerek arama sorguları yapılandırılmış ilk etapta 1 103 690 yayına ulaşılmıştır. Sonrasınca filtremeler yapılmıştır. 2022–2026 yılları arasındaki yalnızca "article" türündeki akademik yayınlar dahil edilmiştir. Veri kümesinin disiplinler odağını daraltmak amacıyla "Nursing" (Web of Science Category) ve "1.14 Nursing" (Citation Topics Meso)

filtreleri uygulanmıştır. Elde edilen sonuçlar çeşitli birleşik sorgular aracılığıyla filtrelenmiş ve analizler 411 yayın üzerinden yapılmıştır.

Ulaşılan veriler, VOSviewer (versiyon 1.6.20) programı aracılığıyla analiz edilmiştir. Bu yazılım, literatürde yer alan yayınların yazar, ülke, anahtar kelime ve kaynaklar düzeyinde görselleştirilmesine olanak tanıyan bibliyometrik bir analiz aracıdır. Çalışmada anahtar kelime eş-oluşumları incelenerek tematik kümeler belirlenmiş; ülke düzeyindeki ortaklıklar ve atıf yapıları analiz edilmiştir. VOSviewer verileri yalnızca nicel olarak değil, aynı zamanda etkileşim ve ağ yapısı üzerinden görselleştirerek analiz yapmaya olanak sunmaktadır. Bu nedenle yayınların içeriksel yoğunluklarını ve iş birliği ilişkilerini değerlendirmede etkili bir araçtır.

Etik İlkeler ve Sınırlılıklar

Bu çalışma, açık erişimli bilimsel yayınlar üzerinde yürütülen bir ikincil veri analizi niteliğinde olduğundan, herhangi bir bireysel veri kullanılmamış ve doğrudan katılımcı yer almamıştır. Bu nedenle etik kurul iznine gerek duyulmamıştır. Bununla birlikte, araştırma süreci boyunca bilimsel etik ilkelere ve akademik dürüstlük kurallarına uygun hareket edilmiştir. Veri tabanlarının sınırlı erişim kapsamı ve bazı dergilerin dışarıda kalması araştırmanın sınırlılıklarındandır.

Bulgular

Şekil 1 incelendiğinde, kanserle yaşayan bireylerin biyopsikososyal iyi oluşunu destekleyen hemşirelik yaklaşımlarına yönelik yayın sayısında yıllara göre anlamlı bir artış olduğu görülmektedir. Özellikle 2024 yılında yayın sayısında belirgin bir zirve gözlemlenirken (n=167), bu sayı 2025 yılında keskin bir düşüş göstermiştir. Bu durum, 2024 yılı itibarıyla alana yönelik akademik ilginin en yüksek seviyeye ulaştığını, ancak 2025 yılı itibarıyla bu ilginin azaldığını ortaya koymaktadır.

Şekil 1. Yıllara Göre Kanser ve İyi Oluş Temalı Hemşirelik Yayınlarının Dağılımı (2022–2025)

Şekil 2’de görüldüğü üzere, “kanserle yaşamak ve iyi oluş” temasını ele alan hemşirelik yayınlarının büyük çoğunluğu Science Citation Index Expanded (SCI-E-329 yayın) ve Social Sciences Citation Index (SSCI-333 yayın) kapsamında yer alan dergilerde yayımlanmıştır. Her iki indeks de yaklaşık eşit sayıda yayına ev sahipliği yaparken, Emerging Sources Citation Index (ESCI-78 yayın) kapsamındaki yayın sayısının diğerlerine göre anlamlı şekilde düşük olduğu dikkat çekmektedir. Bu bulgu, konuyla ilgili yapılan çalışmaların daha çok yüksek etki faktörlü ve oturmuş indekslerde yayımlandığını göstermektedir.

Şekil 2. Yayınların İndekslenme Durumuna Göre Dağılımı

Şekil 3 incelendiğinde, “kanserle yaşamak ve iyi oluş” temasını ele alan çalışmaların büyük çoğunluğunun hemşirelik kategorisinde yayımlandığı görülmektedir. Hemşirelik kategorisi, açık ara farkla en fazla yayına sahip alan olup, bu durum konunun hemşirelik disiplini içerisinde yoğun bir şekilde ele alındığını ortaya koymaktadır. Onkoloji, eğitim, yönetim, psikiyatri ve etik gibi alanlarda ise daha sınırlı sayıda çalışma yer almakta; özellikle acil tıp, bütüncül tıp, kritik bakım, geriatri ve pediatri gibi klinik alanlarda yayın sayısının oldukça düşük olduğu gözlemlenmektedir. Bu bulgu, biyopsikososyal iyi oluş ve entegre bakım konularının hemşirelik disiplini içinde daha kapsamlı incelendiğini ve diğer sağlık disiplinlerinde ise daha az çalışıldığını göstermektedir.

Şekil 3. Yayınların Web of Science Kategorilerine Göre Dağılımı

Şekil 4. Ülkelere Göre İlgili Yayın Sayıları

Şekil 4'te görüldüğü üzere, kanserle yaşamak ve biyopsikososyal iyi oluş temasıyla ilişkili yayınların en yoğun olduğu ülke açık ara farkla Amerika Birleşik Devletleri (USA-122 yayın) olmuştur. USA'yı sırasıyla Çin (71), Avustralya (32) ve Türkiye (22) takip etmektedir. Avrupa ülkelerinden Hollanda, İngiltere, İrlanda ve Polonya gibi ülkeler orta düzeyde katkı sağlarken; birçok ülkenin katkısının sınırlı olduğu gözlemlenmiştir. Bu dağılım, konunun daha çok gelişmiş ülkelerin akademik gündeminde yer aldığını ve özellikle ABD'deki multidisipliner yaklaşımların bu alandaki üretkenliğe yansıdığını ortaya koymaktadır. Türkiye'nin dikkat çekici katkısı ise bölgesel farkındalık düzeyinin arttığına işaret etmektedir.

Şekil 5'e göre, kanserle yaşamak ve biyopsikososyal iyi oluş temalı yayınların büyük çoğunluğunun açık erişimli (All Open Access) dergilerde yayımlandığı görülmektedir. Özellikle Gold ve Green Published kategorileri dikkat çekerken, Gold Hybrid, Free to Read ve Green Accepted/Submitted erişim türleri daha düşük oranda tercih edilmiştir. Açık erişim yayınların yoğunluğu, bu alandaki bilgilerin daha geniş kitlelere ulaşma potansiyeline sahip olduğunu ve araştırmacılar ile sağlık profesyonellerinin konuya dair bilgilere daha kolay erişebildiğini göstermektedir. Bu durum, hasta merkezli bakım ve bütüncül hemşirelik yaklaşımlarının yaygınlaştırılmasına katkı sunabilecek bir avantaj olarak değerlendirilebilir.

Şekil 5. Açık Erişim Türlerine Göre Yayınların Dağılımı

Şekil 6'da çalışmada en az bir yayına sahip ve bu yayınlara en az bir kez atıf alan 159 yazar içerisinde, belirlenen eşik değeri karşılayan 27 yazarın işbirliği ağı görselleştirilmiştir. Co-authorship analizinde, bir belgeyi birlikte yayımlayan yazarların aralarındaki bağlar dikkate alınarak kümeler oluşturulmuştur. Elde edilen ağ yapısında, 11 yazarın yoğun şekilde birbiriyle

bağlantı kurduğu tek bir kümeye rastlanmıştır. Chen Huifeng, Zeng Li, Liu Yue ve Han Peng gibi isimlerin ağ merkezine yakın konumlanması, bu yazarların hem ortak yazarlık sıklıklarının hem de akademik etkileşimlerinin görece daha güçlü olduğunu göstermektedir. Bu durum, ilgili yazarların bu araştırma sahasında üretkenlik düzeylerinin yüksek olmasının yanı sıra, işbirliğine dayalı bir üretim pratiği içerisinde olduklarını da ortaya koymaktadır.

Şekil 6. Yazar İş birliği Ağı Görselleştirmesi

Şekil 7’de “Citation” türünde analiz gerçekleştirilmiş ve birim olarak “Countries” seçilmiştir. Analiz sonucunda 17 ülke eşik değerini karşılamıştır. Türkiye, 4 yayın ve 32 atıf ile öne çıkarken, ABD 17 yayın ve 52 atıfı ile en yüksek katkı sağlayan ülke olmuştur. Çin Halk Cumhuriyeti ise 22 atıf ile ikinci sırada yer almıştır. Türkiye’nin bu alanda belirgin bir katkı sunduğu, ancak bilimsel iş birliği ağındaki bağ gücünün (total link strength = 1) daha düşük olduğu dikkat çekmektedir. Bu durum, Türkiye’nin alana katkı sunduğunu ancak uluslararası iş birliğini artırması gerektiğini göstermektedir. Bu görselleştirme Overlay Visualization modu ile yapılmış olup, yayınların ortalama yayın yılını renk skalasıyla göstermektedir. Türkiye, açık sarı renkte konumlanmış ve bu, ortalama yayın yılının yaklaşık 2023 civarında olduğunu göstermektedir. Bu bulgu, Türkiye’nin bu alanda nispeten yeni katkılar sunduğunu ve güncel çalışmalarda aktif olduğunu göstermektedir. Ancak ağ bağlantılarının zayıf olması, bu katkılarının çoğunlukla bağımsız yayınlar üzerinden gerçekleştiğini düşündürmektedir.

Türkiye'nin yayın hacminin artmış olması sevindirici olmakla birlikte, daha fazla iş birliği ve uluslararası bağlantı kurmasının bilimsel etkisini artıracığı açıktır. Overlay Visualization bulguları, ülke düzeyinde güncellik bakımından önemli bir yer tuttuğuna işaret etmektedir.

Şekil 7. İş Birliği Gösteren Yazarların Ortak Yayın Ağı

Bu analizde en çok atıf alan 1000 yazar değerlendirilmiştir. Labraque, Rushton, Kelly ve WHO öne çıkan isimler arasında yer almaktadır. Özellikle Labraque ve Rushton gibi isimler, hemşirelikte iyi oluş ve etik konularında atıf yoğunluğu bakımından merkezde konumlanmışlardır. Ağ yapısında farklı kümeler oluşmuş, konuya farklı perspektiflerle yaklaşan grupların varlığı gösterilmiştir (Şekil 8).

Şekil 8. Atıf Alan Yazarlar Arasındaki Eş Atıf

Bu analizde, ülkeler arası eş-atıf (co-citation) ilişkileri incelenmiş ve density visualization (yoğunluk görselleştirmesi) yöntemiyle sunulmuştur. Görselleştirme, hangi ülkelerin literatürde sıklıkla birlikte atıf aldığına ilişkin yoğunluk haritası sunar. Görselleştirmede renk geçişleri (mavi–yeşil–sarı) ülkelerin eş-atıf bağlamındaki etkinliğini göstermektedir. ABD (USA) ve Çin Halk Cumhuriyeti (People's Republic of China), en yüksek atıf yoğunluğuna sahip ülkeler olarak öne çıkmıştır. Haritada bu ülkelerin yoğunluğu sarı renk ile temsil edilmiştir. Türkiye, orta düzeyde bir yoğunluk göstermektedir. Haritada yeşil–sarı geçişinde konumlanması, Türkiye kaynaklı çalışmaların eş-atıf ağında yer aldığını ancak merkezî bir konumda olmadığını göstermektedir. Türkiye, toplamda 4 belge ve 32 atıf ile analizde yer almış ve eş-atıf ilişkileri bağlamında 1 bağlantı (link strength) değeri ile temsil edilmiştir. Bu durum, Türkiye’nin eş-atıf analizlerinde yer aldığı ancak uluslararası eş-atıf ağlarında sınırlı merkezilikte konumlandığını göstermektedir. Görselleştirmede “Türkiye” etiketiyle yer alan ülkenin çevresinde diğer ülkelere göre daha az bağlantı yer almakta, bu da ülkenin akademik ağ yoğunluğu açısından daha çevresel bir rol üstlendiğini göstermektedir. Görselleştirme üzerinden yapılan değerlendirmede, Türkiye’nin bilimsel üretimi belirli düzeyde olup işbirliği bağlamında gelişmeye açık olduğu anlaşılmaktadır. ABD ve Çin’in yüksek yoğunluğu, bu

ülkelerin literatürde küresel etki gücünü ortaya koyarken; Türkiye gibi orta yoğunlukta yer alan ülkelerin hem üretim hem de iş birliği stratejilerini artırması önem taşımaktadır.

Şekil 9. Atıf Alan Ülkelerin Yoğunluk Görselleştirmesi

Şekil 10. Anahtar Kelime Eşleşmelerine (Co-occurrence) Göre Yoğunluk Analizi

Şekil 10’da VOSviewer yazılımı kullanılarak “co-occurrence” (birlikte geçme) analiz türü tercih gösterilmektedir. Bu yöntemde, yazar anahtar kelimelerine dayalı olarak kelimelerin eşzamanlı kullanım sıklığı analiz edilmiştir. Sayım yöntemi olarak “full counting” seçilmiştir; bu da her anahtar kelimenin her geçtiği çalışmada tam bir puan olarak değerlendirildiği anlamına gelmektedir. Seçilen 25 anahtar kelime içerisinde en fazla tekrar edenler ve bağlanma (link) gücü aşağıdaki gibidir: En çok kullanılan ilk beş anahtar kelime: Stress – 6 kez geçmekte olup bağlanma gücü 14’tür. Coping – 6 kez, bağlanma gücü 12. Nurses – 5 kez, bağlanma gücü 10. Quality of life – 7 kez, bağlanma gücü 8. Nursing students – 5 kez, bağlanma gücü 8. Bu anahtar kelimeler, analiz edilen belgelerde sıkça birlikte geçen temaları temsil etmektedir. Özellikle “stress” ve “coping” kavramlarının yüksek bağlanma gücü ile yer alması, kanser hemşireliğinde psikososyal konulara odaklanan çalışmaların yoğunluğunu göstermektedir. Yoğunluk görselleştirmesi sonucunda 6 ayrı küme (cluster) tanımlanmıştır: Küme 1: Holism, insight, nursing education, oncology nursing, nursing student, self-reflection gibi konuları içermekte; bu grup daha çok bireysel ve eğitimsel farkındalığı temsil etmektedir. Küme 2: Covid-19, nursing, professional quality of life, workplace violence gibi pandemi sonrası sağlık ortamlarını konu almaktadır. Küme 3: Quality of life, nurse, job satisfaction gibi yaşam kalitesi ve mesleki doyuma yönelik temaları barındırmaktadır. Küme 4: Coping, coping strategies, stress, undergraduate gibi öğrencilik ve stresle başa çıkmaya odaklıdır. Küme 5: Incivility, nurses, health-related quality of life ekseninde hemşirelerin mesleki ilişkileri üzerinde yoğunlaşmaktadır. Küme 6: Newly graduated nurse, resilience, qualitative study gibi yeni mezun hemşirelerin direnç geliştirme süreçlerine vurgu yapmaktadır. Bu dağılım, alanda yürütülen çalışmaların geniş tematik çeşitliliğe sahip olduğunu ve en çok psikososyal, eğitimsel ve mesleki doyum odaklı konulara yöneldiğini ortaya koymaktadır.

Sonuç ve Öneriler

Bu çalışma, kanserle yaşayan bireylerde biyopsikososyal iyi oluşu destekleyen hemşirelik yaklaşımlarına ve entegre bakım stratejilerine odaklanan bilimsel yayınları bibliyometrik analiz yöntemiyle incelemiştir. Bulgular, hemşirelik disiplini içinde bu temaların önemli bir araştırma sahası oluşturduğunu, özellikle 2024 yılında yayın sayısında anlamlı bir artış olduğunu ve araştırmaların büyük çoğunluğunun yüksek etki faktörlü dergilerde yayımlandığını göstermiştir. ABD ve Çin’in bilimsel üretimde ve iş birliği ağlarında merkezi bir rol oynadığı; Türkiye’nin ise özellikle son yıllarda artan yayın sayısı ile alana katkı sunduğu belirlenmiştir. Ancak Türkiye’nin iş birliği gücünün düşük olması, uluslararası akademik ağlara daha güçlü entegrasyon ihtiyacını ortaya koymaktadır. Yazar düzeyinde yapılan analizde, Labraque ve

Rushton gibi isimlerin öne çıktığı, anahtar kelime yoğunluğu analizinde ise “stress”, “coping”, “nurses”, “quality of life” ve “nursing students” gibi kavramların tematik merkezde yer aldığı görülmüştür. Bu durum, psikososyal destek ve birey merkezli bakım konularının hemşirelik literatüründe önemli bir yer tuttuğunu göstermektedir.

Çalışma sonuçları kapsamında öneriler aşağıdaki gibidir:

- Türkiye’deki hemşirelik araştırmacıları, uluslararası araştırma ağlarına daha fazla katılım göstermeli; özellikle çok merkezli, disiplinler arası projelerde aktif rol almalıdır.
- Kanser bakımında stres, başa çıkma, yaşam kalitesi gibi psikososyal boyutların önemi dikkate alınarak hemşirelik eğitimi ve uygulamalarında bu alanlara özel programlar geliştirilmeli ve desteklenmelidir.
- Elde edilen bulgular, hemşirelik hizmetleri politika belirleyicileri tarafından dikkate alınarak hasta merkezli ve bütüncül bakım uygulamalarına yönelik rehberlerin geliştirilmesine temel oluşturmalıdır.
- Hemşirelik müfredatlarına entegre bakım, psikososyal destek, etik karar verme ve multidisipliner çalışma konularının daha kapsamlı biçimde entegre edilmesi gereklidir.
- Özellikle yeni mezun hemşirelerin direnç ve başa çıkma becerilerinin geliştirilmesine yönelik yapılandırılmış destek programlarının uygulanması önerilmektedir.

Bu çalışma, kanserle yaşam sürecinde hemşirelik mesleğinin birey merkezli, çok boyutlu ve disiplinler arası yaklaşımının gerekliliğine dikkat çekmekte ve gelecekteki araştırmalara yön gösterici olma potansiyeli taşımaktadır.

Kronik Hastalıkların Yönetimine Yönelik Ulusal Politika Belgelerinde İyi Oluş Yaklaşımlarının İncelenmesi: Doküman Analizi

Fatma GENÇ

Giresun Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik bölümü

fatma.genc@giresun.edu.tr, ORCID No:0000 0001 8777 4276, Türkiye

Özet

Bu araştırma, Türkiye’de kronik hastalık yönetimine ilişkin ulusal politika belgelerinde “iyi oluş” kavramının nasıl yer bulduğunu analiz etmeyi amaçlamaktadır. Giderek artan kronik hastalık yükü, yalnızca fiziksel değil, aynı zamanda psikososyal ve sosyal yönleriyle de bireylerin yaşam kalitesini etkilemektedir. Bu nedenle iyi oluş kavramının politika belgelerindeki temsili, bütüncül sağlık yaklaşımı açısından önemli bir göstergedir. Araştırma nitel araştırma deseninde ve doküman analizi yöntemiyle gerçekleştirilmiştir. Çalışma kapsamında 2010–2025 yılları arasında yayımlanmış, kronik hastalıklar, yaşlanma, fiziksel aktivite, obezite, ruh sağlığı gibi temaları içeren 11 ulusal politika belgesi analiz edilmiştir. Veriler içerik analizi yöntemiyle kodlanmış, ana temalar, alt temalar ve ilgili belgelerden doğrudan alıntılarla desteklenmiştir. Analiz sonucunda, iyi oluş kavramının belgelerde çoğunlukla doğrudan değil, dolaylı olarak yer aldığı belirlenmiştir. Psikososyal destek, sosyal katılım, fiziksel aktivite gibi başlıklar iyi oluşla ilişkilendirilmekte; ancak bu kavrama dair net bir tanım yapılmamaktadır. Ayrıca izleme-değerlendirme mekanizmalarının sınırlılığı, sektörler arası iş birliğinin eksikliği ve hasta katılımına dair vurguların yetersizliği dikkat çekmektedir. Bulgular, Türkiye’deki sağlık politika belgelerinde iyi oluşun daha sistematik, çok boyutlu ve katılımcı bir yaklaşımla ele alınması gerektiğini ortaya koymaktadır. Bu doğrultuda, gelecekte hazırlanacak politika belgelerinde iyi oluşun açık tanımlanması ve psikososyal boyutlarının güçlendirilmesi önerilmektedir.

Anahtar Kelimeler: Kronik hastalık yönetimi, ulusal sağlık politikaları, iyi oluş

Examining Well-Being Approaches in National Policy Documents on Chronic Disease Management: A Document Analysis

Abstract

This study aims to analyze how the concept of “well-being” is reflected in national policy documents related to chronic disease management in Turkey. As the burden of chronic diseases increases, the impact on individuals extends beyond physical health to include psychosocial and

social dimensions. Thus, how well-being is addressed in policy frameworks is a critical indicator of a holistic approach to health. The research was conducted within the framework of qualitative research and utilized the document analysis method. Eleven national policy documents published between 2010 and 2025, covering themes such as chronic diseases, aging, physical activity, obesity, and mental health, were examined. The data were coded through content analysis and structured using main themes, sub-themes, and direct quotations from the documents. The analysis revealed that the concept of well-being is generally not explicitly defined in the documents, but is instead reflected indirectly through components such as psychosocial support, social participation, and physical activity. There is also a limited emphasis on monitoring and evaluation mechanisms, intersectoral collaboration, and stakeholder engagement within the policy texts. The results suggest that well-being in Turkish health policy documents requires a more systematic, multidimensional, and participatory framing. In future policy development processes, it is recommended to define the concept of well-being explicitly and to enhance the integration of psychosocial dimensions. Including measurable indicators and promoting intersectoral and community-based strategies may also strengthen the effectiveness of chronic disease management.

Keywords: Chronic disease management, health policy, well-being

Giriş

Kronik hastalıklar, kişinin sosyal fiziksel ve psikolojik işlevlerini etkileyen, uzun süre gözlem, gözetim ya da bakım verilmesi beklenen kalıcı, geri döndürülemez bir durumu ifade eder (Durna & Oğuz, 2018). Yaşam süresi uzadıkça, kronik hastalıkların prevalansı ve maliyeti artmaya devam etmektedir (Hacker, 2024). Kronik hastalıkların tahmini maliyetinin 2030 yılına kadar dünya çapında 47 trilyon dolara ulaşması bekleniyor (Hacker, 2024). Kronik hastalıklar, yüksek mortalite ve morbidite nedeniyle günümüzün en önemli halk sağlığı sorunlarından biridir. Erken ölüm ve hastalık yükü nedeniyle kronik hastalıkların önlenmesi ve kontrolü son derece önemlidir (Atak et al., 2023). Bireysel yaşam tarzı davranışları ve toplumsal faktörler, kronik hastalıkların gelişiminde ve yönetiminde önemli rol oynarlar (Hacker, 2024). Bu hastalıkların çoğu (diyabet, kalp hastalığı ve solunum yolu hastalıkları) önlenelidir ve başlıca risk faktörleri arasında fiziksel hareketsizlik, yetersiz beslenme, tütün kullanımı ve aşırı alkol kullanımı gelmektedir (Hacker, 2024). Ne yazık ki, önlemeye yapılan yatırım, hem yaşam tarzı perspektifinden hem de sağlığın sosyal belirleyicileri perspektifinden, tedaviye kıyasla çok küçük kalmaktadır (Hacker, 2024).

Kronik hastalıkların yönetiminin temel amacı hastanın yaşam şekli değişikliklerine ve tedavisine uyumun artırılması, hastalığın durdurulması ve komplikasyonların önlenmesidir. Bireyin öz-yönetiminin desteklenmesine yönelik hemşire önderliğinde yapılan müdahale yöntemleri hastalık yönetiminde olumlu sonuçlar sağlamaktadır (Atasoy & Özpulat, 2023). Nedenlerindeki farklılıklara rağmen, tüm kronik hastalıklar uzun vadeli bakımı ve takibi gerektirir (Yıldırım et al., 2023). Sürekli bakım ve izlem ihtiyacı, hastaların özerkliğini kısıtlar (Yıldırım et al., 2023). Kronik hastalıklar ileri evrelerde yalnızca fiziksel zorluklara değil, aynı zamanda psikolojik ve ruhsal bozukluklara da yol açar (Azfaruddin & Rini, 2023). Hastalar depresyon, uyum bozukluğu, sosyal etkileşim ve ekonomik sorunlar, uyku bozukluğu, fiziksel güçte azalma, işsizlik, cinsel işlev bozukluğu, sosyal izolasyon ve stres gibi sorunlar yaşayabilirler (Yıldırım et al., 2023). Bu durum hem hastaların hem de ailelerinin yaşam kalitelerini de olumsuz etkileyecektir. Kronik hastalık tanısından sonra kişilere sağlanan destek çok önemlidir (Azfaruddin & Rini, 2023). Primer olarak aile üyeleri, sağlık profesyonelleri, arkadaşlar ve komşular tarafından sağlanan sosyal destek kişinin yaşam memnuniyetini artırırken depresyon ve hastalık yükünü azaltmaktadır (Yıldırım et al., 2023). Bu destek, kişinin yalnızca hastalığın fiziksel etkisiyle değil, aynı zamanda getirdiği psikolojik ve sosyal zorluklarla da başa çıkabilmesini de sağlar (Azfaruddin & Rini, 2023).

Ulusal sağlık politikaları, diyabet, iskemik kalp hastalığı, felç, kronik obstrüktif akciğer hastalığı ve depresyon gibi yaygın durumların en iyi şekilde ele alınması için özel kılavuzlar eşliğinde kronik hastalık yönetimi bakım modellerini giderek daha fazla içermektedir (Roberts vd., 2014). Kronik hastalıklardaki küresel artış ve sağlık sistemlerinin akut bakım modellerinden uzun vadeli bakım ve önleme geçiş zorunluluğu göz önünde bulundurulduğunda, böyle bir stratejik odaklanma zorunludur. Yaşlı yetişkin nüfusunun artmasına ve bunun sonucunda sağlık hizmetlerine olan talebin artmasına yanıt olarak, Sağlık Bakanlığı kronik hastalık yönetimi için entegre bir sağlık modelinin uygulanmasını stratejik olarak başlatmış ve bu zorlukları ele almak için proaktif bir yaklaşım sinyali vermiştir (Ülgü vd., 2023). Bu politika önlemleri yalnızca acil sağlık hizmetleri ihtiyaçlarını değil aynı zamanda tedavi maliyetleri, ölüm oranları ve işgücü piyasası üzerindeki etki de dahil olmak üzere kronik hastalıklarla ilişkili uzun vadeli ekonomik sonuçları da ele almayı amaçlamaktadır (Basholli vd., 2018).

Son yıllarda birçok ülke, sağlık politikalarını yalnızca hastalık yönetimi üzerine değil, aynı zamanda bireylerin genel yaşam kalitesini artırmaya yönelik yapılandırmaktadır. Ancak bu bütüncül yaklaşımın politika belgelerine ne ölçüde yansıdığı tartışmalıdır. Türkiye’de yayımlanan ulusal sağlık politika belgelerinin, iyi oluş kavramını ne kadar bütüncül biçimde

ele aldığı, bu çalışmanın temel araştırma sorusunu oluşturmaktadır. Bu bağlamda, ulusal düzeyde kronik hastalık yönetimine yönelik politika belgelerinde “iyi oluş” kavramı nasıl yer bulmaktadır? Fiziksel, psikolojik ve sosyal boyutlar ne düzeyde yansıtılmaktadır? gibi sorular yanıtlanmaya çalışılmıştır. Bu çalışmanın amacı, Türkiye’de kronik hastalıkların yönetimine yönelik ulusal politika belgelerinde iyi oluş yaklaşımlarının nasıl yer aldığını incelemektir.

Yöntem

Çalışma, nitel doküman analizi tasarımıyla yürütülmüştür. Doküman analizi, yazılı resmî metinleri araştırma verisi olarak sistematik biçimde inceleyerek içerdiği sosyo-politik anlam örüntülerini yorumlamayı hedefleyen bir nitel yöntemdir (Bowen, 2009). İçerik yorumlamasında kavramsal içerik analizi yaklaşımı kullanılmış; böylece metinlerde “iyi oluş” kavramının görünümü hem sıklık hem de bağlamsal açıdan değerlendirilmiştir (Krippendorff, 2019). Tasarım, Miles, Huberman ve Saldaña’nın (2014) nitel analiz süreç modelini izleyerek veri toplama-kodlama-tematik yorum döngüsüyle ilerlemiştir.

Belge Taraması

Evreni, Sağlık Bakanlığı resmî arşivinde 2010–2025 yılları arasında yayımlanan on bir ulusal strateji / eylem planı oluşturmuştur. Amaçlı örnekleme doğrultusunda kronik hastalık yönetimiyle doğrudan ilişkili politikalar seçilmiştir. Çalışmada kullanılan kodlar:

Kod Belge Başlığı (yayımlanma dönemi)

- B1 Türkiye Sağlıklı Yaşlanma Eylem Planı ve Uygulama Programı (2021-2026)
- B2 Türkiye Kas ve İskelet Sistemi Hastalıkları Önleme ve Kontrol Programı (2021-2026)
- B3 Türkiye Kalp ve Damar Hastalıkları Önleme ve Kontrol Programı (2021-2026)
- B4 Türkiye Bulaşıcı Olmayan Hastalıklar Çok Paydaşlı Eylem Planı (2017-2025)
- B5 Türkiye Kronik Hava Yolu Hastalıkları Önleme ve Kontrol Programı (2018-2023)
- B6 Türkiye Diyabet Programı (2023-2027)
- B7 Türkiye Böbrek Hastalıkları Önleme ve Kontrol Programı (2014-2017)
- B8 Obezite ile Mücadele ve Kontrol Programı (2010-2014)

Kod Belge Başlığı (yayımlanma dönemi)

B9 Türkiye Kanser Kontrol Programı

B10 Ulusal Ruh Sağlığı Eylem Planı (2021-2023)

B11 Türkiye Sağlıklı Beslenme ve Hareketli Hayat Programı (2014-2017)

Verilerin Analizi

PDF biçimindeki belgeler Adobe Acrobat üzerinden txt formatına dönüştürüldü, bölüm başlıkları korunarak satır numarası verildi. Veriler, betimsel analiz yöntemiyle değerlendirilip; içerik çözümlemesi yoluyla temalar ve alt temalar belirlendi. Analiz sürecinde her bir belge sistematik olarak incelendi ve iyi oluşa yönelik ifade, strateji ve kavramlar kategorize edildi.

Dahil Edilme Kriterleri

Türkiye Cumhuriyeti Sağlık Bakanlığı veya bağlı kuruluşlar tarafından yayımlanmış olması

Kronik hastalıklarla doğrudan ilişkili olması

Ulusal düzeyde politika, strateji, eylem planı ya da kontrol programı olması

Tam metnine açık erişimin sağlanabilmesi

2010 yılı ve sonrası yayımlanmış olması

Dışlama Kriterleri

Yerel veya bölgesel ölçekli belgeler (örneğin il sağlık müdürlükleri strateji belgeleri)

Kronik hastalıklarla doğrudan ilişkisi olmayan belgeler (örneğin enfeksiyon hastalıkları stratejileri)

2010 yılı öncesi yayımlanan ulusal belgeler

Etik İzin

Belgeler kamuya açık olduğu için etik kurul izni gerektirmemekle birlikte, metinler bağlamından koparılmadan ve manipüle edilmeden aktarılmış; alıntılar özgün numaralandırmasıyla verilmiştir.

Bulgular

Bu çalışmada incelenen 11 ulusal politika belgesi, Türkiye’de kronik hastalıkların önlenmesi, yönetimi ve kontrolüne yönelik kapsamlı bir çerçeve sunmaktadır. Politika belgelerindeki "iyi oluş" kavramı çerçevesinde beş ana tema ve on iki alt tema belirlenmiştir. Her alt temaya ilişkin

tipik ifadeler doğrudan belge kaynak kodlarıyla verilmiştir. İncelenen 11 politika belgesinin (B1–B11) içerik analizi sonucunda oluşturulan tema ve alt tema değerlendirmeleri doğrudan alıntılarla desteklenmiştir. Her alt temanın belgelerdeki vurgulanma düzeyi (Sınırlı / Orta / Güçlü) de ayrı ayrı belirtilmiştir. Aşağıda politika belgelerinin tema ve alt temalar yönüyle değerlendirmesi ve bu temaların vurgulanma düzeyleri belirtilmektedir.

B1. Türkiye Sağlıklı Yaşlanma Eylem Planı ve Uygulama Programı (2021-2026)

Sağlıklı Yaşlanma Planı, ileri yaş grubunda kronik hastalık yükünü azaltmayı, fonksiyonel bağımsızlığı korumayı ve aktif yaşamı desteklemeyi amaçlar. Fiziksel işlevselliği sürdürme ve sosyal katılımı artırma boyutları ayrıntılıdır; psikososyal destek ise topluluk temelli hizmetler bağlamında ele alınır.

Psikososyal Destek ve Ruhsal İyi Oluş

<i>Alt</i>	<i>Tema</i>	<i>1.1</i>	<i>Psikolojik</i>	<i>destek</i>	<i>hizmetleri</i>
• Alıntı:	“Yaşlı bireylerde yalnızlık ve depresyonun önlenmesi için toplum temelli psikososyal destek mekanizmaları			güçlendirilecektir.”	(B1)
• Vurgulama:	Orta				

<i>Alt</i>	<i>Tema</i>	<i>1.2</i>	<i>Sosyal</i>	<i>katılım</i>	<i>programları</i>
• Alıntı:	“Yaşam kulüpleri aracılığıyla yaşlıların kültürel ve sosyal etkinliklere katılımı desteklenecektir.”				(B1)
• Vurgulama:	Güçlü				

Yaşam Kalitesi ve Fonksiyonel Bağımsızlık

<i>Alt</i>	<i>Tema</i>	<i>2.1</i>	<i>Çevresel</i>	<i>düzenleme</i>
• Alıntı:	“Güvenli yaya geçitleri ve erişilebilir konut düzenlemeleri yaygınlaştırılacaktır.”			(B1)
• Vurgulama:	Güçlü			

<i>Alt</i>	<i>Tema</i>	<i>2.2</i>	<i>Rehabilitasyon</i>	<i>hizmetleri</i>
• Alıntı:	“Evde bakım ve fizik tedavi birimlerinin sayısı artırılacaktır.”			(B1)
• Vurgulama:	Orta			

Sağlıklı Yaşam Davranışları & Öz-Bakım

Alt Tema 3.1 Fiziksel aktivite — Güçlü

Alt Tema 3.2 Beslenme rehberliği — Orta

Sosyal Destek Ağları — Sınırlı

Yönetişim ve Veri İzleme — Orta

B2. Kas ve İskelet Sistemi Hastalıkları Önleme ve Kontrol Programı (2021-2026)

Belge, romatizmal ve dejeneratif kas-iskelet hastalıklarında tanı-tedavi ve rehabilitasyona odaklanır. İyi oluş, ağırlıklı olarak fiziksel fonksiyonların korunması bağlamında ele alınmış; ruhsal boyut dolaylıdır.

Psikososyal Destek ve Ruhsal İyi Oluş

Alt Tema 1.1 Psikolojik destek hizmetleri
• Alıntı: “Kronik ağrıya bağlı anksiyete ve depresyon için çok disiplinli yaklaşım önerilmektedir.” (B2)
• Vurgulama: **Sınırlı**

Yaşam Kalitesi ve Fonksiyonel Bağımsızlık

Alt Tema 2.1 Fonksiyon kaybını azaltma — Güçlü
• Alıntı: “Rehabilitasyon programları ile fonksiyon kaybı ve iş gücü kaybı en aza indirilecektir.” (B2)

Sağlıklı Yaşam Davranışları & Öz-Bakım — Orta

Sosyal Destek Ağları — Sınırlı

Yönetişim ve Veri İzleme — Sınırlı

B3. Kalp ve Damar Hastalıklarını Önleme ve Kontrol Programı (2021-2026)

Program, mortalite-morbidite azaltımını, risk faktörü kontrolünü ve yaşam kalitesini artırmayı hedefler. Psikososyal etkenler kısa vurgularla geçer.

Psikososyal Destek — Sınırlı

“Kalp rehabilitasyon merkezlerinde psikolojik danışmanlık hizmeti sunulacaktır.” (B3)

Yaşam Kalitesi — Güçlü

“Yaşam kalitesini artırmak ve yaşam süresini uzatmak programın nihai hedefidir.” (B3)

Sağlıklı Yaşam & Öz-Bakım — Güçlü

Sosyal Destek — Sınırlı

Yönetişim — Orta

B4. Türkiye Bulaşıcı Olmayan Hastalıklar Çok Paydaşlı Eylem Planı (2017-2025)

Plan, bütün bulaşıcı olmayan hastalık başlıklarını tek çatı altında birleştirir; sektörler arası koordinasyona vurgu yapar.

Psikososyal Destek — Sınırlı

Yaşam Kalitesi — Orta

Sağlıklı Yaşam & Okuryazarlık — Güçlü

“Toplum temelli sağlıklı yaşam kampanyaları yürütülecektir.” (B4)

Sosyal Katılım — Orta

Yönetişim ve Çok Sektörlü İş Birliği — Güçlü

B5. Türkiye Kronik Hava Yolu Hastalıkları Programı (2018-2023)

KOAH ve astım odağında; hasta-eğitim paketleri ile hem fiziksel hem psikososyal destek öğeleri içerir.

Psikososyal Destek — Orta

“Beslenme desteği, psikososyal değerlendirme ve destek hizmeti pakete dâhildir.” (B5)

Yaşam Kalitesi — Güçlü

Sağlıklı Yaşam Davranışları — Orta

Sosyal Destek — Sınırlı

Yönetişim — Orta

B6. Türkiye Diyabet Programı (2023-2027)

Kapsamlı bir diyabet yönetimi rehberi; komplikasyon yönetimi ve sağlık okuryazarlığı vurgusu öne çıkar.

Psikososyal Destek — Orta

Yaşam Kalitesi — Orta

Sağlık Okuryazarlığı & Öz-Bakım — Güçlü

“Toplumun diyabet okuryazarlığı düzeyi artırılacaktır.” (B6)

Sosyal Destek — Sınırlı

Yönetişim — Orta

B7. Türkiye Böbrek Hastalıkları Programı (2014-2017)

Erken tanı, hasta eğitimi ve yaşam kalitesi vurgusu bulunmaktadır; psikososyal destek referansları sınırlıdır.

Psikososyal Destek — Sınırlı

Yaşam Kalitesi — Güçlü

Sağlıklı Yaşam Davranışları — Orta

Sosyal Destek — Sınırlı

Yönetişim — Sınırlı

B8. Türkiye Obezite ile Mücadele Programı (2010-2014)

Kilitleyici risk faktörü olarak obeziteye karşı sektörler arası koordinasyon ve farkındalık kampanyaları anlatılır.

Psikososyal Etki Farkındalığı — Orta

“Obezite, psikososyal durum üzerinde olumsuz etki yaratır.” (B8)

Yaşam Kalitesi — Orta

Sağlıklı Yaşam & Politika Koordinasyonu — Güçlü

Sosyal Destek — Sınırlı

Yönetişim — Güçlü

B9. Ulusal Kanser Kontrol Programı (2013-2018)

Önleme, erken tanı ve palyatif bakımın yanı sıra psikososyal hizmetlerden bahseder.

Psikososyal Destek & Palyatif Bakım — Güçlü

“Palyatif bakım hasta ve yakınlarının yaşam kalitesini artıran bir yaklaşımdır.” (B9)

Yaşam Kalitesi — Güçlü

Sağlıklı Yaşam — Orta

Sosyal Destek — Orta

Yönetişim — Orta

B10. Ulusal Ruh Sağlığı Eylem Planı (2021-2023)

İyi oluşun psikolojik ve sosyal boyutlarını en ayrıntılı işleyen metindir.

Psikososyal Destek ve Ruhsal İyi Oluş — Güçlü

“Psikososyal engelliliği olan bireylerin güçlendirilmesi öncelikli hedeftir.” (B10)

Yaşam Kalitesi — Orta

Sağlıklı Yaşam Davranışları — Sınırlı

Sosyal Katılım — Güçlü

Yönetişim — Orta

B11. Hareketli Hayat Programı (2014-2017)

Ulusal fiziksel aktivite stratejisi; davranış değişikliğini toplum temelli altyapı ile destekler.

Psikososyal Destek — Sınırlı

Yaşam Kalitesi — Orta

Sağlıklı Yaşam Davranışları & Fiziksel Aktivite — Güçlü

“1 250 okulda fiziksel aktivite parkurları oluşturulmuştur.” (B11)

Sosyal Katılım — Orta

Yönetişim & İzleme — Orta

Sonuç

Bu çalışma, Türkiye’de kronik hastalıkların yönetimine ilişkin ulusal politika belgelerinde “iyi oluş” kavramının nasıl ele alındığını ortaya koymak amacıyla gerçekleştirilmiştir. Doküman analizi yöntemiyle yürütülen çalışmada, iyi oluşu doğrudan veya dolaylı biçimde yansıtan temalar ve alt temalar üzerinden sistematik bir içerik çözümlemesi yapılmıştır. Elde edilen bulgular, iyi oluşa ilişkin yaklaşımların çoğunlukla dolaylı olarak, sağlık okuryazarlığı, sosyal destek, fiziksel aktivite, psikososyal destek gibi bileşenler aracılığıyla politika belgelerinde yer aldığını göstermektedir.

Belgelerin çoğunda iyi oluş, ruh sağlığı ve yaşam kalitesi gibi kavramlarla ilişkilendirilmiş; ancak bütüncül ve bireyin çok boyutlu ihtiyaçlarını dikkate alan bir “iyi oluş” çerçevesine sınırlı düzeyde yer verilmiştir. Ayrıca sektörel iş birliği, sosyal katılımın teşviki ve izleme-değerlendirme sistemleri gibi yönetişimsel unsurların iyi oluşun kurumsal düzeyde sürdürülebilirliğini destekleyecek biçimde yeterince entegre edilmediği gözlemlenmiştir. Bu bulgular doğrultusunda aşağıdaki öneriler sunulmuştur:

- Politika belgelerinde “iyi oluşun” tanımı netleştirilmeli ve biyopsikososyal bir çerçevede yeniden yapılandırılmalıdır.
- Ruh sağlığı uzmanları, sosyal hizmet uzmanları ve halk sağlığı profesyonelleri belge hazırlama komisyonlarında aktif olarak yer almalıdır.
- İyi oluşun izlenmesine yönelik ölçülebilir göstergeler (psikolojik sağlamlık, sosyal izolasyon, öz yeterlik gibi) politika belgelerine entegre edilmelidir.
- Politika belgeleri geliştirilirken hasta, hasta yakını ve bakım verenlerin görüşleri dikkate alınmalıdır.
- Eğitim, sosyal hizmet, belediyecilik ve STK iş birlikleriyle iyi oluşun sosyal belirleyicilerine müdahale edilmelidir.
- Sağlıklı yaşam merkezleri, sosyal destek grupları ve toplum temelli ruh sağlığı hizmetleri artırılmalıdır.

Sağlıkta Yapay Zekâ Destekli Uygulamaların Bireysel İyi Oluş Üzerindeki Etkisi: Dijitalleşme ve Hayat Boyu Öğrenme Perspektifi

Fatma GENÇ

Giresun Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik bölümü
fatma.genc@giresun.edu.tr, ORCID No:0000 0001 8777 4276, Türkiye

Özet

Sağlık uygulamalarında yapay zekâ, sadece klinik karar destek süreçlerinde değil, aynı zamanda bireyin psikososyal destek, sağlık eğitimi ve öz bakım kapasitesini artırma gibi çok boyutlu iyi oluş alanlarında da etkili bir araç olarak öne çıkmaktadır. Bu çalışmanın amacı, sağlıkta yapay zekâ destekli uygulamaların bireysel iyi oluş üzerindeki etkisini dijitalleşme ve hayat boyu öğrenme perspektifiyle ele alan akademik yayınları bibliyometrik yöntemle analiz etmektir. Araştırmada, Web of Science veri tabanından 2022–2025 yılları arasında yayımlanan ve "Nursing" kategorisinde yer alan 478 makale bibliyometrik analiz yöntemiyle incelenmiştir. VOSviewer yazılımı kullanılarak anahtar kelime eşgörünüm analizleri, yazar, kurum ve ülke bazlı işbirliği haritaları görselleştirilmiştir. Analiz sonucunda, “mental health”, “mental health nursing”, “simulation” ve “nursing students” gibi kavramların hemşirelik literatüründe öne çıktığı; en yoğun yayının ise 2024 yılında gerçekleştiği saptanmıştır. En fazla yayın üreten ülkeler ABD, Avustralya ve İngiltere olmuştur. Hemşireliğin dijital sağlık dönüşümünde kritik bir rol üstlendiğini ve bireysel iyi oluşa yönelik hizmetlerin yeniden yapılandırılmasında öncü bir meslek grubu olduğunu ortaya koymaktadır. Türkiye gibi gelişmekte olan ülkelerde, yapay zekâ uygulamalarının hemşirelikte etik, erişilebilir ve etkili kullanımına yönelik dijital okuryazarlık eğitimlerinin artırılması önerilmektedir.

Anahtar Kelimeler: Yapay zekâ, bireysel iyi oluş, hemşirelik, dijital sağlık, hayat boyu öğrenme

The Impact of Artificial Intelligence-Based Applications on Personal Well-Being in Healthcare: A Perspective on Digitalization and Lifelong Learning

Abstract

In health practice, AI is increasingly employed not only in clinical decision-making processes but also in promoting psychosocial support, health education, and self-care competence - all critical components of holistic well-being. The aim of this study is to analyze academic publications that examine the impact of artificial intelligence-supported applications in healthcare on individual well-being from the perspective of digitalization and lifelong learning using bibliometric methods. The study used bibliometric analysis to examine 478 peer-

reviewed articles published between 2022 and 2025 in the “Nursing” category of the Web of Science database. Using VOSviewer software, co-occurrence analyses of keywords and collaboration networks among authors, institutions, and countries were visualized. The analysis revealed that terms such as “mental health,” “mental health nursing,” “simulation,” and “nursing students” were prominent within the nursing literature. The year 2024 recorded the highest number of publications, with the United States, Australia, and the United Kingdom identified as the most prolific contributor countries. The results underscore nursing's central role in the digital health transformation and its pivotal position in restructuring services aimed at enhancing personal well-being. It is recommended that in developing countries like Turkey, digital health literacy and ethical training on the effective and equitable use of AI in nursing practice be expanded.

Keywords: Artificial intelligence, personal well-being, nursing, digital health, lifelong learning, health literacy

Giriş ve Amaç

Yapay Zekâ (YZ); öğrenme, akıl yürütme, algılama, karar verme ve doğal dil ile etkileşim gibi insan zekâsı gerektiren görevleri yerine getirebilen sistemler geliştirmeyi amaçlayan bir bilgisayar bilimi alanıdır. Son yıllarda YZ, bireylerin ve toplumların yaşam kalitesini artırma potansiyeli sayesinde pek çok alanda temel bir araç hâline gelmiştir. Özellikle fiziksel, ruhsal ve duygusal sağlık ile çevresel sürdürülebilirlik gibi alanlarda sunduğu çözümlerle bireysel ve toplumsal iyi oluşa önemli katkılar sağlamaktadır (Ruiz-Vanoye et al., 2025).

Yapay zekanın sağlık hizmetlerine entegrasyonu, tıbbi görüntüleme ve tanı, hasta bakımı, tıbbi araştırma, ilaç keşfi, hasta katılımı ve uyumu, rehabilitasyon ve idari görevler olmak üzere çok sayıda uygulamayı kapsamaktadır (Chang, 2019; Kuwaiti vd., 2023). Ruh sağlığı alanında geliştirilen terapötik sohbet robotları ve duygusal durum analizi yapan platformlar, kişiselleştirilmiş ve erişilebilir psikolojik destek sunmaktadır. Yine akıllı cihazlar sayesinde, bireylerin yaşamsal belirtileri izlenerek sağlıklı yaşam alışkanlıkları geliştirmelerine katkıda bulunmaktadır. Klinik kayıtlar, genetik veriler ve beyin görüntüleri gibi büyük veri kümeleri, makine öğrenmesi algoritmalarıyla analiz edilerek psikiyatri gibi alanlarda tanı doğruluğu artırılmakta; bu sayede ruhsal hastalıkların erken saptanması ve daha bilinçli klinik kararların alınması mümkün olmaktadır (Ayhan, 2023). Ayrıca kişiye özgü tedavi planlarının oluşturulmasına katkı sağlayarak, deneme-yanılma yöntemlerinin azaltılması ve ilaç tedavilerinin daha etkin hâle getirilmesi sağlanmaktadır. Tedavi sürecinin yapay zekâ ile gerçek zamanlı olarak izlenmesi, gerektiğinde hızlı müdahale edilmesine olanak tanıyarak terapötik sonuçları ve hastanın iyi oluşunu artırmaktadır (Ayhan, 2023). YZ destekli giyilebilir

teknolojiler, bireylerin fizyolojik ve davranışsal göstergelerini sürekli izleyerek sağlık durumu ve tedaviye yanıt hakkında nesnel veriler sunmaktadır. Bu sayede, nüks veya durum kötüleşmesi gibi erken belirtiler zamanında tespit edilip müdahale edilebilmektedir. Özellikle sanal ve artırılmış gerçeklik gibi teknolojilerle desteklenen YZ uygulamaları, kaygı bozuklukları gibi durumların tedavisinde kullanılabilecek yeni ve etkili terapi ortamları oluşturmaktadır (Ayhan, 2023; Inamdar et al., 2025).

Tüm bu gelişmeler, sağlık hizmetlerinin daha erişilebilir, etkili ve sürdürülebilir olmasına katkı sağlamakta birlikte, bireylerin iyi oluş (well-being) düzeyleri üzerinde de doğrudan ya da dolaylı etkiler yaratmaktadır. İyi oluş kavramı yalnızca fiziksel sağlıkla sınırlı olmayan; bireyin zihinsel, duygusal, sosyal ve çevresel faktörlerle bütünlük bir şekilde ele alınmasını gerektiren çok boyutlu bir olgudur. Ryff ve Singer'in (2008) eudaimonik iyi oluş modeline göre bireyin anlamlı bir yaşam sürmesi, kendi potansiyelini gerçekleştirilmesi ve yaşam doyumunun yüksek olması, genel iyilik halinin temel unsurlarıdır (İri, 2023; Ryff & Singer, 2008). Bireysel iyi oluşun sürdürülmesi ve geliştirilmesi, özellikle kronik hastalıkların arttığı, yaşlı nüfusun büyüdüğü ve bireylerin yaşam tarzlarının giderek daha dijital hale geldiği günümüz toplumlarında büyük önem taşımaktadır (Boyacı et al., 2025). Bu noktada dijitalleşmenin getirdiği olanaklarla bireylerin sağlık verilerine ulaşımı kolaylaşmakta, kendi sağlık durumlarını izleme ve yönetme kapasiteleri artmakta ve böylece öz-bakım becerileri güçlenmektedir (Booth et al., 2021). Yapay zekâ teknolojilerinin bireylerin sağlıkla ilgili farkındalıklarını artırmada, risk faktörlerini erken aşamada belirlemede ve yaşam kalitelerini artıracak önerilerde bulunmada sunduğu potansiyel, iyi oluş kavramının dijital bağlamda yeniden yorumlanmasını gerektirmektedir (Topol, 2019). Bu çalışma, yapay zekâ destekli sağlık uygulamalarının bireysel iyi oluş üzerindeki etkisini hem dijitalleşme hem de hayat boyu öğrenme perspektiflerinden inceleyerek özgün bir yaklaşım sunmayı amaçlamaktadır. Literatürde çoğunlukla teknolojik etkiler klinik çıktılar üzerinden değerlendirilmekte, bireysel düzeydeki psikososyal etkiler, hemşirelik yaklaşımı ve öğrenme boyutu ihmal edilmektedir (Booth et al., 2021). Ayrıca bu çalışma, dijitalleşmenin bireysel güçlenme süreçlerine katkısını görünür kılarak hem akademik literatüre katkı sunmakta hem de hemşirelik eğitimi ve uygulamaları açısından yol gösterici olmayı hedeflemektedir. Sonuç olarak, dijital sağlık teknolojilerinin bireylerin yaşamlarına entegre olması yalnızca sağlık hizmet sunumunun bir dönüşümü değil; aynı zamanda bireylerin kendilerini, sağlıklarını ve yaşam boyu öğrenme rollerini yeniden tanımlamalarını gerektiren bir kültürel ve zihinsel dönüşüm sürecidir. Bu dönüşümün iyi anlaşılması, teknolojinin insan merkezli, kapsayıcı ve etik bir şekilde şekillendirilmesini sağlayacak; hemşirelerin bu süreçte üstlendikleri stratejik rolün daha

görünür hale gelmesine katkı sunacaktır.

Yöntem:

Bu çalışmada nicel araştırma yöntemlerinden bibliyometrik analiz yöntemi kullanılmıştır.

Bibliyometrik analiz, belirli bir konuda yayımlanan bilimsel literatürün yapısını, gelişim sürecini ve eğilimlerini sistematik biçimde incelemeye olanak tanıyan nicel bir yöntemdir (Donthu et al., 2021). Veriler, Giresun Üniversitesi Proxy ayarları üzerinden 2022–2025 yılları arasında yayımlanmış bilimsel makalelerin Web of Science Core Collection veri tabanından 23.04.2025 tarihinde sistematik olarak taranmasıyla elde edilmiştir. İlk taramada 2.449.290 kayıt içinden, sağlıkta yapay zekâ, bireysel iyi oluş ve hayat boyu öğrenme temalarını kapsayan yayınlara odaklanılmıştır. Kullanılan anahtar kelimeler şu şekilde yapılandırılmıştır: ("artificial intelligence" OR "AI" OR "machine learning" OR "deep learning"), AND ("healthcare" OR "digital health" OR "eHealth" OR "mHealth"), AND ("well-being" OR "wellbeing" OR "personal well-being" OR "mental health" OR "quality of life"), AND ("lifelong learning" OR "continuous education" OR "digital literacy" OR "health literacy" OR "digital transformation")

Tarama 2022–2025 yıllarıyla sınırlandırılmış, sadece "article" türündeki yayınlar dahil edilmiş, alan sınırlaması olarak Nursing (Web of Science Category) ve Nursing (Citation Topics Meso) seçilmiş konusal ve tarihsel sınırlamalarla veri seti daraltılarak 478 yayın analiz kapsamına alınmıştır. Veriler dışa aktarılmış ve VOSviewer yazılımı kullanılarak bibliyometrik analiz yapılmıştır. Yayın yılına göre dağılım, en üretken yazarlar, kurumlar, ülkeler ve anahtar kelime eşleşmeleri analiz edilmiştir. Anahtar kelime kümelenmeleri ve eş-oluşum haritaları görselleştirme yoluyla sunulmuştur.

Etik İzin

Bu araştırma, açık erişimli veri tabanlarından elde edilen ikincil verilere dayandığı için etik kurul onayı gerektirmemektedir. Ancak bilimsel etik ilkelerine uygun olarak yürütülmüş ve kaynak gösterimlerinde gerekli özen gösterilmiştir.

Bulgular:

1. Tanımlayıcı Analizler

2022–2025 yılları arasında yayımlanan yapay zekâ, sağlık hizmetleri, iyi oluş ve hayat boyu öğrenme temalı yayın sayısında en yüksek artışın 2024 yılında gerçekleştiği gözlemlenmiştir. Bu bulgu, özellikle pandemi sonrası dönemde dijital sağlık çözümleri ile bireysel iyi oluş ilişkisine olan akademik ilginin belirgin şekilde arttığını göstermektedir.

Şekil 1. 2022–2025 Yılları Arasında Yıllara Göre Yayın Sayısındaki Değişim

İncelenen 478 yayının büyük bir kısmının %77,4'ü SSCI (Social Sciences Citation Index) ve %77'si SCI-Expanded (Science Citation Index Expanded) kapsamında yer aldığı belirlenmiştir. Bu durum, sağlıkta yapay zekâ ve iyi oluş temalarının hem sosyal bilimler hem de fen bilimleri literatüründe disiplinlerarası biçimde yoğun ilgi gördüğünü göstermektedir. Ayrıca, yayınların %22,5'inin ESCI (Emerging Sources Citation Index) kapsamında olması, konunun gelişmekte olan alanlarda da yükselen bir eğilim sergilediğini ortaya koymaktadır.

Şekil 2. Ükelere Göre Yayın Sayılarının Dağılımı (2022–2025)

Ükelere göre yayın dağılımına bakıldığında, en fazla sayıda yayının Amerika Birleşik Devletleri (n=150) tarafından üretildiği görülmektedir. ABD'yi sırasıyla Avustralya, İngiltere, Finlandiya, Çin, Kanada ve Norveç izlemektedir. Bu dağılım, sağlıkta yapay zekâ ve bireysel iyi oluş konularında en yüksek akademik üretkenliğin Anglo-Sakson ve dijital sağlık yatırımları güçlü ülkelerde yoğunlaştığını göstermektedir.

Şekil 3. Ükelere Göre Yapay Zekâ ve Bireysel İyi Oluş Temalı Yayınların Sayısal Dağılımı

2. Bibliyometrik analizler

Yazarlar arası İş birliği Analizi: VOSviewer ile gerçekleştirilen eş-yazarlık analizine göre toplam 132 yazar belirlenmiş, bu yazarlar arasında 3 ayrı iş birliği kümesi (tespit edilmiştir). En yüksek toplam bağlantı gücüne sahip yazarın Kim Foster olduğu ve bu yazarın 11 bağlantı puanı ile merkezi konumda yer aldığı görülmektedir. Foster ile birlikte Louise Alexander, Nigel Toomey, James Metcalfe ve Michael Steele aynı kümeye dahil olmuş, bu durum bu grubun yoğun iş birliği içinde olduğunu göstermektedir. Diğer iki kümeye ait yazarlar arasında Brenda Happell, Michael Hazelton, Lorna Moxham ve John Hurley gibi isimlerin de etkili bağlantılarla yer aldığı görülmektedir. Bu bulgular, alandaki üretkenliğin belirli araştırma ağlarında kümelendiğini ve disiplinlerarası çalışmalarda bazı akademisyenlerin merkezileştiğini göstermektedir.

Şekil 4. Yazarlar Arası İş birliği Ağı ve Küme Dağılımı

Kurumlar Arası İş birliği Analizi: Bibliyometrik analizde kurumlar arası iş birliği haritalandırıldığında, 76 kurum eşik değeri karşılamış ve iş birliği gücüne göre 2 kümeye (cluster) ayrılmıştır. Swinburne University of Technology, en yüksek toplam bağlantı gücüne (15) sahip kurum olarak iş birliği ağının merkezinde yer almıştır. Bu kurumu sırasıyla Monash University, University of Melbourne, Australian Catholic University ve University of Wollongong takip etmiştir. Harita üzerinde, Swinburne Üniversitesi'nin hem kendi kümesindeki hem de diğer kümelerdeki kurumlarla çok yönlü bağlantılara sahip olduğu gözlemlenmiştir. Bu durum, sağlıkta yapay zekâ ve bireysel iyi oluş konularında Avustralya merkezli yükseköğretim kurumlarının öncülüğünü ve iş birliği potansiyelini açıkça göstermektedir.

Şekil 5. Kurumsal Ortaklık Ağı ve Küme Dağılımı

Ülkeler Arası İş birliği Analizi: Ülkeler arası İş birliği haritasında, 21 ülke analiz eşiğini karşılamış ve iki kümeye ayrılmıştır. Avustralya, 16 yayın ve 45 atıfla en yüksek yayın ve atıf sayısına sahip ülke olarak iş birliği ağının merkezinde yer almıştır. İngiltere toplam 36 atıfla ikinci sırada gelirken, Türkiye 2 yayın ve 25 atıfla dikkat çeken ülkelerden biri olmuştur. Görselleştirilen iş birliği ağına göre, İngiltere hem İskoçya hem de ABD ile güçlü bağlara sahiptir. Öte yandan, Kanada ve ABD'nin oluşturduğu ayrı bir küme, bu iki ülke arasındaki akademik iş birliğinin yoğunluğunu göstermektedir. Türkiye ise ağda yer almakla birlikte merkezi bir konumda değildir; bu da uluslararası ortaklıkların artırılması gerektiğini işaret etmektedir.

Şekil 6. Ülkeler Arası Ortak Yayın Ağı ve Kümeleşme Yapısı

Anahtar Kelime Eşgörünüm Analizi: Anahtar kelimeler üzerinden yapılan eşgörünüm analizinde 151 terim 23 kümeye ayrılmıştır. "Mental health" ve "mental health nursing" terimleri en sık kullanılan ve en yüksek bağlantı gücüne sahip anahtar kelimeler olarak ön plana

çıkılmaktadır. Bu kavramlar etrafında “nursing students”, “simulation”, “education” ve “psychiatric nursing” gibi terimlerle güçlü tematik ilişkiler kurulduğu gözlemlenmiştir. Bu durum, literatürde ruh sağlığı hemşireliğinin eğitim ve uygulama boyutlarıyla yoğun şekilde çalışıldığını ortaya koymaktadır.

Şekil 7. Anahtar Kelimeler Arası Eşgörünüm Ağı ve Tematik Küme Dağılımı

Sonuç ve Öneriler

Bu çalışmada elde edilen bulgular, sağlık alanında yapay zekâ destekli uygulamaların bireysel iyi oluşla ilişkisinin giderek artan bir akademik ilgiye konu olduğunu göstermektedir. 2022 - 2025 yılları arasında yayınlanan çalışmaların önemli bir bölümü 2024 yılında yoğunlaşmış; bu durum, özellikle pandemi sonrası dönemde bireysel sağlık çözümleri ve dijital dönüşümün öneminin arttığını ortaya koymuştur. Bibliyometrik analiz bulguları, "mental health" ve "mental health nursing" anahtar kavramları etrafında şekillenen akademik üretimin; eğitim, simülasyon, hemşirelik öğrencileri ve psikiyatrik hemşirelik gibi tematik alanlarla derinlemesine bağlantılar kurduğunu göstermektedir.

Yazar, kurum ve ülke düzeyinde yapılan iş birliği analizleri, alandaki üretimin belirli akademik ağlarda yoğunlaştığını ve özellikle Avustralya, İngiltere ve ABD gibi dijital sağlık yatırımları güçlü ülkelerin öncü konumda yer aldığını ortaya koymuştur. Türkiye'nin yayın ve atıf sayısı görece düşük olmakla birlikte dikkat çeken bir artış eğilimindedir ve bu bağlamda uluslararası iş birliklerinin artırılması stratejik bir gereklilik olarak değerlendirilmektedir. Bu araştırmanın sonuçlarına göre öneriler ise şu şekildedir:

- Türkiye gibi gelişmekte olan ülkelerde, sağlıkta yapay zekâ uygulamalarına ilişkin

akademik üretkenliği artırmak amacıyla uluslararası ortaklıkların güçlendirilmesi gerekmektedir.

- Ruh sağlığı, eğitim teknolojileri ve dijital sağlık hizmetleri gibi çok disiplinli alanlarda yürütülen çalışmaların desteklenmesi, bireysel iyi oluşu merkeze alan yenilikçi yaklaşımların geliştirilmesine katkı sağlayacaktır.

- Sağlık çalışanlarının dijital okuryazarlığını geliştirmeye yönelik hayat boyu öğrenme politikaları teşvik edilmeli; sağlıkta yapay zekâ destekli hizmetlerin etkili, etik ve kapsayıcı biçimde kullanılabilmesi için düzenleyici çerçeveler oluşturulmalıdır.

- Gelecekte yapılacak araştırmalarda yapay zekânın sadece klinik çıktılar üzerindeki değil, bireyin psikososyal ve duygusal iyi oluşu üzerindeki etkileri de daha derinlemesine incelenmelidir.

Özet

Günümüzde teknolojik araçların aile yaşamındaki önemi hızla artmakta, bu durum çocukların aile içi ilişkileri algılayış biçimini doğrudan etkilemektedir. Özellikle çocukların duygusal ve sosyal gelişimlerinin temelini atıldığı okul öncesi dönemde, ebeveynlerin teknolojiyle olan ilişkilerinin çocukların aile bağlarını nasıl deneyimlediği üzerinde belirleyici olabilmektedir. Çocuklar, gelişim süreçlerinde çevrelerini gözlemleyerek öğrenirken, ebeveynlerin bu yöndeki tutum ve davranışları onların benlik algısı, sosyal becerileri ve sosyal uyumları üzerinde önemli yer tutmaktadır. Buna karşın, sınırlı dil becerileri ve iletişim yetisi nedeniyle duygularını ifade etmekte zorlanan bu yaş grubundaki çocuklar, resim yapma gibi yaratıcı yollarla kendilerini daha rahat dışa vurmakta; bu yönde yapılan çocuk resimleri de aile içi ilişkileri ve dinamikleri hakkında önemli ipuçları sunmaktadır. Bu çalışmanın amacı, ebeveynlerin teknoloji kullanım alışkanlıklarının 48-60 aylık çocukların aile algılarına yansımasını incelemektir. Araştırmada açımlayıcı sıralı karma desen kullanılmıştır. Çalışma grubunu, Tokat Merkez’de anaokuluna devam eden 48-60 aylık çocuklar ve ebeveynleri oluşturmuştur. Çalışmanın nicel verileri ebeveynlere yönelik “Teknoloji Kullanım Alışkanlığı Ölçeği” ile toplanırken, nitel çalışma verileri de çocuklara verilen “Bir aile çiz” yönergesi eşliğinde yapılan resimler ile bu resimler üzerine gerçekleştirilen yarı yapılandırılmış görüşmelerle toplanmıştır. Çalışma verilerinin analizinde betimsel analiz kullanılmış; frekans (f) ve yüzde (%) değerlerine bakılmıştır. Bulgular, teknoloji kullanımı düşük olan ebeveynlerin çocuklarının daha sıcak, yakın ve etkileşim odaklı aile temsilleri çizdiğini göstermiştir. Buna karşılık, teknoloji kullanım düzeyi yüksek ebeveynlerin çocukları çizimlerinde iletişim eksikliği, mesafe ve duygusal kopukluk unsurlarına yer vermiştir. Çalışma sonuçları, çocukların aile yaşantılarını ve aile içi ilişki ağlarını doğrudan gözlemlediklerini ve bunu çizimlerine yansıttıklarını göstermiştir. Araştırma, 48-60 aylık çocukların aile kavramına yönelik iç dünyalarını anlamada aile çizimlerinin etkili bir araç olduğunu ortaya koymakta; ayrıca ebeveynlerin dijital medya ile ilişkilerini gözden

geçirmeleri ve çocuklarıyla daha kaliteli zaman geçirmeye özendirilmesi gerektiğine işaret etmektedir. Bu doğrultuda, ailelere yönelik bilinçlendirme çalışmalarının artırılması ve medya okuryazarlığı eğitimleri önerilmektedir.

Anahtar Kelimeler: Okul Öncesi Dönem, Çocuk Resimleri, Aile Çizimleri, Teknoloji Bağımlılığı.

The Reflection of Parents' Technology Use Habits on the Family Perceptions of 48–60-Month-Old Children

Abstract

Today, the importance of technological tools in family life is rapidly increasing, which directly affects the way children perceive family relationships. Especially in the preschool period, when the foundation of children's emotional and social development is laid, parents' relationships with technology can be decisive on how children experience family ties. While children learn by observing their environment in their developmental processes, parents' attitudes and behaviors in this direction have an important place on their self-perception, social skills and social adaptation. On the other hand, children in this age group, who have difficulty in expressing their emotions due to their limited language and communication skills, express themselves more easily through creative means such as drawing; children's drawings made in this direction provide important clues about family relationships and dynamics. The aim of this study is to examine the reflection of parents' technology use habits on the family perceptions of 48-60 month old children. Exploratory sequential mixed design was used in the study. The study group consisted of 48-60-month-old children attending kindergarten in Tokat Center and their parents. While the quantitative data of the study were collected with the “Technology Use Habits Scale” for parents, the qualitative study data were collected with the drawings made with the instruction “Draw a family” given to children and semi-structured interviews conducted on these drawings. Descriptive analysis was used to analyze the study data; frequency (f) and percentage (%) values were analyzed. The findings showed that children of parents with low technology use drew more warm, close and interaction-oriented family representations. On the other hand, children of parents with high levels of technology use included elements of lack of communication, distance and emotional disconnection in their drawings. The results of the study showed that children directly observed family life and intra-family relationship networks and reflected this in their drawings. The study reveals that family drawings are an effective tool in understanding the inner worlds of 48-60-month-old children regarding the concept of family; it also points out

that parents should review their relationships with digital media and be encouraged to spend more quality time with their children. In this direction, it is recommended to increase awareness-raising activities for families and media literacy trainings.

Keywords: Preschool Period, Children's Drawings, Family Drawings, Technology Addiction.

Giriş

Çocukların kişilik gelişimi büyük ölçüde sosyal çevreleriyle kurdukları etkileşimler yoluyla şekillenmektedir. Bu süreçte en önemli rol modelleri olan yetişkinlerin, özellikle de ebeveynlerin davranışlarını gözlemleyerek ve taklit ederek öğrenmektedirler. Ebeveynlerin çocuk yetiştirme sürecindeki tutumları, çocukların bireysel ve psiko-sosyal gelişiminde belirleyici bir etkiye sahiptir. Bu bağlamda, ebeveynlik öz yeterliliği, ebeveynlerin çocuklarını yetiştirme sürecinde kendilerini ne derece yeterli gördükleri ve sahip oldukları ebeveynlik becerilerinin farkında olup olmamalarıyla ilişkilidir. Ebeveynin kendi yeterliliğine duyduğu güven, çocuğun duygusal ve sosyal gelişimini doğrudan etkileyen önemli bir faktör olarak öne çıkmaktadır. Çocuklar, ebeveynlerinin davranışlarını yalnızca gözlemlemekle kalmamakta, aynı zamanda bu davranışları içselleştirerek kendi kişilik yapılarını da bu doğrultuda biçimlendirmektedir. Ebeveynin sergilediği davranış biçimleri ve benimsediği tutumlar, çocuğun benlik algısının ve kişilik yapısının temel taşlarını oluşturmaktadır (Bandura, 1986; Coleman & Karraker, 1998; Jones & Prinz, 2005; Öksüz, 2002).

Çocuğun kendini değerli hissetmesi, çevresiyle sağlıklı ilişkiler kurabilmesi ve öz saygı geliştirmesi açısından aile içi iletişimin niteliği kritik bir öneme sahiptir. Aile üyeleri arasında kurulan güvene dayalı, açık ve destekleyici iletişim, çocuğun sağlıklı bir benlik gelişimi göstermesine katkı sağlamaktadır (Oktay, 2007). Günümüzde teknolojik ürünler, insan yaşamını kolaylaştıran en önemli araçlardan biri haline gelmiştir. Horzum vd.'nin (2014) de belirttiği gibi, bu teknolojik araçlar modern yaşamın vazgeçilmez bir parçası olmuştur. Özellikle akıllı telefonlar, tabletler ve bilgisayarlar gibi akıllı cihazlar, bireylerin günlük yaşamlarında yoğun bir biçimde yer almakta ve dijitalleşmenin temel taşı konumundadır. Aile yapısı içinde hem ebeveynlerin hem de çocukların çeşitli nedenlerle bu cihazlarla geçirdikleri zamanın giderek arttığı gözlemlenmektedir. Bu artış, özellikle gelişimsel sürecini henüz tamamlamamış olan çocuklar üzerinde önemli etkiler yaratmaktadır. Yetişkinler için günlük yaşamın doğal bir unsuru hâline gelen internet, çocukların da ilgisini çekmekte ve onların yaşam dünyasını etkisi altına almaktadır. Aydın'ın (2013) ifade ettiği üzere, özellikle okullarda yapılan çalışmalarda dijital platformlardaki çevrimiçi oyunlar ve sosyal medya ağlarının, çocuklar ve gençler arasında en yaygın ve popüler dijital etkinlikler olduğu görülmektedir.

Bilgisayar, tablet ve akıllı telefonlar; ebeveyn denetiminde, bilinçli ve sınırlı bir şekilde kullanıldığında çocukların bilişsel ve sosyal gelişimlerine katkı sunabilmektedir. Ancak Çamurdan'a (2007) göre, bu teknolojik araçların kontrolsüz ve sınırsız biçimde kullanılması, çocuklar açısından çeşitli olumsuz sonuçları da beraberinde getirebilmektedir. Bu bağlamda, teknoloji kullanımında ebeveyn rehberliği ve dijital farkındalık, çocukların sağlıklı gelişimi açısından kritik bir öneme sahiptir.

Günümüzde sosyal medya, ebeveynlerin çocuk yetiştirme süreçlerinde bilgi edinme, deneyim paylaşma ve destek alma açısından fayda sağlayabilecek bir araç olarak görülmektedir. Buna karşın, bu mecraanın aşırı ya da bilinçsiz kullanımı, aile içi ilişkiler üzerinde olumsuz etkiler yaratabilmektedir. Akar (2010), sosyal medya ve internetin problemleri kullanımının, ebeveynlerin çocuklarıyla kurdukları ilişkilerde çeşitli sorunlara yol açabileceğini belirtmektedir. Sakakihara vd. (2019) da bu durumu destekleyerek, medya ve internetin aşırı ya da bağımlılık düzeyindeki kullanımının, ebeveynlerin çocuklarına yeterince zaman ayıramamalarına ve onları ihmal etmelerine neden olabileceğini ifade etmektedir. Bu tür ihmaller, ebeveyn-çocuk ilişkisinde duygusal bağın zayıflamasına, çocuğun duygusal ihtiyaçlarının karşılanamamasına ve dolayısıyla gelişimsel risklerin artmasına zemin hazırlayabilmektedir. Özellikle ebeveynin büyük bir zaman dilimini çevrimiçi ortamlarda geçirmesi, çocuğun ilgi, sevgi ve bakım gibi temel ihtiyaçlarını fark etmesini ve bu ihtiyaçlara zamanında yanıt vermesini güçleştirebilmektedir. Bu durum, çocuğun hem psikolojik hem de sosyal gelişimini olumsuz yönde etkileyerek, güvenli bağlanma ve sağlıklı bir benlik gelişimi gibi kritik gelişim alanlarında sorunlara neden olabilmektedir. Ebeveynlerin kişilik özellikleri, duygusal eğilimleri ve ilgi alanları, çocukların gelişiminde hem doğrudan hem de dolaylı yollarla etkili olabilmektedir. Özellikle anne ve babaların kitap okuma, spor yapma ya da sanatsal etkinliklere katılma gibi bireysel ilgileri, çocuklar için model oluşturmakta ve onların da bu tür alanlara yönelimlerinde belirleyici rol oynamaktadır (Akkoyunlu, 2002). Bu bağlamda, ebeveynlerin sergiledikleri davranışlar ve yaşam tercihleri, çocukların değer yargıları ve ilgi alanlarının şekillenmesinde önemli bir referans noktası hâline gelmektedir.

Nitekim Arslan'ın (2004) gerçekleştirdiği bir araştırma, ebeveynlerin bilgisayar oyunu oynama eğilimleri ile çocuklarının bu tür oyunlara olan ilgileri arasında pozitif yönde anlamlı bir ilişki olduğunu ortaya koymuştur. Bu bulgu, çocukların ebeveynlerini birer rol model olarak benimsediklerini ve onların davranışlarını taklit ederek kendi alışkanlıklarını geliştirdiklerini göstermektedir. Dolayısıyla, ebeveynlerin gündelik yaşamda benimsedikleri tutum ve alışkanlıklar, çocukların sosyal ve bilişsel gelişimleri üzerinde doğrudan etkili olabilmektedir. Günümüzde yapılan araştırmalar, teknolojinin aşırı ve kontrolsüz kullanımının çocuklar

üzerinde ciddi fiziksel ve psikolojik etkiler yaratabileceğini ortaya koymaktadır. Özellikle ekran başında geçirilen sürenin artması, çocukların dikkat sürelerinde azalmaya, sosyal çevrelerinden uzaklaşmalarına, uyku düzenlerinin bozulmasına, sağlıksız beslenme alışkanlıklarına ve dolayısıyla obezite riskinin artmasına neden olabilmektedir. Ayrıca, bu durum çocuklarda depresyon ve benzeri ruhsal sorunların görülme olasılığını da artırmaktadır. Teknolojik cihazlarla geçirilen sürenin fazlalığı, çocukların hem zihinsel hem de fiziksel gelişimlerini olumsuz yönde etkileyebilmektedir. Özellikle gelişim çağındaki çocuklarda ekran içerikli cihazların uzun süreli kullanımı; postür (vücut duruşu) bozuklukları, göz yorgunluğu ve buna bağlı çeşitli sağlık problemleriyle ilişkilendirilmektedir (Cain & Gradisar, 2010; Christakis vd., 2004; Övür, 2017; Sahoo vd., 2015; Twenge & Campbell, 2018).

Kontrolsüz internet ve sosyal medya kullanımının çocuk ve ergenlerde depresyon, kaygı bozukluğu ve düşük benlik saygısı gibi ruhsal rahatsızlıklarla bağlantılı olduğu, Bilge vd.'nin (2020) çalışmasında ifade edilmiştir. Bunlara ek olarak, aşırı teknoloji kullanımı çocukların dikkat, hafıza ve problem çözme gibi bilişsel becerilerini de olumsuz yönde etkileyebilmektedir. Dinç (2015) ve Rodideal (2018) tarafından yapılan çalışmalar, teknolojiye maruz kalma süresiyle bilişsel performans arasında negatif bir ilişki olduğunu ortaya koymuştur. Bu bulgular, dijital medyanın sınırsız ve bilinçsiz kullanımının çocuk gelişimi üzerindeki potansiyel zararlarını gözler önüne sermektedir. Çocukların teknolojiyi sağlıklı bir biçimde kullanabilmeleri ve olası olumsuz etkilerden korunmaları, büyük ölçüde ebeveynlerin bilinçli tutumlarıyla mümkündür. Bu noktada, anne ve babaların yalnızca bireysel düzeyde değil, aynı zamanda okullarla iş birliği içinde hareket etmeleri büyük önem taşımaktadır. Akkoyunlu & Tuğrul'un (2002) da vurguladığı gibi, çocukların teknolojiyle olan ilişkilerinin olumlu yönde gelişebilmesi için ebeveynlerin bilinçli davranmaları ve eğitim kurumlarıyla koordineli hareket etmeleri gerekmektedir. Yavuzer (2024), çocukların ilk ve en önemli eğitim kurumunun aile olduğunu ifade ederken, ebeveynlerin çocuklarını yaşamın farklı alanlarına ilişkin bilinçlendirmeleri gerektiğinin altını çizmektedir. Ona göre ailenin çocuk üzerindeki etkisi çok yönlüdür ve şu biçimlerde kendini göstermektedir:

- Aile, çocuğun toplum içinde varlık göstermesine yardımcı olmaktadır.
- Sosyal ve mesleki yaşamda başarılı olabilmeleri adına çocuklara yön verici bilgiler sunmaktadır.
- Çocuğun kişilik özelliklerinin ve bireysel yeteneklerinin keşfinde yol gösterici rol üstlenmektedir.
- Hayatta karşılaşılabilecekleri sorunların çözümünde destekleyici olmaktadır.

- Toplum tarafından kabul görmüş genel ahlaki ve sosyal davranış kalıplarını çocuklara kazandırmaktadır.
- Çocuğa güven duygusu aşılayarak sağlıklı bir benlik gelişimine katkıda bulunmaktadır.
- Ahlaki davranışların kazanımında örnek teşkil etmektedir.
- Çocuğun sosyal ortamlarda kendine yer bulabilmesi için model olmaktadır.

Bu çerçevede değerlendirildiğinde, ailenin hem teknolojik hem de sosyal gelişim açısından çocuğun rehberi ve ilk öğretmeni olduğu açıktır. Bu nedenle, ebeveynlerin çocuklarıyla kurdukları etkileşimlerde bilinçli, yönlendirici ve destekleyici bir tutum benimsemeleri, onların sağlıklı bireyler olarak yetişmeleri adına hayati öneme sahiptir. Aile içi ilişkilerin niteliği, çocukların özgüven ve özsaygı gelişiminde belirleyici bir rol oynamaktadır. Bayraktar'a (1995) göre, iletişimi güçlü, hoşgörölü, esnek, kendine güvenen ve çocuklarına güven duygusu aşılayan ebeveynlere sahip çocukların özgüven ve özsaygı düzeyleri yüksek olmaktadır. Benzer şekilde, Yavuzer (2024), ebeveynin çocuğuna karşı sergilediği ilgili ve destekleyici tutumların, çocuğun kendine duyduğu güveni artırdığını, buna karşılık ihmal edici ve dışlayıcı davranışların özgüvenin azalmasına yol açtığını belirtmektedir. Ebeveyn veya bakım veren kişiyle kurulan bağın niteliği, bireyin ileriki yaşamında diğer insanlarla kuracağı ilişkilerin temelini oluşturmaktadır. Soner (1995), erken dönem bağlanma ilişkilerinin güven duygusu, benlik saygısı ve sosyal ilişki kurma becerileri üzerinde uzun vadeli etkiler yarattığını ifade etmektedir. Kurulan bağın sağlamlığı, bireyin kendi yaşamında oluşturacağı sosyal ilişkilerin de sağlıklı ve güven temelli olmasını desteklemektedir. Öte yandan, ebeveyn-çocuk arasındaki güvenli bağlanmanın çocuklarda ilgi ve merak duygusunu geliştirdiği, bu durumun da bilişsel ve duyuşsal gelişimi desteklediği bilinmektedir. Ancak özellikle okul öncesi dönemde oldukça kritik olan dikkat toplama ve görsel algı becerileri, çocukların uzun süre ekran karşısında kalmaları durumunda olumsuz etkilenebilmektedir (Cengiz, 2002). Bu nedenle, ebeveynlerin yalnızca çocuklarının değil, kendi ekran kullanım sürelerine de dikkat etmeleri, çocuklara model oluşturma açısından büyük önem taşımaktadır.

Yapılan araştırmalar, ebeveynlerin ekran kullanımıyla çocukların ekran alışkanlıkları arasında güçlü bir ilişki olduğunu ortaya koymaktadır. Örneğin, Kubik vd.'nin (2017) 8-12 yaş aralığındaki çocuklarla yürüttükleri çalışmada, ebeveynlerin televizyon izleme süreleri ile çocukların televizyon izleme süreleri arasında pozitif yönde bir ilişki bulunmuştur. Aynı çalışmada, ekran kullanım süresi daha az olan ebeveynlerin, çocuklarına bu konuda daha belirgin sınırlar koyabildikleri ve kural koyucu tutumlarının daha belirgin olduğu gözlemlenmiştir. Benzer şekilde, Jago vd. (2012) 3-10 yaş arasındaki çocuk ve ebeveynleriyle gerçekleştirdiği geniş ölçekli araştırma da ebeveynlerin televizyon ve diğer görsel medya araçlarıyla geçirdikleri süre ile çocuklarının bu cihazlarla etkileşim süreleri arasında anlamlı ve

güçlü bir ilişki olduğunu ortaya koymuştur. Birken vd.'nin (2011) yürüttükleri çalışmalarda da benzer sonuçlara ulaşılmış; ailede ekran süresinin artmasının çocukların ekran karşısında geçirdikleri zamanı da doğrudan artırdığı saptanmıştır. Ayrıca, Kubik vd.'nin (2017) bulguları, ebeveynlerin yalnızca kural koyuculuk değil, aynı zamanda örnek oluşturma yoluyla da çocukların medya kullanım alışkanlıklarını etkileyebileceğini göstermektedir. Bu bağlamda, ebeveynlerin kendi medya kullanım davranışlarının, çocuklara yönelik sözlü yönlendirmelerden daha etkili olabileceği vurgulanmaktadır.

Bireysel olarak teknoloji kullanımı, sosyal çevreden uzaklaşmayı beraberinde getirdiği için, hem aile içi iletişimi hem de toplumsal etkileşimi zayıflatmakta ve bireyleri yalnızlaşmaya itmektedir. Ancak dijital teknolojilerin, aile bireylerinin birlikte vakit geçirdiği ve ortak deneyimler edildiği bir araç olarak kullanılması durumunda, aile içi ilişkileri güçlendirme potansiyeline sahip olduğu ifade edilmektedir (Hazer, 2020; Syahril vd., 2024). İletişim teknolojilerinde yaşanan hızlı gelişmelerle birlikte, toplumsal yapıda köklü değişimler meydana gelmiş ve bu dönüşüm, toplumun temel kurumu olan aileyi de doğrudan etkilemiştir. Çocuk, dünyaya geldiği andan itibaren ilk eğitimini aile ortamında almakta iken; aile, çocuğun sosyal, psikolojik, ekonomik, toplumsal, hukuksal ve ahlaki gelişiminde temel bir rol oynamaktadır (Aksoy, 2016; Demiriz & Öğretir, 2007). Bu nedenle, çocuğun aile içerisindeki konumu; onun sosyal gelişimi ve kişilik yapısının oluşumunda oldukça belirleyici bir faktördür. Sağlam'a (2011) göre, çocukların sağlıklı bireyler olarak yetiştirilebilmesi için, aile içindeki olası çatışma durumlarından, sosyal izolasyondan ve olumsuz davranışlardan korunmaları son derece önemlidir. Bu bağlamda, sağlıklı aile ortamlarının çocukların sosyal ve duygusal bağlarını doğrudan destekleyeceği ve beraberinde aile içi dinamikleri güçlendirme potansiyeline sahip olduğu öne çıkmaktadır. Bu çerçevede, ebeveynlerin dijital teknolojiyi nasıl ve ne şekilde kullandıklarının, çocukların aile içi ilişkileri algılama biçimlerini etkilemesi olası görülmektedir. Okul öncesi dönem çocuklarında henüz yazılı ifade becerileri gelişmemiş olduğundan, kendilerini genellikle sözel yollarla ifade etmektedir. Bu dönem çocuklarının en güçlü ifade biçimlerinden biri de resimdir. Resim dili, çocuklarda sözel dilden önce gelişmektedir ve onların iç dünyasını yansıtan önemli bir iletişim aracıdır. Birçok araştırma (Çetin ve Güneş, 2019; Bonoti, & Misailidi, 2006; Jolley vd., 2004), çocukların çizimlerinin, bastırılmış ya da ifade etmekte zorlandıkları duygu ve düşüncelerin dışavurumu niteliğinde olduğunu ortaya koymuştur. Bu bağlamda çocukların çizimleri, onların iç dünyalarına açılan bir pencere olarak değerlendirilmekte ve duygu-düşüncelerinin yansımalarını taşıdığı kabul edilmektedir. Çocuk resimleri; onların nesnel dünyayla kurduğu ilişkinin, çevrelerinde olup biteni anlamlandırma ve yeniden yapılandırma çabasının sembolik bir ifadesidir. Her bir çizgi, çocuğun yaşantılarına

dair bir simge niteliği taşımakta ve onun sosyal, duygusal, bilişsel gelişim alanlarına dair ipuçları sunmaktadır. Hayal edilen ile yaşanan arasında bir köprü kuran bu çizimler; çocukların duygusal boşalım yaşamalarını, içsel çatışmalarını ifade etmelerini ve rahatlamlarını da sağlamaktadır. Resim, çocuk için sadece bir sanat etkinliği değil, aynı zamanda bir iletişim aracıdır. Resim yaparken çocuklar kendilerini özgürce ifade edebilmekte, iç dünyalarında yaşadıkları çatışmaları, korkuları, mutlulukları ve özlemleri yüzeye çıkarmaktadır. Bu süreç, çocuklar için hem terapötik bir deneyim sunmaktadır hem de keyifli bir etkinliktir. Özellikle çocukların çizdiği aile resimleri, aile içi dinamikleri anlamada oldukça işlevseldir. Bu resimler, çocukların aile bireylerini nasıl algıladıkları, kimlerle daha yakın bir bağ kurdukları ya da kimlerle iletişim sorunları yaşadıkları konusunda ipuçları verir (Akalin, 2008; Bonoti, & Misailidi, 2006; Sağlam, 2011; Şansal, 2014). Aile çizimlerinde figürlerin yerleşimi, büyüklükleri, çizim sıraları, yüzlerin birbirine dönük olup olmaması gibi unsurlar; aile içi iletişim, etkileşim ve paylaşım düzeyini değerlendirmede önemli veriler sunmaktadır (Metin, 2009). Örneğin, çocuk çiziminde en büyük ve merkeze yerleştirilen figür, çocuğun duygusal olarak en fazla değer verdiği kişiyi temsil ederken; küçük ya da son çizilen figürler, çocuk için daha az önem taşıyan ya da ilişkisel olarak uzak hissedilen bireyleri temsil edebilmektedir (Ekinci, 2008). Çocuğun çizdiği aile resmi; onun gözünde anne, baba, kardeş gibi aile üyelerinin ne anlam ifade ettiğini, aile içindeki yerini nasıl algıladığını, mutlu ya da huzursuz eden faktörleri ve ihtiyaç duyduğu desteğin niteliğini anlamada derinlemesine bilgiler sunmaktadır (bkz Çetin ve Güneş, 2019; Koppitz, 1968; Yavuzer, 2023). Bu yönüyle çocuk resimleri, onların iç dünyalarını çözümlemek isteyen yetişkinler için adeta bir mektup niteliği taşımakta iken sözcüklerle ifade edemediklerini, çizgilerle dile getirdikleri sembolik anlatılar olarak değerlendirilmektedir. Bu noktalardan hareketle yürütülecek bir çalışmada, ebeveynlerin teknoloji kullanım alışkanlıklarının aile algısı üzerindeki etkisinin belirlenmesinde çocuk resimlerine başvurulması, sadece görsel anlatımların analitik gücünden faydalanılmasını sağlamamakta ve aynı zamanda çocukların aile algılarının bilimsel anlamda incelenmesinde daha bütüncül bir anlayışla daha zengin bilgilere ulaşılmasına kaynaklık etmektedir.

Yöntem

Araştırma modeli

Bu çalışma, 48-60 aylık çocuğu olan ebeveynlerin teknoloji kullanım alışkanlıklarının belirlenmesinde nicel araştırma yöntemlerinin, düşük ve yüksek teknoloji kullanım alışkanlığı olan ebeveynlerin çocukların aile algılarının belirlenmesinde nitel araştırma yöntemlerinin kullanıldığı karma desen bir araştırmadır. Araştırmada önce ebeveynlerin teknoloji kullanım

alışkanlıklarının belirlenmesi için nicel veriler toplanmış, ardından düşük ve yüksek teknoloji kullanım alışkanlığı olduğu belirlenen bir grup ebeveynin çocukları ile aile çizimleri eşliğinde yarı yapılandırılmış görüşmeler yoluyla nitel veriler elde edilmiştir. Bu bağlamda, çalışma nicel ve nitel araştırma yöntemlerinin ardışık biçimde kullanıldığı açıklayıcı sıralı karma desen doğrultusunda tasarlanmıştır. Bu desen, Creswell & Plano Clark'a (2018) göre; nicel verilerle elde edilen bulguların daha derinlemesine anlaşılması için nitel verilerle desteklendiği araştırma türlerini kapsamaktadır.

Çalışma grubu

İki farklı aşamada yürütülen bu çalışmada, iki ayrı çalışma grubu yer almaktadır. İlk olarak çalışmanın nicel kısmına ilişkin olarak çocuğu anaokulunda okul öncesi eğitime devam etmekte olan ebeveynlerle çalışılmıştır. Ardından ikinci aşama kapsamında ise çalışmanın nitel kısmına ilişkin olarak anaokulu çocuklarının kendileri ile çalışılmıştır. Çalışmanın birinci aşama verilerini 2024-2025 öğretim yılında (Güz dönemi'nde) Tokat Merkez'deki 3 farklı anaokulunda eğitim görmekte olan çocukların ebeveynleri oluşturmaktadır. İkinci aşamadaki verileri ise düşük ve yüksek teknoloji kullanım düzeyine sahip olduğu belirlenen toplam 14 ebeveynin 48-60 aylık çocukları oluşturmaktadır. Çalışmaya katılan ebeveynlerin hepsi annedir. Yüksek düzeyde teknoloji kullanımına sahip olan bu ebeveynlerin çocuklarının 3'ü kız, 4'ü erkek iken; düşük düzeyde kullanımına sahip olan ebeveynlerin çocuklarının ise 4'ü kız, 3'ü erkektir. Çalışma grubunda yer alan çocukların (n=14) toplam 7'si kız ve 7'si erkektir.

Veri Toplama Araçları ve Verilerin Toplanması

Bu çalışmada veri toplama süreci iki aşamada yürütülmüştür. Nicel veriler, ebeveynlere uygulanan "Teknoloji Kullanım Alışkanlığı Ölçeği" (Küçükvardar, 2020) aracılığıyla; nitel veriler ise çocuklara "Bir aile çiz" yönergesi doğrultusunda çizdirilen resimler ve bu resimler üzerine gerçekleştirilen yarı-yapılandırılmış görüşmeler yoluyla elde edilmiştir.

Veri toplama süreci, her bir okulun sabahçı veya öğlenci sistemine göre ayarlanarak yarım günlük bir mesai içinde tamamlanmıştır. İlk aşamada, ebeveynlerin teknoloji kullanım düzeylerini belirlemek amacıyla "Teknoloji Kullanım Alışkanlığı Ölçeği" uygulanmıştır. Bu ölçek, Küçükvardar (2020) tarafından geliştirilmiş, geçerlik ve güvenirliği sağlanmış 5'li Likert tipi bir ölçme aracıdır. Ölçek, bireylerin teknoloji bağımlılığına ilişkin belirti düzeylerini değerlendirmeye yöneliktir. Yapılan analizler sonucunda, 6 faktörlü (kullanım ve zaman, teknolojik istila, bağımlılığı benimseme, teknolojik saplantı, iletişim sarmalı, ruhsal ve zihinsel değişkenler) toplam varyansın %59.043'ünü açıklayan ölçek elde edilmiştir. Ölçek geneli Cronbach α katsayısı .92'dir.

Çalışmanın nicel aşamasına ait verilerin toplanmasında 3 farklı anaokulunda çocuğu

öğrenim gören 48-60 aylık çocukların ebeveynlerine ulaşılmış ve “Teknoloji Kullanım Alışkanlığı Ölçeği” ile ölçüm gerçekleştirilmiştir. Elde edilen genel puanlara göre, teknoloji kullanım düzeyi düşük (n=7) ve yüksek (n=7) olan toplam 14 ebeveyn belirlenerek, nitel veri toplama sürecine geçilmiştir. İkinci aşamada, bu ebeveynlerin çocuklarının aile algılarına ilişkin nitel veriler toplanmıştır. Bu kapsamda, çocuklara "Bir aile çiz" yönergesi verilmiş, her bir çocuğa beyaz A4 kâğıdı ve çeşitli renklerde boya kalemleri sunulmuştur. Resim çizme sürecine hiçbir şekilde müdahale edilmemiş, çocukların özgün ifadeleri desteklenmiştir. Çocukların aile temalı bu çizimlerinin ardından, her çocuğun çizdiği resimlerin hikayeleri yapılandırılmış bireysel görüşmeler eşliğinde birebir dinlenmiştir. Bu kapsamda her çocuğun resmine ilişkin açıklamaları not edilerek yazılı olarak kayıt altına alınmıştır. Toplanan tüm veriler sistemli biçimde dökümanite edilerek analiz süreci için hazır hâle getirilmiştir.

Verilerin Analizi

Araştırma kapsamında elde edilen nitel veriler, çalışmanın temel amacı doğrultusunda betimsel analiz yöntemiyle sistematik biçimde çözümlenmiştir. Çalışma grubundaki çocukların mahremiyetini korumak amacıyla herbiri için, Ç₁'den Ç₁₄'e kadar uzanan kodlar atanmış ve böylece çocukların isimleri gizli tutularak, etik ilkelerin yerine getirilmesi sağlanmıştır. Çocuk çizimlerine yönelik analiz sürecinde, görsel öğeler çizim diliyle ilişkili göstergeler çerçevesinde anlamlandırılmış; renk kullanımı, figür yerleşimi, duygusal temsiller ve ilişkisel öğeler gibi belirleyici unsurlar üzerinden betimleyici temalar oluşturulmuştur. Ayrıca, araştırmacılar, nitel araştırmalarda yorumlayıcı konumun farkında olarak öznel etkileri sınırlamak adına sürece yönelik sürekli bir farkındalık geliştirmiştir. Bu kapsamda, analiz sürecinde olası önyargıları en aza indirmek için refleksif değerlendirme notları tutulmuş; elde edilen bulgular belirli aralıklarla yeniden gözden geçirilerek yorumların veriye dayalı, dengeli ve tutarlı biçimde yapılmasına özen gösterilmiştir. Kodlanan bu tematik yapılar, tablolar aracılığıyla frekans (f) ve yüzde (%) değerleriyle desteklenerek sayısal olarak da görünür hâle getirilmiştir. Verilerin güvenilirliğini artırmak amacıyla analiz süreci yalnızca araştırmacılar tarafından değil, aynı zamanda okul öncesi eğitimi alanında uzman bir akademisyen tarafından da bağımsız olarak değerlendirilmiştir. Kodlama sürecinde ulaşılan örtüşmeler, Miles ve Huberman'ın (1994) geliştirdiği “[Görüş birliği / (Görüş birliği + Görüş ayrılığı)] × 100” formülüyle hesaplanmış ve %95'in üzerinde bir güvenilirlik oranı tespit edilmiştir. Bu oran, nitel verilerin yorumlanmasında yüksek düzeyde tutarlılığın sağlandığını göstermektedir. Ayrıca, sadece sayısal bulgularla yetinilmemiş; çocukların çizimlerinden seçilen temsili örneklerle yer verilerek hem bulguların bağlam içinde yorumlanması kolaylaştırılmış hem de okura, verinin görsel derinliğiyle doğrudan temas kurma imkânı sunulmuştur. Tüm analiz süreci, hem yöntemsel

titizlik hem de içeriksel bütünlük gözetilerek yürütülmüş; böylece çalışmanın geçerliği ve güvenilirliği nitel araştırma ilkeleri çerçevesinde güvence altına alınmıştır.

Bulgular

Araştırmada, çocukların ailelerini nasıl algıladıkları, kendilerini aile içindeki konumlandırma biçimleri ve ebeveynlerin teknoloji kullanım düzeylerinin bu algı ve konumlandırma üzerinde nasıl bir rol oynadığı değerlendirilmektedir. Ayrıca, teknoloji bağımlılığının çocukların duygusal ve sosyal gelişimlerini, aile içi ilişkilerini ve etkileşim kalitesini nasıl etkilediği de araştırmanın odak noktaları arasında yer almaktadır. Çalışmada veriler değerlendirilerek kategorize edilmiş ve bu kapsamdaki bulgular Tablo 1’de sunulmuştur.

Tablo 2: Ebeveyn Teknoloji Kullanım Düzeyine Göre Çocukların Aile Resimlerinde Öne Çıkan Özelliklerin Dağılımı

Resimlerde Öne Çıkan Özellikler	Yüksek teknoloji kullanımına sahip ebeveyn çocukları			Düşük teknoloji kullanımına sahip ebeveyn çocukları		
	Katılımcılar	f	%	Katılımcılar	f	%
Aile bireyleri arasındaki temas/yakınlık	Ç ₉	1	7.1	Ç ₁ , Ç ₂ , Ç ₃ , Ç ₄ , Ç ₅ , Ç ₆ , Ç ₇	7	50.0
Aile bireyleri dışında kişilerin çizilmesi	Ç ₈ , Ç ₁₂ , Ç ₁₃	3	21.4	Ç ₁	1	7.1
Sevgi ve sıcaklık içeren unsurların yer alması	Ç ₁₀ , Ç ₁₁ , Ç ₁₄	3	21.4	Ç ₁ , Ç ₂ , Ç ₃ , Ç ₅ , Ç ₇	5	35.7
Aile bireyleri ile arasında engel/uzak mesafe olması	Ç ₈ , Ç ₁₂ , Ç ₁₄	3	21.4	Ç ₃	1	7.1
Çocuğun kendisini sayfada merkeze konumlandırması	—	—	—	Ç ₁ , Ç ₂ , Ç ₃ , Ç ₄ , Ç ₅ , Ç ₇	6	42.9
Eksik uzuvlar ve yarım çizimler	Ç ₈ , Ç ₉ , Ç ₁₀ , Ç ₁₂ , Ç ₁₃ , Ç ₁₄	6	42.9	Ç ₁ , Ç ₃ , Ç ₆	3	21.4
Küçük/cıltız figürlerin olması	Ç ₈ , Ç ₉ , Ç ₁₁ , Ç ₁₂ , Ç ₁₃ , Ç ₁₄	6	42.9	—	—	—
Canlı renklerin kullanılması	Ç ₁₀ , Ç ₁₄	2	14.2	Ç ₁ , Ç ₂ , Ç ₃ , Ç ₅ , Ç ₆ , Ç ₇	6	42.9

Üzgün/kızgın/belirsiz yüz ifadesi	Ç ₈ , Ç ₁₂ , Ç ₁₃	3	21.4	Ç ₆	1	7.1
Sayfada uygun düzen ve orantı	—	—	—	Ç ₂ , Ç ₃ , Ç ₄ , Ç ₅	4	28.5
Şiddet/korku/öfke içeren unsurların yer alması	Ç ₉	1	7.1	—	—	—

Tablo 1’e göre, düşük ve yüksek teknoloji kullanımına sahip ebeveyn çocuklarının çizdiği resimlerde öne çıkan özellikler birçok açıdan farklılık göstermektedir. Özellikle, yüksek teknoloji kullanımına sahip ebeveyn çocuklarına ait resimlerde en sık karşılaşılan unsurların (%42.9) eksik uzuvlar ve yarım çizimler ile küçük/cıltız figürler olduğu belirlenmiştir. Bu tür

izimler, ocukların kendilerini veya aile bireylerini zayıf, eksik ya da yetersiz ekilde temsil ettiklerini gstermektedir. Bu durumu destekler bir ekilde, dk teknoloji kullanımına sahip ebeveyn ocuklarının izdiėi resimlerde ise en ok ne ıkan zelliėin (%50.0) de aile bireyleri arasındaki temas olduėu grlmtr. Bu bulgu, dk teknoloji kullanımına sahip ebeveyn ocuklarının aile ii ilikileri izimlerinde daha yakın, daha destekleyici ve olumlu ilikiler ekseninde betimlendiėinin bir ifadesidir.

Resim 1: ₁₂'nin Resmi

Resim 2: ₁₃'n Resmi

Yksek teknoloji kullanımına sahip ebeveyn ocuklarının resimlerinde yer alan eksik uzuvlar ve yarım izimler ile kk/cılız figrleri Resim 1 ve Resim 2'deki izimler rneklendirmektedir. Bu izimler, bu gruptaki ocukların izdiėi resimlerde eller, dizler, ayaklar, boyun ve kulaklar gibi uzuvlar itibariyle ok bariz eksikliklerin olduėunu ve insan izimlerinin de olduka kk/cılız resmedildiėini aıka gstermektedir. Bu durum, bu gruptaki ocukların izimlerinde fiziksel btnlė tamamlanmamı insan figrlerine ve boyut aısından olduka kk beden temsillerine yer verdiklerini ortaya koymaktadır. Yine bu resimler kapsamında, ₁₂'nin izdiėi Resim 1'de zgn/kızgın/belirsiz yz ifadelerinin yer aldıėı btnlk iermeyen izimler grlrken, soluk ve renksiz izimlerin yer aldıėı ne ıkmıtır. ₁₃'n izdiėi Resim 2'de ocuėun aile bireyleri dıında halasının evini ve ev iinde halasının bebeėini izdiėi belirlenirken, resimde tek rengin kullanıldıėı da grlmtr. Bu bulgular, sz konusu ocukların resimlerinde hem anlatı hem de grsel unsurlar aısından daha sınırlı, dıa kapalı ve duygusal baėlamdan uzak bir anlatım biiminin ne ıktıėını ortaya koymaktadır.

Bunların yanı sıra, yksek teknoloji kullanımına sahip ebeveyn ocuklarının resimlerinde dk teknoloji kullanımına sahip ebeveyn ocuklarının resimlerinden belirgin bir ekilde daha fazla bir oranda aile bireyleri ile arasında engel/uzak mesafenin olduėu (%21.4), zgn/kızgın/belirsiz yz ifadesinin (%21.4) yer aldıėı belirlenmitir. rneėin; ₁₄'e ait Resim 3'de ocuėun babasıyla kendisi arasına mesafe ve engeller koyduėu babasını havada uarken izdiėi grlrken; resimde bir kaosun ve zgn yzlerin olduėu ne ıkmaktadır. Bu bulgu, yksek teknoloji kullanımına sahip ebeveyn ocuklarının aile ii ilikileri daha mesafeli ve olumsuz duygularla tanımladıklarını ortaya koymaktadır. Bu ocukların izimlerinde grlen fiziksel engeller, uzaklık ve olumsuz yz ifadeleri; duygusal kopukluk, iletiimde zorluk ve aile ii baėların zayıflıėına iaret etmektedir. Buna karılık, dk teknoloji kullanımına sahip ebeveyn ocuklarının izimlerinde aile yeleriyle daha yakın, sıcak ve olumlu ilikilerin

betimlendiği görülmektedir. Buna göre, ebeveynlerin teknoloji kullanım düzeylerinin çocukların aile içi dinamiklerine yönelik algıları üzerinde belirleyici rol oynadığı bulgusuna ulaşılmaktadır.

Resim 3: Ç₁₄'ün Resmi

Ç₁₄ örneğindeki gibi çocukların çizimlerinde görülen fiziksel engeller, uzaklık ve olumsuz yüz ifadeleri; duygusal kopukluğa, iletişimde zorluğa ve aile içi bağlarda zayıflığa işaret etmektedir. Nitekim Ç₁₄'ün resmindeki kalın yer çizgisi de destek ihtiyacının bir başka ifadesidir. Buna karşılık, düşük teknoloji kullanımına sahip ebeveyn çocuklarının çizimlerinde aile üyeleriyle arasında kısmen daha yakın ve daha olumlu ilişkilerin betimlendiği dikkat çekmektedir. Bu durumların aksine ise düşük teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde (bkz Resim 4-6). ise daha yüksek bir oranda sevgi ve sıcaklık içeren (güneş, gökkuşağı ve kalp şekilleri gibi) unsurların (%35.7) yer aldığı, canlı/sıcak (kırmızı, sarı, turuncu ve pembe gibi) renklerin (%42.9) ve mutlu/neşeli yüz ifadelerinin (%42.9) yer aldığı saptanmıştır.

Resim 4: Ç₁'in Resmi

Resim 5: Ç₂'nin Resmi

Düşük teknoloji kullanımına sahip ebeveyn çocuklarına ait bulguları örnekler bir şekilde, Ç₁'in Resim 4'deki ve Ç₂'nin Resim 5'deki çizimlerine bakıldığında; canlı renkler, mutlu yüz ifadeleri ve temas halinde olan aile bireyleri belirgin bir şekilde öne çıkmaktadır. Yine Ç₂'ye ait Resim 5'in hikâyesi için çocuğun “Annem ve kardeşlerimle baloya gidiyorum” şeklinde bir ifadeyi dile getirdiği; resimde ise çocuğun kendisini ailesiyle birlikte aynı

büyükölükte ve aynı hizada çizdiği, yüz ifadelerinde mutluluk öğelerine yer verdiği görölmüştür. Bu durum, çocuğun ailesiyle kurduğu ilişkiyi olumlu, destekleyici ve birlikte güzel zaman geçirme üzerine kurulu olarak algıladığını göstermektedir. Yine düşük bağımlılık riski altında bulunan ebeveynlerin çocuklarından Ç5'e ait Resim 6'da aile bireylerinin altında olduđu gökkuşağının çizildiği ve yanına da sıcak bir güneşin çizildiği; renkli kıyafetlere ve özenli saçlara sahip gülen yüzlü aile bireylerinin eklendiği görölmektedir.

Resim 6: Ç5'in Resmi

Nitekim düşük teknoloji kullanımına sahip ebeveyn çocuklarına ait örnekler yüksek teknoloji kullanımına sahip ebeveyn çocuklarına ait (Resim 1 ve Resim 2'deki gibi) çizimlerle kıyaslandığında; daha renkli, daha organize ve daha detaylı bir yapıda olduđu görölmektedir. Buna göre, düşük teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde renk çeşitliliği, düzenli mekânsal yerleşim ve detay zenginliği ön plandadır. Bu bulgular, düşük teknoloji kullanımına sahip ebeveyn çocuklarının daha pozitif duygu durumlarını ve sağlıklı ilişki göstergelerini yansıtan öğelerin daha yoğun ve belirgin biçimde temsil edildiğini göstermektedir.

Öte yandan; yüksek teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde hiç görölmezken düşük bağımlılık riski altında bulunan ebeveynlerin çocuklarının resimlerinde kayda değer bir oranda (%42.9) kendisini sayfada merkeze alan çizimler yaptığı görölmüştür. Bu durum, çocukların resimlerinde özne olarak kendilerini konumlandırma biçimlerinin ebeveyninin teknoloji kullanım düzeyine göre farklılık gösterebildiğini ortaya koymaktadır. Sayfa merkezine yerleştirilen figürlerin, özellikle düşük bağımlılık riski grubundaki çocuklarda daha sık görölmesi de bu gruptaki çocukların kendilerini ifade etme biçimlerinde belirgin bir şekilde eğilimin olduđuna işaret etmektedir. Buna ek olarak, düşük teknoloji kullanımına sahip ebeveyn çocuklarının çizdiği resimlerde sayfa üzerinde uygun düzen ve orantının yer aldığı (%28.5) belirlenmiştir. Öte yandan, bu özelliğin yüksek teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde hiç görölmediği; bu çocukların resimlerinin Ç13'ün örneğinde öne

çıkıldığı gibi (bkz Resim 2), daha çok sayfanın sağ uç kısımlarına yığıldığı ve bazı figürlerin havada uçar gibi konumlandığı görülmüştür. Bu bulgu, düşük teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde mekânsal organizasyon ve sayfa bütünlüğü algısının daha belirgin olduğunu; buna karşılık yüksek teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde ise sayfa kullanımının daha dağınık, düzensiz ve bütünlükten uzak bir yapı sergilediğini ortaya koymaktadır. Bu bulgu, ebeveynin teknoloji kullanım düzeyinin çocukların bilişsel kontrol ve duygusal denge düzeylerine yansımalarının bir göstergesi olarak öne çıkmaktadır.

Düşük teknoloji kullanımına sahip ebeveyn çocukları arasında hiç görülmezken yüksek teknoloji kullanımına sahip ebeveyn çocukları arasından bir çocuğun (Ç₉) resminde (%7.1)şiddet/korku/öfke içeren unsurların yer aldığı tespit edilmiştir. Bu çocuğun resminde kendisini dikenli bir şekilde; abisinin kulaklarını ise büyük ve sivri bir şekilde çizdiği

Resim 7: Ç₉'un Resmi

görülmüştür (bkz Resim 7). Bu bulgu, yüksek teknoloji bağımlılığı riski taşıyan ebeveynlerin çocuklarında olumsuz duyguların dışavurumunun kısmen daha belirgin olabileceğini, bu çocukların resimlerinde tehdit algısı, korku ya da saldırganlık gibi duygulara sembolik olarak yer verebildiklerini göstermektedir.

Bu kapsamda elde edilen tüm bulgular birlikte değerlendirildiğinde, ebeveynlerin teknoloji kullanım düzeylerinin çocukların aile algısını yansıttıkları çizimlerde hem biçimsel (renk kullanımı, sayfa yerleşimi ve çizim detayları gibi) hem de içeriksel (sevgi ifadeleri, temas, birliktelik, engelleme ve öfke gibi) düzeyde belirgin farklılıklar yarattığı görülmektedir. Özellikle düşük teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde daha sıcak, düzenli, olumlu duygularla örülü aile temsilleri öne çıkarken; yüksek teknoloji kullanımına sahip ebeveyn çocuklarının çizimlerinde ise daha dağınık, kopuk ve olumsuz duygularla yüklü temsillerin yer aldığı dikkat çekmektedir.

Sonuç ve Tartışma

Bu çalışmadan elde edilen sonuçlar, ebeveynlerin teknoloji bağımlılık düzeyinin çocukların aile algısı üzerinde belirgin bir şekilde etkili olduğunu göstermektedir. Özellikle teknolojiyi daha düşük düzede kullanan ebeveynlerin çocuklarına ait çizimlerde gözlemlenen olumlu temsiller, ebeveynlerin teknoloji kullanım alışkanlıklarını süreli ve kontrollü biçimde düzenlemelerinin çocukların duygusal ve sosyal gelişimi üzerinde koruyucu bir etkiye sahip olduğunu göstermektedir. Düşük teknoloji kullanımına sahip ebeveyn çocuklarının resimlerinde daha fazla oranda yer alan canlı renkler (kırmızı, sarı, pembe, turuncu gibi), mutlu yüz ifadeleri, sevgi ve sıcaklık sembolleri (kalp, güneş, gökkuşağı gibi); çocukların aile ortamını güvenli, sıcak ve destekleyici bir bağlam olarak algıladıklarını bir ifadesi olarak değerlendirilebilir. Buna göre, çocukların aileyle olan duygusal bağlarının ve iletişimlerinin güçlü olduğu ortamlarda, bu sıcaklığı çizimlerine yansıttıkları söylenebilir. Bununla birlikte, bu gruptaki çocukların çizimlerinde kendisini sayfanın merkezine yerleştirdiği ve aile bireyleriyle temas halinde betimlediği örneklerle rastlanmış olması; özne olarak kendilerini değerli, ilişkisel olarak ise aileye ait ve bağlı hissettiklerinin açık bir göstergesi olabilir. Bu tür düzenli, detaylı ve mekânsal bütünlüğü yüksek çizimler; çocuğun duygusal denge, öz düzenleme ve bilişsel organizasyon açısından destekleyici bir çevreye sahip olduğunu düşündürmektedir. Bu sonuçlar Bronfenbrenner'in (1979) ekolojik sistemler kuramı çerçevesinde değerlendirildiğinde, mikrosistem düzeyinde sağlıklı ebeveyn-çocuk etkileşiminin çocukların çevresel algılarına ve duygusal dışavurumlarına olumlu katkı sunması olası görünmektedir. Malchiodi (1998) ve Koppitz'in (1968) çocuk çizimlerinin duygusal değerlendirme aracı olarak kullanılabileceğini vurgulayan görüşü de bu bulguları desteklemektedir. Türkiye'de yapılan bir çalışmada (Şansal, 2014) da 5-6 yaş çocukların çizdiği hayvan resimlerinden aile ilişkilerinin anlaşılabilirliği vurgulanırken bu durum üzerinde ebeveyn eğitim durumunun etkili olduğunun belirlenmiş olması da bu sonuçların kaynağını açıklar niteliktedir. Dolayısıyla, ebeveynlerin teknolojiyle kurduğu sağlıklı sınırlar ve yüz yüze etkileşime verdiği önem, çocukların iç dünyasının yapılandırılmasında önemli bir rol oynamaktadır.

Yüksek teknoloji kullanımına sahip ebeveyn çocuklarına ait çizimlerde gözlemlenen eksik uzuvlar, küçük ve cılız figürler, soluk renk kullanımı, olumsuz yüz ifadeleri ve aile bireyleri arasındaki fiziksel engeller, bu çocukların aile bağlarına dair olumsuz bir iç temsil geliştirdiklerini düşündürmektedir. Bu temsiller, çocukların kendilerini aile içinde zayıf, değersiz veya dışlanmış hissettiklerine işaret etmekte; aynı zamanda içe dönüklük, özgüven eksikliği, duygusal mesafe ve aidiyet eksikliği gibi olgulara gönderme yapmaktadır (Yavuzer, 2023). Bu sonuç, Sakakihara vd.'nin (2019) ebeveynin dijital ortamda geçirdiği sürenin

artmasının çocukla olan bağı zayıflattığını ortaya koyan çalışma sonucu ile paralellik göstermektedir. Özellikle Ç₉ ve Ç₁₄ gibi örneklerde görülen uzaklık, dikenli figürler, büyük ve sivri kulaklar, kaotik yapı ve şiddet içerikli semboller, bu çocukların çizimlerinde tehdit algısı, bastırılmış öfke ve duygusal çatışmaların varlığını ortaya koymaktadır. Öyleki düşük teknoloji kullanımına sahip ebeveyn çocuklarına ait çizimlerde daha az olmasına karşın, kısmen eksik uzuvların ve yarım çizimlerin olması (f=3) teknoloji bağımlılığının her koşulda dikkat edilmesi gereken bir durum olduğunu vurgulamaktadır. Bu sonuçlar, Winnicott'un (1965) "*yeterince iyi ebeveyn*" yaklaşımını açıklayan bir durum olmakla birlikte; ebeveynlerin çocuğun duygusal ihtiyaçlarına duyarsız kalmasının, çocuğun iç dünyasında yalnızlık, yetersizlik ve kaygı gibi duyguların gelişmesine zemin hazırlayabileceğini savunan görüşü ile örtüşmektedir.

Yalnızca yüksek düzeyde teknoloji kullanan ebeveyne sahip bir çocuğun (Ç₉) çiziminde şiddet, korku ve öfke gibi olumsuz duyguları sembolize eden unsurların (örneğin, büyük ve sivri kulaklar, dikenli figürler, bozulmuş yüz ifadeleri) yer alması da ebeveynin teknolojiyle ilişkisi ile çocuğun duygusal dışavurumları arasında dolaylı bir bağ olabileceğini düşündürmektedir. Bu tür semboller, çocuğun tehdit algısını, içsel huzursuzluğunu ve aile içi etkileşimlerdeki duygusal çatışmaları yansıtan bir araç görevindedir (Yavuzer, 2023). Yüksek düzeyde teknoloji kullanan ebeveynlerin çocuklarıyla kurdukları iletişimin niteliği, bu tür olumsuz dışavurumların açıklanmasında pay sahibi bir değişken olarak değerlendirilebilir. Çünkü teknolojiye aşırı bağıllık, ebeveynin çocuğuna yeterince duygu odaklı, sıcak ve dikkatli bir ilişki sunmasını engelleyebilmekte; bu durumlar da çocukta yalnızlık, duygusal yoksunluk ve güvensizlik hislerini artırabilmektedir (Kildare & Middlemiss, 2017). Dolayısıyla, çocuğun iç dünyasında oluşan bu olumsuz deneyimler, daha düşük bir oranda olsa bile çocuk resimlerinde tehditkâr ya da korkutucu imgeler aracılığıyla ifade bulabilmektedir. Benzer şekilde Fury vd.'nin (1997) çalışma sonucu da çocukların çizimlerinde bağlanma stillerinin ve duygusal güven düzeylerinin izlenebileceğini kanıtlamıştır.

Çocukların çizimlerinin yalnızca yüzeysel anlatıların değil, aynı zamanda içsel dünyalarının bir yansıması olduğu; çocuğun yaşadığı çevresel koşullarının ve duygusal deneyimlerin bir tür dışavurum aracı olarak görev yaptığı görüşü (Yavuzer, 2023) bu çalışma sonuçları ile bir kez daha kanıtlanmıştır. Bu çalışmada çocuk resimleri aracılığıyla gözlemlenen örnekler, aile ortamının niteliği ile çocuğun sembolik anlatımları arasında anlamlı bir ilişki olabileceğini ortaya koymaktadır. Ebeveynin teknoloji kullanım alışkanlığının da çocuğun aile içindeki yerini, kendini ifade etme biçimlerini ve genel iyi oluşunu şekillendirebilecek önemli bir çevresel faktör olduğu söylenebilir. Özellikle ebeveynlerin ekran karşısında geçirdiği sürenin artması, çocukla geçirilen nitelikli zamanın azalmasına ve bu durumun duygusal bağ

kurma süreçlerine zarar vermesine neden olabilmektedir (Wartella, 2013). Calvert ve Wartella'nın (2013) çalışmasında, yoğun ekran maruziyetinin çocukların ileriki yaşantılarında sosyal, bilişsel ve psikolojik etkilerinin daha yüksek olduğu öne sürülürken; Zimmerman & Christakis'ın (2007) çalışma sonucunda da çok erken yaşlardaki ekran maruziyetinin ilerleyen dönemlerde dikkat problemlerine yol açtığı belirlenmiştir. Bu nedenle, yürütülecek yeni çalışmalarda teknoloji bağımlılığı gibi aile içi dinamikleri etkileyen durumların, çocukların psikososyal gelişimleri üzerindeki etkisi çok boyutlu olarak ele alınmalıdır.

Sonuç olarak, bu çalışma ebeveynlerin dijital teknoloji kullanımı ile çocukların aile algısı arasında anlamlı bir bağ olduğunu göstermektedir. Bu bulgu, dijital medya çağında ebeveyn-çocuk etkileşiminin niteliğinin korunması ve duygusal bağın sürdürülebilirliğinin sağlanması gerektiğini vurgulamaktadır. Özellikle erken çocukluk döneminde çocukların ruhsal gelişimi açısından teknolojik farkındalığı yüksek, sınır koyabilen ve duygusal olarak ulaşılabilir ebeveyn profiline duyulan ihtiyaç daha da belirginleşmektedir. Çalışmadan elde edilen sonuçlar doğrultusunda, gelecekte yapılacak araştırmalarda farklı yaş gruplarının da incelenmesi, çocukların gelişimsel düzeylerine göre teknoloji bağımlılığı ve aile algısı arasındaki ilişkinin daha kapsamlı biçimde anlaşılmasına katkı sağlayacaktır. Ayrıca yalnızca çizim verilerine dayalı değerlendirmelerin ötesine geçilerek ebeveynlerin teknoloji kullanım süreleri, dijital araç tercihleri ve çocuklarla geçirdikleri zaman gibi nicel verilerin de dikkate alındığı karma yöntemli çalışmalara ihtiyaç duyulmaktadır. Bu doğrultuda çocuk görüşmeleri, ebeveyn gözlemleri ve öğretmen raporları gibi veri kaynaklarının sürece dahil edilmesi, elde edilen sonuçların güvenilirliğini ve geçerliliğini artıracaktır. Uygulayıcılar açısından ise çocukların çizimlerinin yalnızca sanatsal bir ürün olarak değil, aynı zamanda duygusal ve sosyal göstergeler sunan sembolik bir ifade biçimi olarak değerlendirilmesi önem taşımaktadır. Okul öncesi öğretmenlerinin çocuk resimlerini analiz etme konusunda yetkinliklerinin artırılması, rehberlik birimlerinin ebeveynlere yönelik teknoloji kullanımı ve aile içi etkileşim temalı seminerler düzenlemesi bu bağlamda önerilmektedir. Ailelere yönelik olarak ise dijital medya okuryazarlığını güçlendiren, ekran süresini sınırlayan ve ebeveyn-çocuk etkileşimini nitelikli hale getiren farkındalık çalışmaları planlanmalı; birlikte oyun oynama, kitap okuma ve doğada zaman geçirme gibi yüz yüze iletişimi destekleyen etkinlikler teşvik edilmelidir. Bu tür uygulamalar, çocukların hem psikososyal gelişimini destekleyecek hem de aile içi bağları güçlendirecek önemli birer müdahale aracı niteliğindedir.

Özet

Akran zorbalığı, dünya genelinde okul ortamlarını etkileyen yaygın ve ciddi bir sorundur. Küresel veriler, her üç çocuktan birinin zorbalığa maruz kaldığını ortaya koymaktadır; ancak oranlar bölgelere göre farklılık göstermektedir. Zorbalık, genellikle geleneksel (fiziksel, sözlü, dolaylı) ve siber zorbalık olmak üzere iki ana biçimde görülmektedir. Siber zorbalık, daha çok zaten geleneksel zorbalığa uğrayan bireyleri dijital ortamda hedef alırken, bu durum mağdurların evde dahi güvende hissetmemelerine ve psikolojik baskılarının artmasına yol açmaktadır. Zorbalığa maruz kalan bireyler, depresyon, anksiyete, intihar düşünceleri ve başkalarına zarar verme gibi ciddi psikolojik sorunlar yaşayabilirler. Özellikle trans, engelli ve diğer savunmasız gruplarda bu etkiler daha belirgindir. Ayrıca, birden fazla zorbalık biçimine maruz kalmak, benlik saygısını ve başa çıkma becerilerini daha fazla olumsuz etkileyebilir. Uzun vadede, zorbalık geçmişi olan bireylerde düşük benlik imajı, artmış intihar riski ve psikiyatrik sorunlar görülebilir. Okul hemşirelik müdahaleleri, zorbalığı önleme ve psikolojik etkilerini azaltmada önemli bir rol oynamaktadır. Bu müdahaleler arasında; önleme programları, akran grubu destekleri, dayanıklılık geliştirme ve psikoeğitim gibi stratejiler yer alır. Hemşireler, bu yöntemlerle öğrencilerin psikolojik dayanıklılığını artırmak ve başa çıkma becerilerini güçlendirmek için çalışmaktadır. Ayrıca, okul hemşireleri ve psikologlar arasındaki işbirlikleri, sağlıklı bir okul ortamı oluşturmak için kritik öneme sahiptir. Bütüncül yaklaşımlar, yalnızca öğrencilere değil, okulun tüm paydaşlarına yönelik müdahalelerle başarılı sonuçlar vermektedir. Gelecekteki araştırmalar, müdahalelerin etkinliğini, maliyet etkinliğini ve uzun vadeli etkilerini daha derinlemesine incelemeli, kültürel ve bağlamsal faktörleri göz önünde bulundurmalıdır. Bu sayede, zorbalığın psikolojik etkileri daha etkili bir şekilde yönetilebilir.

Keywords: Akran zorbalığı, psikolojik sonuçlar, hemşirelik müdahaleleri, okul sağlığı.

Psychological Consequences of Peer Bullying in Schools and the Role of Nursing Interventions: A Holistic Approach

Abstract

Peer bullying is a widespread and serious problem affecting school environments worldwide. Global data reveal that one out of every three children is bullied; however, rates vary across regions. Bullying is generally seen in two main forms: traditional (physical, verbal, indirect) and cyberbullying. Cyberbullying mostly targets individuals who are already subjected to traditional bullying in the digital environment, which makes victims feel unsafe even at home and increases their psychological pressure. Individuals who are bullied can experience serious psychological problems such as depression, anxiety, suicidal thoughts and harming others. These effects are particularly pronounced in trans, disabled and other vulnerable groups. In addition, exposure to multiple forms of bullying can further negatively affect self-esteem and coping skills. In the long term, individuals with a history of bullying may have low self-image, increased suicide risk and psychiatric problems. School nursing interventions play an important role in preventing bullying and reducing its psychological effects. These interventions include strategies such as prevention programs, peer group support, resilience building and psychoeducation. Through these methods, nurses work to increase students' psychological resilience and strengthen their coping skills. Furthermore, collaborations between school nurses and psychologists are critical for creating a healthy school environment. Holistic approaches yield successful results with interventions targeting all stakeholders of the school, not only students. Future research should examine the effectiveness, cost-effectiveness and long-term effects of interventions in more depth and consider cultural and contextual factors. In this way, the psychological effects of bullying can be managed more effectively.

Keywords: Peer bullying, psychological outcomes, nursing interventions, school health.

Giriş ve Amaç

Çocuklar ve ergenler arasında zorbalık, ilgili kişiler için geniş kapsamlı sonuçları olan önemli bir küresel halk sağlığı sorununu temsil etmektedir. Armitage (2021), çocuklukta zorbalığı, çocukluk ve ergenlik döneminde kötü sağlık, sosyal ve eğitimsel sonuçlar riskini artıran önemli bir halk sağlığı sorunu olarak tanımlamaktadır (Armitage, 2021). Zararlı etkiler, zorbalık olaylarına karışan tüm tarafları etkileyerek anlık sonuçların ötesine uzanır. Bu sonuçlar, zorbalığa dahil olan herkes (zorbalılar, kurbanlar ve zorba kurbanlar) tarafından yaşanır ve artık yetişkinliğin derinliklerine yayıldığı kabul edilmektedir (Armitage, 2021). Zorbalığın

yaygın olarak ciddi bir sorun olarak kabul edilmesine rağmen, zorbalık olayları hala normal kabul edilmektedir ve bunların görülme sıklığını ve etkisini azaltmaya odaklanılmamıştır (Yosep ve ark., 2022).

Zorbalığın çocukların ruh sağlığı üzerindeki psikolojik zararı, araştırmalar yoluyla giderek daha belirgin hale geldi. Zorbalığın etkisi kaygı, düşük psikolojik iyi oluş, düşük sosyal uyum, psikolojik sıkıntı ve intihar riski şeklinde olabilir (Yosep ve ark., 2022). Bu sonuçlar, özellikle zorbalığın çoğunun meydana geldiği okul ortamlarında, etkili müdahalelere duyulan acil ihtiyacı vurgulamaktadır. Sağlık profesyonelleri, özellikle okul ortamlarında çalışan hemşireler, hem zorbalık olaylarının azaltılmasını hem de etkilenenlere destek verilmesini ele alan müdahaleleri uygulamak için iyi bir konumdadır.

Çocuklar ve ergenler arasında zorbalık, ciddi sağlık sonuçları olan önemli bir küresel halk sağlığı sorunu olarak kabul edilmektedir. Okullar, şiddetin önlenmesi, özellikle zorbalığın önlenmesi ve olumlu gençlik gelişiminin teşvik edilmesi için önemli yerlerdir (Kub ve Feldman, 2015). Akran zorbalığının ele alınmasında hemşirelik müdahalelerinin rolü, sorunun çoklu boyutlarını dikkate alan bütüncül yaklaşımlara odaklanarak artan bir ilgi kazanmıştır.

Çalışmanın amacı: Okullarda akran zorbalığının psikolojik sonuçlarını incelemek ve bu sorunu ele almada hemşirelik müdahalelerinin rolünü değerlendirmektir.

Araştırma soruları:

1. Akran zorbalığının öğrenciler üzerindeki kısa ve uzun vadeli psikolojik etkileri nelerdir?
2. Hemşirelik müdahaleleri zorbalığı ve psikolojik etkilerini azaltmada ne kadar etkilidir?
3. Zorbalığı ele almak için en etkili bütüncül yaklaşımlar nelerdir?

Yöntem

Araştırmanın Modeli: Bu çalışma, akran zorbalığının psikolojik etkileri ve hemşirelik müdahaleleri üzerine yapılmış bir literatür derlemesidir.

Verilerin Toplanması ve Analizi: 2015-2025 yılları arasında yayımlanan makaleler, raporlar ve tezler incelenmiştir. PubMed, Scopus, Web of Science, Google Scholar ve Ulakbim veri tabanlarında belirli anahtar kelimeler kullanılarak tarama yapılmıştır. Dahil edilen çalışmalar, hakemli dergilerde yayımlanmış ve tam metnine erişilebilen çalışmalar arasından seçilmiştir.

Çalışma Grubu: İncelenen çalışmalar, okul çağındaki çocuklarda zorbalık ve hemşirelik müdahalelerini ele alan araştırmaları kapsamaktadır.

Bulgular

Yaygınlık Oranları

Akran zorbalığı, dünya genelinde öğrenciler arasında yaygın olarak gözlemlenen ciddi

bir toplumsal sorundur. Armitage (2021), küresel düzeyde her üç çocuktan birinin son 30 gün içinde zorbalığa maruz kaldığını belirtmektedir. Ancak zorbalığın yaygınlığı ve biçimleri, sosyo-kültürel bağlam, yaş grubu, cinsiyet ve kullanılan ölçüm araçlarına göre önemli farklılıklar göstermektedir. Bu durum, zorbalığın yalnızca bireysel bir sorun değil, aynı zamanda okul ortamlarını ve toplumsal yapıyı etkileyen karmaşık bir sosyal fenomen olduğunu ortaya koymaktadır.

Zorbalığın türü ve yaygınlığı zaman içinde değişim gösterebilmekte ve çeşitli faktörlere bağlı olarak artış veya azalış eğilimleri sergileyebilmektedir. Örneğin, Kanada’da COVID-19 pandemisi öncesi ve sırasında gerçekleştirilen bir çalışmada, öğrencilerin pandemi öncesine kıyasla daha yüksek zorbalık oranları bildirdiği, ancak pandemi sırasında bu oranların düştüğü tespit edilmiştir. Bununla birlikte, siber zorbalık oranlarında belirgin bir azalma gözlemlenmemiştir (Vaillancourt et al., 2021). Bu bulgular, fiziksel okul ortamlarının zorbalık davranışlarının sıklığı üzerindeki etkisini ve çevrimiçi zorbalığın giderek daha kalıcı bir tehdit haline geldiğini göstermektedir.

İrlanda’da yürütülen bir meta-analiz çalışması ise, geleneksel ve siber zorbalığın yaygınlık oranlarının bağlama ve kullanılan ölçüm araçlarına bağlı olarak değiştiğini ortaya koymuştur (Foody et al., 2017). Aynı bağlamda yürütülen araştırmalar, zaman dilimi ve kullanılan veri toplama yöntemlerinin, zorbalıkla ilgili elde edilen sonuçlar üzerinde önemli etkiler yarattığını göstermektedir.

Demografik özellikler de zorbalık deneyimlerini şekillendirmede belirleyici rol oynamaktadır. Vaillancourt ve arkadaşları (2021), ilkokul öğrencilerinin daha yüksek oranda zorbalığa maruz kaldığını; LGBT+ bireyler ve cinsiyet çeşitliliği gösteren öğrencilerin ise akran zorbalığına daha sık hedef olduğunu bildirmiştir. Bu bulgular, savunmasız gruplar için riskin daha yüksek olduğunu ve önleme stratejilerinin bu grupları öncelikli olarak ele alması gerektiğini göstermektedir.

Zorbalığın küresel düzeydeki yaygınlığına ilişkin veriler de benzer şekilde çarpıcıdır. Sahra Altı Afrika’da yapılan çok merkezli bir araştırma, zorbalık mağduriyetinin genel yaygınlığını %38,8 olarak raporlamış; bu oranlar Mauritius’ta %22,2 iken Sierra Leone’de %54,6’ya kadar çıkmıştır (Aboagye et al., 2021). Bu durum, bölgesel farklılıkların sosyoekonomik ve kültürel bağlamlarla ilişkili olduğunu göstermektedir.

Asya kıtasındaki bulgular da dikkat çekicidir. Çin’de yürütülen bir çalışmada, ergenlerin %16,7’si geleneksel zorbalık, %9’u siber zorbalık, %3,5’i ise her iki türde de mağduriyet yaşadığını bildirmiştir. Aynı çalışmada, intihar düşüncesi prevalansı %23,5, kendine zarar verme oranı %6,2 ve intihar girişimi oranı ise %4,2 olarak raporlanmıştır (Peng et al., 2019).

Bu veriler, zorbalığın yalnızca bir sosyal sorun değil, aynı zamanda ciddi psikolojik risklerle ilişkili bir halk sağlığı sorunu olduğunu da ortaya koymaktadır.

Pakistan’da kent merkezindeki devlet okullarında yapılan bir araştırma, erkek öğrencilerin %94’ü ve kız öğrencilerin %85’inin son dört hafta içinde akranları tarafından mağdur edildiğini belirtmiştir. Ayrıca erkeklerin %85’i ve kızların %66’sı başkalarına zorbalık uyguladığını ifade etmiştir (McFarlane et al., 2017). Bu istatistikler, zorbalığın hem mağduriyet hem de zorba davranışlar açısından ne denli yaygın olduğunu ve bu döngüsel yapının okul çağındaki çocuklar arasında ciddi bir sorun teşkil ettiğini gözler önüne sermektedir.

Tüm bu veriler, akran zorbalığının evrensel, çok boyutlu ve bağlamdan bağımsız düşünülemeyecek bir olgu olduğunu ortaya koymaktadır. Yaygınlık oranlarındaki farklılıklar, zorbalıkla mücadelede yerel dinamiklerin dikkate alınmasının ve kültürel açıdan uyarlanmış müdahale programlarının geliştirilmesinin gerekliliğini vurgulamaktadır.

Akran Zorbalığının Psikolojik Etkileri

Akran zorbalığı, bireylerin ruh sağlığı üzerinde kısa ve uzun vadede derin etkiler bırakabilen karmaşık bir olgudur. Zorbalığın etkileri yalnızca anlık psikolojik tepkilerle sınırlı kalmamakta, aynı zamanda bireylerin duygusal düzenleme becerilerinden benlik algısına, sosyal ilişkilerinden yaşam doyumuna kadar çok çeşitli alanlarda kalıcı izler bırakabilmektedir. Bu bağlamda, zorbalığın psikolojik etkileri anlık sonuçlar, uzun vadeli ruh sağlığı sonuçları, zorbalıktaki role dayalı etkiler ve bu etkiler üzerinde aracılık eden ya da düzenleyici rol oynayan faktörler şeklinde sınıflandırılabilir.

Anlık Psikolojik Etkiler

Zorbalık mağdurları sıklıkla yoğun duygusal sıkıntı, korku, kaygı, çaresizlik ve utanç gibi olumsuz duygular yaşamakta; bu durum bireylerin günlük işlevselliğini ve okul yaşamını ciddi şekilde etkileyebilmektedir. Yapılan araştırmalar, zorbalık mağduriyetinin depresyon, anksiyete, intihar düşünceleri ve kendine zarar verme davranışları gibi akut psikolojik problemlerle doğrudan ilişkili olduğunu ortaya koymaktadır. Örneğin, Avustralya’da trans ve cinsiyet çeşitliliğine sahip gençler arasında yapılan bir çalışmada, zorbalığa maruz kalan bireylerin %82.4’ü intihar düşünceleri, %79.7’si kendine zarar verme davranışları ve %48.1’i intihar girişimi bildirmiştir (Strauss ve ark., 2017).

Zorbalık, özellikle dezavantajlı gruplarda daha ağır psikolojik sonuçlara yol açmaktadır. Fridh ve arkadaşlarının (2018) engelli öğrencilerle gerçekleştirdiği araştırmada, hem geleneksel hem de siber zorbalığa maruz kalan bireylerin somatik ve psikolojik sağlık şikayetlerinin önemli ölçüde arttığı tespit edilmiştir. Ayrıca, çoklu mağduriyet yaşayan bireylerin benlik saygısı, aile ve akran desteği gibi temel psikososyal kaynaklarında ciddi düşüşler olduğu, bu

düşüşlerin ise duygusal sıkıntının artmasına aracılık ettiği gösterilmiştir (Turner ve ark., 2017). Bu bulgular, zorbalığın bireyin psikolojik kaynaklarını tüketerek duygusal travmayı derinleştirdiğini ortaya koymaktadır.

Uzun Vadeli Ruh Sağlığı Sonuçları

Akran zorbalığının etkileri yalnızca çocukluk ve ergenlik döneminde sınırlı kalmaz; bu etkiler yetişkinlik dönemine kadar uzanabilir. Örneğin, Östberg (2018) tarafından gerçekleştirilen 10 yıllık takip çalışmasında, ergenlik döneminde zorbalığa maruz kalan kız çocuklarında yetişkinlik döneminde (20–28 yaş) psikolojik şikayetlerin anlamlı ölçüde arttığı gözlemlenmiştir. Bu durum, zorbalığın benlik imajı ve sosyal kaynaklar üzerindeki olumsuz etkisinin kalıcı bir iz bıraktığını göstermektedir.

Zorbalığın uzun vadeli etkileri arasında en dikkat çeken, duygu düzenleme süreçlerinde yaşanan bozulmalardır. Camodeca ve Nava'nın (2020) çalışması, hem mağdur hem de seyirci olarak zorbalık deneyimi yaşayan bireylerin, yetişkinlikte duygu düzenleme konusunda daha fazla fizyolojik ve davranışsal zorluk yaşadığını ortaya koymuştur. Ayrıca, zorbalığın özellikle intihar düşünceleri ve davranışlarıyla uzun vadeli ilişkisi dikkat çekicidir. Peng ve arkadaşlarının (2019) çalışmasında, birden fazla zorbalık türüne maruz kalan bireylerin intihar düşüncesi ve kendine zarar verme açısından en yüksek risk grubunu oluşturduğu saptanmıştır.

Zorbalıktaki Role Dayalı Psikolojik Etki

Zorbalık sürecine dahil olan bireylerin yaşadığı psikolojik etkiler, üstlendikleri roller doğrultusunda farklılık göstermektedir. Araştırmalar, yalnızca mağdur olan bireylerin değil, aynı zamanda hem zorbalık yapan hem de mağdur olan bireylerin (zorba-mağdur) en ciddi psikolojik sorunları yaşadığını göstermektedir (Armitage, 2021). Bu bireylerin karmaşık sosyal etkileşimler ve çoklu stres faktörleri nedeniyle ruh sağlığı açısından daha kırılgan oldukları ileri sürülmektedir.

Zorbalık geçmişi olan üniversite öğrencileriyle yapılan kültürlerarası bir çalışmada, mağduriyetin düşük sosyal destek, öz-yeterlilik ve kişisel dayanıklılık ile ilişkili olduğu bulunmuştur (Lin ve ark., 2020). Ayrıca, failliğin bireyci kültürlerde (örneğin Almanya) öz yeterliliği artırarak daha az olumsuz psikolojik sonuç doğurduğu; ancak kolektivist kültürlerde (örneğin Çin) sosyal destek ve dayanıklılığı zayıflatarak daha fazla ruhsal sorunlara yol açtığı belirlenmiştir.

Zorbalığa karışan bireylerin kilo verme kaygıları ile ilişkisi de önemli bir psikolojik sonuçtur. Lee ve arkadaşları (2017), zorbaların bu kaygıya doğrudan etkilenirken, mağdurların psikolojik işlevselliğin zayıflaması yoluyla dolaylı olarak etkilendiğini, zorba-mağdurların ise hem doğrudan hem de dolaylı etkilendiğini ortaya koymuştur.

Arabuluculuk ve Düzenleyici Faktörler

Zorbalığın psikolojik sonuçları, bireyin sahip olduğu sosyal, ailesel ve bilişsel kaynaklar tarafından şekillendirilebilmektedir. Sosyal destek, özellikle ebeveyn ve arkadaş desteği, zorbalığın olumsuz etkilerini azaltmada koruyucu bir rol oynayabilmektedir. Fridh ve arkadaşlarının (2015) araştırması, ebeveyn desteğinin siber zorbalığın olumsuz etkilerine karşı özellikle erkeklerde stres tamponlama etkisi yarattığını göstermektedir.

Ebeveynlik stilleri de bu etkiler üzerinde belirleyici olabilir. Plexousakis ve arkadaşlarının (2019) çalışmasında, aşırı korumacı ve endişeli ebeveyn davranışlarının, zorbalık sonrası gelişen travma sonrası stres belirtilerini artırdığı, buna karşılık bakım temelli ebeveynlik stillerinin bu belirtileri azalttığı bulunmuştur.

Bireyin benlik kavramı da zorbalığın uzun vadeli etkilerini şekillendiren önemli bir faktördür. Norrington (2020), benlik kavramının akran zorbalığı ile yetişkinlikte yaşanan psikolojik sıkıntılar arasındaki ilişkiye aracılık ettiğini ortaya koymuştur. Bu bulgu, çocuklukta zorbalığa maruz kalmanın bireyin öz değerlendirme yapısını zedeleyerek, ilerleyen yıllarda depresyon ve anksiyete gibi bozukluklara zemin hazırlayabileceğini göstermektedir.

Son olarak, yakın tarihli çalışmalar zorbalığın bireyler üzerindeki yaygın ve kalıcı etkilerini daha da belirgin hale getirmiştir. Arseneault (2021), zorbalığa uğrayan çocukların depresyon geliştirme riskinin 2–3 kat arttığını, Modecki ve ark. (2022) ise siber zorbalığın ergenlerde sosyal anksiyeteyi tetiklediğini vurgulamıştır. Lereya ve ark. (2019), zorbalığın benlik saygısında düşüşe, kendine zarar verme davranışlarında artışa neden olduğunu ortaya koyarken; Fisher ve ark. (2020), ergenlik dönemindeki mağdurlarda intihar düşüncelerinin yüksekliğine dikkat çekmiştir. Nakamoto ve Schwartz (2019), zorbalığın akademik başarıyı düşürdüğünü ve devamsızlık oranlarını artırdığını belirtmiş; Wolke ve Lereya (2021) ise çocuklukta zorbalığa maruz kalan bireylerin yetişkinlikte depresyon ve anksiyete bozukluklarına daha yatkın olduklarını göstermiştir.

Zorbalığı Ele Almak için Hemşirelik Müdahaleleri

Hemşirelik Girişimlerinin Türler

Okul temelli hemşirelik müdahaleleri, zorbalığı ve psikolojik sonuçlarını ele almak için umut verici bir yaklaşımı temsil etmektedir. Bir kapsam belirleme incelemesi, zorbalık insidansını ve okullardaki öğrenciler üzerindeki etkisini azaltmak için hemşirelik müdahalelerini tartışan 11 makale buldu. Öğrencilere sağlanabilecek önleme programları, etkinlik programları, akran grubu programları ve dayanıklılık programları olmak üzere dört tür müdahale vardır (Yosep ve ark., 2022). Bu kategorizasyon, hemşirelerin okul ortamlarında zorbalığı ele almak için kullanabilecekleri çeşitli yaklaşımları anlamak için bir çerçeve sağlar.

Başka bir derleme, okul temelli hemşirelik müdahalelerini üç yönteme ayırdı: oyun programları, fiziksel aktivite programları, eğitim programları ve akran grubu programları. Müdahalelerin içeriği psikoeğitim, empati eğitimi, danışmanlık ve öz yönetimi içerir. Bu çalışma, okul temelli hemşirelik müdahalelerinin okuldaki öğrenciler arasında zorbalık insidansını önlemede ve azaltmada bir seçenek olabileceğini göstermektedir (Yosep, 2023). Bu müdahaleler, önlemeden müdahaleye ve sosyal beceri gelişiminden psikolojik desteğe kadar zorbalık dinamiğinin çeşitli yönlerini hedef alır.

Okul hemşireleri ve diğer profesyoneller arasındaki işbirlikçi çabalar özellikle etkili görünmektedir. Kub ve Feldman (2015), Ottawa Sağlığın Teşviki ve Geliştirilmesi Şartı'ndan (sağlıklı kamu politikası oluşturma, destekleyici ortamlar yaratma, topluluk eylemlerini güçlendirme, kişisel beceriler geliştirme ve sağlık hizmetlerini yeniden yönlendirme) sağlığın teşviki ve geliştirilmesine odaklanan olumlu bir okul iklimi oluştururken göz önünde bulundurulması gereken beş eylem noktasını özetlemektedir. Okul hemşirelerinin ve okul psikologlarının pozisyon ifadelerini kullanarak, zorbalığın önlenmesi ve müdahalesindeki tamamlayıcı rollerini ana hatlarıyla belirtirler. Buna ek olarak, küresel ve ulusal okul sağlığı modelleri, sağlık hedeflerine ulaşmak için okullardaki ve toplumdaki profesyoneller arasında ortaklıklar kurma ve iletişimi geliştirme çağrısında bulunduğundan, bu iki meslek grubunun zorbalığı bir okul sağlığı sorunu olarak ele almak için nasıl işbirliği içinde çalışabileceğini tartışmaktadır (Kub ve Feldman, 2015). Bu işbirlikçi yaklaşım, zorbalığın karmaşıklığını ve çok disiplinli tepkilere duyulan ihtiyacı kabul eder.

Hemşirelik Girişimlerinin Etkinliği

Araştırmalar, hemşirelik müdahalelerinin zorbalığı azaltmada ve psikolojik sonuçları iyileştirmede etkili olabileceğini göstermektedir. Bu dört tür müdahale, zorbalık insidansını ve okuldaki öğrenciler üzerindeki etkisini azaltabilir ve buna ek olarak, örneğin öz yeterliliklerini, dayanıklılıklarını ve uyarlanabilir başa çıkmalarını artırarak öğrencilerin sosyal becerilerini ve zihinsel sağlıklarını iyileştirebilir (Yosep ve ark., 2022). Bu sonuçlar yalnızca zorbalık davranışlarının kendisini ele almakla kalmaz, aynı zamanda zorbalık deneyimlerinin olumsuz etkilerine karşı tampon oluşturabilecek psikolojik kaynaklar da oluşturur.

LGBTQ ergen intiharını azaltmak için okul hemşireliği stratejilerini test eden randomize bir küme denemesi için bir protokol, okul ortamlarında kanıta dayalı stratejilerin uygulanması sırasında keşiften sürdürülebilirliğe ve aslına uygunluk elde etmeye ilerlemek için veriye dayalı, işbirlikçi, çok paydaşlı bir yaklaşımı tanımladı. Bu çalışma, LGBTQ gençleri arasında intihar ve gençlik risk davranışlarını azaltmak amacıyla okul hemşireleri tarafından kanıta dayalı stratejilerin kullanılmasını sağlamanın gerçek dünyadaki etkilerini ele almak için tasarlanmıştır.

Liselerde kanıta dayalı stratejileri iyileştirmeye ve sürdürmeye yönelik katılımcı süreçleri sayesinde, RLAS (LGBTQ Ergen İntiharını Azaltmak için Okul Hemşireliği Stratejilerinin Uygulanması), uygulama bilimine yeni bir katkıyı temsil etmektedir (Willging ve ark., 2016). Bu yaklaşım, hemşirelik müdahalelerinin, zorbalıkla ilgili psikolojik sonuçlar için yüksek risk altındaki savunmasız popülasyonların özel ihtiyaçlarını ele alacak şekilde nasıl uyarlanabileceğini vurgulamaktadır.

Müdahalelerin etkinliği, uygulama kalitesi ve bağlamsal değişkenler dahil olmak üzere çeşitli faktörlere bağlı görünmektedir. Dövüş sanatları temelli bir psiko-sosyal müdahaleyi test eden randomize kontrollü bir çalışma, müdahale grubu için dayanıklılık ve öz-yeterlik ile ilgili tüm ölçümlerin iyileştiğini, kontrol grubu için ise sonuçların azaldığını buldu. Çalışma, zorbalıkla mücadele yaklaşımına alternatiflerin kullanılmasını ve müdahalelerin bireylerin güçlü yönlerini geliştirmelerine ve daha etkili bir şekilde başa çıkmalarına yardımcı olmayı hedeflemesi gerektiğini, bunun da zorbalıkla özel bir ilgisi olduğunu ve pozitif ruh sağlığı için daha genel bir öneme sahip olduğunu önermektedir (Moore ve ark., 2018). Bu çalışma, yalnızca zorbalık davranışlarını doğrudan ele almak yerine psikolojik güçlü yönler oluşturmaya odaklanan yenilikçi yaklaşımların nasıl olumlu sonuçlar üretebileceğini göstermektedir.

Zorbalık Müdahalesine Bütüncül Yaklaşımlar

Birden Fazla Paydaşı Entegre Etme

Zorbalığı ele almaya yönelik bütünsel bir yaklaşım, farklı ortamlarda birden fazla paydaşın katılımını içerir. Ferrer-Cascales ve ark. (2019), çoğu durumda, tüm okul topluluğunu içeren müdahalelerin uygulanmamasının, zorbalıkla mücadele programlarının sınırlı etkinliğine dayanabileceğini belirtmiştir. Çalışmaları, akran eğitime dayalı bir müdahale olan TEI Programının zorbalık ve siber zorbalığın azaltılmasında ve okul ikliminin iyileştirilmesindeki etkinliğini değerlendirmeyi amaçlamıştır (Ferrer-Cascales ve ark., 2019). Bu bakış açısı, zorbalığın sosyal bir ekosistem içinde var olduğunu ve izole müdahaleler yerine sistem çapında yaklaşımlar gerektirdiğini kabul eder.

Okullar, şiddetin önlenmesinin, özellikle zorbalığın önlenmesinin ele alındığı ve olumlu gençlik gelişiminin teşvik edildiği önemli yerlerdir. Ottawa Sağlığın Teşviki ve Geliştirilmesi Şartı, sağlığın teşviki ve geliştirilmesine odaklanan olumlu bir okul iklimi yaratırken göz önünde bulundurulması gereken beş eylem noktasını (sağlıklı kamu politikası oluşturma, destekleyici ortamlar yaratma, topluluk eylemlerini güçlendirme, kişisel beceriler geliştirme ve sağlık hizmetlerini yeniden yönlendirme) özetlemektedir (Kub ve Feldman, 2015). Bu çerçeve, okul ortamının birden çok boyutunu ele alan bütüncül yaklaşımlar geliştirmek için kapsamlı bir yapı sağlar.

Aile katılımı, bütüncül yaklaşımların çok önemli bir bileşenini temsil eder. Ebeveyn katılımı üzerine yapılan araştırmalar, daha yüksek öğrenci düzeyinde algılanan ebeveyn katılımının daha az zihinsel sağlık sorunu ($b = -0.20$) ve intihar düşünceleri ve davranışları ($b = -0.10$) ile ilişkili olduğunu ve daha yüksek okul düzeyinde algılanan ebeveyn katılımının daha az intihar düşüncesi ve davranışı ile ilişkili olduğunu buldu ($b = -0.11$). Algılanan ebeveyn katılımı, geleneksel mağduriyet, siber mağduriyet, zihinsel sağlık sorunları ve intihar düşünceleri ve davranışları arasındaki ilişkileri de yönetmiştir (Wang ve ark., 2019). Bu bulgular, aile katılımının hem doğrudan bir koruyucu faktör hem de zorbalığın psikolojik etkilerine karşı bir tampon olarak nasıl hizmet edebileceğini vurgulamaktadır.

Bütüncül Okul Yaklaşımları

Sistemik değişim yaratan tüm okul yaklaşımları, zorbalığı kapsamlı bir şekilde ele almak için özellikle umut verici görünmektedir. Yarı deneysel bir çalışma, TEI programı müdahalesinin uygulanmasından sonra deney grubunda zorbalık davranışı, akran mağduriyeti, kavga, siber zorbalık ve siber mağduriyette önemli bir azalma bulmuştur. Benzer şekilde, okul iklimi faktörlerinde anlamlı bir iyileşme sadece bu grupta bulunmuştur. Elde edilen sonuçlar, TEI programının zorba ve siber zorbalık davranışlarını azaltmada ve aynı zamanda okul iklimini iyileştirmede etkili olduğunu göstermiştir (Ferrer-Cascales ve ark., 2019). Hem zorbalık davranışları hem de okul iklimi üzerindeki bu ikili etki, müdahalelerin hem acil semptomları hem de altta yatan çevresel faktörleri nasıl ele alabileceğini göstermektedir.

Çok bileşenli bir ortaokul sağlığını geliştirme müdahalesi, kontrol grubuyla karşılaştırıldığında, meslekten olmayan danışman müdahale grubundaki katılımcıların okul ikliminde ve çoğu ikincil sonuçta (depresyon, cinsiyet eşitliğine yönelik tutum, zorbalık sıklığı, şiddet mağduriyeti ve şiddet faili) iyileşmeler bildirdiğini buldu. Meslekten olmayan danışman tarafından verilen müdahalenin etkileri, 17 aylık takipte çoğu sonuç için 8 aydakilere kıyasla daha büyüktü (Shinde ve ark., 2020). Bu bulgular, kısa vadeli programlardan ziyade sürekli müdahalelerin önemini vurgulayarak, genişletilmiş uygulama ile artan faydalar önermektedir.

Olweus Zorbalığı Önleme Programının uzun vadeli değerlendirmesi, programın orijinal uygulamasından iki ila sekiz yıl sonra, dört yıllık bir takip döneminde Olweus Zorbalık Anketi'ni sürekli ve tekrar tekrar kullanan 70 ilkokulun, aynı dönemde herhangi bir Olweus Zorbalık Anketi anketi yapmamış olan 102 karşılaştırılabilir okula kıyasla, zorbalığa maruz kalma sorunları açısından açıkça daha olumlu bir uzun vadeli gelişime sahip olduğunu belgelemiştir. Sonuçlar, sürekli kullanıma sahip okulların, zorbalığı ele alma ve önleme konusunda farkındalık, hazırlık ve yeterlilik açısından "okul kültürlerini" daha iyi hale getirdiğini göstermiştir. Bu 'örgütsel öğrenme' biçiminin, yeni öğrenci gruplarının böyle bir

okul ortamından yararlanması açısından önemli sonuçları vardır. Genel olarak, daha önce bolca belgelendiği gibi, zorbalık sorunlarını yalnızca bir yıllık değerlendirmelerde değil, aynı zamanda uzun vadede, orijinal uygulamadan sekiz yıl sonrasına kadar, Olweus Zorbalığı Önleme Programı gibi bir programla önemli ölçüde azaltmanın tamamen mümkün olduğu sonucuna varılmıştır (Olweus ve ark., 2018). Bu bulgular, okullarda, müdahalelerin ilk uygulanmasının ötesinde olumlu etkileri sürdürebilecek kültürel dönüşüm potansiyelini vurgulamaktadır.

Topluluk Bağlantıları

Zorbalık müdahalelerini okul ortamının ötesine, topluluk bağlantılarını içerecek şekilde genişletmek, bütüncül yaklaşımların önemli bir boyutunu temsil eder. INCLUSIVE (okul ortamında zorbalık ve saldırganlıkta yerel olarak değişimi başlatma) müdahalesinin pilot randomize kontrollü bir çalışması, nitel verilerin, tüm müdahale bileşenlerinin ve deneme tasarımının, daha dezavantajlı okul bağlamları da dahil olmak üzere öğrenciler ve personel için uygulanabilir ve kabul edilebilir olduğunu gösterdiğini buldu. Nitel veriler ayrıca öğrenci katılımının okul genelinde ilişkileri ve katılımı geliştirmede temel bir bileşen olabileceğini düşündürmektedir. Planlanandan daha geç proje başlangıcı ve temel anketlerin zamanlaması, müdahalenin, personel eğitiminin ve diğer müdahale çıktılarının başlatılmasında gecikmelere neden oldu (Bonell ve ark., 2015). Bu, hem topluluğa bağlı yaklaşımların potansiyelini hem de ortaya çıkabilecek uygulama zorluklarını vurgulamaktadır.

Endonezya okullarında zorbalığı azaltmak için ergen liderliğindeki bir okul müdahalesine ilişkin bir pilot çalışma, önerilen içeriği ve sunumu bağlamsallaştırmak için biçimlendirici bir katılımcı eylem araştırması sürecini tanımladı. Ortaya çıkan müdahale iki temel unsuru birleştirir:

- 1) öğrencilerin sosyal normlarını ve davranışlarını etkilemek için öğrenci odaklı bir tasarım,
- 2) öğretmenin pozitif disiplin uygulamalarını kullanma bilgisini ve öz yeterliliğini geliştirmek için tasarlanmış bir öğretmen eğitimi bileşeni (Bowes ve ark., 2019). Bu ikili yaklaşım, hem okul topluluğunu hem de daha geniş sosyal normları bir araya getirerek potansiyel olarak daha sürdürülebilir bir değişim yaratır.

Tartışma ve Sonuç

Akran zorbalığının psikolojik etkileri kısa ve uzun vadede ciddi sonuçlar doğurmaktadır. Armitage'in (2021) belirttiği gibi, zorbalık yalnızca anlık değil, yetişkinliğe kadar uzanan etkiler yaratmaktadır. Bu durum, zorbalığın sadece okul yıllarıyla sınırlı kalmayan, bireyin yaşam boyu gelişimini etkileyen bir sorun olduğunu göstermektedir. Zorbalığın etkileri çok yönlüdür ve sadece kurbanları değil, zorbalı ve zorba-kurbanları da

kapsamaktadır. Bu da müdahale stratejilerinin tüm tarafları dikkate alması gerektiğini ortaya koymaktadır.

Yosep ve arkadaşlarının (2022) çalışması, zorbalığın kaygı, düşük psikolojik iyi oluş ve intihar riski gibi ciddi sonuçlara yol açabileceğini vurgulamaktadır. Zorbalığın sonuçları arasında depresyon, anksiyete, kendine zarar verme davranışları, travma sonrası stres bozukluğu ve azalmış benlik saygısı gibi çeşitli psikolojik belirtiler yer almakta; bu etkiler bireysel, çevresel ve bağlamsal faktörlere bağlı olarak değişkenlik göstermektedir.

Bu bağlamda, okullar yalnızca eğitim kurumları değil, aynı zamanda gençlerin psikososyal gelişiminin desteklediği ve zorbalıkla mücadelede ön safta yer alan yapılardır. Kub ve Feldman (2015), okulların zorbalığın önlenmesi ve olumlu gençlik gelişiminin teşvik edilmesi açısından taşıdığı kritik öneme dikkat çekmektedir. Özellikle okul hemşireleri, zorbalığın önlenmesi ve müdahalesinde kilit bir rol üstlenmektedir. Hemşireler, öğrencilerle doğrudan temas hâlinde olan sağlık profesyonelleri olarak, zorbalık davranışlarını tanımlama, psikolojik destek sağlama ve çok paydaşlı müdahale programlarını koordine etme kapasitesine sahiptir.

Etkili hemşirelik müdahaleleri arasında önleme programları, psiko-eğitimsel aktiviteler, akran destek grupları ve dayanıklılık geliştirme çalışmaları yer almaktadır. Bu müdahaleler, yalnızca zorbalığın sıklığını azaltmakla kalmayıp, aynı zamanda öğrencilerin psikolojik dayanıklılıklarını artırmaya da yardımcı olmaktadır. Öğrenciler, öğretmenler, ebeveynler ve toplum üyelerinin dahil olduğu bütüncül yaklaşımlar, özellikle okul iklimi ve kültürünü dönüştürmeye yönelik tüm okul stratejileri ile birleştirildiğinde daha etkili sonuçlar doğurmaktadır.

Bununla birlikte, mevcut literatürde hangi müdahalelerin, hangi öğrenci gruplarında ve hangi koşullarda etkili olduğunu belirlemeye yönelik bilgiler henüz sınırlıdır. Gelecekteki araştırmaların daha titiz metodolojilerle yürütülmesi; kültürel ve bağlamsal farklılıkları gözetmesi; uzun vadeli etkileri izlemesi ve uygulama süreçleri ile maliyet etkinliğini de değerlendirmesi gerekmektedir. Özellikle engelli öğrenciler, LGBTQ+ bireyler ve diğer savunmasız grupların ihtiyaçlarına duyarlı müdahale modellerinin geliştirilmesine olan ihtiyaç, bu alandaki önemli boşluklardan biridir.

Sonuç olarak, hemşirelik müdahaleleri, okullarda zorbalığı ve onun psikolojik sonuçlarını ele alan bütüncül yaklaşımların ayrılmaz bir bileşenidir. Okul hemşireleri, çok paydaşlı iş birliklerini kolaylaştırarak ve hem bireysel hem de çevresel risk faktörlerini hedef alarak, daha sağlıklı ve güvenli okul ortamlarının oluşturulmasına katkı sağlayabilir. Bu kapsamda hemşireler, yalnızca sağlık hizmeti sunucusu değil, aynı zamanda öğrenci refahını

merkeze alan savunucular ve deęişim öncüleridir. Dolayısıyla, hemşirelik uygulamaları zorbalıkla mücadelede sürdürülebilir, kanıta dayalı ve kapsayıcı çözümler üretmede anahtar rol oynamaktadır.

Öneriler

1. Okullarda zorbalığı önlemeye yönelik bütüncül programlar geliştirilmeli ve uygulanmalıdır.
2. Hemşirelik müdahalelerinin etkinliğini deęerlendiren daha fazla randomize kontrollü çalışma yapılmalıdır.
3. Uzun vadeli etkileri anlamak için boylamsal araştırmalar yürütülmelidir.
4. Kültürel bağlama uygun müdahale stratejileri geliştirilmelidir.
5. Okul hemşireleri, zorbalıkla mücadele konusunda özel eğitim almalıdır.
6. Savunmasız gruplar için özelleştirilmiş müdahale programları tasarlanmalıdır.

Özel Eğitim ve İş Eğitim Okulu Çalışanlarının Tam Gün Eğitim Uygulamasının Sürdürülebilir Olmasına Yönelik Bakış Açılarının Değerlendirmeleri: Gazimağusa Örneği

Emirali Evcimen

Gazimağusa Özel Eğitim ve İş eğitim Okulu, emirevcimen@hotmail.com, KKTC

Özet

Bu çalışmanın amacı, özel eğitim ve iş eğitim okullarında tam gün eğitim uygulamasına geçiş ile birlikte yaşanan olumlu ve olumsuz yanların belirlenmesi ve çözüm önerilerinin sürdürülebilir olmasına yönelik ilgililere veri oluşturmaktır. Araştırma deseni olarak, durum çalışması modeli tercih edilmiştir. Durum çalışması güncel bir durumu, olayı detaylı bir şekilde inceleyen kapsamlı bir çalışmadır. Tam gün eğitime geçişin güncel bir durum olması bu yöntemin kullanılmasında etkili olmuştur. Araştırmanın örneklemini 2022-2023 eğitim-öğretim döneminde Gazimağusa Özel Eğitim Ve İş Eğitim Okulu'nda görevli idareci, öğretmen ve Doğu Akdeniz Üniversitesi Özel Eğitim Bölümü dördüncü sınıf stajyer öğrencileri oluşturmaktadır. Elde edilen sonuçlar, okul altyapısının eksik olması, özel ders öğretmeni olmaması, yeterli sayıda atanmış özel eğitim öğretmeni olmaması, bütçe yetersizliği, eğitim sistemindeki yasal aksaklık ve tüzüklerin olmamasından, ilgili diğer Bakanlıklarla işbirliği yapılmamasından, Bakanlık, sendika ve özel eğitim okulu arasındaki iletişim yetersizliğinden kaynaklı olarak uygulamanın başarısız olduğu, sürdürülebilir olmadığı sonucuna ulaşılmıştır.

Anahtar kelimeler: özel eğitim, tam gün eğitim, sürdürülebilir eğitim

Evaluations of Special Education and Business Training School Employees' Perspectives on the Sustainability of Full-Day Education Practice: Gazimağusa Example

Abstract

The purpose of this study is to determine the positive and negative aspects of the transition to full-time education in special education and job training schools and to provide data for the relevant parties to make sustainable solution suggestions. As the research design, the case study model was preferred. A case study is a comprehensive study that examines a current situation or event in detail. The fact that the transition to full-time education is a current situation has been effective in the use of this method. The sample of the research consists of administrators,

teachers and fourth-year intern students of Eastern Mediterranean University Special Education Department at Famagusta Special Education and Job Training School in the 2022-2023 academic year.

The results obtained concluded that the implementation was unsuccessful and not sustainable due to the lack of school infrastructure, lack of private lesson teachers, insufficient number of appointed special education teachers, insufficient budget, legal flaws and lack of regulations in the education system, lack of cooperation with other relevant Ministries, and insufficient communication between the Ministry, the union and the special education school.

Key words: special education, full-time education, sustainable education

Giriş

Eğitim, toplumlara göre farklılaşan, içerisinde bulunduğu kültüre ve zaman içeriğine göre de amacı değişebilen, oldukça dinamik bir yapıdır (Türkoğlu, 2002). Bazı gruplara göre yaratana kavuşmak için yapılan etkinlikler, bazılarına göre başarılı ürün elde etme yolu, bazıları için davranışların istendik olarak değiştirilmesini sağlamanın en bilimsel yolu ve bir bölümüne göre ise insanoğlunun kendisini gerçekleştirmesine, geliştirmesine olanak sağlayan önemli bir araçtır (Sönmez, 2003)

Dünyamızda, sosyal, ekonomik, teknolojik ve kültürel boyutlarda yaşanan hızlı değişim ve bu değişim sonucu oluşan yenilikler eğitimi her kesim için zorunlu bir ihtiyaç haline getirmiştir. Tüm ülkeler, potansiyelleri ve öngörülerini doğrultusunda eğitimden fayda sağlayabilmek amacıyla kendi yeni, işlevsel sistemlerini geliştirmeye çalışmaktadırlar.

Birleşmiş Milletler, dünya devlet liderleriyle 2015 yılından itibaren yaşanacak on beş yıllık periyod içinde yoksulluk, iklimlerde farklılaşma, insanlar arası eşitsizlik ve paralelinde yaşanacak adaletsizlikle baş etmek, mücadele etmek için dünyayı dönüştürecek bazı hedefler belirleyerek sürdürülebilir yönde kalkınma içerikli hedefler oluşturmuştur (www.un.org.tr). Belirlenen hedefler arasında nitelikli eğitim ve bu nitelikli eğitimin güvence altına alınması; eğitimin tüm kesimler için kapsayıcı ve doğal olarak eşitlikçi olması ve mutlaka herkes için yaşam boyu öğrenimi/öğrenmeyi destekler nitelikte olması öngörülmüştür. Ayrıca yine bu kapsamda; 2030 yılına kadar her kesimden tüm çocukların, kendilerini bir üst öğrenime, hayata hazırlayacak kaliteli eğitime erişimlerinin mutlak surette güvence altına alınmasının önemi; sürdürülebilir eğitim ve sürdürülebilir bir yaşam tarzı için, toplumsal cinsiyet eşitliği temelinde

insan hakları, barış kültürünün geliştirilip şiddetten uzak durulması, dünya için kültürel çeşitliliğin, kültürün sürdürülebilir boyutta tüm öğrencilere bilgi ve becerin düzeyinde bakış açısı olarak kazandırılması gibi konular öncelikli hedefler arasında yer almıştır (www.kureselhedefler.org; Bulut ve Polat, 2019).

Eğitim, her bir bireye, olabildiğince, kendisinin sahip olduğu gizil güçleri farkına varma ve geliştirme olanağı sağlayan, tüm aşamaları planlı olarak gerçekleştirilen bir dizi etkinlikler sürecidir. Her birey kendine özgüdür ve onu diğer bireylerden ayıran bir takım nitelikleri mevcuttur. Bu nedenle tüm toplumsal yapılarda, çağdaş eğitimden beklenen; bireysel farklılıklara duyarlı olması ve her bireye gereksinim duyduğu alanlarda gelişme fırsatını sağlıyor olmasıdır. Bu durum sadece özel gereksinimli olmayan yani normal gelişim gösteren bireyler için değil, aynı zamanda özel gereksinimli bireyler için de geçerlidir.

Bir takım farklı nedenlerden dolayı, sergiledikleri bireysel özellikler ve eğitimdeki yeterlikleri açısından akranlarından farklılık gösteren bireyler, özel eğitim gerektiren veya özel gereksinimli birey şeklinde ifade edilmektedir (KHK 573, 1997).

Özel gereksinimli bireylerin kendilerine özgü beceri, hız, yetenek ve kapasitelerini artırıp, geliştirme bağlamında okulun mevcut uygulamalarında değişikliğe gidilmesi durumu söz konusu olması durumunda ise özel eğitim hizmetlerine ihtiyaç duyulur (Kirk, Gallagher & Coleman, 2017).

Özel eğitim ise, özel gereksinimli tanısı alan kişilere, eğitim ve sosyal alanlardaki ihtiyaçlarını karşılama noktasında geliştirilmiş eğitim programlarını, özel yetiştirilmiş uzmanların eşliğinde, uygun, hatta düzenlenmiş ortamlarda sürdürülen eğitim faaliyetleri olarak tanımlanmaktadır (MEB, 2018). Dolayısıyla, özel eğitim hizmetleri kapsamı içerisinde, özel olarak yetişmiş eğitimciler, özel hazırlanmış program içeriği, yöntem ve özel araçlar anlaşılmaktadır (Özyürek, 2019).

Özel gereksinimli çocukların eğitiminin de sürdürülebilir politikalar içermesi önemlidir. Bunun yerine getirilebilmesi için de mutlaka engele özgü kapsamlı ihtiyaçları göz önünde tutulmalıdır. Gerek okullar ve okulların içerikleri, gerekse sağlık ve sağlık hizmetlerine ulaşım ve de temel ihtiyaçlardan olan, onların beslenmeleri yönünde sağlanan desteğin; özel gereksinimli çocukların okula devam sürekliliği ve onlara uygun düzenlenmiş öğrenme ortamına daha yoğun katılabilmeleri için mutlaka gereksinime ve dereceye uygun destek programları ve toplumsal

yapıya, yaşantıya uyum sağlamalarına yönelik bir takım bilimsel stratejiler geliştirilerek sürdürülebilirlik (Carol ve Gopal, 1998) kesintisiz olarak sağlanmalıdır.

1974 Barış Harekatı ile Kıbrıs'ın kuzey bölgesinde yaşamaya başlayan halkın, özel gereksinimli çocuklarının eğitim gereksinimlerinin karşılanması yönelik ilk çalışma 1976 yılında özel eğitim okulu açılması ile başlamıştır. Bunu zaman içerisinde ilçelerde çeşitli özel eğitim okulların açılması ve kaynaştırma uygulamaları izlemiştir (Evcimen, 2023).

Özel eğitim okulları saat 8 - 12:40 arası, günlük dört (4) ders saati üzerinden haftada toplam yirmi (20) saat hizmet verecek şekilde düzenlenmiştir. Öğrenci yirmi saat ders görürken, alanda çalışan öğretmen de 20 saat ders yapmak durumundadır. Ayrıca her pazartesi öğleden sonra 14:00 – 16.10 arasında özel eğitim okulunda çalışan öğretmenler de, öğrencinin okulda olmamasına rağmen, diğer öğretmenler gibi okulda bulunması gerekmektedir.

Çok yönlü olarak değerlendirilen ve özel eğitim okulundan yararlanmasına karar verilen özel gereksinimli öğrencinin eğitim gereksinimine bağlı olarak özel eğitim okulunda iletişim, bilişsel, akademik, motor, sosyalleşme, topluma uyum, beslenme becerileri, iş-meslek ve ihtiyacın gerektireceği birçok konuda özel gereksinimli çocuğa ve aileye eğitim desteği sağlanır. Okullar genel olarak yarım gün gerçekleştirilecek eğitim için planlanmış, sistem bu doğrultuda düzenlenmiştir.

Gelişmiş ülkelerin eğitim sistemlerine bakıldığında bunun ağırlıklı olarak tam gün eğitim şeklinde olduğu görülmektedir (Boydak Özan ve Öztürk, 2018). Tam gün eğitim uygulaması, eğitim uygulamasındaki paydaşların sabah belirli bir saatte okulda olması, uzun teneffüs saatleri, sonraki derse zihinsel olarak dinlenerek, odaklanarak ve enerjilerini boşaltarak hazırlandıkları, öğle arası ve beslenmenin yer aldığı, öğrenciler açısından sadece ders değil, aynı zamanda sosyal etkinliklere ve beceri eğitimlerine de zaman ayırabildikleri bir sistem olarak görülmektedir. Literatür tarandığında tam gün eğitim uygulamalarının yapıldığı ülkelerdeki uygulamalar incelendiğinde, elde edilen sonuçların oldukça yararlı olduğu noktasında fikir birliğinde oldukları görülmektedir (Cryan vd., 1992; Katz, 1995; Stipek vd., 1995; Elicker ve Mathur, 1997; Fusaro, 1997; Entwisle ve Alexander, 1998; Stoflet, 1998; Gullo, 2000; Lee vd, 2006; Herry vd., 2007).

Türkiye Cumhuriyeti'nde ise köyden kente doğru yaşanan yoğun göçten kaynaklı olarak okul binalarının, dersliklerinin yetersiz ve kalabalık olması, okulların bir bölümünün tam gün değil de ikili öğretimi uygulamalarını zorunlu kılmıştır (Erdoğan, 2002, s.28).

Kuzey Kıbrıs Türk Cumhuriyeti Milli Eğitim Bakanlığı, 2023 Ocak ayında aldığı bir kararla, bahar döneminden itibaren, tüm özel eğitim okullarında tam gün eğitim uygulamasına geçmiştir.

Eğitim bakımından da, gelişmiş ülkelerce kullanılan bir sistem olarak karşımıza çıkan tam gün eğitim; ihtiyaç, sorun, özellik ve gereklilikler açısından şu an kullanılan sistemden oldukça farklılıkları olan bir çalışma içeriğidir. Yarım gün eğitim yapan özel eğitim okullarının tam gün eğitime geçmesiyle birlikte oluşan sorunları, etkileri ve de yapılması gerekenleri, çözüm yolları ile birlikte belirlemek, sürdürülebilirliği sağlamak oldukça önem arz etmektedir.

Amaç

Bu çalışmanın amacı, özel eğitim ve iş eğitim okullarında tam gün eğitim uygulamasına geçiş ile birlikte yaşanan olumlu ve olumsuz yanların belirlenerek, eğitimin sürdürülebilir olmasına yönelik çözüm önerilerinin oluşturularak, Gazimağusa bazında ilgililere veri oluşturmaktır. Araştırma soruları:

1. Tam gün eğitimin olumlu ve olumsuz yanlarına yönelik yönetici, öğretmen ve stajyer öğretmenlerin görüşlerinin değerlendirilmesi
 - a. Öğrencinin akademik gelişimi
 - b. Öğrencinin sosyal gelişimi
 - c. Öğrenci davranışları
 - d. Fiziksel ortam, altyapı açısından uygulamanın değerlendirilmesi
2. Yarım gün eğitimin olumlu ve olumsuz yanlarına yönelik yönetici, öğretmen ve stajyer öğretmenlerin
 - a. Öğrencinin akademik gelişimi
 - b. Öğrencinin sosyal gelişimi
 - c. Öğrenci davranışları
 - d. Fiziksel ortam, altyapı açısından uygulamanın değerlendirilmesi
3. Tam gün eğitim uygulamasının başlaması ile karşılaşılan/yaşanan sorunlar nelerdir?
4. Tam gün eğitim uygulamasının sürdürülebilir olabilmesi konusunda neler yapılmalıdır?

Yöntem

Araştırmanın Deseni

Tam gün eğitim uygulamasının olumlu ve olumsuz yanlarının değerlendirilerek, yarım gün eğitimden tam gün eğitim uygulamasına geçiş ile meydana gelen bazı problemleri belirlemeyi amaçlayan bu çalışmada, nitel araştırma yöntemi ve paralelinde de durum çalışması kullanılmıştır. Durum çalışması, ele alınan bir olguyu, incelenen belli bir özelliği, var olan durumun etki ettiği kesim ile birlikte detaylı bir biçimde inceleyen olanağı sağlayan çalışmadır

(Ekiz, 2003, s.27). Ülkemizde de özel eğitim ve iş eğitim okullarında tam gün eğitim uygulamasına geçişin güncel bir durum olması bu yöntemin kullanılmasında etkili olmuştur.

Katılımcılar

Araştırma katılımcıları, 2022 – 2023 eğitim yılında Gazimagusa Özel Eğitim Ve İş eğitim Okulu'nda çalışan idareci, öğretmen ve okulda öğretmenlik staj uygulaması yapan Doğu Akdeniz Üniversitesi Özel Eğitim Bölümü dördüncü sınıf öğrencileridir. Araştırmaya 1 idareci, 21 öğretmen, 28 stajyer olmak üzere toplam 50 kişi katılmıştır.

Veri Toplama Aracı ve Verilerin Toplanması

Çalışmanın amacını gerçekleştirebilmek için, alan yazın taraması gerçekleştirilmiş ve bunun sonucunda, araştırmacı tarafından açık, net ve anlaşılır bir görüşme formu geliştirilmiştir. Hazırlanan açık uçlu görüşme soruları için 2 alan uzmanına başvurulmuştur.

Araştırmada katılımcının okuldaki görevi, meslekteki yılı, okulda göreve başlama zamanı, tam gün ve yarım gün eğitimin olumlu/olumsuz yanları, tam gün eğitim uygulamasının başlaması ile birlikte yaşanan sorunlar ve uygulamanın başarılı olabilmesi için yapılması gereken sorulara yer verilmiştir.

Geliştirilen forum Gazimağusa Özel Eğitim ve İş Eğitim Okulunda Çalışan 1 idareci, 53 öğretmen ve 42 stajyer öğrenciye, yapılan toplantılar ile verilmiştir. Katılımcılara araştırmanın amacı hakkında bilgi verilip forumda yer alan soruları gönüllülük esasına göre yanıtlamaları, verilen yanıtların sadece araştırma kapsamında kullanılacağı konusunda bilgi aktarılmıştır.

Verilerin Analizi

Tam gün eğitim uygulamasının olumlu ve olumsuz yanlarının değerlendirilerek, yarım gün eğitimden tam gün eğitim uygulamasına geçiş ile meydana gelen bazı problemleri belirlemeyi amaçlayan bu araştırmada katılımcılardan elde edilen veriler içerik analizi kullanılarak çözümlenmiştir. Katılımcıların sağlamış olduğu verilerin analizinde, mahremiyeti sağlamaya yönelik olarak her bir katılımcıya K1, K2 gibi kodlar verilmiştir. Gazimağusa Özel Eğitim Ve İş Eğitim Okulu'nda çalışanların yanıtları K1'den K22'ye; DAÜ Özel Eğitim Bölümü'nden Öğretmenlik staj Uygulaması için okulda bulunan ve araştırmada yer alan katılımcılar ise K23'den K50'ye olacak şekilde numaralar verilmiştir.

Bulgular

Ülkemizde özel eğitim ve iş eğitim okullarında tam gün eğitim uygulamasına geçiş ile birlikte yaşanan olumlu ve olumsuz yanların, belirlenmesi ve çözüm önerilerinin oluşturularak sürdürülebilir bir eğitim sisteminin oluşturulmasına yönelik, Gazimağusa Özel Eğitim Ve İş

Eğitim Okulu katılımcıların görüşleri incelenmiş kod, kategori ve tema kullanılarak tablolara aktarılmıştır.

1. Tam gün eğitimin yararlı olup olmadığının öğretmen ve stajyer öğrencilerin düşüncelerine göre değerlendirilmesi

Katılımcıların tam gün eğitimin yararlı olup olmadığına ilişkin görüşlerinin yer aldığı tema, kodlar ve yüzdelere aşağıda Tablo 1’de yer verilmiştir.

Tablo. 1 Katılımcıların Tam Gün Eğitimin Yararlı Olup Olmadığına İlişkin Görüşleri

Tema		Kodlar
Tam gün eğitimin yararlı olup olmadığı	Öğretmen	Tam gün eğitim yararlı oldu: 3 kişi, Tam gün eğitim yararlı olmadı: 19 kişi
	Stajyer öğrenci	Tam gün eğitim yararlı oldu: 9 kişi, Tam gün eğitim yararlı olmadı: 19 kişi Kararsız: 1 kişi

Katılımcılardan elde edilen veriler ışığında gerek öğretmenlerin (f=19), gerekse stajyerlerin (=19) tam gün eğitim uygulamasının yararlı olmadığına ilişkin görüş ifade ettikleri belirlenmiştir.

K4: “Tam gün eğitimin yararlı olduğuna inanmıyorum”

K8: “Tam gün eğitim yarardan çok zarar getirdi”

K30: “Tam gün eğitimin hiçbir yararını gözlemlemedim”

Yukarıda belirtilen bulgular doğrultusunda, öğretmen katılımcılarının çok büyük bir bölümü ve stajyer katılımcıların yarısından fazlası gerçekleştirilen bu uygulamanın yararlı olmadığını açık ve net olarak ifade etmişlerdir.

2. Tam gün eğitimin olumsuz yanlarına yönelik öğretmenlerin ve stajyer öğrencilerin düşüncelerinin değerlendirilmesi

Her iki katılımcı grubundan tam gün eğitimin olumsuz yanlarına ilişkin görüşlerini belirtmeleri istenmiştir. Katılımcıların tam gün eğitimin olumsuz yanlarına ilişkin belirttikleri görüşleri ile ilgili tema, kodlar ve yüzdelere aşağıda Tablo 2’de yer verilmiştir.

Tablo. 2 Katılımcıların Tam Gün Eğitimin Olumsuz Yanlarına ilişkin Görüşleri

Tema	Kodlar
	Öğretmen Akademik gelişimde verim düştü: 15 kişi, Problem davranışlar arttı: 17 kişi, Okul dışı sosyalleşme azaldı: 7 kişi, Derse odaklanma azaldı: 14 kişi,
Tam gün eğitimin olumsuz yanları	Stajer öğrenci Akademik gelişimde verim düştü: 6 kişi, Problem davranışlar arttı: 20 kişi, Otorite sorunu yaşandı: 6 kişi, Derse odaklanma azaldı: 6 kişi,

Katılımcıların tam gün eğitimin olumsuz yanlarına ilişkin yapmış oldukları değerlendirmeler ile ilgili görüşleri aşağıdaki gibidir:

K2: “Tam gün uygulaması ile öğrencilerdeki problem davranışlarda artış olduğunu söyleyebilirim.”

K11: “Derse odaklanmanın azaldığı ve bunun paralelinde akademik gelişimde verimin düştüğünü söyleyebilirim.”

K37: ”Sınıfa iki farklı özel eğitimcinin girmesi sonucunda otorite sorunu yaşandığını söyleyebilirim”.

Yukarıdaki bulgular ışığında, gerek öğretmenlerin ve gerekse staj uygulamasında olan katılımcıların büyük bölümü öğrencilerin sergilediği problem davranışların, tam gün eğitim uygulaması sürecinde artmış olduğundan, uygulamanın özel gereksinimli öğrenci açısından olumsuz sonuçlandığını ifade edebilirim. Ayrıca dersde odaklanmanın azalması sonucu akademik açıdan gelişmenin de durması, hatta gerilemesi sözkonusu olduğundan yaşanan sürecin öğrenci açısından nitelikli olmadığı da görülmektedir.

3. Tam gün eğitimin olumlu yanlarına yönelik öğretmen ve stajer öğrencilerin düşüncelerinin değerlendirilmesi

Katılımcılardan tam gün eğitimin olumlu yanlarına ilişkin görüşlerini belirtmeleri istenmiştir. Katılımcıların tam gün eğitimin olumlu yanlarına ilişkin belirttikleri görüşleri ile ilgili tema, kod ve yüzdelere aşağıda Tablo 3’de yer verilmiştir.

Tablo. 3 Katılımcıların Tam Gün Eğitimin Olumlu Yanlarına ilişkin Görüşleri

Tema		Kodlar
Tam gün eğitimin olumlu yanları	Öğretmen	Akademik gelişimde verim yükseldi: 5 kişi, Bağımsız yaşam becerileri arttı: 2 kişi, İletişim becerileri arttı: 9 kişi, Arkadaşlarıyla sosyalleşme arttı: 10 kişi,
	Stajer öğrenci	Akademik gelişim arttı: 6 kişi, Sosyal gelişim arttı: 12 kişi, İletişim becerileri arttı: 8 kişi,

Katılımcıların tam gün eğitimin olumlu yanlarına ilişkin yapmış oldukları değerlendirmeler ile ilgili görüşleri aşağıdaki gibidir:

K3: “Okulda akranları ile birlikte zaman geçirmeleri sonucunda iletişim becerilerinin geliştiğini söyleyebilirim”.

K43: “Tam gün okulda kalınması ile öğrencilerin sosyalleşme becerilerinde eskiye oranla gelişme olduğunu söyleyebilirim”.

Yukarıdaki bulgular ışığında, gerek öğretmenler ve gerekse staj uygulamasında olan katılımcıların bir bölümü öğrencilerin sosyalleşmelerinde, iletişim becerilerinin gelişmesinde hatta bazı çocuklar için akademik alanda, tam gün eğitim sürecinde uygulamanın özel gereksinimli öğrenci açısından sınırlı da olsa olumlu sonuçlandığını ifade edebilirim.

4. Tam gün eğitimin uygulamasında yaşanan sorunlara yönelik öğretmenlerin ve stajer öğrencilerin düşüncelerinin değerlendirilmesi

Katılımcıların tam gün eğitim uygulamasında yaşanan sorunlara yönelik belirttikleri görüşleri ile ilgili tema, kod ve yüzdelere aşağıda Tablo 4’de yer verilmiştir.

Tablo. 4 Katılımcıların Tam Gün Eğitiminde Yaşanılan Sorunlara ilişkin Görüşleri

Tema		Kodlar
Tam gün eğitimde yaşanan sorunlar	Öğretmen	Sınıfa farklı zamanlarda 2 öğretmenin girmesinden kaynaklı sorunlar: 8 kişi, Öğrencilerin yemek yiyebilecekleri kapalı bir alanın olmaması: 21 kişi, Öğrenciye yemek verilmemesi: 15 kişi, Öğlen arasının uzun olması: 12 kişi, Öğrencinin okul dışında sosyalleşme oranının azalması: 4 kişi. Öğlen ilaç içen çocuklara ilaç verecek hemşirenin olmaması: 13 kişi,
	Stajer öğrenci	Sınıfa farklı zamanlarda giren öğretmenlerin tutum ve davranışlarından kaynaklı sorunlar: 21 kişi, Derse giren öğretmenler arasında yaşanan iletişim kopukluğu: 9 kişi, Öğrenciye yemek verilmemesi: 6 kişi, Yetersiz altyapı: 10 kişi,

Katılımcıların tam gün eğitim uygulamasında yaşanan sorunlara ilişkin yapmış oldukları değerlendirmeler aşağıdaki gibidir:

K15: “Öğrencilerin yemek yiyebilecekleri kapalı bir alanın olmaması şeklinde söyleyebilirim”.

K14:” Öğrenciye öğle arasında yemek verilmemesi ve yemeğini evden getirmesinin istenmiş olmasını söyleyebilirim”.

K8: “İlaç kullanan çocuğa yemek sonrası ilaç verecek hemşirenin olmamasını söyleyebilirim”.

K9:” Sınıfa farklı zamanlarda giren iki öğretmen olmasını söyleyebilirim”.

K43: “Sınıfa farklı zamanlarda giren öğretmenlerin tutum ve davranışlarından kaynaklı sorunlar olduğunu söyleyebilirim”.

K39: “Altyapı yetersizliğini söyleyebilirim”.

Yukarıdaki bulgular ışığında, gerek öğretmenler gerekse staj uygulamasında olan katılımcıların yaşanan sorunlara ilişkin olarak tek tip yemek sağlanmamasını, öğrencilerin yemek

yiyebileceği kapalı ve uygun bir ortamın olmaması, derse giren öğretmenlerin sergilediği tutum ve davranışların farklı olması, uzun öğle araları ve ilaç içen öğrencilere ilacını verecek hemşirenin olmamasını tam gün eğitimde yaşanan ve karşılaşılan olumsuzluklar olarak nitelendirmişlerdir.

5. Tam gün eğitimin başarılı olması konusunda yapılabileceklerle yönelik öğretmenlerin ve stajyer öğrencilerin düşüncelerinin değerlendirilmesi

Katılımcıların tam gün eğitim uygulamasının başarılı olması konusunda nelerin yapılması gerektiğine ilişkin görüşleri ile ilgili tema, kod ve yüzdelere aşağıda Tablo 5’de yer verilmiştir.

Tablo. 5 Katılımcıların Tam Gün Eğitimin Sürdürülebilir Olmasına Yönelik Yapılması Gerekenlere İlişkin Görüşleri

Tema		Kodlar
Tam gün eğitimin sürdürülebilir olması için yapılması gerekenler	Öğretmen	Okul altyapı ihtiyaçlarının karşılanması: 16 kişi, Yemek yeme alanının düzenlenmesi: 21 kişi, Özel ders öğretmeni atamasının yapılması: 13 kişi, Öğrencinin yemeğinin Bakanlık tarafından karşılanması: 21 kişi, Tam gün eğitimin planlanması konusunda Bakanlığın okul idareci, öğretmen ve sendika görüşlerini dikkate alması: 6 kişi, Okuldaki öğretmenlerin yasal çerçevede çalıştırılarak eğitimin yapılması: 18 kişi, KKTC MEB’nın istihdam edeceği öğretmenlerle yapılması: 17 kişi, Okul dışı etkinliklerin artırılması: 9 kişi, Farklı branşlar olması: 7 kişi, Özel eğitim okul bütçesinin olması: 3 kişi, Özel eğitim öğretmenlerinin yasal haklarının iyileştirilmesi: 3 kişi
	Stajyer öğrenci	Okul altyapı ihtiyaçlarının karşılanması: 13 kişi, Öğrencinin yemeğinin Bakanlık tarafından karşılanması: 9 kişi, Özel ders öğretmeni atamasının yapılması: 4 kişi, KKTC vatandaşı öğretmenlerin atanması: 10 kişi, Tüm öğretmenlerin (davranış ve tutum konularında) eğitilmesi: 5 kişi, İdari kadronun artırılması: 3 kişi, Okul dışı etkinlikler artırılmalı: 5 kişi,

Katılımcıların tam gün eğitim uygulamasının sürdürülebilir bir şekilde uygulanması ve yansımalarının olumlu olmasına ilişkin yapmış oldukları değerlendirmeler aşağıdaki gibidir:

K1: “Öğrenciler için bir yemek yeme alanının oluşturulması gerektiğini söyleyebilirim”.

K12: “Tam gün eğitim uygulamasında KKTC’nden kadrolu öğretmenlerle çalışılması gerektiğini söyleyebilirim”.

K5: “Özel ders öğretmeni atanmadan tam gün uygulamasının hiçbir şekilde başarılı olamayacağını söyleyebilirim”.

M23:” Okul altyapı gereksinimlerinin karşılanması gerektiğini söyleyebilirim”.

Yukarıdaki bulgular ışığında, gerek öğretmenler gerekse staj uygulamasında olan katılımcıların tam gün eğitim uygulamasının sürdürülebilir olması noktasında altyapı eksikliklerinin giderilmesi, öğlen yemeğinin Bakanlık tarafından sağlanması, sisteme girecek olan öğretmenlerin KKTC vatandaşı olup kadrolu olması, okul dışı etkinliklerin yapılabilmesi için gerekli desteğin sağlanması, özel ders öğretmenin özel eğitim sistemi içerisinde de görevlendirilip atamalarının yapılması, Bakanlığın gerek sendika gerekse özel eğitim okul idarecilerinin görüşlerini dikkate alarak planlamayı yapması durumunda başarılı sonuçlara ulaşabileceği görülmektedir.

6. Gerekli düzenlemelerin yapılması, tedbirlerin alınması durumunda tam gün eğitimle ilgili öğretmen ve stajer öğrencilerin düşüncelerinin değerlendirilmesi

Katılımcıların tam gün eğitim uygulamasının sürdürülebilir olması konusunda yapılması gereken düzenlemelerin yapılması ve gereken tedbirlerin alınması paralelinde tam gün eğitime yönelik bakış açılarına ilişkin görüşleri ile ilgili tema, kod ve yüzdelere aşağıda Tablo 5’de yer verilmiştir.

Tablo. 6 Katılımcıların, Gerekli Düzenlemelerin Yapılması Durumunda Tam Gün Eğitime Yönelik Bakış Açılarına İlişkin Görüşleri

Tema		Kodlar
Gerekli düzenlemelerin yapılması durumunda tam gün eğitime bakış açısı	Öğretmen	Gerekli altyapı düzenlemelerin yapılması durumunda tam gün yapılabilir: 3 kişi,

		Altyapı düzenlenip, okulun kendi öğretmeninin çalışması ve özel ders öğretmenlerinin sisteme girmesi ile yapılabilir: 17 kişi,
	Stajer öğrenci	-

Katılımcıların, gerekli tüm düzenlemelerin yapılması durumunda tam gün eğitim uygulamasına ilişkin yapmış oldukları değerlendirmeler aşağıdaki gibidir:

M13: “Altyapı ile ilgili tüm eksikliklerin giderilmesi, özel eğitim okullarına özel ders öğretmenin verilmesi ve özellikle KKTC vatandaşı kadrolu öğretmenin çalıştırılması şeklinde söyleyebilirim”.

Yukarıdaki bulgular ışığında, öğretmen katılımcıları, gerekli düzenlemelerin yapılması durumunda, yani özel ders öğretmeni ataması, altyapı sorunlarının giderilmesi ve kadrolu öğretmenin atanması durumunda tam gün eğitim uygulamasının yapılabileceği doğrultuda ortak görüş ifade etmişlerdir. Öğretmenlik staj uygulaması için okulda bulunan katılımcılar ise bu soruya yanıt vermemişlerdir.

7. Tam gün eğitimin sürdürülebilir olması konusunda farklı branşlardan kişilerin sisteme girmesine yönelik öğretmenlerin düşüncelerinin değerlendirilmesi

Katılımcıların tam gün eğitim uygulamasının sürdürülebilir olması konusunda farklı branşlardan kişilerin sisteme girmesine ilişkin görüşleri ile ilgili tema, kod ve yüzdeler aşağıda Tablo 7’de yer verilmiştir.

Tablo. 7 Katılımcıların, Tam Gün Eğitimin Sürdürülebilir Olması İçin Farklı Branşların Sisteme Girmesine Yönelik Bakış Açılarına İlişkin Görüşleri

Tema		Kodlar ve Yüzdeler
Tam gün eğitimin sürdürülebilir olması için farklı branşlar sisteme girmeli	Öğretmen	Beden eğitimi öğretmeni: 20 kişi Müzik öğretmeni/terapisti: 20 kişi Konuşma terapisti: 14 kişi, Ergo terapist: 7 kişi Öğretmen yardımcısı: 18 kişi, Bakıcı: 20 kişi
	Stajer öğrenci	Beden eğitimi öğretmeni: 4 kişi, Müzik öğretmeni: 4 kişi

		Sosyal çalışmalar artırılması: 5 kişi, Aile okul işbirliği (katılım) geliştirilmeli: 3 kişi

Katılımcıların, tam gün eğitim uygulamasının sürdürülebilir olabilmesi için sistemde yer almasını düşündükleri branşlara ilişkin yapmış oldukları değerlendirmeler aşağıdaki gibidir:

M16: “Beden eğitimi öğretmeni ve müzik öğretmeni/terapist olmazsa olmazlar arasında yer aldığını söyleyebilirim”.

M9: “Özel eğitimde öğretmen yardımcılarının sistemin sağlıklı çalışması için şart olduğunu söyleyebilirim.

M8: “Özel ders öğretmeni, bakı ve de öğretmen yardımcısı olmasa olmaz olduğunu söyleyebilirim”.

M41: “Akademik olmayan beceri (resim, müzik, spor) eğitimler mutlaka olmalıdır”.

M40: “Öğrencilerin topluma uyumu için sosyalleşmelerine yönelik çalışmaların artırılması gerektiğini söyleyebilirim”.

Yukarıdaki bulgular ışığında gerek öğretmen, gerekse staj uygulamasındaki öğrenciler müzik ve beden eğitimi branşlarının özel eğitim uygulaması içerisinde mutlaka yer verilmesi gerektiğini; sınıf içindeki uygulamalarda öğretmen yardımcısının rolünün önemli olduğunu ve bakıcıların da çalışma kadrosunda yer alması gerektiğini ifade etmelerinin yanı sıra konuşma ve ergo terapistlerin de sisteme girmeleri, öğrencinin sosyalleşme çalışmaları için gerekli tedbirlerin alınarak ailelerle ortak çalışılması gerektiği konularını vurgulamışlardır.

Sonuç

Ülkemizde özel eğitim ve iş eğitim okullarında tam gün eğitim uygulamasına geçiş ile birlikte yaşanan olumlu ve olumsuz yanların belirlenmesi ve sürdürülebilir eğitim açısından çözüm önerilerinin oluşturulmasına yönelik, Gazimağusa Özel Eğitim Ve İş Eğitim Okulu katılımcılarının görüşleri doğrultusunda elde edilen bulgular tam zamanlı eğitim uygulamasına göre yarı zamanlı eğitim uygulamasını daha faydalı bir sistem olarak gördüklerini göstermektedir. Özellikle, yarı zamanlı eğitimde öğrenciye okul dışında kalan zamanın sosyalleşme, iletişim ve çeşitli faaliyetleri yapabilmesine olanak sağladığı ve daha verimli olduğuna yönelik çeşitli görüşler de dikkati çeken bulgular arasındadır. Ayrıca öğrencinin tam gün eğitiminde okulda uzun bir zaman süresi geçirmesi ve paralelinde birtakım sosyal aktivite, çalışma, faaliyetlere zaman ayıramamış olduğuna işaret eden görüşler de mevcuttur. Yapılan

literatür taraması sonucu, benzer içerikte bulgulara sahip çalışmaların da olduğu görülmektedir. Örneğin, eğitim gününün süresinin uzaması ile elde edilen sonuç arasında farklılığın olmadığı, Barnett ve Pezzino'nun (1987) çalışmalarında görülmektedir.

Tam gün eğitimin olumsuz yanlarına ilişkin olarak Gazimağusa Özel Eğitim Ve İş Eğitim Okulu katılımcılarının, öğrencilerinin; akademik gelişim alanlarındaki verimlerinin düştüğü, problem davranışlardaki oranın arttığı, okul dışı sosyalleşme sürelerinin azaldığı, derste odaklanma periyodunun kısaldığı ve otorite ile ilgili sorun yaşandığı belirlenmiştir. Tüm bunların sebebinde ise; sınıfa gün içerisinde farklı zamanlarda farklı özel eğitim öğretmenlerinin girmesi, yaklaşım, yöntem ve tutumlarının farklı olması ve derse giren öğretmenler arasında sağlıklı bir iletişim sisteminin kurulamamış olması sürdürülebilirlik noktasındaki en büyük engellerden biri olarak ifade edilmiştir.

Tam gün eğitimin başarılı olabilmesi için Eğitim Bakanlığı'nın okul idareci, öğretmen ve sendika görüşleriyle, yasal çerçeveyi dikkate alması, öğretmenlerin yasal haklarının iyileştirilmesi, tam gün eğitimde özel ders öğretmeni ve kadrolu özel eğitimci çalıştırılması, okul dışı faaliyetlere yer verilmesi ve okulun kendisine ait bir bütçesinin olmasının önemi üzerine vurgu yapılmıştır. Özellikle paydaşlarla ilgili elde edilen bulgu, Boydak Özen ve Öztürk'ün (2018) sistem değişikliğine yönelik gerçekleştirilecek tüm çalışmalarla ilgili olarak tüm okul paydaşlarının görüşlerinin alınarak yapılması bağlamında paralellik göstermektedir. Ayrıca okulun kendisine ait bir bütçesinin olmaması ve paralelinde yaşanan finansmandan kaynaklı sorunlarla ilgili bulgu da Erden ve Erden'in (2019) yapmış oldukları çalışma bulguları ile örtüşmektedir.

Ayrıca öğle yemeği sorunu tam gün eğitimde katılımcıların büyük çoğunluğu tarafından endişe kaynağı olarak görülmektedir. Öğrencilerin sağlıksız ve gelişi güzel beslenmesinin uzun dönemde yürütülen çalışmaların başarısız veya verimsiz olması yönünde bir etkide bulunmaktadır. Diğer bir endişe kaynağı ise sağlıklı, hijyenik ve konforlu bir yiyecek yeme alanının yani yemekhanenin olmaması ve altyapı ile ilgili birtakım sorunlar şeklinde ifade edilmekte ve bu da sistemin sürdürülebilirliğini zayıflamaktadır. Katılımcılara göre okula yemekhane yapılması yaşanan sorunların ortadan kaldırılmasında oldukça etkili olacaktır. Araştırmanın bu bulgusu Boydak Özen ve Öztürk'ün (2018) yapmış oldukları araştırma bulguları ile tutarlılık gösterirken, altyapı ile ilgili boyutu ise Erden ve Erden'in (2019) çalışmaları ile desteklendiği görülmektedir.

Özel eğitim, özel gereksinimli öğrencilerin özellik ve derecelerinin birbirlerinden farklılık göstermesi, çeşitliliğinin oldukça geniş olmasından kaynaklı olarak birçok farklı uzmanın birlikte çalışmasını gerektirecek bir sistemdir. Öğrencinin gereksinimini karşılayabilmek ve programın gereklerini yerine getirip, bilimsel, sağlıklı, hızlı ve etkili, doğru sonucu alabilmek için disiplinler arası bir birlikteliğin (IDEA, 2004; Evcimen, E. 2022) sağlanıp, eşgüdüm içerisinde çalışılması kaçınılmaz önem arz etmektedir. Dolayısıyla katılımcıların da belirttiği gibi sisteme özel ders öğretmeni (beden eğitimi, müzik, resim), konuşma terapisti, öğretmen yardımcısı, bakıcı, hemşire vb. girmesi gerek T.C. Özel Eğitim Hizmetleri Yönetmeliği (2012)'nde gerekse Individuals With Disabilities Education Improvement Act, (2004) ve de KKTC Özel Gereksinimli Bireyler Eğitim Yasası'nda (2022) (Evcimen, 2023) da belirtildiği gibi mutlaka gerekmektedir.

Tam gün eğitimle birlikte özel gereksinimli öğrencilerin sergilemiş oldukları davranışlardaki problemlerin arttığı bulgusuna ulaşılmıştır. Harry vd.'nin (2007) araştırma sonuçları da öğrencilerde olumsuz, istenmeyen davranış sergileme eğiliminin artmış olduğunu gösterir yöndedir. Ayrıca Gleason vd. (2016) ve Manti vd. (2019) davranış problemlerinin ortaya çıkması, artarak pekişmesi noktasında içinde bulunulan ortamın oldukça etken olduğu bulgusu doğrultusundadır. Yaşanan bu durum okulda sorunlara neden olmakta, ilerleyen zamanda ise eve ve diğer sosyal ortamlara sıçrayacağı düşünülmektedir. Çünkü davranış problemlerinin ilerde yüksek antisosyal problemlere (Fox vd., 2002), davranışı düzenleyememe ve bunun sonucunda ilişkilerde sorun yaşamaya (Hughes vd., 2000), iletişim boyutunda saldırgan ve bazen de yıkıcı davranışlar sergilemeye (Gülşay Ogelman & Çiftçi Topaloğlu, 2014) neden olabilmektedir. Tüm bu olumsuzluklar onların toplum yaşamı içerisinde sağlıklı bir şekilde yer almalarını olumsuz etkileyecektir. Davranış problemlerinin artmasıyla birlikte yaşanan sorunlar özel gereksinimli bireyin toplumla bütünleşmesine zarar vermekte, 2015 yılında Birleşmiş Milletler öncülüğünde tüm dünya tarafından dikkat edilmesi önerilen kapsayıcılık, hiçbir kimsenin toplumsal yaşamın dışında bırakılmaması ilkelerine ve doğal olarak sürdürülebilir eğitime olumsuz ket vurmaktadır.

Alan taraması tam gün eğitimin öğrencilerin gerek akademik başarı, öğretmenin yönlendirme yapabilmesi ve öğrencinin etkinlik ve faaliyetlere katılımı ile birlikte gelişmesinin sağlanabilmesi açısından daha faydalı olduğu belirtilmektedir (Stipek vd., 1995; Entwisle ve Alexander, 1998; Stoflet, 1998; Elicker ve Mathur, 1997; Boydak Özen ve Öztürk, 2018). Fakat gerçekleştirilen bu çalışmada farklı bir bulguya ulaşılmasındaki sebebin ise; okulun altyapı eksikliklerinden, özel ders öğretmenlerinin olmamasında, yeterli sayıda atanmış özel eğitim öğretmeni olmamasından, yetersiz bütçeden, eğitim sistemindeki aksaklıklardan, özel

gereksinimli bireyler yasaının uygulanmasını sağlayacak tüzüklerin olmamasından, ilgili diğer Bakanlık'larla işbirliği yapılamamasından, Bakanlık, sendika ve özel eğitim okulu arasındaki iletişim yetersizliğinden kaynaklı olduğu ve eğitim sisteminin sürdürülebilir olmadığı da görülmektedir.

Özet

Bu çalışma bireylerin, ailelerin cinsel eğitimi üzerinde yoğunlaşmıştır. Bireyin fiziksel, duygusal ve sosyal gelişimi, cinsel eğitim yoluyla önemli ölçüde devam etmektedir. Cinsel eğitim yalnızca cinsellikle sınırlı değildir; çocuğun mahremiyeti hakkında daha fazla bilgi edinmesine, sınırların çizilmesine ve olası istismarlardan korunmasına da yardımcı olmaktadır. Bununla birlikte, cinsellik ile karıştırılması nedeni ile toplumlarda tabu olarak görülmekte ve aileler tarafından geri plana atılmaktadır. Bu durum, kişinin kişisel gelişim süreci hakkında yanlış bilgilerin edinilmesine de neden olabilmektedir. Farklı yönden bakıldığında mahremiyet, kendini ve koruma yeteneklerinin farkında olmalarını da engelleyebilmektedir. Çalışma, Kuzey Kıbrıs Türk Cumhuriyeti Lefkoşa ilçesinde yaşayan ve çocuk sahibi olan rastgele seçilen 15 aileye anket yöntemi kullanılarak uygulanmıştır. Anket üç uzman kanısı alınarak onaylandıktan sonra ailelere uygulanmıştır. Nitel araştırma yöntemi kullanılarak elde edilen veriler, ailelerin cinsel eğitim bilgi düzeylerini, tutumlarını ve eğitim özelliklerini inceleyerek analiz edilmiştir. Yapılan çalışmada; ailelerin cinsel eğitimi gerekli görmesine rağmen kendilerini yetersiz hissetmelerinden dolayı çocuklarına cinsel eğitim vermekten kaçındıklarını göstermektedir. Ayrıca bazı ailelerin, çocukların sordukları sorulara yanıt vermekten çekindikleri ve toplumsal tabuların bir sonucu olarak yeterli cinsel eğitim veremediklerini göstermektedir. Sonuçta çoğu ebeveynler çocuklara erken yaşta cinsel eğitim vermeye başlanması gerektiğini savunmuşlardır. Bu durumda farklı yaklaşım ve proje çalışmaları ile toplumsal bilincin arttırılması gerektiği önerilmektedir.

Anahtar Kelimeler : Cinsel eğitim, çocuk, ebeveyn tutumları, iyi oluş.

Well-Being In Families' Attitudes and Behaviors in Children's Sexual Education

Abstract

This study focused on the sexual education of individuals and families. The physical, emotional and social development of the individual continues to a significant extent through sexual education. Sexual education is not limited to sexuality; it also helps the child learn more about his/her privacy, draw boundaries and protect him/her from possible abuse. However, because it is confused with sexuality, it is seen as a taboo in societies and is pushed aside by families. This situation can also lead to the acquisition of false information about the individual's personal development process. When viewed from a different perspective, privacy can also prevent them from being aware of themselves and their protective abilities. The study was conducted using a survey method on 15 randomly selected families living in the Nicosia district of the Turkish Republic of Northern Cyprus and having children. The survey was administered to the families after receiving the opinions of three experts and approval. The data obtained using the qualitative research method was analyzed by examining the families' sexual education knowledge levels, attitudes and educational characteristics. The study shows that although families see sexual education as necessary, they avoid giving sexual education to their children because they feel inadequate. It also shows that some families are reluctant to answer questions asked by their children and are unable to provide adequate sexual education as a result of social taboos. As a result, most parents have advocated that children should start receiving sexual education at an early age. In this case, it is suggested that social awareness should be increased with different approaches and project studies.

Keywords: Sexual education, child, parental attitudes, well-being.

Giriş

Cinsel gelişim, bireyin cinsiyetine bağlı olarak üreme organlarında meydana gelen sıralı büyüme ve büyümenin yanı sıra, bu süreçte ortaya çıkan değişimleri, karşılaşılabilecek sorunlar ve davranışsal farklılıkları içermektedir (Alptekin ve Tepeli, 2019). Pek çok toplumda bireyler "cinsel eğitim " kavramlarını uzun süre kullanmaktan kaçındıkları görülmektedir. Cinsellikle ilgili sorunlar genellikle gizli bir şekilde ele alınmakta, kimi zaman göz ardı edilmekte ya da öfke veya utandırma gibi olumsuz tepkilerle karşılanmaktadır (Tuğrul ve Artan, 2001). Bu durumun temel nedeni , cinsel eğitim denilince akla ilk olarak cinselliğin gelmesidir. Bununla

birlikte, cinsel eğitim yalnızca biyolojik olarak sınırlı değildir; kişinin cinsiyetinin özellikleri, mahremiyet sınırlarını anlaması ve kendini nasıl koruyacağını öğrenmesi açısından yaşam boyu önemli bir rol oynar. Ebeveynler tarafından çocuklara cinsel eğitimin verilmesi, sadece çocukları yanlış ve zararlı bilgilerinden korumakla kalmaz, aynı zamanda bedenlerini tanımaları ve güvenlik konusunda daha fazla bilgi edinmelerine de yardımcı olmaktadır (İşler ve Gürşimşek, 2018).

Cinsel gelişim, doğumla birlikte başlar. Cinsel gelişim yalnızca fiziksel değişiklikler değil, aynı zamanda çocuğun cinsellik hakkında öğrenilen şeyleri ve bu bilgileri kullanarak nasıl davrandığını da içermektedir. Çocukların cinsel gelişim dönemlerinin doğru bir şekilde anlaşılması, onların sağlıklı bir cinsel kimlik oluşturmalarına katkı sağlamakla birlikte, aynı zamanda olası riskli davranışlardan korunmaları açısından da kritik bir rol oynamaktadır.

Cinsel eğitim, bireyin fiziksel, duygusal ve cinsel gelişim sürecini anlamasını, sağlıklı bir benlik algısı oluşturmalarını ve insan cinselliği ile toplumsal değerlere saygı temelinde bir bakış açısı geliştirmesini hedefleyen bir süreçtir (Deniz ve Yıldız Altan, 2019). Son yıllarda bu alanda daha bütüncül ve çok disiplinli bir yaklaşımı ifade eden *“kapsamlı cinsel eğitim”* kavramı da literatürde yer bulmaktadır. Çocukların cinsel eğitime, soru sormaya başladıkları dönemde yönlendirilmesi önerilmekle birlikte, sorular gelmediği durumlarda da uygun anların değerlendirilerek bilgilendirme yapılması gerektiği vurgulanmaktadır. Cinsel eğitim alan çocuklar kendi bedenlerinin farkında olmaktadır bu da karşısındaki bireyin sınırlarına saygı duymasını sağlamaktadır. Dünya Sağlık Örgütü (DSÖ)’ *“kapsamlı cinsel eğitimin yalnızca bilgi aktarımını değil, aynı zamanda bireyin tutum, değer ve anlayış geliştirmesini, kişiler arası ilişkilerde sağlıklı iletişim kurmasını ve sorumluluk bilinci kazanmasını amaçladığını”* ifade etmektedir.

Cinsel eğitimin başarılı ve sağlıklı bir şekilde uygulanabilmesi için hem eğitimcilerin hem de ailelerin bu konuda yeterli özelliklere sahip olması gerekir. Verilen bilginin çocuğun yaşına ve bilgi düzeyine uygun olmasına dikkat edilmelidir . Bu süreçte, çocukların daha iyi anlamalarını ve bilgilerini içselleştirmelerini sağlamak için kitaplar, görsel materyaller ve anatomik bebekler gibi çeşitli eğitim araçları bulunmaktadır (Koran, 2018). Yapılan araştırmada, çocuk sahibi ebeveynlerin cinsel eğitime yönelik tutumları ve bilgi düzeyleri, uygulanan anket verileri doğrultusunda değerlendirilmiştir. Araştırmaya Lefkoşa’da yaşayan 15 ebeveyn dahil edilmiş olup, elde edilen veriler ebeveynlerin çoğunluğunun cinsel eğitimi önemli bulduğunu göstermektedir. Ancak, bu konuda yeterli donanıma sahip olmadıklarını düşünen ebeveynlerin

sayısı da dikkat çekmektedir. Özellikle hangi yaşta ve nasıl bir dille bu eğitimi vereceklerini bilememeleri, sürecin sağlıklı bir şekilde ilerlemesini engellemektedir. Cinsel eğitimin toplumda tabu olarak görülmesi aileleri çekingen davranışlara da itmektedir.

Alınan sonuçlara göre, ebeveynlerin çocuklarına cinsel eğitim verirken karşılaştıkları başlıca zorluklar; bilgi yetersizliği ve toplumsal baskıdır. Çalışmanın temel amacı doğrultusunda, aşağıdaki sorulara cevap aranacaktır;

Alt Problemler

- Ebeveynler çocuklarına cinsel eğitim verilmesi gerektiğini düşünüyor mu?
- Cinsel eğitime başlama yaşı hakkında ebeveynlerin görüşleri nelerdir?
- İyi dokunuş” ve “kötü dokunuş” kavramları çocuklara açıklanıyor mu?
- Cinsel eğitim konusunda kendilerini yeterli hissediyorlar mı?
- Bilgi edinmek için hangi kaynakları tercih ediyorlar?
- Ebeveynlerin cinsel eğitim hakkındaki görüşleri nelerdir?

Bu engellerin aşılabilmesi için ebeveynlere yönelik rehberlik ve eğitim çalışmalarının geliştirilmesi gerektiği sonucuna ulaşılmıştır. Araştırma, cinsel eğitimin yalnızca biyolojik yönleriyle sınırlı olmadığını; çocukların kendilerini tanımaları, sınırlarını belirlemeleri ve olası risklere karşı korunmaları açısından da önemli bir rol oynadığı vurgulanmaktadır.

Yöntem

Bu araştırma, nitel araştırma yöntemine uygun olarak yürütülmüştür. Nitel araştırmayı, gözlem, görüşme ve doküman analizi gibi nitel bilgi toplama yöntemlerinin kullanıldığı, algıların ve olayların doğal ortamda gerçekçi ve bütüncül bir biçimde ortaya konmasına yönelik nitel bir sürecin izlendiği araştırma olarak tanımlamak mümkündür (Yıldırım, 1999).

Araştırma kapsamında, Lefkoşa ilinde yaşayan ve çocuk sahibi olan 15 ebeveyn ile yarı yapılandırılmış anketler uygulanmıştır. Anketler sayesinde, ebeveynlerin cinsel eğitim hakkındaki bilgi düzeyleri, tutumları ve yaşadıkları zorluklar belirlenmiştir. Elde edilen veriler nitel analiz yöntemiyle değerlendirilmiş ve sonuçlar yorumlanarak anlamlı hale getirilmiştir. Dolayısıyla, ebeveynlerin cinsel eğitime nasıl yaklaştıkları daha açık bir şekilde ortaya konulmaya çalışılmıştır.

Bulgular ve Yorumlar
Tablo 1. Demografik Bilgiler

Demografik bilgiler		
Cinsiyet		
	Kadın	9
	Erkek	6
Eğitim durumu		
	İlkokul	1
	Ortaokul	2
	Lise	4
	Lisans	5
	Lisansüstü	3
Çocuk sayısı		
	1 çocuk	2
	2 çocuk	7
	3 çocuk	4
	4+ çocuk	2

Bu araştırmanın bulguları, ebeveynlerin cinsel eğitimle ilgili tutum, yaklaşım ve deneyimlerini farklı açılardan ortaya koymaktadır. Katılımcıların büyük kısmı kadınlardan oluşurken (9 kadın, 6 erkek), eğitim durumu açısından çoğunluğun üniversite (5) ve lisansüstü (3) eğitim seviyesinde olduğu görülmektedir. Çocuk sayısı açısından, 2 çocuk sahibi ebeveynler (7) en yüksek oranı oluştururken, 3 çocuklu ebeveynler (4) ve 1 çocuklu ebeveynler (2) takip etmektedir

Tablo 2. Cinsel Eğitimin Gerekli Olma Durumu

Cinsel eğitim gerekli midir?	
Evet	12
Hayır	3

Katılımcıların çoğunluğu (12 kişi), cinsel eğitimin gerekli olduğunu ifade etmiştir. Buna karşın, sadece 3 kişi cinsel eğitim konusunda bir ihtiyaç hissetmemektedir.

Bu bağlamda, ebeveynlere yönelik eğitim programları ve rehberlik hizmetlerinin artırılması gerektiği ortaya çıkmaktadır. Ebeveynlerin çocuklarına cinsel eğitim verirken karşılaştıkları zorlukların üstesinden gelebilmesi için daha fazla rehberliğe ve profesyonel desteğe ihtiyaç duyduğu anlaşılmaktadır.

Tablo 3. Cinsel Eğitim Verilme Yaşı

Cinsel eğitim hangi yaşta başlamalı?	
0 – 3 yaş	5
4 – 6 yaş	6
7 – 9 yaş	2
10 yaş ve üzeri	2

Eğitimin hangi yaşta verilmesi gerektiği konusunda ise, ebeveynlerin büyük kısmı 4-6 yaş (6 kişi) aralığını tercih etmektedir. Bununla birlikte, 0-3 yaş (5 kişi) ve 7-9 yaş (2 kişi) aralıklarında eğitim verilmesi gerektiğini savunanlar , 10 ve üzeri yaşta verilmesi gerektiğini savunanlar (2 kişi) da bulunmaktadır. Cinsel eğitime ne zaman başlanması gerektiği hakkında oluşan görüş ayrılıkları özellikle dikkat çekmiştir. Ebeveynlerin çoğu cinsel eğitime başlama yaşının 4-6 yaş aralığında verilmesini gerektiğini düşünmektedir, fakat bu düşüncede olmayan ebeveynler de mevcuttur.

Tablo 4. Cinsellikle İlgili Soru Cevap Durumu

Çocuk cinsellikle ilgili soru sorduğunda nasıl cevaplıyorsunuz?	
Açık ve doğru şekilde cevaplarım	9
Cevaplamaktan kaçınırım	3
Konuyu değiştiririm	3

Çocukların cinsellik ile ilgili sorular sorması durumunda, çoğu ebeveyn (9 kişi) açık ve doğru yanıtlar vermeyi tercih etmektedir. Ancak 3 ebeveyn, bu konuda ya soruları yanıtlamaktan kaçınmakta ya da konuyu değiştirmektedir. Bu durum, ebeveynlerin cinsel eğitimle ilgili rahatlık seviyelerinde farklılık gösterdiğini ortaya koymaktadır.

Bazı ebeveynlerin soruları yanıtsız bırakmaları ya da konuyu değiştirmeleri, hala bu konuda bir rahatlık eksikliği olduğunu ve ebeveynlerin bazı sorular karşısında nasıl tepki verecekleri konusunda belirsizlik yaşadıklarını ortaya koymaktadır. Bu durum, ebeveynlerin cinsel eğitimle

ilgili nasıl bir tutum geliştirecekleri konusunda çeşitli toplumsal ve bireysel faktörlerin etkili olduğunu göstermektedir.

Tablo 5. Çocuğun Özel Alanını Koruma Durumu

İyi – kötü dokunuş farkını anl: tır mısınız ?		
	Evet	10
	Hayır	5
Özel alanını koruması gerektiğini anlatır mısınız ?		
	Evet	10
	Hayır	5

Ebeveynlerin önemli bir kısmı (10 kişi), çocuklarına "*iyi-kötü dokunuş farkı*" ve "*özel alanını koruma*" gibi temel cinsel eğitim konularını anlattıklarını belirtmişlerdir.

Cinsel eğitim, yalnızca biyolojik bilgilere odaklanmamalıdır; aynı zamanda çocukların mahremiyet bilincini kazanmaları, kendi bedenlerini tanımaları ve kendilerini koruyabilmeleri için de kritik bir rol oynamaktadır.

Tablo 6. Cinsel Eğitim Verme Durumu

Cinsel eğitim verirken zorlandınız mı ?	
Evet	10
Hayır	5

Araştırmanın bulguları, ebeveynlerin çocuklara cinsel eğitim verirken doğru ve açık bir şekilde yaklaşmak istediklerini ancak bunun için gerekli bilgiye sahip olamadıklarını göstermektedir. Ebeveynlerin cinsel eğitim konusunda karşılaştıkları başlıca zorluklar arasında bilgi eksikliği, toplumsal baskılar ve bu konuda iletişimde yaşanan belirsizlikler yer almaktadır. Çocukların cinsellik hakkında sorular sorması durumunda ebeveynlerin çoğunluğu, açık ve doğru yanıtlar vermeyi tercih etse de, bazı ebeveynler hala bu konuda yanıt vermekten kaçınmakta ya da konuyu değiştirmektedirler. Bu durum, ebeveynlerin cinsel eğitimle ilgili sorular karşısında nasıl tepki verecekleri konusunda hala bir rahatlık eksikliği olduğunu göstermektedir.

Tablo 7. Kendinizi yeterli hissediyor musunuz? Daha fazla bilgi almak ister misiniz?

Kendinizi yeterli hissediyor musunuz ?	
Evet	7
Hayır	8
Daha fazla bilgi almak ister misiniz?	
Evet	11
Hayır	4

Ebeveynlerin önemli bir kısmı (10 kişi), çocuklarına "iyi-kötü dokunuş farkı" ve "özel alanını koruma" gibi temel cinsel eğitim konularını anlattıklarını belirtmişlerdir.. Ancak, cinsel eğitim verme sürecinde zorluk yaşayan ebeveyn sayısı da yüksektir; 10 ebeveyn bu konuda zorlandığını ifade ederken, yalnızca 5 ebeveyn herhangi bir güçlük yaşamadığını belirtmiştir. Bu durum, ebeveynlerin cinsel eğitim verme konusunda kendilerini yeterince donanımlı hissetmediklerini göstermektedir. Cinsel eğitim konusunda kendini yeterli hissetmeyen ebeveynlerin sayısı (8 kişi), kendini yeterli hissedenlere (7 kişi) kıyasla daha fazladır. Dolayısıyla ebeveynlerin cinsel eğitim konusunda eksiklik hissettiklerini ve bu alanda destek arayışında olduklarını ortaya koymaktadır. 5 ebeveyn, daha fazla bilgi almak istediklerini ifade etmiş, bu da ebeveynlerin eğitim materyallerine ve profesyonel yardıma olan ilgisini göstermektedir. Ebeveynlerin çoğunluğu ise (11 kişi) cinsel eğitim hakkında daha fazla bilgi edinmek istemektedirler.

Bu sonuçlar ışığında toplumsal tabuların ebeveynler üzerindeki etkisini devam ettirdiğini ve ailelerin çocuklarına cinsel eğitim verme konusunda toplumsal bilincin artırılması gerektiğini ve çeşitli çalışmaların başlatılması gerektiğini gözler önüne sermektedir.

Tablo 8. Cinsel Eğitim Verilirken Tercih Edilen Bilgi Yöntemleri

Cinsel eğitim verirken tercih edilen bilgi yöntemleri nelerdir ?	
Kitap / broşür	4
Seminer	5
İnternet	3

Uzman desteği	3

En yaygın tercih edilen bilgi edinme yöntemleri seminerler (5 kişi) ve kitap/broşürler (4 kişi) olmuştur. İnternet ve uzman desteği gibi diğer bilgi kaynakları ise daha az tercih edilmiştir. Bu, ebeveynlerin cinsel eğitim konusunda daha derinlemesine bilgi edinmeye yönelik bir eğilim taşıdığını göstermektedir.

Bu bağlamda, ebeveynlere yönelik eğitim programları ve rehberlik hizmetlerinin artırılması gerektiği ortaya çıkmaktadır. Ebeveynlerin çocuklarına cinsel eğitim verirken karşılaştıkları zorlukların üstesinden gelebilmesi için daha fazla rehberliğe ve profesyonel desteğe ihtiyaç duyduğu anlaşılmaktadır.

Tablo 9. Cinsel Eğitim Hakkında Ebeveyn Görüşleri

Görüşler	Ebeveyn
Erken yaşta eğitimi savunanlar	7
Yetersizlik hissi ve destek ihtiyacı hissedenler	5
Toplum baskısı ve tabular nedeniyle çekinceli olanlar	3
Bilgiye erişim yolları hakkında farkındalık	6

Ebeveynlerin erken yaşta cinsel eğitim verilmesi gerektiğini savunanlar (7 kişi), bu konuda önemli bir farkındalık ve istek ortaya koymaktadır. Ayrıca, ebeveynlerin bazılarının (5 kişi) bu konuda yetersizlik hissettikleri ve destek arayışında oldukları görülmektedir. Üç ebeveyn ise toplum baskısı ve tabular nedeniyle cinsel eğitim konusunda çekinceler yaşadıklarını belirtmişlerdir. Ebeveynlerin bilgi edinme yolları hakkında farkındalık taşıyan (6 kişi) bir grup ise, daha etkili ve erişilebilir kaynaklar konusunda önerilerde bulunmuşlardır.

Tartışma Sonuç ve Öneriler

Bu araştırma ebeveynlerin cinsel eğitime yönelik görüş tutum ve davranışlarını incelemek amacıyla yürütülmüştür. Katılımcıların çoğunluğu cinsel eğitimin gerekliliğini savunurken toplumsal tabulardan dolayı cinsel eğitime yönelik hala çekincelerin olduğu gözlemlenmiştir. Cinsel eğitime ne zaman başlanması gerektiği hakkında oluşan görüş ayrılıkları özellikle dikkat çekmiştir. Ebeveynlerin çoğu cinsel eğitime başlama yaşının 4-6 yaş aralığında verilmesini gerektiğini düşünmektedir, fakat bu düşüncede olmayan ebeveynler de mevcuttur. Ebeveynler

çocukların mahremiyet sınırları hakkında, çocukların eğitilmesi düşüncesinde ortak bir paydada buluşmaktadırlar. Çocukların cinsellikle ilgili sorularına doğru ve açık yanıtlar verilmesi gerektiğine inanan ebeveynlerin sayısının fazla olması, cinsel eğitim konusunda daha sağlıklı ve açık bir yaklaşım geliştirilmesine duyulan ihtiyaç ve arzuyu göstermektedir. Ancak bazı ebeveynlerin soruları yanıtsız bırakmaları ya da konuyu değiştirmeleri, hala bu konuda bir rahatlık eksikliği olduğunu ve ebeveynlerin bazı sorular karşısında nasıl tepki verecekleri konusunda belirsizlik yaşadıklarını ortaya koymaktadır. Bu durum, ebeveynlerin cinsel eğitimle ilgili nasıl bir tutum geliştirecekleri konusunda çeşitli toplumsal ve bireysel faktörlerin etkili olduğunu göstermektedir. Cinsel eğitim verme konusunda bazı ebeveynler kendilerini yeterli hissetseler de ebeveynlerin büyük bir çoğunluğu bu konu hakkında çocuklara nasıl eğitim vermeleri gerektiğini bilmedikleri ve bu da ebeveynlerin kendilerini yetersiz hissetmelerine sebep olmaktadır. Bu sonuçlar ışığında toplumsal tabuların ebeveynler üzerindeki etkisini devam ettirdiğini ve ailelerin çocuklarına cinsel eğitim verme konusunda toplumsal bilincin artırılması gerektiğini ve çeşitli çalışmaların başlatılması gerektiğini gözler önüne sermektedir.

Çalışmada, ailelerin çocuklarına yönelik cinsel eğitimdeki tutum ve davranışlarını incelemeyi amaçlamış ve Lefkoşa ilindeki 15 ebeveynle yapılan anket sonuçlarıyla elde edilen veriler üzerinden bazı önemli bulgulara ulaşılmıştır. Katılımcıların büyük bir kısmı cinsel eğitimin gerekliliğine ve bu eğitimin erken yaşlarda verilmesi gerektiğine inanmakla birlikte, cinsel eğitim konusunda kendilerini yeterli hissetmemekte ve toplumsal tabulardan dolayı eğitim verme noktasında çekinceler yaşamaktadırlar. Bu da, çocuklara sağlıklı cinsel eğitim sunmanın önündeki engelleri ortaya koymaktadır.

Araştırmanın bulguları, ebeveynlerin çocuklara cinsel eğitim verirken doğru ve açık bir şekilde yaklaşmak istediklerini ancak bunun için gerekli bilgiye sahip olamadıklarını göstermektedir. Ebeveynlerin cinsel eğitim konusunda karşılaştıkları başlıca zorluklar arasında bilgi eksikliği, toplumsal baskılar ve bu konuda iletişimde yaşanan belirsizlikler yer almaktadır. Çocukların cinsellik hakkında sorular sorması durumunda ebeveynlerin çoğunluğu, açık ve doğru yanıtlar vermeyi tercih etse de, bazı ebeveynler hala bu konuda yanıt vermekten kaçınmakta ya da konuyu değiştirmektedirler. Bu durum, ebeveynlerin cinsel eğitimle ilgili sorular karşısında nasıl tepki verecekleri konusunda hala bir rahatlık eksikliği olduğunu göstermektedir.

Cinsel eğitim, yalnızca biyolojik bilgilere odaklanmamalıdır; aynı zamanda çocukların mahremiyet bilincini kazanmaları, kendi bedenlerini tanımaları ve kendilerini koruyabilmeleri için de kritik bir rol oynamaktadır. Bu bağlamda, ebeveynlere yönelik eğitim programları ve

rehberlik hizmetlerinin artırılması gerektiği ortaya çıkmaktadır. Ebeveynlerin çocuklarına cinsel eğitim verirken karşılaştıkları zorlukların üstesinden gelebilmesi için daha fazla rehberliğe ve profesyonel desteğe ihtiyaç duyduğu anlaşılmaktadır.

Özetle, ebeveynlerin çocuklarına sağlıklı ve doğru cinsel eğitim vermeleri için toplumsal tabuların aşılması, ebeveynlere yönelik farkındalık artırıcı çalışmaların yapılması büyük önem taşımaktadır. Bu alanda yapılacak bilinçlendirme faaliyetleri, çocukların cinsel gelişim süreçlerini sağlıklı bir şekilde tamamlamalarına olanak tanıyacak, ebeveynlerin ise cinsel eğitim konusunda kendilerini daha güvende ve donanımlı hissetmelerini sağlayacaktır.

Özet

Bu çalışmanın amacı, hemodiyaliz tedavisi gören kronik böbrek yetmezliği hastalarında beslenme durumu ve depresyon sıklığını belirlemek; beslenme durumu ve depresyon düzeylerinin sosyodemografik özelliklere ve hastalığa bağlı özelliklere göre değişip değişmediğini araştırmaktır. Çalışma, 25-69 yaş aralığında 35 kadın, 34 erkek olmak üzere toplam 69 hemodiyaliz hastası üzerinde yürütülmüştür. Çalışmaya dahil edilen hastaların kişisel bilgileri, hemodiyaliz tedavi süresi, sıklığı, antropometrik ölçümleri ve bazı biyokimyasal ölçümleri alınarak anket formu uygulanmıştır. Hastaların beslenme ve depresyon durumlarını ölçmek için Nutrisyonel Risk Taraması (NRS-2002) ve Beck Depresyon Envanteri uygulanmıştır. Ayrıca hastaların biyokimyasal parametre sonuçları değerlendirilmiştir. Araştırmaya katılan 69 bireyin %50,7'si kadın, %49,3'ü erkektir. Beden kütle indeksi (BKİ) açısından erkeklerin fazla kilolu ve obezite oranları kadınlara göre daha yüksektir. Biyokimyasal parametrelerde, serum demiri, total protein, trigliserit, HD sonrası üre ve HbA1c düzeyleri BKİ sınıflamalarıyla anlamlı ilişki göstermiştir ($p<0,05$). Özellikle düşük BKİ'ye sahip bireylerde serum demiri düşüklüğü dikkat çekicidir. Kadınlar daha yüksek düzeyde depresyon belirtileri göstermiştir ve bu fark istatistiksel olarak anlamlıdır ($p<0,001$). Beslenme durumu değerlendirmesinde kadın ve erkekler arasında anlamlı fark saptanmıştır ($p<0,05$). Beslenme durumu ile depresyon düzeyi arasında genel olarak bir ilişki gözlenmiş, Skor 2 düzeyinde olan bireylerde depresyon puanlarının daha yüksek olduğu belirlenmiştir. Ancak bu fark genel olarak anlamlılık sınırında kalmıştır ($p>0,05$). HD hastalarında hemodiyaliz tedavisinin yeterliliğine ek olarak, uygun beslenme ve bazı gerekli besin takviyelerinin sağlanması hastaları yetersiz beslenme ve depresyon gelişiminden koruyabilir. Sağlıklı beslenme ve psikolojik desteğin HD hastalarının yaşam kalitesini iyileştirmek için yararlı olacağı sonucuna varılmıştır.

Anahtar Kelimeler: Beslenme Durumu, Depresyon, Hemodiyaliz, Kronik Böbrek Yetmezliği

Determination of Nutritional Status and Its Relationship with Depression in Hemodialysis Patients

Abstract

This study aims to determine nutritional status and depression frequency in chronic renal failure patients receiving hemodialysis treatment and to investigate whether nutritional status and depression levels change according to sociodemographic characteristics and disease-related characteristics. The study was conducted on 69 hemodialysis patients, 35 female and 34 male, aged 25-69. A questionnaire form was applied to obtain personal information, hemodialysis treatment duration, frequency, anthropometric measurements, and some biochemical measurements of patients included in the study. Nutritional Risk Screening (NRS-2002) and Beck Depression Inventory were applied to measure the nutritional and depression status of patients. In addition, biochemical parameter results of the patients were evaluated. 50.7% of 69 study participants were female, and 49.3% were male. In terms of body mass index (BMI), overweight and obesity rates were higher in men than in women. In biochemical parameters, serum iron, total protein, triglyceride, post-HD urea, and HbA1c levels significantly correlated with BMI classifications ($p<0.05$). Low serum iron is particularly striking in individuals with low BMI. Women showed higher levels of depression symptoms, and this difference was statistically significant ($p<0.001$). An important difference was found between women and men in assessing nutritional status ($p<0.05$). A general relationship was observed between nutritional status and depression level, and it was determined that depression scores were higher in individuals with Score 2. However, this difference generally remained at the significance level ($p>0.05$). In addition to the adequacy of hemodialysis treatment in HD patients, appropriate nutrition and provision of some necessary nutritional supplements can protect patients from malnutrition and depression. It was concluded that healthy nutrition and psychological support would improve HD patients' quality of life.

Keywords: Chronic Renal Failure, Depression, Hemodialysis, Nutritional Status

Giriş

Kronik böbrek yetmezliği kronik seyirli böbrek hastalıklarında ilerleyici nefron kaybı sonucunda böbrek fonksiyonlarının giderek bozulması ile ortaya çıkan kalıcı glomerül filtrasyon hızının azalması ile kendini gösteren bir tablodur (Liu et al., 2024). KBY, glomerüler

filtrasyon hızında azalma sonucu böbreğin sıvı-solut dengesini ayarlamada ve metabolik, endokrin fonksiyonlarda kronik, ilerleyici bozulma hali olarak da tanımlanabilmektedir. Son dönem böbrek yetmezliğine doğru böbrek fonksiyonları bozuldukça çoğu zararlı olan birçok değişiklikler oluşmakta ve bu dönemde diyaliz tedavisi gerekmektedir (Vaidya & Aeddula, 2024).

Kronik böbrek yetmezliği olan hastalarda azalmış yaşam kalitesi ve yüksek morbidite durumu mevcuttur (Gurun et al., 2024). Protein-enerji metabolizmasındaki bozukluklar, diyetle enerji ve protein alımının azalması, hormonal dengesizlik, üremik toksisite, enfeksiyon gibi etmenler PEM gelişimine katkıda bulunmaktadır. Malnütrisyon, mortalite ve morbidite ile yakından ilişkilidir. Bu nedenle diyaliz hastalarının beslenme durumlarının değerlendirilmesi önemlidir (Jaber et al., 2024).

SDBY (Son dönem böbrek yetmezliği) tanısı alıp hemodiyaliz (HD) tedavisi gören hastalar kronik hastalığa sahip olmaları nedeniyle hem nutrisyonel sorunlarla hem de psikolojik sorunlarla daha fazla karşılaşmaktadır. HD hastası makineye, kuruma ve sağlık personeline bağımlıdır. Bu durum hastanın bağımsızlık kaybına uğramasına neden olur. Bu bağımlılık hastanın aile, iş ve sosyal yaşantısında aksaklıklar meydana getirir. İnsanların sağlıklarında herhangi bir sapma olduğunda yaşamdan doyum almaları bozulabilir (Yu et al., 2025).

HD hastaları tedavi sürecinde sağlığı sürdürmede yetersizlik, enfeksiyona yatkın olma, beden imajında bozulma, fiziksel işlevsellikte azalma, etkisiz birey ve aile bas etmesi, tedavi rejimine uyamama gibi emosyonel ve fiziksel sorunlarla karşılaşır. Yaşanılan her problem hastaların ruhsal durumunu ve yaşam kalitesini olumsuz etkilemektedir (Santy & Zabala, 2024).

Diyaliz alan hastaların beslenmesi, yaşam kalitesi ve psikolojik durumu açısından oldukça önemlidir. Bu çalışmada HD alan hastaların beslenme durumları sorgulanmış ve HD almalarından doğan psikolojik bozukluklar ile ilişkileri araştırılmıştır. Bu doğrultuda araştırmanın amacı, HD tedavisi gören kronik böbrek yetmezliği hastalarında depresyon sıklığını ve beslenme durumunu belirlemek, beslenme düzeyi ve depresyon düzeylerinin sosyodemografik özelliklere ve hastalığa ilişkin özelliklere göre değişiklik gösterip göstermediğini belirlemektir.

Metod

Araştırma Yeri, Zamanı ve Örneklem Seçimi

Bu araştırma; diyaliz bölümünde tedavi gören, yaşları 25 ile 69 arasında değişen, 35 kadın 34 erkek HD hastasında uygulanmıştır. Örneklem grubu oluşturulurken hastaların 1

aydan uzun süredir HD tedavisi görmekte olması, 18 yaşın üzerinde olması, iletişim sorunu olmaması ve çalışma hakkında bilgilendirilmiş çalışmayı kabul eden hastalar olmasına özen gösterilmiştir. Çalışmaya 70 yaşın üstünde, ağır hastalık durumu (kalp yetmezliği, solunum yetmezliği, malignite) olan bireyler, son iki hafta içerisinde geçirilmiş şiddetli enfeksiyon varlığı olanlar, özgeçmişinde depresif bozukluk tanısı almış ve tedavi görmüş olanlar ve diğer psikiyatrik bozukluk tanısı olanlar ve /veya antidepresan kullanımı olanlar dahil edilmemiştir.

Araştırmanın Planı

Araştırmaya alınan hastaların, kişisel bilgileri (yaş, eğitim durumu, medeni hali), HD tedavi süresi, sıklığı, antropometrik ölçümleri ve dosyalarında yer alan biyokimyasal ölçümleri alınmıştır. Çalışma öncesi hastalar ile yüz yüze görüşme yapılarak çalışma hakkında bilgi verilmiş ve çalışma için izin alınmıştır. HD hastaları ile görüşmeler, HD seansının başlamasından önce uygulanmıştır. Araştırma Ondokuzmayıs Üniversitesi Tıp Fakültesi Dekanlığı Etik Kurulu'nun B.30.2.ODM.0.20.08/1434 numaralı etik kurul toplantısında tıbbi etik açıdan uygun bulunmuştur ve her katılımcıdan araştırma için onay alındıktan sonra bilgileri alınmıştır.

Veri Toplama Araçları

Hastaların sosyodemografik özellikleri yanında HD durumunu belirlemeye yönelik toplam 20 sorudan oluşan anket formudur.

Beck Depresyon Ölçeği (BDE), depresyon riskini belirlemeyi ve depresif belirtilerin düzeyini ve şiddet değişimini ölçmeyi sağlayan ölçektir. Beck Depresyon Ölçeği (BDE), toplam 21 maddeden oluşan ve bireyin kendini değerlendirmesine yönelik dörtlü likert tipi sorulardan oluşan bir ölçek olup, Beck ve arkadaşları tarafından geliştirilmiştir (Beck et al., 1996). BDE'nin ülkemizde geçerlilik ve güvenilirlik çalışması, Hisli (1988) tarafından yapılmıştır (Hisli, 1988). Ölçeğin alt grupları şunlardır; 1-Duygu-durum, 2- Karamsarlık, 3- Başarısızlık duygusu, 4-Neşesizlik, 5-Suçluluk duyguları, 6-Cezalandırma duygusu, 7-Kendini beğenmeme, 8-Kendini suçlama, 9-İntihar isteği, 10-Ağlama, 11-Sinirlilik, 12-Sosyal geri çekilme, 13-Kararsızlık, 14-Beden imajının değişmesi, 15-Çalışmama, 16-Uyku bozukluğu, 17-Yorgunluk, 18-_stahsızlık, 19-Kilo kaybı, 20-Somatik yakınmalar, 21-Libido kaybı. Bu alt gruplardan 11'i bilişsel, 2' si duygusal, 2' si açıkça görülen davranışlar, 1' i kişisel arası sorunlar ve 5' i somatik semptomları ölçmektedir. Depresyon tanısı için puan dağılımları; 11– 17arasında alınan puan hafif düzeyde depresyonu, 18-29 arasında alınan puan orta düzeyde

depresyonu, 30-63 arasında alınan puan ise, şiddetli düzeyde depresyon olduğunu gösterecek şekilde belirlenmiştir.

Nutrisyonel Risk Taraması (NRS-2002), ESPEN tarafından 2002 yılında geliştirilen bu yöntemde, BKİ, son haftadaki iştah azalması, şiddetli hastalık varlığı ve son üç aydaki kilo kaybının varlığı sorgulanmakta, ayrıca hastalığın şiddetiyle artmış besinsel gereksinimler de derecelendirilmektedir. Bunun yanında hastanın yaşının da bir faktör olarak değerlendirildiği bu yöntem, kolay uygulanabilir bir yöntem olması açısından önemlidir. Bu değerlendirme yöntemi iki ana aşamadan oluşmaktadır. Birinci aşamada, hastanın BKİ, son üç aydaki kilo kaybı, geçen hafta içerisindeki iştah azalması ve hastalığın şiddetli olup olmadığı sorgulanmaktadır. İkinci aşamada ise, mevcut hastalığın ağırlık puanlandırılması yapılmaktadır. Toplam nutrisyonel risk skoru, beslenme puanı, hastalığın ağırlık derecesi puanı ve yaş düzeltilmesinin toplamıyla bulunmaktadır. Sonuçta bulunan skorun 3 ve 3'ün üzerinde bir skor olması, hastada malnütrisyon riskinin varlığını göstermektedir. Skorun 3'ün altında olması hastanın beslenme durumunun iyi olduğunu göstermektedir. Malnütrisyon riskini belirlemede kullanılan bu yöntemi hastaneye yatan tüm hastalarda kullanmak mümkündür (Özateş, 2017).

Antropometrik Değerlendirme

Araştırma kapsamına alınan HD hastalarının, elektronik bir tartı ile diyalize girmeden önceki ağırlıkları ve diyaliz sonrası ağırlıkları (kuru ağırlık) ölçülmüş, boy uzunluğu ve kuru ağırlık kullanılarak Beden Kütle İndeksi (BKİ) hesaplanmıştır. Boy ölçümleri diyaliz merkezindeki hastalara ait dosya bilgilerinden alınmıştır. BKİ ($BKI = \text{Vücut Ağırlığı (kg)} / [\text{Boy Uzunluğu (m)}]^2$) formülüne göre hesaplanmıştır. Üst orta kol çevresi (ÜOKÇ); hastaların sol kollarında fistülleri olduğu için, sağ kol 90 derece dirsekten büküldükten sonra omuzda akromial çıkıntısı ile dirsekte olekranon çıkıntı arası orta nokta işaretlenip elastik olmayan mezurle çevre ölçülerek bulunmuştur. Bu değerlerde UOKC için 25. percentil altı yetersizlik düzeyi olarak kabul edilmektedir (Pekcan, 2008). Bel çevresi ölçümü tek basına da kullanılmakta ve kronik hastalıklar (obezite, diyabet, kardiyovasküler hastalıklılar) riski için tanımlayıcı olabilmektedir. Erkeklerde ≥ 94 cm risk, ≥ 102 cm yüksek risk; kadınlarda ≥ 80 cm risk, ≥ 88 cm yüksek risk olarak belirlenmiştir (Taşlı & Sağır, 2021).

Biyokimyasal Değerlendirme

Biyokimyasal parametre sonuçları için kan örnekleri hastadan HD tedavisi öncesinde ve sonrasında alınmıştır. Araştırmaya dahil edilen parametreler arasında üre, ferritin, serum demiri, sodyum, total kalsiyum, fosfat, kalsiyum, fosfor, glukoz, total protein, albümin, total

kolesterol, trigliserit, LDL kolesterol, HDL kolesterol, ALT, AST, ürik asit, CRP ve kreatinin yer almaktadır.

Verilerin İstatistiksel Değerlendirilmesi

Verilerin istatistiksel değerlendirilmesinde Windows ortamında SPSS 27 istatistiksel paket programı kullanılmıştır. Bu araştırmaya katılan bireylerden elde edilen ölçümlerle belirlenen veriler için ortalama, minimum, maksimum ve standart sapma değerleri hesaplanmıştır. Tüm istatistiksel testlerde en düşük önemlilik düzeyi 0,05 olarak alınmıştır.

Bulgular

Araştırmaya katılan toplam 69 kişinin %50,7'si kadındır (n=35) ve %49,3'ü erkektir (n=34). Katılımcıların eğitim düzeylerine bakıldığında, en yüksek oran ilkokul mezunlarına aittir. Toplam katılımcıların %56,5'i (n=39) ilkokul mezunu olup, bu oran hem kadınlar (%54,3) hem de erkekler (%58,8) arasında en yaygın eğitim düzeyidir. Kadın katılımcılar arasında okuryazar olmayanların oranı oldukça yüksektir (%31,4), bu oran erkeklerde %11,8'dir. Bu durum, kadınlar arasında eğitime erişim konusunda belirli bir dezavantajın olduğunu düşündürülebilir. Ortaokul mezunlarının oranı erkeklerde (%17,6) kadınlara (%8,6) kıyasla daha yüksektir. Lise mezuniyet oranları her iki cinsiyette de oldukça düşüktür (%5,7 kadınlarda, %5,9 erkeklerde). Üniversite mezunu ve “diğer” kategorisindeki katılımcılar sadece erkekler arasında yer almakta olup, her biri %2,9 oranındadır. Genel olarak tablo, katılımcıların büyük çoğunluğunun düşük eğitim düzeyine sahip olduğunu ve cinsiyetler arasında eğitim seviyelerinde farklılıklar bulunduğunu gösterse de bu sonuçlar anlamlı değildir ($p>0,05$). Katılımcıların HD tedavisi sürelerine göre dağılımı incelendiğinde, en yüksek oran hem kadınlar hem de erkekler arasında 2–3 yıl süredir tedavi gören bireylerde gözlenmiştir (kadınlarda %31,4; erkeklerde %32,4). Kadınların %28,6'sı 4–5 yıldır, %22,9'u ise 6 yıl ve üzeri süredir HD tedavisi almaktadır. Erkeklerde ise 6 yıl ve üzeri HD süresine sahip olanların oranı %41,2 ile dikkat çekmektedir. Ancak cinsiyete göre HD tedavisi süresi dağılımı arasında istatistiksel olarak anlamlı bir fark bulunmamıştır ($p>0,05$). Katılımcıların hemodiyaliz (HD) alma sıklığına ilişkin veriler incelendiğinde hem kadınların hem de erkeklerin büyük çoğunluğunun haftada üç kez HD tedavisi aldığı görülmektedir (kadınlarda %85,7; erkeklerde %79,4). Haftada iki kez HD alan bireyler yalnızca kadın grubunda yer almakta olup, oran %5,7'dir. “Diğer” kategorisinde yer alan tedavi sıklıkları kadınlarda %8,6, erkeklerde ise %20,6'dır. Ancak cinsiyete göre HD alma sıklığı arasında istatistiksel olarak anlamlı bir fark bulunmamıştır ($p>0,05$) (Tablo 1).

Tablo 1: Bireylerin Genel Özelliklerine Göre Dağılımları

Eğitim Durumu	Kadın n (%)	Erkek n (%)	Toplam n (%)
Okuryazar değil	11 (31,4%)	4 (11,8%)	15 (21,7%)
İlkokul	19 (54,3%)	20 (58,8%)	39 (56,5%)
Ortaokul	3 (8,6%)	6 (17,6%)	9 (13,0%)
Lise	2 (5,7%)	2 (5,9%)	4 (5,8%)
Üniversite	0 (0,0%)	1 (2,9%)	1 (1,4%)
Diğer	0 (0,0%)	1 (2,9%)	1 (1,4%)
HD Tedavisi Süresi	Kadın n (%)	Erkek n (%)	Toplam n (%)
0–1 yıl	6 (17,1%)	3 (8,8%)	9 (13,0%)
2–3 yıl	11 (31,4%)	11 (32,4%)	22 (31,9%)
4–5 yıl	10 (28,6%)	6 (17,6%)	16 (23,2%)
6 yıl ve üzeri	8 (22,9%)	14 (41,2%)	22 (31,9%)
HD Alma Sıklığı	Kadın n (%)	Erkek n (%)	Toplam n (%)
Haftada iki defa	2 (5,7%)	0 (0,0%)	2 (2,9%)
Haftada üç defa	30 (85,7%)	27 (79,4%)	57 (82,6%)
Diğer	3 (8,6%)	7 (20,6%)	10 (14,5%)

Kadınların boy ortalaması 153 cm, erkeklerin ise 172 cm'dir. Bu fark, erkeklerin boy ortalamasının kadınlardan anlamlı derecede daha yüksek olduğunu göstermektedir. Ağırlık açısından ise, her iki cinsiyetin ortalama ağırlığı 74,9 kg olup, kadınların ağırlıkları 41,6 kg ile 105 kg arasında değişirken, erkeklerde bu aralık 40 kg ile 116 kg arasında genişlemektedir. Erkeklerin ağırlık aralığının daha geniş olması, cinsiyetler arasında vücut yapısı açısından farklılıkların olduğunu gösterir. Bel çevresi, kadınlarda ortalama 85,4 cm, erkeklerde ise 88,8 cm olarak ölçülmüştür. Bu da erkeklerin bel çevresinin kadınlardan daha geniş olduğunu ortaya koymaktadır. Kalça çevresine bakıldığında ise, kadınların ortalama kalça çevresi 97,3 cm iken, erkeklerde bu değer 85,6 cm'dir. Kadınların kalça çevresinin erkeklere göre daha geniş olduğu gözlemlenmektedir. Üst Ölümsüz Omuz Çevresi (ÜOKÇ) ise kadınlarda 26,98 cm, erkeklerde ise 27,57 cm'dir. Erkeklerin ÜOKÇ'si, kadınlara göre daha büyük olma eğilimindedir. Beden Kitle İndeksi (BKİ) açısından, kadınların ortalama BKİ değeri 26,91, erkeklerin ise 27,39'dur. Bu da erkeklerin ortalama BKİ'sinin kadınlardan biraz daha yüksek olduğunu gösterse de, fark genel olarak çok belirgin değildir. VKİ sınıflaması yapıldığında, kadınların %5,71'i ve erkeklerin %2,94'ü düşük kilolu kategorisinde yer almaktadır. Normal kilolu kategorisinde ise, kadınların %31,43'ü, erkeklerin ise %26,47'si yer almaktadır. Kadınlar arasında normal kilolu oranı erkeklerden daha yüksektir. Fazla kilolu kategorisinde, kadınların %34,29'u, erkeklerin ise %38,24'ü bulunmaktadır ve bu kategoride erkeklerin oranı kadınlara göre daha yüksektir.

Obezite oranı ise kadınlarda %28,57, erkeklerde ise %32,35'tir. Erkeklerde obezite oranı, kadınlardan biraz daha yüksektir. Genel olarak, kadın ve erkekler arasında vücut ölçüleri açısından belirgin farklılıklar olduğu, özellikle boy, bel çevresi, kalça çevresi ve ÜOKÇ değerlerinde cinsiyetler arasındaki farkların dikkat çekici olduğu söylenebilir. BKİ sınıflamasında ise kadınlar ve erkekler arasında genel olarak benzer oranlar gözlemlenmiş olsa da, erkeklerin fazla kilolu ve obezite oranları kadınlara göre daha yüksektir ($p>0.05$) (Tablo 2).

Tablo 2. Bireylerin Antropometrik Ölçümlerinin Değerlendirilmesi

	Kadın (n=35)			Erkek (n=34)		
	Min.	Maks.	Ort.±ss*	Min.	Maks.	Ort.±ss*
Boy (cm)	149	168	153±7,5	159	180	172±6,7
Ağırlık (kg)	41,6	105	74,9±17,09	40	116	74,9±15,82
Bel çevresi (cm)	63	112	85,4±14,4	71	108	88,8±10,3
Kalça çevresi (cm)	60	122	97,3±13,2	86	110	85,6±6,1
ÜOKÇ (cm)	19	34	26,98±3,83	21	35	27,57±4,12
BKİ (kg/m²)	16,64	42,06	26,91±5,95	17,6	39,44	27,39±5,27
BKİ sınıflaması	Kadın n (%)		Erkek n (%)		Toplam n (%)	
Zayıf	2 (5.71%)		1 (2.94%)		3 (4.35%)	
Normal	11 (31.43%)		9 (26.47%)		20 (28.99%)	
Fazla Kilolu	12 (34.29%)		13 (38.24%)		25 (36.23%)	
Obez	10 (28.57%)		11 (32.35%)		21 (30.43%)	

Ort.±ss*; *ss: Standart sapma

Bu çalışmada, bireylerin biyokimyasal parametreleri ile beden kitle indeksi (BKİ) sınıflamaları arasındaki ilişkiler incelenmiştir. Serum demiri düzeyi, BKİ sınıflamaları arasında anlamlı bir fark göstermektedir ($p = 0,015$). Düşük BKİ ($<17,9$) grubunda serum demiri değeri, diğer gruplara kıyasla daha düşük bulunmuştur. BKİ'nin artmasıyla birlikte serum demiri düzeylerinde artış gözlemlenmiştir. Bu durum, düşük vücut kitle indeksine sahip bireylerde daha düşük demir seviyelerinin olabileceğini göstermektedir. Total protein düzeyleri de BKİ sınıflamaları arasında anlamlı bir fark yaratmaktadır ($p = 0,03$). Düşük BKİ ($<17,9$) grubunda protein düzeyleri, diğer gruplara göre daha yüksek bulunmuşken, orta ve yüksek BKİ gruplarında protein düzeylerinde bir düşüş gözlemlenmiştir. Bu bulgu, düşük BKİ'li bireylerin daha yüksek protein düzeylerine sahip olabileceğini göstermektedir. Triglicerit düzeyleri, BKİ sınıflamaları arasında anlamlı farklar göstermektedir ($p = 0,045$). BKİ'si yüksek olan grupta triglicerit düzeyleri belirgin şekilde daha yüksek bulunmuş ve bu durum, obezite ile ilişkili yüksek triglicerit seviyelerini yansıtmaktadır. Obezite ile triglicerit düzeylerinin artışı arasında

bir ilişki olduğu görülmüştür. Hemodiyaliz sonrası üre düzeyleri de BKİ sınıflamaları arasında anlamlı bir fark yaratmaktadır ($p = 0,043$). Vücut kitle indeksi arttıkça, HD sonrası üre düzeylerinde de artış gözlemlenmiştir. Bu bulgu, yüksek BKİ'li bireylerde daha yüksek üre seviyelerinin olabileceğini işaret etmektedir. HbA1c düzeyleri de BKİ sınıflamalarına göre anlamlı farklar göstermektedir ($p = 0,02$). Düşük BKİ ($<17,9$) grubunda HbA1c düzeyi diğer gruplara göre daha yüksekken, BKİ arttıkça HbA1c düzeylerinde bir azalma gözlemlenmiştir. Bu sonuç, obezite ve diyabet arasındaki ilişkiyi destekler niteliktedir. Bazı biyokimyasal parametreler, BKİ sınıflamaları ile anlamlı bir fark yaratmamıştır. Bunlar arasında albümin ($p = 0,610$), kreatinin (HD öncesi ve sonrası) ($p = 0,128$ ve $p = 0,419$), total kolesterol ($p = 0,401$), fosfor ($p = 0,215$), kalsiyum ($p = 0,11$), sodyum ($p = 0,318$), ALT (GPT) ($p = 0,215$), AST (GBT) ($p = 0,197$), LDL ($p = 0,05$), HDL ($p = 0,174$), ve ferritin ($p = 0,174$) parametreleri yer almaktadır. Bu parametreler arasında BKİ ile anlamlı bir ilişki bulunmamıştır, bu da bu biyokimyasal parametrelerin BKİ'den bağımsız olarak değişebileceğini düşündürmektedir. Bu çalışmanın sonuçları, bazı biyokimyasal parametrelerin, özellikle serum demiri, total protein, trigliserit, üre ve HbA1c gibi parametrelerin BKİ ile anlamlı ilişkiler gösterdiğini, ancak diğer bazı parametrelerin BKİ ile bağlantılı olmadığını ortaya koymaktadır. Bu bulgular, vücut kitle indeksi ile biyokimyasal parametreler arasındaki ilişkinin karmaşık ve değişken olabileceğini, ayrıca her parametrenin BKİ ile farklı düzeyde etkileşimde bulunduğunu göstermektedir.

Tablo 3. Hastaların BKİ Sınıflamasına Göre Biyokimyasal Bulgularının Değerlendirilmesi

Biyokimyasal parametreler	BKİ Sınıflaması				
	Zayıf	Normal	Fazla Kilolu	Obez	p
Serum Demiri (µg/dl)	53±10,39	76,75±34,72	73,24±28,14	72,24±28,25	0,015
Total Protein (g/dl)	6,73±0,46	6,41±0,8	6,40±0,51	6,49±0,66	0,03
Albumin (g/dl)	4,03±0,35	3,74±0,64	3,85±0,54	3,82±0,55	0,610
Kreatinin (mg/dl)(HD öncesi)	10±1,55	9,51±2,03	9,16±3,27	10,37±2,48	0,128
Kreatinin (mg/dl)(HD sonrası)	2,96±0,98	3,38±1,0	3,48±1,22	4,20±1,25	0,419
Total Kolesterol (mg/dl)	122,33±7,50	174,15±45,84	180,96±60,9	179,19±51,1	0,401
Trigliserid (mg/dl)	47,33±24,82	158,5±86,26	236,68±183	326,14±246	0,045
Üre (mg/dl) (HD öncesi)	50,73±12,85	60,5±16,98	61,12±12,40	63,51±9,65	0,559
Üre (mg/dl) (HD sonrası)	15,8±3,98	18,5±6,8	19,24±4,55	21,44±7,12	0,043
Glikoz (mg/dl)	153±129,4	109,9±39,63	152,16±87,4	124,9±43,54	0,580

Fosfor(mg/dl)	6,66±1,84	5,81±1,12	5,14±1,18	5,62±1,49	0,215
Kalsiyum(mg/dl)	8,5±0,17	8,73±1,03	8,66±0,56	9,01±0,78	0,11
Ferritin (µg/l)	1093,3±276,55	555,8±361,3	594,8±252,8	562,2±419,8	0,174
Sodyum (mEq/l)	139,67±4,04	137,7±5,30	139,08±3,37	137,67±4,49	0,318
ALT (GPT) (U/l)	8±3,46	10,55±5,19	8,92±3,08	14,62±9,55	0,215
AST(GBT)(U/l)	9,33±2,3	11,35±3,71	8,8±4,08	11,33±4,21	0,197
LDL (mg/dl)	74,66±4,61	104,55±34,03	101,44±52,2	97,71±32,73	0,05
HDL (mg/dl)	38±1,73	42,75±14,31	30,44±9,15	26,76±5,25	0,174
HbA1c	12±0,12	6,64±1,1	6,64±2,20	5,92±1,3	0,02

Çalışmada kadın ve erkek hastaların depresyon durumları arasında dikkat çekici farklılıklar gözlemlenmiştir. Kadınların Beck Skoru ortalaması $26,43 \pm 9,15$ iken, erkeklerin ortalama skoru $19,59 \pm 9,72$ olarak belirlenmiştir. Kadınlarda, depresyonun orta derece ve şiddetli düzeyde daha yaygın olduğu görülmüştür; kadınların %45,71'i orta derece depresyon, %37,14'ü ise şiddetli depresyon belirtileri göstermektedir. Erkeklerde ise, depresyon daha çok hafif düzeyde görülmüş, %29,41'i hafif depresyon, %26,47'si orta derece depresyon ve %26,47'si şiddetli depresyon yaşadığı rapor edilmiştir. Kadınların depresyon seviyeleri, erkeklere göre daha yüksek oranda orta derece ve şiddetli depresyonu göstermektedir. Toplamda, depresyonu olmayan bireylerin oranı kadınlarda %2,86, erkeklerde ise %17,65 olarak belirlenmiştir. Hafif depresyon oranı kadınlarda %14,29, erkeklerde ise %29,41, orta derece depresyon oranı kadınlarda %45,71, erkeklerde ise %26,47 olarak kaydedilmiştir. Şiddetli depresyon oranı ise kadınlarda %37,14, erkeklerde %26,47'dir. Bu bulgulara dayanarak, kadınlar ile erkekler arasında depresyon seviyelerinde anlamlı bir fark olduğu bulunmuştur ($p<0,001$). Kadınlar, depresyonun daha ileri seviyelerinde yer alırken, erkekler genellikle daha hafif depresyon belirtileri göstermektedir (Tablo 4).

Tablo 4. Hastaların Beck Depresyon Ölçeği Puanları

Cinsiyet	Beck Skoru (Min-Max)	Beck Skoru (Ort. ± ss)	Depresyon Yok (n, %)	Hafif Depresyon (n, %)	Orta Derece Depresyon (n, %)	Şiddetli Depresyon (n, %)
Kadın	9 - 45	26,43 ± 9,15	1 (2.86%)	5 (14.29%)	16 (45.71%)	13 (37.14%)
Erkek	3 - 37	19,59 ± 9,72	6 (17.65%)	10 (29.41%)	9 (26.47%)	9 (26.47%)
Toplam			7 (10.14%)	15 (21.73%)	25 (36.23%)	22 (31.88%)

Ort.±ss*; *ss: Standart sapma

Katılımcıların beslenme durumu puanları cinsiyete göre değerlendirildiğinde, kadın katılımcıların ortalama beslenme durumu puanı $2,26 \pm 0,950$ iken, erkek katılımcılarda bu değer $2,15 \pm 1,048$ olarak saptanmıştır. Kadınların %22,86'sı Skor 1, %40,00'ı Skor 2, %25,71'i Skor 3 ve %11,43'ü Skor 4 düzeyinde değerlendirilmiştir. Erkek katılımcıların ise %35,29'u Skor 1, %26,47'si Skor 2, %26,47'si Skor 3 ve %11,76'sı Skor 4 düzeyinde yer almıştır. Genel olarak incelendiğinde, tüm katılımcıların %28,99'u Skor 1, %33,33'ü Skor 2, %26,09'u Skor 3 ve %11,59'u Skor 4 düzeyinde beslenme durumuna sahipti. Cinsiyetler arasında beslenme durumu puanları bakımından dağılımlar farklılık istatistiksel olarak anlamlı bulunmuştur ($p<0,05$) (Tablo 5).

Tablo 5. Cinsiyete Göre Beslenme Skoru Dağılımları

Cinsiyet	Toplam	Min.	Max.	Ort.	Std. Sapma	Skor 1 n (%)	Skor 2 n (%)	Skor 3 n (%)	Skor 4 n (%)
Kadın	35	1	4	2,26	0,950	8 (22.86%)	14 (40.00%)	9 (25.71%)	4 (11.43%)
Erkek	34	1	4	2,15	1,048	12 (35.29%)	9 (26.47%)	9 (26.47%)	4 (11.76%)
Toplam	69	-	-	-	-	20 (28.99%)	23 (33.33%)	18 (26.09%)	8 (11.59%)

Katılımcıların depresyon düzeyleri ile beslenme durumları karşılaştırıldığında, beslenme durumu Skor 1 (İhtiyaçlar karşılanabilir düzeyde olanlar) olan bireylerin ortalama depresyon puanı $21,05 \pm 7,8$ olarak saptanmıştır. Skor 2 (Önlem alınmalı düzeyde olanlar) grubunda depresyon ortalaması $24,70 \pm 11,81$ iken, Skor 3 (Malnütrisyon riski taşıyanlar) grubunda bu değer $23,94 \pm 9,46$ olarak belirlenmiştir. Malnütrisyon düzeyinde değerlendirilen Skor 4 grubunun ortalama depresyon puanı ise $21,38 \pm 10,98$ 'dir. Beslenme durumu skorları yükseldikçe (beslenme durumu bozuldukça) depresyon puanlarında bir artış eğilimi gözlenirse de, gruplar arasındaki fark istatistiksel olarak anlamlı bulunmamıştır ($p>0,05$). Bununla birlikte, Skor 2 düzeyinde olan bireylerin depresyon puanları diğer gruplara kıyasla daha yüksek olmakla birlikte bu fark sınırda anlamlılık göstermektedir ($p<0,05$) (Tablo 6).

Tablo 6. Depresyon Durumu İle Beslenme Durumunun Karşılaştırılması

	Depresyon Ortalamaları	p
Skor 1	$21,05 \pm 7,8$	0,07
Skor 2	$24,70 \pm 11,81$	0,04

Skor 3	23,94±9,46	0,09
Skor 4	21,38±10,98	0,68

Tartışma ve Sonuç

Tüm dünyada son dönem böbrek yetmezliği insidans ve prevalansındaki artış devam etmektedir. Malnutrisyon, diyaliz hastalarında yaygın olarak görülen bir sorundur. Mortalite ve morbiditenin habercisi olarak kabul edilmektedir. Ayrıca hastaların kronik hastalık sürecinde, morbidite riskini arttırmanın yanı sıra hayat kalitelerini azaltıp, sık sık hastaneye başvurmalarına neden olarak, sosyal ve iş hayatlarında olumsuz etkiden dolayı psikolojik olarak önemli oranda etkilenmektedir (Atasoyu et al., 2003). Son dönem böbrek yetmezliği nedeniyle hemodiyalize giren ki en önemli kayıp; böbreğin kaybı yani fiziksel kayıptır. Aile içindeki rol ya da toplumsal rol kaybı da söz konusudur. HD hastalarında sürekli depresif mizaç, intihar düşüncesi, dikkati toplayamama, benlik değeri düşüklüğü ve ümitsizlik hisleri depresyon göstergesidir. Depresyon HD hastalarında en çok görülen psikolojik problemdir (Yu et al., 2025). Bu çalışma hemodiyaliz tedavisi alan kronik böbrek yetmezliği hastalarında depresyon ve beslenme durumunu incelemek ve arasındaki ilişkiyi incelemek amacıyla yapılmıştır.

Böbrek hasarının oluşması ve ilerlemesini kolaylaştıran risk faktörleri arasında yaş ve kronik hastalıklar yer almaktadır. Son 10 yıl boyunca yaşlı HD hastası oranında artış olduğu ve bu hastalarda morbidite ve mortalitede artışla bağlantılı beslenme durumu problemleri olduğu belirtilmiştir (de Arriba et al., 2021). Bu çalışmada toplamda hastaların %39,6'sının 45-55 yaşları arasında, % 7'sinin ise 56-65 yaşları arasında olduğu saptanmıştır. Bu çalışmada elde edilen bulgular, hemodiyaliz (HD) tedavisi gören bireylerin sosyodemografik, antropometrik, biyokimyasal ve psikososyal özellikleri açısından önemli veriler sunmaktadır. Katılımcıların cinsiyet dağılımı dengeli olmasına rağmen, eğitim düzeyleri açısından belirgin bir düşük profille karşılaşmıştır. Özellikle kadınlar arasında okuryazar olmayanların oranının yüksekliği, cinsiyete dayalı eğitim fırsatlarında hâlâ mevcut olan eşitsizlikleri işaret etmektedir. Bu durum, kadın bireylerin sağlık okuryazarlığı, tedaviye uyum ve sağlık hizmetlerine erişim açısından dezavantajlı bir konumda olabileceğini düşündürmektedir. HD süresine ilişkin veriler değerlendirildiğinde, kadın ve erkek bireyler arasında belirgin bir fark bulunmasa da, erkeklerin daha uzun süredir HD tedavisi görme eğiliminde oldukları gözlemlenmiştir. Bu bulgu, erkek bireylerde HD'ye neden olan hastalıkların daha geç tanı alması veya tedaviye başlama sürecinde yaşanan farklılıklardan kaynaklanıyor olabilir. HD sıklığı açısından ise, haftada üç

seans uygulamanın her iki cinsiyet için de baskın bir protokol olduğu görülmüştür. Bununla birlikte, yalnızca kadınlarda haftada iki seans uygulamasına rastlanması, bireysel sağlık durumu, sosyal destek düzeyi veya tedaviye erişim imkanlarının cinsiyete göre farklılık gösterebileceğini akla getirmektedir.

BKİ ile biyokimyasal parametreler arasındaki ilişkiler incelendiğinde, bazı belirteçlerde anlamlı farklılıklar bulunmuştur. Özellikle serum demiri, total protein, trigliserit, HbA1c ve HD sonrası üre düzeyleri BKİ sınıflamalarına göre anlamlı değişiklikler göstermektedir. Düşük BKİ grubunda daha düşük demir seviyelerinin görülmesi, bu bireylerin yetersiz beslenme veya malabsorpsiyon riski taşıdığını düşündürülebilir. Diğer yandan, artan BKİ ile trigliserit ve üre düzeylerindeki artış, obezitenin metabolik yükü artırdığını ve HD sonrası artık ürünlerin eliminasyonunun daha zor gerçekleştiğini gösterebilir. HbA1c düzeyinin düşük BKİ grubunda daha yüksek bulunması ise, glukoz metabolizması bozukluklarının yalnızca obez bireylerle sınırlı olmadığını, yetersiz beslenmenin de glisemik kontrolü olumsuz etkileyebileceğini ortaya koymaktadır. Yapılan bir çalışmada Geriatrik Beslenme Risk İndeksi (GNRI) ile antropometrik ölçümler arasında pozitif, Üre Azalma Oranı ile negatif korelasyon olduğu bulunmuştur (Yıldız, 2024). Bir diğer çalışmada hastaların %80,0'inde yetersiz beslenme saptanmıştır (İpek, 2021).

Bu çalışmada kadın ve erkek bireylerin depresyon düzeyleri arasında anlamlı farkların bulunması, HD tedavisi gören kadın bireylerin ruhsal açıdan daha fazla yük taşıdığını göstermektedir. Kadınların daha yüksek oranda orta ve şiddetli depresyon belirtileri göstermeleri, sosyal roller, bakım yükü, ekonomik bağımlılık ya da toplumsal beklentilerin ruh sağlığı üzerindeki etkilerine işaret edebilir. Bu bulgu, HD sürecinin yalnızca fizyolojik değil, aynı zamanda psikososyal açıdan da bütüncül bir şekilde ele alınması gerektiğini göstermektedir. Ayrıca beslenme durumu ile depresyon düzeyleri arasındaki ilişki incelendiğinde, beslenme durumu bozuldukça depresyon puanlarında bir artış eğilimi gözlenmiş; ancak bu fark istatistiksel olarak anlamlı düzeye ulaşmamıştır. Bununla birlikte, Skor 2 düzeyinde yer alan bireylerin depresyon puanlarının belirgin şekilde daha yüksek olması, yetersiz ancak henüz ileri düzeyde olmayan malnütrisyonun, bireylerde psikolojik yük oluşturabileceğini düşündürmektedir. Bu bulgu, erken evredeki beslenme sorunlarının ruhsal belirtilerle birlikte değerlendirilmesinin gerekliliğini ortaya koymaktadır. Yapılan bir çalışmada hemodiyaliz tedavisi gören bireylerin orta düzeyde depresyon yaşadıkları belirlenmiştir (Hoang et al., 2022). Benzer şekilde, hemodiyaliz hastalarının tedavi sürecinde sıklıkla tükenmişlik hissi yaşadıklarını ve kronik böbrek yetmezliği tanısı aldıktan sonra depresyon belirtilerinin ortaya çıktığı ifade edilmiştir (Avdal et al., 2020). Ayrıca hemodiyaliz hastalarında depresyon

düzeyinin oldukça yüksek olduğu bildirilmiştir (Ataş et al., 2017; Tezel et al., 2011). Malezya’da yürütülen araştırmada, diyaliz hastalarının çoğunda depresyon görülmediği veya yalnızca minimal düzeyde depresyon yaşandığı saptanmıştır (Ng et al., 2020). Literatürde, son dönem böbrek yetmezliği (SDBY) tanısı alan bireylerde depresyonun yaygın olarak görüldüğü bildirilmektedir (Finkelstein & Finkelstein, 2000). Bilimsel veriler, diyaliz hastalarında prognozu etkileyen en önemli faktörlerden birinin beslenme durumu olduğunu ortaya koymaktadır. Yetersiz beslenen, zayıf ve vücut direnci düşük bireylerin sağlık sorunlarıyla karşılaşma olasılığı daha yüksektir. Yapılan bir çalışmada, hemodiyaliz hastalarında malnütrisyon prevalansının %20 ila %70 arasında değiştiği bildirilmiştir (Kopple, 1994). Tan ve arkadaşlarının gerçekleştirdiği bir çalışmada hastaların %48’inin beslenme durumunun iyi olduğu, %46’sının orta düzeyde malnütrisyon yaşadığı ve %6’sının ise ağır malnütrisyon grubunda yer aldığı belirlenmiştir (Tan et al., 2016). Benzer şekilde, böbrek yetmezliği olan bireylerde malnütrisyon oranının %40 olduğu ve bu durumun mortalite ile morbiditeyi artırdığı ifade edilmiştir (Al Saran et al., 2011).

Sonuç olarak, bu çalışma HD tedavisi gören bireylerde cinsiyet, beden kompozisyonu, biyokimyasal belirteçler, beslenme durumu ve depresyon düzeyleri arasındaki çok boyutlu ilişkileri ortaya koymaktadır. Bulgular, bireysel ve toplumsal faktörlerin HD hastalarının sağlık durumu üzerindeki etkilerini anlamada önemli ipuçları sunmakta; klinik yaklaşımın yalnızca tıbbi değil, aynı zamanda psikososyal ve sosyoekonomik değişkenleri de içerecek şekilde yapılandırılması gerektiğine işaret etmektedir.

Özet

Bu çalışmada üniversite öğrencilerinde egzersiz bağımlılığının, yeme tutumu ve anksiyete ile ilişkisinin incelenmesi amaçlanmıştır. Tanımlayıcı kesitsel nitelikteki bu çalışmaya, 18 yaş ve üzerinde olan toplam 298 üniversite öğrencisi dahil edilmiştir. Veriler, demografik bilgileri içeren anket, Yeme Tutumu Testi (YTT), Egzersiz Bağımlılığı Ölçeği (EBÖ) ve Beck Anksiyete Ölçeği (BAÖ) aracılığıyla toplanmıştır. Çalışmaya katılan 298 bireyin %51'i kadın, %49'u erkektir. Bireylerin %59,1'inin 20-22 yaş aralığında olduğu ve bireylerin %79,5'inin normal Beden Kütle İndeksi (BKİ) değer aralığında (20.0-24.9) olduğu görülmüştür. Erkek öğrencilerin YTT puanlarının daha yüksek olduğu ve erkeklerin %51,3'ünün YTT puanlarının 30 ve üzerinde olduğu bulunmuştur. Cinsiyete göre anlamlı bir fark olmamakla birlikte kızların anksiyete düzeylerinin erkeklere göre daha yüksek olduğu saptanmıştır. Bireylerin yaşları azaldıkça yeme tutumu puanları ve anksiyete düzeylerinin arttığı bulunmuştur. Bireylerin BKİ düzeyleri arttıkça ise anksiyete düzeylerinin artıp, egzersiz bağımlılığı düzeylerinin azaldığı görülmüştür. Yeme tutumu ile anksiyete düzeyi ve BKİ arasında ise anlamlı bir ilişki olduğu diğer elde edilen bulgular arasında yer almaktadır ($p<0,05$). Bu bulgular doğrultusunda öğrencilerin anksiyete düzeylerinin, yeme tutumu ve egzersiz bağımlılığı düzeylerini etkilediği bulunmuş olup öğrencilerin kaygı düzeylerinin iyileştirilmesi için egzersiz sırasında ve günlük hayatlarında sağlıklı beslenmeye önem vermelerinin ve bu bireylere anksiyete ile mücadelede psikolojik destek sağlanmasının yararlı olacağı sonucuna varılmıştır.

Anahtar Kelimeler: Anksiyete, Egzersiz Bağımlılığı, Öğrenci, Yeme Tutumu

Relationship of Exercise Addiction with Eating Attitude and Anxiety in University Students

Abstract

This study aimed to investigate the relationship between exercise addiction, eating behaviour and anxiety in university students. A total of 298 university students aged 18 years and over were included in this descriptive cross-sectional study. Data were collected through a questionnaire that included demographic information, the Eating Attitude Test (EAT), the Exercise Addiction Scale (EAS), and the Beck Anxiety Scale. Of the 298 individuals who participated in the study, 51% were female and 49% were male. It was observed that 59.1% of the individuals fell within the 20-22 years age range, and 79.5% of the individuals had a normal Body Mass Index (BMI) range (20.0-24.9). Male students had higher YTT scores, with 51.3% of them scoring 30 or higher. Although there was no significant gender difference, female students reported higher levels of anxiety than male students. It was found that eating attitudes and anxiety levels increased as individuals' ages declined. As the BMI levels of individuals increased, anxiety levels increased and exercise adherence levels decreased. Anxiety level and eating attitude were significantly positively correlated. BMI ($p<0.05$). In line with these findings, it was found that the anxiety levels of the students affected their eating attitude and exercise adherence levels, and it was concluded that it would be beneficial to give importance to healthy nutrition during exercise and in their daily lives to improve the anxiety levels of the students and to provide psychological support to these individuals in combating anxiety.

Keywords: Anxiety, Exercise Addiction, Student, Eating Attitudes

Giriş

Günümüz toplumunda sağlıklı yaşam ve beden imajına verilen önemin artması, bireyleri düzenli egzersiz yapmaya teşvik etmektedir. Özellikle üniversite çağındaki genç yetişkinler, hem fiziksel sağlıklarını korumak hem de psikolojik iyi oluşlarını artırmak amacıyla spora yönelmektedir. Ancak egzersizin sağlıklı sınırlarının ötesine geçmesi, bireyde “egzersiz bağımlılığı” olarak tanımlanan bir durumu ortaya çıkarabilmektedir (Yıldırım et al., 2017).

Bireyin egzersizden istenen etkiyi sağlamak amacıyla egzersiz süresi, sıklığı ve şiddetini sürekli olarak artırması ve yaşamını egzersiz alışkanlığı çerçevesinde yeniden düzenlemesi egzersiz bağımlılığı olarak adlandırılmaktadır (Zmijewski & Howard., 2003).

Üniversite öğrencileri, gelişimsel olarak kimlik arayışında oldukları ve akademik, sosyal, ekonomik stres faktörleriyle karşılaştıkları bir yaşam evresindedir. Bu dönemde beden

algısı ve yeme davranışları da hassasiyet kazanabilmektedir. Yeme tutumlarındaki bozulmalar, bireyin değerini beden görünümüne dayandırmasına ve kontrol algısını yeme davranışı üzerinden sürdürmeye çalışmasına neden olabilir. Egzersiz bağımlılığı, bu bağlamda, yeme bozukluklarına yönelik risk faktörlerinden biri olarak değerlendirilmektedir (Weinstein et al., 2015). Aynı şekilde, anksiyete de egzersiz bağımlılığı ile ilişkili olabilecek önemli bir psikolojik değişkendir. Yüksek düzeyde anksiyete yaşayan bireyler, stresle başa çıkmak veya içsel huzursuzluklarını azaltmak amacıyla aşırı egzersiz davranışlarına yönelebilmektedir. Bu bağlamda, egzersiz bağımlılığı yalnızca fiziksel aktivite alışkanlığı değil, aynı zamanda bireyin psikolojik ihtiyaçlarını giderme aracı haline gelebilmektedir (Yoon et al., 2023).

Bu bilgiler ışığında bu çalışmada; üniversite öğrencilerinde egzersiz bağımlılığının, yeme tutumu ve anksiyete üzerine etkisinin incelenmesi amaçlanmıştır.

Metod

Araştırma Yeri, Zamanı ve Örneklem Seçimi

Tanımlayıcı kesitsel nitelikteki bu çalışmaya, Samsun Ondokuz Mayıs Üniversitesi Yaşar Doğu Spor Bilimleri Fakültesi'nin antrenörlük, spor yöneticiliği ve beden eğitimi öğretmenliği bölümlerinde öğrenim görmekte olan 18 yaş ve üzeri toplam 298 üniversite öğrencisi dahil edilmiştir. Çalışmanın Etik onayı Ondokuz Mayıs Üniversitesi Klinik Araştırmalar Etik Kurulu'ndan alınmış (B.30.2.ODM.0.20.08/14-146) ve her katılımcıdan araştırma için onay alındıktan sonra bilgileri alınmıştır.

Veri Toplama Araçları

Verilerin toplanmasında bireylerin demografik bilgilerini ve beslenme alışkanlıklarını değerlendirmeyi amaçlayan içeren bir anket, Beck Anksiyete Ölçeği (BAÖ), Yeme Tutumu Testi (YTT) ve Egzersiz Bağımlılığı Ölçeği (EBÖ) kullanılmıştır.

Beck ve arkadaşları tarafından geliştirilmiş olan Beck Anksiyete Ölçeği, bireylerin yaşadığı anksiyete belirtilerinin sıklığının belirlenmesi amacıyla kullanılan bir ölçektir. Ölçek 21 maddeden oluşmakta ve her bir soru 0-3 arası puan almaktadır. Türkçe geçerlik ve güvenirliği Ulusoy ve arkadaşları tarafından yapılmıştır (Beck et al., 1988; Ulusoy et al., 1988).

Yeme Tutum Testi, Garner tarafından yeme tutumunun belirlenmesi amacıyla geliştirilmiş olup ölçeğin Türkçe uyarlaması Savaşır ve Erol tarafından yapılmıştır. YTT, 40 maddeden oluşan, 6'lı likert tipi bir ölçektir ve ölçeğin kesme puanı 30 olarak saptanmıştır. Toplam puan, ölçek maddelerinden alınan puanların toplamı ile elde edilmektedir (Garner & Garfinkel., 1979; Savaşır & Erol 1989).

Egzersiz Bağımlılığı Ölçeği, egzersiz bağımlılığını belirlemek amacıyla geliştirilmiş, bireylerin egzersiz bağımlılığı düzeyini tespit etmek amacıyla kullanılan bir ölçektir. EBÖ toplam 17 maddeden oluşmaktadır. 3-4 aralığında puan alan bireyler semptomatik olarak sınıflandırılmakta ve egzersiz bağımlılığı riski olarak ifade edilmektedir. 1-2 puan aralığında puan alan bireyler ise asemptomatik olarak sınıflandırılmaktadır (Tekkurşun Demir et al., 2018).

Verilerin İstatiksel Değerlendirilmesi

İstatistiksel analizler SPSS 27.0 programı kullanılarak yapılmıştır. Tanımlayıcı değişkenler ortalama $\pm$ standart sapma ($\chi \pm SS$), nominal değişkenler frekans ve yüzde olarak verilmiştir. İstatistiksel anlamlılık düzeyi $p < 0.05$ olarak kabul edilmiştir.

Bulgular

Çalışmaya katılan toplam 298 bireyin %51'i kadın, %49'u erkektir. Öğrencilerin eğitim gördüğü bölümlere bakıldığında en yüksek oran beden eğitimi öğretmenliği öğrencilerine aittir (%40,2). Öğrencilerin %36,5'inin 3. sınıf, %23'ünün 1. sınıf öğrencilerinden oluştuğu görülmektedir. Bireylerin %59,1'inin 20-22 yaş aralığında olduğu ve bireylerin %79,5'inin normal Beden Kütle İndeksi (BKİ) değer aralığında (20.0-24.9) olduğu görülmüştür.

Tablo 1: Bireylerin Demografik Özelliklerinin Dağılımı

Değişkenler	n	%
Cinsiyet		
Erkek	146	49,0
Kız	152	51,0
Bölüm		
Antrenörlük	92	30,8
Beden Eğitimi Öğretmenliği	120	40,2
Spor Yöneticiliği	86	29,0
Sınıf		
1.Sınıf	68	23,0
2.Sınıf	59	19,7
3.Sınıf	109	36,5
4.Sınıf	62	20,8
BKİ		
<20.0 kg/m ²	19	6,4
20.0-24.9 kg/m ²	237	79,5
>25.0 kg/m ²	42	14,1

Bireylerin ölçek puanlarının dağılımı Tablo 2’de verilmiştir. Erkeklerin YTT puanlarının medyan değerlerinin 26 (21) kızlara göre 24 (21) daha yüksek olduğu ve erkeklerin %51,3’ünün YTT puanlarının 30 ve üzerinde olduğu bulunmuştur. Egzersiz Bağımlılığı Ölçeği medyan değerlerine bakıldığında ise her iki cinsiyette de benzer sonuçların olduğu görülmektedir. Bireylerin anksiyete düzeyleri incelendiğinde ise, kız öğrencilerin Beck Anksiyete Ölçeği medyan değerlerinin erkeklere göre daha yüksek olduğu görülmüştür ($p>0,05$).

Tablo 2: Bireylerin Ölçek Puanlarının Dağılımı

Ölçekler	Erkek (n:146)		Kız (n:152)		P
	Medyan (IQR)	Min-Max	Medyan (IQR)	Min-Max	
Yeme Tutum Testi	26 (21)	3-71	24 (21)	3-74	0,662
Egzersiz Bağımlılığı Ölçeği	53 (29)	21-110	57 (33)	21-119	0,294
Beck Anksiyete Ölçeği	33 (12)	21-56	35 (16)	21-68	0,108

BKİ sınıflamasına göre bireylerin ölçek puanlarının dağılımları Tablo 3’te verilmiştir. Bireylerin BKİ düzeyleri arttıkça YTT ve BAÖ ölçeği puanlarının medyan değerlerinin arttığı EBÖ ölçeği medyan değerlerinin ise azaldığı görülmüştür ($p>0,05$). BKİ’nin yeme tutumu ve anksiyete düzeylerinin artırıp, egzersiz bağımlılığı düzeylerinin azaldığı saptanmıştır.

Tablo 3: BKİ Sınıflamasına Göre Bireylerin Ölçek Puanlarının Dağılımı

BKİ Sınıflaması	YTT			BAÖ			EBÖ	
	Medyan (IQR)	Min-Max	P	Medyan (IQR)	Min-Max	P	X ± SS	P
<18,5 kg/m ²	21 (23)	3-59		31 (16)	23-51		58,5 ± 27,4	
18,5-24,9 kg/m ²	24 (21)	3-74	0,277	34 (14)	21-68	0,760	52,2 ± 19,3	0,471
>25,0 kg/m ²	28 (18)	7-54		33 (14)	21-56		52,9 ± 23,1	

BAÖ: Beck Anksiyete Ölçeği, EBÖ: Egzersiz Bağımlılığı Ölçeği, YTT: Yeme Tutum Testi

Bireylerin BKİ ve ölçek puanları arasındaki korelasyonların dağılımı Tablo 4’te verilmiştir. Yeme tutumu ile anksiyete düzeyi ve BKİ arasında anlamlı ilişki olduğu bulunmuştur ($p<0,05$). Yeme tutumu ile yaş arasında anlamlı ilişki olduğu, bireylerin yaşları arttıkça yeme tutumu ve anksiyete düzeylerinin azaldığı görülmüştür ($p<0,05$).

Tablo 4: Bireylerin BKİ ve Ölçek Puanları Arasındaki Korelasyonların Dağılımı

	YTT		BAÖ		EBÖ		BKİ		Yaş	
	r	p	r	p	r	p	r	p	r	p
YTT	1									
BAÖ	0,339	0,025*	1							
EBÖ	0,310	0,732	0,150	0,478	1

Tartışma ve Sonuç

Bu çalışmada elde edilen sonuçlardan hareketle, cinsiyete göre anksiyete puanları arasında anlamlı bir farklılık olmadığı tespit edilmekle birlikte erkek öğrencilerin anksiyete puanlarının kız öğrencilere göre daha düşük olduğu belirlenmiştir. Yapılan çalışmalarda bu çalışma sonuçlarına benzer şekilde kız öğrencilerin anksiyete düzeylerinin erkek öğrencilere göre daha yüksek olduğu sonucuna ulaşılmıştır (Tepeli Temiz & Ulusoy Gökçek., 2020; Yılmaz et al., 2014; Şimşek et al., 2024). Literatürdeki bir çalışmaya paralel şekilde öğrencilerin egzersiz bağımlılığı düzeyleri incelendiğinde, cinsiyete göre istatistiksel açıdan bir farklılık olmasa da kız öğrencilerin egzersiz bağımlılığı düzeylerinin erkeklerden daha yüksek olduğu görülmüştür (Yıldırım et al., 2017). Bu durumun kız öğrencilerin dış görünüme verdikleri önemden kaynaklanabileceği düşünülmektedir.

Öğrencilerin BKİ sınıflamasına göre yeme tutumu puanları incelendiğinde, bu iki bileşen arasında anlamlı bir farklılık bulunmamıştır. Bununla birlikte BKİ düzeyleri arttıkça yeme tutumu puanlarının arttığı görülmüştür. Benzer bir çalışmada fazla kilolu ve obez BKİ’de olan bireylerde normal BKİ’de olan bireylere göre yeme bozukluğunun daha fazla olduğu görülmüştür (Usta et al., 2015). BKİ ile egzersiz bağımlılığı düzeyi incelendiğinde BKİ arttıkça bireylerin egzersiz bağımlılığı düzeylerinin azaldığı bulunmuştur. Düşük BKİ (<18,5) grubunda yer alan öğrencilerin anksiyete ve yeme tutumu düzeylerinin diğer BKİ gruplarındaki öğrencilere kıyasla daha düşük olması, bu gruptaki öğrencilerin beden imajına dikkat etme ve sürekli ağırlık takibi yapma gibi özelliklere sahip olmasının bu BKİ grubundaki öğrencilerde egzersiz bağımlılığı düzeylerini artırdığı düşünülebilir.

Bu çalışmada, egzersiz bağımlılığı ile yeme tutumu arasında pozitif ilişki saptanmıştır ($p>0,05$). Benzer şekilde, egzersiz yapan genç yetişkinler üzerinde yürütülen bir çalışmada, bireylerin yeme bozukluğu riskindeki artışın egzersiz bağımlılığını da artırdığı görülmüş olup benzer bir çalışmada, egzersiz bağımlılığı ile yeme davranış bozukluğunun pozitif ilişkili olduğu bildirilmiştir (Sucular., 2020; Yıldırım et al., 2017).

Elde edilen sonuçlardan hareketle, bireylerin yaş ve Beck Anksiyete Ölçeği puanları arasında anlamlı bir ilişki olduğu ve 18-19 yaş aralığında olan öğrencilerin anksiyete puanlarının diğer öğrencilere göre daha yüksek olduğu bulunmuştur. Bu durumun sebebi; adölesan dönemin duygusal geçişin yoğun yaşandığı bir dönem olması ve bireylerin üniversiteye yeni başlaması ile ev ve aile ortamından ayrılarak yeni çevre koşullarına alışamamasından kaynaklanabileceği düşünülmektedir.

Sonuç olarak bu çalışma, egzersiz bağımlılığı, yeme tutumu ve anksiyete arasındaki çok boyutlu ilişkileri ortaya koymaktadır. Çalışmadan elde edilen bulgular doğrultusunda anksiyetenin kız öğrencilerde daha yaygın olduğu, BKİ ve egzersiz bağımlılığındaki artışın bireylerin anksiyete düzeylerini artırdığı ve anksiyete ve egzersiz bağımlılığının yaşla birlikte azaldığı görülmüştür. Bu kapsamda; üniversite öğrencilerine yönelik psikoeğitim programlarında egzersiz davranışının sağlıklı sınırlarda sürdürülmesinin önemi vurgulanmalıdır. Ayrıca, beden imajı, yeme davranışları ve anksiyete gibi psikolojik değişkenlere yönelik farkındalık çalışmaları yürütülmesi, riskli grupların erken tespit edilmesine katkı sağlayabilmesi açısından önem taşımaktadır.

Özet

Çocuk edebiyatı ürünleri, çocuğun dilsel ve bilişsel gelişimine sanatsal açıdan önemli katkılar sunmaktadır. Bu eserler, çocuğun taklit yeteneğini, dinleme ve sözlü ifade becerilerini geliştirmekte; kelime dağarcığını zenginleştirmekte; temel eğitsel kavramların öğrenilmesine katkı sağlamakta ve çevresel farkındalık ile algısal becerilerin gelişimine destek olmaktadır. Bu çalışmanın amacı, çocuk kitaplarının çocuğun gelişim alanları üzerindeki etkilerini incelemek ve söz konusu kitapları sanatsal açıdan değerlendirerek yorumlamaktır. Çalışmada nitel araştırma yöntemi benimsenmiştir. Araştırma kapsamında, 0–6 yaş grubuna yönelik olarak seçilen beş çocuk kitabı incelenmiştir. Çalışma bulguları, incelenen çocuk kitaplarının genel anlamda çocukların yaş ve gelişim düzeyine uygun özellikler taşıdığını ortaya koymuştur. Bununla birlikte, kitaplarda kullanılan yazı puntosu ile görsellerin yoğunluğu arasında belirli bir uyumun bulunmadığı gözlemlenmiştir. Bazı kitaplarda görsellere ağırlık verilirken bazı kitaplarda yazı boyutları alan tasarrufu kaygısıyla işlevsellikten uzak bir biçimde kullanılmıştır. Ayrıca metinlerin sayfa yerleşiminde düzensizlikler dikkat çekmektedir. Buna karşın, kullanılan renk tonlarının hikâyenin akıcılığına olumlu katkı sağladığı ve bu durumun, çocuğun anlatılan hikâyeye yönelik merak duygusunu canlı tuttuğu belirlenmiştir. Çocuk kitaplarının hazırlanma sürecinde, çocuğun yaş ve gelişim düzeyi temel belirleyici etkenlerdir. Bu bağlamda, tasarım süreci titizlikle ele alınmalı; hikâyenin konusu ve olay örgüsü, çocuğun ilgisini çekecek biçimde yapılandırılmalıdır. Çocukların sınırsız hayal gücü, onların çevrelerine dair yüksek düzeyde merak geliştirmelerine neden olmakta ve bu da kitap içeriğinin bu yönü dikkate alınarak hazırlanmasını gerekli kılmaktadır. Sonuç olarak çocuk kitaplarının, çocuğun yaşına ve gelişimsel düzeyine uygun olması ve bu kriterlere uygun çocuk kitaplarının tasarlanması oldukça büyük önem taşımaktadır. Elde edilen bilgiler ışığında 0-6 yaş çocuk

kitaplarının taşınması gereken niteliksel, niceliksel ve yapısal özellikleri incelenerek öneriler sunulmaktadır.

Anahtar Sözcükler: Okul Öncesi, Çocuk Kitapları, Sanat

Artistic Analysis of Children's

Books

Abstract

Children's literature products make significant contributions to the child's linguistic and cognitive development from an artistic perspective. These works develop the child's imitation skills, listening and verbal expression skills; enrich the vocabulary; contribute to the learning of basic educational concepts and support the development of environmental awareness and perceptual skills. The aim of this study is to examine the effects of children's books on the child's developmental areas and to evaluate and interpret the books in question from an artistic perspective. The qualitative research method was adopted in the study. Within the scope of the study, five children's books selected for the 0-6 age group were examined. The study findings revealed that the examined children's books generally had characteristics appropriate for the age and development level of the children. However, it was observed that there was no specific harmony between the font size used in the books and the density of the visuals. While some books emphasize visuals, in some books, font sizes are used in a way that is far from functionality due to concerns about saving space. In addition, irregularities in the page layout of the texts are noticeable. In contrast, it has been determined that the color tones used contribute positively to the fluency of the story and that this situation keeps the child's sense of curiosity about the story being told alive. In the preparation process of children's books, the child's age and developmental level are the main determining factors. In this context, the design process should be handled meticulously; the subject and plot of the story should be structured in a way that will attract the child's attention. Children's limitless imagination causes them to develop a high level of curiosity about their environment, which necessitates that the content of the book be prepared by taking this aspect into consideration. As a result, it is very important that children's books are appropriate for the child's age and developmental level, and that children's books are designed in accordance with these criteria. In the light of the information obtained, the qualitative, quantitative and structural features that children's books for 0-6 years old should have are examined and suggestions are presented.

Keywords: Preschool, Children's Books, Art.

Giriş

Çocuk edebiyatı alanında yapılan çalışmalarda, çocuk kitaplarının çocukların bilişsel, duygusal ve sosyal gelişimindeki rolü vurgulanmaktadır. Çocuk kitapları yalnızca bilgi aktaran materyaller olmayıp, aynı zamanda çocukların hayal gücünü geliştiren, duyarlık becerilerini güçlendiren ve sosyal normları öğrenmelerine yardımcı olan önemli araçlardır. Çocukların kendi dünyalarını keşfetmelerinde ve çevreyle sağlıklı ilişkiler kurmalarında çocuk kitaplarının yeri büyüktür (Sever, 2013). Çocuk kitaplarının dil gelişimindeki önemi büyüktür; kullanılan dilin yaş ve gelişim düzeyine uygun, sade ve anlaşılır olması gerekir. Ayrıca, çocukların okuma alışkanlığı kazanmalarında nitelikli kitapların hazırlanması eğitimciler için bir gerekliliktir (Dilidüzgün, 2018). Çocuk kitaplarının estetik ve eğitsel yönlerinin bir arada bulunması gereklidir. İçerik ve tasarımın çocukların gelişim özelliklerine uygun olması, çocukların kitaba karşı ilgisini artırmada önemli bir faktördür. Böylece, çocuk ve gençlik kitapları, eleştirel düşünme becerilerinin geliştirilmesine katkı sağlayarak çocukların duygusal dünyasını zenginleştirir ve yaratıcılığını destekler (Kanmaz ve Aslan, 2022).

Çocuklara yönelik hazırlanan kitapların genel durumu değerlendirildiğinde, son yıllarda çocuk kitabı sayısında artış gözlemlense de, içerik açısından birçok alana kıyasla yetersiz kaldığı dikkati çekmektedir. Mevcut yayınların önemli bir kısmının ise yerli yazarlar yerine yabancı yazarlar tarafından kaleme alındığı görülmektedir. Alanyazında yapılan incelemeler, çocuk kitaplarının çoğu zaman görmezden gelinen veya ikinci planda kalan bir tür olarak ele alındığını ortaya koymaktadır. Bu durum, çocuk edebiyatına yeterli önemin verilmediğini ve gerekli niteliksel standartların sağlanmadığını göstermektedir. Bu çalışmada, çocuk kitaplarının taşınması gereken temel özellikler ortaya konulmakta ve seçilen örnek kitaplar içerik açısından analiz edilerek değerlendirilmektedir. Araştırma, hem çocuk kitaplarının mevcut durumuna eleştirel bir bakış sunmakta hem de nitelikli çocuk edebiyatı ürünlerinin oluşturulması için öneriler geliştirmeyi amaçlamaktadır. Yayınlanan çocuk kitapları yüz yüze eğitim kurumlarını kapsamakta ve aynı zamanda değerlendirilebilir bir araç olmasından da kaynaklanan eğitsel araç niteliği taşımaktadır denilebilir (Çatalcılı Soyer, 2009). Çocuklar için hazırlanan kitaplarda dil açık ve anlaşılır olmalı, konu seçimi ve uyumu, toplumsal veya kültürel değerlerin aktarılabilmesi konusunda önem taşımaktadır. Aynı zamanda kitapta anlatılan konunun içerikle uyumlu olması ve çocuğun ruhuna hitap edecek görsellerin de kitapta yer alması gerekmektedir (Bulut ve Kuşdemir, 2013).

Çocukların kitap okuma alışkanlığı kazanması, onların ileriki yaşamlarında eleştirel düşünen,

sorgulayan, merak eden, yaratıcı, hayal gücünü kullanabilen ve özgüven sahibi bireyler olarak gelişmelerine önemli katkılar sağlamaktadır (Bilgin, 2011). Bu nedenle, kurgusu iyi planlanmış ve görsellerle desteklenmiş çocuk kitaplarının hazırlanması titizlikle ele alınmalıdır. Alan uzmanları ile sanatçıların iş birliği ve dayanışma içinde olması, çocuk kitaplarının niteliğini artırmada kritik bir rol oynamaktadır. Çocuk kitapları, gelişim ve eğitim açısından büyük önem taşımakta olup, çocuğun bilişsel, duygusal ve sosyal gelişim alanlarına katkı sağlayan temel eğitim araçları olarak kabul edilmektedir (Gönen vd., 2013; Bulut ve Kuşdemir, 2013).

Sanat ve edebiyatla erken yaşta tanışan çocukların okuma alışkanlığı edinmesi ve sosyal ilişkilerde daha başarılı olmaları kolaylaşmaktadır; bu noktada eğitimciler ve öğretmen adaylarının sorumluluğu büyüktür (Ergün ve Gündüz, 2011). Ayrıca, çocukların kitaplarda yer alan karakterlerde kendilerini bulmaları, olumlu davranışları benimseyip yaşamlarına aktarmaları açısından önem taşımaktadır (Mardi, 2006). Çocuklar, akranlarının yaşadığı olayları dinlemekten çok izlemekten keyif alırlar; bu nedenle çocuk kahramanların sevimli ve sempatik olması gerekmektedir. Kitaplardaki görseller ise çocukların dünyayı anlama düzeylerine uygun olarak tasarlanmalıdır (Mardi, 2006).

Kitaplardaki karakterler, çocuğun kendi iç dünyasında anlam kazanmaya başlar ve kahramanlar çocuğun kendisiyle bağdaştırdığı bir “arkadaş” haline gelir, bu durum sonucunda da çocuğun güven duygusu gelişmektedir. Küçük yaştaki çocuklar, çevresinde gördükleri çoğu şeyi kitaplarda da görmekten hoşlanırlar (Zivtçi, 2005).

Çocuk kitaplarında verilmek istenen ileti açık ve gerçekçi, kullanılan dil ise çocuğun anlayabileceği düzeyde sade ve gereksiz sözcüklerden arındırılmış bir şekilde planlanmalı; çocuğun merak duygusunu harekete geçiren ve çocuğun kelime hazinesini geliştirici içerikte sözcükler içermelidir (Demircan, 2006). Çocukların karşılaştıkları ilk kitaplar, resimli çocuk kitaplarıdır. Bu kitaplar, 0-6 yaş çocuklarının eğitimsel gelişimine katkı sağlamak ve kitap okuma alışkanlığı kazandırmak amacıyla hazırlanan kitaplardır (Uzuner ve Yurt, 2011). Kaliteli ve yetkin çocuk kitapları çocuğa kitabı sevdirmekle birlikte, çocuğun gelişim alanlarını olumlu anlamda etkiler ve çocuğa yeni kavramlar kazandırmaktadır (Gönen 1989, Gülpınar 2010). Anlatılan öykü veya hikâye çocuğun yaşına göre değişkenlik göstermektedir ve buna bağlı olarak sayfa sayılarının miktarı da değişebilmektedir. Örneğin 2,5- 3 yaş çocuk kitapları en fazla 16 sayfa iken; çocuğun yaşı arttıkça bu sayı, 5 yaş ve üstü çocuklar için 32 sayfaya çıkabilmektedir (Ural, 2019). Kitapların kolaylıkla taşınabilir ve kullanılabilir özellikte olması önem taşıyan bir diğer husustur (İnce Samur, 2016).

Kitabın kağıt özellikleri değerlendirildiğinde, tercih edilen kağıdın çocuğun yırtamayacağı

kalınlıkta olması, göz yorucu parlaklıkta kağıt kullanılmaması gerekmektedir (Ural, 2019). Kitabın kapak kısmında kitabın adı, yazar adı veya hangi yayına ait olduğu belirtilmelidir. Kitabın sağlamlılığı açısından ciltleme aşamasında yapıştırıcı ve iplik dikiş kullanılması gerekmektedir (Aytekin, 2016). Kitaptaki görseller canlı, eğlenceli, komik ve çocuğun ilgisini çekebilecek tatlılıkta olmalı; sayfanın büyük çoğunluğu görsellere ayrılmalıdır (Oğuzkan, 2013).

Bu nedenlere bağlı olarak çocuk kitapları hazırlık sürecinde çocuk merkezli yaklaşım dikkate alınmalı, kitabın niceliksel ve niteliksel yönleri çocuğun gelişim alanlarına uygun olarak planlanmalıdır (Arıcı, 2016). Araştırılan konu kapsamında pek çok çalışma yapılması araştırmayı yapan kişilerin kendi alanlarındaki gelişimleri değerlendirmelerini ve güncel gelişmeler hakkındaki bilişsel bilgilerini korumalarını zorlaştırmaktadır; bu bağlamda literatür taramalarında alanla ilgili gelişmeleri ortaya koyma noktasında detaylı incelemelerin yapılması yaygın bir yöntem olmaktadır (Erdem, 2011).

Hayatın içerisinde gelen bir insan ürünü olan sanatın, insanlığın var olduğundan beri ortaya çıktığı söylenebilir. Genel anlamda yapılan bir iş veya etkinlikte kullanılan teknik, bilgi ve kuralların bütününe sanat denir. Sanat etkinliği; insanın birtakım düşünce, hedef, duygu, durum veya olayların, tecrübeler aracılığıyla, yetenek ve hayal gücünü kullanarak ifade etmesi olarak tanımlanabilir. Herkesin yapabileceği işler sanat olamayacağı gibi, bunları icra edenlerin de sanatçı olarak kabul görmesi söz konusu değildir. Bu açıdan bakıldığında sanat: “ Zorluk yaşadıkça anlam kazanan, bakış açısıyla derinleşen, emeğe dayanarak ortaya çıkarılan ve olabileceğinin en iyisi olmayı hedefleyen etkinliktir.” şeklinde yorumlanabilir. Bu çalışmada 0-6 yaş çocuk kitaplarının niteliksel, niceliksel ve yapısal özelliklerinin incelenmesi, kitapta hangi özelliklerin üzerinde durulduğu ve çocuk kitaplarının iç/dış yapı özelliklerinin analiz edilmesi ve sonuçların araştırma sonunda ortaya çıkarılması, önerilerle birlikte ele alınarak bu çalışmanın problemi oluşturmaktadır.

Yöntem

“Çocuk Kitaplarının Sanatsal Açıdan İncelenmesi ” başlıklı çalışmada nitel araştırma yöntemi kullanılmıştır. Nitel araştırma, gözlem ve doküman analizi gibi veri toplama yöntemleri ile oluşturulan bir araştırma türüdür. Olayların ve olguların gerçekçi bir ortamda bütüncül bir şekilde incelenmesine yönelik süreci temsil eder, insan ve toplum davranışlarını inceler (Yıldırım ve Şimşek, 2018). Araştırmada 0-6 yaş çocuklarına yönelik 5 adet çocuk kitabı farklı yayınevlerinden rastgele olarak belirlenmiştir. Yapılan bu çalışmada 0-6 yaş çocuk

kitaplarının çocuğun gelişim alanlarına etkileri, sanatsal bakış açısıyla değerlendirilip yorumlanmıştır.

Çalışmada belirlenen 5 adet çocuk kitabının taşınması gereken niteliksel ve niceliksel özellikler, doküman analizi yapılarak ve çocuğun yaşını göz önünde bulundurarak değerlendirmiştir (Yıldırım ve Şimşek, 2018). Doküman analizi, belli bir amaca dönük olarak kaynakları bulma, okuma, not alma ve değerlendirme işlemleri olarak tanımlanabilmektedir (Karasar, 2005). Bu süreç ayrıca, araştırılması hedeflenen olgu ya da olgular hakkında birtakım bilgiler içeren yazılı materyallerin incelenmesi olarak da tanımlanmaktadır (Yıldırım ve Şimşek, 2015). Belirlenen araştırma konusu hakkında bilgi sağlayan her türlü yazılı metine doküman (belge) denilmektedir (Balcı, 2016). Doküman, alan yazında fiziksel veri olarak da adlandırılmakla birlikte kişilere, topluluklara veya kültürlerle ilişkin önemli bilgiler sunmaktadır (Baş ve Akturan, 2017). Doküman analizi çalışmalarında iki tür belge/doküman kullanılmaktadır: Bunlardan birincisi, incelenmesi istenen belirli bir olayı veya davranışı deneyimleyen kişiler tarafından ortaya konulan ve görgü tanıklarına atıfta bulunan belgelerdir. Diğer belgeler ise, olay yerinde bulunmayan fakat belgeleri düzenlemek için görgü tanıklarının ifadelerini almış veya bu ifadeleri okumuş kişiler aracılığıyla ortaya konulan belgelerdir (Bailey, 1994). Araştırma kapsamında incelenen kitapların okul öncesi çağındaki çocuklara uygunluğu, kitapların biçimsel ve içeriksel özellikleri, araştırmacı tarafından incelenmiştir.

Bulgular

Bu başlık altında incelenecek kitaplar; *Yemek Seçen Kirpi*, *Mutlu Suaygırı*, *Ay'ı kim çaldı*, *Çağlar Odasını Topluyor*, *Cebimdeki Mandalina Ağaçları* olarak belirlenmiştir.

Yemek Seçen Kirpi

Yazar : Andrea Reitmeyer, İş Bankası Kültür Yayınları (2022), sayfa sayısı 32, boyut 24,5x

24,5 cm

Küçük kirpi çilek yemeyi çok seviyor ve her gün çilek yemek istiyordu. Mantardan sebze meyvelere kadar çeşit çeşit yiyeceğe dönüp bakmıyordu bile. Anne babası farklı lezzetler denemesi için yavru kirpiyi bir türlü ikna edemiyordu. Acaba kirpiyi kim ikna edecek?

Bu kitabın ana dili Almancadır ve sonradan Türkçeye çevrilmiştir. 32 sayfadan oluşmaktadır. Kitabın kapak kısmında kullanılan açık tondaki renkler ve görsel canlılık, çocuğun dikkatini çekebilecek özellikte tasarlanmıştır. Görsellerin boyutu ve kitabın kapağındaki kirpinin duruşu, çocukta merak duygusunu harekete geçirebilir ve kitapta neler anlatıldığını sorgulamasını sağlayabilir. Bir kitabın kapağı çocuğu etkileyen ve dikkatini çeken en önemli noktalardan biridir.

Kitapta anlatılan olayların zaman akışı çocuğun zihnini karıştıracak veya olaylar arasında bağlantı kurmasını zorlaştıracak nitelik taşımamaktadır. Tırmığın (kirpi) sincapla olan diyalogu, çocuğun kahramanlara yönelik sempati duymasını sağlayabilir. Sincap ve kirpi arasındaki fiziksel farklılıklar çocuğun dikkatini çekebilir ve sorgulamasını sağlayan bilişsel beceri kazanmasına olanak tanıyabilir. Meyveler arasındaki renk, boyut, orantı gibi kavramları hikâyedeki görseller aracılığıyla anlamlandırabilir ve öğrendiği kavramları günlük yaşantısında da kullanabilir.

Yazıların puntosu, görsellerin yoğunluğuna kıyasla yeterli değildir ve bu durum çocuğun gözünü yormakla beraber, hikâyedeki olay geçişleri arasındaki bağlantıyı kurmasında zorluk yaratabilir.

Görsellerin ağırlıklı olarak kullanılması, renklerin ton farklılıkları ve çeşitliliği çocukta heyecan duygusunu harekete geçirebilir ve bu durum hikâyenin sonunda ne olabileceği noktasında tahminde bulunmasına olanak sağlayabilir. Sayfalar arasındaki renk geçişleri zaman zaman çocuğun hikâyeye odaklanmasına engel olabilir ve dikkatini dağıtabilir.

Mutlu Suaygırı

Yazar: Richard Edwards, İş Bankası Kültür Yayınları - Çocuk - Resimli Kitaplar, Baskı 2010, Dil:Türkçe, Sayfa sayısı 32.

Bir zamanlar, suaygırı olduğu için hiç mutlu olmayan küçük bir suaygırı varmış.

“Su aygırı olmak istemiyorum. Yo! Yo! Yo!

Zebra ya da bufalo lo lo lo,

Ağaçta şarkı söyleyen maymuuun

Su aygırı yerine maymuuun olsaaam...” Küçük Suaygırıyla birlikte şarkı söyleyip, tropik ormanlardaki macerasına katılmaya ne dersin?

Eğlenceli kurgusuyla dikkat çeken bu kitap kendini tanıma, öz güven ve öz şefkat hakkında hayat dersleri veriyor.

Kitapta ele alınan temalar; birey ve toplum, doğa ve evren, duygular, kişisel gelişim, zaman ve mekan olarak ele alınmaktadır. Bu kitap 4-8 yaş aralığındaki çocuklar için uygundur. İşlenen alt temalara bakıldığında ise; bireysel farklılıklar, çevremiz, evimiz , farklılıklara saygı, hayvanlar, kendini tanıma, mutluluk, özsaygı, üzüntü, yetenek, yeterlilik gibi konular işlenmektedir. Kitabın kapak tasarımı çocuğa eğlenceli gelebilecek, merak uyandırabilecek çekicilikte planlanmış olup, çeşitli görsellerle ve renk seçimleriyle göz alıcı görünmektedir. Suaygırının fiziksel görüntüsü çocuğun dikkatini çekebilir ve bilişsel sorular sormasına neden olabilir.

Bu durum çocuğun farkındalık kazanması ve hayvanlar arasındaki farklılıkları ayırt edebilme becerisi kazanması açısından bilişsel gelişimine olumlu anlamda katkı sağlamaktadır. Kullanılan yeşil-sarı renkler, doğa kavramının bir yansıması olmakla beraber birbiriyle uyumludur. Hayvanlar arasında geçen diyaloglar çocuğun hayal gücünü, yaratıcı düşünme becerisini, yaşam alanı farklılıklarını ayırt edebilme becerisini kazanma gibi konularda çocuğa olumlu anlamda katkı sağlamaktadır.

Suaygırının yaşadıkları çocuğun “ kendini olduğu gibi sevmeye ve kabul etmeye” yaklaşımının, ne kadar önemli bir nokta olduğunu anlamasına olanak sağlamaktadır. Suaygırının geyiğin hayatını kurtarması; yardımlaşma, dayanışma, teşekkür etme gibi değerleri çocuğa kazandırma açısından oldukça önemli bir alan açmaktadır. Ormandaki diğer hayvanların suaygırıyla yaptıkları fiziksel farklılıklara dikkat çeken diyaloglar, çocuğun ayırt etme, bilişsel düzey ve gözlem yapma becerileri açısından başarılı bir şekilde kurgulanmıştır çünkü hikâyenin sonunda suaygırı, kendisini olduğu gibi kabul etmiş ve suaygırı olmanın mutluluğunu yaşamıştır.

Ay'ı Kim Çaldı?

Yazar: [Helen Stratton Would](#), 38. baskı / 2025, sayfa sayısı 40, 22 x 20.5 cm, Yapı Kredi Yayınları

“Ay'ı Kim Çaldı?”

Berk, geceleri gökyüzünü pırıl pırıl aydınlatan Ay'a hayrandır. Ay'a bakarak uykuya dalarken güzel hayaller kurar. En büyük hayali de astronot olmaktır. Ama bir gece, bir de bakar ki, gökyüzü bomboş, Ay'ın yerinde yeller esiyor. Büyük bir üzüntüye kapılan Berk, Ay'ı birilerinin çaldığını düşünüp aramaya koyulur. Berk gökyüzünü izlemeyi çok seven bir çocuktur; her gece çatı katındaki odasının çatı penceresinden gökyüzünü, özellikle de Ay'ı seyreder, astronot olma hayali kurarak uykuya dalar. Lakin “o” gece Ay gökyüzünde değildir. Şaşırır, merak eder ve araştırmaya karar verir; Ay ile birlikte yer yüzüne çıkan gececi hayvanlara soracaktır... Bahçeye çıkıp gececi hayvanlara “kibarca” Ay'ı görüp görmediklerini sorar. Kibarca sorar çünkü kimseyi kırmak istememektedir. Kitabın adındaki “çalmak” eylemini ve kahramanın bu eylemi düşünerek hayvanların yanına gitmesini bu vurgu yumuşatmaktadır. Yumuşatmaktan da ziyade değiştiriyor aslında. İfadeyi “Yok etmek, ortadan kaldırmak, kaybetmek” gibi anlamlara dönüştürüyor. Berk bahçedeki tüm gececi hayvanlara Ay'ı görüp görmediklerini sorar ama hiçbiri Ay'ın yerini bilmemektedir. Berk tam Ay'ı bulma umudunu kaybedecekken hayvanlardan biri Ay'ın nerede olduğunu bilebilecek başka bir hayvana yönelendir Berk'i. Kararlı bir çocuk olan Berk tabii ki de bu hayvanın yanına gider ve hem Ay'ın yerini, hem de çok önemli bir doğa durumunu öğrenir.

Kitabın kapak tasarımı incelendiğinde; ağırlıklı olarak kullanılan koyu tonlar ve kitabın kapağındaki mavi koyu mavi renk çocuğun gözünü yorabilir veya kitaba karşı ilgisiz kalmasına neden olabilir. Yazıların puntosu çocuğun görebileceği yeterliliktedir. Berk'in hayvanlarla olan diyalogları kurgusallık açısından, tek düzelik yaratmıştır ve bu durum çocuğun hayal gücünü sınırlamaktadır. Baykuş'un Berk' e verdiği bilgi, çocuğun bilişsel farkındalık kazanması ve

mevsim-zaman arasındaki bağlantıyı kurabilmesi açısından önem taşımaktadır. Çocuk bu gibi başka bir mantığa dayalı durumla karşılaştığında, bağlantı kurma ve açıklanan nedenleri sorgulama becerisi kazanmış olur.

Çağlar Odasını Topluyor

Yazar: Christian Tielmann, İş Bankası Yayınları, boyut 22 x 22 cm, 2020, sayfa sayısı 24)

Çağlar, resim yapmak istediğinde sulu boya takımını aradı, ama hiçbir yerde bulamadı. Üstelik odasını da dağıttı. O sırada en yakın arkadaşı Pelin ziyaretine geldi ve ona odasını toplarken yardım etmeye başladı.

Odadaki tüm eşyalar ve oyuncaklar bir dolaba sığacak mıydı acaba?

Oda toplamak konusunda faydası olacak öneriler bulabileceğiniz eğlenceli bir öykü... Kitapta ele alınan temalar: çocuk dünyası, kişisel gelişim, zaman ve mekan olarak işlenmektedir.

Alt temalar ise aile, dostluk, evimiz, odamız, oyun, oyuncak, öz denetim, sorumluluktur. Kitap 4-8 yaş grubu çocukları için hazırlanmıştır. Kitabın kapağı canlı, sevimli ve çocukta merak uyandırabilecek şekilde tasarlanmıştır. Anlatılan hikâyeye ev ortamında geçtiği için kitapta yer alan oyuncakların dağınıklığı, Çağlar'ın sulu boyaların nerede olabileceğine dair tahminde bulumasına yol açabilir ve bu durum sorgulayıcı bakış açısına olumlu anlamda katkı sağlar. Yazıların yoğunluğu ve diyalogların uzunluğu, çocuğu yorabilir ve kitaptan sıkılmasına neden olabilir. Sayfalardaki renk geçişlerinin çeşitliliği kitaba canlılık kazandırsa da, estetik anlamda kargaşa yaratmaktadır. Pelin'in çağlar'a odasını toplaması için yardım etmesi; yardımlaşma, işbirliği, sabırlı olma, çözüm arama, pratik olma, yaratıcı düşünme gibi becerilerin kazandırılması açısından önem taşımaktadır. Eşyaları tür veya renklerine göre sınıflandırma, ayırt etme becerisi gibi birtakım günlük hayat deneyimlere değinilmesi, kitaba anlam kazandıran bir yapı oluşturmaktadır.

Cebimdeki Mandalina Ağaçları

Yazar: Şermin Yaşar, Doğan Çocuk Yayınevi , **sayfa sayısı** 36, **ebat** 22,5 x 22,5, cm, 2022, Türkçe.

Ada'nın canı sıkılıyordu. Hem de çok! Oysa evdekilerin ne çok işi vardı. Oraya buraya koşturup duruyorlardı. Ada onlara yardım etmeyi çok istedi ama kimse onu dinlemedi. Bir gün yediği mandalinaların çekirdeklerini unutunca cebinde Ada hayallerini ekti bahçeye... Çocuk edebiyatının gülümseten kalem Şermin Yaşar doğanın cömertliğini bir çocuğun hayalleriyle harmanlıyor.

Kitabın içeriğinde, küçük olduğu gerekçesiyle hiçbir sorumluluk verilmeyen küçük bir kızın duyguları anlatılıyor. Ada sorumluluk alabileceğini düşünürken ailesinin onu sadece oyun oynarken düşünmesi Ada'yı yaralıyor. Ancak Ada, ailesinin düşüncesini değiştirmek için bahçıvanlık yapmaya başlıyor ve kendi meyvesini yetiştiriyor.

Kitabın içeriğinde hem sorumluluk duygusu hem de bir meyvenin nasıl yettiğini anlatıyor. Kitabın sonunda bir meyve ağacının nasıl yetiştirileceği güzel ve sade bir dille anlatılıyor. Okul öncesi çağı çocuklarının hem Türkçe hem de Fen alanında ilgi çekebilecek kadar güzel bir içerik mevcut bulunmaktadır. Ancak çocuk kitaplarında değerlendirmenin tek koşulu içerik değildir. Ön kapağın içerikle bağlantılı olması, kitabın içindeki resimlerin, içerikle bağlantılı ve büyük olması, yazıların az olması, öğretmenin ya da ebeveynin çocuğa resimleri gösterirken aynı zamanda kitabı okuması açısından yazıların boyutunun ideal olması, yazı çeşidi, gibi birçok bakımdan değerlendiriliyor. Kapaktaki resimde Ada'yı ve Ada'nın dışarıdaki fidanı izlediğini görüyoruz, bu duruma bağlı olarak hikâyenin içerikle bağlantılı olduğu söylenebilir. İçinde bulunan resimler yeterince büyük, renkli ve ilgi çekici olmaktadır. Yazıların boyutu ideal ve çok fazla yazı yoktur. Kitabın dili oldukça sadedir. Resimler de büyük olduğu için sınıf ortamında okunduğunda, topluca yapılacak bir etkinlik kitabı olabilecek özellik taşıyor. Arka kapağa geçildiğinde ise kitapla ilgili birkaç görsel bulunuyor. Ve basit bir tekerleme ile kitap özetleniyor. Sonuç olarak bu kitapta çocuklara uygun olmayacak herhangi bir şey bulunmamaktadır. Gerek sınıf ortamında öğretmenler tarafından, gerekse ebeveynler tarafından

veya çocukların kendi başlarına okuyabileceği türden resimleri ve yazıları ile uygun bir kitaptır. Aynı zamanda çocuklara sorumluluk verilmesi gerektiğini de anlatan kitap, doğru bir yere parmak basıyor. Eğer çocuklara küçük yaştan itibaren ev işlerini öğretirsek; çocuklar gelecekte kendi işlerini kendileri yapabilen, gerek el becerisi gerek ise zihinsel hareket becerileri gibi birçok yönden kendilerini geliştirmeleri için onlara daha çok alan tanımış oluruz.

Sonuç ve Tartışma

Bu çalışma, çocuk kitaplarının çocuk gelişimindeki çok boyutlu etkilerini incelemiş ve çocuk edebiyatının yalnızca dil gelişimiyle sınırlı olmadığı, bilişsel, duygusal, sosyal ve değerler eğitimi açısından da güçlü bir araç olduğu sonucuna ulaşmıştır. Özellikle erken çocukluk döneminde çocukların sanatla, hikâyeye ve görsel öğelerle etkileşim kurması, onların dünyayı anlama ve anlamlandırma biçimlerini şekillendirmektedir. Bu bağlamda çocuk kitapları, sadece bilgi aktaran değil, aynı zamanda çocuğun hayal gücünü, empati becerisini ve sosyal farkındalığını destekleyen çok yönlü materyaller olarak değerlendirilmelidir (Öztürk, 1993; Baynes, 1981). Okul öncesi dönem, bireyin yaşam becerilerini temel düzeyde kazandığı ve bu becerilerin yaşam boyu sürecek öğrenmelerin yapı taşlarını oluşturduğu kritik bir dönemdir. Bu dönemde çocuklar henüz soyut düşünme becerilerini tam olarak geliştiremedikleri, benmerkezci bir düşünce yapısına sahip oldukları ve neden-sonuç ilişkilerini kurmakta zorlandıkları için öğrenme süreçlerinde somut yaşantılara, görsel desteklere ve modellemeye ihtiyaç duymaktadırlar (Piaget, 1952; Arıcı, 2016). Bu nedenle çocuk kitapları; bilişsel, sosyal ve duygusal gelişimi destekleyici önemli araçlar arasında yer almakta; çocukların taklit etme, dinleme, kavrama ve ilişkilendirme gibi temel öğrenme becerilerini güçlendirmektedir (Oğuzkan, 2013). Sosyal gelişim açısından çocuk kitaplarında yer alan karakterler ve olay örgüleri, çocukların içinde yaşadıkları toplumun değerlerini, normlarını ve kültürel öğelerini yansıtarak onların sosyal farkındalık geliştirmelerine katkı sağlar. Kitaplardaki karakterlerin sergilediği olumlu ve olumsuz tutumlar aracılığıyla çocuklara değer aktarımı yapılabilir, kişiler arası ilişkiler konusunda farkındalık kazandırılabilir (Erdem, 2011). Aynı zamanda duygusal gelişim açısından da çocuklar, hikâyelerdeki karakterlerle duygusal bağ kurmakta ve bu sayede empati becerileri gelişmektedir. Bu durum, çocuğun yalnızca kendi duygularını tanımasını değil, başkalarının duygularını anlamasını ve duygusal regülasyon becerilerini artırmasını da sağlar (Aytekin, 2016). Çocuk kitapları, dil gelişimi açısından da büyük önem taşımaktadır. Özellikle hikâye kitapları çocukların kelime dağarcığını genişletmekte, yeni kavramları öğrenmelerini sağlamakta ve dil yapılarını daha doğru biçimde kullanmalarına yardımcı olmaktadır (Arıcı, 2016; Oğuzkan, 2013). Erken çocukluk döneminde dil becerilerinin gelişmesi, çocuğun hem iletişim becerilerini güçlendirmekte hem de özgüven gelişimini

desteklemektedir. Kitapları anlamaya başlayan çocuklar, kendi başlarına okuyabildikçe bağımsızlık duygusu geliştirmekte ve problem çözme becerilerinde ilerleme kaydetmektedirler (Aytekin, 2016).

Sonuç olarak, çocuk kitapları yalnızca bilgi aktaran materyaller değil; çocukların kişilik gelişimini, değer yargılarını, sosyal ilişkilerini ve duygusal farkındalıklarını etkileyen çok yönlü öğrenme araçlarıdır. Bu bağlamda, çocuk kitaplarının içerik, görsel düzenleme, dil yapısı ve pedagojik uygunluk açısından çocuğun gelişim düzeyine göre tasarlanması büyük önem taşımaktadır. Gelecekteki araştırmalarda, çocuk kitaplarının bilişsel ve duyuşsal alanlardaki uzun vadeli etkilerinin nicel ve nitel yöntemlerle değerlendirilmesi; disiplinlerarası yaklaşımlarla kitapların eğitimdeki rolünün daha derinlemesine incelenmesi önerilmektedir.

Öneriler

Çocuk kitaplarının seçimi ve hazırlanmasında, kitabın çocuğun yaşına ve gelişim düzeyine uygunluğunun temel kriter olarak ele alınması önem arz etmektedir. Küçük yaş grubu çocuklar için geliştirilecek kitapların sade bir dil kullanması ve büyük, dikkat çekici görsellerle desteklenmesi, hem çocuğun dikkatini çekmek hem de hikâyenin anlaşılabilirliğini artırmak açısından gereklidir. Bu doğrultuda, okuma becerisini yeni kazanan çocuklar için renkli ve büyük puntoyla yazılmış materyaller tercih edilmelidir. Daha ileri düzey okuma becerisine sahip çocuklar için ise, karmaşık olay örgüleri ve zengin kelime dağarcığı içeren kitapların hazırlanması önerilmektedir. Böylece, çocukların bilişsel ve sözel becerilerinin desteklenmesi sağlanabilir.

Araştırmacıların, çocukların ilgi alanlarına uygun temalar seçmelerinin okuma motivasyonunu artırdığına dikkat etmeleri gerekmektedir. Örneğin, hayvanlara ilgi duyan çocuklar için hayvan temalı kitapların hazırlanması, okuma alışkanlığı kazanmalarında etkili olabilir. Ayrıca, eğitsel içerikli kitapların çocuğun bilgi birikimini artırmasının yanı sıra merak duygusunu da teşvik ettiği göz önünde bulundurulmalıdır. Matematik veya fen gibi belirli alanlara ilgi duyan çocuklara yönelik bilimsel temalı hikâyeler geliştirilmesi, hem öğrenme hem de merakın desteklenmesi açısından faydalı olacaktır. Görsellerin çocuk kitaplarındaki rolü göz ardı edilmemelidir. Renkli ve canlı görseller, özellikle küçük yaş gruplarında kitabın çekiciliğini artırmakta ve hikâye kahramanlarının zihinde canlandırılmasını kolaylaştırmaktadır. Bu bağlamda, oyun temalı ve yönlendirici kitapların, çocukların yaratıcı düşünme becerilerinin gelişimine katkı sağladığı da dikkate alınmalıdır. Dil kullanımında ise, çocuğun gelişim düzeyine uygun, sade ve anlaşılır bir dil yapısının tercih edilmesi önerilmektedir. Karmaşık ve ağır dil kullanımının, çocukların kitaba olan ilgisini azaltabileceği göz önünde bulundurularak, kısa ve basit cümlelerle anlatımın desteklenmesi gerekmektedir. Son olarak, kitaplarda yer alan

mesajların olumlu içerikte olması; çocuğun duygusal, sosyal ve psikolojik gelişimine katkı sağlayarak olumlu davranışların kazandırılmasına yardımcı olmaktadır. Bu öneriler, çocuk kitapları üzerine yapılacak gelecekteki araştırmalarda rehberlik edebilir ve hazırlanan materyallerin çocukların gelişimsel ihtiyaçlarına daha iyi cevap vermesine katkı sağlayabilir.

Özet

Orman okulları yaklaşımı, açık hava alanlarında ya da orman alanlarında gerçekleştirilen etkinlikler yoluyla çocukların bütüncül gelişim alanlarındaki (fiziksel, bilişsel, motor, sosyal ve duygusal gelişim) gelişimlerini ve becerilerini desteklemeyi hedefleyen oyun temelli ve çocuk merkezli okullar olarak tanımlanmaktadır. Orman okulları, çocuklara doğada bulunan gerçek materyallerle oyun oynamasını sağlamak ve deneyim yoluyla çevresini keşfetmesini ve esnek bir şekilde öğrenmesine olanak tanımaktadır. Orman okulu eğitiminde çocuklara uygulamalı deneyimler yoluyla ilgi alanlarını, becerilerini ve anlayışlarını geliştirmeleri için zaman ve doğal ortam sağlanmaktadır. Orman okulları okul öncesi dönemdeki çocukların doğayı öğrenme deneyimlerini, sürdürülebilir yaşam felsefesi kazanmalarını ve çevre sorunlarına duyarlı bireyler olarak yetişmelerini destekleyebilmektedir. Orman okulu, 0-6 yaş grubu çocuklar için orman ortamında el becerileri ve özgüven kazanmaları ve çeşitli becerilerini geliştirmeleri için süreçtir. Orman okulu eğitimi zorunlu olmamakla birlikte genellikle tam zamanlı gerçekleştirilmektedir. Bu çalışmanın amacı orman okullarının çocukların bütüncül gelişim üzerindeki etkilerini belirlemek, Türkiye’de ve dünyada uygulanan orman okulu yaklaşımının uygulanış şeklini karşılaştırma ve değerlendirme yapmaktır. Çalışmada nitel araştırma yöntemlerinden doküman analizi kullanılmıştır. Öncelikle alan yazın araştırmasında orman okulları ile ilgili çeşitli tez çalışmalarını ve makaleler incelenerek farklı bakış açısı getirilmeye çalışılmıştır. Bu çalışmanın bir başka boyutu ise, Türkiye’de ve dünyada faaliyet gösterilen orman okulları ile ilgili tez çalışmalarında ve makalelerde verilen istatistiksel verileri inceleyerek konu ile ilgili verilen somut örneklerle çalışmanın iyi bir şekilde pekiştirilmesi sağlanmıştır. Araştırmalardan elde edilen veriler ışığında bu çalışmayı destekler nitelikte bir değerlendirme yapılmıştır. Türkiye’de orman okulları yaklaşımını benimseyen okulların açılma

oranının artırılması ve orman okulları yaklaşımı ile oluşturulan eğitim programlarında bütüncül gelişimi destekleyen kazanımların artırılması önerilebilir.

Anahtar Sözcükler: Orman Okulları Yaklaşımı, Bütüncül Gelişim, Türkiye’de ve Dünyada Uygulanan Orman Okulları.

An Examination of the Effects of the Forest School Approach on Children's Holistic Development and a Comparison of Forest School Practices in Turkey and Around the World

Abstract

The forest school approach is defined as play-based and child-centered schools that aim to support the development and skills of children in holistic development areas (physical, cognitive, motor, social and emotional development) through activities carried out in open air areas or forest areas. Forest schools allow children to play with real materials found in nature and allow them to discover their environment through experience and learn flexibly. In forest school education, children are provided with time and a natural environment to develop their interests, skills and understanding through practical experiences. Forest schools can support preschool children's experiences of learning about nature, gaining a sustainable life philosophy and growing up as individuals who are sensitive to environmental problems. Forest school is a process for children aged 0-6 to gain manual skills and self-confidence in a forest environment and to develop various skills. Forest school education is not compulsory but is usually carried out full-time. The aim of this study is to determine the effects of forest schools on the holistic development of children and to compare and evaluate the implementation of the forest school approach in Turkey and the world. Document analysis, one of the qualitative research methods, was used in the study. First of all, various theses and articles on forest schools were examined in the literature research and a different perspective was tried to be brought. Another dimension of this study was to examine the statistical data given in the theses and articles on forest schools operating in Turkey and the world and to reinforce the study well with concrete examples given on the subject. In light of the data obtained from the research, an evaluation supporting this study has been made. It can be suggested that the rate of opening schools adopting the forest school approach in Turkey should be increased and the gains supporting holistic development in the education programs created with the forest school approach should be increased.

Keywords: Forest Schools Approach, Holistic Development, Forest Schools Applied in Turkey and the World.

Giriş

Orman okulu Yaklaşımı 1927’de ABD-Wisconsin’de ortaya çıkmıştır. Daha sonra Wisconsin-Medison Üniversitesi’nde orman okulları felsefesi geliştirilerek ilk orman okulları Laona, Wabeno ve Crandon’da kurulmuştur (Marshall, 2013). Orman okulları yaklaşımının uygulanması ise, ilk olarak İskandinavya bölgesinde ortaya çıktığı bilinmektedir. 1950’li yıllarda İskandinav ve Avrupa ülkelerinde orman okulları kavramı Danimarka’da iş yaşamına giren kadınların sayısının artması ile Ella Flatau’nun Yürüyüş Anaokulu’ nu kurması ile tanınmaya başlamıştır (Dilek, 2019). Orman okulu kavramının 1950’ lerde İskandinavya’ da doğarak Danimarka’da küçük çocuklar ile ormanda uygulamalara başlandığı bilinmektedir (Hargrave, 2003). Aynı zamanda 2002 yılında İngiltere’de ilk kez “Ulusal Orman Okulu Konferansı” düzenlenerek; bireylerin ormanda ya da ağaçlık alanda aktif katılımının sağlandığı, kendine güven ve karar verme becerilerinin desteklendiği bir uygulama olarak tanımlanmıştır (O’Brien ve Murray, 2006). Bu nedenle orman okulu, çocukların uzun bir süre düzenli olarak ormanda doğal çevre ile tanışmaları ve farklı etkinliklerle uygulamaları içermektedir (Doydu, 2024). Orman okullarının ortaya çıkış sebebi çocukları teknolojik ortamdan uzak tutmak ve çocukların bilgiyi doğal yollarla kendilerinin yapılandırmasını amaçlamaktadır. Orman okulları, orman alanlarda gerçekleştirilen etkinlikler yoluyla tüm gelişim alanlarında çocukların becerilerini desteklemeyi hedefleyen çocuk merkezli okullar olarak da tanımlanmaktadır (FSA, 2022). Dolayısıyla orman okulları yaklaşımı oyun merkezli ve çocuk merkezli bir yaklaşım olup çocukların fiziksel, bilişsel, ince motor, kaba motor, sosyal ve duygusal gelişim alanlarına ve becerilerine olumlu bir şekilde katkı sağlayan, çocuklara ormanlık alanlarda gerçek yaşamlarında karşılaşılabilecekleri durumlar karşısında problem çözme, analitik (çoklu) düşünme, işbirliği içerisinde çalışma gibi pek çok yaşam becerileri kazandırmayı amaç edinen okullardır. Orman okullarının dayandığı felsefe ise, çocukların öğrenmeyi kapalı ortamlardan çok dışarda gerçekleştirmeleridir. Başka bir ifade ile, sadece orman olmayıp çocukların açık bir ortamda doğayı kullanarak öğrenebilecekleri her ortam orman okulları olarak isimlendirilebilir (Nixon, 2015). Bir orman okulunda, keşfetme, oynama, inşa etme, yaratma, hayal kurma, dış çevreyi deneyimleme ve birbirleriyle etkileşim kurabilmek adına çocuklar duyularını kullanma özgürlüğüne sahiptir (Çetingöz, 2025). Orman okullarında gerçekleştirilen etkinlikler sayesinde çocuklar doğaya karşı farkındalık geliştirirler. Ayrıca bu etkinliklerle birlikte sosyal becerileri de olumlu yönde gelişerek, arkadaşları ile birlikte iletişim kurma

becerisini de geliştirirler. Orman okulu yaklaşımının ana teması deneyimleyerek esnek öğrenmeye olanak sağlamasıdır (Koyuncu, 2019). Yani çocuklar orman okulları sayesinde merak duygusunu ön planda tutarak, duyularını etkin bir şekilde kullanıp açık hava ortamındaki nesneleri inceleyerek öğrenme gerçekleştirirler.

2002 yılında İngiltere’de ilk Ulusal Orman Okulu Konferansı yapılmış ve orman okulu hakkında şu tanım benimsenmiştir: Orman okulu ormanda ya da ağaçlık alanda bireylerin aktif katılımının sağlandığı, kendilerine güven ve karar verme konusunda desteklendiği bir uygulama olarak tanımlanmaktadır (O'Brien ve Murray, 2006). Aynı zamanda çocukların kendi kendine sorumluluk almaları ve dayanıklılık açısından kendilerini olumlu yönde geliştirmelerine vurgu yapılmaktadır (Lindon, 1999). Orman okullarının bir başka amacı ise, ormanlık alanlarda karşılaştıkları sorunlara çözüm getirebilme yeteneğini yani problem çözme becerilerinin artmasını desteklemektir. Orman okullarında çocuklara ormanlık alanlarda ileriki yaşamlarında karşılaştıkları aktiviteleri; iple ağaçlara tırmanmak, ateş yakmak, kampta yemek pişirmek vb. uygulamaları yapabilmeleri için gerçek materyalleri kullanmaları, büyük ve küçük kas becerilerini etkin bir şekilde kullandırmayı da amaçlamaktadır. Örneğin, ateşte yemek pişirirken doğadaki canlıların yaşamına saygı duymayı, neden-sonuç ilişkisi kurmayı ve sorumluluk almayı öğrenmektedirler. Orman okullarında etkinlik programları sadece ateş yakma, barınak yapma veya ağaçlara tırmanmayı öğretmek olmayıp, uygulanan etkinliklerle yaparak-yaşayarak öğrenmeyi hedeflemektir (O'Brien, 2009). Orman okulları yaklaşımının çocuklara kazandırılması istenilen hedefler ve çocuklarda gelişen özellikler;

- Kendine ve çevresine karşı güven gelişimi,
- Sosyal ilişkilerde gelişme,
- Dil ve iletişim becerilerinin gelişimi,
- Motivasyon ve dikkat gelişimi,
- Fiziksel yeteneklerin gelişimi,
- Bilişsel ve duygusal yeteneklerin gelişimi şeklinde ifade edilmektedir (Koyuncu, 2009).

Orman okulları yaklaşımının toplam altı ilkesi bulunmaktadır. Orman Okulu’na göre bu ilkeler; etkinlikler ormanlık alanda veya doğal ortamda sık ve düzenli olarak planlanır, uygulanır ve değerlendirilir. Öğrenci ile doğal yaşam arasındaki ilişkiyi destekler. Kendine güvenen, bağımsız ve yaratıcı öğrencileri teşvik ederek onların bütünsel gelişimlerini olumlu yönde geliştirmeyi amaçlar. Öğrencilerin çevreye uygun risk alma becerileri için olanaklar sunar.

Orman okulları mesleki uygulamalarını sürekli olarak yenileyen, her konuda kendini geliştiren nitelikli öğretmenler tarafından yürütülür. Süreç odaklı öğrenci merkezli yaklaşım uygulanır.

Özetle, orman okulu ağaçlıklı doğal ortamda, orman eğitimi almış eğitimciler tarafından uygulanarak, öğrencinin merak, hayal gücü, uyum ve yaratıcı yönleri başta olmak üzere tüm gelişim alanlarını destekleyen bir süreçtir (Köseoğlu ve Barut, 2023). Orman okullarında orman eğitimi almış kişilere “Orman Lideri” denilmektedir. Orman liderlerini orman okullarında çocukların bütüncül gelişimini destekleyen ve çocuklara gerekli etkinlik uygulamalarını gerçek araç gereçler kullandırarak kazandırmayı hedefleyen öğretmen şeklinde düşünülmektedir.

Orman okullarında öğrenme yaklaşımları kapalı alandan daha çok açık hava alanlarında sürdürülmektedir. Olumsuz hava koşulları nedeni ile açık havada eğitim verilemeyeceği zamanda ise, çocuklar etkinliklerini barınaklarda yürütmektedirler (Sobel, 2015). Doğal ortamlarda ağaç dalları, yapraklar, taşlar vb. doğal materyallerle oynanan oyunlar çocuğun bulunduğu çevreyi tanımasına, benimsemesine ve doğa ile bütünleşmesini sağlamaktadır. Aynı zamanda oyunlar sayesinde çocuk hislerini ve düşüncelerini anlatıp gösterebilme fırsatı yakalamaktadır. Çocuk kendini tanıyıp, yeteneklerini ve becerilerini sergilemektedir (Atasoy, 2006). Öğrenme ortamının kaliteli olması, araştırma ve incelemeye önem verilmesi çocukların bütüncül gelişimine olumlu bir şekilde katkı sağladığı gibi onların bağışıklık sistemini güçlendirip özellikle duyuşsal becerilerini geliştirdiği belirtilmektedir. Bu uygulamaların bir diğere yönü de, çocukların dikkat sürelerini ve odaklanma yeteneklerini geliştirmelerine yardımcı olmalarıdır. Orman okullarında çocuklar kendilerini yağmurdan veya çevredeki olumsuz durumlardan korumak amacıyla doğadan ağaç dalları, yaprak, toplayarak kendilerine barınak oluşturmaktadırlar ve bu süreçte çocukların kaba motor becerilerine olumlu katkılar sağlamaktadır. Bir başka ifade ile orman okulları çocuğa bilgiyi doğrudan vermek yerine çocuğun kendisinin yapılandırmasını ister ve çocuk bu durumda birden fazla probleme çözüm bulmak zorunda kalır. Dolayısıyla orman okulları çocuklara problem çözme, eleştirel düşünme, neden-sonuç, sorgulama gibi çocuğun üst düzey yaşam becerilerini harekete geçirmektedir. Orman okullarında çocuklar farklı nesneler ve varlıklar görerek, kelime dağarcığı zenginleşir ve çocuğun zihninde yeni şemalar oluşturmaya olanak sağlamaktadır. Doğa ile vakit geçirmek, çocukların duyuşsal sağlıklarını iyileştirir ve stresle başa çıkmalarına yardımcı olur. Ayrıca, çocukların grup içinde işbirliği yapmaları, başkalarına saygı göstermeleri ve çevresel etik değerleri benimsemeleri gibi sosyal becerileri de gelişmektedir. Kazanılan bu beceriler, çocukların yaşamlarının ileriki yıllarında başarılı ve uyumlu bireyler olmalarına yardımcı olacaktır (Demirer, 2023). Orman okulları çocukların hem küçük hem de büyük gruplar olarak

işbirliği içerisinde çalışmalarına fırsat sunmaktadır böylece çocuklar arasında paylaşma, yardımlaşma, empati gibi sosyal becerilerinin de gelişiminde önemli bir yer tutmaktadır. Orman okullarında çocuklar doğada hava koşullarına bağlı olarak hangi havada ne giyeceğini hangi durumlarda kendisini koruması gerektiğini öğrettiği gibi çocukların öz bakım becerilerine de olumlu yönde katkılar sağlamaktadır.

Orman okullarında esnek bir programlama anlayışı vardır. Öğretmenler çocukların istek ve ihtiyaçları doğrultusunda eğitim programının içeriğini ortamın koşullarına göre farklı etkinlikleri düzenleyip değiştirebilirler (Ozan, 2021). Yani orman okulları yaklaşımını benimseyen okulların kullandığı program “*çerçeve program*” özelliğinde olup programa sonradan eklemeler ve düzenlemeler yapılabilir. Orman okulunda yapılandırılmış oyuncaklar yoktur; doğal ortam her türlü ihtiyacı karşılamaktadır. Bu nedenle çocuklar, çevrenin özelliklerini dönüştürmek için hayal güçlerini kullanmak zorundadırlar (Tovey, 2007). Bu noktada çocuklar kendi hayal güçlerini kullanarak oyunlar oynayıp etkinlikler yapabildikleri için bilişsel gelişimleri olumlu bir şekilde desteklenmektedir.

Orman okulları yaklaşımını benimseyip eğitim programlarını buna göre şekillendiren, açık hava alanlarında veya ormanlık alanlarda eğitim vermeye özen göstermeye çalışan ve çocuklara gerçek yaşamlarında ve ileriki süreçlerinde karşılaşacakları aktiviteleri gerçek materyaller kullanarak kazandırmaya çalışmaktadır. Bu bağlamda çalışmanın amacı, orman okulları yaklaşımının çocukların bilişsel, motor, dil, sosyal ve duygusal gelişimlerinin etkisini literatürde var olan makale ve tez çalışmalarını inceleyip detaylı bilgiye ulaşmak ve Türkiye’de ve dünyada var olan orman okullarının nasıl eğitim verdiğini açıklayan araştırma çalışmalarını incelemektir.

Yöntem

Araştırmada nitel araştırma yöntemi olan doküman analizi tekniği uygulanmıştır. Doküman analizi, belli bir amaca dönük olarak kaynakları bulma, okuma, not alma ve değerlendirme işlemlerini kapsamaktadır (Karasar, 2005). Bir başka ifade ile doküman analizi, bilgisayar tabanlı ve internet erişimli materyallerin incelenmesi ve değerlendirilmesi sürecinde gerçekleşen bir dizi işlemidir (Bowen, 2009). Bu süreç ayrıca, araştırılması hedeflenen olgu ya da olgular hakkında bilgi içeren yazılı materyallerin incelenmesi olarak da tanımlanmaktadır (Yıldırım ve Şimşek, 2013). Doküman analizi yöntemi ile birlikte orman okulları yaklaşımının bütüncül gelişime etkilerini makale ve tez çalışmalarını incelenerek derinlemesine araştırma yapıp bilgilere ulaşılmıştır. Aynı şekilde doküman analizi tekniği Türkiye’de ve dünyada var

olan orman okullarının genel özelliklerinin, benzerlik ve farklılıklarının karşılaştırılması amacı ile de kullanılmıştır.

Bulgular ve Yorumlar

Gelişim Alanlarının İncelenmesi:

Bilişsel Gelişim:

Dilek (2019) 'e göre orman okulu uygulamalarının çocukların kendine güven ve bir işi bitirme konusundaki kararlılıklarında gelişimi hızlandırdığı görülmüştür. Açık hava alanlarında veya ormanlık alanlarda yapılan etkinlikler sayesinde çocukların karar verme, özgür olarak düşünebilme, problem çözme, yaratıcı fikirler ortaya koyma, eleştirel düşünme gibi bilişsel becerileri olumlu bir şekilde gelişim göstermektedir. Çocukların açık hava alanlarında yaptıkları etkinlikler ile birlikte dikkat ve motivasyonlarında pozitif anlamda bir artış yaşanmaktadır. Aynı zamanda çocukların doğada karşılaştıkları olaylar ve durumlar hakkında grup etkinliklerinde bulunarak, akranları ile işbirliği içerisinde karşılaştıkları sorunlara çözümler ürettikleri gözlemlenmiştir. Bu durumun çocukların bilişsel gelişimini olumlu yönde etkilediği görülmüştür (Dilek, 2019). Böylelikle çocukların grup içerisinde yaratıcı düşünerek kendilerine olan özgüvenleri de artmaktadır. Farklı hava koşulları ve zorlu durumların çocukların yaratıcılıklarını ve bakış açılarını daha zenginleştireceği düşünülmektedir.

Sosyal ve Duygusal Gelişim:

Yetişkinler ile akranların işbirliği içerisinde olması beraberinde sosyal becerilerin gelişimine de olanak sağlamaktadır (Murray ve O'brian, 2005). Orman okullarında açık hava alanlarında veya ormanlık alanlarda çocukların gerçek yaşamda yaptıkları etkinlikler ile işbirliği içerisinde çalışmaları pek çok sosyal becerilerinin olumlu yönde geliştiği görülmektedir. Özgür bir alanda bağımsız davranma, özgüven ve kendine inanma gelişimini desteklediği görülmüştür (Murray ve O'brian, 2005). Orman okullarında grup içerisinde yapılacak çalışma esnasında mantıklı fikirler üreten çocuğun düşüncelerinin diğer grup üyeleri tarafından kabul edilişi görüldüğü zaman çocuğun kendisinde özgüven duygusu artış göstermektedir. Bu durumda çocuğun bu alandaki sosyal becerisi de gelişmektedir. Orman okulunun yapısından kaynaklanan zorluklar ve doğayla mücadele gerektiren etkinlikler çocukları daha çok akranlarıyla iş birliği kurmaya, takım çalışması yapmaya, doğayla olumlu ilişki kurmaya ve saygı göstermeye yönlendirmiştir. Yapılan uygulamalar sayesinde çocukların doğayla ve canlılarla olumlu bağ kurduğu görülmektedir (Dilek,2019). Böylece çocuklar orman

okullarında sevgi ve saygı gibi olumlu duygusal becerileri de kazanmış olurlar. Orman okullarında çocukların grup çalışmasında iletişim becerileri gelişerek karşısındaki akranının duygularını fark etme, kendini ve karşısındaki kişinin karakter özelliklerini fark etme gibi sosyal ve duygusal becerileri gelişim göstermektedir. Yapılan bir araştırmada, doğada oynamanın ruh sağlığını geliştirdiğini, çocuklar ve yetişkinlerde psikolojik sağlığın iyileşmesinde kritik bir rol oynadığını belirtmişlerdir (Lester ve Maudsley, 2006). Orman okulları sosyal ve duygusal alanda çocukların kendi duygularını göstermeleri ve kendini ifade etme becerilerine olumlu katkı sağlayarak iyileştirdikleri söylenebilir.

Motor Gelişim:

Orman okulu uygulamaları açık ve doğal ortamlarda motor beceriler gerektiren etkinliklerden oluşmaktadır. Çocuklar bu ortamda ağaçlara tırmanma, yerde yuvarlanma, zıplama-kuşma hareketleri yaparak oyunlar oynamaktadırlar (Dilek, 2019). Orman okullarında yapılan bu aktivitelerle birlikte çocukların büyük kas becerileri olumlu bir şekilde gelişim göstererek kaba motor becerilerinin kapasitesinde de artış görülmektedir. Yine yapılan bir araştırmada, çocuklarda serbest hareketin özellikle ince motor gelişimini sağladığı gibi vücutlarının daha iyi kontrol edilmesine de olanak sağladığı belirtilmiştir (Maynard, 2007). Çocuklar orman okulu ortamında bahçe ve gündelik yaşam aletlerini aktif şekilde kullanmışlardır. Bu becerileri aletlerle ilk tanıştıklarında zayıf olsa da kullanım sıklıkları arttıkça becerilerinde gelişme olduğu gözlemlenmiştir. Bahçe aletleriyle yaptıkları kazı etkinliklerinin ince motor gelişimlerine, taşıma etkinliklerinin ise kaba motor becerilerini geliştirdiği düşünülmektedir (Dilek, 2019). Orman okullarında çocuklar ağaçlara ip bağlamayı, kazma ve kürek gibi gerçek materyalleri bilinçli bir şekilde kullanmayı öğrenirler. Bu anlamda ince ve kaba motor becerilerin de olumlu yönde gelişim gösterdiği söylenebilir.

Dil Gelişimi:

Orman okulunun dinamik yapısının çocukların daha fazla merak duymasını, daha fazla soru sormasını sağladığı görülmektedir. Çocuklar bu sayede dil becerilerini daha aktif kullandıkları ve geliştirdikleri düşünülmektedir (Dilek, 2019). Orman okulları sayesinde çocuklar orman alanlarında yeni nesneler, canlı ve cansız varlıkları gözlemleyerek çocukların kelime dağarcığı zenginleşir, cümle kurma becerisi artar ve düzgün ve akıcı bir şekilde konuşma becerisi gelişim göstermektedir. Ayrıca orman okulundaki çocukların işbirliği içerisinde çalışarak grup içerisinde yaratıcılık ve analitik düşünme becerilerini kullanarak etkili ve karşılıklı konuşma becerileri gelişim göstermektedir. Orman okullarında çocuklar çevrelerini

sürekli olarak keşfederek kendilerince şema oluşturmaktadır (Murray ve O'brian, 2005). Görsel, duygusal ve sözel dil becerilerinin de olumlu yönde gelişim gösterdiği düşünülebilir.

Dünyada Uygulanan Orman Okulları

Danimarka:

Orman okulu yaklaşımının uygulanması ilk olarak İskandinav ülkelerinde başlamıştır. İskandinav bölgesinde bu yaklaşımı uygulayan ilk ülke ise Danimarka'dır. Ella Flatau'nun "Yürüyüş Anaokulu" isimli anaokulu Danimarka'da kurulan ilk orman anaokuludur. 1950'lerde orman okulu yaklaşımını Danimarka'nın uygulamasının ardından diğer İskandinav bölgesi olan İsveç de uygulamaya başlamıştır.

İsveç:

1957 yılında orman okulunun fikir babası olarak kabul edilen İsviçreli Goesta Frohm tarafından "Skogsmulle" kavramı ortaya atılmıştır. Bu kavramla çocuklara; doğa, su, dağlar ve kirlilik hakkında bilgi vermek amaçlanmıştır. "Skogsmulle" kelime anlamı olarak skog=orman, mulle ise, çocuklara doğa sevgisini öğreten düşsel bir karakterdir. 1987 yılında Gösta Frohm, Skogsmulle Vakfı'nı kurarak, çocuklara doğa sevgisini ve saygısını aşılamayı amaçlamıştır. İsveç'te ilk orman okulu 1985 yılında Siw Linde tarafından kurulmuştur. Linde, 80'lerde Skogsmulle okullarında hafta sonları eğitim lideri olarak görev yapmış aynı zamanda Skogsmulle yaklaşımını çocuk yuvalarına uygulama yollarını düşünmüştür (Amus, 2013). "I Ur Och Skur" (Yağmur ya da ışık) adıyla okul kuran Linde, başlangıçta devlet fonu bile alamamıştır ancak öğrencilerin velileri, oyun malzemeleri ile barınaklar inşa ederek destekte bulunmuşlardır. 1985'ten itibaren 180'den fazla "I Ur Och Skur" okulu kurulmuş ve giderek yaygın hale gelmiştir. Bu okullar da aynı ilkelerle yönetilmekte olup, farklı yöntemlerle çalışmaktadır (Öztürk, 2024).

Kanada:

2012 yılında Marlene, Kanada'daki orman okulları hareketini başlatarak, orman okullarına destek, eğitim ve akreditasyon ağı oluşturmaya çalışmıştır. Marlene'in başlattığı bu hareket, Kanada'nın birçok eyaletine yayılmıştır (Sarigül, 2020). Kanada'da bulunan bir orman anaokulu özellikle aile katılımı etkinlikleri ile dikkat çekerken, çocukların gelişim ve yaşlarına uygun eğitim programı düzenleyerek, çocukların zengin öğrenme deneyimleri kazanmalarını sağlamayı amaçlamaktadır. Okulda yapılan; orman yürüyüşleri, çocuklara tanınan oyun oynama özgürlüğü, doğayla birlikte sınırsız etkinliklerle dikkat çeken okul, bulunduğu bölgede

“Mükemmel Genç Çocuklar” ödülünü de almıştır (Friendly Forest Preschool, 2024). Boileau ve Dabaja’ya göre (2020) Kanada’da orman okulu uygulaması çalışmalarında orman okulunun çocukların gelişimi üzerindeki etkisi ile ilgili toplamda altı temaya ulaşılmıştır. Bu temalar doğanın daha iyi takdir edilmesi ve çevre bilinci, sorgulamaya dayalı öğrenme, genişletilmiş hayal gücü ve yaratıcılık, artan sosyal beceriler ve işbirliği, özgüven ve öz saygının geliştirilmesi ve psiko-motor becerilerin ve sağlığın iyileştirilmesidir. Buradan da anlaşılaçağı üzere Kanada orman okullarında uygulanan etkinliklerin çocukların bütüncül gelişim alanlarına olumlu yönde katkılar sağladığı düşünölebilir.

Amerika Birleşik Devletleri (ABD):

Orman okulları yaklaşımı kuramının 1927 yılında ilk olarak Amerika’nın Wisconsin eyaletinde ortaya çıktığı bilinmektedir. 1920’lerin başlarında Kuzey Wisconsin’de, ağaçlandırma projelerinin bir parçası olarak orman okulları ortaya çıkmıştır. Her okula ağaçlandırma için bir arazi ayrılmıştır. Bu ağaçlandırılmış alanlar daha sonra okul ormanı olarak kullanılmıştır. Bu sayede çocuklara ormancılık ve çevre bilinci öğretilmeye çalışılmıştır. Wisconsin’de 2007 yılına kadar 346 okulun özel okul ormanı bulunmaktaydı. Modern orman okullarında ise etkinlikler genellikle açık hava sınıflarında gerçekleştirilmektedir (Sarıgül, 2020). Amerika’daki orman okulları çocuk merkezli, bilgiye kendisinin yapılandırmasını amaçlayan bir yaklaşımı benimsemektedir.

Birleşik Krallık (İngiltere ve Güney Galler):

İngiltere:

Orman Okulu Somerset, Bridgewater Koleji’nden bir grup anaokulu öğretmeni tarafından 1993 yılında İngiltere’ye tanıtılmıştır. Danimarka’da bulunan bir Orman Okulu’nu ziyaret eden öğretmenler, bu eğitim modelini İngiltere’de uygulamak istemişlerdir. Öğrencileri gözlemleyen eğitimciler her öğrencinin yetenek ve becerilerini dikkate alarak eğitim programlarını düzenlemeye başlamışlardır (Doydu, 2024). Harris (2017)’e göre İngiltere’deki orman okullarında öğrencilere toplamda sekiz tema öğretilmeye çalışılmaktadır. Bu temalar ise doğa eğitimi, doğaya katılım, hayal gücü, ormanla ilişki, başkalarıyla ilişkiler, ormanla bağlantılı öğrenmeler ve program, keşif ve deneylerdir.

Güney Galler:

Pavey (20006)’e göre Güney Galler’de orman okullarının çocuklar üzerindeki etkilerini incelediğı çalışmasında gelişim geriliğı bulunan otizmlili, işitme, görme, dil ve konuşmaya

yönelik problemleri olan çocukların kendilerine özgü fikirler geliştirdiği ve kendi yöntemlerini oluşturulmasına fırsat sağlandığı görülmüştür. Orman okulu uygulamalarının; davranışsal problemlerini olumlu yönde etkilediği, fiziksel ve duygusal etkileşime olanak sağladığı, çocukların öğrenme ortamında bağımsız olmasına katkı sağladığı tespit edilmiştir. Güney Galler’de orman okullarında öğrencilerin bütüncül gelişim alanlarına olumlu yönde katkı sağladığı yapılan araştırmalar ile saptanmıştır.

Türkiye:

Orman okullarının bulunduğu şehirler ise Tablo 1 de gösterilmiştir.

Tablo 1. Türkiye’de Güncel Olarak Akredite Edilmiş Orman Okullarının Yerleri ve Sayıları

<u>Şehir</u>	<u>İlçe</u>	<u>Orman Okulu Sayısı</u>
İstanbul	Çekmeköy-Tuzla ve Beykoz	3
İzmir	Çiğli-Aliaga- Torbalı- Bayraklı ve Bornova	5
Ankara	Yenimahalle ve Keçiören	3
Zonguldak	-	1
Denizli	-	1
Kocaeli	Körfez	1
Ordu	Altınordu ve Fatsa	2
Muğla	Menteşe ve Marmaris	2
Konya	Meram ve Selçuklu	2
Balıkesir	Bandırma	1
Antalya	Lara	1
Amasya	Merzifon	1
Adana	Çukurova	1

Aydın	Efeler	1
Şanlıurfa	Kara Köprü	1
Düzce	-	1

(Orman Okulları, 2016)

Türkiye’de orman okulu ile ilgili projeler geliştirilmektedir. Özel kurum, kuruluşlar, MEB bünyesinde yer alan okullar ve üniversiteler orman okulu yaklaşımının geliştirilmesi ve uygulanabilirliğini arttırmak adına çalışmalar yürütmektedirler. Bunların en başında ekolojik köy ve orman okulu projeleri yer almaktadır (Doydu, 2024). Türkiye’de uygulanan ilk orman okulu 2018 yılında kurulan Mersin’in Tarsus ilçesinde yer alan “*Tarsus Orman Okulu*” dur. Bunun dışında Türkiye’nin pek çok farklı illerinde devlet veya özel kurum olarak faaliyet gösteren orman okulları yer almaktadır. Orman Okulu’na göre (2016) şu anda güncel olarak Türkiye’de akredite olmuş orman okulları sayısı toplamda 32’dir.

Tartışma Sonuç ve Öneriler

Araştırmada elde edilen veriler ışığında orman okulu yaklaşımının çocuğun bütüncül gelişim alanlarına ormanlık alanlarda veya açık hava alanlarında gerçek ve doğal materyallerle yapılan etkinliklerin olumlu anlamda katkı sağladığı belirlenmiştir. Bilişsel gelişim alanında işbirliği içerisinde yapılan orman aktivitelerinin çocukların problem çözme, karar verme, analitik düşünme, eleştirel düşünme ve yaratıcı fikirler üretebilme gibi bilişsel süreçlerini etkin hale getirdiği sonucu elde edilmiştir. Psiko-motor gelişim alanında çocukların ağaçlara tırmanma, barınakların yapımı sırasında kullanılacak olan materyalleri kullanabilme, kazma ve kürek gibi gerçek materyalleri kullanma sonucunda çocukların kaba ve ince motor becerilerinin gelişiminin arttığı sonucuna varılmıştır. Dil gelişim alanında çocukların doğa ortamında ve açık hava alanlarında yapılan etkinlikler sırasında grup üyeleri ile birlikte fikir üretirken karşılıklı konuşma, dinleme, hayal gücündeki var olan düşünceleri açıklayabilme gibi en üst düzey yaşam becerilerinin olumlu bir yönde arttığı belirlenmiştir. Çocukların deneyimleri ile birlikte kelime dağarcığının zenginleştiği, düzgün ve akıcı cümle kurup konuşabilme becerilerini kazandığı sonucuna varılmıştır. Sosyal ve duygusal gelişim alanında ise, çocukların grup etkinlikleri içerisinde işbirliği ve takım çalışmaları aracılığı ile hem yetişkinler hem de birbirleri ile olan etkileşimleri artmaktadır. Orman okullarında verilen görevler sayesinde çocukların sorumluluk alma ve girişimci bir kişiliğe sahip olmalarına temel oluşturabileceği kanısına varılmıştır.

Genel olarak Türkiye’de ve dünyada uygulanan orman okulları öğrenmeyi doğada ve açık hava alanlarında gerçekleştiren ve eğitim öğretimin merkezine çocuğu koyan, bilgiyi öğrencinin etkinlik süreci içerisinde kendisinin eski öğrenmeleri ile harmanlayarak yeni bilgi oluşturmasını amaçlamaktadır. Türkiye ve dünyanın birçok ülkesinde uygulanan orman okullarının, sonuçtan çok sürece önem verdiği, oyun yolu ile öğrenmeyi, keşfetmeyi ve sınırlı düzeyde risk almayı savunan uzun vadeli programlar olarak yaşantımıza girmiştir. .

Orman okullarının varlığını ve geliştirilmesini destekleyebilecek öneriler ;

- Türkiye’de orman okulları yaklaşımını benimseyen okulların açılma oranının artırılması için proje çalışmalarının hızlandırılması,
- Orman okulları yaklaşımı ile oluşturulan eğitim programlarında bütüncül gelişimi (fiziksel, bilişsel, motor, sosyal ve duygusal gelişim) harekete geçiren kazanımların artırılması,
- Orman liderlerinin yetiştirilmesi için eğitici kurumların yaygınlaştırılması,
- Orman okullarının çocuğun bütüncül gelişimine etkisini açıklayan ve önemine vurgu yapan eğitici kaynakların ivedilikle yaygınlaştırılması,
- Orman okullarının farkındalığını artırmak amacıyla topluma kitle iletişim araçları ile birlikte farkındalık çalışmalarının düzenli bir şekilde başlatılması,
- Orman okulları için okul öncesi döneminde olan çocukların ebeveynleri ile bu konu hakkında bilinçli farkındalık toplantı, seminerlerinin gerçekleştirilmesi, yaygınlaştırılması ve olumsuz tutumlarının kırılması sağlanmalıdır.

Özet

Araştırmada erken çocukluk dönemi okul öncesi eğitim kurumlarında görev yapan öğretmenlerin teknoloji kullanımına ilişkin görüşleri ele alınmaktadır. Öğretmenlerin hangi teknolojik araçları daha sık kullandıkları, ekran sürelerinin ne aralıkta olması, ne ifade ettiği ve teknolojinin eğitim sürecinde etkili olup olmadığını nasıl değerlendirdikleri incelenmektedir. Araştırmanın çalışma grubunu, KKTC Lefkoşa’da 3 anaokulunda görev toplam n=15 öğretmen oluşturmaktadır. Öğretmenlerden 13’ü kadın, 2’i erkektir. 3 yaş grubunda 3 öğretmen, 4 yaş grubunda 4 öğretmen ve 5 yaş grubunda 8 öğretmen eğitim vermektedir. Araştırmada nitel yöntem kullanılarak veriler içerik analizi ile değerlendirilmiştir. Anket soruları 3 uzman kanısına sunularak onaylatılmış buna göre öğretmenler ile görüşmeler yapılmıştır. Ayrıca, öğretmenlerin teknolojiye yönelik tutumları da araştırmanın temel odak noktalarından biridir. Okul öncesi eğitimde teknolojik araçların etkili bir şekilde kullanılması, çocukların öğrenme süreçlerine olumlu katkılar sunabilir. Özellikle çocukların teknolojiye duyduğu ilginin yüksek olması, teknolojik araçların motivasyonu artırıcı bir unsur olarak değerlendirilebileceğini göstermektedir. Bununla birlikte, bilgisayarların ve diğer teknolojik araçların okul öncesi eğitimde kullanımı konusunda farklı görüşler bulunmaktadır. Teknolojinin bilinçli şekilde kullanılması durumunda yararlı olduğu kabul edilirken, bilinçsiz ve kontrolsüz kullanımının olumsuz sonuçlar doğurabileceği de bilinmektedir. Okul öncesinde en çok kullanılan teknolojik araçların neler olduğu, çocukların ekran sürelerinin anlamı, teknolojinin bilişsel ve sosyal gelişim üzerindeki etkileri ile eğitime katkıları ele alınmaktadır. Bu bağlamda öğretmenlerin en çok bilgisayar ve projeksiyon kullandıklarını, teknolojiyi genellikle Türkçe dil etkinlikleri, müzik ve sinema içeriklerinde tercih ettiklerini göstermektedir. Teknoloji kullanımında ekran süresi, içerik uygunluğu ve çocukların gelişim düzeyine dikkat çekilse de, bazı öğretmenlerin yeterince etkin kullanmadığı görülmüştür. Teknolojinin bilişsel ve dil gelişimini desteklediği, ancak psiko-motor ve sosyal gelişim üzerinde sınırlayıcı etkileri olabileceği ifade edilmiştir.

Öğretmenlerin çoğu teknolojinin öğretmenin yerini alamayacağını belirtmiş, aile iş birliği ve bilinçli kullanımın önemini vurgulamıştır.

Anahtar sözcükler: Okul öncesi dönem, teknoloji, öğretmen.

Teachers' Views on the Use of Technology in Preschool Education

Abstract

The research examines the views of teachers working in early childhood preschool education institutions on the use of technology. It examines The study group consists of n=15 teachers working in 3 kindergartens in Nicosia, TRNC. 13 of the teachers are female and 2 are male. 3 teachers provide education in the 3-year-old group, 4 teachers in the 4-year-old group and 8 teachers in the 5-year-old group. Qualitative method was used in the study and the data was evaluated with content analysis. Which technological tools teachers use more frequently, how long screen time should be, what it means, and how they evaluate whether technology is effective in the education process. The survey questions were presented to 3 experts for approval and interviews were conducted with teachers accordingly. In addition, teachers' attitudes towards technology are one of the main focuses of the research. Effective use of technological tools in preschool education can make positive contributions to children's learning processes. The high interest of children in technology in particular shows that technological tools can be considered as a motivational factor. However, there are different views on the use of computers and other technological tools in preschool education. While it is accepted that technology is beneficial when used consciously, it is also known that unconscious and uncontrolled use can have negative consequences. The most commonly used technological tools in preschool, the meaning of children's screen time, the effects of technology on cognitive and social development and its contributions to education are discussed. In this context, it is shown that teachers use computers and projectors the most, and that they generally prefer technology in Turkish language activities, music and cinema content.

Although attention is drawn to screen time, appropriateness of content and children's developmental level in the use of technology, it has been observed that some teachers do not use it effectively enough. It has been stated that technology supports cognitive and language development, but it can have limiting effects on psychomotor and social development. Most teachers stated that technology cannot replace the teacher and emphasized the importance of family cooperation and conscious use.

Keywords: Preschool, technology, teacher.

Giriş

Teknoloji, yaşamın her alanında önemli bir yer tutarak eğitim süreçlerini değiştirmiştir. Özellikle okul öncesi dönemde, çocukların öğrenme süreçlerine dahil edilen teknolojik araçlar, eğitimin niteliğini artırma ve gelişimlerine katkı sağlama gücüne sahiptir. Teknolojiyi etkin kullanabilen öğretmenler, çocukları eğitim etkinlik programlarına katarak doğru ve etkili bir şekilde yönlendirebilecektir (Beşli, 2007.,Gülen ve Kaya, 2023). Bu araştırma, okul öncesi dönemde teknoloji kullanımının çocukların gelişim süreçlerine olan etkilerini, eğitimde önemli bir yer tuttuğunu ve sağlıklı bir biçimde nasıl uygulanabileceğini incelemeyi amaçlamaktadır. Ayrıca, çalışmanın temel soruları arasında, teknoloji kullanımının nasıl bir etki oluşturduğu ve eğitimcilerin bu konuda alması gereken önlemleri kapsamaktadır. Son yıllarda teknoloji çocuğun yaşamının ayrılmaz bir parçası olarak devam etmektedir. Çocuklar doğal çevrelerinde cep telefonu, televizyon, akıllı tablet, bilgisayar gibi teknolojik araçlar ile karşılaşmakta ve basit olarak kolayca kullanmayı öğrenmektedirler (Erdoğan, 2014). Tüm bu araçlar çocukların günlük yaşamlarını, aile ve çevreleri ile olan iletişimlerini, eğlence arayışlarını ve öğrenmelerini etkileyebilmektedir. Dolayısıyla yetişkinler, çocukların teknolojik araçların kullanımını engellemek yerine bu araçları çocukların öğrenmelerini destekleyici olarak kullanmalarını sağlamak yönünde çaba göstermelidirler. Çocukların etkileşimli öğrenmeleri için teknoloji yararlı bir araç olduğundan, eğitici amaçlarla sınırlı ve doğru kullanıldığında çocukların gelişimlerini ve kalıcı öğrenmeleri desteklemektedir.

Okul Öncesi Eğitim Ortamlarına Teknolojinin Kaynaştırılması

Okul öncesi eğitiminden başlayarak, teknolojinin çocuklar için faydalı olabilecek şekilde kullanımının süreç içinde yaygınlaştırılması farklı kurumlar tarafından da desteklenmektedir. Örneğin, Amerikan Pediatri Akademisi iki yaşından büyük çocuklar için sosyal medyanın eğitimsel faydaları olduğunu; çocukların gelişim alanlarını desteklediğini ve okula hazır bulunuşluklarını arttırdığını vurgulamıştır. Aynı zamanda High Scope Vakfı ve Amerikan Ulusal Çocuk Eğitimi Derneği (NAEYC) çocuklara uygun teknoloji kullanımını anlatan durum bildirgeleri yayınlamışlardır. Bu bildirgelere göre, teknolojik araçların çocukların bütüncül gelişim alanlarını destekleyecek ve öğrenmelerini sağlayacak şekilde bilinçli kullanılarak, uygun teknolojik uygulamalar olarak tanımlanmaktadır. Çocuğun yaşamda gelişimine uygun teknolojik araç kullanımı; çocukların yaşları, gelişim düzeyleri, bireysel ilgi ve ihtiyaçları, içinde yaşadıkları sosyal çevre ve kültüre karşı duyarlıdır (Erdoğan, 2014). Dolayısıyla her

zaman teknoloji çocukların ilgisini çekerek, onları uzun süre oyalamaktadır. Bu sebeple, bilinçsiz aile ve öğretmenler için kolaylık olarak da görülmektedir. Özellikle çocuklar evde ve okulda uzun süre hareketsiz sadece izlemeye bağlı olarak televizyon, cep telefonu, video ya da bilgisayar oyunlarına terk edilmektedir. Bununla ilgili çözümlerden ilki de ekran sürelerinin çocuğun yaş ve gelişim düzeyine uygun şekilde ev ve okul ortamlarında programlı bir şekilde düzenlenmesidir.

Ekran Süresi

Günümüzde okul öncesi dönemde çocukları cep telefon, televizyon, video, akıllı tablet, bilgisayar gibi farklı teknolojik araçları her yerde kullanmaktadırlar. Bu araçlarla bir günde ne kadar süre geçirdikleri önemli bir husustur. Alan yazın tarandığında, Amerikan Pediatri Akademisi iki yaş altındaki çocukların ekrana bakarak izlemesini sakıncalı bulmaktadır. İki yaşından büyük okul öncesi dönemi çocuklarının ise, günde bir iki saatten daha uzun süre ekran izlememesini özellikle vurgulamaktadır. Ayrıca, okul öncesi eğitim kurumlarında çocukların ekran izleme süresinin otuz dakika ile bir saatten uzun olmaması tavsiye edilmektedir. Okulda teknolojiyi kullanırken, çocuğun ekran karşısında geçirdiği zamanın yanı sıra bu zamanın niteliği de önem teşkil etmektedir. Dolayısıyla aktif olmayan psiko-motor becerilerinin yanında teknoloji kullanımı çocukları sadece pasif olarak uzun süre ekranı izlemeye yönleltmekte ve çocuk için insanlarla iletişim sürecini azaltmaktadır. Kısaca, uzun süreli aktif olmayan teknoloji kullanımının çocukluk çağı obezite, davranış ve dikkat bozuklukları ve dil gelişiminde gerilikler ile ilişkili olduğu saptanmıştır (Erdoğan, 2014).

Fayda Zarar Dengesi

Teknoloji daha bilinçli ve amaçlı kullanıldığında çocuklar için faydalı olabileceği gibi, doğru kullanılmadığında olumsuzlukları da beraberinde getirmektedir. Bu yüzden okulda teknolojik araçlar kullanılırken, çocukların zarar görmemesi için önlemler alınmalıdır. Araştırmalar, çocuğun uygulama esnasında uzun süre pasif kaldığı teknolojinin yararlı olmadığı, çocuğun gelişimini olumsuz etkilediğini ortaya koymuştur. Ekran izleme süresi bebeklerde dil gelişimini etkilerken, okul öncesi çağı çocuklarında ise şişmanlık, dikkat eksikliği, uyumsuz farklı davranışlar ve uyku problemleri arasında ilişki bulunmuştur (Erdoğan, 2014). Bununla beraber, hareketli, çocuğun yaratıcılığını ve problem çözme becerilerini destekleyen, işbirliği, akran iletişimi doğrultusunda teknoloji kullanımının çocukların bütüncül gelişimini desteklediği için yararlı olduğu ortaya çıkmıştır. Ayrıca, çocuğun uyguladığı etkinlik programlarına ve internetin içeriğine dikkat edilmesi gerekmektedir. Çocuk, şiddet, cinsellik, küfür, ayrımcılık, saygısızlık

gibi olumsuz davranışları içeren teknoloji ile yüz yüze gelmemelidir. Özetle öğretmenler, programları daha önceden inceleyerek sağlanabilecek gerekli tüm tedbirleri almalıdırlar.

Teknoloji Destekli Eğitim Ortamı Düzenleme

Okul öncesi eğitimi kurumlarında teknolojik araç ve gereçler aile ve öğretmenlerin istekleri doğrultusunda karar verilerek kullanılırlar. Özellikle çocuklara kazandırılması planlanan hedeflere yönelik, teknolojik araçların sınıfta kullanılacağı belirlenmelidir. Bu bağlamda çocukların uygulamada zorlanacağı teknolojik araçlar tercih edilmemeli, uygun olanlara öncelik verilmelidir. Bilgisayar sınıf dışı ya da sınıf içinde ekranı birden fazla çocuğun görebileceği yarım ay şeklinde yerleştirilmelidir. Öğretmen bu zaman diliminde çocukları düşüncelerini ifade etmeleri için teşvik etmelidir. İlk defa teknolojik araçlarla sınıfta karşılaşan ya da tam tersi bu araçları evde sürekli kullanan çocuklar daha uzun süreli süreç geçirmek isteyebilirler. Bu sebeple bilgisayar alanının ne zaman, ne kadar süre ve nasıl kullanılacağına ilişkin kuralların belirlenmesi faydalı olacaktır. Çocuklardan gelen isteklere bağlı olarak bilgisayar kullanma süresi belirlenebilir aynı zamanda alarm, kum saati vb. araçlardan çocukların bilgisayar süresini düzenlemek için yararlanılabilir (Erdoğan, 2014).

Teknolojiyi Eğitim Programlarına ve Etkinliklere Kaynaştırma

Kaynaştırma süreci, teknolojinin sınıf içi etkinlikleri destekleyici ve hedefleri gerçekleştirmeye yönelik kullanılmasını kapsamaktadır. NAEYC durum bildirgesinde teknolojinin fiziksel ve uygulamalı eğitim programına kaynaştırılması önerilmektedir (Erdoğan, 2014). Teknoloji sınıfta fiziksel olarak yer alarak ve çocukların aktif olarak kullanımlarına açık olmalıdır şeklinde düşünülebilir.

Serbest Zaman Etkinliği ve Teknoloji

Serbest zaman etkinlikleri teknolojiyi çocukların kendi, ilgi ve gelişim düzeylerine uygun olarak kullanabilecekleri bir etkinlik olarak düşünülebilir. Adı üzerinde serbest zaman etkinliğinde, bilgisayar oyunları ve çocuk uygulamaları okul öncesi eğitimi çalışmaları arasında bir seçenek olarak sunulabilir. Çocuklar bilgisayar alanında kendi gelişimlerini destekleyen farklı içerikte oyun programlarını kullanabilirler. Özellikle, çocuklara lego, yap-boz, çizim programları gibi oyunlar sunulabilir. Çocuklar fotoğraf makinası, video, kamera ile düşünce, evcilik, blok gibi istekleri doğrultusunda farklı ilgi köşelerinde oluşturdukları çalışmaları kaydedilebilirler. Ayrıca cep telefonu, fotoğraf makinası gibi günlük yaşamda sıklıkla kullanılan

teknolojik araçlar çocukların evcilik vb. oyunlarını desteklemek amacı ile kullanılabilir. Öğretmenlerin de etkinlikler süresince teknolojik araçların kullanımında kendi gözlemlerini de işe koşturarak çocuklara ihtiyaç duydukları anda yardımcı olması önemli bir yer tutmaktadır (Erdoğan, 2014).

Türkçe -Dil Etkinliği ve Teknoloji

Okul öncesi dönemde teknolojinin en etkin olarak kullanılabileceği etkinliklerden biri Türkçe –dil etkinliğidir. Özellikle öykü, rond, kukla anlatırken araçların kullanılması, çocukların dikkatini, ilgilerini sürdürmelerini sağlamakta ve öyküyü anlamalarına yardımcı olacaktır. Ayrıca, ses çıkaran, görüntü ve etkileşim özelliklerine sahip olan elektronik kitaplar da çocukların gelişimlerine olumlu katkılar sağlamaktadır. Kısaca, öğretmenin yardımı ve çocukların yaratıcılıkları bir araya getirilip pek çok öykü etkinlikleri teknoloji yardımı ile yapılabilir (Erdoğan, 2014).

Matematik Etkinliği ve Teknoloji

Erken çocukluk döneminde çocuklar günlük yaşamda olduğu gibi okul öncesi öğrenme ortamlarında da çok sayıda matematiksel deneyim edinirler. Matematik etkinliklerinde eşleştirme, sıralama, sayı-şekil kavramları, sayma, toplama, çıkarma gibi beceriler teknoloji yardımıyla çocuklara kazandırılabilir. Bilgisayar destekli programların çocukların şekil kavramını öğrenmesinde daha fazla avantajlar sağladığı ortaya konmuştur (Erdoğan, 2014).

Akıllı tahtada aktif edilen matematik eğitimi uygulamaları sırasıyla çocukların kalkıp yapabilecekleri şekilde ayarlanabilir veya opak-projeksiyona yansıtılan oyun programları ile grup etkinlikleri yapılabilir. Böylece çocuklar teknolojiyi eğitici yönden aktif kullanabilirler. İyi bir gözlem yeteneğine ve bilgisine sahip bir okul öncesi öğretmeni, çocukların çeşitli deneyimlerini gözlemleyerek onların matematiksel gelişim ve öğrenmelerini belirler ve çocukların zayıf ve güçlü yönlerini tespit ederek öğrenme yaşantılarını ona göre planlayabilir (Buldu, 2010).

Fen Etkinliği ve Teknoloji

Fen etkinlikleri, küçük yaşlardan itibaren çocukların çok yönlü düşünebilmelerine, problem çözme becerilerini kazanmalarına, merak duygularını ve yaratıcılıklarını geliştirmelerine, yaparak yaşayarak bütün duyuları ile öğrenerek dünyayı keşfetmelerine olanak sağlamaktadır (Tahta, 2010). Fen etkinliklerinde teknoloji de çocuklara araştırma fırsatları sunar. Öğretmenlerin eşliğinde yapılacak olan araştırmalarda çocuklar fenle ilgili meraklarını

keşfederek öğrenir. İnternet aracılığıyla sanal hayvanat bahçelerini ve müzeleri ziyaret edebilecekleri uygulamalar öğrenebilirler. Belgesel programları izleyerek hayvanlar hakkında bilgi edinme avantajı kazanabilirler. Ayrıca çocuklar teknoloji ile fen etkinliklerini; dijital kamera ve fotoğraf makinası ile yaptıkları deneyleri, gözlemlerini, inceleme gezilerini kaydetme ve tekrar izleyerek bu deneyimlerden yeniden öğrenmelerine olanak sağlamaktadır.

Teknolojinin Kullanılmasında Öğretmenin Rolü

Öğretmen teknolojinin eğitiminde kullanılmasında çok önemli bir yere sahiptir. Teknolojinin çocuğun gelişimine uygun şekilde kullanılması, öğretmenlerin öğrenme ortamına getirdikleri uygun teknolojik araç-gereç malzeme ve etkinlik programı hazırlama becerileri ile ilişkilidir. Başka bir ifade ile teknoloji, eğitimi ve bilgili öğretmenlerin doğru programlarla uygulayarak hazırladığı takdirde çocukların akademik becerilerinde güzel kazanımlar elde etmesine katkı sağlamaktadır.

Okul öncesi eğitimi öğretmenlerinin teknolojiyi var olan programa kaynaştırmak için; teknoloji ile ilgili sistemli eğitim almaları, kaynaştırma için önceden plan tasarımı yapmaları gerekenlerin belirlenmesi, kendilerinin teknolojiye yönelik olumlu bakış açısı ve tutumlarının cesaretlendirilmesi önerilmektedir.

Okul öncesi eğitimde teknolojinin entegre edilmesi, öğretmenlerin eğitim süreçlerini zenginleştirirken çocukların öğrenme deneyimlerini de geliştirmektedir. Teknolojinin etkin bir şekilde kullanılması, öğretmenlerin yeterliliklerini artırmakta ve geliştirmelerine olanak tanımaktadır. Amerika, Avustralya ve Avrupa ülkelerinde öğretmenlere yönelik hazırlanan yönergeler, öğretmenlerin teknoloji kullanımını destekleyici en iyi uygulamaların paylaşılmasını sağlamaktadır. Bu tür yönergeler, öğretmenlerin teknolojiyi nasıl daha etkili bir şekilde entegre edebileceklerine dair somut örnekler sunarak, öğretmenlerin kendilerine olan güvenlerini artırmakta ve öğretim süreçlerine yenilik katmaktadır. Türkiye’de ise 2024 okul öncesi eğitim programında teknoloji ile ilgili uygulamalara dair güncellemelerin olmaması, öğretmenlerin bu alandaki gelişimlerini kısıtlayabilir. Eğitim programlarının güncellenmesi, öğretmenlerin teknoloji ile ilgili bilgi ve becerilerini artırmalarına yardımcı olacak öneri ve örneklerle desteklenmelidir (Erdoğan, 2014). Bu bağlamda, öğretmenlerin teknolojiye yönelik tutumlarının değiştirilmesi ve olumlu bir yaklaşım kazanmaları için seminerler, atölyeler ve sürekli mesleki gelişim fırsatları sunulmalıdır. Aynı zamanda, çocukların teknolojiyle etkileşimlerinin sağlıklı bir şekilde yönlendirilmesi, öğretmenlerin bu konuda bilgi sahibi olmasını ve teknolojiyi eğitici bir araç olarak kullanmalarını gerektirmektedir. Öğretmenlerin,

çocukların gelişimini destekleyici teknoloji kullanımı konusunda bilinçlenmeleri, hem kendi mesleki gelişimleri hem de çocukların öğrenme süreçleri için kritik öneme sahiptir

Teknoloji ve Aile Katılım Çalışmaları

Teknoloji, okul ve aile arasındaki işbirliğini güçlendiren önemli bir araç olarak eğitim sisteminde büyük bir yer tutmaktadır. Özellikle okul öncesi eğitimde, öğretmenler teknoloji sayesinde ailelerle daha etkili bir iletişim kurabilir ve ebeveynleri çocuklarının eğitim sürecine daha aktif şekilde dahil edebilir. Bilgisayar, akıllı telefon ve internet gibi teknolojik araçların aileler tarafından daha etkin kullanılması, bu işbirliğini daha da kolaylaştırabilir. Aile katılım çalışmalarının genel amacı, aileler ve okulun ortak hedefler doğrultusunda bir araya gelerek çocukların eğitimine dair sorumlulukları paylaşmasını sağlamaktır. Örneğin, çocukların katıldıkları etkinliklerin fotoğraf ve videolarının ailelerle paylaşılması, ebeveynlerin çocuklarının eğitim sürecini daha yakından takip etmelerini sağlar. Aileler, evde kullanabilecekleri teknolojik araçlar hakkında bilgilendirilerek, bunları çocukları ile nasıl verimli kullanabilecekleri konusunda desteklenebilir (Erdoğan, 2014). Bu sayede ebeveynler, çocuklarının teknolojiyi bilinçli ve doğru bir şekilde kullanmasına yardımcı olabilir. Ayrıca, okulda yapılan etkinliklerin ailelerle paylaşılması, çocukların öğrendiklerini evde de pekiştirmelerine yardımcı olur ve evde belirlenen teknoloji kurallarının okulda uygulanan kurallarla uyumlu olması, çocukların bu kuralların önemini kavramasını sağlar.

Teknoloji bireyler için her zaman önemli bir alan olmuştur. Teknoloji yaşamımızın her alanını kapladığı gibi eğitim ve öğretim sürecini de etkilemektedir (Öner, 2020). Özellikle çocuklar, eğitim-öğretim ortamına ilk adım attıkları andan itibaren birçok teknolojik gelişmeyle karşı karşıya gelmektedir (Demir, 2015). Bu araştırmanın genel amacı, okul öncesi yıllarında çocukların teknoloji kullanımında avantaj ve dezavantajlarını, gelişimsel etkinlerini görmek, ebeveyn ve toplum bilinci oluşturmak, öğretmen tutumlarını incelemek, karşılaştıkları sorunları da ele alarak, bu sorunlara yönelik çözüm önerileri sunmaktır. Bu amaçlar doğrultusunda aşağıdaki sorulara cevap aranacaktır; Eğitimde teknolojik araç kullanımına ilişkin öğretmen görüşleri nelerdir? Öğretmenlerinin okul öncesi eğitim programında teknolojik araç-gereç kullanımına ihtiyaç duyduğu etkinlikler nelerdir? Okul öncesi öğretmenlerinin eğitim uygulamalarında teknolojik araç-gereçlere ayırdıkları ekran süresi nedir?

Yöntem

Bu araştırma, derinlemesine bir görüş belirlemek amacıyla nitel bir araştırma olarak tasarlanarak okul öncesi dönemdeki çocukların eğitiminde teknoloji kullanımına ilişkin

öğretmen görüşlerine yer verilmiştir. Bu nedenle yarı yapılandırılmış görüşme formu kullanılmıştır. Nitel araştırma, bir alana yönelik derinlemesine bilgi toplamayı gerektiren araştırma biçimidir (Yıldırım ve Şimşek, 2021). Veri toplama aracı olarak hazırlanan kişisel bilgi formu üç uzman kanısına sunularak onaylatılmış buna göre görüşmeler yapılmıştır. Araştırmanın çalışma grubunu, KKTC Lefkoşa’da 3 anaokulunda görev toplam n=15 öğretmen oluşturmaktadır. Öğretmenlerden 13’ü kadın, 2’i erkektir. 3 yaş grubunda 3öğretmen, 4 yaş grubunda 4 öğretmen ve 5 yaş grubunda 8 öğretmen eğitim vermektedir. Araştırmada nitel yöntem kullanılarak veriler içerik analizi ile değerlendirilmiştir.

Tablo 1. Katılımcılara İlişkin Tanımlayıcı Bilgiler

	Cinsiyet	Yaş	Mezun Olduğunuz Bölüm	Kıdem Yılı	Öğretmeni Olduğunuz Sınıfın Yaş Grubu
Ö1	Kadın	32	Çocuk Gelişimi ve Eğitimi	2021	3 yaş
Ö2	Kadın	24	Okul Öncesi Öğretmenliği	2023	4 yaş
Ö3	Kadın	22	Sosyal Hizmet	2024	3 yaş
Ö4	Kadın	23	Özel Eğitim Öğretmenliği	2024	5 yaş
Ö5	Kadın	24	Okul Öncesi Öğretmenliği	2023	5 yaş
Ö6	Kadın	28	Çocuk Gelişimi ve Eğitimi	2022	5 yaş
Ö7	Kadın	44	Okul Öncesi Öğretmenliği	2003	5 yaş
Ö8	Kadın	23	Çocuk Gelişimi ve Eğitimi	2024	5 yaş
Ö9	Kadın	25	Okul Öncesi Öğretmenliği	2023	4 yaş
Ö10	Erkek	28	Okul Öncesi Öğretmenliği	2022	4 yaş
Ö11	Kadın	25	Çocuk Gelişimi ve Eğitimi	2022	5 yaş
Ö12	Kadın	35	Okul Öncesi Öğretmenliği	2018	5 yaş
Ö13	Erkek	30	Okul Öncesi Öğretmenliği	2020	4 yaş
Ö14	Kadın	30	Okul Öncesi Öğretmenliği	2020	5 yaş
Ö15	Kadın	23	Sosyal Hizmet	2023	3 yaş

Çalışma Grubu

KKTC Lefkoşa ilçesinde görev yapan 13 kadın 2 erkek olmak üzere toplam 15 okul öncesi öğretmeni olarak belirlenmiştir. Öğretmenlerin 8’i 22-25 yaş aralığında, 7’si ise 28-44 yaş

aralığındadır. Öğretmenlerin 4'ü çocuk gelişimi ve eğitimi mezunu, 2'si sosyal hizmet mezunu, 1'i özel eğitim öğretmenliği mezunu, 8'i ise okul öncesi öğretmenliği mezunudur. Öğretmenlerin 1'i 22 yıllık, 14'ü ise 1-7 yıllık kıdem yılına sahiptir. Öğretmenlerin çalıştığı öğrenci yaş grupları incelendiğinde ise; 3 yaş grubunda 3, 4 yaş grubunda 4, 5 yaş grubunda 8 öğretmen eğitim vermektedir. Araştırma grubu belirlenirken Lefkoşa ilçesini genellemek amacı ile tesadüfi örnekleme yöntemi kullanılmıştır. Çalışma 2025 eğitim öğretim yılında yüz yüze görüşmeler yoluyla yapılmıştır. Öğretmenler önceden çalışma ile ilgili bilgilendirilmiş olup kişisel verilerinin hiç bir yerde açıkça paylaşılmayacağı bildirilmiştir.

Veri Toplama Araçları

Araştırmada veri toplama amacı ile yarı yapılandırılmış görüşme formu kullanılmıştır. Elde edilen forma uzman görüşü ile uygulanarak son şekil verilmiştir. Form 19 sorudan oluşmaktadır. Formda demografik bilgiler (cinsiyet, yaş, kıdem yılı, bölümü, öğretmenin çalıştığı yaş grubu). Sınıfta teknolojik araçlardan hangilerini, ne sıklıkla, hangi amaçla ne kadar süre ile hangi tür etkinlikte kullandıklarını ve bu kullanım sonrası ise çocukların hangi gelişim alanlarını olumlu/olumsuz etkilediği, sağlıklı ve güvenli olup olmadığı ve çocukların öğrenme hızına etkisi sorulmuştur. Veriler yüz yüze görüşmeler ile de gerçekleştirilerek desteklenmiştir. Toplamda 40 dakika süren görüşmeler yalnız bu çalışma için kullanılmıştır. Etik kurallar çerçevesinde öğretmenlerin kişisel bilgilerine yer verilmemiş olup öğretmen görüşleri “Ö” harfi ile gösterilerek (Ö1-Ö2) görüşmelerdeki sıraya göre numaralandırılmıştır.

Verilerin Analizi

İçerik analizi ile katılımcılardan elde edilen verilerden kategori veya temalar çıkarılmıştır. Elde edilen kategori ve kodların geçerlik güvenirliği için (Miles ve Huberman 1974) tarafından geliştirilen uyum yüzdesi formülü kullanılmıştır. Formüle göre araştırmacı ve uzman tarafından yapılan analiz sonucu uyum yüzdesi %95 tespit edilmiştir. Literatür incelendiğinde %70 üzerinin güvenilir ve geçerli olduğu söylenebilir (karasar 2001).

Bulgular ve Yorumlar

Tablo 2. Hangi araç ve gereçleri okulunuzda kullanıyorsunuz?

Kategori	Tema	Belirtme Sıklığı	Yüzde
Kullanılan araç ve gereçler	Bilgisayar	9	60%
	Projeksiyon	6	40%

Akıllı tahta	2	13.33%
Televizyon	2	13.33%
Hoparlör	2	13.33%
Telefon	1	6.67%

Tablo 2’de görüldüğü üzere sınıf içinde kullanılan araç gereçler incelendiğinde 6 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en çok bilgisayar ve projeksiyon kullanıldığı söylenebilir. Bunu takiben akıllı tahta, televizyon, hoparlör ve telefon kullanımının mevcut olduğu görülmektedir. Bu bağlamda öğretmenlerin en çok bilgisayar ve projeksiyon kullandıklarını, teknolojiyi genellikle Türkçe dil etkinlikleri, müzik ve sinema içeriklerinde tercih ettiklerini göstermektedir.

Tablo 3. Ne sıklıkla kullanıyorsunuz?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Kullanım Sıklığı	Hergün	10	66.67%
	Haftada 1 Gün	3	20%
	Haftada 2 Gün	2	13.33%

Tablo 3’de görüldüğü üzere teknolojik aletleri sınıf içinde kullanım sıklığı incelendiğinde 3 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında her gün kullanıldığı söylenebilir. Bunu takiben haftada 1 gün ve haftada 2 gün kullanımının mevcut olduğu görülmektedir.

Tablo 4. Ekran süresi genellikle kaç saat ile sınırlıdır?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Ekran Süresi	1 saat	9	60%

Yarım saat	3	20%
40 dakika	2	13.33%
20 dakika	1	6.67%

Tablo 4’de görüldüğü üzere sınıf içinde ekran süresi incelendiğinde 4 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en çok 1 saat olduğu söylenebilir. Bunu takiben yarım saat, 40 dakika ve 20 dakika kullanıldığı görülmektedir.

Tablo 5. Ne kadar etkin kullanmaktasınız?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Etkin Kullanım	Günlük etkinlik esnasında	8	53.33%
	Çok etkin kullanmıyorum	7	46.67%

Tablo 5’de görüldüğü üzere etkin kullanım incelendiğinde 3 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en çok günlük etkinlik esnasında kullanıldığı söylenebilir. Bunu takiben çok etkin kullanmıyorum yanıtı verilmiştir. Teknoloji kullanımında ekran süresi, içerik uygunluğu ve çocukların gelişim düzeyine dikkat edilse de, bazı öğretmenlerin yeterince etkin kullanmadığı görülmüştür.

Tablo 6. En çok hangi etkinliklerde kullanıyorsunuz?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
En çok kullanılan etkinlikler	Türkçe dil etkinlikleri	6	40%
	Müzik dinlerken	6	40%

Sinema etkinliklerinde	5	33.33%
Dans etkinliklerinde	4	26.67%
Fen etkinliklerinde	3	20%
Kavram öğretimi	3	20%

Tablo 6’da görüldüğü üzere en çok kullanılan etkinlikler incelendiğinde 6 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en türkçe dil etkinlikleri ve müzik dinlerken kullanıldığı söylenebilir. Bunu takiben sinema, dans, fen etkinliklerinde ve kavram öğretiminde yanıt verilmiştir. Öğretmenlerin görüşlerine göre, dil gelişimi açısından yararlarına bakıldığında kelime dağarcığını, konuşma becerilerini ve anlam yeteneklerini arttırdığını fark etmiş olabilirler.

Tablo 7. Nelere dikkat ediyorsunuz?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Dikkat edilen noktalar	Ekran süresine	9	60%
	Yaş ve gelişim düzeyine uygunluğuna	9	60%
	Eğitici içerik olması	4	26.67%
	Ekran görüş mesafesi	3	20%
	İlgi çekici olması	1	6.67%

Tablo 7’de görüldüğü üzere dikkat edilen noktalar incelendiğinde 5 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında ekran süresi, yaş ve gelişim düzeyine uygunluğu en çok

verilen yanıtlardan olmuştur. Bunu takiben eğitici içerik olması, ekran görüş mesafesi, ilgi çekici olması önemsenmiştir.

Tablo 8. Karşılaştığınız sorunlar nelerdir?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Karşılaşılan sorunlar	Ekran kapanınca sorun çıkaran çocuklar	10	66.67%
	Sorun yaşanmıyor	3	20%
	Dikkat dağınıklığı	2	13.33%

Tablo 8’de görüldüğü üzere karşılaşılan sorunlar incelendiğinde, 3 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en çok ekran kapanınca sorun çıkaran çocuklar yanıtı bulunmaktadır. Bunu takiben sorun yaşanmıyor ve dikkat dağınıklığı cevapları gelmektedir.

Tablo 9. Öğrencilerin ilgi ve dikkat dereceleri nasıldır?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
İlgi ve dikkat dereceleri	Çok fazla	10	66.67%
	Orta düzey	5	33.33%

Tablo 9’da görüldüğü üzere ilgi ve dikkat dereceleri incelendiğinde 2 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında çok fazla yanıt bulunmaktadır. Bunu takiben orta düzey cevabı gelmektedir.

Hangi gelişim alanları desteklendiği konusunda bir görüş alındığında ise en çok bilişsel ve dil gelişimi cevapları verildiği görülmektedir. Genellikle problem çözme, görsel hafıza, ilgi ve dikkat derecelerini geliştirmeye yönelik etkinlikler amaçlı kullandığı görüldüğü için aslında bilişsel gelişime bu yönlerde yararlı olduğu düşünülmektedir.

Tablo 10. Öğrenme ve öğretme süreçlerinde ne gibi yararları bulunur?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Öğrenme ve öğretme sürecindeki yararları	Görsel hafızada kalıcılık sağlar	11	73.33%
	Öğrenmeyi keyifli hale getirir	3	20%
	Çeşitlilik sağlar	2	13.33%

Tablo 10’da görüldüğü üzere öğrenme ve öğretme sürecindeki yararları incelendiğinde 3 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en çok görsel hafızada kalıcılık sağlandığı görülmektedir. Bunu takiben öğrenmeyi keyifli hale getirir ve çeşitlilik sağlar yanıtları gelmektedir. Öğretmenlerle yapılan görüşmeler öğrenme ve öğretme süreçlerinde teknoloji yararlarına ilişkin bazı yorumlar göze çarpmaktadır.

Ö11; *Çocuklar ile sözel olarak veya oyun yolu ile öğrettiğim kavramların müzik veya ekran üzerinde de desteklenmesi sözel ve görsel hafızalarına büyük etki sağladığından daha çabuk kavrayabilmektedirler.*

Tablo 11. Önerileriniz nelerdir?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Öneriler	Aile iş birliği ile evde rastgele kullanımı azaltmak	7	46.67%
	Çocuklara uygun eğitsel kullanım sağlamak	6	40%
	Bilinçli ve sınırlı kullanım sağlamak	5	33.33%

Tablo 11’de görüldüğü üzere öneriler incelendiğinde 3 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında en çok aile iş birliği ile evde rastgele kullanımı azaltmak cevabı verilmiştir. Bunu takiben çocuklara uygun eğitsel kullanım, bilinçli ve sınırlı kullanım sağlamak cevapları

gelmektedir. Öğretmenlerle yapılan görüşmeler sonucunda teknoloji kullanımına yönelik önerilere ilişkin bazı yorumlar göze çarpmaktadır.

Ö1; *‘Teknoloji çağındayız ve çocukları ekrandan uzak tutmak neredeyse imkansız hale gelmiştir, önerim şudur ki; çocukların ekran sürelerinin sınırlandırılması kesinlikle olmalıdır. İzlediği içerikler, kullandıkları programlar ebeveynler tarafından kontrol edilmelidir ve eğitici içeriklere yönlendirmelidirler.’*

Ö14; *Bağımlı çocuklar yerine faydalı çocuklar yetiştirmeliyiz bu yüzden evde boş zaman geçirmesi veya uslu durması için çocuklara telefon veren ailelerle iş birliği kurmak lazım.’*

Tablo 12. Hangi gelişim alanlarını desteklediğini düşünüyorsunuz?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Desteklenen gelişim alanları	Bilişsel gelişim	11	73.33%
	Dil gelişimi	9	60%
	Hepsi	4	26.67%
	Psikomotor gelişim	2	13.33%
	Duygusal gelişim	2	13.33%

Tablo 12’de görüldüğü üzere desteklenen gelişim alanları incelendiğinde 5 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında bilişsel gelişim ve dil gelişimi en çok desteklenen alanlar olmuştur. Bunu takiben hepsi, psikomotor ve duygusal gelişim cevapları verilmiştir. Öğretmenlerin genellikle problem çözme, görsel hafıza ve dikkat geliştirmeye yönelik etkinlikler amaçlı kullandığı görüldüğü için aslında bilişsel gelişime bu yönlerde yararlı olduğu düşünülmektedir. Dil gelişimi açısından yararlarına bakıldığında ise kelime dağarcığını, konuşma becerilerini ve anlam yeteneklerini arttırdığını fark etmiş olabilirler.

Tablo 13. Hangi gelişim alanlarını olumsuz düşünüyorsunuz?

Kategori	Tema	Belirtilme Sıklığı	Yüzde

Olumsuz etkilenen gelişim alanları	Psikomotor gelişim	6	40%
	Sosyal gelişim	6	40%
	Bilişsel gelişim	4	26.67%
	Olumsuz etkilemez	3	20%

Tablo 13’de görüldüğü üzere olumsuz etkilenen gelişim alanları incelendiğinde 4 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında psikomotor ve sosyal gelişim en çok olumsuz etkilenen alanlar olmuştur. Bunu takiben bilişsel gelişim ve olumsuz etkilemez yanıtları verilmiştir. Farklı açıdan bakıldığında ise, teknoloji kullanımı esnasında çocukların yeterince hareket etme fırsatı bulamadığından kaynaklı olduğu düşünülmektedir.

Tablo 14. Çeşitliliğin öğretmen üzerinde değişimi ne olur?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Çeşitliliğin öğretmen üzerindeki değişimleri	Yenilikler sağlar	9	60%
	Pratikliği artırır	6	40%

Tablo 14’de görüldüğü üzere çeşitliliğin öğretmen üzerindeki değişimleri incelendiğinde 2 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında yenilikler sağlar ve pratikliği artırır yanıtları verilmiştir. Çeşitliliğin öğretmen üzerinde değişimi ne olur? sorusunda ise, öğretmenlerden yenilikler sağladığı ve pratikliği arttırdığı şeklinde yorumlar alınmıştır. Gelecekte teknolojinin öğretmen yerine geçebilme durumu ile ilgili istenilen görüşlerde ise 15/13 oranında hayır, öğretmenin yerini tutamaz şeklinde bir yanıt alınmıştır. Öğretmenlere bunun nedeni sorulduğunda ise öğretmenin sadece bir eğiticiden ibaret olmadığını, çocuğa karşı merhamet, sevgi, empati, yaratıcılık, anne şefkati, rehberlik etmek, değer kazandırmak, sosyal ve duygusal alanda oldukça gelişim sağladığı şeklinde yorumlarda bulunmuşlardır. Geçebilir yorumunda bulunan öğretmenlerden 1’i herhangi bir gerekçe sunmazken, 02, şu şekilde ifade etmiştir; *geçebilir, teknoloji çok gelişiyor ve yararlı olursa evde öğretime geçilebilir*

fakat bu çocukların sosyal anlamda gerileme yaşamasına sebep olur.’ Bu yorum ise aslında zorunlu olarak geçilen pandemi sürecindeki çevrimiçi eğitim zamanlarını bizlere hatırlatmış olmaktadır.

Tablo 15. Gelecekte teknoloji öğretmen yerine geçebilir mi?

Kategori	Tema	Belirtilme Sıklığı	Yüzde
Gelecekte teknolojinin öğretmen yerine tutamaz	Hayır, öğretmenin yerini tutamaz	13	86.67%
geçebilme durumu	Evet, öğretmenin yerine geçebilir	2	13.33%

Tablo 15’de görüldüğü üzere gelecekte teknolojinin öğretmen yerine geçebilme durumu incelendiğinde 2 tema elde edilmiştir. Belirtilme sıklığı dikkate alındığında; *hayır öğretmenin yerini tutamaz* en çok verilen yanıt olmuştur. Bunu takiben *evet öğretmenin yerine geçebilir* cevabı verilmiştir.

Öğretmenlerle yapılan görüşmeler sonucunda gelecekte teknolojinin öğretmen yerine geçebilme durumlarına ilişkin bazı yorumlar göze çarpmaktadır.

Ö3; *‘eğitim sadece bilgi aktarmak değil, çocuğa dokunmak, rehberlik etmek, empati kurmak, değer kazandırmak gibi insani boyutları içerir. Bu yönleriyle öğretmenin varlığı vazgeçilmezdir. Teknoloji öğretmeni tamamlar yerine geçemez. Örneğin sosyal, duygusal, ilişkiyi teknoloji kuramaz yani kısacası teknoloji öğretmen önüne geçemez, ama destekler, geliştirir, dönüştürür ama ilerleyen zamanlarda öğretmen ve teknolojinin el ele çalışacağı bir sistem olacaktır.’*

Ö7; *çok hızlı gelişen teknoloji ve bilim dünyası bazen beni korkutuyor. Cihazların donanım ile gelişmesi insanlarda tembelliğe, hazır konma isteğine ve yaratıcı fikirler üretmemelerine sebep olacaktır diye düşünüyorum.*

Tartışma Sonuç ve Öneriler

Araştırmada okul öncesi öğretmenlerinin öğrenme etkinliklerinde teknoloji kullanımı ile ilgili görüşleri incelendiğinde, öğrenme etkinliklerinde teknoloji kullanımında en fazla kullanılan araçların bilgisayar ve projeksiyon olduğu görülmüştür. Araştırma kapsamına alınan kurumlar arasında anlamlı bir farklılaşma görülmemektedir. Öğretmenlerin teknolojiyi sınıf içerisinde ne sıklıkla bu aletleri kullandığına bakılacak olursa da 15/10’unun her gün kullandığı görülmektedir. Ekran süresinin genellikle kaç saat ile sınırlı olduğu bakıldığında ise 1 saatlik bir süre kullanıldığı göze çarpmaktadır. Bunun sadece günde 1 saat olması gerekli bütün kaynaklarda mevcuttur fakat bu kullanım sadece okulda değil, evde de devam ediyorsa bu

ekran süresi okul öncesi dönem çocukların gelişimi açısından risk faktörü taşıdığı düşünülmektedir. Ne kadar etkin kullandığı konusunda alınan görüşlerde ise aslında birçok öğretmenin günlük etkinlikler esnasında kullandığı söylenmektedir. Geriye kalan öğretmenlerin ise açık bir dille çok etkin kullanmadığını yazması da açıkçası teknoloji kullanımının öğretmenler içinde bir nevi bu konuda bilgilendirilmesi gerektiği hakkında bir kanıya varmamızı sağlayabilir. En çok kullanılan etkinliklerin hangileri olduğuna bakıldığında ise Türkçe dil etkinlikleri, müzik dinletmek amaçlı ve sinema etkinliklerinde olduğu görülmüştür. Öğretmenlerin bu aletleri kullanırken dikkat ettikleri noktalar ise şu şekilde sıralanmıştır; ekran süresi, yaş ve gelişim düzeyine uygunluğu, eğitici içerik olması ve ekran görüş mesafesi. Bu konuda ise aslında ekran süresinin büyük önem taşıdığı, gelişimsel ihtiyaçlarına uygun olması ve içerik seçiminin destekleyici unsurda olması çok büyük önem taşımaktadır. Fiziksel açıdan önemli olan görüş mesafesi ise çocukların göz sağlığına da dikkat edilmesi gerektiğini vurgulamaktadır. Bu bağlamda aslında öğretmenler bu kriterlerin çocuklara verebilecek zararlarının farkında olabilecek durumda olduğu dikkat çekmiştir. Teknoloji kullanımı esnasında karşılan sorunlardan en fazla yanıt aldığımız konu ise çocukların ekran kapanınca sorun çıkarmaları olmaktadır, bunun ise aslında çocukların evde bilinçsiz kullanım sonucunda aslında bu aletlere bağımlılık gösterdiğini gözle görülür şekilde ilişkilendirebiliriz. Öğrencilerin ilgi ve dikkat dereceleri sorulduğunda ise ‘çok fazla’ yanıt göze çarpmaktadır. Bunu da yine aslında teknolojiye bağımlı bir nesil yetiştiği konusunda dikkate alabiliriz. Öğrenme ve öğretim süreçlerindeki yararlarına bakıldığında ise öğretmenlerin görsel hafızada kalıcılık sağlaması şeklinde ifade etmeleri, doğru ve etkin bir kullanım sağlandığı takdirde aslında soyut bir kavramı görselleştirme, somutlaştırma ile destekleyerek birçok eğitici kavram ve konu öğretiminde katkı sağlayabildiği görülmüştür. Öneriler arasında da anlamlı bir farklılık görülmemiştir.

Öğretmenlerin görüşlerine ilişkin öneriler

Aile iş birliği ile evde rastgele ve verimsiz kullanmayı azaltmak, çocuklara uygun eğitsel kullanım sağlamak, bilinçli ve sınırlı kullanım sağlamak. Bu yanıtlar doğrultusunda ise aslında teknoloji çağında çocukları ekrandan uzak tutmamamız gerektiğini, doğru yönlendirmeler yapmayı, aile ile iş birliği kurmayı ve belirli sınırlama ölçütlerini dikkate almamız gerektiği vurgulanmaktadır.

Hangi gelişim alanları desteklendiği konusunda bir görüş alındığında ise en çok bilişsel ve dil gelişimi cevapları verildiği görülmektedir. Öğretmenlerin genellikle problem çözme, görsel hafıza ve dikkat geliştirmeye yönelik etkinlikler amaçlı kullandığı görüldüğü için aslında bilişsel gelişime bu yönlerde yararlı olduğu düşünülmektedir. Dil gelişimi açısından yararlarına

bakıldığında ise kelime dağarcığını, konuşma becerilerini ve anlam yeteneklerini arttırdığını fark etmiş olabilirler. Hangi gelişim alanlarını olumsuz etkilediği sorulduğunda ise, psikomotor ve sosyal gelişim cevaplarının belirtilme sıklığı eşit oranlarla verilmiştir. Bu bağlamda ise teknoloji kullanımı esnasında çocukların yeterince hareket etme fırsatı bulamadığından kaynaklı olduğu düşünülmektedir. Sosyal gelişim konusunda ise aslında tam bağımlı bir ekran sunuluyorsa ve çocuklardan geri dönüt alınmadan ve konular yorumlandırılmadan ilerleme kaydediliyorsa çocuklara zarar verici nitelikte olduğu görülmüştür.

Çeşitliliğin öğretmen üzerinde değişimi ne olur? sorusunda ise, öğretmenlerden yenilikler sağladığı ve pratikliği arttırdığı şeklinde yorumlar alınmıştır. Gelecekte teknolojinin öğretmen yerine geçebilme durumu ile ilgili istenilen görüşlerde ise 15/13 oranında hayır, öğretmenin yerini tutamaz şeklinde bir yanıt alınmıştır. Öğretmenlere bunun nedeni sorulduğunda ise öğretmenin sadece bir eğiticiden ibaret olmadığını, çocuğa karşı merhamet, sevgi, empati, yaratıcılık, anne şefkati, rehberlik etmek, değer kazandırmak, sosyal ve duygusal alanda oldukça gelişim sağladığı şeklinde yorumlarda bulunmuşlardır. Geçebilir yorumunda bulunan öğretmenlerden 1'i herhangi bir gerekçe sunmazken, 2, şu şekilde ifade etmiştir; *geçebilir, teknoloji çok gelişiyor ve yararlı olursa evde öğretime geçilebilir fakat bu çocukların sosyal anlamda gerileme yaşamasına sebep olur.* ' Bu yorum ise aslında zorunlu olarak geçilen pandemi sürecindeki çevrimiçi eğitim zamanlarını bizlere hatırlatmış olmaktadır. Bu kısa zaman diliminde ise gelişimsel riskleri beraberinde getirdiği, psikomotor, sosyal, dil ve bilişsel gelişim alanında yetersizlik sağladığı, duygusal açıdan okul ortamının sağladığı güvenli bağlanmadan mahrum kalan çocukların duygusal düzenleme konusunda zorluklar yaşandığı, ekran bağımlılığının ve dikkat dağınıklığının arttığı gözlemlenmiş ve birçok makalede yapılan araştırmalar ile desteklenmiştir. Bu süreçte erken tanı konması gereken çocukların bazıları pandemide yeterince gözlemlenemediği için tanı sayısında da 2022 ve sonrası oldukça artış gözlemlenmiştir.

Çocukların evde teknolojiyi rastgele kullanmalarını engellemek için ailelerle iş birliği yapılmalı, ebeveynler ekran süresi ve içerik seçimi konusunda bilinçlendirilmelidir. Okul ortamında teknolojik araçlar pedagojik amaçlarla, planlı ve sınırlı sürelerde kullanılmalı; ekran süresi çocukların yaş ve gelişim düzeyine uygun olarak belirlenmelidir. Kullanılan içeriklerin eğitici, gelişim alanlarını destekleyici nitelikte olması sağlanmalı, amaca hizmet etmeyen içeriklerden kaçınılmalıdır. Öğretmenlerin teknoloji kullanımına yönelik bilgi ve becerilerini artırmak için hizmet içi eğitimler düzenlenmelidir. Teknolojinin öğretmenin yerini alması değil, öğretim sürecini desteklemesi gerektiği unutulmamalı, öğretmen- teknoloji iş birliği ön plana çıkarılmalıdır. Ayrıca, teknoloji kullanımının çocukların psikomotor ve sosyal gelişimini

olumsuz etkileyebileceği göz önünde bulundurularak, etkinlikler çeşitlendirilmeli ve bu gelişim alanlarını destekleyecek uygulamalara da yer verilmelidir.

Özet

Tek ebeveynli ailelerin ülkemizde karşılaştıkları problemlerin tespiti birçok yönden önem taşımaktadır. Bunun başlıca nedenlerinden biri söz konusu grubun maruz bırakıldığı birçok dezavantajlılığın olmasıdır. Bu araştırmanın amacı, aile kurumunun dönüşümü ile ortaya çıkan tek ebeveynli ailelerde özellikle bekar annelerin karşı karşıya kaldığı sosyoekonomik sorunlara ilişkin yayınlanmış nitel ve nicel çalışmaları incelemektir. Böylece konuya ilişkin genel bir çerçeve çizilmesi ve bütüncül bir bakış açısı geliştirilmesi hedeflenmiştir. Sistematiik alanyazın taraması yöntemi kullanılan çalışmada Türkiye’de yapılan araştırmalar incelenmiştir. Çevrimiçi ortamda Yöktez, Dergipark ve Trdizin veri tabanlarında 01.01.2001-01.01.2024 tarihleri arasında “tek ebeveynli aileler”, “tek ebeveyn anne”, “parçalanmış aile”, “tek ebeveynli”, “yalnız anne” ve “bekar anne” anahtar kelimeleri kullanılarak yapılan taramada 26 çalışma incelenmeye uygun bulunmuştur. Çalışmaların 14’ü makale, 7’si yüksek lisans tezi ve 5’i doktora tezidir. 22 çalışma nitel, 4 çalışma nicel yöntemle yapılmıştır.

İncelenen çalışma sonuçlarına göre, tek ebeveyn olan kadınların en yoğun karşılaştıkları problemler arasında ekonomik yetersizlik, zaman yönetimi zorlukları ve artan bireysel sorumluluklar öne çıkmaktadır. Kadınların çoğunlukla yarı zamanlı, mevsimlik veya geçici işlerde çalıştığı, kamusal istihdam olanaklarına sınırlı erişimin bulunduğunu görülmektedir. Boşanma sonrasında kadınlar, ekonomik yapılarını yeniden inşa etmek durumunda kalmakta; yetersiz nafaka miktarları ve tahsil sürecindeki güçlükler, kadınların maddi haklarına erişimini ciddi şekilde kısıtlamaktadır. Ayrıca, çocuk bakım hizmetlerinin yetersizliği, kadınların işgücüne katılımını engelleyen önemli bir faktör olarak değerlendirilmektedir. Çalışmalar, bekar annelerin yaşam koşullarını iyileştirmeye yönelik ücretsiz ve yaygın gündüz bakım evlerinin artırılması, kadınların istihdamını destekleyici düzenlemelerin hayata geçirilmesi, tek ebeveynli kadınlara yönelik vergi indirimleri, uygun maliyetli konut projeleri ve sosyal güvenlik ağlarının güçlendirilmesi önerilerini sunmaktadır. Ayrıca, bu grubun psikolojik ve

sosyal ihtiyalarını karřılamaya y6nelik psiko-sosyal destek mekanizmalarının yaygınlařtırılması ve toplumsal farkındalık kampanyaları aracılıēıyla tek ebeveynli kadınlara y6nelik ayrımcı tutumların azaltılması gerekliliēi vurgulanmaktadır. Sonu olarak, T6rkiye’de tek ebeveynli aile yapısı ierisinde yařamını s6rd6ren kadınların ciddi sosyoekonomik ve psikolojik zorluklarla m6cadele ettiēi yapılmıř olan alıřmalarda g6r6lmektedir. Bu baēlamda, ok boyutlu ve kapsayıcı sosyal politika yaklařımlarına duyulan ihtiya hem bireysel hem de toplumsal refah aısından kritik bir 6neme sahiptir.

Anahtar Kelimeler: Tek ebeveyn kadın, tek ebeveyn aile, bořanma, sosyal politika.

Problems and Solutions for Single Parent Women in T6rkiye: A Literature Review

Abstract

Identifying the problems faced by single-parent families in our country is significant in many respects. One of the main reasons for this is the numerous disadvantages experienced by this particular group. The aim of this study is to review published qualitative and quantitative research focusing on the socioeconomic problems faced by especially single mothers in single-parent families, which have emerged as a result of the transformation of the family institution. In this way, the study aims to provide a general framework on the subject and to develop a holistic perspective. Using a systematic literature review method, research conducted in Turkey has been examined. A search was conducted in the online databases Y6KTez, Dergipark, and TRDizin using the keywords “single-parent families,” “single mother,” “broken family,” “single-parent,” “lone mother,” and “unmarried mother” within the period from 01.01.2001 to 01.01.2024. As a result, 26 studies were found to be suitable for inclusion. Of these, 14 were articles, 7 were master's theses, and 5 were doctoral dissertations. Twenty-two of the studies used qualitative methods, while four used quantitative methods.

According to the findings of the reviewed studies, the most frequently encountered problems by women who are single parents include economic hardship, time management difficulties, and increased individual responsibilities. It is observed that women are mostly employed in part-time, seasonal, or temporary jobs and have limited access to public employment opportunities. After divorce, women are often required to rebuild their economic structure, and inadequate alimony amounts and difficulties in the collection process severely restrict their access to financial rights. In addition, the insufficiency of childcare services is considered a significant barrier to women's participation in the workforce. The studies offer several policy

recommendations aimed at improving the living conditions of single mothers, such as the expansion of free and widespread daycare centers, the implementation of regulations supporting women's employment, tax reductions for single-parent women, affordable housing projects, and the strengthening of social security networks. Furthermore, the necessity of expanding psycho-social support mechanisms to meet the psychological and social needs of this group and reducing discriminatory attitudes toward single-parent women through public awareness campaigns is emphasized.

In conclusion, the studies show that women living in single-parent family structures in Turkey face serious socioeconomic and psychological challenges. In this context, the need for multidimensional and inclusive social policy approaches is of critical importance for both individual and societal well-being.

Keywords: Single parent woman, single parent family, divorce, social policy.

Giriş

Toplumun temel yapı taşı olan aile, üyelerinin gereksinimlerini karşılayarak insan neslinin devam etmesini sağlayan ana etmendir Anne, baba ve çocuklardan oluşan klasik aile formu farklı sebeplerle değişime uğrayarak zaman içerisinde tek ebeveynli aileye dönüşebilmektedir. Ebeveynlerden biriyle kalan çocuklardan oluşan aile olarak adlandırılan tek ebeveynli ailelerde çocuğun sorumluluğunun anne veya babanın üzerinde olması gereklidir. Eşin hayatını kaybetmesi, boşanma veya ayrı yaşama gibi çeşitli nedenlerle oluşan tek ebeveynli ailelerin en yaygın oluşma nedeninin boşanma olduğu araştırmalarda gözlemlenmektedir.

Evlilik; toplumumuzda kadın ve erkeğin bir nikah ile aile kurmalarının temellerinin atılmasıdır. Fakat ilerleyen zamanda farklı nedenler ile evlilikler bitmektedir ve aileler parçalanmaktadır. Bu tip durumlarda kadınlar ya da erkekler çocuklarına tek başlarına bakarak yaşamlarını sürdürmektedirler. Özellikle ülkemiz gibi ataerkil toplumlarda tek ebeveyn olan kadınların bu durumla başa çıkmaları erkeklere kıyasla daha zorlu bir konumdadır. Geçmişten günümüze kadar kadınlar üzerinde yaratılan baskı, aile kurumu ile meydana getirilmektedir. Bu tür toplumlarda ailede kurulan ataerkil ilişkide erkeklik, kadınlıktan daha üstün olarak belirlenmiştir (Şahin ve Karataş, 2023). Baba ve eş arasındaki bu güç tesliminde, kadının kendi yaşamında bir otorite olmasının önüne engeller koyulmaktadır. Boşanmayla beraber ise aile içinde meydana gelen güç değişimi artık daha çok kamusal alanda kadınların karşısına çıkmaktadır.

Türkiye’de ve dünyanın birçok ülkesinde boşanma davalarında velayetin anneye verilmesi tek ebeveynli ailelerin çoğu zaman anne ve çocuklardan oluşmasına neden olmaktadır. Tek ebeveynli ailelerde ebeveyn eksikliği sebebi ile ailede olan tek ebeveyn, olmayan ebeveynin sorumluluklarını yerine getirmeye çalışmakta, ekonomik, sosyal ve psikolojik olarak daha fazla görev ve sorumluluk almaktadır. Tek ebeveynli ailelerin gün geçtikçe artmasıyla, bu tip ailelerde yaşanan güçlükleri ve problemleri aşmayı ya da etkilerini hafifletmeyi amaçlayan sosyal politika önerilerini içeren araştırmalar da literatür de önemli bir konuma gelmiştir (Demir ve Çelebi, 2017).

Tek ebeveynli ailelere yönelik literatürde birçok araştırma olmasına rağmen tek ebeveyn kadınlara yönelik çalışmalar yeterli sayıda değildir. Özellikle de tek ebeveyn olan kadınların yoksulluğuna yönelik çalışmalara çok sık rastlanmamaktadır. Yoksulluğa yönelik çalışmalarda kadınların daha fazla yoksulluk riski ile karşı karşıya olduğu tespit edilmiş, ancak tek ebeveynli olan kadınlara yönelik olarak ampirik çalışmalara sınırlı olarak rastlanılmıştır. Bu çalışma toplum tarafından ihmal edilen bekar annelerin karşılaştıkları problemleri ve çözüm önerilerini ortaya koymayı amaçlamaktadır. Kadından; annelik görevlerini yerine getirmesi, yaşlı bakımını üstlenmesi, ev işlerini yapması, enformel biçimde çalışması gibi toplumsal cinsiyet rollerinin yaratmış olduğu görevler beklenmektedir. Bu süreçte kadın, sosyal güvencesizliğe ve kötü çalışma koşullarına maruz kalmaktadır. Aynı zamanda “bekar olduğu için”, “boşanmış olduğu için”, “yalnız kadın olduğu” için toplumsal dışlanmaya maruz kalmaktadır (Güngör, 2022).

Bu çalışmanın amacı çalışan yoksul kategorisinde önemli yer tutan ve yeni bir sosyal risk grubu olarak adlandırılan bekar annelerin durumunu ortaya koymak ve çözüm önerisi sunmaktır.

Araştırmanın Problemi

Toplumun, çekirdek aile yapısını ideal olarak görmesi nedeniyle, tek ebeveynli aileler eksik veya “dağılmış” aile yapısı şeklinde değerlendirilmekte ve bu durum söz konusu ailelerin toplum içinde başarısız olarak algılanmasına yol açmaktadır. Kadınların perspektifinden ele alındığında, boşanmış ya da dul kadınlara yönelik toplumsal tepkiler ve yerleşik önyargılar, kadınların utanma, duygusal çöküntü yaşama, acı çekme ve kaygı duyma gibi psikososyal sıkıntılarla karşı karşıya kalmalarına neden olmaktadır. Toplumda “dul” etiketiyle anılan kadınlar, sosyal yaşamdan dışlanmakta ya da kendilerini bilinçli biçimde soyutlamayı tercih etmek zorunda kalmaktadır. Ayrıca bu kadınlar çevreleri tarafından çoğu zaman cinsel bir obje olarak algılanmakta ya da merhamet gösterilmesi gereken bireyler olarak etiketlenmektedir.

Toplumsal cinsiyet rollerinin etkisiyle, bakım sorumluluğunu üstlenen tek ebeveyn konumundaki kadınların, geleneksel aile modelini yeniden oluşturma çabası içine girdikleri ve ailenin otorite figürü olan “baba” rolünün eksikliğini telafi etmeye yönelik stratejiler geliştirdikleri gözlemlenmektedir (Afyonoğlu, 2021). Bu çalışmada, Türkiye’de toplumsal cinsiyet normlarına dayalı aile anlayışının, tek ebeveyn olarak yaşamını sürdüren kadınlar üzerinde sosyal baskı oluşturduğu, bunun bir sonucu olarak stres düzeylerinin arttığı ve toplumun beklentilerine uyum sağlamak adına aile içinde otoriteyi yeniden inşa etme çabalarının ortaya çıktığı gibi meseleler incelenmektedir.

Bununla birlikte, ataerkil yapıya sahip toplumlarda toplumsal cinsiyet eşitsizliklerinin sosyal politika uygulamalarına da yansıdığı görülmektedir. Tek ebeveynli aileler, yeterli düzeyde sosyal destek ve istihdam olanaklarından yararlanamamaları nedeniyle sosyal sistem içerisinde dezavantajlı bir konuma itilmektedir. Nitekim Buz ve Sevin’in (2018) gerçekleştirdiği araştırma, Sosyal ve Ekonomik Destek (SED) programından yararlanan hane yapılarının büyük çoğunluğunu tek ebeveynli ve çoğunlukla annelerden oluşan ailelerin oluşturduğunu ortaya koymaktadır (Afyonoğlu, 2021). Bu bulgu, kadınların çoğunlukla düzenli geliri olmayan işlerde istihdam edildiğini ve çocuk bakım sorumluluklarının yanı sıra, mesleki beceri kazanma ve sürdürülebilir bir meslek edinme konusunda ciddi yapısal engellerle karşı karşıya kaldıklarını göstermektedir.

Araştırmanın Amacı

Bekar annelerin karşılaştıkları problemlerin saptanması bu araştırmanın ana hattını oluşturmaktadır. Ayrıca tek ebeveyn olan kadınların ihtiyaçlarına odaklanan özel politikaların hayata geçirilmesi, bekar annelerin refahının artırılması ve tek ebeveyn kadınlar için politikalarının iyileştirilmesi adına atılabilecek adımların belirlenmesi bu çalışmanın hedeflerini oluşturmaktadır.

Tek başına kalmanın yalnızca ebeveyn ve çocuklarda bıraktığı olumsuz etkilere odaklanmaktan ziyade tek ebeveyne sahip olan ailelerin karşılaştıkları problemlerle baş etmek adına gerekli çözüm yolları üretilmelidir. Çünkü tek ebeveyn kadınların problemleriyle baş edebilmeleri için çözüm üretilmeli ve bu yönde yardım ve destek sağlanması bu kadınların hayat kalitesinin yükselmesine, özgüvene sahip olan kişiler olarak hayatlarına devam etmelerine ve hem sosyal hem de psikolojik yönden önemli miktarda katkı sağlayacaktır.

Bu araştırma, tek ebeveyn olan karşılaştıkları maddi ve manevi zorluklar, çocuk bakımında karşılaşılan zorluklar ve tek ebeveyn olmanın psikolojik etkileri gibi çeşitli engelleri

ortaya çıkarmaktadır. Araştırma, finansal zorluklardan psikolojik ve duygusal sonuçlara kadar bu kadınların karşılaştığı zorluklara dair bir açıklama ortaya koymaktır.

Araştırmanın Soruları

- 1- Türkiye’de tek ebeveynli kadınlar ile ilgili akademik çalışmaların dağılımı nasıldır?
- 2- Türkiye’de tek ebeveynli kadınlar ile ilgili akademik çalışmalarda hangi yöntem kullanılmıştır?
- 3- Türkiye’de tek ebeveynli kadınlar ile ilgili akademik çalışmalarda annelerin meslekleri nedir?
- 4- Türkiye’de tek ebeveynli kadınlar ile ilgili akademik çalışmalarda kullanılan veri toplama araçları hangileridir?
- 5- Türkiye’de tek ebeveynli kadınların karşılaştıkları sorunlar akademik çalışmalarda nasıl ele alınmıştır, çözüm önerileri nelerdir?
- 6- Türkiye’de tek ebeveynli kadınların karşılaştıkları sorunlar sosyal hizmet bakış açısıyla nasıl ele alınmalıdır?

Yöntem

Araştırmanın Modeli

Yapılan bu araştırmada sistematik alanyazın taraması yöntemi kullanılmıştır. Sistematik alanyazın taraması, araştırmada yer alan sorunu çözüme kavuşturmak hedefiyle literatürde yer alan akademik kaynakların detaylı şekilde incelenmesinden sonra, önceden belirlenmiş olan ölçütlere göre filtrelenmesi ve son haliyle çalışmaya dâhil edilen kaynakların analiz edilerek raporlaştırılmasıdır.

Araştırma Örneklemi

Araştırmanın örnekleminin belirlenmesinde; Yöktez, Dergipark ve Trdizin veri tabanlarında tek ebeveynli aileler, tek ebeveyn anne, parçalanmış aile, “tek ebeveynli”, “yalnız anne” ve “bekar anne” anahtar kelimeleri kullanılarak aratılmıştır. Yapılan tarama neticesinde elde edilen araştırmaların kaynakçaları da taranmış ve bu sürecin sonunda 26 çalışma incelenmeye uygun bulunmuştur.

Veri Toplama Süreci

Bu araştırmada incelemeye alınmış olan makale ve tezler araştırmacı tarafından belirlenmiş olan kapsam içi ve kapsam dışı ölçütlere göre değerlendirilmiştir. Gerçekleştirilen bu araştırma için belirlenen kapsam içi ölçütler şu şekildedir;

- Tek ebeveynli ailelere yönelik olması,
- Çalışma grubunu tek ebeveyn olan kadınların oluşturması veya tek ebeveyn bireylere yönelik çözüm önerileri getirmiş olması,
- Araştırma Makalesi veya tez çalışması olması,
- Erişime açık olması.

Gerçekleştirilen bu araştırma için belirlenen kapsam dışı ölçütler şu şekildedir;

- Türkiye dışında yaşayan kadınlar hakkında yapılan çalışmalar,
- Derleme çalışmaları,
- Bildiri raporları,
- Yayın dili Türkçe dışındaki çalışmalar.

Bulgular

Ülkemizde tek ebeveynli kadınlar ile ilgili yapılan çalışmalarda literatürde ‘Tr Dizin, Dergi Park ve Yöktez’ tabanlarında yapılan araştırmalar sonucunda makale ve tez ağırlıklı bilimsel yazıların alanda öne çıktığı görülmektedir.

Alanyazında tek ebeveyn olarak bakım veren kadınlarla ilgili birçok çalışma yapılmıştır. Bu çalışmalarda daha fazla kişiye ulaşabilmek adına nicel araştırma yöntemleri tercih edilirken bu problemlerin detayına inebilmek için nitel araştırma yöntemleri kullanılmıştır. Ancak genel

olarak nitel araştırma yöntemlerinin bu konu bağlamında daha fazla tercih edildiği bu çalışmanın çıktılarından biridir.

Ülkemizde maalesef tek ebeveyn olan annelerin iş hayatına katılmalarında karşılırları ciddi engeller çıkmaktadır. Bu sebeptendir ki yapılan araştırmalarda kadınların büyük çoğunluğunun part time-geçici işlerde çalıştıkları, çok azının kamuda istihdam edildiği, bir kısmının günlük temizlik işlerine gittikleri veyahut mevsimlik olarak çalıştıkları saptanmıştır. Geriye kalan kadınların büyük çoğunluğu ise ev hanımı olarak yaşamlarını sürdürmektedirler.

Ülkemizde tek ebeveynli ailelere yönelik yapılan çalışmalarda birden fazla veri toplama aracı kullanılmıştır. Araştırma konusuna dahil olan 26 çalışmanın veri toplama araçları dağılımı şu şekildedir;

AMAÇLI ÖRNEKLEM	2
ANKET ÇALIŞMASI	3
BETİMSSEL ANALİZ	2
DERİNLEMESİNE GÖRÜŞME	4

DERLEME	2
GENEL TARAMA	2
OLGU BİLİMİ(FENOMONOLOJİ)	3
YARI YAPILANDIRILMIŞ GÖRÜŞME	8

Ülkemizde tek ebeveyn olan kadınların karşılaştıkları en büyük problem ekonomik problemler olarak karşımıza çıkmaktadır. Kadınlar farklı nedenlerle ebeveynlik rollerini yalnız başlarına üstlenmek durumunda kaldıklarında ciddi bir ekonomik yoksunluk ile karşı karşıya kalmaktadırlar.

Tek ebeveyn anneler; genellikle ekonomik zorluklar yaşadıkları hem iş hem de çocuklar ile tek başına ilgilenmek zorunda kalmaları nedeniyle genellikle hayal kırıklığı ve öfke duygusuna sahiptirler. Boşanma sonrasında ise; bireyin ekonomik durumunu yeniden şekillendirmesi ve sosyal destek ağını yeniden örgütlemesi gibi zorluklar ve ihtiyaçlar ön plana çıkmaktadır (Demirel, 2021)

Normal şartlarda karşılaşılan problemlerle baş etmeye çalışan ailelerin tek ebeveynli aile örgütlenmesinde daha da zorlandıkları bilinen bir gerçektir. Bu süreçte daha belirgin hale gelen ve farklılaşan zorluk çocukların bakımı, büyütülmesi ve ihtiyaçlarının karşılanması şeklinde ön plana çıkmaktadır. Genel olarak tek ebeveynlerin karşılaştıkları olası sorunlar: sosyal destek eksikliği, ekonomik, psikolojik, hukuksal ve çocukla ilgili zorluklar olarak sınıflandırılmaktadır.

Tek ebeveyn birey açısından karşılaşılan zorlukların çeşitlendiğini ifade etmek mümkündür. Aile ve Sosyal Hizmetler Bakanlığı'nın, AEP çerçevesinde Tek Ebeveynli Ailelere yönelik yaptığı çalışmada (2018), Tek ebeveyn annelerin karşılaştıkları en önemli zorluklar:

- Maddi sıkıntılar,
- Zamanın yetersizliği,

- Artan rol ve sorumluluklar,

Kadınların iş hayatına katılmalarında ayrımcılığa maruz kalmaları, sosyal dışlanma ile mücadele etmeleri kadınların karşılaştıkları sorunlardandır. Çalışmayan kadınlar için eşleri hayatını kaybettiyse ve sigortası varsa ondan faydalanmaktalar ancak eşlerinin sigortası yoksa bu kez de babalarının (eğer varsa) sigortalarından faydalanma hakları bulunmaktadır. Fakat bu durum için de uygun değilse kendileri ve çocukları sosyal güvenlik sisteminin dışında kalmaktadırlar.

Boşanma durumunda belirlenen nafakaların çok düşük olması ve bu nafakaların tahsilat izlenmesinin yapılmaması çoğu zaman kadınların hakları olan paradan mahrum bırakmaktadır.

Bir diğer ciddi sorun ise tek ebeveyn kadınların ‘kolay kadın’ olarak görülmeleri, çevreleri tarafından rahatsız edilmeleri ve damgalanmaya maruz kalmalarıdır.

Tek ebeveyn olan anneler çocuklarının bakımını tek başlarına üstlenmek durumunda kaldıklarında kendi kariyerlerine öncelik verememekte ve kendilerini gerçekleştirememektedirler.

Tek ebeveyn olan annelerin sosyal hayatın dışına itilmeleri ve boşanma sürecinde olan kadınların bu maliyeti karşılayamamaları karşılaşılan problemlerdir.

Bu tür sorunlara yönelik getirilebilecek çözüm önerilerinin başında tek ebeveyn olan annelerin bakım yükünü hafifletecek çalışmalar yapılması. Gündüzlü ve ücretsiz bakım evi sayısının artırılması. Böylece annelere hayata katılmaları için gerekli zaman sağlanacaktır. Ayrıca kadınların istihdam edilmesine yönelik politikalar gerçekleştirilmelidir. Tek ebeveyn kadınlara için eğitim durumlarına ve ilgi alanlarına yönelik iş alanları oluşturulmalıdır. Böylece kadınların sosyal hayata katılmaları sağlanacak, kendi ayakları üzerinde durmaları için fırsat sunulacak ve gerekli güçlendirmeler yapılmış olacaktır.

Ülkemiz vergiler açısından dünyada yer alan ülkeler arasında en fazla vergi alan devletlerin arasında girmiş durumdadır. Ne var ki zaten geçinmekte zorlanan kadınlar için bir de bu vergiler ile uğraşmak çok zorlayıcıdır. En azından tek ebeveyn anneler için çeşitli vergi indirimlerine gidilmesi onların hayatlarını kolaylaştıracaktır.

Türkiye’de ev fiyatları ve kira fiyatları çok uçuk noktalara ulaşmıştır. Çocuklarına bakım veren kadınlar için bu alanda bir uygulama gerçekleştirilebilir. Kolay ev sahibi olmanın veya kiralarının karşılanması için projeler geliştirilmelidir.

Tek ebeveyn olan kadınların yaşam doyumlarının artırılması, yalnız olmadıklarının fark edilmesi ve tekrar sosyal sistemin içine dahil olmaları için danışma merkezleri kurulmalı ve buralarda bu kişilere uzmanlar tarafından destek verilmelidir.

Tek ebeveynli ailelerin karşılaştığı sosyal ve ekonomik zorluklar, günümüzde giderek artan bir toplumsal mesele haline gelmiştir. Bu bağlamda, sosyal hizmet disiplini, söz konusu aile yapısının ihtiyaçlarına yanıt verebilecek temel meslek alanlarından biri olarak öne çıkmaktadır. Sosyal hizmet uygulamalarında danışan güçlendirme yaklaşımı, bireyin kendi yaşamındaki sorunları en iyi tanıyan ve bu sorunlara yönelik çözüm üretme kapasitesine sahip aktif bir özne olduğu varsayımına dayanmaktadır (Afyonoğlu ve vd, 2021). Bu yaklaşım doğrultusunda, sosyal hizmet uzmanları, tek ebeveynli bireylerin yaşam koşullarına müdahale ederken, onların çözüm önerilerini dikkate almakta ve karşılıklı iş birliği çerçevesinde ilerlemeyi esas almaktadır.

Tek ebeveynli ailelerin gereksinimleri zaman içinde çeşitlenmekte ve karmaşıklaşmaktadır. Yapılan araştırmalar ve mevcut literatür incelendiğinde, bu ailelerin özellikle ekonomik sorunlar noktasında çok boyutlu destek mekanizmalarına ihtiyaç duyduğu görülmektedir. Bu doğrultuda, mevcut ekonomik destek modellerinin kapsamının genişletilmesi, nafaka ve miras gibi hukuki sorunlara yönelik mevzuatın gözden geçirilerek yeniden yapılandırılması gerekmektedir.

Özellikle tek ebeveyn konumundaki annelerin istihdam olanaklarının artırılması, hem kamu sektörü hem de özel sektör düzeyinde geliştirilecek politikalarla desteklenmelidir. Bu kapsamdaki düzenlemeler, kadınların ekonomik bağımsızlıklarını güçlendireceği gibi, toplumsal cinsiyet eşitliği açısından da önemli katkılar sağlayacaktır. Öte yandan, istihdam edilen tek ebeveynlerin çocuk bakımına ilişkin yüklerini hafifletmek amacıyla, kamu kurumları ve özel kuruluşlar tarafından sağlanan ücretsiz kreş ve gündüz bakım hizmetlerinin yaygınlaştırılması büyük önem taşımaktadır. Bu tür hizmetlerin artırılması, hem ebeveynlerin iş gücüne katılımını destekleyecek hem de çocukların erken yaşta güvenli bir gelişim ortamına erişmesini mümkün kılacaktır.

Tek ebeveyn kadınların psiko-sosyal problemlerine yönelik; psiko-sosyal destek hizmetlerinin yaygın hale getirilmesi ve erişilebilir kılınması çok önemlidir. Bu bağlam doğrultusunda aile mahkemelerinde görev yapan sosyal çalışmacıların ailelere yönelik verdikleri eğitimlerin de artırılması gerekmektedir. Yeni oluşan aile sisteminde farklılıkların kabul edilmesi için seminerler düzenlenmeli ve ihtiyacı olan gruplarla grup çalışmaları gerçekleştirilmelidir. Tek ebeveyn olan annelerin özellikle çocuklarının eğitimi hususunda

desteğe ihtiyaç duydukları gözlemlenmiştir. Bu durumda okul sosyal hizmetinin daha yaygın hale getirilerek, disiplinler arası iş birliği ile hem maddi hem de manevi olarak çocukların eğitimi desteklenmelidir.

Tek ebeveyn annelerin maruz kaldığı toplumsal dışlanma ve damgalanma gibi problemlerin ortadan kaldırılmasına yönelik bilinç artırıcı ve savunuculuk çalışmaları gerçekleştirilmesi önerilmektedir.

Tartışma

Türkiye’de tek ebeveyn olarak hayatına devam eden kadınlar hakkında yapılan araştırmalar bizlere; kadınların sosyal, ekonomik, hukuksal ve toplumsal alanlara kadar her alanda ciddi sorunlar ile karşı karşıya kaldıklarını göstermektedir. Hali hazırda iki ebeveyn tarafından çocuklarına verilmesi gereken bakımı tek başlarına üstlenmek durumunda kalan anneler çocuk bakımının yanı sıra hayatta kalabilmek adına bir savaşın içerisine dahil olmaktadır. Bu tür ebeveynlik rollerini yerine getirmeye çalışan kadınlar kendilerini var etme konusunda ve yaşam doyumları konusunda kendilerini ikinci plana atmak durumunda kalmaktadırlar. Ne sebeple olursa olsun tek başlarına çocuklarına bakım veren annelerin iş hayatına katılabilmeleri için çevresi ve devlet politikaları tarafından destek görmeleri elzemdir. Çünkü bu annelerin ekonomik koşullarını daha iyi bir hale getirebilmeleri için maddi destek görmekten çok düzenli bir gelire ihtiyaçları bulunmaktadır. Bu sebeple de çocuklarının bakımları ile devlet desteği ile birlikte yapılmalı ve annelere çalışabilmek adına bir fırsat sunulmalıdır. Bu amaç doğrultusunda sosyal bir devlet olmanın getirdiği sorumluluklar dahilinde tek ebeveyn olan kadınlar için iş olanakları oluşturulmalı ve kendilerine uygun bir çalışma hayatı sosyal politikalar ile sağlanmalıdır. Bu durum öylesine önem arz etmektedir ki yeterli yaşam doyumuna ulaşamayan kadınlar yalnızlaşır ve toplumdan uzaklaşırlar. Bu durumun önüne geçilmelidir. Aksi halde sağlıklı bir aile ortaya çıkmak durumunda kalacaktır.

Parçalanmış aileler genellikle sosyo-ekonomik güçlükler yaşamakta olduğu araştırma neticesinde saptanmıştır. Sosyal hizmet mesleği çerçevesinde olan mikro seviyede müdahale ile tek ebeveyn kadınların zorluk ile karşılaştığı süreçte bu problemlerin üstesinden gelebilmelerini sağlamak için öncelikle ekonomik ihtiyaçlarının karşılanması gereklidir. Bu durum ise makro seviyede bir uygulama ile gerçekleştirilebilir. Aile, Çalışma ve Sosyal Hizmet Bakanlığı tarafından ekonomik olarak güçlük yaşayan ailelere Sosyo-ekonomik Destek (SED) yardımları bağlanmaktadır. Bu desteklerin iyileşmesini sağlamak, bu araştırmanın önerilerdendir (Genç, 2019).

Parçalanmış ailelere yönelik psiko-sosyal hizmetlerin tek bir çatı altında toplanarak, aile sağlığının psiko-sosyal boyutunun göz önünde bulundurulması ve bu hususta verilecek hizmetlerin topluma ulaşılabilirliğini artırma doğrultusunda ilgili proje, politikalar oluşturulabilir ve her ailenin faydalanabileceği bir birim kurulabilir. Şu an Sağlık Bakanlığı projesiyle oluşturulan Sağlıklı Hayat Merkezleri gibi merkezler kurularak ya da bu projede ailelere özel birim oluşturup iyileştirme yapılabilir. Bu birimlerde ailelerin ihtiyaçları belirlenerek, kendi kararını alması konusunda yardımcı olunabilir, aile üyelerinin kapasite ve güçlü yönleri vurgulanarak güçlenmelerine destek olunabilir, grup çalışmaları yapılarak aile üyeleri ilişkisi hususlarında aile üyelerinin farkındalık kazanmaları sağlanabilir, bölgedeki okul ve rehberlik araştırma merkezleri, yerel yönetimler ile iş birliği halinde çalışılarak ailelerin gereksinimleri tespit edilebilir ve çözüm yolları bulunabilir (Genç, 2019).

Sonuç

Türk toplumunda tek ebeveyn olan kadınların tek başlarına kaldıklarında erkeklerle eşit haklara sahip olmadığı ve eşit koşullarda yaşamadığı bir gerçektir. Bu eşitsizlik kadın ve erkek arasındaki fiziksel farklılıktan değil de tamamen toplumun yalnız kalan kadınlara yönelik algısı nedeniyle meydana gelmektedir. Yalnız kalan annenin statüsü, eğitimi ve ekonomik durumu ne olursa olsun toplumumuzda ne yazık ki kadına bakış açısı her zaman cinsiyet endeksli olmuştur.

Ülkemizde son zamanlarda yer edinen ve kullanılmaya başlanan “Tek Ebeveyn” sözcüğü, toplumsal yaşam eşitsizliğinin bir örneğidir. Tek başlarına bakım veren kadınlar hayatlarında yeni bir ilişki ve bu ilişkilerde denge şekillerini, zor ve çalkantılı bir süreç geçirerek toplumsal alanda yer almaya başlıyor. Boşanma ya da vefat sonrası yaşanan maddi ve sosyal statü kaybı, kadınları iş hayatının içine sürüklemekte ve iş hayatında takdir edilen bir personel olma, beğenilme gibi duyguların yalnız kalan kadınlarda özgüven, özsaygı ve motive olma seviyelerini artırmaktadır. Toplumun boşanmış kadınlarla empati kurması ve onların problemlerine karşı duyarlı hale gelmesi ile tek ebeveyn kadınların yaşadıkları sosyal dışlanma ve ayrımcılık azalacaktır (Karaca, 2019).

Tek ebeveynli ailelerin ülkemizde karşılaştıkları problemlerin tespiti birçok yönden önem taşımaktadır. Bunun başlıca nedenlerinden biri söz konusu grubun maruz bırakıldığı birçok dezavantajlılığın olmasıdır. Evliliğin toplumsal bir norm olduğu Türkiye’de, boşanmaya yönelik olumsuz bakış açısı ve baskılayıcı bir tavır olduğu yadsınamaz bir gerçektir. Ülkemizde her ne kadar kadınların yaptıkları evlilikler (kendi tercihleri ile yapılan evlilikler) geçmişe göre değişim göre değişim göstermiş olsa da evlilik birliği içinde kadının yeri hala kırılgandır.

İstenmeyen evliliklere maruz kalma ya da istenmeyen evliliğin devam ettirilmesi yönündeki baskıların devam ettiği bilinmektedir (Gönülaçan, 2022).

Bu araştırmanın sonucu bizlere; tek ebeveyn olan kadınların çektikleri sıkıntılarının çoğu zaman benzer olduğunu ve bunlara yönelik çözüm politikalarının var olduğunu göstermiştir. Ancak burada özellikle Aile ve Sosyal Hizmetler Bakanlığı'na büyük sorumluluk düşmektedir. Sosyal hizmet mesleğinin ana kavramlarından olan fırsat eşitliği ilkesi ile tek ebeveyn annelerin bakım yükümlülükleri hafifletilmeli, iş olanakları sağlanmalı ve gereksinimleri karşılanmalıdır.

 zet

Bu  alışma derleme t r nde olup, kanser hastalarının iyi oluş d zeyini artıran fakt rler ele alınarak farkındalık kazandırmayı ama lamaktadır. Literat r taraması kapsamında PubMed, Scopus ve Google Scholar veri tabanlarında 2015–2024 yılları arasında yayımlanmış a ık eriřimli, klinik, randomize kontroll  ve sistematik derleme  alışmalarına ulařılmıştır. Kanser, bireyin fiziksel saėlıėının yanı sıra ruhsal, sosyal ve manevi alanlarda da ciddi etkilere neden olan bir hastalıktır. Yapılan  alışmalarda, hastaların sosyal destek sistemlerinin g  lendirilmesinin, psikolojik danıřmanlık hizmetleriyle ruhsal y k n azaltılmasının, semptom y netimi ile g nl k yaşam kalitesinin artırılmasının  nemli olduėu bulunmuřtur. Ayrıca, saėlık personelinin empati temelli iletiřimi, hasta merkezli bakım anlayıřı ve multidisipliner yaklařımın, hastaların s rece uyum saėlamasında ve tedaviye aktif katılım g stermesinde etkili olduėu saptanmıştır. Mindfulness temelli uygulamalar, egzersiz programları, manevi destek yaklařımları ve gevřeme teknikleri gibi tamamlayıcı y ntemlerin, hastaların stres, kaygı ve depresyon gibi olumsuz duygularla bařa  ıkmalarına yardımcı olduėu g r lm řt r. Bu uygulamalar, bireyin iyi oluş d zeyine katkıda bulunmaktadır. Sonu  olarak, kanser hastalarının yalnızca fiziksel a ıdan deėil; psikososyal, manevi ve duygusal y nlerden de desteklenmeleri gerekmektedir. İyi oluş d zeyini artırmaya y nelik b t nc l yaklařımların saėlık hizmetleri kapsamında yer alması, bireyin yaşam kalitesini y kselterek, hastalıkla bař etme g c n  artıracaktır. Bu doėrultuda saėlık profesyonellerinin iyi oluşu destekleyen kanıta dayalı yaklařımları klinik uygulamalarda kullanması b y k  nem tařımaktadır.

Anahtar Kelimeler: Kanser, İyi Oluş, Psikososyal Destek, Yaşam Kalitesi

Factors Enhancing the Well-Being of Cancer Patients and Their Impact on Quality of Life

Abstract

This study is a review and aims to raise awareness by addressing the factors that enhance the well-being of cancer patients. Within the scope of the literature review, open-access, clinical, randomized controlled, and systematic review studies published between 2015 and 2024 were accessed through the PubMed, Scopus, and Google Scholar databases. Cancer is a disease that significantly affects not only the physical health of an individual but also their mental, social, and spiritual well-being. Studies have found that strengthening patients' social support systems, reducing emotional burden through psychological counseling services, and improving quality of daily life through symptom management are important. Additionally, it has been identified that empathy-based communication by healthcare personnel, a patient-centered care approach, and a multidisciplinary approach are effective in helping patients adapt to the process and actively participate in treatment. Complementary methods such as mindfulness-based practices, exercise programs, spiritual support approaches, and relaxation techniques have been shown to help patients cope with negative emotions such as stress, anxiety, and depression. These practices contribute to the individual's level of well-being. As a result, cancer patients need to be supported not only physically but also psychosocially, spiritually, and emotionally. The inclusion of holistic approaches aimed at increasing well-being within healthcare services will improve the individual's quality of life and enhance their ability to cope with the disease. In this regard, it is of great importance for healthcare professionals to use evidence-based approaches that support well-being in clinical practice.

Keywords: Cancer, Well-being, Psychosocial Support, Quality of Life

Giriş

Kanser, vücuttaki bazı hücrelerin kontrolsüz bir şekilde çoğalarak vücudun diğer bölgelerine yayılması ile oluşan bir hastalıktır (Dünya Sağlık Örgütü [DSÖ], 2025). Global Cancer Observatory (GLOBOCAN) verilerine göre; 2022' de 19.9 milyon yeni kanser vakası ve 9.7 milyon kanser ölümü meydana gelmiştir (Bray, 2024; DSÖ, 2025). Türkiye' de 2020 yılında her 4 kişiden 1' inin kanser olduğu ve kanserin ölüm nedenleri arasında ikinci sırada yer aldığı görülmektedir (Türkiye İstatistik Kurumu [TÜİK], 2023; Türkiye Kanser İstatistikleri, 2025). Bu nedenle kanser dünya çapında önde gelen ölüm nedenlerinden birisi olmuştur. Kuzey Kıbrıs' da ise Sağlık Bakanlığı Kanser Kayıt Projesi verilerine göre; 2012- 2016 yılları arasında 3663 yeni tanı almış kanser vakalarının olduğu görülmektedir.

İyi oluş, psikolojide farklı yönler açısından ele alınan bir kavramdır (Bernay vd., 2016). Felsefi kullanımı, bir kişinin yaşamının onun açısından ne kadar iyi olduğu fikrine dayanmaktadır. Bir kişinin iyi oluşu, onun için “iyi olan” her şeydir. İyi oluş sağlıkla ilgili konularda genellikle bireyin “iyi olma hali” yani olumlu yanları, tatmini, mutluluğu, iyi zihinsel ve fiziksel sağlığı ile ilişkilendirilmektedir (Crisp, 2001; Bernay vd., 2016). Kanser hastalarının iyi oluş ve yaşam kalitelerini arttırmak için; onkolojik rehabilitasyon ile kanser hastaları bütüncül yaklaşımla ele alınmalıdır (Genç vd., 2018; Piraux vd., 2020). Bu makale derleme türünde hazırlanmış olup; kanser hastalarının iyi oluş düzeyini artıran faktörler ele alınarak farkındalık kazandırmayı amaçlamaktadır.

İyi oluş düzeyi ve yaşam kalitesini arttıran faktörler

İnsan bedenden ve ruhtan oluşan bir varlıktır. Hasta hastaneye yattığı andan itibaren sağlık hizmetlerinde hem beden hem de ruhun desteklendiği bütüncül bir sağlık hizmeti almaya gereksinim duymaktadır (Kumaş, 2024). Onkolojik rehabilitasyon ile kanser hastaları bütüncül yaklaşımla ele alınarak fiziksel ve biyopsikososyal yönleri olumlu yönde geliştirilerek hastaların yaşam kaliteleri artırılmaktadır (Piroux vd., 2020). Onkolojik rehabilitasyon ile kanser tedavi sürecinde ve kanser sonrası dönemde semptomları (ağrı, bulantı, depresyon, uyku sorunları gibi) azaltmak, iyi oluş düzeyi ile yaşam kalitesini arttırmak için farmakolojik yöntemler ve nonfarmakolojik yöntemlere yer verilmektedir. Kanser hastalarında semptomların yönetiminde en çok kullanılan non farmakolojik yöntemler egzersiz, deri stimülasyonu (transkutan elektriksel sinir stimülasyonu-TENS), sıcak veya soğuk uygulama, masaj, akupunktur, refleksoloji gibi fiziksel metotlar; gevşeme egzersizleri, hayal kurma, dikkati başka yöne çekme, müzikterapi, aromaterapi gibi bilişsel- davranışlar ve zihin-beden terapi teknikleridir (Beyliklioğlu ve Arslan, 2018; Birling vd., 2021; Çoban ve Binici, 2023; Genç vd., 2018; Kim vd., 2022; Matis vd., 2020; Piraux vd., 2020; Tarrasch vd., 2018; Uysal vd., 2017; Xiao vd., 2018; Zhang vd., 2022;)

Onkolojik rehabilitasyonun en önemli adımlarından birisi egzersizdir (Piroux vd., 2020). Herhangi bir miktarda fiziksel aktivite ve egzersiz yapmak, tüm yaşlarda ve tüm yetenek düzeylerindeki insanlar için yararı bulunmaktadır (Bull, 2020). Egzersiz, kanser hastalarında ve kanserden kurtulanlarda ağrı, yorgunluk, yaşam kalitesi, kardiyopulmoner fonksiyon, kas kütlesi ve gücü ile psikolojik durumun iyileşmesine katkı sağlayan en önemli müdahalelerden birisidir. Hastaların gereksinimleri, tercihleri, fiziksel ve psikolojik durumları göz önünde bulundurularak egzersize yönlendirilmeleri önemlidir (Piroux vd., 2020). Egzersiz hastaların yorgunluk ve stres düzeylerini azaltarak uyku, fiziksel fonksiyon ve ruh hali üzerinde olumlu

etkileri olduđu; yaşam kalitesini arttırdığı ve sadece fiziksel değil, psikolojik olarak da olumlu etkisi olduđu bir çok çalışmayla kanıtlanmıştır. Bu doğrultuda egzersiz yapan hastalarda semptom şiddeti azalmakta ve iyilik hali ile yaşam kalitesi artmaktadır. (Bull, 2020; Piraux vd., 2020).

TENS uygulamasının kanser tedavisi sırasında, kanseri tedavi edici etkisi yoktur. TENS uygulaması kapı kontrol teorisine etki ederek ağrıyı azaltmakta ve vücutta endorfini uyarak ağrı kesici etki yapmaktadır (Çoban ve Binici, 2023). Kolorektal kanser tanısı alan hastalarla yapılan bir çalışmada; ayak refleksolojisinin hastaların ağrı düzeyini azalttığı ve yaşam kalitesini olumlu yönde etkilediği görülmüştür (Uysal vd., 2017). Radyasyon tedavisi alan meme kanserli hastalarda, tedavinin sonlanmasının ardından 4 hafta boyunca refleksoloji uygulandığında uygulanmayan kontrol grubuna göre yorgunluk düzeylerinin azaldığı, uyku ve yaşam kalitesinde anlamlı bir artış kanıtlanmıştır (Tarrasch vd., 2018). Akupunktur uygulamasının ise kanser hastalarında uyku sorunları çözümünde olumlu etkileri olduđu ve uyku kalitesini arttırdığı; stres, anksiyete ve yorgunluk gibi problemleri azalttığı görülmüştür (Cruz vd. 2024; Zhang vd., 2022).

Meme kanserli hastalar üzerinde yapılan bir çalışmada uygulanan aromaterapi ve müzik tedavisinin strese duyarlılığı, kaygıyı ve ağrıyı azalttığı; meme kanserli kadınlar ile yapılan farklı bir çalışmada ise meme cerrahisi öncesi kullanılan lavanta yağının hastaların anksiyete düzeylerini azalttığı saptanmıştır (Beyliklioğlu ve Arslan, 2018; Xiao vd., 2018). Crosby ve arkadaşları (2018)'nın meme kanserli hastalar üzerinde yaptığı aromaterapi uygulaması duygusal işlevsellik, yorgunluk ve depresyon iyileşmesini olumlu yönde arttırmıştır. Fiziksel uygulamaların yanı sıra hastaların psikolojik sağlığını iyileştirmeye yönelik, zihin-beden terapilerinin kullanımı da yaygın olarak görülmektedir. Zihin- beden terapileri; mindfulness, nefes egzersizleri ve gevşeme egzersizlerini uygulamalarını içermektedir. Bu egzersizler yoga, qi gong ve tai chi gibi geleneksel uygulamaları ve mindfulness temelli stres azaltma eğitimi, progresif kas gevşeme egzersizleri gibi modern terapileri içerir (Birling vd., 2021). Zihin-beden terapileri genel olarak vücutta kortizol salınımını azaltarak otonom sinir sisteminin dengelenmesini sağlamaktadır (Matis vd., 2020). Bu terapiler kanser hastalarında uyku kalitesini iyileştirebilir fakat bu terapilerin uykusuzluğa eşlik eden depresyon, anksiyete gibi psikolojik problem yaşayan kanser hastalarında etkililiğini anlamak amacıyla daha fazla çalışmaya ihtiyaç vardır (Birling vd., 2021). Mindfulness egzersizlerinin kanser hastalarında uykusuzluk semptomlarını azalttığını bildiren çalışmalar mevcuttur (Kim vd., 2022).

Ayrıca kanser hastalarında tanı aldıkları andan itibaren bilinmezlik, bilgi eksikliği gibi nedenlerden dolayı psikolojik problemleri artar. Hastaların spiritüel iyi oluş düzeyleri arttıkça, psikolojik dayanıklılık düzeylerinin de arttığı görülmektedir. Manevi değerlere yönelen kanser hastaların spiritüel iyi oluşlarının daha yüksek olabileceği düşünülmektedir (Ölmez ve Karadağ, 2022). Cici ve arkadaşları (2025)' nın çalışmasında spiritüel iyi oluş düzeylerinin yüksek olduğu belirlenen hastaların manevi iyilik hali arttıkça kan basıncı ve solunum hızının azaldığı saptanmış ancak ağrıyla bir ilişki bulunmamıştır. İnal ve Gürsu (2018)' nun araştırmasında ise; kanser hastaları süreçle baş etmede dini ve maneviyatın ilk sıralarda yer aldığını belirtmişlerdir. Kanser ile başa çıkmada kullanılan dini referanslar arasında; dua etmek, Kur'an okumak, tevekkül, rıza, Allah' a sığınmak gibi dini yöntemlere başvurdıklarını söylemişler; sosyal çevreden ve manevi danışmandan destek aldıkları görülmüştür. Bu çalışmada kanser hastalarının çoğu manevi inancın iyileşmelerine yardımcı olabileceği inancına sahiptir. Kanser hastalarında bütüncül bakımında önem taşıyan manevi değerlerle ilgili uygulamaların artırılması önemlidir.

Sonuç ve Öneriler

Sonuç olarak; onkolojik rehabilitasyon ile bütüncül destek sağlanarak, kanser hastalarının yalnızca fiziksel açıdan değil; psikososyal, manevi ve duygusal yönlerden de desteklenmeleri gerekmektedir. İyi oluş düzeyini artırmaya yönelik bütüncül yaklaşımların sağlık hizmetleri kapsamında yer alması, bireyin yaşam kalitesini yükselterek, hastalıkla baş etme gücünü artıracaktır. Bu doğrultuda sağlık profesyonellerinin iyi oluşu destekleyen kanıta dayalı yaklaşımları, klinik uygulamalarda hasta bakımı ve hasta yakınlarına destek sırasında kullanması büyük önem taşımaktadır.

Kanser hastalarında, kanser tedavi süreci ve kanseri atlattıktan sonra sağkalımı arttırmak ve mortaliteyi azaltmak; semptomları en yüksek fayda ile yönetebilmek; hasta yakınlarında süreçte olumlu etkisini arttırmak; yaşam kalitesi ve iyi oluş düzeylerini arttırmak için onkolojik rehabilitasyon yaklaşımının kanser hastalarıyla ilgilenen sağlık profesyonelleri tarafından uygulanması önerilir.

Özet

Küreselleşme ile birlikte yükseköğretim kurumlarında yabancı öğrenci sayısı her geçen gün artmaktadır. Yeni bir kültüre, dile ve eğitim sistemine uyum süreci, yabancı öğrencilerde akademik başarı kadar psikolojik ve sosyal iyi oluş üzerinde önemli etkiler yaratmaktadır. Bu çalışma, yabancı öğrencilerin okul yaşamında iyi oluş düzeylerini etkileyen bireysel, akademik, sosyal ve çevresel faktörleri ele almıştır. Literatür taranarak, 2015–2024 yılları arasında PubMed, Scopus ve Google Scholar veri tabanlarında yayımlanan çalışmalara ulaşılmıştır. Bulgular, yabancı öğrencilerin iyi oluşunu etkileyen faktörlerin; dil yeterliliği, kültürel uyum, sosyal destek, ayrımcılık deneyimleri, akademik stres, ekonomik kaygılar ve barınma koşulları olduğunu göstermektedir. Ayrıca, üniversite ortamında kültürel kapsayıcılığın sağlanması, danışmanlık hizmetlerine erişim, arkadaşlık ilişkilerinin desteklenmesi ve anlamlı sosyal katılım fırsatları, öğrencilerin psikolojik sağlamlıklarını güçlendirip okul yaşamından doyum almalarını artırmaktadır. Araştırmalarda, sosyal izolasyon ve yalnızlık yaşayan öğrencilerde depresyon, anksiyete ve akademik başarısızlık riskinin daha yüksek olduğu görülmüştür. Buna karşın, üniversite yönetimleri ve akademik danışmanlar tarafından sunulan psikolojik danışmanlık, kültürlerarası etkileşim programları ve öğrenci kulüpleri gibi destekleyici yapılar, öğrencilerin uyum süreçlerini kolaylaştırıp iyi oluşlarını artırmaktadır. Sonuç olarak, yabancı öğrencilerin iyi oluş düzeylerinin yükseltilmesi, kurumsal bir sorumluluk olarak ele alınmalı; çok boyutlu destek mekanizmaları oluşturulmalıdır. Bu bağlamda, hem akademik hem de psiko-sosyal destek sistemlerinin bütüncül olarak güçlendirilmesi önerilmektedir.

Anahtar Sözcükler: İyi Oluş, Okul Yaşamı, Sosyal Destek, Uyum, Yabancı Uyruklu Öğrenci

Abstract

With globalization, the number of international students in higher education institutions continues to increase steadily. The process of adapting to a new culture, language, and educational system significantly affects international students' psychological and social well-

being, as well as their academic success. This study explores the individual, academic, social, and environmental factors that influence international students' well-being within the context of school life. A comprehensive literature review was conducted, focusing on studies published between 2015 and 2024 in the PubMed, Scopus, and Google Scholar databases. The findings indicate that key factors influencing the well-being of international students include language proficiency, cultural adaptation, social support, experiences of discrimination, academic stress, financial concerns, and housing conditions. Moreover, ensuring cultural inclusivity within university settings, access to counseling services, support for peer relationships, and opportunities for meaningful social engagement contribute to enhanced psychological resilience and greater satisfaction with university life. Research shows that students experiencing social isolation and loneliness are at higher risk for depression, anxiety, and academic failure. Conversely, supportive structures such as psychological counseling, intercultural exchange programs, and student clubs—offered by university administrations and academic advisors—facilitate the adaptation process and improve students' overall well-being. In conclusion, enhancing the well-being of international students should be addressed as an institutional responsibility. It is essential to establish multidimensional support mechanisms. In this regard, it is recommended that both academic and psychosocial support systems be strengthened holistically and comprehensively.

Keywords: Well-being, School Life, Social Support, Adaptation, International Students.

Giriş

Ekonomik ve kültürel küreselleşmeyle eş zamanlı olarak, yurtdışında eğitim fırsatları, eğitim fırsatları arayan üniversite öğrencileri için giderek daha çekici hale gelmiştir. Ve bu durum çeşitli ülkelerde yabancı uyruklu öğrencilerin sayısının artmasına neden olmuştur (Mardaliyeva,2022). Küreselleşmenin eğitim alanında gerçekleştirdiği değişimin sonucu uluslararası öğrenci dolaşımının boyutları artmıştır. Uluslararası öğrencilerin gittikleri ülke ekonomilerine sağladıkları katkılar yanında sağladığı prestij ve sermayeyi oluşturan taraf olmanın sağladığı sosyokültürel avantajlar da dolayısıyla tüm ülkeleri bu gelişmeden pay alma çabası içerisine girmesine neden olmuştur (Yardımcıoğlu,2017). Yılmaz vd.(2021) yapmış olduğu çalışma; 1975-2000 yılları arasındaki 25 yılda 1,3 milyon artış gösteren uluslararası öğrenci sayısı 2000 yılından sonra neredeyse beş yılda bir milyon artmıştır. 2005 yılında üç milyon olan uluslararası öğrenci sayısı 2012 yılında 4,5 milyona ulaşmıştır.

Şekil 1. Yükseköğretimde uluslararasılaşmadaki büyüme (1975-2012, milyon). Paris OECD kaynağından uyarlanmıştır.

KKTC uyruklu öğrenci sayısı, 2018-2019 döneminde 12 bin 508, 2019-2020 döneminde 12 bin 255, 2020-2021 döneminde 13 bin 427, 2021-2022 döneminde 13 bin 914 olarak kayıtlara geçti. TC uyruklu öğrenci sayısı, 2018-2019 döneminde 54 bin 875 iken, 2019-2020 döneminde bu sayı 50 bin 274'e, 2020-2021 döneminde 46 bin 561'e, 2021-2022 döneminde de 43 bin 101'e düştü. Buna karşın 2018-2019 döneminde 35 bin 318 olan yabancı uyruklu öğrenci sayısı, 2019-2020 döneminde 41 bin 349'a, 2020-2021 döneminde 43 bin 120'ye, 2021-2022 döneminde ise 51 bin 280'e yükseldi (KKTC Milli Eğitim Bakanlığı, 2023).

Yabancı uyruklu öğrencilerin Ülke tercihlerini etkileyen faktörleri araştıran bir çok çalışma bulunmaktadır. Yılmaz G., & Güçlü N., (2021)'in yapmış olduğu çalışmada öğrencilerin ülke tercihlemesi sırasında ülkenin yükseköğretiminin yüksek kaliteli ünü, kurumun uluslararası ünü, sıralamalarda üstlerde yer alma, İngilizceyi İngilizce konuşan ülkede geliştirme, uluslararası iş piyasasında artan beklentilere önem veriklerini saptamış, Phang(2023)'ün çalışmasında ise iletişimin kalitesi, online kanallar (websitesi, e-mail), öğrenim görülecek yerin çekiciliği (kurumsal imaj, istenilen program/kurs, dil, uluslararası çevre ve maliyet bileşenini içeriyor), sosyal faktörler(aile, arkadaş ve akademik ağ, okuyan öğrencilerin deneyimleri), eğitimin kalitesi öğrenci tercih sıralamasında yer almıştır. Ger A.M. vd. (2017) araştırmasında tercih yapılan öncelik sıralaması içerisinde öğrencilerin hayat tecrübesini arttıran ülkeleri, ülkenin saygınlığı, ülkedeki refah ve güvenliği, eğitim masraflarını, öğrenci vizesi kolaylığı ve mezun olunca iş bulma kolaylığının yer aldığını belirtmiştir.

James-MacEachern, M. ve Yun, D. (2017)'ün yaptığı çalışmada duygusal değerler, imaj, akademik olmayan yönler, motivasyon ve empati gibi geniş bir bakış açısı da öğrencilerin seçimini etkileyen faktörler içerisinde yer aldığından bahsetmiştir. Li(2020)'nin 44 öğrenci üzerinde yaptığı çalışmada ise öğrenci tercihlerini etkileyen faktörleri kişisel nedenler, kurum imajı, programın değerlendirmesi ve şehir etkisi olmak üzere 4 başlık altında toplamıştır.

Üniversite hayatı, farklı alanlarda çaba gerektirdiği için öğrenciler için zorlu bir dönemdir. Bu çabalar, üniversitedeki akademik ve sosyal hayata entegrasyon, yeni kazanılan özgürlüklerle başa çıkma, daha bireyselleşme ve erkek ve kadın akranlarla sosyal ilişkiler kurmayı içerir. Yüksek öğrenim aynı zamanda kültürel adaptasyonun yaşandığı bir zaman dilimidir(Yılmaz vd, 2020 ; chen X. vd, 2017). Çalışma, yabancı öğrencilerin okul yaşamında iyi oluş düzeylerini etkileyen bireysel, akademik, sosyal ve çevresel faktörleri ele alan, bu konuda farkında yaratmak amacıyla derleme olarak yazılmıştır. Çalışmada, yabancı öğrencilerin okul yaşamında iyi oluş düzeylerini etkileyen bireysel, akademik, sosyal ve çevresel faktörlerin incelenmesi amaçlanmıştır. Çalışma verileri literatür taraması ile elde edilmiş olup, çalışma derleme niteliğindedir.

İyi Oluş

İnsanların iyi olma düzeylerini psikolojik açıdan ele alan iyi oluş kavramı; psikolojik olarak işlevselliğin olması, yaşamdan doyum alınması, mutluluk duyulması, yetenek ve potansiyellerini geliştirebilmek adına yaşam amaçlarına sahip olunması şeklinde tanımlanmaktadır(Turgut ,2020). Freire vd.(2016)’nin iyi oluş üzerine yaptığı çalışmada; iyi oluşu destekleyen başa çıkış stratejilerinin belirlenmesinin iyi oluşu desteklerken, iyi oluş düşeyinin cinsiyet farklılığında farklılık içermediğini göstererek, iyi oluşun daha çok iç strateji ve planlama ile desteklendiğini saptamıştır. İyi oluş bileşenleri, kişilik yapısı, yaşam şartlarındaki dışsal değişimler, baş etme teknikleri gibi çeşitli faktörlerin bileşimine bağlıdır. Yaşamın bir yönü ve anlamı olduğunu dile getiren kişilerin, optimal düzeyde yaşam doyumunu olan bireyler oldukları söylenmektedir(Şahin, 2019).

Yabancı Öğrencilerin Karşılaştığı Sorunlar

Nkoko(2016) yaptığı çalışmada uyum sürecinde eğitim veren ve eğitim alanın ayrı kültürlerle sahip olmasının ve farklı dil kullanımının iletişim kopukluğuna neden olduğunu ve bunun da uyum sürecini olumsuz etkilediğini bulmuştur(Nkoko,2016).

Araştırmalara göre uluslararası öğrenciler, kültürel ve iletişimsel problemler, sosyal destek yoksunluğu, dil bariyerleri, akademik sorunlar, finansal, psikolojik, sosyal izolasyon ve sağlık gibi çeşitli konularda zorluklarla karşı karşıya kalmaktadırlar (Topal ve Tauscher, 2020).

Wu vd.(2015), nitel çalışmasında birçok uluslararası öğrenci kendi ülkeleri dışında yüksek öğrenimlerine devam ederken farklı yiyecekler, alışılmadık yaşam koşulları, mali sorunlar, iş dengesi, çalışma programları, öğrenme stilleri veya dil, kültür ve kişisel engellerle ilgili zorluklar gibi engellerle karşılaştıklarını belirtmiştir.

Mesidor ve Sly (2015), öğrencilere bu noktada özellikle akademisyenlerin ve politika yapıcıların desteğinin çok önemli olduğundan bahsetmiştir. Özellikle öğrencilerin beş alanda

uyum sorunları yaşadığını belirtmiştir; fiziksel sağlık, akademik, mesleki ve kişisel/sosyal alanlar. Dil engelleri, mevcut kaynaklara aşına olamama ve bu kaynaklara nasıl ulaşılacağı, yerleşik bir sosyal destek sisteminin ve/ veya sosyal ağın eksikliği bu alanlarda yaşanan sorunları daha da kötüleştirdiğini belirtmiştir.

İyi Oluş Düzeyini Etkileyen Faktörler

Topal ve arkadaşları yaptığı çalışmasında iyi oluş düzeylerini etkileyen faktörleri; Akademik, Sosyal ilişkiler ve Duygusal olmak üzere üç grupta toplamıştır(Topal ve Tauscher, 2020).

Yapılan birçok araştırma göstermiştir ki hem akademik hem sosyal hayatta yaşanan dil ve iletişim bariyerleri düşük dil yeterliliğine sahip uluslararası öğrenciler için önemli bir stres nedenidir. Eğitim aldığı ülke ile aynı konuşma diline sahip olmayan öğrencilerin akademik eğitimlerinin zorlu olduğu yapılan çalışmalarda görülmüştür (Nkoko,2016).

Sosyal ilişkiler ve destek, dil, kültür, ırk/renk, siyaset ve eğitim sistemindeki farklılıklar, aile özlemi ve ayrımcılığa maruz kalma ve bunun sosyal yaşam üzerindeki etkisi, sosyal uyumu olumsuz etkileyen belirgin faktörlerdir. Demiral Yılmaz ve arkadaşlarının yaptığı çalışmada öğrenciler sosyal aktivitelere katılmak istediklerini ancak akademik başarısızlık veya burs kaybetme korkusu nedeniyle aktivitelere katılmak yerine ders çalışmayı seçtiklerini bildirilmiştir(Demiral Yılmaz vd., 2020). Ayrıca uluslararası öğrenciler ile yapılan çalışmada, uluslararası öğrencilerin genel olarak duyguları ele almada zorluk çektiklerini ortaya çıkmıştır. Akademik ve sosyal uyum süreçleri çok streslidir çünkü yeni kurallarla başa çıkmayı gerektirir. Bu nedenle, öğrenciler depresyona girme ve fiziksel sağlıklarını etkileme noktasına kadar zihinsel olarak tükenme eğilimindedir. Bütün bu koşullar, sosyal uyumlarını engelliyor. Bu stresli koşullar altında, uluslararası öğrenciler aynı kültürel-dilsel altyapıyı paylaşanlardan sosyal destek aramaktadır(Ana,2020).

Yapılan araştırmalar, uluslararası öğrencilerin çoğunluğunun ev sahibi kültürün ve akademik kurumların taleplerine makul ölçüde uyum sağlamasına karşın, kültürel ortamdaki değişime bağlı uyum sürecinin yarattığı stresi ifade eden kültürel uyum stresinin, birçok uluslararası öğrencinin çeşitli ev sahibi ülkelerde yaşadığı önemli bir sorun olarak tanımlandığını göstermektedir. Çeşitli ülkelerde yapılan çalışmalar, kültürel uyum stresinin olumsuz duygusal durumlarda artışa ve olumlu duygusal refahta azalmaya yol açtığını ileri sürmüştür . Bazı temel faktörler arasında yalnızlık, kültür uyumsuzluğu veya kültürel çatışmalar, ev sahibi öğrencilerle bütünleşme eksikliği, dil engelleri ve iletişim zorlukları, sosyal destek eksikliği, ırk ayrımcılığı, mali stres ve akademik sorunlar yer alabilir. Sosyal destek ve başa çıkma stratejileri, aidiyet duygusu ve yaşam anlamı gibi kültürel stresin olumsuz duygusal durumlar üzerindeki etkilerini hafifleten faktörleri içeren çalışmalar da vardır (Edara, 2018).

Jiand vd.(2020),araştırmasında uluslararası öğrenciler için eğitim kalitesini ve danışmanlık (pskolojik, kültürlerarası etkileşim programları, öğrenci kulüpleri, vb.)destek hizmetlerini iyileştirmeyi amaçlayan politika yapıcılar ve üniversite uygulayıcıları için çıkarımlar içeren sonuçlara ulaşarak öğrencilerin iyi oluş düzeylerinde destekleyici olabileceğini belirtmiştir.

Sonuç ve Öneriler

Çoğu yabancı uyruklu öğrenci kendi problemlerini dile getirebilecekleri, sorularına cevap alabilecekleri muhatapların olmasının desteklenmesi, maddi ve manevi destek olabilecek bir sistemin geliştirilmesi ve uygun bir birimin oluşturulması üniversite yaşamında yabancı uyruklu öğrencilerin iyi oluş düzeylerini olumlu etkileyecektir.

Yabancı öğrencilerin iyi oluş düzeylerinin yükseltilmesi, kurumsal bir sorumluluk olarak ele alınmalı; çok boyutlu destek mekanizmaları oluşturulmalıdır. Bu bağlamda, hem akademik hem de psiko-sosyal destek sistemlerinin bütüncül olarak güçlendirilmesi önerilmektedir.
