PREFACE

We are proud to have held the 3rd *International Congress on Positive Schools and Well-being*, where approaches to well-being and positive education are discussed on a global scale. Once again this year, our congress has served as a strong academic platform bringing together scholars, practitioners, and policymakers from around the world. With participation from six continents and 40 countries, the congress has become a hub for high-quality interdisciplinary research centered on well-being across various fields.

Our congress meets the academic criteria set by the Turkish Council of Higher Education (YÖK) and the Interuniversity Board (ÜAK) for academic advancement, and it holds the status of an international scientific event. The papers accepted through the meticulous efforts of our distinguished scientific, organizing, and editorial committees reflect contemporary understandings of well-being and offer significant interdisciplinary contributions to the academic literature.

With the goal of promoting well-being in education and related disciplines on a global scale, our congress has gone beyond the boundaries of scientific knowledge exchange by creating a universal learning atmosphere enriched with diverse cultures, perspectives, and practices. International presentations, panels, workshops, training sessions, and interactive forums throughout the congress have provided a valuable foundation for building more inclusive, healthier, and positive schools of the future by evaluating the concept of well-being from a multidisciplinary standpoint.

This proceedings book stands as a lasting record of the contributions made by all our participants. The full-text papers included herein serve as a guiding resource not only for academic circles but also for educational policymakers, practitioners, and field experts.

I would like to extend my sincere gratitude to the Ministry of National Education, Cyprus International University, Girne American University, the Tangül Ünal Çağiner Foundation for Children, Accapulco Hotel for their warm hospitality, and our publishing sponsors. I would especially like to express my deep appreciation to the President of the Turkish Republic of Northern Cyprus and the Minister of National Education, who honored us with their presence and participation in our congress, thereby making this event even more meaningful. My thanks also go to the university rectors, deans, directors, all contributing scholars, the researchers whose valuable work is included in this full-text book, and every member of our team who contributed at every stage of the congress.

Prof. Dr. Çağla GÜR
Congress Chair

ÖNSÖZ

İyi oluş ve pozitif eğitim yaklaşımlarının küresel ölçekte ele alındığı Uluslararası Pozitif Okullar ve İyi Oluş Kongresi'nin bu yıl 3. sünü gerçekleştirmiş bulunuyoruz. Kongremiz, bu yıl da dünyanın dört bir yanından akademisyenleri, uygulayıcıları ve politika yapıcıları bir araya getiren güçlü bir bilimsel platform olmuştur. Altı kıtadan ve 40 farklı ülkeden katılım sağlanan bu kongre, disiplinler arası bakış açısıyla çeşitli disiplinlerden iyi oluşu merkeze alan nitelikli bildirilerin buluşma noktası haline gelmiştir.

Kongremiz, yükseköğretim alanında akademik yükseltilmelerde aranan YÖK Doçentlik ve ÜAK kriterlerini karşılayan uluslararası bilimsel bir etkinlik niteliğindedir. Alanının önde gelen araştırmacılarının yer aldığı bilim, düzenleme kurulları ve editöryel ekibimizin titiz çalışmaları sonucunda kabul edilen bildiriler, çağdaş iyi oluş anlayışının disiplinlerarası yansımalarını derinlemesine ele alarak literatüre önemli katkılar sunmaktadır.

Küresel ölçekte eğitimde ve ilişkili disiplinlerde iyi oluşu destekleme hedefiyle yola çıkan kongremiz, yalnızca bilimsel bilgi paylaşımıyla sınırlı kalmayıp aynı zamanda farklı kültürleri, perspektifleri ve uygulamaları bir araya getirerek evrensel bir öğrenme atmosferi yaratmıştır. Kongre süresince yapılan uluslararası sunumlar, paneller, çalıştaylar, eğitim atölyeleri ve etkileşimli oturumlar; iyi oluş kavramının multidisipliner bir şekilde değerlendirilmesi ile geleceğin daha kapsayıcı, sağlıklı ve pozitif okullarının inşası için değerli bir zemin oluşturmuştur.

Bu bildiriler kitabı, kongremize katkı sunan tüm katılımcıların emeğini belgeleyen kalıcı bir kaynak niteliğindedir. Kitapta yer alan tam metin bildiriler, yalnızca akademik çevreler için değil; eğitim politikaları, uygulamaları ve sahada çalışan uzmanlar için de yol gösterici olacaktır.

Kongremizin gerçekleşmesinde her aşamada yanımızda olan Milli Eğitim Bakanlığı'na, Uluslararası Kıbrıs Üniversitesi'ne, Girne Amerikan Üniversitesi'ne, Tangül Ünal Çağınır Çocuklara Yardım Vakfı'na, bizleri ağırlayan Accapulco Hotel'e, sponsor yayınevlerimize, kongremize katılarak bizleri onore eden Sayın Cumhurbaşkanımıza, Milli Eğitim Bakanımıza, rektörlerimize, dekan ve müdürlerimize, kongremize katkı sunan tüm bilim insanlarına, bildirileriyle bu kitapta yer alan değerli araştırmacılara ve sürecin her aşamasında emeği geçen tüm ekip arkadaşlarımıza içten teşekkürlerimi sunarım.

Prof. Dr. Çağla GÜR
Kongre Başkanı

Abstract

Foster care plays a major role in supporting children deprived of proper parental care. Its role is to create a stable and safe environment for children whose biological parents are unable to provide them with. Foster families care about social, educational and emotional development of their children. Their role is also to care for children with the aim of addressing the caregiving deficiencies before the children enter foster care. In 2023, as many as 75,000 children were placed in foster care in Poland. This number requires an appropriate approach to supporting their well-being and development on a daily basis. Foster families, in carrying out their roles, aim to ensure the well-being of the children placed in their care by fulfilling the following duties: providing proper nutrition, taking care of the child's hygiene and health (also necessary therapies), satisfying child's basic needs, educating the child about the world, culture, art, indicating accepted norms of behaviour, setting rules and teaching the child to express his feelings. The foster care system in Poland is supported by Family Support Centres and Social Welfare Centres which, in addition to material and financial support, also offer non-material assistance including psychological consultations and various forms of therapy. However, according to several studies, such support is still insufficient. Many foster families are in a real need for legal assistance (when dealing with difficult situations involving the biological parents of children), more trainings to prepare the parents for challenging situations, better access to specialist help, as well as more accurate and supportive legislation for foster families and their children.

Key words: foster care, well-being, children in foster care

Introduction

Children who enter foster care often come from backgrounds that are marked by trauma, neglect, or abuse. Providing a safe environment for them is essential, and the goal of ensuring well-being to these children should go beyond the basic necessity to offer them conditions that promote healing, emotional development, and a sense of belonging. Before looking at the specific support of strategies and the ways in which the Polish foster care system addresses these needs, one has to

understand the starting point for many of these children. Therefore, the first thing to consider is to ponder the differences in functioning between the children brought up in supportive families, where their well-being is safeguarded and maintained, and those who come from dysfunctional or high-risk environments.

An unequal start in life reflect a reality faced by millions of children around the world. Whether it is the access to healthcare, education or a safe environment, not every child is lucky enough to get the same opportunities from the very outset.

Table 1: Individual research

Differences in functioning of children in:	
Dysfunctional families	Families that care for the well-being of their children
Concerns about access to basic resources – worrying about food scarcity and instability can lead to early development of survival strategies and existential fears	Engaging the child in family decisions and acknowledging his or her individuality – asking for his or her opinion, planning joint activities, gives the child a sense of agency and influence
Experiencing various forms of violence (physical, verbal, emotional) – children are often beaten, called names, humiliated, bullied or blamed, leading to low self-esteem and anxiety disorders	Active listening, conversation, positive reinforcement – children feel important and noticed when their emotions and thoughts are listened to and taken into account, and praising the child's efforts and achievements builds internal motivation and healthy self-esteem
Addictions within the family – alcohol or other psychoactive substances in home life often go hand in hand with neglect, violence and emotional instability	Lack of addictions in the family , building the right atmosphere is necessary for the child's emotional stability
Unmet emotional needs – the child does not receive enough emotional support, hugs, understanding, which leads to attachment disorders	Emotional stability of caregivers – predictability and adequacy of adult reactions provides the child with a sense of security
High level of family conflict – frequent quarrels, divorces, changes of caregivers cause insecurity	Modelling healthy interpersonal relationships , a constructive way of resolving conflicts and expressing emotions is conducive to the child's development
The absence of parents – both physical and emotional – results in deficits in attachment, which translates into difficulties in building relationships in the future	Spending time/activities together/supporting development through learning – singing, drawing and playing with parents, learning to ride a bike, reading together, talking about school, etc. create a safe space for expressing emotions and strengthening bonds; being "together" in everyday activities is crucial for building a relationship based on emotional safety, trust, building self-confidence and independence
Taking on the role of a caregiver or "adult" – children forced to take care of younger siblings prematurely take on age-inappropriate responsibility, which disturbs their emotional and cognitive development and/or children often become intermediaries in conflicts, guardians of adults or are forced to behave excessively maturely	Mutual respect and trust – the child-parent relationship based on respect and mutual trust shapes a positive image of interpersonal relationships, and the child may finally be a child

Chaotic structure of the day – lack of routine, regular meals, bedtimes and activity increases the level of unpredictability and anxiety in the child	Structured day , square meals, activity and sleep time
Social isolation – lack of relationships with peers and limited contact with the social environment can lead to difficulties in social adaptation	Access to recreational activities – going to the cinema, for a walk or to the theatre support the cultural, social and cognitive development of the child
Avoidance of adult caretakers – children experiencing physical, sexual or psychological violence often develop avoidance and isolation mechanisms that interfere with their later interpersonal relationships and trust development	A stable "world" of the child is conducive to development in all spheres of the child's functioning, and peace increases the sense of security
Failure to celebrate important family events – ignoring holidays, birthdays and other family rituals deprives the child of the experience of community and the sense of being important	Celebration of holidays and family rituals – celebrating holidays and other celebrations together builds a sense of community and positive memories, and organizing birthday parties and celebrating important moments in a child's life is an expression of care and recognition of their identity
Inadequate medical and educational care – neglect of physical health and lack of interest in education result in cognitive and health deficits	Learning together, involvement in education and care for health – help with homework, talking about school and reading together support cognitive development and pro-educational attitudes, and taking care of health is important for the child's further proper development

Source: Author's individually-made list.

Based on the data gathered in 2023, it can also be seen that more than half of foster families consist of individuals aged **51–70**. Children living in family children's homes and foster families are mostly between the ages of 7 and 13 (a total of 20,179 children). In contrast, infants represent the smallest group (1,004). Additionally, in 2003, as many as 58,000 children were in family-based foster care, of whom 7,100 had a disability certificate.

Under Section 76 of the Polish Family Support and Foster Care System Act of 9th June 2011, District Family Support Centres recruit people who are willing to perform the function of a foster family, diagnose and qualify them, and organise training to prepare candidates for optimal foster care of the children who have been taken away from their biological parents due to educational and care-related negligence.

After obtaining qualifications for a foster family, families, guided in their role by the good of the child placed in their care, have specific tasks to perform. These include above all care-related and educational tasks in the following areas: providing the child with stability and security, appropriate housing and living conditions, providing the child with a proper diet, securing development, access to education and enabling the child to express his or her emotions, experience trauma and provide the child with appropriate models of behaviour, a sense of love, acceptance and belonging. Therefore, foster parents, when deciding to carry out their mission of helping a child, must remember that “by

taking a child into their care, they take him or her into their home, life and heart” [Cattabeni, 2008, p. 14].

According to Marzena Ruszkowska, a child placed in foster care should be diagnosed in the following areas:

1. impaired functions and the need for therapeutic activities;
2. bond with biological parents and cooperation with them, including determining whether the child's biological family poses a threat to the child [Ruszkowska, 2013, p. 77].

District Family Support Centres, acting as district organisational units, are tasked with watching over and supporting foster families, providing them with the necessary consultations and therapeutic assistance. In addition, they appoint a family coordinator who helps the family in their mission of caring for the child, advises, supervises and controls the implementation of the family's activities towards providing the child with appropriate conditions for development. The family coordinator visits the family once a month for the first year of the child's care, and then once every two months in the following years. In accordance with the Act on Family Support and the Foster Care System, the foster care organiser (institution) assesses the legitimacy of the child's stay in foster care. An assessment of the child's situation is made every six months for children over 3 years of age, and every three months for younger children [Walancik-Ryba, 2019, p. 101]. Foster parents, together with specialists, consider the stages of actions taken by parents to improve the child's situation, as well as the relevant methods and structure of these tasks.

Child Assistance Plan

After a meeting with specialists held to discuss the child's situation, the appointed team of foster care specialists establishes the so-called Child Assistance Plan. It is broken down into four areas: type of aid activities, working methods, performance, and implementation date. The activities undertaken as part of the child assistance plan concern many aspects of child custody and their implementation. These include:

- providing the child with basic needs (housing, food, clothing, appropriate to the season, taking care of physical appearance – cleanliness and combing). The methods of work in this area are ongoing care, organization of housing and material and living conditions on a permanent basis by foster parents;
- ensuring the continuity of education for the child and supporting the child's learning process, which is associated with regular full-time compulsory education, providing the child with the necessary textbooks and school supplies, maintaining constant contact with the class tutor, teaching staff and, if necessary, the pedagogue or psychologist at school. These activities also concern the development and support of the child's motivation to learn, providing the child with

individual learning assistance and supervision in performing work and household tasks, as well as shaping age-appropriate responsibility and educational independence. The methods of work in this area include systematic sending the child to school, contact with the staff, ongoing justification of the child's absence from school, systematic and constant monitoring of learning progress, homework, help in catching up with school arrears, and motivating to learn and deepening knowledge;

- providing the child with a sense of physical and mental security, namely embracing the child with full acceptance, kindness, a sense of security and understanding, paying special attention to the child, observing the child's behaviour, maintaining constant contact with a psychologist. These activities should also be carried out on an ongoing basis and systematically;
- building and maintaining personal and emotional contacts of the child with the biological mother and father, with siblings, i.e. enabling the child to have contact with his biological family in accordance with the child's will. Talking to the child about topics related to his or her family situation, belonging to it, monitoring contacts with parents and siblings (if any) are also the responsibility of foster parents;
- introducing the child into independence (autonomy) and adequate responsibility in life - these activities consist in enforcing the agreed scope of responsibilities and duties at home (setting time for study, work, and leisure), enforcing the performance of school duties (attendance, homework, preparation for classes), introducing the child to resourcefulness and independence in basic matters concerning himself (pointing out by his own example and through conversation, exercises with the child in ways and forms of dealing with their own affairs, coping with negative emotions and difficulties), shaping hygiene and tidying habits, building self-esteem and self-esteem (by praising, noticing changes, emphasizing strengths), learning and controlling the use of technical goods and economic benefits, learning to use the Internet, computer, clothing and food wisely, disposing of one's own funds (pocket money);
- activities in the field of health and adequate medical care: the foster family is obliged to take actions on a permanent and ongoing basis in the form of consultations and follow-up medical visits, appearance on current dates for vaccinations, use of a varied diet (or adequate to the needs, e.g. in the case of allergies or celiac disease) and treatment proportional to the individual needs of the child (providing ongoing, constant and specialist care), following the recommendations of doctors and specialists when the situation requires it.¹

Additionally, children placed in foster care are looked after by a psychologist employed at the District Family Support Centres, who organises consultations and prepares the so-called Individual

¹ Author's own source.

Parenting Plans for foster parents in order to redress the damage caused to children by their biological parents and to support their physical, mental and social development.

Examples of Individual Parenting Plans for a child with FAS syndrome, RAD disorders and attention deficit hyperactivity disorder (ADHD) prepared by a psychologist appointed by a District Family Support Centre

An example of a psychologist's educational plan based on an individual case of a child placed in foster care begins with suggesting to parents/guardians a change of their perspective and education in the field of dealing with a child with RAD (reactive attachment disorders), FASD (foetal alcohol syndrome) or ADHD (attention deficit hyperactivity disorder). According to the psychologist conducting therapeutic classes for the child, the parent should consider consulting a psychologist specializing in childhood trauma. Parents are also recommended items from the literature on FASD disorders and attachment disorders. The aim of these activities is to understand the parents of the child's behaviour in the areas of "does not want to", or "cannot do it".

The psychologist also proposes recommendations related to changing the **approach to discipline**. Those often used by parents to assess the child's behaviour – such as "You should be polite", or "Stop answering back!" – should be replaced with "I can see that it is difficult for you, and I will help you to calm down".

These new strategies are to be based on the principles of positive discipline, which assumes consequences without violence. Children with FASD syndrome need predictability, so it is important to build a routine, set short and clear rules (also with the child). The key is to avoid punishments - instead of using punishments, it is worth teaching the child to fix the situation, e.g. "did you mess things up?" to "we'll fix it together."

Another major step for parents to improve the situation of the child placed in their care is to take action routinely every day. They primarily concern devoting time to the child alone for a minimum of 15 minutes, devoting it to playing together. According to the psychologist, such rituals of spending time together build a sense of security in the child.

What's more, in moments of **outbursts of anger in a child**, it is advisable to reflect his or her emotions by noticing that the child feels anger (and telling the child so) and the parent's appropriate reaction "it's ok to be angry. I'll help you calm down." Creating a safety base and naming emotions in this way is very necessary for the child to understand his outbursts of emotions that he cannot yet cope with, and to reassure the child that he is safe and can count on his caregivers.

Depending on what other disorders the child has, it is worth diagnosing sensory integration, consulting a psychologist, neuro-speech therapist and FAS therapist, and meeting with a

therapist/social skills trainer. Home support for the child's development can consist in praising the child for the effort put into work and not for the effect of work, setting small goals and frequent rewards (tokens, smileys, praise), accepting the child's sensory and cognitive needs (giving short tasks and allowing for more movement).

In verbal contacts with the child, it is recommended to use expressions such as "Behave safely and calmly" (instead of "be polite"), "we do it differently here" (instead of "this is not allowed here") or "I can see that you're getting nervous. Let's talk" (instead of "don't shout!").

When it comes **to dealing with the child's anger**, the psychologist suggests a change of approach in the first place - from punishment to support. Instead of the words "don't shout, go to the room" – the parent should lower himself to the child's level and calm him down with words such as "I see that you are very angry, I'm here, we'll manage". You should not send your child to your room because such isolation deepens their anxiety and causes a sense of lack of control over what is happening. Parents should make sure that there is a so-called quiet corner in the child's room - not as a punishment, but as a refuge. Such an asylum is a place with soft pillows, mascots and a blanket. A child can use the asylum voluntarily if he wants to, if he is nervous. You can encourage your child to calm down with the words "this is your safe place where you can calm down, do you want to go there with me?"

Regulating the child's emotions should be done through co-regulation with the child's parent. Children with FAS and RAD disorders cannot calm down on their own. Such learning to calm down can be effective when the parent shows how to do it. You can use the simplest hugging of the child (if accepted by the child), rocking the child, learning to breathe together: "Inhale-exhale. Let's do it again!" It is also a good idea to show your child pictures with emotions and discuss them, e.g. "which picture represents what you feel now?"

A parent can prevent outbursts of anger in a child and often knows, or can predict, when they will occur. It is important to limit changes in the rhythm of the day and avoid unexpected changes. When such a change is to take place - tell the child about it. You should also observe the child's behaviour and signals of approaching anger (clenching fists, growling) so that you can react quickly. However, when this outburst of anger occurs, you should not hold the child accountable, but support him: "I saw that it was very difficult for you. Do you want to cuddle now?" The parent must stop judging and lecturing because it is not adequate to what happened – the child does not remember his or her behaviour during the attack.

Fear of rejection and strategies for repairing bonds are important in the functioning of a child in the family. A parent should constantly reassure the child of his or her safety, e.g. by using expressions such as "we are always together, even when you get angry", "you are safe", "I am here

for you" or "you don't have to be perfect for us to love you". A child's withdrawal and "bad behaviour" are symptoms of anxiety. The child will often express his fear with the words "you don't love me anymore", then the parent should not deny by force, moreover, he should calm the child's fear by expressing the understanding that he knows that the child is afraid, but the parents are with him and will be with him, even when he is afraid. Strengthening the bond can take place by spending a minimum of 15 minutes a day alone with the child. This time can be spent playing, cuddling, talking (without a phone and without judging). Such actions treat anxiety more effectively than words.

In difficult moments, the so-called treasure box ("proof of love") has proven to work well: in it, the child can keep his or her drawings, notes, photos, tickets from trips – things that show the child that he or she is important and loved, thus willed. Difficult moments that are the reason for the child's difficult behaviour should be guided by the principle: we fix, we do not reject. You can tell your child that "sometimes it's hard for everyone to control themselves, but we can fix it together" and "your behaviour was wrong, but you are important to me".

In order for the child's development plan to work, the psychologist can create a weekly plan to support the child for foster parents struggling with specific disorders of the child placed in their care.

Table 2: Sample support plan for a child with FAS

Day of the week	Goal of the day	Actions and strategies	Tools/materials
Monday	Safe start of the week	In the morning: announcement of the week (picture calendar), 15 minutes of playing together in the evening (the child chooses an activity), 3 things that were fun today.	Calendar with pictograms, blocks, puzzles, board game
Tuesday	Anger calming training	Exercise "Volcano of anger" - drawing what is happening inside the body. Playing candle blowing (learning to breathe). In the evening - a therapeutic fairy tale about anger.	Colouring pages of emotions, cards, crayons, fairy tale
Wednesday	Strengthening the bonds	In the morning: a "I love you" card in the breakfast box, mirror play - imitating movements (building a connection), in the evening: relaxing massage and cuddled reading session.	Sticky notes, fragrance oil, book
Thursday	Calming difficult moments	Practicing the "peace corner" creating rules together. Scene - what to do when I'm angry? In the evening: conversation about the day using the smiley method (happy/sad/angry)	Silence corner, a face of emotions
Friday	A sense of competence and acceptance	Special task: the child helps with something (e.g. makes sandwiches); in the evening: praise of the day - "I'm proud of you, because..." Quick reminder: "You don't have to be perfect - you are still loved"	Praise board, photo of a child, magnets
Saturday	Time just for us – relationships above all	Longer time together - expedition/cooking/playground. Drawing a "What was cool?" day together; in the evening: safety ritual "We're always together"	Book, crayons, group photo from the day
Sunday	Weekly summary and getting ready for the next week	Album "Our great moments" - pasting 1 item from the week. Announcement of the weekly	Diary, photos, drawings, glue, picture calendar

		plan with the choice made by the child - "Tomorrow is Monday: we can do it together"	

Source: individually-made list.

The psychologist suggests fixed elements each day, e.g. one-on-one time spent with the child on at least 15 minutes of play, conversation, and/or hugs. Reinforcing messages should include phrases, such as: "I can see that you are trying", "Even when you are angry, I am by your side", "I love you no matter what". Messages will be useful in reacting to anger, e.g. "do you want to go with me to the quiet corner?", while the tone of voice should be calm and after the whole situation you can offer the child to fix it together (e.g. the child can draw a drawing "what can I do next time").

It is important to introduce a so-called safety ritual (the evening relationship ritual), which is designed to help your child fall asleep feeling loved, accepted, and safe – regardless of the day's events. Such a ritual can take the form of reading or talking about attachment, the power of relationships and acceptance, hand and back massage, a calming hug and repeating the same words: "We are always close", "Anger does not distance me from you", "Tomorrow I will also be here", "Even when you are angry, you are mine". Safety rituals must have a fixed time, preferably just before bedtime. In addition, you can prepare a drawing or photo from the day, which you can put together in the "Safety Box" as proof of good times and the stability of the relationship. Rituals and techniques only work out if they are regular, calm, and sincere. If the child does not tolerate them at first, over time he or she will get used to them and accept them, because repetition will make them feel safe.

Another recommendation for working with a child with FAS and RAD is the so-called "Letter of Love", or "Letter of Certainty" activity. This task is geared towards helping the child in difficult moments of fear and anger to remind himself/herself that he or she is loved and needed. This task involves the parent writing a simple letter on a piece of paper assuring the child that "we always want you", "I'm always coming back, even when I move away", "you don't have to be perfect". Your child can keep the letter in a backpack, pocket or in a box by the bed. Another proven action is to use a safe password "anchor sentence", which the child can repeat or hear from the caregiver to feel more confident in an anxious situation or when he is frustrated. "Anchor sentences" are used in moments of tension calmly, without pressure.

A child with attachment disorders is often afraid of yet another rejection. The child should be assured of his or her return, e.g. in the form of a picture, the parent can leave a photo or an object "as a souvenir" of his or her presence. In the evening, you should sum up the course of the whole day and mark "together again – the day has been a success!"

An interesting example of an activity that can be done with a child is the so-called "relationship mirror", i.e. convincing the child in the morning and evening that he does not have to deserve love -

he already has it from his parents. In the evening, parents can remind their child by looking into their eyes (e.g. in the mirror) that they are their child and are proud of him/her, even if something didn't work out. The child will be happy to hear the words: "I love you as much as I do in the morning".

An example of an individual plan devised for working a child with ADHD

The children placed in foster care who have been diagnosed with ADHD have difficulties related to lack of attention, excessive motor activity without deliberate action, and impulsivity. In addition to therapeutic methods that are necessary to improve the functioning of a child diagnosed with ADHD, it is also necessary to add activities supporting the child in the home of an adoptive or foster family. The main therapeutic activities include the introduction of psychoeducation, i.e. obtaining information on how to deal with the child (applies to parents, teachers, family members), behavioural interventions (parental training, meetings with a doctor and psychologist), and adapting educational requirements to the specificity of children with hyperkinetic disorders (using an individualised pedagogical approach, making requirements that take into account the child's problems), individual child psychotherapy (used in anxiety and emotional disorders), family therapy (in conflict situations in the family) and social skills training (used in children who have difficulties in building relationships and show aggressive behaviour). As psychologists suggest, a child with ADHD needs understanding, reassurance that he or she is loved, but parents also need some forms of support and upbringing. A child with ADHD wants to be listened to. In this case, you do not need any long conversations, but concentration, at least for some time, directing your eyes at him, because a child with hyperactivity sometimes needs to be listened to immediately. Parents should accept the feelings of the child, who at the moment of an outburst of anger, irritation or impatience should hear the words: "I can see that you are angry, but in our house we do not use such words/nicknames...". What's more, the child's need to control his emotions is enormous, we can react: "tell me about what has worried you", etc. [Szczygielska et al., 2021, p. 48].

Table 3: Individual plan for working with a child with ADHD

Area of operation	Traditional approach (ineffective)	New approach (recommended)	Educational goal
Discipline (recommendations similar to those for a child with FAS/RAD)	"You have to be polite", "Don't answer back!", "You're grounded - off you go, into your room!"	"I can see that it is difficult for you, I will help you to calm down", "I can see that you're nervous; let's be together for a while"	Emotion regulation and non-violent boundary learning

Consequences of behaviour (as above)	Physical and emotional punishment, taking away privileges	Fixing the situation: "Did you mess things up? We'll fix it together", "You've made a mess - let's clean up together"	- strengthening responsibility, without shaming;
Structure of the day	Little or no predictability, sudden changes	Visual schedules, fixed rituals, preparing for change	- reducing anxiety, increasing the sense of security
House rules	General, hard to remember	Short, concise and clearly established rules together with your child	- clarity, shared responsibility
Daily relationships	Lack of time, communication mainly in conflict situations, misunderstanding of intentions	Daily ritual of 15 minutes of fun together, without distractions	- building bonds and a sense of being important
Emotion regulation	"Don't be hysterical", "Calm down immediately"	"I can see that you're angry – you have the right to be; I am here to listen to you, and I am with you"	- helping to understand and name emotions
Impulsive behaviour	Frequent criticism and shaming: "What are you doing again?", "you're always causing trouble!"	Alternative approach: "I can see that you find it difficult to sit still, maybe we can jump, let's take a break"	- acceptance of movement needs, learning self-regulation
Reactions to successes	No praise or reward mainly for "perfect behaviour"	Daily reinforcement: "I can see that you have been waiting for your turn – well done!"	- reinforcing positive behaviour, building self-esteem
Cooperation with tasks and communication	Long instructions, a lot of questions, criticism for lack of concentration; "Flooding" the child with one's own words	- We let the child speak, explain the body language (with time, also proverbs, neologisms, etc.); - Short, simple commands and questions (at most 1-2, along with checking whether the child has understood the message), e.g. "What do you want to do first? Clean up the blocks, or put the books away?"	- understanding - a sense of being heard - fostering agency and cooperation

Source: Author's individually-made list.

Parents can support their child's individual needs by paying attention to the child, by communicating with the child in a simple and concise manner, by drawing consequences immediately, by using the child's energy to involve him or her in cleaning and/or other household activities, by communicating to the child what we want him or her to do – how he or she ought to behave, and not what not to do. A child with attention deficit should not be distracted or attacked by a large number of external stimuli. We teach the child to focus, e.g. by using pictures, drawings, we arrange riddles, jigsaw puzzles.

Table 4: An example of a day for a child with ADHD

Time of day	Goal of the day	Actions and strategies	Tools and materials
Morning (7.00-8.00)	- a calm start of the day, preparation for the daily duties	- fixed morning routine (picture-based plan) - avoiding rushing - verbal encouragement, e.g. "It's almost ready";	Picture schedule, kitchen timer, to-do list, clothes prepared in the evening, sensory mat

	- emotion regulation - collaborative mindset	- short supportive conversation "How are you feeling today?"; - reminder of the rules for today; - releasing bad emotions, e.g. jumping, stretching.	
School (8.00-13.00)	- focus on educational tasks	- positive reinforcement "It's great that you're trying"; "Look how well you're doing" - frequent breaks (preferably every 20-30 minutes)	- motivational boards, worksheets, quiet zone (room)
Lunch and rest (13.00-14.00)	- chilling out, satisfaction of needs	- fixed meal plan - short breathing exercises - time without a phone, etc.	- simple menu - relaxation exercises/ chilling out
Afternoon activities (14.00-16.00)	- developing interests and social skills	- we continue the time spent without a phone (we regulate this time and set the rules in advance); - physical activities, e.g. swimming pool, dancing, etc. - group games with controlled stimulation; - reminding the rules of the game	- board with the rules of the game; - educational toys - timer
Time alone with the caretaker (16.00-16.30)	- building relationships and a sense of security	- daily ritual: playing together, drawing, playing chosen by the child; - no judging, full attention of the caregiver	- puzzles, sensory toys/ educational, playing cards, place to play
Free time (16.30-18.00)	- independent play, learning responsibility	- choosing from a set of activities; - gentle attention to time - organising the space on your own	- activity board, toy basket, clock/timer
Supper/ Preparing for sleep (18.00-20.00)	- chilling out - end of the day	- regular evening ritual, e.g. a bath, a fairy tale, a conversation (e.g. about emotions); - joint summary of the day	- books, bedside lamp, diary with pictures
Sleep (20.00-7.00)	- rest and regeneration	- silence, darkness, no screens - favourite soft toy to cuddle - presence of a caregiver, if necessary	- blackout curtains, white noise, mascot, sensory pillow, if necessary

Source: Author's own-made list.

An individual plan for working with a child suffering from the ADHD syndrome, based on the principles of positive discipline, is the foundation of effective and ethical developmental support. The key assumption of this approach is to move away from punishment and judging the child in favour of building relationships, regulating emotions and solving difficult situations together. Children with ADHD function best in an orderly and predictable environment based on clear and short rules. Messages used by adults should reinforce feelings of security and autonomy, rather than causing fear, shame, or guilt. Daily emotional contact plays a significant role in the plan – e.g. through the ritual (mentioned earlier) of 15 minutes of one-on-one play with the caregiver – which builds bonds, reduces the level of tension and increases the child's cooperation. An important element is also learning to name emotions and help regulate them. In difficult situations, it is not about calming the child "at all costs", but about creating a safe space for experiencing and controlling emotions with the help of an adult. This approach enhances the development of social and emotional competences, and improves the child's functioning at home, school, and peer group.

Sample individual plan for working with a child with selective mutism and language disorders (e.g. aphasia)

Selective mutism and aphasia are communication disorders of various origins and nature, but those that significantly affect the child's functioning in the linguistic, emotional and social spheres. Selective mutism is defined as a persistent inability to speak in certain social situations, despite maintaining the ability to speak in other, usually safe environments for the child. This disorder is often associated with social anxiety and difficulties in regulating emotions, which requires a multifaceted therapeutic and educational approach. Aphasia, on the other hand, is a disorder of the acquired or developmental language function, involving difficulties in understanding, formulating and processing speech. It can result from brain damage or developmental deficits and requires intensive speech therapy and pedagogical support². Both of these disorders pose challenges not only to children, but also to their families and caregivers, who need specialist knowledge and appropriately selected support strategies. In the educational context, it is crucial to create an environment full of acceptance, predictability and a safe space for communication, which allows the child to gradually overcome difficulties and develop language and social competences. The plan must take into account the individual needs of the child, integrating therapeutic methods into everyday pedagogical practice.

A sample the individual plan for working with a child with selective mutism and language disorders (e.g. developmental aphasia) has been prepared on the basis of current psychological and pedagogical knowledge, speech therapy and the interactional and communicative approach, m.in. according to the standards of the American Speech-Language-Hearing Association (ASHA):

(<https://www.asha.org/?srsltid=AfmBOopDbpaIsKhOM01Fl60FPzvyCe-0cEp6HOzOrpoa912VyqTKXTkH>) and research on mutism: e.g. based on Mulligan, Hale, Shipon-Blum (2015).

Table 5: A sample individually-designed plan for working a child with selective mutism and language disorders (e.g. aphasia)

Area of operation	Educational goals	Actions and strategies	Tools and materials
Verbal and non-verbal communication	- developing communication skills, chiefly verbal; decreasing the fear of speaking in specific situations	- using alternative/supportive forms of communication (AAC or pictograms, or PCS, etc., communication boards); - gradual introduction of speech in safe and secure situations;	- picture boards (can be in large and small format), communication cards, alternative or augmentative communication scheme
Emotional support	- building a sense of security and trust, re-education of fear	- creating a daily routine with predictable stages; - using relaxation and breathing techniques; - psychological support (e.g. as part of cognitive-behavioural therapy)	- visual schedules, relaxation corner
Language development	- improving speech comprehension and transmission,	- speech therapy focused on the individual needs and abilities of the child;	- speech therapy materials, educational

² The description of the disorders outlined here is general due to the framework and subject matter of the publication. We focus more on the forms of helping and working with such a child, and not on the causes, types or nature of disorders that we are dealing with in the child. This said, we recommend that parents who have such children deepen their knowledge about the causes of the difficulties, as they will help them to be better prepared to help and spend their daily life with such a child.

	developing vocabulary and correct syntax	- enriching vocabulary in everyday situations; - language games and word games	games, books for children
Social interactions	- increasing the child's participation in interactions with peers and the group	- gradual introduction of the child to the group through integration activities; - teaching non-verbal communication, sometimes verbal; - encouraging participation in group games with the help of a guardian or supporting teacher ³	- boards with emotions, game scenarios, materials for exercises/integration games
Family and caregiver support	- increasing the competences of caregivers in supporting the child	- training, consultations, e.g. with a speech therapist, psychologist in the field of mutism and language disorders; - establishing joint communication activities at home and at school	- guides/manuals, meetings with specialists, training materials
Regulation of emotions and behaviour	- support/help in coping with tension, frustration, fear of contact and communication	- using positive reinforcement, avoiding pressure; - introduction of a quiet corner ⁴	- emotion cards, sensory aids, relaxation/tranquillity place/room

Source: Author's individually-made list.

The scheme rests on a comprehensive, interdisciplinary approach that takes into account the specific communication and emotional needs of the child and aims to create a safe and predictable environment that will enable the development of language skills and reduce anxiety related to verbal communication. Cooperation between guardians and the school is very important. The very fact of integration in a new foster family is already a sufficient reason for fear, which is why it is so important to work out similar activities that will complement each other. This should concern, for example, the choice of the same alternative communication program, the ways of introducing and familiarizing the child with subsequent pictures, etc. The school and the foster family play a key role in the implementation of this program by using positive discipline, patience and consistent support for the child in the process of overcoming language and emotional difficulties, and constant cooperation with a team of specialists: a psychologist, speech therapist, educator and pedagogue – allows for monitoring the child's progress and flexible adaptation of activities to his or her current needs and abilities.

Table 6: Examples of activities applied in handling a child with selective mutism and language disorders (e.g. aphasia)

Time of day/activity	Goal	Actions and strategies	Tools and materials
morning	- reducing tension/anxiety before starting a new day and leaving home	- introduction of a permanent ritual; - no pressure to speak freely; - if necessary, non-verbal communication (when the child is ready, you can combine gestures with speech and	- pictorial schedule, emotion boards and/or emotion calendar: "How am I feeling today?"

³ In Poland, a pupil/student with a special education certificate has the right to education in a special, integrated, mainstream school with integration classes. Attending an integration class, for example, they have the right to the assistance of a support teacher (this is the second teacher in the class) or an assistant who is employed for a given child with a certificate.

⁴ In the integrated school where one of the authors works, there is a room for silence and relaxation (quiet room), where pupils/students can stay together with their support teacher when they have a problem with too many stimuli or emotions. There are also small "houses of silence" in the school, where children can enter and rest, calm down and cut off from the rest by putting on sound-dampening headphones.

		pictures, e.g. using the MAKATON alternative communication system) ⁵	
school	- creating a safe space	- letting the child to show initiative; - transition time with a caregiver;	- "My day" booklet to be completed in advance, support mascot
group activities/ integration	- observation, participation in classes without communicative (verbal) obligation	- sitting close to a trusted person; - indicating an answer, showing with a gesture or pointing to an image from alternative communication; - gradual inclusion;	- individual communication board, cards with emotions, pictograms
Individual classes (speech therapy)	- supporting alternative communication	- introducing images - over time – gradual, gentle incitements to speak (without pressure); - breathing and articulation exercises	- speech therapy mirror, alternative communication program, e.g. AAC or PCS (Boardmaker)
Time at home/ relaxation/ free play	- different ways of expressing emotions; - developing a relationship with the child; - spontaneous interaction, building bonds	- observation or participation without comment or evaluation; - following the child; - the possibility of withdrawing at any time; - playing together, naming emotions	- picture menu, "please", "thank you", "I don't want", "I need", "yes", "no" tabs; - silence corner, puzzles, books, sensory toys to relieve tension, e.g. squishy toys - cabinets and other pieces of furniture, objects, etc. can have sticky pictograms on them that symbolise them
Art, music and other classes.	- releasing bad emotions; - non-verbal expression of emotions	- short activities without assessment, with a tutor (preferred person) and without	- crayons, instruments, cards with emotions

Source: Author's individually-made list.

The above program and sample activities are conducive not only to the improvement of verbal communication and language development, but also strengthen the sense of security, emotional bond and support the child's social competences, which is necessary for his or her harmonious functioning both in a foster family and in the wider social environment.

A sample individual plan devised for working with a child suffering from autism spectrum disorder

Children suffering from autism spectrum disorder placed in foster care require special, individually tailored support that takes into account their unique developmental, communication and social needs. Autism spectrum disorders are characterized by difficulties in social communication, limited and repetitive behaviour patterns, and specific interests and sensory sensitivity. Placing a child in a foster family often involves additional challenges, such as adapting to a new environment, establishing relationships with caregivers, and coping with emotional difficulties resulting from a change in life situation.

⁵ We work with a child applying one system; it is important that the same system be used at school.

It is crucial to create a predictable, safe and supportive atmosphere that will enable the child to develop communication, social and self-regulation skills. To a large extent, the Individual Work Plan is similar to the actions taken for children with mutism or other communication disorders. Particular emphasis should be placed, m.in others, on creating a corner of peace, avoiding punishments, using natural consequences, organizing integration activities (initially with support), positive reinforcement, learning to recognize social norms and rules of coexistence, establishing clear and predictable daily routines, learning to perform daily activities divided into simple steps, regulating emotions, using techniques related to sensitivity to sensory stimuli (stimulation sensory/poly- sensory), or encouraging independent problem solving. It is also important to support caregivers who would increase their competence in working with a child on the autism spectrum. An important aspect is to include a wide range of activities in the plan – from developing communication skills, through learning self-regulation of emotions, to shaping social competences and everyday independence. The use of supportive communication methods, such as systems such as AAC or pictograms, allows to reduce frustration resulting from difficulties in expressing one's needs, and consistent reinforcement of positive behaviour patterns and avoidance of punishments minimizes the risk of problematic behaviour. The implementation of the work plan (educational and supportive) in the foster family environment requires not only knowledge and commitment on the part of the caregivers, but also close cooperation with a team of specialists – psychologists, pedagogues and therapists, as well as educators (which has already been emphasized when discussing other disorders occurring in children). This makes it possible to monitor the child's progress on an ongoing basis and flexibly adapt the support strategy to his or her changing needs and abilities. Building a safe and predictable daily routine also plays a key role in this process, which aims to reduce fear and anxiety, often exacerbated in children with autism spectrum. Creating an environment of acceptance and understanding, in which the child can express emotions and develop social skills, promotes the growth of self-esteem and independence. Such a work plan is a living document, requiring continuous evaluation and cooperation of all parties involved, and its effectiveness depends on consistent implementation, adaptation to the individual needs of the child and support provided by the foster family, creating conditions conducive to harmonious development and full use of the child's potential.

Individual plan for working with a child with hypersensitivity and sensory sub-sensitivity

In foster and adoptive families that are interested in therapeutic and developmental interventions, the issue of sensory disintegration therapy of children placed in their care is becoming an increasingly common problem. The neurological process that accompanies the integration of the senses is not an

innate process. Along with experiencing the world, the child learns to recognize stimuli (coming from the environment and from inside the body) and respond to them adequately. Sensory integration disorders therefore refer to difficulties in receiving and processing these stimuli, which can lead to problems in regulating emotions, behaviours and everyday functioning. For example, children with hypersensitivity to tactile stimuli may avoid physical contact, noise, selected smells, tastes, texture of certain objects, combing hair, etc.; On the other hand, those with sub-sensitivity may show the search for intense sensory sensations, such as swinging, strong pressure, sniffing, licking or hitting objects, showing an increased need for movement or sensations, etc. In a foster care environment, it is necessary to adapt daily activities, spaces and educational methods to the unique sensory needs of the child to provide them with a sense of security and comfort, as well as to enable optimal development and self-regulation (cf. Bieńkowska, 2018). Examples of such activities have been outlined briefly in the table below.

Table 7: Examples of behaviours and exercises for some sensory systems

Sensory hypersensitivity	Sensory sub-sensitivity
Sense of touch	
Avoidance of physical contact, reluctance to get your hands dirty, hair/teeth washing, irritability to the texture of clothes. <u>Exercises:</u> - massages with a soft brush - kinetic sand - sensory bags	Lack of response to touch, need for strong stimuli (e.g. hitting oneself), low pain threshold <u>Exercises:</u> - playing in plastic masses, - drawing on one's back, - obstacle courses (sensory path)
Sense of deep sensation (proprioceptive)	
Reluctance to oppression, weighted blankets, force movements <u>Exercises:</u> - tug-of-war with controlled resistance - sponge squeezing - carrying light objects with force control	Need for strong pressure, getting into people or objects, difficulty in judging the force of movement <u>Exercises:</u> - wrapping things in a blanket (weighted blankets) - throwing stuff onto the target - carrying a backpack with a light load
Sense of balance (vestibular)	
Reluctance to swings, dizziness, balance problems <u>Exercises:</u> - swinging on a gymnastic ball - walking in a straight line - playing with motion control ("freeze at the signal given")	Loves spinning, swinging, does not feel dizzy, looks for strong motor stimuli <u>Exercises:</u> - swings - trampoline - swivel chair (with caregiver control)
Sense of hearing	
Ear clogging, anxiety at loud noises, noise avoidance <u>Exercises:</u> - playing with silent instruments - getting used to sounds - "What is this sound?" game.	Lack of reaction to the first name, restlessness in silence, search for sound stimuli <u>Exercises:</u> - ratchets, bobbins - searching for sounds in the environment - sound recognition game
Sense of sight	
Irritability to light and excess colours/details, avoiding looking into the eyes,	Fails to notice changes in the environment, gets lost in space, needs intense visual stimuli

<u>Exercises:</u> - books with simple pictures - sorting items by colour	<u>Exercises:</u> - playing with a flashlight in a dark room - puzzles with a lot of pieces

Source: Author's own-made list.

The plan for working with a child with sensory integration disorders is geared towards creating a coherent, safe and supportive environment that will enable the child to develop in harmony emotionally, socially and cognitively. Taking into account the difficulties resulting from sensory dysfunctions and the child's previous experiences related to being in a family that is often dysfunctional, the plan should assume systematic activities supporting both the therapeutic and educational spheres, and such actions should be aimed at:

- improving sensory and emotional regulation,
- enhancing the sense of security and predictability,
- supporting independence and a positive self-image/confidence,
- developing social and communication competences.

The cooperation of a team of specialists (SI therapist, psychologist, pedagogue-educator, caregivers from a foster family or institution) and regular evaluation of activities allows for flexible adaptation of the forms of support to the changing needs of the child. Only thanks to a comprehensive approach will the child achieve greater emotional stability, improve functioning in everyday situations and gain tools to better cope with developmental challenges. The key element of such support is, as always, monitoring progress and building relationships based on trust, empathy and acceptance.

Individual Pathway Plan (IPP)

Pursuant to the Family Support and the Foster Care System Act of 9th June 2011, adult wards who are in care of foster families (performing various forms of care, such as professional, non-professional, related foster families, family children's homes, care and educational institutions) can count on financial support for becoming independent. District Family Support Centres provide assistance in obtaining appropriate housing, employment, psychological and legal assistance, advice from a career counsellor and assistance for continuing education. This form of support is provided according to the reported needs and its amount depends on the type of foster care in which the foster child was placed, the length of stay in the foster family and is increased in situations where the person has a disability certificate. In addition, institutional financial assistance also includes support for the development of a child who is becoming independent. The so-called Individual Independence Program is also being developed. This program also allows you to take bold steps towards adulthood - m.in. participation in OHP, including vocational courses (including a driving license), language training, workshops with a stylist service, professional internship with an employer, internship and training scholarships, and

special scholarship programs are offered to high school graduates who want to continue their education and study at universities.

Unfortunately, the scheme of granting independence of the wards is referred to as the so-called “Achilles’ heel” of the foster care system in Poland [Domaradzki, Krzyszkowski, 2016, p. 209]. It is not uncommon for an adult pupil to return to the social welfare system, because the programmes of independence are usually related to benefits, and unfortunately they do not implement programmes for the development of the wards’ life skills with full commitment [ibidem, p. 209].

The basic assumptions of the IPP are the diagnosis prepared together with the ward and his family, the assignment of a caregiver who focuses on the planning, implementation of the IPP, motivation of the ward with his or her personality traits, the formulation and implementation of the IPP to strengthen the development of the mentee, respect and the right to make mistakes by the ward, the involvement of family and friends in the implementation of the IPP [ibidem, p. 210].

The legislator has provided for the following template of the Independent Pathway Plan of a foster family child/ward:

Table 8: Formally accurate independence/autonomy scheme

The scheme is written in the form of a document
The pupil/student accepts his or her decisions for implementation
The attitude of the pupil is conducive to the implementation of the planned help
Motivating the pupil to implement the scheme
Providing the pupil with the necessary support for their start in life
Completion of the program in accordance with its assumptions
Speed and simplicity of implementation
Positive result of the audit
Low level of independence/autonomy of the pupil
Returning to the social welfare system

Source: Author’s individual list, based on "Wsparcie dziecka w rodzinie i pieczy zastępczej" by P. Domaradzki and J. Krzyszkowski.

Throughout the entire period of children's stay in foster care, District Family Support Centres offer various forms of support for children and teenagers – for foster family children who remain in foster family children's homes until they reach the age of 18. In this case, the Centres provide support in the process of becoming independent of the adult charge..

Other foster family support activities and activities aimed at children in foster care offered by District Family Support Centres

District Family Support Centres, as part of their support given to foster families and children placed in them, also provide non-material assistance, including organising Children's Day, Santa Claus Day, but also running workshops for children to develop their interests and conducting psychotherapeutic activities. Among the workshops proposed this school year, there were to choose from: ceramic

workshops, jewellery design workshops and TUS classes, support groups for children and young people, a series of webinars on violence and dealing with anger.⁶

A highly beneficial step towards improving the situation of a child placed in foster care is the participation of the family in EU projects, which, financed by non-governmental organizations, propose many solutions and forms of support for children in care and their families. These programmes are dedicated to foster parents, children placed in their care, biological children of foster parents and other family members, as well as the staff of the Centres themselves. These schemes provide social activation, psychological assistance, therapeutic and specialist support - including diagnosis and therapy of disorders, development of potentials and interests, and support of an animator, mentors, and counsellors for people with disabilities. Unfortunately, recruitment to participate in such projects is very limited in terms of numbers and due to the schedule of project implementation.⁷

District Family Support Centres provide support to foster families and children placed in their care also by organising training for foster parents who want to improve their professional qualifications, organising volunteer help, cooperating with the local community, courts, educational institutions, medical entities and other social organisations. They provide legal support in ongoing court proceedings, but also provide legal advice, especially in the field of family law. In addition, in addition to implementing the assumptions of the Act on Family Support and the Foster Care System, they develop strategies for solving social problems, offer corrective and educational programs, psychological and therapeutic programs and others for people with disabilities.

In accordance with the public announcement of the Minister of Family and Social Policy of 27th March 2023, a child is entitled to appropriate sums of money to cover the maintenance of a child in a foster family, allowances to the benefit for a child with a disability certificate or a certificate of severe or moderate disability, an allowance for foster families for a child on juvenile proceedings. What is more, foster family support programs developed by social work specialists also include rehabilitation camps for children and their families, as well as leisure and recreational stays. Other additional sources of mental health support are offered, including diagnostics and psychological assistance, individual, family and group psychotherapy, psychiatric consultations and treatment, emergency assistance as part of the round-the-clock Admission Room and community treatment of the patient.

District Family Support Centre also supervise Crisis Intervention Points, which support families and their members in a crisis caused by domestic violence, marital crisis, family conflict, addiction, loss of a loved one, loss of job, loss of the meaning of life, or being involved in an accident.

⁶ Forms of workshops retrieved from the websites of several District Family Support Centres.

⁷ EU schemes announced on the websites of District Family Support Centres.

Creating a family “forever” through adoption or temporarily by foster families is a combination of everything – the acquisition by parents and children of behaviours and skills that are a long and ongoing process in closeness, everyday experiences that build trust, faith and hope, in healthy and safe relationships. Gregory Keck⁸ advises not to react immediately to behaviours, but to respond wisely to the deeper needs of the child. No institution, no specialist knows children like their parents. Therefore, it is important to choose the necessary support wisely, and unconditional parental love will accelerate the bonding with the child.

Parents, caring for the well-being of children placed in their care, should have the ability to accept children's feelings and point of view - which will affect the understanding and appropriate response to the child's behaviour. Time devoted to the child and the involvement of parents are very important for abused children. Additionally, parents' awareness of what they say and how they act is key to success, as children are alert and instinctively respond to every threat and sign of abandonment. The previously suggested sample therapeutic proposals, containing guidelines, advice and suggestions for foster parents are the result of many years of work and experience of specialists and therapists prepared to work with foster families.

Clearly, it is important that the proposed forms of specialist support are practised by parents so that they can yield the results of supplementing children's deficits in development, but also their relationships with new relatives and the environment in which the child has found himself at some point in life, and which is so different from the one in which he or she grew up and which he knows best. The well-being of children placed in foster care is a priority for foster parents; Unfortunately, the forms of support offered by institutions will never be exhausted in the actions taken to improve the child's situation, and parents will always report their lack of satisfaction, because each child has a different background, and different traumas and deficits to compensate for.

Abstract

This article examines the intersection between indigenous worldviews and the implementation of photovoltaic solar energy and artificial intelligence in the Wayúu communities of La Guajira, Colombia. Through a mixed-methods approach that integrates scientometric analysis and qualitative exploration, the study analyzes global academic trends related to energy transitions and digital inclusion in indigenous and rural territories. A total of 675 unique documents retrieved from Web of Science and Scopus were processed using the Bibliometrix package in R and structured through the Tree of Science algorithm to identify the foundational, consolidating, and emerging areas of the field.

The analysis reveals three main research branches: (1) optimization models for rural electrification systems, (2) socio-technical approaches to the implementation of decentralized technologies, and (3) frameworks of energy justice that emphasize procedural fairness, cultural recognition, and equitable distribution. These perspectives are highly relevant to the Wayúu case, where solar systems have begun to transform both domestic life and educational processes through the integration of digital tools in community schools.

However, the arrival of electricity and artificial intelligence also introduces complex tensions between development narratives and indigenous values. Issues such as cultural erosion, epistemological displacement, and shifts in community behavior demand critical reflection. This work argues that the energy transition in indigenous territories must be guided by principles of justice and participation, and that technological innovation should align with ancestral knowledge systems and the indigenous concept of Being-Well. Only then can solar energy and digital technologies become truly inclusive and empowering tools.

Keywords: Wayúu communities, energy justice, photovoltaic solar systems, artificial intelligence, indigenous knowledge, rural electrification

Introduction

The Wayúu Indigenous communities of Colombia have historically cultivated a unique form of Being-Well, rooted in harmonious coexistence with nature, respect for ancestral wisdom, and collective social practices. This notion of Being-Well transcends conventional Western indicators of progress or utility, positioning instead a relational paradigm where life, territory, and knowledge form a coherent whole. For centuries, the Wayúu have preserved this worldview despite marginalization, infrastructural exclusion, and limited access to basic services.

In recent years, the Colombian government, through agencies such as Ipse, Gensa, Fenoge, and Dispac, has promoted the implementation of photovoltaic solar systems in non-interconnected zones—initiatives often framed as mechanisms to close development gaps and foster inclusion. At the same time, the accelerated expansion of telecommunications has enabled the entry of digital technologies such as television, smartphones, and, incipiently, Artificial Intelligence (AI), particularly among Wayúu youth through educational programs.

However, this process raises critical questions regarding cultural continuity, epistemological autonomy, and the sociotechnical transformations induced by state-led electrification and digitalization. Will these technologies, deployed under national development agendas, reshape the indigenous cosmovision? Could they erode traditional practices by imposing utilitarian and consumption-based logics? This article explores these tensions by intersecting the Wayúu's ancestral concept of Being-Well with the current implementation of photovoltaic systems and AI access in La Guajira.

Drawing from a scientometric and qualitative methodology, the study maps the academic production surrounding energy transitions and digital inclusion in indigenous and rural contexts. It then contextualizes these findings through the lens of the Tree of Science algorithm, identifying the foundational roots, theoretical consolidations, and emerging branches of research. The discussion highlights the risks of techno-determinism, the potential of culturally-sensitive innovation, and the need for energy justice frameworks that respect indigenous autonomy. Ultimately, this work contributes to rethinking energy transitions not only as technical processes but as profound socio-cultural transformations.

Method

This research adopts a qualitative and applied methodological approach, aimed at exploring the intersection between indigenous worldviews, energy transitions, and the adoption of emerging technologies—particularly photovoltaic solar energy and AI—in the Wayúu communities of

Colombia. To trace the evolution of academic discourse on these topics, a scientometric strategy was applied, which allowed for a structured, evidence-based analysis of publication trends, thematic focuses, and key contributions in the field.

Bibliographic data were obtained from the Web of Science (WoS) and Scopus databases, recognized for their broad coverage and reliability in bibliometric studies (Pranckutė, 2021). A search strategy was designed combining terms related to indigenous peoples, renewable energies, and digital technologies, applied to abstracts and keywords. This search yielded a total of 441 documents in WoS and 488 in Scopus, which, after removing 254 duplicate records, formed a final corpus of 675 unique documents. The complete search parameters, including the time range (2002-2024), document types (articles, reviews and conference papers), and term logic, are presented in Table 1.

The analysis was performed using the Bibliometrix package in R, which facilitated data cleaning, calculation of performance metrics, and visualization of citation networks. This package, developed by Aria & Cuccurullo (2017), offers a comprehensive open-source tool for conducting bibliometric analysis and scientific mapping. Additionally, text mining and web scraping techniques were applied to refine metadata and extract thematic patterns within the corpus.

The scientometric analysis process was developed progressively, addressing four analytical dimensions. Firstly, scientific production was examined, measuring the volume and evolution of publications over time, including the annual growth rate and peaks of highest activity. Secondly, contributions by country were analyzed, identifying geographical trends in production and academic impact, with an emphasis on Global South countries. Thirdly, a review of journals was conducted to assess the relevance and influence of editorial spaces, highlighting those indexed in the Q1 quartile of Scimago. Finally, collaboration among authors was studied, which allowed for the identification of academic clusters and transnational associations that drive the interdisciplinary development of the topic.

As a complement to the scientometric mapping, the Tree of Science algorithm was applied, which organizes academic production into a tree-like structure composed of roots, trunk, and branches. This citation network-based approach has been successfully used in areas such as natural sciences (Durán-Aranguren et al., 2021), organizational management (Erazo-Muñoz et al., 2022), and as a web tool for scientific literature recommendation (Zuluaga et al., 2022), demonstrating its ability to identify both theoretical foundations and emerging lines of research.

Figure 1. General methodology (own elaboration).

Results

Scientometric research has allowed us to search with a qualitative and exploratory methodology to move from the particular to the general. On the other hand, fieldwork in the territories of the Wayúu Indigenous community, where nano-grids and microgrids of photovoltaic solar systems have been implemented, has led us to conduct a scientometric analysis.

Scientific Production

Scientific production, despite being limited, has been important, considering the technological changes in the world and the needs in some communities. The search in Scopus and WoS represents a sample of interest with characteristics that reflect, over a period of time, important changes in production, publications, and citations. The research, delimited to a twenty-year period, allows us to observe, in the number of publications, the importance of citations. Figure 2 shows a scientometric production between the years 2018 and 2024 in both Scopus and WoS, with a significant increase, highlighting that the last year reflects the highest production and publications made. Between 2008 and 2010, the impact of the topic was very high, achieving 5696 citations; however, between 2019 and 2020, 2936 citations were reached. It is analyzed that in the year 2024, despite having higher production in Scopus and WoS, citations are reduced to only 243, and publications reach their maximum exponent with 98 articles. It is noticeable that there is a growing academic interest and importance in the research topic from 2002 to 2024, specifically in production in each of the indexed journals. Thus, we perceive growth in the selected period, i.e., an Annual Growth of 24.40%. Research on solar energy, as described by Nawab et al. (2022), is supported by a need in some communities.

Figure 2. Scientific Production vs. Total Citations over time (own elaboration).

Regarding the analysis of scientific production and the detailed study by Vargas-Hernández et al. (2024), we will consider three fundamental stages that allow us to appreciate a change in production, supported by the database: The period between 2004 and 2008, where a growth in publications is

perceived in both Scopus and WoS, reaching 10.67% more, even with a higher number of citations and slight growth in the Scopus database. Period 2: covering 2009 to 2019, with an exponential growth of 15.67%, allows us to visualize greater interest in the WoS database and a record of growth in citations. Period 3: We take the years 2020 to 2024, a time in which article production increases by 19.54%, and the WoS database registers a higher number of publications. As for citations, a significant reduction is perceived in the last four years, which does not detract from the importance of the topic addressed.

Countries

Table 2 shows the scientific production of 10 countries along with the impact (measured in citations) and quality (measured in the Scimago quartiles) metrics. The countries with the highest productivity are the USA with 12.05% (100 papers), India with 7.47% (62 papers), and Australia with 5.78% (48 papers). Interestingly, India has the second highest citation (5.66%), but almost a third of the production is in Q1. Compared with Australia, 62.5% of the scientific production is in Q1, but the citation impact is 4.43% (1159 citations). The topic of the paper has gradually positioned itself in emerging countries such as Nigeria and Africa due to the need to develop sustainable energy.

Table 2. Scientific Production and Impact by Country (own elaboration).

Country	Production		Citation		Quality			
	Count	Percent	Count	Percent	Q1	Q2	Q3	Q4
Usa	100	12.05%	2288	8.75%	49	3	2	2
India	62	7.47%	1480	5.66%	22	11	6	5
Australia	48	5.78%	1159	4.43%	30	7	1	0
United Kingdom	43	5.18%	1496	5.72%	22	3	2	1
South Africa	38	4.58%	352	1.35%	8	6	5	1
China	35	4.22%	624	2.39%	17	6	0	1
Spain	33	3.98%	1212	4.63%	21	1	3	0
Canada	29	3.49%	772	2.95%	15	4	1	0
Nigeria	27	3.25%	232	0.89%	9	1	5	0
Korea	26	3.13%	510	1.95%	18	1	0	0

The distribution of scientific production and impacts across countries highlights notable trends related to the Wayúu indigenous communities, solar energy, and AI. The United States leads in total research output, with 100 papers (12.05%), and also has a strong citation impact (8.75%), reflecting the global influence of its contributions. India follows with 62 papers (7.47%) and stands out with a citation impact of 5.66%, though a significant portion of its research is published in lower-tier journals. Meanwhile, Australia, despite a smaller overall production (5.78%), has the highest percentage of publications in Q1 journals (62.5%), suggesting a focus on high-quality research, though its citation impact (4.43%) remains moderate.

Emerging countries, particularly Nigeria and South Africa, are gaining relevance in this field due to the pressing need for sustainable energy solutions in developing regions. Nigeria, for instance, has a growing research presence (3.25% of total papers), though its citation impact remains low (0.89%). Similarly, South Africa contributes 4.58% of publications but has a lower citation influence (1.35%). These patterns suggest a shift in research priorities towards addressing real-world energy challenges, particularly in regions where solar energy and AI-driven solutions could significantly improve living conditions. This evolving landscape underscores the increasing interest in sustainable energy initiatives within Indigenous and developing communities. The integration of AI and solar energy aligns with global efforts to enhance energy access, reduce environmental impact, and promote well-being, particularly among marginalized populations such as the Wayúu.

Figure 3. Global Collaboration Network (own elaboration).

Journals

Regarding the productivity and impact of the journals that are most important in the researched topic of Well-Being and student participation in solving social problems (Ma'rifatullah et al., 2021), solar panels as described by Vasiliev et al. (2024), and AI, which is part of an inclusive change in

indigenous communities as described by George & Mohanan (2025), we have analyzed important factors as proposed by Quintero-Arango et al. (2024): Impact factor, Quartile, H-index, and the most outstanding journals by academic production.

Thus, we can observe that the ten most contributing journals are categorized as Q1, and Renewable And Sustainable Energy Reviews has an impact factor of 3.596 citations and an H-index of 421, being above the most outstanding journals; it can be analyzed that this journal has 22 publications in Scopus. As for Renewable Energy, categorized by its higher production with 29 journals in WoS and 20 in Scopus, it reflects an impact factor of 1.923 and an H-index of 250. This means that the academic contribution is valuable in the university community. We cannot fail to highlight that the journal Energies contributes 24 journals in WoS and 19 in Scopus.

One of the latest investigations from the journal Renewable Energy by Makai & Popoola (2024) deals with micro-hybrid renewable systems in rural Zambia, which shows an important path in science. This type of research and work in the non-interconnected zones of Colombia perceives the presence of State companies as main actors; these are the Ministry of Mines and Energy, Ipse, Fenoge, Gensa, Dispac, and energy companies, seeking solutions for peasants and indigenous people who have never had electricity.

Table 3. Productivity and Impact of Leading Journals(own elaboration).

Journal	WoS	Scopus	Impact factor	Quartile	H Index
Renewable Energy	29	20	1.923	Q1	250
Energies	24	19	0.651	Q1	152
Renewable And Sustainable Energy Reviews	0	22	3.596	Q1	421
Energy For Sustainable Development	17	14	1.208	Q1	83
Energy Research And Social Science	0	15	2.32	Q1	113
Energy Policy	12	11	2.388	Q1	272
Sustainability (Switzerland)	0	14	0.672	Q1	169
Energy Research & Social Science	25	0	2.32	Q1	113
Renewable & Sustainable Energy Reviews	31	0	3.596	Q1	421
Sustainability	22	0	0.672	Q1	169

Figure 4. Citation Network of Leading Journals (own elaboration).

Author Collaboration Network

The analysis of the most productive researchers on this topic allows for the identification of academic communities and emerging approaches over time. Table 4 shows the 10 authors with the highest production. The first is Professor Jinhyeok Kim, with 26 publications, and his recent interests are related to the improvement of ecological solar cells (Park et al., 2024). Professor Seung-wook Shin is the researcher with the highest h-index (44), and his recent research has focused on making water electrolysis more efficient for sustainable energy generation (Gaikwad et al., 2024).

Table 4. Top production by author (own elaboration).

Nº	Author	Total Publications	H Index	Affiliation
1	Kim J	26	15	Gwangju Institute of Science and Technology, Gwangju, South Korea
2	Shin S	18	44	Korea Rural Community Corporation, Ansan, South Korea
3	Suryawanshi M	16	40	UNSW Sydney, Sydney, Australia
4	Jang J	14	20	Chonnam National University, Gwangju, South Korea
5	Ferrer-Martí L	12	24	Universitat Politècnica de Catalunya, Barcelona, Spain
6	Karade V	8	24	The University of Toledo, Toledo, United States
7	Domenech B	7	16	Universitat Politècnica de Catalunya, Barcelona, Spain
8	Ghorpade U	7	5	UNSW Sydney, Sydney, Australia
9	He M	7	21	UNSW Sydney, Sydney, Australia
10	Kumar P	7	14	Boston College, Chestnut Hill, United States

Another important aspect for identifying authors is the academic communities that are generated. For example, Figure 5 shows the scientific collaboration network generated by the ego-networks of the top researchers. Three groups are observed in the network: the first formed by researchers Jinhyeok Kim, Seung-wook Shin, Vijay C. Karade, Mahesh P. Suryawanshi, Mingrui He, and Jun Sung Jang, who have common research on improving solar cell efficiency and hydrogen production (Park et al., 2024; Suryawanshi et al., 2024). The second group, which belongs to the same component one, is led

by Professor Pujari Harish Kumar, who is shown as a researcher connecting two groups. That is, although Professor Kumar has worked directly with the professors of the first group, he has also worked with co-authors who have not worked with them. In other words, he is a researcher who serves as a bridge between two groups of researchers. This is because Professor Kumar has focused more on improving renewable energies aimed at hydrogen production (Kumar et al., 2025).

Figure 5. Network Collaboration of the Most Productive Authors (own elaboration).

Tree of Science

Figure 6 shows the citation network analysis corresponding to the branches of the field of study, represented by a thematic cluster structure. Each node in the figure represents a scientific article, its size reflecting the number of citations received; the connections between nodes indicate direct citation relationships. This visualization, generated by the Tree of Science algorithm, allows us to observe how the most recent knowledge on renewable energies, technological access, and community development in rural and indigenous contexts is structured and diversified.

Three main subtopics are identified in the network. The first, represented in purple and grouping 42.87% of the articles, consists of research focused on the optimization of energy systems, rural electrification, technology analysis, and international development. Keywords such as energy, optimization, system, development, electrification, and international reflect an approach oriented towards technical and strategic solutions to expand energy access in remote areas. This thematic line is closely related to what is developed in Branch 1, which addresses models and methodologies for community energy systems.

The second subtopic, visualized in orange and corresponding to 29.15% of the articles, brings together studies that analyze the sustainability of renewable systems, their technical and economic viability,

as well as decentralized generation. Concepts such as renewable, sustainable, systems, generation, assessment, and solar show an interest in adapting energy technologies to local conditions, paying special attention to the balance between efficiency and equity. This thematic line coincides with the approaches developed in Branch 2, oriented towards socio-technical approaches for the implementation of technologies in communities.

The third subtopic, represented in green and comprising 27.98% of the network, focuses on issues related to access to photovoltaic technologies, energy justice, energy transitions, and sustainability in the Global South. Terms such as access, photovoltaic, technology, transitions, countries, and sustain underscore a critical perspective on structural inequalities in energy access. This dimension is directly connected to the topics addressed in Branch 3, focused on the principles of equity, cultural recognition, and community empowerment as axes of a just energy transition.

This branch analysis allows us to visualize how the most current knowledge has been distributed and specialized around various technical, social, and ethical problems. Based on this thematic segmentation, we move towards a structural reading of the scientific field that distinguishes between foundational studies (roots), those that articulate and consolidate knowledge (trunk), and those that open new lines of research (branches).

Root

This section explores the foundational roots of the Being-Well concept in relation to the introduction of solar energy and AI in indigenous communities, with an emphasis on the Wayúu indigenous communities of Colombia. Although much of the early literature on rural electrification does not specifically focus on Latin American indigenous populations, it provides a key framework for understanding the technical, social, and regulatory challenges that accompany the arrival of energy technologies in culturally diverse territories. The impact on social changes, behavior, fashion, and the relationships of indigenous people is high. Children at early ages handle social media with such ease that nothing is strange to them, but their worldview is gradually changing, and free time is used with televisions and technological applications; in fact, there is always someone who asks AI a question from their applications. We must highlight that this is the first time in their lives that indigenous people and peasants can light their homes and use electronic devices connected directly to their power outlets. This task of energizing with solar panels is carried out by the State through Ipse, Gensa, Dispac, Fenoge, the Ministry of Mines and Energy, and national energy companies and contractors.

One of the first relevant studies, developed in 2004, analyzes access to electricity in rural and remote areas based on a case study in India. This pioneering work offers an overview of reforms in the electricity sector and regulatory policies that have guided rural electrification (Chaurey et al., 2004); however, Colombia initiated this program two decades ago, but it is now that the program to energize peasant and indigenous communities is at its peak. Complementarily, Wüstenhagen et al. (2007) introduce the concept of social acceptance for renewable energies, emphasizing that while there is general support for these technologies, local barriers persist that can hinder their implementation; precisely in the non-interconnected zone of Colombia, many communities refuse to receive the benefit, fearing the change in mindset that it generates. This approach is key to understanding the possible dissonance between external development logic and traditional cultural practices; it is the confusion of development, progress, and growth. A worldview at risk of changes, shown by Rojas

Quiceno (2013), due to the entry of computers, AI, and devices, as elements that lead to behavioral and thought changes.

With the persistent challenge of energy provision in marginalized areas, research began to focus on sustainable alternatives that also consider social, economic, and ecological factors, noting that the large land extensions of the Wayúu community are also uncultivated lands; their use is exclusively for lambs and goats. In this context, Cherni et al. (2007) propose a decision-support system that evaluates different energy solutions suitable for improving livelihoods, incorporating variables beyond mere technological selection. In turn, community photovoltaic solar microgrids and nanogrids emerge as key tools in rural development processes, especially in isolated contexts (Kirubi et al., 2009). This centralization of photovoltaic systems generates fear but also awakens in some indigenous people the option to train and educate. It is the schools that promote and ask the State for the interconnection of telecommunication networks.

In the Colombian context, recent studies have begun to articulate the energy discussion with a systemic perspective, considering the Energy-Water-Food nexus in rural indigenous communities of La Guajira. One of these analyses examines how solar microgrids and nanogrids and wind energy systems have improved access to water and food, but also warns about ecological risks such as the depletion of local aquifers due to intensive pumping (Granit, 2022). In technological terms, photovoltaic energy has acquired a central role in the La Guajira region, where solar resources are abundant. Vides-Prado et al. (2018) conducted a techno-economic analysis of the installation of photovoltaic solar systems in indigenous communities, evaluating their viability from a perspective of universal, sustainable access adapted to the particular conditions of these territories. Thus, Ipse, Gensa, Fenoge, and the Ministry of Mines, in association with the Mining and Energy Planning Unit -UPME-, through research studies, are giving programmatic meaning to the connection of the national energy system.

Collectively, these foundational studies not only offer a technical and political basis for understanding the processes of rural electrification and the introduction of renewable energies but also open the door to deeper reflections on the acceptance, appropriation, and transformation of technologies in specific cultural contexts. In the case of the Wayúu, these technologies cannot be analyzed solely from their functionality, but from their potential impact on ways of life, the relationship with nature, and the ancestral idea of Being-Well. Thus, the transition to the next section, the Trunk, will allow us to articulate how these theoretical roots have evolved to integrate new narratives, debates, and experiences where technological development, energy autonomy, and indigenous knowledge converge.

Trunk

Building on the foundational roots described earlier, the debate on implementing technologies like solar energy and artificial intelligence in indigenous territories has evolved towards more complex approaches. These consider not only technical and economic viability but also sociocultural, ethical, and political dimensions (Ahlborg & Hammar, 2014). In the case of Colombia's Wayúu communities, this development has materialized within rural electrification projects driven by the State and entities like The Institute for Planning and Promotion of Energy Solutions Ipse, Gensa, Dispac, Fenoge, and Upme, among others. Here, the installation of photovoltaic systems intertwines with discourses of development, inclusion, and modernization (Guerra López, 2023; Rodríguez Zabala et al., 2021).

However, these processes have also created tensions with traditional ways of living, relationships with the environment, and inherent modes of knowing and learning (Escobar, 2010). The indigenous school calls for and requests technological change, while indigenous people, with their female leadership, fear the cultural transformation of the Being-Well communities, the Index of Happiness, and living well. This is considered from the perspective of leading a pleasant life without technological changes and thinking about what happened in Bhutan—a shift in thinking that distorts life standards and leads to desire-driven behaviors, also described by Oliveira Dos Santos & Trigo Aza (2025). By distancing ourselves from the land, from nature, and increasingly living in urban or urbanized rural centers, we have forgotten that we are nature-culture.

In this section, we will explain how these technologies have been appropriated, resisted, or reconfigured in the Wayúu context, revealing a hybrid landscape where ancestry and innovation, territory and digitality coexist (Fernandez Hernandez, 2023). This hybridity is manifested, for example, in the use of cell phones to maintain community social networks, share knowledge in the Wayuunaiki language, or even facilitate political organization processes against extractive projects, and the use of social media and AI. One thing must be clear: communities organize easily through cell phones, and today families seek ownership of televisions to find out what is happening in the national territory.

Stemming from a historical power imbalance between the Wayúu communities and the State, some works have focused their efforts on presenting case studies on the adoption of renewable energies. The main objective is to empower the community through sustainable and culturally relevant energy solutions (Camargo et al., 2016; Jiménez Becerra et al., 2020). These approaches consider that energy, beyond being a technical resource, can become a tool for territorial autonomy, identity strengthening, and the recovery of Being-Well as an organizing principle of collective life.

Next, three main branches that have nurtured this field of study are presented: models and methodologies for designing sustainable energy systems; socio-technical approaches in the implementation of energy technologies; and empirical evidence on the local effects and appropriations of these technologies. The algorithm developed by Blondel et al. (2008) was used to identify the branches of the Tree of Science. The main research branches on the implementation of solar energy technologies in indigenous and rural communities are represented by the three broadest groups in the network, as shown in Figure 6.

Branch 1: Models and methodologies for community energy systems

Various studies have explored how to design sustainable energy systems for rural and indigenous communities, highlighting approaches that integrate technical, social, and environmental criteria; this is the case for Ipse, Fenoge, Upme, and Gensa in Colombia. From hybrid configurations adapted to remote territories (Rai et al., 2021) to methodological proposals based on co-design with the community (Rodolfo Martinez et al., 2023), theory agrees that local participation is key to the success of these projects. Some research incorporates multi-objective optimization models that prioritize job creation and equity (García-Martínez et al., 2022), while others suggest innovative ways of sharing territory, such as agrivoltaics, which combines solar generation with agricultural crops (Choi et al., 2021). These experiences offer valuable lessons for thinking about the energy transition in territories like Wayúu, where solutions must dialogue with the local environment and culture. In this case, photovoltaic solar microgrids and nanogrids were implemented to take advantage of the fact that Wayúu communities are concentrated in isolated sectors of the non-interconnected zone. An exploratory study by researchers from the Ministry of Mines and Energy and Upme, covering basic needs for a population considered vulnerable, the Wayúu, who are in the department of La Guajira, Colombia. And the adjustment that Wayúu teachers have explored to bring technology and information networks, wireless and physical, to schools, and the use of computers and AI-equipped mobile phones in search of contributions to better education, breaking with the indigenous peoples' own models.

Branch 2: Socio-technical approaches in the implementation of energy technologies

This branch brings together research that addresses electrification with photovoltaic solar systems in rural areas from a socio-technical perspective, integrating technical factors with social, environmental, and equity aspects. Some studies highlight the transformative role of solar energy when planned with a perspective where the female gender has great power and importance, as in communities in Pakistan where women have improved their access to basic services thanks to solar

mini-grids designed with an inclusive approach (Khalid et al., 2023). Other technological proposals, such as reversible solid oxide cells, allow for integrated solutions for energy and drinking water, strengthening the resilience of marginalized communities (Baldinelli et al., 2021). Furthermore, agricultural biomass has been evaluated as a viable source of energy for rural communities in Ghana and India, although its viability depends on the economic context and institutional support (Chambon et al., 2020; Odoi-Yorke et al., 2022). Together, these works demonstrate the need to adapt technological solutions to local realities, recognizing that the energy transition is also a social process. The studies and research carried out by the Ministry of Mines and Energy of Colombia significantly cover areas where national interconnection with electricity grids is not achieved. The photovoltaic solar system is seen as the recognition of peasant and indigenous communities from a social aspect to support primary basic needs.

Branch 3: Equity, Recognition, and Justice in the Energy Transition

The debate on the energy transition in indigenous territories cannot be separated from issues of justice and social action. These are proposals for agreements between the State and indigenous leaders. This involves research with geographical rethinking and coverage needs as well as required energy capacity. Various studies have addressed how rural and indigenous communities face inequalities in access, participation, and the benefits of renewable technologies. The department of La Guajira is an area of 20,848 km² (8,049 sq. miles) with desert-type lands and a temperature of 34 degrees Celsius or 94 degrees Fahrenheit. In the case of the Wayúu in La Guajira, Colombia, conflicts have been documented around wind projects that have violated principles of procedural, distributive, and recognition justice (Fajardo Mazorra, 2023). However, it is necessary to justify to the community the social contribution and the contribution to the community, which is not an easy task. At the same time, positive experiences of adopting microgrids and nanogrids are currently highlighted as a model being implemented in the year 2025, community-based systems that respond to the cultural and territorial needs of these communities, although limited by a lack of funding (Granit, 2022). Cases in Canada and the Global South show how institutional support, community ownership, and the design of inclusive policies are key factors in ensuring a just, equitable, and sustainable transition (Leonhardt et al., 2023; Vassiliades et al., 2022). In the words of Hernan Garcia (Hg Ingeniería), the aim is to cover public services supported by photovoltaic solar systems that meet basic needs, or in the words of Suncolombia as a contractor, the objective is for photovoltaic solar systems to achieve a higher efficiency index for a better being well.

The Wayúu indigenous communities of Colombia have historically built a harmonious relationship with nature, based on respect, reciprocity, and their own notion of Being-Well. This state of well-

being, deeply rooted in their cosmovision, has been challenged by the recent arrival of technologies such as photovoltaic solar energy and, with it, television, cell phones, the internet, and, incipiently, artificial intelligence. This article has shown how the foundational roots of energy access in rural contexts have evolved from technical approaches to comprehensive visions that also consider social, cultural, political, environmental, and technological aspects.

Conclusion and discussion

The paths taken by different Wayúu communities in La Guajira, Colombia, allow for the identification of common patterns: the importance of participatory design, the social and technological value of photovoltaic solar systems—in this case, the implementation of microgrids (12 families) and nanogrids (6 families) as decentralized solutions—and the need to align technological innovation with local realities. In the Wayúu case, these technological processes are intertwined with state discourses on development and inclusion, but they also raise questions about the possible transformation of traditional ways of living, learning, and relating to the environment.

This work has shown that the energy transition in indigenous communities must be approached from a justice perspective, which recognizes historical asymmetries and promotes the effective participation of peoples in decisions affecting their territories. Likewise, they have underlined the need to imagine energy futures beyond the merely technical, that integrate cultural diversity, care for life, and respect for ancestral knowledge. Although artificial intelligence has not yet been widely documented in the Wayúu context, its imminent expansion demands critical attention so that its implementation does not reproduce inequalities but, on the contrary, enhances local forms of knowledge and autonomy. We cannot fail to highlight the State's political participation in social investment, energy, and technology of photovoltaic solar systems. This occurs not only in the Wayúu indigenous community, where a large economic and technological investment is being made, but also in peasant communities and sectors without connection to the electrical grid. This work is carried out by the Ministry of Mines and Energy with actors such as Ipse, Gensa, Dispac, Upme, and Fenoge.

Abstract

In the Chair of Scientific Research Methodology, students select a topic of interest and throughout the academic cycle, they transfer the theoretical aspects covered class by class to their annual project. Additionally, the teaching team proposes that students investigate an epidemiological problem identified in 2024. As an objective, it is proposed to analyze the products created by students of the fourth year of Medicine of a Private Management University of the City of Mar del Plata on the Viruela del Mono (Mpox). The research is conducted in a descriptive, longitudinal manner with a sample of 65 students selected non-probabilistically for convenience. Students realize a characteristic by reporting signs, symptoms, risk factors, mechanisms of prevention of treatment, repercussions in society, analyzing the global situation, with a Follow-up for 8 weeks in Argentina of notifications and confirmed cases. With all these data they elaborated a Lotus flower which is a diagram very well implemented as a technique of creativity. This creative technique consists of a central flower with eight petals. In the center, the name of this disease, which has caused alarm in many parts of the world, is placed. In turn, each of these petals is transformed into a new flower containing eight new petals. Thus, the central flower is surrounded by eight flowers. Each petal has a concept associated with MPox, generating surprising productions. Although the technique is the same, the Lotus flowers generated have similarities and differences in terms of the concepts selected by the students' Educating students, future professionals in the follow-up of cases of illness that the WHO has considered to be of importance at a global level, is key to their development in future scenarios that can be identified

Keywords: methodology, research, Mpox, Lotus flower.

⁹ Valentina Guazzetti works as teaching assistants in the Methodology department and is a students of the Medicine degree.

Introduction

Countries are constantly monitoring the epidemiological situation. This allows different actors to be vigilant in their roles regarding different diseases, not only of national but also international interest. In light of the WHO warning that this is a “Public Health Emergency of International Concern (ESPII)”¹⁰ as indicated in the National Epidemiological Bulletin No. 743, SE 06, Year 2025¹¹. Vila, (2024) refers to the origins of this disease and how it spread in different countries of the world, exceeding more than 60,000 cases in the American continent and of these, 2,27 % died. Alfaro Angulo, and Baltodano Nontol, (2024) present a description of this disease, its signs, symptoms and forms of contagion, also pointing out the clades identified with their characteristics. The objective was: to analyze the products created by students of the fourth year of Medicine of a Private Management University of the City of Mar del Plata on the Viruela del Mono (Mpox).

Materials and Methods

The research is conducted in a descriptive, longitudinal manner with a sample of 65 students selected non-probabilistically for convenience. Students realize a characteristic by reporting signs, symptoms, risk factors, mechanisms of prevention of treatment, repercussions in society, analyzing the global situation, with a Follow-up for 8 weeks in Argentina of notifications and confirmed cases.

Results

Students are asked to delve deeper into the topic of Monkeypox. To do so, they conducted a bibliographic search in updated sources. For 8 weeks, the data reflected in the National Epidemiological Bulletin was analyzed, where the information collected on Mpox: confirmed cases and total accumulated notifications by jurisdiction of residence was weekly recorded in a table. The students not only created tables but also developed graphs like the one shown in the Figure. 1

¹⁰ If you wish to expand the information, it is suggested to consult

Figure 1: Number of confirmed cases with follow-up for 8 weeks

The teaching team presents the conditions that the final multimedia presentation must have. The one shown in Figure 2

Figure 2: Multimedia Presentation Guidelines

The Lotus Flower is a very particular creativity technique. Michalko (2010 p: 132-135) indicates that this technique is very pertinent when one wants to increase knowledge of the same. The central flower is surrounded by 8 petals that in turn transform into centers of 8 flowers with new 8 petals. Creativity is enhanced by the great dynamism that is perceived when completing it.

In the Figure 3 you can see which concepts associated with Mpox were selected by the students to complete the 8 petals of the central flower.

Figure 3: Contents selected by students to complete the 8 petals of the central flower

Below is a summary of how this diagram was completed sequentially. Starting with the central flower with 8 concepts surrounding the central theme such as Characteristics, Geographic Distribution, Treatment, Risk Factors, Symptoms and signs, Prevention, Complications and Transmission.

			Geographical distribution	Characteristics	Prevention			
			Risk factors	Mpo X	Symptoms and signs			
			Treatment	Complications	Transmission			

	Geographical distribution			Characteristics			Prevention	
				Virus	Under epidemiological surveillance			
			Geographical distribution	Characteristics	Prevention	Headache	Fever	Skin rash
			Risk factors	Mpo X	Symptoms and signs		Symptoms and signs	
			Treatment	Complications	Transmission			
	Treatment			Complications			Transmission	

Ruanda	Geographical distribution	Burundi		Characteristics			Prevention	Avoid contact with animals
Kenia	Republic of the Congo	Uganda		Virus	Under epidemiological surveillance	Avoid contact with infectious waste		
			Geographical distribution	Characteristics	Prevention	Headache	Fever	Skin rash
			Risk factors	Mpox	Symptoms and signs		Symptoms and signs	Myalgia
			Treatment	Complications	Transmission	Lymphadenopathy	Asthenia	General malaise
						Direct contact	Bedding	Objects
	Treatment			Complications			Transmission	

South Sudan	Nigeria	Democratic Republic of the Congo		~~Clade I~~	~~Clade II~~	Use of face masks	, Hand washing,	Avoid direct contact,
Ruanda	Geographical distribution	Burundi	Two strains identified	Characteristics	Diagnostic tests to detect other conditions	Covering injuries,	Prevention	Avoid contact with animals
Kenia		Uganda		Virus	Under epidemiological surveillance	Avoid contact with infectious waste	Isolation of infected <u>people</u> .	Disinfecting surfaces.
Pregnant women	Children		Geographical distribution	Characteristics	Prevention	Headache	Fever	Skin rash
Immunocompromised	Risk factors	Close contact with someone infected	Risk factors	Mpox	Symptoms and signs	Odynophagia.	Symptoms and signs	Myalgia
Travel to endemic area,	Health personnel	Multiple sexual partners	Treatment	Complications	Transmission	Lymphadenopathy	Asthenia	General malaise
Analgesia	Antipyretics		Severe scarring, e.g.	Pneumonia,	Skin infections	Direct contact	Bedding	Objects
Cortisone-free eye drops	Treatment	Prevent the sequelae.	Eye infections,	Complications	Meningoencephalitis,	Infected animal meat	Transmission	Transplacental
Antiviral treatment,	Treat the injuries	Treat the infections,	Myocarditis,	Sepsis,	Blindness.	Bites	Scratches.	Perinatal

Figure 4: Sequence in the filling of the Lotus Flower

In this work it is observed that although they have completed most of the concepts, some are still missing.

Figure 5: Examples of Mpox Lotus Flowers made by students of the Methodology
At the end of the activity, the productions are presented, establishing a dialogical and reflective space what was developed.

Table 1 proposed capabilities for students listed in the teaching program that recognise the teaching team that came into play in this activity.

	Yes	No
Identifies and evaluates academic sources associated with the topic.	x	
Processes information associated with the topic selected by his/her work group.	x	
Works in a team, respecting the opinions of theirs peers.	x	
Uses information management strategies respecting the current standards recognized by the Academic Community.	x	
Processes information associated with the topic selected by their work group.	x	
Analyze and interpret the relevant results of epidemiological research.	x	
Investigate available resources, using them according to needs.	x	
Associates' information from scientific articles for data interpretation.	x	
Acquires/strengthens skills for reading and interpreting data reflected in the results of scientific publications.	x	
Strengthens oral and written communication skills	x	

Discussion and Conclusion

Rabanillo Herrero (2018:98) in his Master's Thesis he highlights the value of creativity regardless of the academic level in which the student is. He also highlights that for a teacher the techniques are easy to apply. Hofstadter (2011:8) stands out for his work and one of his chapters refers to Bach and inspires "inquiry and search" and making an analogy with our role within the teaching and learning of the Methodology, they are actions that we permanently carry out to achieve a greater understanding of the students.¹² Antonorsi Blanco (2012) refers to the phases of the creative process, which leads us to the final reflection of our students who have indicated that this proposal allowed them to delve into a topic of epidemiological interest since their training, allowing the Lotus Flower diagram a more comprehensive view. Ordonez (2011) begins his book with the idea of change, where he shares the idea that change is characteristic of today, and if we stop to think about the gradual incorporation of Artificial Intelligence in disciplines and academic centers, as a teaching team it is necessary to constantly update ourselves by looking for resources and strategies that encourage the active, collaborative and reflective work of our students.

An Overview of Publications on Academic Achievement in Türkiye: A Bibliometric Analysis

Zeynep Şimşir Gökarp

Selcuk University, zey.simsir.93@gmail.com, 0000-0003-2353-8922, TURKIYE

Abstract

Enhancing students' academic achievement by providing them with academic knowledge and skills is one of the leading goals of education systems. Therefore, studies on academic achievement have increased from the past to the present. In this context, this study aimed to reveal the studies on academic achievement in Türkiye using the bibliometric method. For this purpose, Türkiye-addressed publications scanned in the Web of Science (WoS) database and published between 1990 and 2025 were analyzed using bibliometric analysis. The data were analyzed using the VOSviewer program. The studies on academic achievement were analyzed according to years, authors, number of citations, journals, institutions, and the most productive authors, institutions, and journals were revealed. Furthermore, co-author, co-citation, and co-word maps were created. According to the results of the study, there are 2420 articles on academic achievement originating from Türkiye in the WoS database since 1990. It was determined that the studies on academic achievement showed an increasing trend overall. Regarding the ranking of productive authors, it was found that there was no linear relationship between the number of citations and the number of articles. It was found that Hacettepe and Gazi Universities were the most productive institutions in academic achievement studies, and the journals of Education and Science and Hacettepe University Faculty of Education were the most productive sources. In the analysis of the common keywords, it was identified that concepts such as motivational meta-analysis and self-efficacy came to the forefront. Based on the findings, some suggestions for researchers were presented.

Keywords: Academic success, academic performance, Turkey, scientific mapping, bibliometric

Introduction

Achievement generally refers to the extent to which individuals attain their goals. In educational settings, it is commonly understood as academic achievement. This can be defined by students' grade point averages, their ability to demonstrate expected behaviors, and the extent to which they meet academic criteria (Duru & Balkıs, 2015). Academic success is

critically important not only for the individual student but also for their family and broader society. A well-educated, academically successful population is considered a key driver of societal development (Yıldırım, 2000).

In contemporary education systems, academic performance—often measured through grades and standardized tests—plays a central role in student selection for higher education. Consequently, academic achievement significantly influences an individual's future career prospects, income level, and overall quality of life (Spinath, 2012). Given these outcomes, academic success holds both personal and societal importance and is widely regarded as the primary goal of education today (Koca & Dadandı, 2019).

Academic achievement is seen as one of the important fields of study in education (Ulubey & Toraman, 2015). For this reason, the number of studies on academic achievement is increasing day by day (Dilmaç & Şimşir Gökalp, 2022). Meta-analysis studies have revealed that academic achievement is related to many variables such as student characteristics, home and family factors, classroom and teacher influence, curriculum, learning strategies, technology use, and out-of-school factors (Hattie, 2023). In addition, some researchers have addressed cognitive and non-cognitive factors affecting achievement (Dilmaç & Şimşir Gökalp, 2022; Khine, 2016). In sum, academic achievement emerges as a result of a complex interaction of intrapersonal and interpersonal factors (Armitage, 2008). Therefore, it is important to investigate the trend of studies on academic achievement and which concepts are studied together with academic achievement. When the literature was reviewed, there was no study examining the trend of studies on academic achievement. The purpose of this study is to examine the overall trends in academic achievement research originating from Turkey and indexed in the Web of Science (WoS) database. Specifically, the study aims to answer the following research questions:

1. How is the distribution of academic achievement research spread across different years
2. Which authors contribute most frequently to academic achievement research?
3. In which journals is academic achievement research most commonly published?
4. Which institutions are most active in producing research on academic achievement?
5. What is the pattern of collaboration among researchers (co-authorship) in this field?
6. What is the distribution of research based on co-citation patterns?
7. What are the most frequently used keywords in academic achievement research?

Method

This study employed bibliometric analysis to examine articles from Turkey on academic achievement published in journals indexed by the Web of Science (WoS). WoS was selected as the data source due to its multidisciplinary structure and its role as a subscription-based scientific citation index that includes high-impact academic journals, conference proceedings, online books, and editorial content across globally recognized indexes such as SCI, SSCI, and AHCI.

While obtaining the data for this study, the “Topic” field was selected in the WoS general search tool. English words related to academic achievement (“school performance” OR “school achievement” OR “school success” OR “academic achievement” OR “academic success” OR “academic performance”) were entered in the search section of the search motor. Some of the studies obtained as a result of the search were included in the analysis while others were excluded. First of all, Turkey was selected as a region from the filtering section in WoS in order to ensure that the studies included in the analysis originated from Turkey. It was ensured that at least one of the authors of the study had a Turkish origin. There were no limitations in terms of the document type, and all kinds of works from articles to book chapters, and conference proceedings to book reviews were included. The output of the studies to be included in the analysis was received on February 17, 2025. Therefore, the studies included in the analysis are the studies included in WoS on and before this date.

The output (.txt) of the bibliographic data obtained in the study consists of data such as author name, title, author institution, and abstract. The outputs were transferred to the VOSviewer program for bibliometric analysis. As a result of the analysis performed with the VOSviewer program, journal distribution, author rankings, citation rankings, and institutional rankings of the studies were obtained.

Results

1. Distribution of studies on academic achievement by years

The distribution of publications on academic achievement in WoS according to years is presented in Table 1. As can be seen, publications have shown an increasing trend from 1980 to the today. However, it can be stated that there are small fluctuations and decreases in some years. The reason for the decrease in 2025 is that the data is only for the first two months of the year.

Table 1: Distribution of Publications by Year

2. Distribution of studies on academic achievement by authors

The ranking of the authors who published on academic achievement according to the number of articles is presented in Table 2. When the first three authors were examined, it was seen that each of them was a scholar working in the Department of Educational Sciences. The first-ranked author works in the Department of Curriculum and Instruction, the second-ranked author works in the Department of Lifelong Learning and Adult Education, and the third-ranked author works in the Department of Curriculum and Instruction. There is no linear relationship between the number of articles by the authors and the number of citations and link strength. For example, the second-ranked author in terms of the number of articles is the academic with the highest number of citations and the highest link strength.

Table 2: Ranking of the Most Prolific Authors in Academic Achievement Research

Order	Author	Number of articles	Number of citations	Strength of connection
1.	Veli Batdi	18	204	5
2.	Murat Balkis	17	454	12
3.	Hatice Yildiz Durak	15	373	0
4.	Erdinc Duru	12	327	13
5.	Gokmen Arslan	12	244	3
6.	Engin Karadağ	11	59	0
7.	Tarik Talan	9	188	5
8.	Mehmet Baris Horzum	9	118	0
9.	Ibrahim Yildirim	9	330	0
10.	Ramazan Yilmaz	9	118	0

3. Distribution of research on academic achievement by journals

The ranking of journals in WoS in terms of the number of articles on academic achievement is presented in Table 3. As can be seen, Education and Science, which is the only journal in Türkiye that is indexed in SSCI, takes the first place in terms of the number of articles. This is followed by Hacettepe University Journal of Education and Educational Sciences-Theory & Practice. Among the top ten journals in WoS where Turkish scholars publish on academic achievement, eight of them are Turkish journals and two of them are journals founded by foreigners. This shows that Turkish academics prefer Turkish journals more when publishing their studies on academic achievement.

Table 3: Journals Publishing the Most Studies and Number of Citations

Journal name	Number of articles	Number of citations	Strength of connection
Education and Science	121	785	45
Hacettepe University Journal of Education	75	340	33
Educational Sciences-Theory & Practice	73	486	13
Eurasian Journal of Educational Research	64	582	18
Education and Information Technologies	60	819	10
Pamukkale University Journal of Education	44	109	15
Cukurova University Faculty of Education Journal	34	91	8
Pegem Journal of Education and Instruction	28	85	7
Innovation and Creativity in Education	26	132	5
Journal of Higher Education	25	59	2

4. Distribution of research on academic achievement by institutions

The ranking of publications on academic achievement according to institutions is presented in Table 4. As can be seen, the institutions with the highest number of publications are Hacettepe, Gazi and Ankara University, respectively. Looking at the list, it is seen that all of the universities included in the ranking are long-established public universities in Türkiye. When we analyze the list in terms of the number of citations and link strength, it can be said that Hacettepe University ranks first by far ahead of other universities. Atatürk University also stands out in terms of the number of citations and is ahead of other universities.

Table 4: Article Rankings of Institutions

Order	Institutions	Number of articles	Number of citations	Strength of connection

1.	Hacettepe Üniversitesi	168	2118	47
2.	Gazi Üniversitesi	117	943	13
3.	Ankara Üniversitesi	86	826	19
4.	Marmara Üniversitesi	84	608	18
5.	Ataturk Üniversitesi	77	1091	14
6.	Ortadoğu Üniversitesi	56	398	12
7.	Ege Üniversitesi	56	515	15
8.	Dokuz Eylül Üniversitesi	55	693	22
9.	Akdeniz Üniversitesi	55	363	9
10.	Sakarya Üniversitesi	53	620	11

5. Distribution of research on academic achievement according to collaborative studies (Co-author)

Information on the collaborations between authors publishing on academic achievement is presented in Figure 1. It is seen that the collaboration of authors is very weak.

Şekil 1: Yazarlar Arası İşbirliği

6. Distribution of studies on academic achievement according to co-citations (co-citation)

The findings of the co-citation network analysis of publications on academic achievement are presented in Figure 2. During the analysis, the minimum number of citations was set as 50 and 70 works emerged. When the citation network map is examined, it is seen that methodology and analysis books

and Bandura are cited the most.

Figure 2: Co-Citation Network

7. Distribution of studies on academic achievement according to common keywords used

Distribution of studies on academic achievement according to common keywords used

The findings of the common word network analysis of publications on academic achievement are presented in Figure 3. The minimum number of repetitions was determined as 10 and 119 words emerged as a result of the analysis. In the word map, it is seen that concepts such as motivation, meta-analysis, self-efficacy, gender, university students, achievement, and attitude are repeated more frequently. When the colors in the map are examined, it is noteworthy that the red area includes studies related to psychological problems, the green and yellow areas include learning methods, and the blue Area includes international exams.

Discussion and Conclusion

This study aimed to identify prevailing research trends on academic achievement in publications originating from Turkey and indexed in international journals, using a bibliometric approach. Through scientific mapping based on publication years, author and institutional citation rankings, collaboration networks, and keyword co-occurrences in the Web of Science (WoS) database, the study provides insights into the scholarly output in this field. The visualization of these trends offers valuable information for identifying underdeveloped research areas and supporting evidence-based strategic planning.

The analysis revealed that scholarly publications on academic achievement began around 1980 and have shown a steady increase over time. This trend is consistent with the growing individual and societal emphasis on academic success in Turkey. The authorship analysis indicated that scholars affiliated with departments of Educational Sciences are the most prolific contributors, likely due to the natural alignment between academic achievement and educational topics such as learning processes, instructional environments, teaching methods, learning models, and educational policy.

Journal analysis showed that most articles were published in high-impact educational journals indexed in SSCI and ESCI, highlighting the academic rigor of this research area. In terms of institutional output, universities such as Hacettepe, Gazi, and Ankara—renowned for their long-established faculties of education—were found to be leading contributors. Despite

this productivity, the co-authorship network analysis revealed limited collaboration among authors, suggesting an area for improvement in scholarly cooperation.

Citation analysis indicated that the most frequently cited authors were international experts in research methodology, suggesting a reliance on foundational methodological literature. Lastly, the keyword co-occurrence analysis revealed diverse thematic clusters, visually represented by different color-coded networks, illustrating the multidimensional structure of academic achievement research.

In conclusion, this study offers a comprehensive overview of academic achievement research conducted in Turkey and published in international journals, highlighting key patterns and gaps that can guide future research and policy development.

Cartoons in Teaching Turkish to Foreign Children: Rafadan Tayfa

Example...

Sedef GÖLTAŞ

sedef.goltas@avrasya.edu.tr, 0000-0001-7486-6489, TURKEY

Avrasya Üniversitesi

Abstract

Today, children prefer to watch cartoons the most. The effects of these productions, which occupy a large place in the children's world, on education have become an interesting research topic. From this point of view, different methods and materials are used in teaching Turkish to foreigners. Among these materials, cartoons have an important place. Especially cartoons can be considered as an effective resource in language teaching. TRT archive has a very rich content in terms of cartoons that can be used in teaching Turkish to foreign children. Various studies on this subject show that cartoons contribute positively to the language learning process.

In this study, the cartoon movie 'Rafadan Tayfa' broadcasted on TRT was analyzed and its benefits in terms of teaching Turkish to foreign children were examined. In the paper, the role of the cartoon in language teaching was emphasized and evaluations were made on the determined episodes. In the research, especially the episodes named 'Bee in the Room, Rafadan Radio, Mind Library, Circle and Stone, Victory of Malazgirt' were taken as basis. Firstly, the content of these episodes was introduced, and then the results about the general gains offered by the cartoon in terms of language teaching were reached. As a result of the research, the fluent and didactic language of the cartoon was found to be very useful for foreign children.

Keywords: Turkish teaching, children, foreign, cartoon, Rafadan Tayfa.

Introduction

Many different methods and techniques have been developed and applied in foreign language teaching over time. These methods have been continuously developed and made more effective in line with the experiments conducted in the past and the results obtained (Taştan, 2022).

The methods used in teaching Turkish to foreigners may have different effects on different age groups. In particular, one of the most effective methods for attracting children's attention and developing their hearing and speaking skills is the Auditory and Visual Method. Thanks to this method, children can focus on language learning more easily.

People have to fulfill certain developmental tasks in every period of their lives. The science of psychology reveals the conditions under which and the rates at which these tasks are

completed through observations and experiments. Among these tasks is language development, which is expected to take place at certain age intervals. At this point, psycholinguistics (psycholinguistics), a field where psychology and linguistics intersect, emerged (Taştan, 2022).

Babies first make a variety of sounds during the "chirping phase" and gradually begin to produce phrases such as "agu". Around one year of age, they enter the "one-word phase" and soon begin to form "two-word sentences". As their vocabulary increases, they enter the "telegraphic word stage" and finally reach a stage where they can form longer, meaningful sentences (Cüceloğlu, 2009). This process is called "language acquisition" and develops spontaneously and naturally thanks to the individual's innate language ability. Teaching foreign languages to children requires not only a good knowledge of language teaching methods, but also a sound knowledge of child development. The attention given to them should be shaped in line with their age-appropriate capacities and the relationships they establish with their social-cultural environment (Vanthier, 2009, p. 17).

On the other hand, the process of "language learning" does not happen naturally. It is guided by a teacher, a specific program is followed and various methods and materials are used. In language learning, it is of great importance that the individual participates in the process consciously, willingly and actively. One of the common points that children have in this period is their interest in cartoons. This commonality leads to the use of cartoons in language teaching as an element that supports learning a common foreign language (Philp, Mackey, & Oliver, 2008).

Cartoons are one of the important tools that attract children's attention and support foreign language learning. The fact that they contain both auditory and visual elements contributes to the development of children's listening skills. In addition, language skills learned with auditory and visual support are further reinforced through reading and writing processes.

Children spend an average of one hour or more a day with television and other technological devices (Gündoğdu et al., 2016). According to a study conducted with 452 primary school students, 90.7% of children watch cartoons (Bold & Paker, 2007).

Cartoons play a major role in the self and personality development of preschool children because children in this age group cannot fully distinguish between imagination and reality. It is inevitable that a child who watches cartoons in front of the television for more than three hours a day will be affected by visual and verbal stimuli and behavioral patterns (Özyürek & Tecim, 2011).

According to studies in the literature, Meller (1996), Gentile and Walsh (2002), Ayrancı, Köşgeroğlu and Günay (2004), Büyükbaykal (2007), Akçay and Özcebe (2012), Özakar and Koçak (2012) found an increase in impulsive and aggressive behaviors in children affected by violent themes on television. In 2008, with the establishment of TRT Çocuk (cartoon channel), TRT's support for domestic cartoons increased and the market in this field grew. In this context, many cartoons such as Maysa and Bulut, Rafadan Tayfa, Küçük Hezarfen, Dede Korkut and Pepee were introduced to children (Alicenap Taş, 2015).

According to Aytan and Tuncel (2015, p. 246), cartoons make an important contribution to teaching Turkish as a foreign language. While the participants in the study gave mostly correct answers to the questions about cartoons, the number of incorrect answers remained quite low. Likewise, they showed high success in the questions that required them to choose verbs based on the cartoons they watched. The participants were able to establish a strong connection between visual materials and written texts, which supported the learning process. In line with these findings, it was concluded that cartoons can be more effective and efficient when used in teaching Turkish to foreigners in accordance with age and language level. From this point of view, in this study, the contributions of Rafadan Tayfa, one of the most watched cartoons, to Turkish teaching were examined.

Method

This study was conducted with a descriptive approach in the survey model. Five of the 127 episodes out of 127 episodes in 10 seasons of the cartoon movie "Rafadan Tayfa" broadcast on TRT Children's channel were selected and watched by random selection method. In this study, document analysis method, one of the qualitative research methods, was used. Document analysis is a method of carefully and systematically analyzing the content of all types of written, printed and electronic documents (Corbin & Strauss, 2008).

Document analysis is divided into two groups according to its nature and setting:

Document analysis by nature:

- Those based on writing (such as texts, books, encyclopedias, reports, dictionaries, journals, diaries),
- Those based on visuals (such as photographs, posters, maps),
- Those based on sound (such as sound recordings, music broadcasts, radio broadcasts),

- Audiovisual (such as documentaries, TV programs, videos, feature films).

Document analysis according to its environment:

- Written (such as books, reports, journals),
- Film-based ones (such as photographs),
- What is on the computer (such as databases),
- Portable magnetic ones (such as CDs, flash drives) (Geray, 2006)..

Results

RAFADAN TAYFA

Rafadan Tayfa is a Turkish animated series that started airing on TRT Çocuk channel on December 1, 2014. Produced by ISF Studios, the series is produced and directed by 'İsmail Fidan' and most of the scripts are written by 'Ozan Çivit'. The animation 'Produced in Ankara' is about the adventures of a group of friends living in a neighborhood on the Asian side of Istanbul.

The series also has different series such as 'Ramazan Tayfa, Traffic Tayfa and Digital Tayfa'. The cartoon series, which lasted a total of '10 seasons and 127 episodes', was removed from TRT Çocuk's broadcast stream on September 1, 2023, but was later added again.(Wikipedia)

Subject.

The cartoon series Rafadan Tayfa is about the fun and adventurous events that happen to a group of friends consisting of four children. The series reflects the neighborhood culture of the 1980s and 1990s, sincere human relations and the warm neighborhood environment of that period on the screen.

The name of the group came about during the search for a name while shooting a movie in an episode. Hayri, one of the characters, mistakenly used the expression "Rafadan Tayfa" instead of "Kafadan Tayfa" due to hunger and this name was accepted as the name of the group.

Living in a neighborhood on the European side of Istanbul, this group of friends experience funny and exciting adventures in their daily lives. The series narrates these events in an entertaining and impressive way, while at the same time conveying to the audience the neighborhood relations, neighborhood culture and sincere friendships of the past years. Also, at the end of some episodes, important lessons are taught to the viewers. (Wikipedia)

Bee in the Room

Mert and Hayri play chess at home. When Hayri says that he is bored of Mert not making any moves, Mert states that he looks at it from a strategic point of view and that is why he plays late. When Hayri asks 'what is strategy', Mert replies that 'strategy is the plan made in advance to achieve the goal'. Here, explaining the unknown word is an important point for children to develop their vocabulary. During the game, they plan a strategy to take the bee that enters the room out of the window. In the meantime, information is given about the type of bee, its sound, its way of life, its behavior and its importance in nature. This is a positive result in teaching Turkish to foreign children in the beginning.

Circle and Stone

Mert, Hayri and Akin saw a circle and a stone neatly drawn in the middle of the street. They started to come up with ideas to find out why this circle was drawn and why the stone was placed in the center. At that moment Kamil shows up with a book about a meteor shower. According to Kamil, this stone is the last piece of a huge meteorite. Hayri, not believing it at all, asks where the rest of the meteorite is. Kamil gives detailed information about the formation and disintegration of the meteorite. These discourses and the visuals supported by these discourses are very useful for foreign children to understand Turkish better.

Radio Rafadan

Mert, Hayri and Kamil decide to make a radio program. Mert, Hayri and Kamil joined the program as guests. Mert asked the guests to tell a story. Kamil and Hayri said that it was their first time in such a project and they were excited. The children told about their dreams and the insects they saw, but they decided that the radio program would not work this way and decided to continue with another topic. In this section, both daily information and terminological concepts are given about the radio program, what to talk about, what kind of style to use, and which topics will attract attention.

Mind Library

Mert, Hayri, Kamil, Akın are sitting at home because it is raining outside. Hayri is complaining about the rain; Kamil is making a paper boat to float in the water that accumulates after the rain; Mert is reading a book called 'SCIENCE'. Mert explains the concept of mind library he read in the book and tries to focus by controlling his mind as he learned from the book. They then decide to play the 'name-city-plant' game to reveal learned knowledge. While Hayri, Kamil and Akın had difficulty in playing the game, Mert focused as he had learned from the book, remembered the information in his mind immediately and finished the game in a short time. Both the animations and the concepts are very explanatory.

Malazgirt Victory

A radio program organizes a quiz show and Kamil will participate in the radio show on August 26. The children immediately looked at the importance of August 26th in history. On August 26, 1071, Sultan Alparslan opened the gates of Anatolia to the Turks with the Malazgirt Victory. Kamil thought that this information would not be enough and said that he was going to study at home, but Mert convinced his friend by saying 'we cannot let you study alone, we will study together'. All the friends went to the library and studied together. On the way to the radio program the next day, Akın gives historical information from the intersection of Anatolia's historical trade routes to the fact that Anatolia has been home to Byzantines and Romans in history. The intelligence, war strategies and warrior structures of Turks were also mentioned. It is very useful to give information about Turkish culture and history rather than teaching Turkish to foreign children.

Discussion and Conclusion

TRT cartoons can be used as an effective material in teaching Turkish to foreign children. These movies support the language learning process by providing children with continuous exposure to Turkish. Especially by playing an important role in the development of listening and speaking skills, they can contribute to foreign children learning Turkish in a more natural and fluent way (Taştan, 2022). Rafadan Tayfa has a very fluent and didactic language; the absence of violence in the cartoon can be seen as binding for children. In addition, new concepts and terminology can be useful for foreign children to learn from Turkish sources. Murat and Bal (2021) stated that while benevolence, respect and patience stand out as the basic values in the episode 'Circle and Stone', there are other important values such as friendship, love, justice, honesty and responsibility; since the children of the neighborhood have self-control skills, it is clearly seen that these values are naturally experienced in their daily lives.

According to Aydođan & İnce Samur (2021), in the episode 'Radyo Rafadan', it is thought that the necessity of communication instead of violence is encouraged to solve problems related to life. It was concluded that the Rafadan Tayfa team created an activity based on direct communication with their radio program and that there was no element of violence in the episode.

This cartoon can help children develop their vocabulary and support their transition from abstract concepts to concrete meanings. In particular, Ege and Gaga characters' thinking aloud in the face of the events they encounter was visualized and presented to the audience with cartoon animation techniques. In this way, abstract concepts were made concrete and visual and auditory support was provided for children to better comprehend the language. Especially for children who are in the process of learning a foreign language, such narratives can provide great convenience in terms of making sense of concepts and learning in context. Think aloud sections can guide children in understanding the relationships between events, while at the same time contributing to strengthening their communication skills by reinforcing their vocabulary knowledge. Thus, children in the process of learning a language are provided with both a fun and instructive experience (Tařtan, 2022).

Goltas (2021) also examined Rafadan Tayfa in her study on gender inequality in cartoons. Goltas concluded that the visuals in the analyzed cartoons were created according to the widely accepted norms in the society. For example, the female characters usually have long hair and wear skirts or dresses, while the male characters mostly prefer clothes in shades of blue. This can be considered as a view that universally accepted rules will be considered normal by foreign children..

Assessment of Public Administration Reform Policies in Kosovo within the Framework of the EU Integration Process

Arianisa Ramadani

St. Kliment Ohridski, N. MACEDONIA

e-mail: arianisa2.ramadani@universitetiaab.com, Orcid No: 0009-0005-5810-304X

Abstract

This paper aims to assess public administration reform policies in Kosovo in the context of the European Union (EU) integration process. Public administration reform has been one of Kosovo's main priorities in its efforts to meet the EU membership criteria, focusing on improving the efficiency, transparency and accountability of state institutions. This paper examines the implementation process of these policies and assesses their impact on meeting EU requirements, with a particular focus on the impact at the administrative, legislative and institutional levels. Through an in-depth analysis of documents, policy reports, international institutions and through an analysis of the academic literature on public administration, the paper identifies the challenges and obstacles that Kosovo has encountered during the implementation of the reforms. A comparative analysis with other Western Balkan countries, which are also in the integration process, provides a broader perspective on the effectiveness of the reform policies. This analysis also examines the role of international agencies, particularly the EU, in supporting these reforms and monitoring progress. The policy assessment is based on an analytical methodology, which includes a qualitative research approach. The paper focuses on identifying factors that have influenced the success or failure of these reforms, including lack of resources, weak institutional capacities and political uncertainty. The paper also provides recommendations for improving these policies and strengthening Kosovo's institutional capacities to meet EU requirements and ensure a more sustainable and efficient public administration. This analysis contributes to the academic literature on public administration and the European integration processes of the Western Balkan countries, by providing a deep and detailed understanding of the dynamics of public administration in the context of integration challenges.

Keywords: Public administration reform, European Union integration, Kosovo, Public policy

Introduction

Public administration reform is one of the key aspects of Kosovo's integration process into the European Union (EU). Despite the numerous challenges that the country has faced in this regard, public administration reform remains one of the main priorities for achieving EU requirements. Also, for improving the efficiency, transparency and accountability of state

institutions. This paper aims to analyze public administration reform policies in Kosovo and their impact on the EU integration process, focusing on the assessment of the implementation of these policies, the challenges encountered and recommendations for improving these reforms. The European integration process has been a powerful driver of reforms in the public administrations of the Western Balkan countries, including Kosovo. As part of the conditions for membership in the European Union, these countries have committed to transforming their public administration in order to comply with European standards. This transformation focuses on increasing transparency, improving institutional efficiency and strengthening accountability mechanisms (Robaj, 2024).

Transparency and accountability are fundamental elements for building an efficient public administration in the Western Balkan countries, especially in the context of reforms aimed at meeting European Union standards. These principles help create institutions that act with integrity and serve citizens, becoming better prepared for the challenges of European integration (Jashari & Pepaj, 2018; Meyer-Sahling, 2009). Several authors analyze the current situation of public administration in Kosovo and the challenges related to the European Union integration process. They emphasize that, although efforts have been made to modernize administrative structures and improve the provision of public services, the implementation of reforms often remains partial and fragmented due to the lack of institutional capacities and the influence of party politics on the administration. Also, according to the authors, the role of the European Union is as a driving factor for reforms through political pressure and technical assistance, emphasizing that the EU's influence has limited effect in the absence of domestic political will for deep structural reforms (Haliti, Abdullahu, & Asllani, 2020).

Public management and administration encompass a wide range of theoretical approaches, the most prominent of which is New Public Management (NPM). NPM emphasizes efficiency and managerial practices modeled after the private sector. This approach is particularly relevant for Kosovo, where reforms have focused on adopting modern management techniques and promoting greater transparency and accountability within the public sector. Moreover, in the context of European integration, administrative theories guided by EU standards play a crucial role. A key element of this process is the approximation of national laws and policies to those of the European Union, prioritizing modernization and increasing efficiency in the delivery of public services.

The academic literature on public administration reform and the European integration process has covered the Western Balkans region extensively, providing a solid basis for understanding the challenges and opportunities facing these countries. In the case of Kosovo,

European Commission reports highlight that public administration reforms are essential for meeting EU membership criteria, particularly in areas such as transparency, effective resource management and the fight against corruption. The literature identifies several key obstacles, including limited institutional capacity, political uncertainty and lack of inter-institutional coordination – all of which have hindered the successful implementation of reforms.

This study is important for two main reasons: first, because of the impact that public administration reform policies based on European Union standards have; and second, because it provides an in-depth analysis of how these policies are implemented in a complex and often unstable political and institutional environment. Furthermore, the importance of this research lies in its focus on promoting a more efficient and accountable public administration in Kosovo – a key component for the country's progress towards European integration.

The purpose of this paper is to assess the public administration reform policies in Kosovo and their impact on the European Union integration process. Part of this assessment will be to analyze the implementation of these policies, identify the main challenges and provide recommendations for their improvement. This research will attempt to provide an in-depth and objective assessment of administrative reforms.

The study aims to find answers to the following research questions:

1. What are the main public administration reform policies in Kosovo that are related to the European Union integration process?
2. What are the main challenges and obstacles that Kosovo has encountered during the implementation of these policies?
3. How do international agencies, especially the European Union, influence the support of these reforms and the monitoring of progress?
4. What recommendations can be offered for improving public administration reform policies in Kosovo in the context of its EU integration?

Method

This research uses the qualitative part to analyze public administration reform policies in Kosovo and their impact on the European Union integration process. This methodology will help to provide a complete and in-depth overview of the implemented policies, the challenges and factors that affect their success, as well as provide recommendations for improving existing policies. Therefore, the research will follow the qualitative part, where policy documents will be analyzed, to assess the progress of the reforms. The qualitative part will focus on the analysis

of policy documents and international reports related to administrative reforms, analyzing the main messages, goals and progress achieved. This analysis will be based on theories of public administration and public management, especially those related to the European integration processes. Two main groups are important in this research: experts and professionals who are directly involved in the implementation of public administration reforms in Kosovo and policy documents that cover the reforms. The experts include academics who support the reforms and have researched in the field of public administration and European integration. The second group consists of policy documents and reports from international institutions such as the European Commission and other organizations that monitor public administration developments and Kosovo's European integration processes.

Results

In this section, the main research findings that were reached through the analysis of documents, articles and books are presented. The results are divided into several main parts, which reflect the research questions and objectives of the study.

Q1: What are the main public administration reform policies in Kosovo that are related to the European Union integration process?

One of the main findings of this research is that public administration reform policies in Kosovo are designed in line with EU requirements, but the implementation of these policies has encountered some significant difficulties. At the administrative level, there have been efforts to modernize structures and increase the efficiency of public services, but the main challenges have included the lack of financial resources and human capacities. In addition, there have been difficulties in coordinating between different government institutions and international agencies. A concrete example of reform policies is the establishment of the Agency for Public Service Management, which aims to improve transparency and increase the efficiency of the administration. However, its implementation has been hampered by the lack of proper training and by political pressure that has affected the independence of the agency. The transformation of public administration in Kosovo should be oriented towards the creation of a civil service based on professionalism, where appointments and promotions of staff are based on merit and skills, avoiding political interference. Political influence in the administration has been identified as one of the main obstacles that has prevented the building of a functional and independent administration.

According to Batalli (2022), public administration reforms require professionalization of civil servants and improvement of institutional capacities, underlining that the politicization

of the administration has been one of the main obstacles to the development of an effective and independent administration. In order to meet the requirements of the European Union integration process, it is essential for Kosovo to build sustainable institutional capacities. This includes continuous training for the public administration and the definition of clear professional standards, in order to effectively implement EU legislation (Batalli, 2022). According to the European Commission's 2023 report, Kosovo has made limited progress in meeting the necessary standards for EU membership, highlighting the need for further reforms in public administration and strengthening institutional capacities (Komisioni Evropian, 2023).

Meanwhile, the European Commission report (2019) highlights the need to improve the organizational structure of public administration, including a clear separation of functions and responsibilities. It also emphasizes the need to create a legal framework that guarantees a fair and transparent process in the recruitment and promotion of civil servants, as well as reducing political influence in decision-making (European Commission, 2019). One of the main challenges hindering the progress of reforms in Kosovo's public administration is the acceptance of corruption as part of institutional structures and the lack of transparency in the management of public finances. In the absence of accountability and integrity in administrative activity, meeting the criteria for integration into the European Union becomes impossible (Limani, 2017).

Q2: What are the main challenges and obstacles that Kosovo has encountered in implementing these policies?

From the analysis of documents, articles and books, several main challenges and obstacles have been identified that have affected the implementation of public administration reforms in Kosovo. These challenges can be summarized in four main categories:

The lack of financial resources and institutional capacity constitutes one of the main challenges in the effective implementation of reform policies in Kosovo's public administration. Although the European Union has provided assistance through financial support and technical assistance, there is still a significant gap between real needs and capacities for sustainable implementation of reforms.

Institutionalized corruption continues to be a serious obstacle to the implementation of administrative reforms. Despite efforts to improve transparency and accountability, mismanagement practices and the lack of effective mechanisms for punishing violations remain a concern.

Political instability and lack of institutional stability have negatively affected the reform process. Frequent changes in leadership and an unstable political climate have created

difficulties in consolidating long-term reforms and in building a functional and sustainable administration.

Limited institutional capacities and the lack of qualified personnel in public administration constitute a major challenge in the process of harmonizing domestic legislation with that of the European Union. These shortcomings hinder the effective implementation of reforms and delay the fulfillment of the standards required for integration (Selaci, 2020). Thus, the author argues that the lack of professional capacity in Kosovo's public institutions is one of the biggest obstacles to meeting EU membership criteria, underlining the importance of continuous staff training and building a sustainable administration. According to the European Commission (2019), the process of approximation of legislation with that of the European Union and the implementation of reforms in Kosovo are hindered by the lack of effective coordination between institutions as well as deficiencies in accurate translations of legal acts (European Commission, 2019). The implementation of the decentralization process in Kosovo has often been partial and poorly coordinated, with a lack of technical and financial support for municipalities, which has negatively affected the quality and efficiency of public service delivery (Shasha, 2020).

Q3. How do international agencies, especially the European Union, influence the support of these reforms and the monitoring of progress?

Another important aspect of the research is the influence of international agencies and the EU on the public administration reform process in Kosovo. The findings show that the role of the EU has been quite important in supporting the reforms, but there has also been criticism of the EU's undefined influence on some aspects of the reform process. For example, the European Commission has provided financial support for various projects, but there has been a lack of in-depth monitoring and assistance in managing the implementation of the reforms. Representatives of international institutions, it is clear that there is a high commitment to help Kosovo meet EU standards, but the frequency of changes in domestic policy and the influence of domestic political factors have meant that support has been fragmented and without proper coordination. According to the European Commission (2019), the EU provides technical assistance, financial assistance and political guidance to Kosovo through the Instrument for Pre-Accession Assistance (IPA), aiming to build a sustainable public administration in line with European standards (European Commission, 2019). European Union External Action (2020) emphasizes that support includes training of civil staff, strengthening public finance management, improving recruitment processes, and modernizing institutional structures (European Union External Action, 2020). One of the most effective forms of influence of the

European Union is to establish reform conditions as a precondition for advancing in the integration process, namely: only through reforming the public administration can the country make progress towards EU membership.

According to Gerguri-Nimanbegu (2022), the European integration process constitutes an important driving factor for reforms in Kosovo, however, these reforms often aim more to meet the formal requirements of the European Union than to bring about fundamental and sustainable changes within public institutions. Therefore, it is argued that the pressure to meet EU conditions has led to superficial implementation of reforms, without deep reflection on the real needs of public administration in Kosovo. Therefore, the author argues that the pressure to meet EU conditions has led to superficial implementation of reforms, without deep reflection on the real needs of public administration in Kosovo (Gerguri- Nimanbegu, 2022). Despite ongoing challenges, some progress has been made in terms of improving efficiency and transparency within public administration. Reports by international organizations show that the provision of public services has made progress, especially in terms of resource management and services to citizens. A concrete example is the integration of information technology in several administrative units, which has had a positive impact on accelerating service processes and reducing corruption cases.

Q4: What recommendations can be offered to improve public administration reform policies in Kosovo in the context of its EU integration?

To improve public administration reforms, it is necessary to make significant investments in training and staff capacity development, so that policies can be implemented with a higher level of efficiency. Closer cooperation between state institutions and international agencies should also be ensured, to avoid duplication of activities and to enable more sustainable implementation of reforms. At the same time, the EU should provide more coordinated and focused support, ensuring that policies are more sustainable and supported with sufficient resources for their implementation. According to Meyer- Sahling, 2019, the report assesses recruitment practices in the public sector in the Western Balkans region, including Kosovo, and emphasizes the importance of merit-based recruitment to improve the performance and integrity of public administration (Meyer- Sahling, 2019).

Investment in continuous training for public administration personnel is recommended, to increase the skills and knowledge to implement EU legislation and meet European integration criteria (Batalli, 2022). The authors emphasize the need for closer coordination between state institutions and international agencies, to avoid duplication and ensure a successful

implementation of reforms (Limani, 2017). The authors suggest the creation of independent mechanisms for the recruitment and promotion of civil servants, to prevent political influences and to ensure that processes are based on merit and skills, rather than party affiliation. The European Commission (2019) recommends strengthening the capacities of the Public Administration Agency, to enable more consistent implementation of the civil service law (European Commission, 2019). Improving budget management requires regular audits at all levels of government and a clearer link between strategic planning and budget allocation. It is also recommended to provide training and technical support to municipal administrations to increase the quality of services and strengthen local accountability. It is also recommended to create mechanisms for coordination between central and local levels of government to prevent the division and fragmentation of functions.

Following the results of the analysis of public administration reform in Kosovo, a comparative analysis was conducted with other Western Balkan countries, such as Albania, North Macedonia, Montenegro and Serbia. All of these countries have adopted reform strategies harmonized with the requirements of the European Union and the SIGMA methodology (European Commission, 2019). However, differences in practical implementation and level of progress are pronounced. Albania and North Macedonia have achieved more visible results in the professionalization and depoliticization of the administration, thanks to the establishment of independent mechanisms for recruitment and promotion in the civil service (Meyer- Sahling, 2019). In contrast, Kosovo continues to face political obstacles and a lack of institutional capacities, which limit the effectiveness of reform implementation (Komisioni Evropian, 2023).

In terms of transparency and accountability, North Macedonia and Montenegro have made significant progress through the digitalization of public services and reporting mechanisms (Ristic, 2020), while in Kosovo, limited civil society involvement and weak technical capacities remain ongoing challenges (Gerguri- Nimanbegu, 2022). Although all countries benefit from EU assistance through the Instrument for Pre-Accession Assistance (IPA), Kosovo shows more difficulties in effectively absorbing funds and managing complex projects, which has also been highlighted in European Commission reports (Komisioni Evropian, 2023). These comparisons highlight the need for Kosovo to strengthen internal monitoring mechanisms, strictly implement the principles of meritocracy, build sustainable institutional capacities and increase civic engagement, learning from the experiences of neighboring countries that have advanced further in the European integration process.

Discussion and Conclusion

In this section, we will discuss the research results regarding public administration reform policies in Kosovo and the impact of these reforms on the European Union (EU) integration process. We will analyze how our findings align with the existing literature and provide recommendations for improving public administration reforms. Finally, we will present the main conclusions of this research and highlight the importance of these reforms for Kosovo's European integration efforts. The findings of this research show that, although public administration reform policies in Kosovo are in line with European Union requirements, there have been numerous challenges in implementing these policies. One of the main challenges is the lack of financial resources and internal capacities to support and implement the necessary changes. This is consistent with the findings of the existing literature, which shows that many Western Balkan countries have encountered similar challenges in implementing public administration reforms (Ristic, 2020). Another key finding is that there has been significant progress in increasing the efficiency and transparency of public administration, especially in the use of technology for the management of public services. This meets one of the main objectives of the reform, as envisaged by the European Commission, which requires Balkan countries to increase the efficiency of their administration (European Commission, 2019). However, difficulties with corruption and lack of inter-institutional coordination are still significant obstacles. Research shows that, despite considerable support from the European Union, the implementation of reforms in Kosovo has been hampered by the lack of effective supervision and proper coordination of reform activities. This has resulted in a partial and unsustainable implementation of public administration reforms. This assessment is in line with the position of Elbasan (2013), who argues that the EU's impact in Western Balkan countries is often limited due to the lack of sustained pressure and coordinated support strategies (Elbasani, 2013).

In conclusion, this research has highlighted some key aspects of public administration reform in Kosovo in the context of EU integration. Thus, although reform policies have been developed in line with European Union directives, their implementation in Kosovo has faced difficulties, mainly due to the lack of sufficient financial resources and institutional capacities. Some positive results have been achieved, especially in terms of improving transparency and the use of technology in the provision of public services. International support, especially that provided by the European Union and other international organizations, has been an important factor in promoting reforms. However, this assistance requires better coordination and closer supervision to ensure sustainable and effective implementation of reforms.

Throughout this study, it has become clear that the process of public administration reform in Kosovo represents an ongoing and complex challenge. Although some progress has been made in aligning with European Union standards, significant challenges remain related to institutional capacity, transparency and the fight against corruption. Reform policies have been largely motivated by the objective of European integration, but their implementation requires a deeper commitment and better coordinated support. Therefore, to build a functional, efficient and sustainable public administration, Kosovo needs to continue structural reforms by deepening cooperation with international actors and ensuring an approach based on accountability and good governance. This study also shows that Kosovo's challenges are not isolated, but reflect a common pattern in the Western Balkan countries on the path to European integration, thus highlighting the need for a more tailored and supportive approach from the EU.

Based on the findings of this study, several key recommendations can be formulated for advancing public administration reforms in Kosovo in the context of European Union integration:

- To improve the implementation of reforms, it is necessary to invest in the professional development of public administration staff. This includes providing specialized training and enhancing the technical competencies of public officials, so that they are equipped to cope with the demands arising from the process of approximation with EU standards.
- One of the main obstacles to the effective implementation of reforms has been insufficient coordination between public institutions. Therefore, it is necessary to establish efficient vertical and horizontal coordination mechanisms to ensure an integrated approach and to avoid overlapping or duplication of functions.
- The European Union and international donors should provide better targeted and coordinated assistance, including strong monitoring and evaluation mechanisms to ensure that financial and technical resources are used effectively and in line with the reform goals.
- To increase transparency and accountability in public administration, it is essential to strengthen internal and external control mechanisms, as well as rigorous implementation of anti-corruption legislation. This means supporting institutions with a clear mandate to monitor and punish corrupt practices.

Based on the internal analysis of public administration reforms in Kosovo and comparison with other Western Balkan countries, it results that Kosovo needs to undertake a series of concrete actions to improve the implementation of reforms and advance towards European integration. The experience of countries such as North Macedonia, Montenegro and

Albania shows that progress is possible when there is sustained political will, independent implementation mechanisms and broad involvement of social actors. Some of the steps that are recommended to be considered:

1. Kosovo should institutionalize sustainable systems for monitoring and evaluating reforms, through the development of performance indicators and the involvement of civil society in the evaluation.
2. In line with the findings of Meyer-Sahling (2019), which emphasizes the importance of merit-based recruitment in Western Balkan countries, Kosovo should establish independent mechanisms for hiring, promote professional development, and protect civil servants from political influence.
3. To increase citizen trust, Kosovo should follow the example of North Macedonia in building digital platforms and implementing laws on access to official documents.
4. The European Commission report (2023) has highlighted that the lack of human and technical resources in Kosovo has contributed to the slowdown of reforms. For this reason, it is urgent to invest in training, academic partnerships and increasing the budget for key sectors.
5. The European Commission (2023) also highlights that the capacity to absorb EU funds remains limited. Kosovo needs to establish inter-institutional teams trained in project cycle management and learn from the experiences of countries such as Montenegro and Serbia in this regard.

The Role of Public Administration in the Process of Kosovo's Integration into the European Union: Challenges and Opportunities of Managing Institutional Changes

Arianisa Ramadani

St. Kliment Ohridski, N. MACEDONIA

e-mail: arianisa2.ramadani@universitetiaab.com, Orcid No: 0009-0005-5810-304X

Abstract

This paper aims to examine the role of public administration in the process of Kosovo's integration into the European Union (EU), by analyzing the challenges and opportunities that arise during the management of the institutional changes necessary for this process. Kosovo's integration into the EU requires the reform and modernization of public administration, making it more suitable to meet EU requirements and to ensure a sustainable and efficient functioning of state institutions. This paper examines how Kosovo's public administration has managed this period of major changes and how it has reacted to the pressures and demands of European integration. Through the analysis of policy documents, EU reports, the paper assesses the impact of institutional changes on the capacities of public administration to manage the challenges that come with the integration process. This process includes reforming administrative structures and processes, improving public services, and increasing transparency and accountability. It also examines the main challenges, including lack of resources, weaknesses in institutional capacities, and resistance to change from some interest groups. The paper also identifies opportunities for better management of these changes, including improving managerial capacities and developing a stronger culture of cooperation and coordination between different institutions. Through these opportunities, public administration can contribute to a more successful integration of Kosovo into the EU and to fulfilling the necessary conditions for membership. This paper contributes to the understanding of the role of public administration in Kosovo's European integration and offers recommendations for improving the management of institutional changes and strengthening administrative capacities to meet the integration requirements.

Keywords: Public administration, European Union integration, Kosovo, Management of institutional changes, public administration reform.

Introduction

The integration of Kosovo into the European Union represents one of the most important strategic priorities of the country and requires the undertaking of deep reforms in all state structures. In this process, public administration is of fundamental importance, as it constitutes the basis for the efficient functioning of the state and for the implementation of legislation and policies originating from the EU. In order to achieve compliance with the requirements of membership, the administration must be transformed, modernized and equipped with sufficient capacities to manage the institutional challenges associated with this journey. The process of transformation of public administration in Kosovo is not limited only to the technical aspect, but also includes political and social dimensions, directly affecting the construction and functioning of the state. Integration into the European Union represents one of the key objectives of national policies, both in the external and internal plan. This path is complex and requires the fulfillment of the standards set by the Copenhagen criteria, as well as the obligations arising from the agreements with the EU. Within this framework, the existence of a capable, accountable and independent public administration is considered a decisive factor for the progress of integration. This administration plays a central role in the implementation of reforms, the approximation of domestic legislation with European legislation, as well as in improving the quality of public services.

However, to achieve these objectives, an in-depth process of reform and modernization of public administration is necessary, which faces various obstacles, including the lack of human and technical resources, reluctance to change, and weak coordination between institutions. At the same time, the integration process also brings opportunities to strengthen institutional capacity and build a sustainable public administration, oriented towards the principles of good governance. These dynamics emphasize the importance of analyzing the way in which public administration in Kosovo is coping with this period of profound transformations, as well as the difficulties of an internal and external nature that accompany it. It is also important to identify the spaces for further improvement and development in order to approximate to European standards. This study aims to provide an analytical and argued overview of the role that public administration plays in this process, examining its ability to manage the institutional transformations required within the framework of integration into the European Union. In this regard, the analysis relies on relevant literature, local and European strategic documents, annual progress reports from the European Commission, as well as interviews with institutional representatives, with the aim of clarifying the connection between administrative reforms and European integration.

The theoretical framework of this study is based on European institutionalism, a theory that emphasizes the transformative role of the European Union in the institutional structures of candidate countries. This approach argues that through the standards, regulations and conditions set, the EU exerts a profound influence on the adaptation and reform of local institutions. In parallel, the perspective of organizational change management is also integrated into this analysis, with a particular focus on the models developed by Kotter and Lewin. These approaches provide analytical tools to understand the processes of institutional transition, the role of leadership in mobilizing relevant actors, as well as ways to overcome resistance to reforms. In this way, the combination of these theories allows for a more in-depth assessment of Kosovo's efforts to adapt to the requirements of European integration and the factors that influence the effectiveness of these reforms.

The academic and institutional literature on the European integration process of the Western Balkan countries has consistently emphasized the essential role of public administration in fulfilling the criteria set by the European Union. It argues that progress towards membership is largely dependent on the institutional capacity to implement legislation and implement effective reforms. However, despite numerous contributions, there is still a lack of in-depth analyses that address the concrete way of managing institutional change in the Kosovo context. In particular, the way in which public administration faces specific local challenges, including lack of resources, political interference and a weak culture of institutional accountability, has not been adequately addressed.

This study represents an important contribution to understanding the role played by public administration in Kosovo's European integration process, by providing a detailed analysis of the obstacles and opportunities that affect the management of institutional reforms. In the conditions where EU integration remains one of the strategic objectives of the state, the examination of these processes takes on particular importance for policymakers, international organizations and Kosovar society as a whole. The main purpose of this paper is to investigate the way in which public administration faces the challenges of institutional transformations required within the framework of the European integration process. The study also aims to identify the most prominent barriers that appear during this transition and to highlight the spaces for improvement, with the aim of strengthening institutional capacities and approximation with European Union standards.

The study aims to find answers to the research questions:

1. What is the role of public administration in the process of Kosovo's integration into the European Union?

2. What are the main challenges that hinder the management of institutional changes in public administration?

3. How has the process of institutional reforms been managed so far and what are the concrete results?

4. What are the opportunities for improving administrative capacities and change management in the context of European integration?

Method

This section presents the methodology followed for conducting research on the role of public administration in the process of Kosovo's integration into the European Union, with a particular focus on the management of institutional changes, challenges and opportunities that arise during this process. The research relies on a qualitative approach, which aims to provide an in-depth and contextual understanding of the experience of public institutions in Kosovo in implementing reforms related to European integration. Through the case study method, a detailed analysis of complex phenomena in their natural environment is enabled, which makes this approach suitable for examining institutional reforms that are influenced by a multitude of internal and external factors. The data were collected mainly through documentary analysis of the European Commission's annual reports on Kosovo, strategic documents of the Kosovo government, as well as reports of local and international organizations dealing with public administration reform and the European integration process. To ensure the reliability and validity of the results, a systematic review of relevant academic literature, including scientific articles, books and official documents, was conducted. This combined methodology aims to provide the most complete and well-argued picture possible of the capacity of public administration to cope with the reform demands within the framework of the EU integration process.

Results

This section presents the main findings of the research, which were drawn from a documentary analysis of relevant reports and strategies. The results are organized according to themes identified through the thematic analysis.

Q1: What is the role of public administration in the process of Kosovo's integration into the European Union?

The results show that public administration in Kosovo has a central role in the process of European integration, in particular in: implementing EU-harmonized legislation,

coordinating institutional reforms in line with EU requirements, and in preparing and implementing sectoral policies, especially in areas such as the rule of law, economy, and environment. However, it is emphasized that this role is often hampered by the lack of a clear institutional vision and weak coordination between different state agencies. SIGMA reports highlight that public administration in Kosovo constitutes a key element in the process of European integration, having important responsibilities in aligning with the Principles of Good Administration and in achieving the standards required by the European Union. However, these reports also highlight the existence of significant challenges, especially in the effective management of human resources, ensuring accountability and improving inter-institutional cooperation (SIGMA, Public service and the principles of good administration in Kosovo, 2022). The European Commission considers public administration reform to be a key priority for Kosovo's progress on its path to EU membership. The 2020 report notes³ that there have been some positive developments, progress in the direction of integration, while the implementation capacities of the administration have been weak, especially in relation to the professionalization and depoliticization of the civil service (European Commission, 2023).

Meyer-Sahling (2012) argues that the professionalization of the civil service is essential for strengthening institutional capacities in the Western Balkan countries. He emphasizes that the lack of meritocracy and the politicization of public administration undermine its ability to meet the requirements of European integration and to effectively implement public policies (Meyer-Sahling, 2012). Public administration also plays a crucial role in the Europeanization process of the Western Balkan countries. Although the formal structure of institutions is in line with European Union standards, success in the real implementation of reforms depends largely on the level of political will and internal administrative capacity. Dimitrova (2010) argues that in many cases, new EU member states adopt European rules and standards mainly formally, without implementing deep and substantial changes in institutional structures. According to her, public administration has a key role in the effective absorption of the *acquis Communautaire*, as administrative capacities must extend beyond simple legal compliance (Dimitrova, 2010).

It is necessary to underline the importance of strengthening administrative capacities to face the challenges of the European integration process in the Western Balkans. In this context, Kosovo continues to face significant shortages in both professional resources and administrative infrastructure, which negatively affects the effective implementation of reforms and the absorption of European Union policies. According to the UNDP assessment (2021), public administration is a key factor in promoting good governance and consolidating institutions in Kosovo. However, challenges in implementing public policies and providing

services remain significant, mainly due to the lack of inter-institutional coordination and insufficient technical capacities (UNDP, 2021).

The reform process in Kosovo's public administration is often characterized by more declarative efforts than by genuine and substantial changes. The pronounced politicization, the lack of a meritocratic system and the lack of a well-organized approach in the design and implementation of reforms have contributed to the weakening of the effective role of public administration in advancing the European integration process. The Public Administration Reform Strategy 2022–2026 of the Government of Kosovo aims to build a more efficient, transparent and meritocratic-oriented public administration, in line with the requirements and standards of the European Union (Government of Kosovo, 2022).

Q2: What are the main challenges that hinder the successful management of institutional changes in public administration?

The analysis of the documents has highlighted several main challenges that affect the public administration reform process. These include limited human and technical capacities within public institutions, persistent political influence that undermines professionalization and the principles of meritocracy, as well as resistance to change, especially at middle management levels. In addition, the lack of financial resources to support long-term reforms and institutional fragmentation appear as major obstacles to building a coordinated and sustainable approach to reform. SIGMA reports highlight several internal challenges that limit the effectiveness of institutional change management in Kosovo's public administration. Among the main challenges are the lack of inter-institutional coordination, insufficient capacities in policy development, and the lack of functional mechanisms for performance management and evaluation (SIGMA, 2022).

Another important challenge highlighted is institutional fragmentation and the lack of a clear and long-term vision for public administration reform. The European Commission (2023) highlights that the lack of stability in reform policies and the continued political influence on appointments and the functioning of the public administration constitute serious obstacles. These practices undermine the process of professionalization, compromise the integrity of the civil service and create uncertainty and resistance to necessary institutional reforms (European Commission, Kosovo 2023 Report, 2023). Meyer-Sahling (2012) identifies politicization as one of the biggest challenges hindering the process of public administration reform in the Western Balkans. He emphasizes that the lack of meritocracy and political influence in the appointment processes in the civil service undermine the motivation and professionalism of civil servants,

thus limiting the capacity of the administration to manage structural and institutional changes (Meyer- Sahling, 2012).

Elbasan (2009) argues that Europeanization processes often face structural obstacles, due to the lack of political will to undertake substantive reforms. She emphasizes that the focus often remains on formal and superficial changes, while informal structures and practices continue to remain unchanged, making it difficult to implement sustainable and deep reforms (Elbasani, 2009). Tadic and Jovic (2016) assess that limited administrative capacities constitute one of the main obstacles to the successful management of institutional changes. According to them, the lack of qualified staff, insufficient funds and the lack of effective mechanisms for monitoring and evaluating reforms make the process of institutional transformation fragile and unstable (Tadic & Jovic, 2016).

According to UNDP (2021), one of the main challenges is the lack of a culture of change management and low sustainability in the implementation of reform policies. The report also highlights that the role of civil society is limited and that the lack of public consultation during the design of reforms negatively affects the legitimacy and effectiveness of the implementation of these reforms (UNDP, 2021). An important criticism of the institutions is their inconsistent and often superficial approach to reforms. Bureaucratic obstacles, inherited administrative culture and the lack of a clear strategic vision have created considerable difficulties in implementing deep reforms. Moreover, changes are often only a reaction to external demands, such as those of the European Union, and not an internal initiative to improve administrative processes. The Government of Kosovo's Strategy for Public Administration Reform (2022–2026) identifies several key obstacles to institutional change, including institutional fragmentation, lack of legislative harmonization and limited capacity for policy implementation. It emphasizes the importance of an integrated, comprehensive and evidence-based approach to enable successful reform (Government of Kosovo, 2022).

Q3: How has the institutional reform process been managed so far and what are the concrete results?

Some important progress has been achieved in the reform process, such as the drafting and adoption of national strategies for public administration, including the Public Administration Reform Strategy 2022–2026, the establishment of coordination structures for European integration such as the Secretariat of the Council for European Integration, and the improvement of capacities for the translation and approximation of legislation with the EU acquis. However, progress has slowed down and has not always been sustainable, mainly due

to the lack of political continuity and the poor implementation of the strategies. According to SIGMA reports, public administration reform in Kosovo has been a slow and often unsustainable process. Despite efforts to improve institutional structures and procedures, implementation remains difficult due to the lack of human and technical capacities. However, some progress has been achieved in developing the strategic framework and drafting policies for human resource management (SIGMA, 2021).

The European Commission assesses that Kosovo has adopted several important legal reforms, such as the Law on Public Officials and the Law on Salaries. However, the implementation of these laws has encountered numerous delays and difficulties. The lack of effective monitoring and political influence on administrative processes are some of the factors that have limited the real results of the reforms (European Commission, Kosovo 2023 Report, 2023). The Public Administration Reform Strategy 2022–2026 of the Government of Kosovo has identified some moderate progress, including the creation of new platforms for the digitalization of public services and the improvement of inter-institutional coordination. However, the report emphasizes that many of the measures undertaken for reform have remained at a formal level and have not yet produced any visible impact on increasing the efficiency of the administration (Government of Kosovo, 2022).

Institutional reform in Kosovo has had a fragmented and uncoordinated character. Although some changes have been made to the legislation and structure, concrete results in improving public services and the efficiency of the administration are limited. Reforms have focused more on formal aspects than on their substantive content. Elbasan emphasizes that reform processes in the region have a superficial character, where imitation of European standards often occurs without a deep institutional transformation. She argues that reforms are often considered as an obligation to formally meet EU criteria, without an internal commitment to real change (Elbasani, 2009). Meanwhile, Tadic and Jovic underline those institutional reforms in the Western Balkans, including Kosovo, have been hampered by a lack of resources and administrative capacities. However, they recognize some positive efforts, such as improving transparency and harmonizing legislation with the EU *acquis Communautaire* (Tadic & Jovic, 2016).

Q4: What are the opportunities for improving administrative capacities and change management in the context of European integration?

Several concrete opportunities for improvement have been identified, including: Investing in sustainable training for civil servants, particularly in EU-related areas; depoliticizing public administration and strengthening the principles of meritocracy in

recruitment and promotion; increasing inter-institutional cooperation through the establishment of joint coordination platforms; making more effective use of technical assistance from the EU and international partners; and developing a culture of performance measurement and institutional accountability. SIGMA reports suggest that improving administrative capacity requires professionalizing the civil service, establishing sustainable management structures, and building a performance culture within public institutions. Furthermore, increasing inter-institutional cooperation and the use of digital technology offer concrete opportunities for delivering sustainable and effective reforms, in line with EU standards (SIGMA, 2022).

The European Commission stresses the importance of continuous training for civil servants, as well as the need to create a clear coordination mechanism for administrative reform. Furthermore, the report highlights the importance of depoliticizing public administration as an opportunity to increase the professionalism and credibility of institutions, thus strengthening the European integration process (European Commission, Kosovo 2023 Report, 2023). According to Meyer-Sahling, opportunities for improvement lie in building a meritocratic career in the civil service, focusing on recruitment and objective performance evaluation. He emphasizes that effective reform also requires greater independence of institutions from political influences (Meyer-Sahling, 2012). To increase administrative capacity in the region, it is necessary to go beyond the "formal imitation" of EU standards and create domestic conditions for sustainable reforms. This can be achieved by supporting civil society organizations, increasing transparency, and encouraging citizen participation in governance processes.

The Public Administration Reform Strategy 2022–2026 offers opportunities through the modernization of public services, the digitalization of processes, and the implementation of a performance evaluation system for civil servants. It also includes measures to strengthen managerial capacities and improve the efficiency of policymaking (Government of Kosovo, 2022). To improve administrative capacities in the region, it is necessary to invest in the development of standardized training, in strengthening regional cooperation for the exchange of practices and in strengthening supervisory institutions. The EU can play a key role as a technical and financial partner for the development of these capacities. Also, for a successful management of institutional changes in the framework of integration, the aspiring countries need to have a clear political vision and a functional internal coordination structure, which can adapt the European experience to the local context.

Discussion and Conclusion

The findings of this research show that public administration in Kosovo plays a central role in the European integration process, but faces numerous challenges that affect the efficiency and sustainability of institutional reforms. Despite efforts to modernize administrative structures and align with EU standards, progress remains slow and often fragmented. In line with the theory of European institutionalism, the results of this study confirm that external pressures from the EU have driven legal and institutional changes, but the lack of a sustainable internal capacity and continuous political influence have negatively affected the deepening of reforms. Also, according to change management approaches, the reform process requires not only technical planning, but also continuous commitment, effective leadership and an organizational culture that promotes cooperation and accountability. One of the most prominent issues is the lack of inter-institutional coordination and fragmentation of responsibilities, which leads to overlapping functions and reduced efficiency. Moreover, limited technical and managerial capacities make it difficult to implement new policies and maintain continuity in reforms. This highlights the need for a deeper transformation of the administration, not only in structural terms, but also in cultural and professional terms.

In conclusion, this research emphasizes that in order to advance on the path of European integration, Kosovo needs to invest more in building a functional, independent public administration capable of meeting the challenges of reform. While some positive steps have been made, the process remains fragile without a strong political commitment and the active involvement of all stakeholders in the implementation of reforms. Reforms in the administration should not only be a response to EU requirements, but should be seen as a necessity for building an efficient, democratic and trustworthy state for its citizens. Only a professionalized public administration can ensure a successful and sustainable integration of Kosovo into the European Union.

Based on the analysis and discussion of the results, several key recommendations can be formulated:

- Increasing the professionalism and depoliticization of public administration, by reforming the system of recruitment and promotion of civil servants, with a particular focus on implementing the principles of meritocracy.
- Developing human and managerial capacities, through organizing continuous training, promoting exchanges with EU member states and building local expertise in the field of European integration.

- Improving coordination between institutions, by strengthening cooperation and communication mechanisms to ensure a more harmonized approach to reforms and the EU integration process.

- Establishing effective performance measurement and accountability systems, to assess the results of reforms in a clear and transparent manner, as well as to increase institutional efficiency.

- Making better use of technical and financial assistance from the EU, with the aim of supporting institutional reform initiatives and compliance with the *acquis Communautaire*.

Abstract

In the context of global digital transformation, digital mental health models have become an important choice to meet the increasing demand for psychological and mental health care services. Smartphone applications, online platforms and new technologies such as virtual reality and artificial intelligence have been widely used to provide remote counseling, treatment and psychological support services. Digital health care models not only help overcome geographical and social distance barriers, but also can increase access to more people's care services, reduce the burden on traditional health systems and provide flexible and convenient solutions. They also play an important role in monitoring and managing the mental health status of the people towards creating a healthy and happy life. In this study, we are based on the results of surveying the demand for mental health care on digital equipment of the people, focusing on students, teachers and parents in the urban community to build appropriate implementation models. From the survey data, we designed a model of digital mental health care with 3 main pillars: (1) Screening psychological issues for therapy; (2) Education to prevent mental health problems; and (3) Communication to increase the mental health literacy. All the pilot content is deployed on digital platforms such as online classrooms, virtual interactive space, podcast programs, and community workshops to serve the needs of the people's mental care. In experimental pillars, we discover that communication strategies to raise people's awareness through digital devices receive the best and most effective feedback when helping many parents support their children in time with mental health problems. In addition, teachers and students also responded that the pilot model has helped them improve their quality of life than before through the timely professional psychological support from school counselors. The pilot results reflect the urgency of the model and is an important evidence for us to promote social security policies for people in a developing country - Vietnam - aiming to pay more attention to the mental life.

Keywords: digital health care, digital mental health, community health, virtual mental care, AI counseling, AI mental health care.

Introduction

The rising burden of mental health challenges in urban areas, especially within low- and middle-income countries (LMICs), has underscored the urgent need for innovative, scalable, and culturally appropriate service delivery models. Traditional mental health systems in these settings often grapple with infrastructure constraints, shortages of trained professionals, stigma, and limited funding factors that hinder timely and equitable access to care (Naslund et al., 2017;

Rathod et al., 2017). In response, digital mental health (DMH) solutions have emerged as a promising avenue for expanding access to care, particularly in underserved urban communities.

Globally, the COVID-19 pandemic has accelerated the adoption of digital health tools, including mobile health (mHealth), telepsychiatry, AI-enabled self-help platforms, and online psychoeducation, in both high-income and resource-limited settings (Torous et al., 2020; World Health Organization, 2022). These technologies encompass smartphone applications, wearable sensors, cloud-based services, and conversational AI, which have demonstrated potential in mental health screening, diagnosis, prevention, and therapeutic support (Inkster et al., 2016; Mohr et al., 2013). By offering real-time, flexible, and anonymous support, digital tools can complement traditional face-to-face interventions while reducing costs and stigma (Hollis et al., 2015).

Urban populations in Southeast Asia especially students, educators, and low-income working families represent a strategic demographic for DMH implementation due to increasing smartphone penetration and digital literacy (Wani et al., 2024). However, implementation in LMICs remains limited by infrastructural and regulatory challenges, lack of integration into public health systems, and the risk of exacerbating digital divides if technologies are not adapted to local cultural contexts (Arjadi et al., 2018; Khoja et al., 2012)

While global frameworks such as the WHO's classification of digital health interventions offer general guidance, there remains a significant gap in localized, evidence-informed DMH models tailored to the sociocultural, infrastructural, and educational contexts of urban communities in the Global South (World Health Organization, 2019). Vietnam, like many Southeast Asian LMICs, is experiencing rapid urbanization alongside rising mental health needs among youth and educators, yet lacks integrated digital strategies in public mental health policy.

Therefore, this study aims to design and pilot a conceptual digital mental health care model for a southern urban community in Vietnam. The model comprises three interrelated

components: (1) digital screening and referral for early identification of mental health issues, (2) culturally relevant digital psychoeducation for awareness and prevention, and (3) community engagement through digital communication platforms to reduce stigma and promote mental health literacy. These interventions are delivered via familiar digital channels, including online classrooms, mobile platforms, and podcasts.

Grounded in a participatory design framework, this pilot integrates input from parents, teachers, school counselors, and youth to ensure cultural resonance, usability, and sustainability. A “researcher-in-the-loop” approach guides the iterative development, contextual adaptation, and continuous evaluation of the model principles critical to responsible digital innovation in LMICs (Saxena et al., 2007). By documenting the process and early outcomes, this study contributes to the evidence base for DMH implementation in resource constrained urban settings and offers practical implications for policy and practice in similar contexts.

Theoretical Framework

Foundations in Community Mental Health

Community mental health care is underpinned by principles of prevention, promotion, accessibility, and cultural relevance. Preventive approaches emphasize the early identification of mental health risks and timely intervention to prevent escalation into more severe conditions (Barry et al., 2013). In LMICs, where services are often scarce or stigmatized, promotive strategies such as public education, resilience training, and community-based psychosocial support are essential for fostering mental well-being at the population level (Patel et al., 2018).

The World Health Organization advocates for a multi-tiered, community integrated mental health system, where schools, families, and primary care providers collaborate to deliver sustainable, person-centered care (World Health Organization, 2013). This approach recognizes the ecological determinants of mental health, such as social inclusion, education, and economic stability, necessitating interventions that extend beyond clinical settings (Compton & Shim, 2015). In the context of urban Southeast Asia, embedding mental health literacy, early screening, and school-based support within the community ecosystem is particularly effective for improving outcomes among children, adolescents, and caregivers.

Digital Health Frameworks

The development of DMH interventions is informed by global digital health frameworks, notably the WHO Classification of Digital Health Interventions (World Health Organization, 2019), which categorizes technologies based on their primary function for clients,

health providers, system managers, and data services. In the mental health domain, these functions translate into client-facing tools (e.g., self-help apps), provider support technologies (e.g., teleconsultation platforms), and governance tools (e.g., electronic records, decision support systems).

User engagement with digital health tools is often conceptualized through the Technology Acceptance Model (TAM), which identifies perceived usefulness and perceived ease of use as key determinants of technology adoption (Davis, 1989; Venkatesh & Bala, 2008). Furthermore, digital health literacy adapted from Nutbeam's (2000) health literacy framework and expanded by Norman and Skinner (2006) is crucial for enabling individuals to access, understand, and critically evaluate digital mental health information (Norman & Skinner, 2006; Nutbeam, 2000). Culturally sensitive design, multilingual accessibility, and interactivity are essential to ensuring that DMH tools effectively promote awareness, reduce stigma, and encourage help-seeking behaviors in diverse communities.

Modeling Strategy

Effective DMH models in LMICs must adopt a contextualized and sustainable strategy that bridges global best practices with local realities. Drawing on frameworks such as stepped-care models (e.g., Australia) and task-shifting approaches (e.g., sub Saharan Africa), implementation strategies should be adapted to existing infrastructure, digital penetration levels, and sociocultural contexts (van Ginneken et al., 2013)

In urban Vietnam, where smartphone usage is widespread but digital literacy remains uneven, DMH models must prioritize low cost, high-accessibility technologies such as SMS based tools, mobile-responsive platforms, chatbots, and open-access content libraries (Naslund et al., 2019). The application of co-design methodologies, involving end-users students, teachers, parents ensures that interventions are user centered, contextually relevant, and adaptable to evolving policy and technological environments (Torous & Roberts, 2017). A robust DMH model must not only deliver services efficiently but also cultivate a culture of mental health literacy and digital self efficacy across the community.

Contextual Considerations

Urban Community Characteristics

Southern Vietnam's urban centers have experienced rapid growth in digital infrastructure and technology adoption, particularly among families, students, and educators. According to the Vietnam Internet Network Information Center (VNNIC), as of 2022, approximately 72% of the national population had internet access, with significantly higher

rates in urban areas (VNNIC, 2022). Notably, a 2022 survey by Google reported that Vietnamese children own smartphones at an average age of 9, compared to the global average of 13, underscoring the early and widespread exposure to mobile technology (VietnamNet, 2022).

This high level of digital engagement has reshaped communication patterns within families. Research by Nguyen and Le (2021) found that parents increasingly use the internet to stay connected with their children, seek information, and facilitate family interactions. However, while digital communication has broadened the range of conversation topics, it has also led to a reduction in emotional depth and interpersonal quality of parent-child relationships (Marinescu & Nguyen, 2021). Despite strong digital connectivity, the availability of mental health services remains limited, especially in school settings where teachers and counselors report challenges in engaging families particularly those from ethnic minority backgrounds (Unicef Vietnam, 2021).

These conditions present both a challenge and an opportunity: while traditional mental health services are lacking, the technological readiness of urban Vietnamese communities provides a promising foundation for delivering digital mental health interventions that are accessible, scalable, and contextually relevant.

Cultural Sensitivities

Mental health stigma remains a pervasive barrier to care in Vietnam, particularly in urban areas. A study by Ta et al. (2016) found that urban residents in Hanoi demonstrated higher levels of stigma toward mental illness compared to their rural counterparts—an effect potentially linked to increased social competition, performance pressure, and limited mental health awareness (Ta et al., 2016). This stigma often discourages help-seeking behavior due to fears of discrimination, loss of social status, or negative family reactions.

Family and school systems serve as central agents in supporting youth mental health. However, deeply rooted traditional beliefs and low levels of mental health literacy can limit their effectiveness. The UNICEF (2021) policy brief identified that students from ethnic minority backgrounds often experience economic hardship, discrimination, and marginalization, increasing their vulnerability to mental health issues (Unicef Vietnam, 2021). Similarly, LGBTQ+ youth report challenges related to family rejection and fear of social exclusion, which further compounds their psychological risk.

In this sociocultural context, the development of culturally sensitive digital mental health interventions is essential. Effective models must prioritize stigma reduction, mental health literacy, and inclusive design, ensuring that support systems resonate with the lived

experiences and values of diverse urban populations in Vietnam. Interventions must be framed not merely as technological solutions, but as culturally adaptive tools that engage families, schools, and communities in fostering mental health awareness and care-seeking behavior.

The Proposed Model

A digital mental health model is a comprehensive approach that embeds digital technologies within conventional mental-health services. The model is built on three core pillars — Science, Digital Technology, and Operations — designed to deliver mental-health care that is effective, accessible, and attuned to users' needs in the digital era. Centred on these pillars, the model advances three principal solutions:

Digital screening for online counselling and therapy – Web-based screening tools generate an initial assessment of each user's mental health status; the resulting profile then guides appropriate e-counselling or tele-therapy referrals. Torous and colleagues (2020) demonstrated that such online screening markedly improves service access and shortens waiting times for users.

Preventive psychoeducation – The model offers online courses and educational materials on mental health, enabling users to build knowledge and self-care skills. Bakker et al. (2018) found that web-based psychoeducational programmes can reduce depressive and anxious symptoms among adults.

Digital communication to enhance mental-health awareness – Using social-media platforms and other digital channels, the model disseminates evidence-based information, raises community awareness, and combats stigma. Naslund and collaborators (2018) showed that digital mental-health campaigns can lessen stigma and encourage help-seeking among individuals experiencing mental-health difficulties.

Pillar 1: Digital Screening and Early Detection

Digital Screening and Early Detection constitutes the model's entry point, ensuring that every subsequent intervention is grounded in accurate, real-time clinical data. Specifically, users especially university students—complete online, self-administered assessments that the research team has standardised (PHQ-9, GAD-7, DASS-21, etc.) within a secure app / web platform; their scores are instantly processed by a risk-stratification algorithm that simultaneously activates a 24/7 AI chatbot to probe additional symptoms and recommend professional linkage when necessary. In cases flagged as urgent, the system automatically dispatches an encrypted report to the user-care unit, which schedules an online or outpatient appointment and assigns a dedicated case manager to monitor progress. This multi-tiered

architecture embodies primary– and secondary-prevention principles, echoing evidence that mobile mental-health solutions can markedly reduce depression, anxiety, and stress among young people (Linardon et al., 2019; Karyotaki et al., 2023). By leveraging artificial intelligence, big-data analytics, and digitised referral pathways, the Digital Screening and Early Detection pillar not only narrows the detection-to-intervention gap and delivers immediate support, but also generates a valuable data reservoir for policy formulation while alleviating pressure on conventional service systems.

Pillar 2: Mental Health Education and Prevention

Pillar 2: Mental Health Education and Prevention is critical to addressing psychological concerns across population groups, particularly in secondary schools and higher-education institutions. Effective strategies comprise (a) embedding mental-health content within formal curricula, (b) launching awareness-raising campaigns, and (c) delivering structured psychoeducation programmes. The overarching goals are to reduce stigma, enhance literacy, and foster early intervention.

The e-learning platform is organised into vetted micro-learning modules that concisely cover core topics—stress-coping strategies, sleep hygiene, mindfulness, and emotional self-regulation. Each module combines interactive videos, standardised quizzes, real-time feedback, and an algorithm that recommends the next lesson, thereby reinforcing knowledge acquisition and sustaining learner engagement.

In parallel, a series of topic-specific infographics and gamified elements—practice mini-games, leader boards, and progress badges—are widely disseminated via social media and school portals to maximise reach, lower stigma-related barriers, and strengthen intrinsic motivation. Personalised learning pathways are automatically generated from the risk-stratified results produced in Pillar 1, ensuring seamless service continuity from early detection to universal and indicated interventions.

Recent meta-analyses confirm that online psychoeducation delivered through blended-learning formats—combining micro-lectures, guided practice, and instantaneous feedback—significantly reduces depressive and anxious symptoms in adolescents while improving their propensity to seek professional help. Consequently, Pillar 2 not only communicates accurate scientific knowledge but also catalyses attitude and behaviour change, constructing a multilayered line of defence for community mental health.

Pillar 3: Digital Communication and Engagement

Pillar 3: Digital Communication and Engagement operates as a multi-tier “communication ecosystem,” using social interaction as a catalyst to enhance clinical outcomes

while sustaining long-term user adherence to the interventions delivered in the preceding two pillars.

Structural Layer – Multichannel Outreach. A multichannel media layer—podcasts, livestreams, and hashtag-driven social-media campaigns—performs the functions of advocacy, education, and evidence-based diffusion of mental-health messages, thereby reducing community stigma. Aggregate data indicate that digital campaigns can improve help-seeking attitudes and increase actual help-seeking behaviours (Tam et al., 2024); lower self-stigma; improve attitudes toward mental health; and heighten awareness of treatment effectiveness (Diouf et al., 2022; Plackett et al., 2024).

Peer-Support Layer. A peer-sharing forum and buddy-system, moderated by trained facilitators, provides structured peer support—an element shown to significantly decrease loneliness and improve depression indices after eight weeks of online intervention (Joo et al., 2023).

Platform Integration. All channels are consolidated within a centralised web/app platform equipped with a real-time professional dashboard, ensuring continuous service flow from screening → education → support. The design adheres to user-centred principles, conforms to WCAG 2.1 accessibility standards, and employs end-to-end encryption, reflecting the standardisation recommendations of Torous and colleagues on safety, privacy, and usability in digital mental-health applications (Torous et al., 2019).

Macro Layer – Engagement Analytics. Developing engagement indices—visit frequency, interaction duration, and forum-participation depth—provides intermediate indicators that predict clinical effectiveness, consistent with Torous and colleagues’ overview of the link between engagement level and treatment response in mobile applications.

Accordingly, Pillar 3 is not merely an information-broadcast channel; it is a pivotal interactive component that reinforces trust, motivation, and continuity of care. The combination of multichannel communication, coordinated peer support, and an integrated, standards-compliant platform expands reach, reduces access barriers, and thereby optimises the overall effectiveness of the digital mental-health care ecosystem.

Expected Benefits

Drawing from empirical evidence, the digital mental-health model is expected to help the public enhance mental-health literacy and obtain timely, cost-effective care that fits individual schedules and is unconstrained by place or time. The anticipated user benefits are as follows:

First, improvements in accessibility and service coverage. By leveraging widespread smartphone ownership and ever-faster mobile-data services, the model can deliver mental-health packages anytime, anywhere, eliminating the spatial and temporal barriers inherent in face-to-face counselling. Bunyi et al. report that more than 10,000 mental-health apps are now active—most with built-in user-support features—greatly enlarging access for those seeking care. Robinson et al. (2024) further emphasise that when developed within a diversity–equity–inclusion (DEI) framework, digital programmes can close service gaps that have persisted for decades in the United States.

Second, effective reach to vulnerable or stigmatised populations. Advanced digital technologies expand outreach to people lacking financial resources or reliable transport, while also helping communities reduce stigma around mental-health care. Digital tools promote techquity by offering privacy-preserving, flexible features that let users engage with content discretely (Robinson et al., 2024).

Third, demonstrated cost-effectiveness. Buntrock’s (2024) narrative review shows that most digital interventions fall below national health-system willingness-to-pay thresholds. A meta-analysis of 37 RCTs by Rohrbach et al. (2023) concludes that internet-based programmes for depression and anxiety generate more quality-adjusted life-years (QALYs) at equal or lower cost than standard treatment. In resource-constrained settings, the Step-by-Step trial in Lebanon (Abi Hana et al., 2024) proved that guided online interventions are socially cost-saving while improving symptom remission compared with enhanced usual care.

Fourth, relief of pressure on traditional health-care systems. By handling front-line tasks such as screening, psychoeducation, and low-intensity AI-guided support, the digital model can ease outpatient workloads. Buntrock (2024) estimates a 15 %–30 % reduction in clinic visits, coupled with savings from averting premature or unnecessary hospitalisations and allowing clinicians to focus on emergencies.

Finally, stronger mental-health literacy and help-seeking intentions. Digital education programmes markedly elevate knowledge, reduce stigma, and encourage professional help-seeking. In a synthesis of 114 interventions, Yeo et al. (2024) found moderate effects on mental-health outcomes and large effects on mental-health literacy.

In sum, converging data indicate that a well-designed digital mental-health care model can substantially broaden service coverage, foster techquity for stigmatised or disadvantaged groups, deliver clinically effective care at lower cost, ease the burden on conventional services, and produce meaningful gains in knowledge, attitudes, and early intervention—yielding sustainable clinical, economic, and social benefits for individuals and communities alike.

Challenges and Limitations

Deploying a digital mental-health model in Ho Chi Minh City faces a web of intertwined challenges: unequal technical infrastructure limits mobile-data access across neighbourhoods; device sharing and low smartphone literacy—especially among older adults and those with limited resources—constrain uptake; data costs, the absence of insurance coverage for digital therapies, and persistent cultural stigma toward mental disorders undermine sustained engagement. Because the model is not yet integrated into the public-health system, clinical records and specialised personnel remain fragmented; the city’s scarcity of mental-health professionals has already caused school counsellors’ workloads to spike. Most intervention content still relies on Western frameworks, so cultural adaptation is essential. In addition, AI-driven components require professional oversight to minimise diagnostic error, and robust information-security measures are imperative. Rapid technological change also threatens long-term sustainability through obsolescence. To overcome these hurdles, multi-layered solutions are needed: data-cost subsidies through public–private partnerships, targeted support programmes for vulnerable communities, policies that embed digital mental-health services into primary care, intensive training to build a high-quality workforce, and a unified data-governance framework—all of which would promote equity, effectiveness, and scalable growth for digital mental-health services.

Conclusion

The digital mental-health model structured around three core pillars: screening, preventive education, and multichannel communication is expected to deliver optimal clinical outcomes, reduce costs for users, and ensure cultural relevance for the residents of Ho Chi Minh City. Online screening employs rigorously standardized instruments to shorten the detection-to-intervention interval. Preventive mental-health education is delivered via gamified e-learning modules that both enhance knowledge and diminish stigma. Leveraging multichannel communication through podcasts, livestreams, social-media campaigns, and moderated peer forums sustains user engagement with the model over time.

However, uneven technical infrastructure across districts, high mobile-data costs, workforce shortages, and stringent security requirements continue to impede scalability. To operate effectively and reach diverse populations, the model will require coordinated support from both government and industry to expand coverage, optimize funding, integrate primary-care medical records, establish unified data-governance protocols, and localize content. These

measures will be essential to ensure safety, equity, and long-term sustainability as the model scales city-wide and, ultimately, across the nation.

Abstract

Color symbolism varies significantly across cultures, reflecting deep-rooted differences in history, geography, religion, and traditions. This article explores the divergent interpretations of colors—red, white, and yellow—in Chinese and Western cultures, contextualizing these differences through scholarly perspectives and comparative analysis. By addressing the cultural nuances embedded in these interpretations, the research aims to mitigate misunderstandings in global interactions. Employing a comparative analysis framework, the study synthesizes scholarly literature, historical texts, and several observations to trace the evolution of color symbolism in both cultural contexts. Thematic categorization and case studies are utilized to contrast the multifunctional roles of colors in rituals, art, language, and daily practices.

Findings suggest stark contrasts in the interpretation of red, which symbolizes luck, prosperity, and celebration in Chinese culture but is often associated with danger, passion, or sin in Western contexts. White, emblematic of mourning and purity in China, represents innocence and peace in Western traditions, reflecting divergent views on life and death. Yellow holds historical prestige in China, linked to imperial authority and cosmic harmony, whereas in Western societies, it frequently conveys caution, joy, or cowardice.

The study reveals the necessity of culturally informed perspectives in design, branding, diplomacy, and media to avoid unintended symbolism. It concludes that recognizing these chromatic divergences fosters mutual respect and enriches intercultural dialogue. By bridging symbolic gaps, this research contributes to strategies for minimizing cultural friction and advancing global harmony.

Keywords: Color symbolism, Cross-cultural communication, Cultural traditions, Comparative analysis

Introduction

Color symbolism serves as a silent yet powerful language that shapes cultural values, histories, and belief systems across societies. The meanings embedded in colors influence

perception, behavior, and communication, yet these interpretations vary significantly between cultures—what one culture celebrates, another may mourn or forbid. As globalization intensifies cross-cultural interactions, misinterpretations of color symbolism can lead to stereotypes, miscommunication, and even diplomatic or commercial friction. This study seeks to bridge these gaps by examining the divergent symbolic interpretations of red, white, and yellow in Chinese and Western cultures, tracing their historical and socio-cultural roots, and proposing strategies to mitigate misunderstandings.

The research is grounded in Edward T. Hall's (1976) conceptualization of culture as a "silent language," which argues that unspoken cultural codes shape human behavior and perception. This framework helps explain how color symbolism operates as an implicit yet influential aspect of cultural communication. Complementing this perspective, Michel Pastoureau's (2001) historiography of color symbolism provides insight into how colors acquire sociohistorical meanings over time. Together, these frameworks illuminate the interplay between cultural context and chromatic interpretation, offering a foundation for comparative analysis.

Existing scholarship has explored color symbolism from various cultural and disciplinary angles. Zhou and Gao's *The Language of Color in China* (1991) examines the cosmological and political significance of colors in Chinese dynastic history, highlighting their role in imperial rituals, philosophy, and social hierarchy. In contrast, Heller's *The Symbolism of Colors* (2000) catalogues Western chromatic associations, particularly in art, religion, and psychology, demonstrating how colors like red, white, and yellow convey distinct emotions and ideologies. While these studies provide valuable cultural insights, few have systematically compared Eastern and Western interpretations or addressed the practical implications of these differences in contemporary global interactions.

In an increasingly interconnected world, misunderstandings of color symbolism can have tangible consequences—ranging from marketing failures to diplomatic missteps. For instance, while red symbolizes luck and prosperity in China, it may signify danger or aggression in Western contexts. Similarly, white, often associated with purity in the West, represents mourning in Chinese culture. Such disparities underscore the need for deeper intercultural awareness. By decoding these "silent" cultural cues, this study contributes to more effective global communication, fostering mutual understanding in business, diplomacy, and social exchanges.

This study has three primary objectives: (1) to map the divergent symbolic meanings of red, white, and yellow in Chinese and Western cultural contexts; (2) to trace the historical, religious, and environmental factors that have shaped these differences; and (3) to propose actionable strategies for minimizing cross-cultural miscommunication in professional and social settings. To guide this investigation, the research addresses the following questions: How do interpretations of red, white, and yellow differ between Chinese and Western cultures? What historical, religious, and socio-environmental factors drive these divergences? And how can an understanding of these variations enhance intercultural dialogue and collaboration? By integrating theoretical, historical, and comparative analyses, this research advances scholarly discourse on color symbolism while offering pragmatic insights for global communication practices.

Method

This qualitative study employs comparative literature analysis to examine color symbolism in Chinese and Western cultures. The methodology involves three key components:

(1) Data Collection: Systematic selection of academic sources (books, journal articles) and cultural materials (artworks, religious texts, folklore) representing both traditions.

(2) Analysis Method: Thematic analysis identifies and compares symbolic meanings of red, white, and yellow across cultures. Triangulation validates findings through cross-disciplinary verification (anthropology, art history, cultural studies).

(3) Comparative Framework: Structured comparison first analyzes each color within its cultural context, then contrasts interpretations between cultures to reveal patterns and divergences.

This approach ensures rigorous, culturally-grounded understanding of color symbolism while maintaining methodological transparency.

Results

The analysis reveals stark contrasts in color symbolism (Table 1).

Table 1: Cross-Cultural Symbolism of Red, White, and Yellow

Color	China	West
Red	Fortune, revolution, sacrifice	Love, violence, vitality
White	Mourning, death	Purity, divinity, surrender
Yellow	Imperial power, harvest	Cowardice, betrayal

Examples include the Chinese “Red Eyebrows Army” versus Western red roses for romance, and Judas’s yellow robes in Christian art contrasting with China’s Yellow Emperor mythology.

Discussion and Conclusion

Understanding how different countries interpret the same color not only contributes to personal growth and development but also plays a vital role in promoting harmony and progress in global society. By appreciating the diverse meanings of colors, individuals can navigate cultural differences more effectively, reduce misunderstandings, and contribute to a more inclusive and interconnected world. This study underscores the importance of cultural awareness in fostering cross-cultural communication and global harmony.

Abstract

In the current educational scenario, marked by social and technological changes, Digital Learning Objects emerge as promising tools for teaching Modern Foreign Languages, especially in rural areas. This study, based on two cases of studies, explores the potential of Digital Learning Objects to overcome geographical and social barriers, contextualizing learning and promoting student autonomy.

Digital Learning Objects are innovative resources that transcend the limits of traditional teaching, offering a more engaging, interactive and personalized learning experience. Through autonomous, reusable and interactive digital tools, students take an active role in building their knowledge, exploring content relevant to their reality and developing linguistic, intercultural and citizenship skills.

Analysis of two schools in different rural contexts reveals the transformative impact of Digital Learning Objects. At the Japanese school in Brasília, the appropriate use of resources, combined with community engagement and appreciation of local and family culture, resulted in an inspiring educational experience. At the Gama school in Brasília too, the challenges of precarious teaching, with little connection to the students' reality, highlight the need for adequate infrastructure and contextualized pedagogical practices for the success of teaching Modern Foreign Languages.

Digital Learning Objects represent a crucial step towards building more equitable and effective education in rural areas. By promoting digital inclusion, student autonomy and

contextualization of learning, these resources transform traditional education, making it more dynamic, accessible and inspiring. Through Digital Learning Objects, rural students are equipped for the future, with the tools of learning and motivation necessary to reach their full potential and build a promising future.

Keywords: Digital learning objects, digital inclusion, modern foreign languages, rural areas.

Introduction

The integration of digital technologies into education has become a key strategy for promoting equity, innovation, and inclusion, particularly in rural and socially vulnerable contexts where traditional educational models often fall short. In these scenarios, technological resources can play a transformative role in reducing learning gaps, democratizing access to knowledge, and fostering meaningful and contextualized learning experiences.

Among these resources, Digital Learning Objects (DLOs) stand out as flexible, interactive, and reusable tools that can enhance teaching and learning processes across disciplines. DLOs are defined as digital entities designed to be used, reused, and referenced during technology-supported learning. They incorporate multimedia components, such as text, images, audio, and video, and enable interaction that promotes active engagement and the construction of knowledge (Wiley, 2002; Silva & Barbosa, 2018).

In the field of Modern Foreign Language (MFL) education, DLOs have gained increasing attention for their potential to support communicative and intercultural competence, particularly when traditional classroom resources are scarce. They allow learners to interact with authentic linguistic content, practice listening and speaking skills, and explore diverse cultural contexts—all within digital environments that can be tailored to individual learning needs and paces.

According to Moran (2015), digital learning environments empower students by placing them at the center of the learning process, encouraging autonomy, and facilitating meaningful interactions with content. Moreover, as highlighted by researchers such as Kenski (2012) and Pereira & Silva (2018), DLOs have the capacity to transcend physical and social boundaries, making quality language education more accessible in rural areas. However, the effectiveness of these tools depends on several contextual factors, including teacher preparedness, institutional support, infrastructure, and pedagogical alignment.

This study seeks to analyze the pedagogical potential of DLOs in rural schools by comparing two cases with distinct realities in the Federal District of Brazil. The goal is to understand how DLOs can be used not only to support language acquisition but also to promote equity, digital inclusion, and culturally responsive education in regions historically marginalized in terms of educational resources and technological access.

Method

The research follows a qualitative, exploratory, and descriptive approach, rooted in the epistemological framework of constructivism, which values the interpretation of social phenomena through the perspectives and experiences of participants (Creswell, 2013). Specifically, the study employs the multiple case study method (Yin, 2015), which allows for an in-depth examination of complex educational contexts and the identification of cross-case patterns and contrasts.

Two public schools located in rural areas of the Federal District, Brazil, were selected based on purposive sampling, considering their distinct levels of engagement with digital learning strategies and their contrasting socioeconomic and infrastructural conditions. This sampling strategy enabled the researchers to compare successful and challenging implementations of DLOs within similar geographic but different pedagogical realities.

Data collection was conducted using a combination of qualitative techniques:

- **Classroom Observations:** Sessions were observed to examine the use of DLOs in practice, student engagement, and teacher facilitation strategies.
- **Semi-structured Interviews:** Teachers and administrators were interviewed to gain insights into planning, implementation challenges, and perceptions regarding the impact of DLOs on language learning.
- **Document Analysis:** Lesson plans, institutional documents, and school reports were analyzed to complement and triangulate observational and interview data.

Data were analyzed using thematic coding, guided by categories such as infrastructure, pedagogical strategies, student engagement, digital competence, and community involvement. The use of triangulation enhanced the credibility and trustworthiness of the findings.

The units of analysis were:

a) **Japanese School (Brasília):** A rural school with a strong cultural identity and consistent use of digital tools integrated into language instruction.

b) Gama School (Brasília): A rural school facing structural difficulties and lacking systematic approaches to technology use in the classroom.

Results

The comparative analysis revealed both the transformative potential and the limitations associated with the use of Digital Learning Objects in rural language education. The two cases presented significant contrasts that illustrate how contextual variables influence the effectiveness of digital pedagogical strategies.

In the Japanese School, the implementation of DLOs was characterized by intentional pedagogical planning, cultural contextualization, and teacher autonomy. Teachers were trained in digital methodologies and encouraged to adapt DLOs to local realities. This alignment between content, culture, and community produced a dynamic classroom environment in which students actively engaged with foreign language content. The use of videos, interactive quizzes, digital storytelling, and virtual simulations enriched the students' experience and stimulated their curiosity. Oral expression and intercultural reflection were particularly strong areas of development.

Furthermore, the school's strong ties to the local community played a crucial role. Parents and community members participated in cultural exchange activities and supported the integration of technology into the curriculum. This approach fostered a sense of belonging and relevance that helped sustain student motivation and engagement.

In contrast, the Gama School faced several technical and pedagogical barriers that limited the use of DLOs. Teachers reported limited access to stable internet connections, lack of institutional investment in digital infrastructure, and insufficient training in the use of digital tools. Many digital activities were underutilized or implemented in a superficial way, with little alignment to the students' realities. As a result, student participation was low, and the development of communicative and intercultural competencies was limited.

These contrasting cases reinforce the idea that while DLOs can enhance language teaching in rural areas, their success depends on a complex interplay of factors, including:

- Infrastructure and connectivity;
- Teacher training and digital literacy;
- Institutional vision and pedagogical alignment;
- Community involvement and cultural integration.

This study demonstrates that Digital Learning Objects can serve as powerful tools for the teaching and learning of Modern Foreign Languages in rural settings—provided that their implementation is supported by adequate infrastructure, teacher training, and contextualized pedagogical practices. When thoughtfully integrated, DLOs can promote autonomy, increase learner motivation, and support the development of linguistic, cultural, and digital competencies.

The analysis of the two rural schools illustrates the importance of going beyond mere technological availability. In the successful case, DLOs were embedded in a broader educational project that valued student identity, respected local culture, and promoted active, inclusive learning. In the less successful case, technological limitations and lack of pedagogical planning hindered the potential benefits of DLOs.

Therefore, DLOs should be understood not just as digital tools, but as strategic instruments for educational equity, capable of empowering rural students and reshaping traditional educational practices. Their adoption must be accompanied by structural investments, professional development policies, and community engagement to ensure sustainability and impact.

Future research may explore longitudinal effects of DLOs on student outcomes in rural areas, as well as the development of open-access platforms specifically designed for linguistically and culturally diverse rural populations.

Abstract

This paper explores the strategic implementation of wellness initiatives in the workplace and their impact on employee health and organisational performance. In light of increasing concerns about occupational stress and lifestyle-related health challenges, many forward-thinking organisations are prioritising comprehensive wellness programmes that holistically promote physical, mental and emotional well-being. By doing so, these organisations aim to foster a healthy and productive workforce, while simultaneously gaining a competitive advantage in an increasingly complex and dynamic business landscape. In recognising employees as the cornerstone of organisational success, wellness initiatives transcend mere corporate responsibility they are a declaration of value and respect for human potential. When employees feel cared for, they are more likely to be engaged, loyal and innovative. The study adopts a desk-based review and analysis, drawing on secondary data from academic literature, industry reports and existing case studies of organisations with established wellness frameworks. Through this approach, the paper identifies key components of effective wellness programmes, including physical fitness support, mental health resources, flexible work arrangements and preventive health screenings.

The analysis highlights the positive outcomes of well-designed wellness strategies, such as decreased absenteeism, improved job satisfaction, enhanced morale and increased productivity. It also discusses challenges related to implementation, including resource constraints, limited employee participation and lack of organisational commitment. The paper emphasises the critical role of leadership commitment, tailored programme design and ongoing monitoring in

sustaining wellness efforts. It concludes that for organisations to reap sustained benefits, wellness must be embedded into the corporate culture and aligned with broader business goals. Ultimately, investing in employee well-being is a strategic priority for building organisational resilience and maintaining a competitive advantage in a dynamic business environment.

Keywords: Workplace wellness, employee health, productivity, well-being, organisational strategy

Introduction

Employee well-being has become increasingly acknowledged as essential to organisational success. As a result, workplace wellness programmes have gained momentum as a powerful method to improving health and well-being. These programmes often address fitness, nutrition, mental health and stress management. Businesses recognise the link that exists between employee health and productivity, leading to the global expansion of wellness programmes, especially in low-and middle-income countries (LMICs), alongside advanced economies (Sentinel Consulting, 2013). This research addresses the rising concern over employee well-being, which has become a crucial factor in organisational success. As workplace-related stress and lifestyle diseases increase, companies are recognising the value of investing in wellness programmes. These initiatives are important not only for improving employee health and morale but also for enhancing productivity, reducing absenteeism and lowering healthcare costs. Additionally, wellness programmes contribute to creating a supportive organisational culture, improving employee retention, and achieving long-term business sustainability if well implemented. Over time, workplace wellness has evolved from a marginal idea to a core element of organisational strategies. Once predominantly seen in high-income areas like North America, these programmes are now growing across Asia, South America, Africa and the Middle East, tackling both communicable diseases (HIV, malaria) and Non-Communicable Diseases (NCDs) (diabetes, cardiovascular conditions). Companies in LMICs increasingly see the benefits, with 47% of Asian and 33% of African and Middle Eastern organisations implementing wellness programmes (Sentinel Consulting, 2013). These initiatives span diverse sectors healthcare, automotive and technology targeting a wide range of health concerns (Sentinel Consulting, 2013) in both the private and public sectors. Employers are increasingly adopting workplace wellness programmes to support employees' health and to foster a more productive workforce (Goetzel & Ozminkowski, 2008). These programmes typically include physical health interventions, mental health support and

initiatives aimed at improving work-life balance. Research demonstrates that effective wellness initiatives not only improve employee health outcomes but also enhance organisational performance by reducing absenteeism, increasing engagement and lowering healthcare costs (Abasili et al., 2023; Baicker et al., 2010). The paper's main thrust is its synthesis of existing research on the effectiveness of workplace wellness programmes, coupled with practical recommendations for implementation. Building on a thorough review of existing research, this paper provides a strategic framework that organisations can use to initiate, execute as well as appraise wellness initiatives that are both effective and sustainable. Additionally, the paper offers insights into the role of data-driven decision-making in optimising wellness programs and highlights the importance of integrating wellness into organisational culture.

The remainder of this study furnishes an overview of the study's structure: the subsequent section presents a comprehensive review literature, which delves into the underlying reasons for workplace wellness initiatives and examines the fundamental elements of successful programmes. This is succeeded by an exploration of the challenges associated with the implementation of wellness initiatives, followed by case studies that substantiated the effectiveness and importance of wellness programmes. The paper then delineates a strategic approach that organisations can embrace to optimise the advantages of wellness programmes. A methodology section expounds on the procedures employed in conducting this study. Lastly, the conclusion encapsulates the principal findings and presents policy recommendations for organisations aiming to enhance employee health, productivity and overall business performance through improved wellness programmes.

Literature Review

Workplace wellness initiatives have become a vital component of organisational strategies directed at enhancing employee health, productivity and overall well-being. These programmes are created to address a broad spectrum of health issues, including physical and mental aspects that are increasingly recognised as crucial to fostering a healthy and productive work environment. The growing importance of these initiatives is driven by their potential to align with organisational goals, improve employee morale and reduce healthcare costs, thereby benefiting both employees and employers. Despite the growing popularity of wellness programmes, there is still a lack of understanding about the specific factors that make them effective. Many existing studies focus on how to implement these programmes without thoroughly exploring the factors that influence their success, such as organisational culture, employee engagement, leadership commitment. There is also limited analysis of the long-term sustainability of wellness initiatives and how regional or industry-specific challenges may

impact their effectiveness. This research aims to address these gaps by examining how wellness programmes can be tailored to different organisational contexts and evaluating their long-term benefits.

The Rationale and Importance of Workplace Wellness Initiatives

Workplace wellness programmes have their roots in the broader public health movement, where preventive health measures aim to improve overall community health outcomes. Within the workplace, these initiatives are designed to proactively address the health risks associated with sedentary work environments, chronic diseases and mental health challenges, which contribute to low productivity (Mattke et al., 2013). As organisations recognise the value of a healthy workforce, wellness programmes are evolving from simple gym memberships or health screenings to more comprehensive, multi-dimensional approaches. According to the Centre for Disease Control and Prevention (CDC), lifestyle-related diseases such as cardiovascular disease, diabetes and obesity contribute significantly to increased absenteeism and higher healthcare costs (CDC, 2023). Workplace wellness programmes that promote physical activity, healthy eating and regular health assessments can mitigate these risks, leading to improved employee health outcomes.

Moreover, employees who participate in wellness programmes report greater job satisfaction, improved physical fitness, sound mind and a stronger sense of belonging within their organisation (Abdullah & Lee, 2012; Brown et al., 2011; Goetzel et al., 2014). The concept of wellness gained widespread acceptance in the 1970s and workplace wellness programmes became increasingly popular in the 1980s to improve the physical, mental and emotional health of employees (Sentinel Consulting, 2013). The significance of wellness programmes in the workplace has been well-documented. Workplace wellness programmes target a range of benefits, including improved health, morale, productivity, employee satisfaction and reducing absenteeism (Sentinel Consulting, 2013) and healthcare costs. Studies have shown that well-executed wellness initiatives have proven to yield significant returns on investment by elevating job satisfaction, decreasing turnover and improving the overall health of the workforce (Baicker et al., 2010; Goetzel & Ozminkowski, 2008). Furthermore, these programmes contribute to broader societal benefits, such as improved public health outcomes and reduced national healthcare expenditures (McDaid, 2011). Evidence suggests that workers who are physically and mentally healthy are more productive and involved with their work, contributing positively to overall business performance (Baicker et al., 2010). Furthermore, with the increasing strain

of Non-Communicable Diseases (NCDs) like diabetes and cardiovascular disease, wellness programmes play a crucial role in reducing healthcare costs and promoting long-term employee health.

Key Components of Effective Wellness Programmes

A successful workplace wellness programme addresses multiple dimensions of employee health needs, including physical health, mental well-being and work-life balance. While the specific components of wellness programmes may vary depending on the organisation and its workforce, several critical elements contribute to their effectiveness, elements such as:

Physical Health Initiatives: Physical health programmes typically involve promoting regular exercise, healthy eating habits and preventive health care. Many organisations provide on-site fitness centres, nutritional counselling and annual health screenings. These programmes can reduce the risk of chronic diseases and help employees manage existing conditions more effectively (Aldana, 2001). Baicker et al. (2010) have shown that workers who take part in physical wellness programmes experience lower rates of absenteeism and increased productivity.

Mental Health and Stress Management: Mental health support has become an increasingly important aspect of wellness programmes, especially in light of growing awareness of the impact of stress, anxiety and depression on employee performance. Organisations that offer mental health aid such as employee assistance programmes (EAPs), mindfulness training and access to mental health professionals report better outcomes in employee engagement and retention (Richardson & Rothstein, 2008). Additionally, stress management programmes that teach coping strategies for handling work pressures have been shown to reduce burnout and improve job satisfaction (Lamontagne et al., 2007).

Work-Life Balance: Employees who struggle to balance work demands with personal responsibilities are more likely to experience stress and burnout, leading to reduced job performance. Wellness programmes that promote flexible working modalities, such as telecommuting or flexible hours, are increasingly recognised as essential for supporting work-

life balance (Kossek et al., 2010). Other initiatives, such as paid family leave and childcare support, have been shown to improve employee well-being and productivity (Allen et al., 2014).

Health Education and Communication: Wellness programmes are most effective when employees understand the benefits and have access to clear information about their options. Health education plays a crucial role in raising awareness about preventive health practices, such as smoking cessation or weight management (Goetzel et al., 2010). Additionally, effective communication strategies such as wellness newsletters, intranet portals and health coaching can encourage greater participation and engagement with wellness initiatives.

For wellness programmes to be effective, they must be strategically aligned with organisational objectives and customised to meet the needs of the workforce. Successful programmes typically involve a comprehensive approach integrating physical and mental health interventions. These initiatives often include health risk assessments, personalised health coaching and stress management workshops. The inclusion of psychological well-being as a critical component of these programmes has become increasingly common, reflecting a broader understanding of health (Kelloway, 2017). Moreover, employee involvement in the design and implementation of these programmes is crucial, as it increases relevance and engagement, leading to better outcomes (Grawitch et al., 2006).

Challenges in Implementing Workplace Wellness Programmes

Despite the clear benefits, many organisations face challenges in implementing and sustaining workplace wellness initiatives. One of the most common barriers is cost, as comprehensive wellness programmes can require significant financial investment in terms of facilities, personnel and resources (Mattke et al., 2013; Sentinel Consulting, 2013). Small and medium-sized enterprises (SMEs), may find it difficult to justify these expenses without clear evidence of a Return on Investment (ROI). Another challenge is low employee participation and engagement; this can undermine the effectiveness of these initiatives (Attridge et al., 2013). While many organisations offer wellness programmes, participation rates are often lower than expected. Lack of time, interest, or awareness can prevent employees from taking advantage of wellness resources (Aldana, 2001). Employees are more likely to engage in wellness programmes when they perceive them as relevant to their needs and when they have been involved in their design (Goetzel et al., 2007).

Difficulty in finding qualified staff and delivering services for programmes in remote locations, cultural barriers and lack of support from leadership were frequently identified as challenges (Sentinel Consulting, 2013). Lastly, privacy concerns may deter employees from fully engaging with wellness initiatives, especially when programmes require sensitive health information for personalisation or incentives. In other words, the availability of wellness programmes does not always translate to utilisation, particularly for mental health services. Stigma, confidentiality concerns and a lack of awareness can prevent employees from seeking help, even when programmes are available (Dimoff & Kelloway, 2016). To address these issues, employers must create a culture of wellness that integrates health into the daily work experience, rather than offering wellness activities as optional or isolated events. Employers must ensure that all data collected through wellness programmes is handled in compliance with health privacy laws and other health laws specific to the country or state in which an organisation is situated, laws such as the Health Insurance Portability and Accountability Act (HIPAA) and National Health Act (NHA) 2014 in Nigeria (Edemekong et al., 2023). Also, ensure employees feel confident that their personal information will remain confidential (Edemekong et al., 2023) likewise involve them in mapping out plans for executing the programmes.

Case Studies of Effective Wellness Initiatives in Some Countries around the World

The case study explores the growing significance of workplace wellness programmes within organisations and their impact on employee well-being and overall productivity. As businesses across the globe increasingly recognise the direct link between a healthy workforce and organisational success, wellness initiatives have shifted from a supplementary benefit to a critical component of strategic planning. This case study examines the evolution and expansion of these programmes in low and middle-income countries (LMICs), where they are becoming increasingly prevalent, to show the importance of these initiatives as catalysts for positive behavioural and financial change, even in the face of limited resources. Case studies are chosen to show that even countries with fewer funds are keying into it due to the benefits that can be derived from such programmes. By focusing on diverse industries and regions, the study provides insights into how wellness programmes are being adapted to address both communicable and non-communicable diseases, highlighting their role in fostering a healthier, more engaged and productive workforce. Apart from being from lower-income countries, these case studies are valuable because they showcase diverse health challenges, resource constraints and cultural integration. They highlight how organisations innovate to address specific issues

like HIV/AIDS and financial literacy, despite scarce resources. The programmes' adaptability and impact on employees and surrounding communities offer scalable models for similar settings globally. Additionally, they provide insights into addressing global concerns, making them relevant beyond just low-income contexts.

Chevron Nigeria: Chevron's "Healthy Heart" programme aims to mitigate the risk of cardiovascular disease among employees. The programme includes risk assessments, lifestyle modification support and peer health educator models to encourage healthy behaviours (Sentinel Consulting, 2013). In the workplace, peer educators are workers who have been trained to assess and modify co-workers high-risk behaviours, promoting positive change (International Labour Organisation [ILO], 2013). Peer educators have been particularly effective in addressing both communicable and non-communicable diseases, such as HIV and cardiovascular risks, enhancing the programme's reach and impact.

Unilever India: Unilever's "Lamplighter" programme focuses on assessing the risk of NCDs and promoting healthy lifestyles among employees. The programme integrates health risk assessments, monitoring for hypertension, cholesterol and body mass index (BMI) and coaching for mental resilience and physical fitness (Sentinel Consulting, 2013). This initiative has successfully moved employees from high-risk health categories into safer zones, demonstrating the effectiveness of proactive wellness interventions.

Volkswagen South Africa: Volkswagen's comprehensive wellness programme, initially focused on HIV prevention, has evolved to include NCD screenings and occupational health services. The programme has significantly increased employee engagement in health checks, achieving a participation rate of 80-89% for health screenings, which cover conditions like diabetes, hypertension and mental health (Sentinel Consulting, 2013).

Philippines (HP): HP Philippines developed the "Winning with Wellness" programme to create a culture that encourages a healthy lifestyle within and outside the organisation, focusing on three core components physical health, emotional health and financial health. This programme aimed to integrate previously separate wellness initiatives into a comprehensive approach to boost participation and employee output while addressing the different needs of the workforce. This programme brought about changes in how employees manage their physical and emotional health including financial wellness thus improving overall health.

Zimbabwe (Zimplats): Zimbabwe Platinum Mine initiated its workplace wellness programme in 2003, focusing on addressing the widespread of HIV in the mining industry. The programme intends to curb the transmission of HIV, mitigate the impact on infected employees and minimise stigma and bias connected to the disease. It includes peer educators, free condoms and antiretroviral treatment for employees and their dependents. The programme extends to the community, offering sexually transmitted infections (STI) clinics, condom distribution and income-generating projects for sex workers. Collaborations with organisations like Population Service International (PSI) and the Zimbabwe Business Council on AIDS (ZBCA) have helped reduce STI rates and employee deaths.

These examples demonstrate that workplace wellness initiatives can be adapted to suit the unique health challenges of different regions, effectively improving employee health outcomes and productivity.

A Strategic Approach to Wellness and Implementation of Wellness Programmes

For wellness programmes to be truly effective, they must be strategically aligned with organisational goals and tailored to meet the specific needs of the workforce. A one-size-fits-all approach is unlikely to yield optimal results. Instead, organisations should use data-driven insights to customize their wellness offerings based on employee demographics, health risks and preferences (Goetzel & Ozminkowski, 2008). For wellness programmes to be effective, organisations must adopt a strategic approach to their design and implementation to prevent some of these diseases, intervene and accommodate those that can be managed. Kelloway (2017) suggested prevention, intervention and accommodation as an effective framework for addressing workplace wellness comprehensively. Thus a comprehensive approach must adopt evidence-based practices in the design and implementation of these programmes to enhance their effectiveness and sustainability (Rousseau & Barends, 2011). Sentinel Consulting (2013) outlines several key factors for successful programme execution, including:

Tailored Interventions: Wellness programmes should be designed to address the specific health risks and challenges faced by the workforce. This often means addressing both communicable diseases and NCDs. For instance, programmes in Nigeria and South Africa focus on HIV prevention alongside cardiovascular disease management (Sentinel Consulting, 2013).

Engagement and Education: Peer support and education are essential components of wellness initiatives. Programmes that employ peer educators, such as Chevron's initiative in Nigeria, have been particularly successful in promoting health behaviours within culturally relevant frameworks (Sentinel Consulting, 2013). These educators not only provide information but also serve as role models for healthy living, increasing programme uptake and effectiveness.

Comprehensive Support: Offering a range of services that address various aspects of employee well-being physical, mental and even financial can enhance participation and sustainability. HP's programme in the Philippines, for example, addresses physical health, emotional well-being and financial literacy, recognizing the interconnectedness of these elements in employee wellness (Sentinel Consulting, 2013).

Monitoring and Evaluation: Employers should also measure the effectiveness of wellness programmes through both quantitative and qualitative metrics. Common metrics include participation rates, employee satisfaction, health outcomes and ROI (Baicker et al., 2010). Regular evaluation enables organisations to make informed decisions about how to refine and improve their wellness strategies over time. To demonstrate the value of wellness programmes, organisations must establish clear metrics for success. Other strategic approaches are:

Evidence-based programming: Evidence-based programming refers to the use of interventions, strategies and practices in wellness programmes grounded in scientific research and proven effective in improving employee health and well-being. These programmes must have been tested and evaluated through rigorous evaluation methods and be based on peer-reviewed research as well as demonstrated significant as well as sustainable outcomes. These can include programmes such as behavioural change interventions such as smoking cessation, weight management, nutrition education and healthy eating promotions among others.

Leadership support and commitment: Sentinel Consulting (2013) recognised lack of support from leadership as a challenge. According to Dimoff and Kelloway (2016), one of the factors leading to the underutilisation of wellness resources stems from inadequate leadership engagement, which is critical for facilitating resource utilisation and encouraging employee participation in wellness initiatives. Thus, leadership support is crucial for the success and effectiveness of employee well-being programmes. Supports can include resource allocation

(infrastructure, funds and personnel) to successfully implement the programme, endorsement, participation in such initiatives and so on.

Additionally, organisations should integrate wellness initiatives into the company culture, encouraging leadership support and employee involvement. When wellness is seen as a core component of the organisation's values, employees are most likely to engage with and benefit from the available resources (Allen et al., 2014).

A strategic approach to workplace wellness involves integrating these programmes into the broader organisational strategy, ensuring they align with company goals and employee needs. This approach should include proactive measures, such as altering work conditions to prevent stress and reactive measures, such as interventions that help employees manage existing stressors (Grawitch et al., 2015). Adopting evidence-based practices in the design and implementation of wellness programmes can further enhance their effectiveness and sustainability. Thus, workplace wellness initiatives are essential for fostering a healthy and productive workforce. When designed and implemented effectively, these programmes can lead to significant improvements in both employee health and organisational outcomes. However, for these initiatives to be truly successful, they must be strategically aligned with organisational goals, tailored to the specific needs of the workforce and supported by strong leadership and a culture that prioritises employee well-being.

The Long-Term Benefits of Workplace Wellness Programmes

Workplace wellness programmes have become an essential component of many organisations' strategies to promote employee health and productivity. Over time, these initiatives deliver long-term benefits for both employees and employers. Drawing from extensive research and analyses by organisations such as RAND Corporation as well as scholarly works, this article explores the sustained advantages of implementing workplace wellness programmes.

Workplace wellness programmes offer long-term benefits for both employees and organisations, as supported by various researches on wellness programmes. For employees, these programmes lead to improved physical and mental health outcomes. For example, research by Baicker et al. (2010) demonstrates that wellness initiatives significantly decrease the incidence of chronic diseases such as diabetes and heart disease, leading to better overall

health and a decrease in healthcare utilisation over time. Employees who participate in wellness programmes also report higher job satisfaction and reduced stress levels, which contribute to their long-term well-being (Goetzel et al., 2018).

Employee Health and Well-Being: One of the most critical long-term benefits of wellness programmes is the improvement in employees' physical and mental health. Studies by Baicker et al. (2010) have demonstrated that wellness programmes lead to reductions in risk factors for chronic diseases such as diabetes and cardiovascular issues. Through health screenings, fitness initiatives and mental health support, employees who participate in wellness programmes can significantly reduce their long-term health risks. Similarly, Dement et al. (2015) showed that workplace wellness programmes reduced healthcare utilisation and costs over time, further emphasising the health benefits of these programmes.

Increased Productivity and Reduced Absenteeism: Healthier employees are more productive and engaged in their work. RAND Corporation's extensive research on workplace wellness highlights that these programmes lead to fewer sick days and higher job satisfaction, both of which positively impact productivity (Mattke et al., 2014). Goetzel et al. (2018) found that organisations implementing comprehensive wellness programmes experienced a reduction in absenteeism and an increase in presenteeism, where employees are more productive when they are at work. In the long run, healthier employees translate to enhanced organisational performance.

Financial Savings and Return on Investment: Wellness programmes not only benefit employee health but also result in significant financial savings for employers. A study by Baicker et al. (2010) found that for every dollar spent on wellness programmes, employers saved \$3.27 in healthcare costs. Similarly, the RAND Corporation's research concluded that wellness programmes targeting high-risk employees, such as those with chronic conditions, resulted in considerable cost savings (Mattke et al., 2014). Dement et al. (2015) also documented a reduction in healthcare costs for organisations that implemented wellness programmes, affirming the financial viability of these initiatives in the long term.

Positive Organisational Culture and Employee Retention: In addition to health and financial benefits, wellness programmes contribute to creating a positive organisational culture. Mattke et al. (2014) emphasise that these programmes foster a culture of health, where employees feel

supported in their wellness goals. This not only improves employee morale but also aids in retaining talent. Employees are more likely to remain with companies that invest in their health and well-being, reducing turnover costs for organisations (Baicker et al., 2010; Goetzel et al., 2018).

Long-Term Engagement and Sustained Benefits: One of the keys to successful wellness programmes is sustained employee engagement. The RAND toolkit developed by Mattke et al. (2014) outlines best practices for ensuring long-term participation, such as tailoring programmes to employee needs, using incentives and providing convenient access to wellness resources. By fostering continuous engagement, organisations can ensure that the benefits of wellness programmes are sustained over time, improving both employee health and organisational outcomes.

Hence, the long-term benefits of workplace wellness programmes are clear, improved employee health, enhanced productivity, significant financial savings and a more positive organisational culture. Research works consistently demonstrate that wellness programmes yield substantial returns on investment for organisations while promoting the well-being of their workforce. The long-term advantages for both employees and organisations highlight the necessity of integrating wellness programmes as part of a broader strategy for maintaining a healthy, productive workforce.

Method

This paper is based on a systematic examination of various studies, including peer-reviewed journal articles, published books and credible online sources. The key steps in the methodology include:

Literature Review

The first step in the methodology involved conducting an extensive literature review to gather information on workplace wellness programmes. The literature search was conducted using English only as the primary language. The keywords used included "workplace wellness programmes," "employee health," "organisational productivity," "employee well-being", "organisational strategy" and "long-term benefits of wellness programmes." Synonyms or similar terms were not used in this search. To ensure a comprehensive review, the authors focused specifically on these core terms. Sources were selected based on their relevance, credibility and the recency of their data. This review included books authored by experts in

workplace health and wellness to provide foundational knowledge and context, peer-reviewed journal articles from reputable databases such as Wiley, Elsevier and Google Scholar, which provided empirical studies and reviews on the effectiveness of wellness programmes, their impact on employee health and organisational outcomes. To complement these primary sources, the paper also incorporated data and statistics from authoritative websites, such as the Centres for Disease Control and Prevention (CDC) and the International Labour Organisation (ILO). These sources were chosen for their high credibility and for offering up-to-date information on public health and workplace wellness trends.

Data Analysis and Synthesis

The information gathered from these sources was systematically analysed and synthesized to identify common themes, trends and best practices in workplace wellness initiatives. This involved comparing findings from different studies to ensure consistency and to highlight areas where the evidence was strongest. For example, the consistent finding across multiple studies that wellness programmes reduce absenteeism and improve employee productivity was used to support the argument for the strategic importance of these initiatives. The synthesis process also involved critically evaluating the quality of the studies reviewed, considering factors such as sample size, research design and the methodologies used by the original authors. This critical approach helped to ensure that the conclusions drawn in this paper were based on robust and reliable evidence.

Ensuring Trustworthiness

To ensure the credibility of the content, the paper adhered to several methodological principles. Firstly, the paper relies only on credible sources that meet rigorous academic standards. Peer-reviewed articles were prioritised, as these undergo extensive scrutiny by experts in the field before publication, thus ensuring their reliability. Secondly, triangulation was used to verify the accuracy of the information. This involved cross-referencing data from multiple sources to confirm findings and identify discrepancies. By comparing results from different studies, consistent patterns and outliers were identified, providing a more nuanced understanding of the effectiveness of wellness initiatives. Using high-quality, credible sources and ensuring methodological transparency, this paper has ensured that the content is trustworthy and well-supported by evidence. This methodological approach provides a solid foundation for the conclusions drawn and the practical recommendations offered, making the paper a reliable resource for scholars and practitioners interested in workplace wellness initiatives.

Conclusion and Recommendations

Workplace wellness initiatives play a vital role in cultivating a healthy, productive and engaged workforce. To achieve maximum impact, these programmes must be integrated into the broader organisational strategy, aligning with company goals and addressing the unique needs of employees. By incorporating physical and mental health interventions, wellness initiatives can significantly improve employee well-being, reduce stress and boost productivity. Leadership support, employee involvement and attention to privacy concerns are imperative for the success of these programmes. Ultimately, a culture that prioritises employee well-being not only promotes individual health but also contributes to the long-term success of the organisation.

Recommendations

- 1. Holistic Approach to Employee Wellness:** Organisations should adopt policies that promote a comprehensive wellness strategy, incorporating both physical and mental health interventions. This includes offering mandatory health risk assessments, mental health support and stress management initiatives.
- 2. Integration into Organisational Culture:** Wellness programmes should be embedded within the organisation's core culture, ensuring that health initiatives are not treated as optional or isolated activities, but as an integral part of the daily work experience.
- 3. Leadership Involvement:** Policies should encourage leadership participation in wellness programmes, promoting transparency, accountability and active engagement from management to set a positive example for employees.
- 4. Compliance with Privacy Regulations:** Companies must enforce strict compliance with health laws and provisions of privacy by these laws, ensuring that employee health data is collected, stored and managed confidentially and securely.
- 5. Regular Evaluation and Adaptation:** Policies should support the continuous evaluation of wellness programmes to adapt to changing employee needs and ensure the on-going relevance and effectiveness of the initiatives.
- 6. Transparency and Confidentiality:** Clear policies should be in place that addresses employee concerns regarding privacy, ensuring that personal health information remains confidential and is handled with transparency.

7. Data-Driven Decision-Making: Companies should implement policies that use data from wellness assessments to make informed decisions, tailoring wellness programmes to address the specific needs of their workforce.

8. Incentives and Engagement: Policies should promote the use of incentives, such as flexible work arrangements and rewards, to encourage higher participation and sustained engagement in wellness programmes.

Abstract

This paper explores the strategic implementation of wellness initiatives in the workplace and their impact on employee health and organisational performance. In light of increasing concerns about occupational stress and lifestyle-related health challenges, many forward-thinking organisations are prioritising comprehensive wellness programmes that holistically promote physical, mental and emotional well-being. By doing so, these organisations aim to foster a healthy and productive workforce, while simultaneously gaining a competitive advantage in an increasingly complex and dynamic business landscape. In recognising employees as the cornerstone of organisational success, wellness initiatives transcend mere corporate responsibility; they are a declaration of value and respect for human potential. When employees feel cared for, they are more likely to be engaged, loyal and innovative. The study adopts a desk-based review and analysis, drawing on secondary data from academic literature, industry reports and existing case studies of organisations with established wellness frameworks. Through this approach, the paper identifies key components of effective wellness programmes, including physical fitness support, mental health resources, flexible work arrangements and preventive health screenings.

The analysis highlights the positive outcomes of well-designed wellness strategies, such as decreased absenteeism, improved job satisfaction, enhanced morale and increased productivity. It also discusses challenges related to implementation, including resource constraints, limited employee participation and lack of organisational commitment. The paper emphasises the critical role of leadership commitment, tailored programme design and ongoing monitoring in sustaining wellness efforts. It concludes that for organisations to reap sustained benefits, wellness must be embedded into the corporate culture and aligned with broader business goals.

Ultimately, investing in employee well-being is a strategic priority for building organisational resilience and maintaining a competitive advantage in a dynamic business environment.

Keywords: Workplace wellness, employee health, productivity, well-being, organisational strategy

Introduction

Employee well-being has become increasingly acknowledged as essential to organisational success. As a result, workplace wellness programmes have gained momentum as a powerful method to improving health and well-being. These programmes often address fitness, nutrition, mental health and stress management. Businesses recognise the link that exists between employee health and productivity, leading to the global expansion of wellness programmes, especially in low-and middle-income countries (LMICs), alongside advanced economies (Sentinel Consulting, 2013). This research addresses the rising concern over employee well-being, which has become a crucial factor in organisational success. As workplace-related stress and lifestyle diseases increase, companies are recognising the value of investing in wellness programmes. These initiatives are important not only for improving employee health and morale but also for enhancing productivity, reducing absenteeism and lowering healthcare costs. Additionally, wellness programmes contribute to creating a supportive organisational culture, improving employee retention, and achieving long-term business sustainability if well implemented. Over time, workplace wellness has evolved from a marginal idea to a core element of organisational strategies. Once predominantly seen in high-income areas like North America, these programmes are now growing across Asia, South America, Africa and the Middle East, tackling both communicable diseases (HIV, malaria) and Non-Communicable Diseases (NCDs) (diabetes, cardiovascular conditions). Companies in LMICs increasingly see the benefits, with 47% of Asian and 33% of African and Middle Eastern organisations implementing wellness programmes (Sentinel Consulting, 2013). These initiatives span diverse sectors healthcare, automotive and technology targeting a wide range of health concerns (Sentinel Consulting, 2013) in both the private and public sectors.

Employers are increasingly adopting workplace wellness programmes to support employees' health and to foster a more productive workforce (Goetzel & Ozminkowski, 2008). These programmes typically include physical health interventions, mental health support and initiatives aimed at improving work-life balance. Research demonstrates that effective wellness initiatives not only improve employee health outcomes but also enhance organisational

performance by reducing absenteeism, increasing engagement and lowering healthcare costs (Abasili et al., 2023; Baicker et al., 2010). The paper's main thrust is its synthesis of existing research on the effectiveness of workplace wellness programmes, coupled with practical recommendations for implementation. Building on a thorough review of existing research, this paper provides a strategic framework that organisations can use to initiate, execute as well as appraise wellness initiatives that are both effective and sustainable. Additionally, the paper offers insights into the role of data-driven decision-making in optimising wellness programs and highlights the importance of integrating wellness into organisational culture.

The remainder of this study furnishes an overview of the study's structure: the subsequent section presents a comprehensive review literature, which delves into the underlying reasons for workplace wellness initiatives and examines the fundamental elements of successful programmes. This is succeeded by an exploration of the challenges associated with the implementation of wellness initiatives, followed by case studies that substantiated the effectiveness and importance of wellness programmes. The paper then delineates a strategic approach that organisations can embrace to optimise the advantages of wellness programmes. A methodology section expounds on the procedures employed in conducting this study. Lastly, the conclusion encapsulates the principal findings and presents policy recommendations for organisations aiming to enhance employee health, productivity and overall business performance through improved wellness programmes.

Literature Review

Workplace wellness initiatives have become a vital component of organisational strategies directed at enhancing employee health, productivity and overall well-being. These programmes are created to address a broad spectrum of health issues, including physical and mental aspects that are increasingly recognised as crucial to fostering a healthy and productive work environment. The growing importance of these initiatives is driven by their potential to align with organisational goals, improve employee morale and reduce healthcare costs, thereby benefiting both employees and employers. Despite the growing popularity of wellness programmes, there is still a lack of understanding about the specific factors that make them effective. Many existing studies focus on how to implement these programmes without thoroughly exploring the factors that influence their success, such as organisational culture, employee engagement, leadership commitment. There is also limited analysis of the long-term sustainability of wellness initiatives and how regional or industry-specific challenges may impact their effectiveness. This research aims to address these gaps by examining how wellness

programmes can be tailored to different organisational contexts and evaluating their long-term benefits.

The Rationale and Importance of Workplace Wellness Initiatives

Workplace wellness programmes have their roots in the broader public health movement, where preventive health measures aim to improve overall community health outcomes. Within the workplace, these initiatives are designed to proactively address the health risks associated with sedentary work environments, chronic diseases and mental health challenges, which contribute to low productivity (Mattke et al., 2013). As organisations recognise the value of a healthy workforce, wellness programmes are evolving from simple gym memberships or health screenings to more comprehensive, multi-dimensional approaches. According to the Centre for Disease Control and Prevention (CDC), lifestyle-related diseases such as cardiovascular disease, diabetes and obesity contribute significantly to increased absenteeism and higher healthcare costs (CDC, 2023). Workplace wellness programmes that promote physical activity, healthy eating and regular health assessments can mitigate these risks, leading to improved employee health outcomes.

Moreover, employees who participate in wellness programmes report greater job satisfaction, improved physical fitness, sound mind and a stronger sense of belonging within their organisation (Abdullah & Lee, 2012; Brown et al., 2011; Goetzel et al., 2014). The concept of wellness gained widespread acceptance in the 1970s and workplace wellness programmes became increasingly popular in the 1980s to improve the physical, mental and emotional health of employees (Sentinel Consulting, 2013). The significance of wellness programmes in the workplace has been well-documented. Workplace wellness programmes target a range of benefits, including improved health, morale, productivity, employee satisfaction and reducing absenteeism (Sentinel Consulting, 2013) and healthcare costs. Studies have shown that well-executed wellness initiatives have proven to yield significant returns on investment by elevating job satisfaction, decreasing turnover and improving the overall health of the workforce (Baicker et al., 2010; Goetzel & Ozminkowski, 2008). Furthermore, these programmes contribute to broader societal benefits, such as improved public health outcomes and reduced national healthcare expenditures (McDaid, 2011). Evidence suggests that workers who are physically and mentally healthy are more productive and involved with their work, contributing positively to overall business performance (Baicker et al., 2010). Furthermore, with the increasing strain of Non-Communicable Diseases (NCDs) like diabetes and cardiovascular disease, wellness

programmes play a crucial role in reducing healthcare costs and promoting long-term employee health.

Key Components of Effective Wellness Programmes

A successful workplace wellness programme addresses multiple dimensions of employee health needs, including physical health, mental well-being and work-life balance. While the specific components of wellness programmes may vary depending on the organisation and its workforce, several critical elements contribute to their effectiveness, elements such as:

Physical Health Initiatives: Physical health programmes typically involve promoting regular exercise, healthy eating habits and preventive health care. Many organisations provide on-site fitness centres, nutritional counselling and annual health screenings. These programmes can reduce the risk of chronic diseases and help employees manage existing conditions more effectively (Aldana, 2001). Baicker et al. (2010) have shown that workers who take part in physical wellness programmes experience lower rates of absenteeism and increased productivity.

Mental Health and Stress Management: Mental health support has become an increasingly important aspect of wellness programmes, especially in light of growing awareness of the impact of stress, anxiety and depression on employee performance. Organisations that offer mental health aid such as employee assistance programmes (EAPs), mindfulness training and access to mental health professionals report better outcomes in employee engagement and retention (Richardson & Rothstein, 2008). Additionally, stress management programmes that teach coping strategies for handling work pressures have been shown to reduce burnout and improve job satisfaction (Lamontagne et al., 2007).

Work-Life Balance: Employees who struggle to balance work demands with personal responsibilities are more likely to experience stress and burnout, leading to reduced job performance. Wellness programmes that promote flexible working modalities, such as telecommuting or flexible hours, are increasingly recognised as essential for supporting work-life balance (Kossek et al., 2010). Other initiatives, such as paid family leave and childcare support, have been shown to improve employee well-being and productivity (Allen et al., 2014).

Health Education and Communication: Wellness programmes are most effective when employees understand the benefits and have access to clear information about their options. Health education plays a crucial role in raising awareness about preventive health practices, such as smoking cessation or weight management (Goetzel et al., 2010). Additionally, effective

communication strategies such as wellness newsletters, intranet portals and health coaching can encourage greater participation and engagement with wellness initiatives.

For wellness programmes to be effective, they must be strategically aligned with organisational objectives and customised to meet the needs of the workforce. Successful programmes typically involve a comprehensive approach integrating physical and mental health interventions. These initiatives often include health risk assessments, personalised health coaching and stress management workshops. The inclusion of psychological well-being as a critical component of these programmes has become increasingly common, reflecting a broader understanding of health (Kelloway, 2017). Moreover, employee involvement in the design and implementation of these programmes is crucial, as it increases relevance and engagement, leading to better outcomes (Grawitch et al., 2006).

Challenges in Implementing Workplace Wellness Programmes

Despite the clear benefits, many organisations face challenges in implementing and sustaining workplace wellness initiatives. One of the most common barriers is cost, as comprehensive wellness programmes can require significant financial investment in terms of facilities, personnel and resources (Mattke et al., 2013; Sentinel Consulting, 2013). Small and medium-sized enterprises (SMEs), may find it difficult to justify these expenses without clear evidence of a Return on Investment (ROI). Another challenge is low employee participation and engagement; this can undermine the effectiveness of these initiatives (Attridge et al., 2013). While many organisations offer wellness programmes, participation rates are often lower than expected. Lack of time, interest, or awareness can prevent employees from taking advantage of wellness resources (Aldana, 2001). Employees are more likely to engage in wellness programmes when they perceive them as relevant to their needs and when they have been involved in their design (Goetzel et al., 2007).

Difficulty in finding qualified staff and delivering services for programmes in remote locations, cultural barriers and lack of support from leadership were frequently identified as challenges (Sentinel Consulting, 2013). Lastly, privacy concerns may deter employees from fully engaging with wellness initiatives, especially when programmes require sensitive health information for personalisation or incentives. In other words, the availability of wellness programmes does not always translate to utilisation, particularly for mental health services. Stigma, confidentiality concerns and a lack of awareness can prevent employees from seeking help, even when programmes are available (Dimoff & Kelloway, 2016). To address these issues, employers must create a culture of wellness that integrates health into the daily work experience, rather than offering wellness activities as optional or isolated events. Employers

must ensure that all data collected through wellness programmes is handled in compliance with health privacy laws and other health laws specific to the country or state in which an organisation is situated, laws such as the Health Insurance Portability and Accountability Act (HIPAA and National Health Act (NHA) 2014 in Nigeria (Edemekong et al., 2023). Also, ensure employees feel confident that their personal information will remain confidential (Edemekong et al., 2023) likewise involve them in mapping out plans for executing the programmes.

Case Studies of Effective Wellness Initiatives in Some Countries around the World

The case study explores the growing significance of workplace wellness programmes within organisations and their impact on employee well-being and overall productivity. As businesses across the globe increasingly recognise the direct link between a healthy workforce and organisational success, wellness initiatives have shifted from a supplementary benefit to a critical component of strategic planning. This case study examines the evolution and expansion of these programmes in low and middle-income countries (LMICs), where they are becoming increasingly prevalent, to show the importance of these initiatives as catalysts for positive behavioural and financial change, even in the face of limited resources. Case studies are chosen to show that even countries with fewer funds are keying into it due to the benefits that can be derived from such programmes. By focusing on diverse industries and regions, the study provides insights into how wellness programmes are being adapted to address both communicable and non-communicable diseases, highlighting their role in fostering a healthier, more engaged and productive workforce. Apart from being from lower-income countries, these case studies are valuable because they showcase diverse health challenges, resource constraints and cultural integration. They highlight how organisations innovate to address specific issues like HIV/AIDS and financial literacy, despite scarce resources. The programmes' adaptability and impact on employees and surrounding communities offer scalable models for similar settings globally. Additionally, they provide insights into addressing global concerns, making them relevant beyond just low-income contexts.

Chevron Nigeria: Chevron's "Healthy Heart" programme aims to mitigate the risk of cardiovascular disease among employees. The programme includes risk assessments, lifestyle modification support and peer health educator models to encourage healthy behaviours (Sentinel Consulting, 2013). In the workplace, peer educators are workers who have been trained to assess and modify co-workers high-risk behaviours, promoting positive change (International Labour Organisation [ILO], 2013). Peer educators have been particularly

effective in addressing both communicable and non-communicable diseases, such as HIV and cardiovascular risks, enhancing the programme's reach and impact.

Unilever India: Unilever's "Lamplighter" programme focuses on assessing the risk of NCDs and promoting healthy lifestyles among employees. The programme integrates health risk assessments, monitoring for hypertension, cholesterol and body mass index (BMI) and coaching for mental resilience and physical fitness (Sentinel Consulting, 2013). This initiative has successfully moved employees from high-risk health categories into safer zones, demonstrating the effectiveness of proactive wellness interventions.

Volkswagen South Africa: Volkswagen's comprehensive wellness programme, initially focused on HIV prevention, has evolved to include NCD screenings and occupational health services. The programme has significantly increased employee engagement in health checks, achieving a participation rate of 80-89% for health screenings, which cover conditions like diabetes, hypertension and mental health (Sentinel Consulting, 2013).

Philippines (HP): HP Philippines developed the "Winning with Wellness" programme to create a culture that encourages a healthy lifestyle within and outside the organisation, focusing on three core components physical health, emotional health and financial health. This programme aimed to integrate previously separate wellness initiatives into a comprehensive approach to boost participation and employee output while addressing the different needs of the workforce. This programme brought about changes in how employees manage their physical and emotional health including financial wellness thus improving overall health.

Zimbabwe (Zimplats): Zimbabwe Platinum Mine initiated its workplace wellness programme in 2003, focusing on addressing the widespread of HIV in the mining industry. The programme intends to curb the transmission of HIV, mitigate the impact on infected employees and minimise stigma and bias connected to the disease. It includes peer educators, free condoms and antiretroviral treatment for employees and their dependents. The programme extends to the community, offering sexually transmitted infections (STI) clinics, condom distribution and income-generating projects for sex workers. Collaborations with organisations like Population Service International (PSI) and the Zimbabwe Business Council on AIDS (ZBCA) have helped reduce STI rates and employee deaths.

These examples demonstrate that workplace wellness initiatives can be adapted to suit the unique health challenges of different regions, effectively improving employee health outcomes and productivity.

A Strategic Approach to Wellness and Implementation of Wellness Programmes

For wellness programmes to be truly effective, they must be strategically aligned with organisational goals and tailored to meet the specific needs of the workforce. A one-size-fits-all approach is unlikely to yield optimal results. Instead, organisations should use data-driven insights to customize their wellness offerings based on employee demographics, health risks and preferences (Goetzel & Ozminkowski, 2008). For wellness programmes to be effective, organisations must adopt a strategic approach to their design and implementation to prevent some of these diseases, intervene and accommodate those that can be managed. Kelloway (2017) suggested prevention, intervention and accommodation as an effective framework for addressing workplace wellness comprehensively. Thus a comprehensive approach must adopt evidence-based practices in the design and implementation of these programmes to enhance their effectiveness and sustainability (Rousseau & Barends, 2011). Sentinel Consulting (2013) outlines several key factors for successful programme execution, including:

Tailored Interventions: Wellness programmes should be designed to address the specific health risks and challenges faced by the workforce. This often means addressing both communicable diseases and NCDs. For instance, programmes in Nigeria and South Africa focus on HIV prevention alongside cardiovascular disease management (Sentinel Consulting, 2013).

Engagement and Education: Peer support and education are essential components of wellness initiatives. Programmes that employ peer educators, such as Chevron's initiative in Nigeria, have been particularly successful in promoting health behaviours within culturally relevant frameworks (Sentinel Consulting, 2013). These educators not only provide information but also serve as role models for healthy living, increasing programme uptake and effectiveness.

Comprehensive Support: Offering a range of services that address various aspects of employee well-being physical, mental and even financial can enhance participation and sustainability. HP's programme in the Philippines, for example, addresses physical health, emotional well-being and financial literacy, recognizing the interconnectedness of these elements in employee wellness (Sentinel Consulting, 2013).

Monitoring and Evaluation: Employers should also measure the effectiveness of wellness programmes through both quantitative and qualitative metrics. Common metrics include participation rates, employee satisfaction, health outcomes and ROI (Baicker et al., 2010). Regular evaluation enables organisations to make informed decisions about how to refine and improve their wellness strategies over time. To demonstrate the value of wellness programmes, organisations must establish clear metrics for success. Other strategic approaches are:

Evidence-based programming: Evidence-based programming refers to the use of interventions, strategies and practices in wellness programmes grounded in scientific research and proven effective in improving employee health and well-being. These programmes must have been tested and evaluated through rigorous evaluation methods and be based on peer-reviewed research as well as demonstrated significant as well as sustainable outcomes. These can include programmes such as behavioural change interventions such as smoking cessation, weight management, nutrition education and healthy eating promotions among others.

Leadership support and commitment: Sentinel Consulting (2013) recognised lack of support from leadership as a challenge. According to Dimoff and Kelloway (2016), one of the factors leading to the underutilisation of wellness resources stems from inadequate leadership engagement, which is critical for facilitating resource utilisation and encouraging employee participation in wellness initiatives. Thus, leadership support is crucial for the success and effectiveness of employee well-being programmes. Supports can include resource allocation (infrastructure, funds and personnel) to successfully implement the programme, endorsement, participation in such initiatives and so on.

Additionally, organisations should integrate wellness initiatives into the company culture, encouraging leadership support and employee involvement. When wellness is seen as a core component of the organisation's values, employees are most likely to engage with and benefit from the available resources (Allen et al., 2014).

A strategic approach to workplace wellness involves integrating these programmes into the broader organisational strategy, ensuring they align with company goals and employee needs. This approach should include proactive measures, such as altering work conditions to prevent stress and reactive measures, such as interventions that help employees manage existing stressors (Grawitch et al., 2015). Adopting evidence-based practices in the design and implementation of wellness programmes can further enhance their effectiveness and sustainability. Thus, workplace wellness initiatives are essential for fostering a healthy and productive workforce. When designed and implemented effectively, these programmes can lead to significant improvements in both employee health and organisational outcomes. However, for these initiatives to be truly successful, they must be strategically aligned with organisational goals, tailored to the specific needs of the workforce and supported by strong leadership and a culture that prioritises employee well-being.

The Long-Term Benefits of Workplace Wellness Programmes

Workplace wellness programmes have become an essential component of many organisations' strategies to promote employee health and productivity. Over time, these

initiatives deliver long-term benefits for both employees and employers. Drawing from extensive research and analyses by organisations such as RAND Corporation as well as scholarly works, this article explores the sustained advantages of implementing workplace wellness programmes.

Workplace wellness programmes offer long-term benefits for both employees and organisations, as supported by various researches on wellness programmes. For employees, these programmes lead to improved physical and mental health outcomes. For example, research by Baicker et al. (2010) demonstrates that wellness initiatives significantly decrease the incidence of chronic diseases such as diabetes and heart disease, leading to better overall health and a decrease in healthcare utilisation over time. Employees who participate in wellness programmes also report higher job satisfaction and reduced stress levels, which contribute to their long-term well-being (Goetzel et al., 2018).

Employee Health and Well-Being: One of the most critical long-term benefits of wellness programmes is the improvement in employees' physical and mental health. Studies by Baicker et al. (2010) have demonstrated that wellness programmes lead to reductions in risk factors for chronic diseases such as diabetes and cardiovascular issues. Through health screenings, fitness initiatives and mental health support, employees who participate in wellness programmes can significantly reduce their long-term health risks. Similarly, Dement et al. (2015) showed that workplace wellness programmes reduced healthcare utilisation and costs over time, further emphasising the health benefits of these programmes.

Increased Productivity and Reduced Absenteeism: Healthier employees are more productive and engaged in their work. RAND Corporation's extensive research on workplace wellness highlights that these programmes lead to fewer sick days and higher job satisfaction, both of which positively impact productivity (Mattke et al., 2014). Goetzel et al. (2018) found that organisations implementing comprehensive wellness programmes experienced a reduction in absenteeism and an increase in presenteeism, where employees are more productive when they are at work. In the long run, healthier employees translate to enhanced organisational performance

Financial Savings and Return on Investment: Wellness programmes not only benefit employee health but also result in significant financial savings for employers. A study by Baicker et al. (2010) found that for every dollar spent on wellness programmes, employers saved \$3.27 in healthcare costs. Similarly, the RAND Corporation's research concluded that wellness programmes targeting high-risk employees, such as those with chronic conditions, resulted in considerable cost savings (Mattke et al., 2014). Dement et al. (2015) also

documented a reduction in healthcare costs for organisations that implemented wellness programmes, affirming the financial viability of these initiatives in the long term.

Positive Organisational Culture and Employee Retention: In addition to health and financial benefits, wellness programmes contribute to creating a positive organisational culture. Mattke et al. (2014) emphasise that these programmes foster a culture of health, where employees feel supported in their wellness goals. This not only improves employee morale but also aids in retaining talent. Employees are more likely to remain with companies that invest in their health and well-being, reducing turnover costs for organisations (Baicker et al., 2010; Goetzel et al., 2018).

Long-Term Engagement and Sustained Benefits: One of the keys to successful wellness programmes is sustained employee engagement. The RAND toolkit developed by Mattke et al. (2014) outlines best practices for ensuring long-term participation, such as tailoring programmes to employee needs, using incentives and providing convenient access to wellness resources. By fostering continuous engagement, organisations can ensure that the benefits of wellness programmes are sustained over time, improving both employee health and organisational outcomes.

Hence, the long-term benefits of workplace wellness programmes are clear, improved employee health, enhanced productivity, significant financial savings and a more positive organisational culture. Research works consistently demonstrate that wellness programmes yield substantial returns on investment for organisations while promoting the well-being of their workforce. The long-term advantages for both employees and organisations highlight the necessity of integrating wellness programmes as part of a broader strategy for maintaining a healthy, productive workforce.

Method

This paper is based on a systematic examination of various studies, including peer-reviewed journal articles, published books and credible online sources. The key steps in the methodology include:

Literature Review

The first step in the methodology involved conducting an extensive literature review to gather information on workplace wellness programmes. The literature search was conducted using English only as the primary language. The keywords used included "workplace wellness programmes," "employee health," "organisational productivity," "employee well-being", "organisational strategy" and "long-term benefits of wellness programmes." Synonyms or similar terms were not used in this search. To ensure a comprehensive review, the authors

focused specifically on these core terms. Sources were selected based on their relevance, credibility and the recency of their data. This review included books authored by experts in workplace health and wellness to provide foundational knowledge and context, peer-reviewed journal articles from reputable databases such as Wiley, Elsevier and Google Scholar, which provided empirical studies and reviews on the effectiveness of wellness programmes, their impact on employee health and organisational outcomes. To complement these primary sources, the paper also incorporated data and statistics from authoritative websites, such as the Centres for Disease Control and Prevention (CDC) and the International Labour Organisation (ILO). These sources were chosen for their high credibility and for offering up-to-date information on public health and workplace wellness trends.

Data Analysis and Synthesis

The information gathered from these sources was systematically analysed and synthesized to identify common themes, trends and best practices in workplace wellness initiatives. This involved comparing findings from different studies to ensure consistency and to highlight areas where the evidence was strongest. For example, the consistent finding across multiple studies that wellness programmes reduce absenteeism and improve employee productivity was used to support the argument for the strategic importance of these initiatives. The synthesis process also involved critically evaluating the quality of the studies reviewed, considering factors such as sample size, research design and the methodologies used by the original authors. This critical approach helped to ensure that the conclusions drawn in this paper were based on robust and reliable evidence.

Ensuring Trustworthiness

To ensure the credibility of the content, the paper adhered to several methodological principles. Firstly, the paper relies only on credible sources that meet rigorous academic standards. Peer-reviewed articles were prioritised, as these undergo extensive scrutiny by experts in the field before publication, thus ensuring their reliability. Secondly, triangulation was used to verify the accuracy of the information. This involved cross-referencing data from multiple sources to confirm findings and identify discrepancies. By comparing results from different studies, consistent patterns and outliers were identified, providing a more nuanced understanding of the effectiveness of wellness initiatives. Using high-quality, credible sources and ensuring methodological transparency, this paper has ensured that the content is trustworthy and well-supported by evidence. This methodological approach provides a solid foundation for the conclusions drawn and the practical recommendations offered, making the paper a reliable resource for scholars and practitioners interested in workplace wellness initiatives.

Conclusion and Recommendations

Workplace wellness initiatives play a vital role in cultivating a healthy, productive and engaged workforce. To achieve maximum impact, these programmes must be integrated into the broader organisational strategy, aligning with company goals and addressing the unique needs of employees. By incorporating physical and mental health interventions, wellness initiatives can significantly improve employee well-being, reduce stress and boost productivity. Leadership support, employee involvement and attention to privacy concerns are imperative for the success of these programmes. Ultimately, a culture that prioritises employee well-being not only promotes individual health but also contributes to the long-term success of the organisation.

Recommendations

- 1. Holistic Approach to Employee Wellness:** Organisations should adopt policies that promote a comprehensive wellness strategy, incorporating both physical and mental health interventions. This includes offering mandatory health risk assessments, mental health support and stress management initiatives.
- 2. Integration into Organisational Culture:** Wellness programmes should be embedded within the organisation's core culture, ensuring that health initiatives are not treated as optional or isolated activities, but as an integral part of the daily work experience.
- 3. Leadership Involvement:** Policies should encourage leadership participation in wellness programmes, promoting transparency, accountability and active engagement from management to set a positive example for employees.
- 4. Compliance with Privacy Regulations:** Companies must enforce strict compliance with health laws and provisions of privacy by these laws, ensuring that employee health data is collected, stored and managed confidentially and securely.
- 5. Regular Evaluation and Adaptation:** Policies should support the continuous evaluation of wellness programmes to adapt to changing employee needs and ensure the on-going relevance and effectiveness of the initiatives.
- 6. Transparency and Confidentiality:** Clear policies should be in place that addresses employee concerns regarding privacy, ensuring that personal health information remains confidential and is handled with transparency.
- 7. Data-Driven Decision-Making:** Companies should implement policies that use data from wellness assessments to make informed decisions, tailoring wellness programmes to address the specific needs of their workforce.

8. Incentives and Engagement: Policies should promote the use of incentives, such as flexible work arrangements and rewards, to encourage higher participation and sustained engagement in wellness programmes.

Holistic Development of a Child in School

Shobhna Laksmi Devi

University of Fiji, Saweni campus, Lautoka, Fiji.

Email Address: shobhnad@unifiji.ac.fj

Abstract

The overall development of a child is essential for becoming a better human being and a good citizen of the country. Therefore, the importance of regular schooling should not be underestimated. Principals and staff members must address students and parents during career counseling sessions held at schools. For a child to become a better human being and a good citizen of the country, their overall development is essential. It should be the aim of every school to help identify careers that align with the students' personality and interests. Parents and teachers should work together for the importance of aligning career options with personal capabilities, ensuring that students embark on a journey that is both fulfilling and successful. It has been noted that without quality education, children face significant obstacles later in the field of employment. High schools must organize meetings with parents to accommodate such interactive session with their children. Parents can also share their views about traditional or regular schools. Regular schools provide opportunities for friendship and networking, which can be beneficial later in life. Non-attending students may miss out on these benefits. Teachers from various faculties of the school, capable of facing future challenges, can also encourage parents and students to be part of regular or traditional schools. They can inform parents that non-attending students cannot develop effective study habits. More and more emphasis must be given on the significant role of parents in the decision-making process. Regular or traditional schools help students develop interpersonal skills through daily interactions. This facility may be less developed in non-attending students. Teachers should encourage parents to assist children in making informed choices, creating an environment where the child feels empowered and accepted. This approach will help students become confident and capable while preparing them to face future challenges.

Keywords: holistic, teacher, parents, development

Introduction

The overall development of a person—whether physical, mental, emotional, or social—is influenced by numerous factors. The role of family and school is particularly important among these factors, as they are the primary institutions where the foundation of a child's personality is laid. Development and learning have a deep and complicated relationship. Just as seeds sprout quickly in fertile soil to take the form of a strong and developed tree, a favorable family and educational environment encourages the mental and intellectual development of a child and significantly enhances their learning capacity. Learning is not limited to school, but is a continuous process influenced by various life experiences, family background, social conditions, and the framework of the education system. A child's learning style, curiosity, and ability to think and understand depend on the type of family environment and school atmosphere they receive. If a child receives an environment where they are encouraged to think freely, understand, and ask questions, their learning process becomes more effective and creative.

Family and schools are not just means of providing knowledge, but they also assist in developing a child's self-confidence, discipline, problem-solving skills, and moral values. A child's early education is not limited to books; rather, they continuously learn from their environment. The mindset of parents, their behavior, family values, and traditions have a profound impact on the child's perspective. Similarly, the teaching methods of teachers in school, their interactions with peers, and the overall environment of the school also influence a child's learning. Therefore, it is essential to understand the various factors that affect an individual's development and how they shape the learning process. For this, we need to deeply understand the interactions between family, school, and society, so that an environment can be created for children that strengthens their holistic development and knowledge acquisition process.

Dalhousie Hala-Chal (Garli): Inaugurating the district-level two-day children's fair at Government Senior Secondary School, Garli, MLA Kamlesh Thakur stated that the overall development of children is the responsibility of teachers and parents. He said that children are the future of the country, and in the coming times, these children will become doctors, engineers, officers, and teachers. He advised children to follow discipline and stay away from drugs.

Major Factors Affecting Development

Family and Its Influence

The family is the first school for a child, where they learn the fundamental values, behaviors, and skills of life. In the early years of childhood, parents and other family members shape the child's cognitive abilities, emotional stability, and social competencies. A positive family environment lays the foundation for the child's overall well-being and academic success.

Safe and Supportive Family Environment

A safe, loving, and supportive family environment is essential for a child's mental, emotional, and social development. When a child receives affection, respect, and support at home, their confidence increases, and they are more motivated to learn new things. A positive family atmosphere helps in developing a child's problem-solving ability, emotional balance, and decision-making skills. Additionally, when a child receives moral support from the family, they become more capable of taking risks and facing new challenges. The lack of a safe environment can cultivate a sense of insecurity in a child, which can hinder their ability to learn.

Impact of a Stressful Environment

A stressful, violent, or unstable family environment can have a negative impact on a child's mental and emotional health. Situations such as domestic conflict, disagreement between parents, strict discipline, or financial hardship can generate anxiety, fear, and self-doubt in the child (Philip, 2022). When a child is constantly stressed, their ability to concentrate decreases, leading to inadequate involvement in the learning process. Children living in such environments often perform poorly in school and may have limited self-expression abilities. Therefore, it is essential for the family to provide a positive and stable environment so that the child can learn with confidence without any mental pressure.

Communication and Cooperation

Open dialogue and collaboration between parents and children are essential for a child's overall development. When parents try to understand their children's emotions, thoughts, and problems, it fosters a sense of self-motivation and self-esteem in the child. Regular communication encourages the child to express their thoughts freely and makes them feel that their opinions and feelings matter. Moreover, when parents actively participate in their children's learning, support their educational goals, and encourage their interests, it nurtures a curiosity and independence to learn in children. A lack of communication or a strict disciplinary attitude can

undermine the child's confidence and affect their learning capacity.

Influence of Parental Relationships

The mutual relationship between parents and the harmony between them have a profound impact on a child's mental and emotional health. If there is an atmosphere of mutual respect, love, and cooperation between the parents, the child feels more secure and self-reliant. This enhances their desire to learn and focus. In contrast, if there are constant fights, disagreements, or stress between the parents, the child may feel insecure, which can negatively affect their self-esteem and academic performance (Philip, 2022). Positive relationships between parents strengthen the child's social and emotional skills, allowing them to develop qualities such as teamwork, leadership, and empathy. Therefore, parents should maintain a balanced and cooperative relationship so that the child's development can be healthy and balanced.

Educated Parents and Educational Opportunities

Educated parents play a vital role in the overall development of their children. They not only encourage their children to receive quality education but also provide them with necessary resources and guidance. Such parents better understand their children's educational needs and strive to provide them with the right study materials, technological resources, and a conducive learning environment. Furthermore, educated parents promote a culture of home study to enhance their children's learning and adopt appropriate strategies to maintain the continuity of education. When a child receives intellectual support from the family, their learning capacity and self-confidence increase, enabling them to excel in their academic achievements.

Parental Education and Child's Curiosity

Parents' education has a direct impact on their children's curiosity and learning inclination. When parents themselves have an interest in learning and consider education as a continuous process, children are naturally motivated to explore and understand new things. Educated parents encourage their children's questions, promote their curiosity, and help develop logical thinking. Additionally, they involve their children in various educational activities, reading books, conducting science experiments, and engaging in intellectual discussions, which significantly enhances the children's intellectual and creative development. If a child receives continuous inspiration and guidance from their parents, their interest in learning remains intact, and they remain eager to understand various subjects in depth.

Culture of Valuing Education

The culture of prioritizing education within the family directly affects children's educational development (Nokha News, 2024). When parents consider education as the foundation for success in life and view it as a continuous process, their children also start to take their studies seriously. Such families create a positive environment for learning, where children receive the necessary motivation and support to learn. In contrast, if parents adopt an indifferent attitude towards education or see it merely as a means to pass exams, the child's learning process may be disrupted. A family that values education helps foster qualities in the child such as discipline, a quest for knowledge, and self-reliance. Therefore, parents should ensure that they do not limit education to just formal degrees, but instead view it as a means to absorb new ideas and develop innovations.

Parental Sensitivity and Guidance

Parents being sensitive towards their children is extremely essential for their overall development. When parents understand the emotional, mental, and educational needs of their children, they can provide them with the right guidance and necessary support. Every child is different, and their learning pace, interests, and challenges also vary. If parents recognize these individual needs of their children and offer support accordingly, it fosters confidence and self-reliance in the child. Conversely, if parents ignore their children's problems or put excessive pressure on them, it can negatively impact their mental health and learning ability. Therefore, parents should maintain communication with their children, recognize their interests and abilities, and be supportive of their education and personal development. When parents play the role of a sensitive guide, children can achieve success not only in academics but in every aspect of life.

Lack of Learning Resources and Its Impact

Simply enrolling in school is not sufficient for obtaining an education; necessary resources are also required for that. Children from economically weaker families often face a lack of educational materials, online resources, and additional academic support, which slows their educational progress. In the modern era, the importance of digital education has increased, but children from economically weaker families have limited access to computers, the internet, and other technological facilities, leaving them deprived of digital learning. Additionally, they also face difficulties in receiving tutoring and other personal educational support, which can affect their learning process. Due to these challenges, economically weaker students often lag behind

their peers, negatively impacting their academic success. Thus, the availability of educational resources is critically essential for children's learning and educational progress.

Importance of Discipline, Ethics, and Hard Work

The family is the most important foundation for a child's early education and personality development. In families where discipline, morality, and hard work are prioritized, children also internalize these qualities. Discipline teaches children time management, responsibility, and self-control, allowing them to achieve their educational and personal goals more effectively. Morality helps them understand the difference between right and wrong, enabling them to emerge as responsible citizens in society. Meanwhile, the spirit of hard work inspires children to tackle challenges and make continuous efforts, allowing them to progress toward their goals despite difficulties. Children raised in such a family environment not only perform well in their studies but are also prepared to lead successful and balanced lives in their future.

Effect of Prioritizing Education

The perception and priority regarding family education directly influence a child's academic performance and interest. If parents consider education important and view it as a continuous learning process, the child also begins to take an interest in studies. When there is a positive atmosphere for studying at home, such as a regular study routine, intellectual discussions, and participation in educational activities, the child naturally gets motivated to read and learn new things. Furthermore, if parents themselves show an interest in learning new things and prioritize knowledge acquisition, the child starts to adopt those habits. Children raised in such families are more academically motivated and see education as an enjoyable process rather than an obligation.

School and Its Influence

The school is a place where children not only receive formal education but also develop social, intellectual, and moral skills. A positive and effective school environment encourages children's learning.

Teacher's Knowledge and Teaching Style

The qualifications and teaching style of a teacher play a crucial role in the learning process of students. When a teacher has a deep understanding of the subject and is capable of presenting it effectively, students are able to grasp the subject matter better. Teaching is not just about

providing information, but it is a process of motivating students to think, analyze, and connect knowledge with real life. A teacher's behavior, language style, and communication skills also impact the effectiveness of learning. If a teacher adopts a positive and encouraging attitude, it inspires students to learn. Conversely, if the teaching style is boring and traditional, students may lose interest in the subject (Hatolkar, 2022). Thus, the teacher's knowledge and teaching methodology have a direct impact on children's academic development.

Role of Inspiring and Supportive Teachers

A good teacher is not just someone who teaches, but also serves as a guide and source of inspiration for children. Inspirational teachers play a crucial role in developing students' self-confidence, logical thinking, and problem-solving skills. They encourage students to face challenges, learn from mistakes, and express their thoughts freely. A supportive teacher understands the individual needs of students and provides a conducive environment for learning. When teachers teach with encouragement and support, students study with more interest and self-motivation. Thus, a teacher's positive attitude and collaborative behavior help to enhance the pace of students' learning.

Effective Teaching Methods

To make education effective and engaging, it is essential to use innovative teaching techniques that go beyond traditional methods. When teaching is not limited to textbooks but is presented through practical activities, discussions, and experiential learning, students' ability to understand and retain information increases. Game-based education, group discussions, project-based learning, and problem-solving techniques help students engage actively in learning. Such teaching methods not only simplify the complexities of the subject but also promote curiosity and creativity among students. If teachers make teaching interesting and interactive in the classroom, children begin to embrace education as an enjoyable process.

Encouraging Creativity and Logical Thinking

The purpose of education should not only be to make students memorize information, but it should focus on developing students' creativity and logical abilities. When teachers inspire students to understand, analyze, and develop new ideas rather than merely rote learning, their thinking capacity increases. This not only enhances their academic performance but also prepares them to solve real-life problems. Teachers who encourage students to ask questions, think independently, and present their ideas create an inclusive and innovation-driven learning

environment. Thus, when creativity and reasoning are encouraged by teachers, students not only perform well in exams but also progress with an exploratory and innovative approach.

Importance of a Disciplined and Inspiring School

The school environment plays a crucial role in shaping students' learning capacity. A disciplined, safe, and inspiring school atmosphere not only instills confidence in students but also enhances their desire to learn. When rules and discipline are properly adhered to in schools, students receive a structured and conducive environment where they can focus on their studies without any fear or hindrance. Additionally, when schools promote positive values and engage students in motivating activities, they show more interest in their studies. The collaborative role of teachers and administration also helps in maintaining this inspiring environment. A school where children are encouraged, where their achievements are appreciated, and where they receive the right guidance for solving their problems, is supportive of the overall development of children.

Healthy Competition and Co-curricular Activities in School

Education is not limited to books and exams, but it is also a means of holistic personality development. Healthy competition and co-curricular activities in schools promote students' mental, physical, and social growth. Sports, debates, arts, music, drama, and other creative activities provide opportunities for children to enhance their talents. When students participate in competitions, their self-confidence increases, they learn teamwork and leadership skills, and they develop the ability to face challenges. In the same way, strong communication between teachers and students helps children openly share their problems and learn better. A school that provides practical experiences and opportunities for creativity, rather than focusing solely on the curriculum, makes education

Impact of Friends and Peers

The child's social circle, especially his friends and classmates, plays a crucial role in his learning process and overall development. The time spent in school is not limited to formal education; it also provides children with social experiences and an understanding of group behavior. When children interact with their peers, share ideas, and learn from one another, their cognitive and social skills develop (Eden, 2024). If the peer group is academically motivated and positive, the child shows interest in studies and other creative activities. Conversely, if the influence of peers

is negative and they are undisciplined or uninterested in studies, it can affect the child's education and behavior. Therefore, parents and teachers should guide children in choosing the right friends and establishing positive social relationships.

Positive and Negative Influence

Friends and classmates play a significant role in the personal and educational development of children. If they are part of an inspiring and supportive group, it helps boost their confidence, keeps them motivated, and encourages creative thinking. Good friends encourage each other, assist in studies, and provide support in difficult situations. On the other hand, negative company can lure children into indiscipline, lack of interest in studies, and unproductive activities. If a student spends time with peers who do not value educational efforts or engage in inappropriate behavior, it can hinder their development. Therefore, children should be taught to understand the influences around them and choose their circle of friends wisely.

Social Interaction and Skill Development

Social participation enriches children's learning process and helps develop their communication skills, leadership abilities, and problem-solving skills. When children engage in teamwork with peers at school, exchange ideas, and work together, they develop the capacity to tackle real-world challenges. Group activities, such as debate competitions, project work, and sports, not only provide children with opportunities for self-expression but also teach them the importance of patience, tolerance, and teamwork. Through these interactions, they understand different perspectives and learn to respect the feelings of others. Therefore, schools should provide an environment that encourages social engagement and prepares children to be part of a collaborative and inclusive society.

Coordination Between Parents and Teachers

Effective communication and coordination between parents and teachers play a crucial role in enhancing children's academic performance. When teachers and parents regularly discuss the child's progress, interests, weaknesses, and needs, they can work together to guide the child in the right direction (Ameya, n.d). Parents should participate in school meetings, maintain communication with teachers, and take an active role in their children's education. Meanwhile, teachers should also understand that every child is different and may require individual support. If families and schools work together, learning issues can be identified early, and the right strategies can be implemented to address them. This enhances their education while also boosts

their confidence and sense of belonging.

Conclusion

The family is a child's first school, where they learn fundamental moral values, discipline, and social behavior. The parents' thoughts, their teaching approach, and the family environment influence the child's mentality and pace of learning. When the family prioritizes education and encourages intellectual development, the child's confidence increases, and they remain eager to learn new things. On the other hand, schools provide a structured environment where children excel in various subjects, logical thinking, and problem-solving skills. A good school not only ensures academic success but also aids in children's social, emotional, and creative development. A child's education is not limited to school and family; society and the environment also play significant roles. Due to technological advancements and modern resources, learning methods are also changing, making education no longer confined to books and classrooms. Therefore, it is essential that parents, teachers, and society come together to provide new learning opportunities for children and create an environment where they can think freely, absorb new ideas, and be prepared for future challenges. When education is not limited to examinations but is made a means of holistic development, only then can we create a strong and aware generation.

Abstract

This paper explores the role of ethical leadership practices in enhancing staff retention in colleges of education in Southwest Nigeria. Ethical leadership, characterized by integrity, fairness, transparency, and respect, is crucial in creating a positive work environment that fosters employee commitment and satisfaction. The paper focuses on the concept of Staff retention, the Ethical Leadership process, problems associated with staff retention in Nigerian higher Institutions, as well specific strategies that can be implemented to address these challenges through ethical leadership. This paper concludes by highlighting the importance of the ethical leadership process as a strategic approach to address staff retention challenges, providing insights into how educational institutions can cultivate a supportive and ethical work environment. The paper among many recommends that adopting ethical leadership practices can lead to a more stable and effective educational environment, enhancing both staff well-being and institutional performance in Nigeria through promoting fair and transparent decision-making.

Keywords: Staff Retention, Ethical Leadership, Ethical Leadership Process Higher Institutions

Introduction

Ethical leadership practices are increasingly recognized as a crucial factor in organizational success and sustainability, particularly within educational institutions. Ethical

leaders are characterized by their commitment to principles of fairness, transparency, integrity, and accountability, which collectively foster a positive organizational climate and enhance employee satisfaction (Vikaraman, Mansor, Nor, Alias & Gurusamy, 2021). In the context of higher education, the role of ethical leadership is paramount, as it directly influences not only the educational outcomes but also the retention of staff, which is essential for institutional stability and growth.

In Nigeria, higher institutions face numerous challenges related to staff retention, including inadequate funding, limited career advancement opportunities, and administrative inefficiencies (Ogunsola, 2023). High turnover rates among academic and non-academic staff can disrupt the continuity and quality of education, making it imperative to explore factors that can mitigate these issues. Recent studies have shown that ethical leadership can play a significant role in addressing these challenges by fostering an environment of trust, respect, and motivation (Ko, Ma, Bartnik, Haney, & Kang, 2018).

Ethical leadership practices, such as equitable treatment, involvement in decision-making processes, and the alignment of organizational values with personal ethics, have been found to significantly impact staff retention (Ogunsola, 2023). Leaders who exhibit ethical behavior are more likely to build strong relationships with their staff, which in turn enhances job satisfaction and loyalty. This relationship is critical in educational settings where the stability and commitment of the workforce directly affect the quality of education and student outcomes.

Moreover, the implementation of ethical leadership in colleges of education in Southwest Nigeria is not without its challenges. External pressures, such as political interference and resource constraints, can hinder leaders' ability to maintain ethical standards (Oyededeji, 2023). Despite these challenges, the adoption of ethical leadership practices remains a viable strategy for improving staff retention. By prioritizing ethics in leadership, colleges can create a more supportive and sustainable work environment, thereby enhancing their overall effectiveness and reputation (Ogunsola, 2023). The importance of ethical leadership practices in retaining staff within colleges of education in Southwest Nigeria cannot be overstated. Therefore, this paper aims to explore the role ethical leadership process in enhancing staff retention in higher institutions in Nigeria. Thus, this paper will be discussed under the following subsections: Staff Retention, Ethical Leadership process, Theoretical Review, Hindrances to Staff Retention in Higher Institutions in Nigeria, Ways By Which Ethical Leadership Can Enhance Staff Retention in Higher Institutions in Nigeria, Conclusion, Way Forward.

Concept of Staff Retention

Staff retention is a critical issue in educational institutions, particularly in colleges of education in Southwest Nigeria. It involves the strategies and practices employed to retain talented and valuable staff members to ensure the continuity and stability of the institution (Wakabi, 2016). High staff turnover can disrupt the academic process, reduce the quality of education, and increase recruitment and training costs. Staff retention refers to an organization's ability to keep its employees and minimize turnover. High retention rates indicate a stable and satisfied workforce, often achieved through competitive salaries, benefits, career development opportunities, and a positive work environment. According to recent trends, offering flexible work arrangements and continuous feedback are essential strategies to improve staff retention (SHRM, 2024)

In the context of higher institutions in Nigeria, staff retention is influenced by several factors, including working conditions, career development opportunities, job satisfaction, and leadership practices (Ogunsola, 2023). Effective staff retention strategies are essential for maintaining a motivated and committed workforce, which is crucial for achieving educational goals and improving student outcomes.

Recent studies highlight the significance of ethical leadership practices in enhancing staff retention. Ethical leaders, who demonstrate integrity, fairness, and transparency, create a supportive work environment that fosters trust and loyalty among employees (Lee, Hur & Shin, 2023). This positive organizational climate is instrumental in reducing turnover intentions and increasing job satisfaction.

Moreover, the alignment of organizational values with personal ethics and the involvement of staff in decision-making processes are key elements that contribute to staff retention (Ko, et al., 2018). Employees are more likely to stay with an organization that values their input and treats them with respect and fairness. However, retaining staff in higher institutions in Nigeria also involves addressing challenges such as inadequate funding, limited resources, and political interference (Oyedemi, 2023). These challenges can undermine the efforts of ethical leaders and negatively impact staff morale and retention.

Despite these obstacles, implementing robust staff retention strategies can lead to significant benefits for educational institutions. These strategies include offering competitive salaries and benefits, providing opportunities for professional development, and creating a positive work-life balance (Wakabi, 2016). Additionally, fostering a culture of recognition and appreciation can enhance employee engagement and commitment. Staff retention is a multifaceted concept that requires a comprehensive approach involving ethical leadership, supportive working

conditions, and effective policies. By prioritizing these factors, higher institutions in Nigeria can improve staff retention, thereby ensuring the continuity and quality of education.

Concept of Ethical Leadership Practices

Ethical leadership is a leadership style characterized by guiding and influencing others through established principles and moral values. Ethical leadership is a crucial practice that emphasizes the importance of integrity, transparency, accountability, and respect in guiding and managing organizations. The core principles of ethical leadership include fairness, justice honesty, integrity, transparency, respect, and accountability.

Ethical leadership practices are essential for staff retention in every organisation, including educational institutions in Nigeria. Ethical leadership involves making decisions based on moral principles and the common good, rather than personal gain. Leaders who exhibit ethical behavior foster trust, respect, and fairness within their organizations, which are crucial elements for retaining staff.

In the context of higher institutions in Nigeria, ethical leadership has been shown to have a positive impact on staff retention. Leaders who demonstrate ethical practices create an environment where staff feel valued and respected, leading to higher levels of job satisfaction and commitment. This is particularly important in Nigeria, where challenges such as corruption and distrust can significantly affect employee morale and retention rates (Cullen, 2022). For example, ethical leaders in these higher institutions are likely to engage in transparent communication, fair resource allocation, and inclusive decision-making processes. These practices help build a sense of belonging and loyalty among staff, reducing turnover intentions. Studies have found that when employees perceive their leaders as ethical, they are more likely to stay with the organization, as they trust that their well-being and professional growth are prioritized (Eneanya, 2020).

Moreover, ethical leadership can mitigate some of the systemic issues in Nigerian educational institutions by promoting a culture of accountability and integrity. This not only enhances the overall work environment but also contributes to the long-term stability and success of the institutions by retaining skilled and motivated staff (Igbaekemen & Odivwri, 2015; GPH-International Journal of Business Management, 2024; Smith, 2020).

Transformational Leadership Theory

The concept of transformational leadership theory has its roots in the work of several scholars, but it was formalized and popularized primarily through the work of James MacGregor Burns and Bernard M. Bass in 1978. **Transformational Leadership** is a leadership style where leaders inspire and motivate their followers to achieve extraordinary outcomes and, in the

process, develop their leadership capacity (Squires, 2018). Transformational leaders focus on the growth and development of their followers, fostering an environment that encourages creativity, innovation, and positive change. This leadership style is characterized by the ability to create a shared vision, promote ethical practices, and inspire followers to exceed their self-interests for the collective good.

Impact and Applications of Transformational Leadership

Transformational leadership has had a significant impact on organizational behavior and leadership studies. This theory is widely used in various sectors, including education, healthcare, business, and the military. The style is particularly effective in environments that require change, innovation, and the alignment of followers with a shared vision (Stewart, 2006).

In practice, transformational leadership has been associated with numerous positive outcomes, such as increased job satisfaction, higher employee engagement, improved organizational performance, and enhanced creativity. It also plays a crucial role in ethical leadership, as transformational leaders are often seen as moral exemplars who prioritize the well-being of their followers and the greater good of the organization.

Critiques and Limitations

While transformational leadership is highly regarded, it is not without its critiques. Some scholars argue that the concept is overly broad and difficult to measure consistently. Additionally, there is a concern that transformational leadership can become manipulative if not grounded in strong ethical principles. Critics also point out that the theory may not fully account for the complexities of leadership in diverse and global contexts.

Despite these critiques, transformational leadership remains a foundational theory in leadership studies and continues to influence how leaders are trained and developed across various fields.

Influence of Transformational Leadership Theory on Ethical Leadership Practices in Enhancing Staff Retention in Higher Institutions in Nigeria

Transformational leadership significantly influences ethical leadership practices, particularly in educational settings where fostering a positive and ethical environment is crucial for staff retention. In Higher institutions in Nigeria, the application of transformational leadership can lead to the creation of a work culture that values integrity, trust, and professional development, all of which are essential for retaining talented staff members.

One of the primary ways transformational leaders enhance ethical practices is through the role modeling of ethical behavior by leaders. Transformational leaders are known for their **idealized influence**, which involves acting as role models and demonstrating high ethical standards. This behavior sets a tone of integrity and trustworthiness within the institution, encouraging staff

members to adopt similar ethical practices (Barinua, Waripamo, Progress, & Okilo, 2022). By establishing a strong ethical foundation, leaders can create an environment where staff feel valued and respected, leading to greater job satisfaction and, consequently, higher retention rates.

Transformational leadership's focus on individualized consideration fosters a supportive and inclusive work environment where the unique needs and aspirations of staff members are recognized and addressed. This personalized attention not only enhances employee morale but also reinforces the ethical commitment of the leadership to treat each staff member fairly and justly (Squires, 2018). In Higher institutions in Nigeria, this approach can be particularly effective in retaining staff who might otherwise feel overlooked or undervalued in larger or more bureaucratic institutions.

Inspirational motivation, another key component of transformational leadership, plays a crucial role in aligning staff with the ethical goals of the institution. Leaders who communicate a compelling and ethical vision for the college inspire their staff to commit to this vision, fostering a sense of shared purpose and collective responsibility (Givens, 2008). This sense of belonging and alignment with ethical values can lead to increased loyalty and a lower likelihood of turnover among staff members.

Transformational leaders encourage **intellectual stimulation**, promoting a culture of continuous improvement and ethical decision-making. By challenging staff to think critically and engage in problem-solving, leaders help cultivate an environment where ethical dilemmas are addressed collaboratively and thoughtfully (Khanin, 2007). In educational settings, where ethical challenges often arise, this approach can enhance the institution's overall ethical climate, making it a more attractive and stable place to work.

In conclusion, transformational leadership profoundly influences ethical leadership practices by promoting integrity, inclusiveness, and a strong ethical vision. These elements are critical in enhancing staff retention in Southwest Colleges of Education, as they create a work environment that supports and values employees, leading to higher job satisfaction and long-term commitment to the institution.

Hindrances to Staff Retention in Higher Institutions in Nigeria

Staff retention in Higher institutions in Nigeria faces numerous challenges. These problems can be categorized into several key areas: (Tettey, 2006).

1. **Inadequate Funding:** One of the most significant issues is the lack of adequate funding. Insufficient financial resources result in poor salaries, delayed payment of salaries, and a lack of necessary teaching materials and infrastructure. This financial instability discourages staff from staying long-term, as they seek better opportunities elsewhere.
2. **Poor Working Conditions:** Many educational institutions in Nigeria suffer from poor working conditions, including inadequate facilities and insufficient teaching resources. This not only affects the quality of education but also contributes to job dissatisfaction among staff. The absence of conducive working environments makes it challenging for staff to remain motivated and committed to their roles.
3. **Lack of Professional Development Opportunities:** Continuous professional development is crucial for staff retention. However, many higher institutions in Nigeria do not provide sufficient opportunities for training and development. This lack of investment in professional growth leads to stagnation and frustration among staff, prompting them to look for better prospects where their skills and careers can develop.
4. **Poor Management and Administrative Practices:** Inefficient management and administrative practices contribute to job dissatisfaction. Issues such as poor communication, lack of support from management, and inadequate recognition and reward systems undermine staff morale. Effective leadership and fair administrative practices are essential for creating a supportive work environment that encourages staff to remain with the institution.
5. **Economic Instability and Job Insecurity:** The broader economic instability in Nigeria also plays a role in staff retention. Job insecurity due to economic fluctuations and frequent industrial actions, such as strikes, disrupt the educational process and contribute to an unstable work environment. This instability makes it difficult for staff to plan their futures and feel secure in their positions.

Addressing these issues requires a comprehensive approach that includes increased funding, improved working conditions, enhanced professional development programs, effective management practices, and policies that provide economic stability and job security for staff.

By tackling these challenges, colleges of education in Southwest Nigeria can improve staff retention and ensure a more stable and productive educational environment.

Ways By Which Ethical Leadership Practices Can Enhance Staff Retention in Higher Institutions in Nigeria

Ethical leadership plays a crucial role in addressing staff retention issues in higher institutions in Nigeria. By fostering an environment that values integrity, fairness, and respect, ethical leaders can create a positive workplace culture that encourages staff to remain committed to their institutions. (Nwokocha & Iheriohanma, 2015). Here are some ways ethical leadership can help solve staff retention problems, supported by recent research:

1. Building Trust and Transparency

Ethical leaders build trust through transparency in decision-making and open communication. When staff members feel that their leaders are honest and transparent, they are more likely to trust the institution and remain committed to it. According to Omogbemi (2023), trust in leadership significantly reduces turnover intentions among staff in educational institutions in Nigeria, as it fosters a sense of security and belonging.

2. Fostering Fairness and Equity

Ethical leadership involves fair treatment of all staff members, ensuring that promotions, rewards, and disciplinary actions are conducted impartially. A study by Udokwu, Oshioste, Okoye, Nwankwo, Azubuike & Uzougbo, (2023), found that perceived fairness in workplace policies and practices is a key predictor of job satisfaction and retention among higher institution staff in Nigeria. By promoting fairness, ethical leaders can enhance job satisfaction, reducing turnover.

3. Promoting Professional Development

Ethical leaders support the professional growth of their staff by providing opportunities for training, development, and career advancement. This approach not only enhances employees' skills but also shows that the institution values their contributions and is invested in their future. Ibraheem, (2024) highlight that access to professional development opportunities is a critical factor in staff retention in Nigerian educational institutions, as it helps employees feel valued and appreciated.

4. Encouraging a Positive Work Environment

Creating a positive work environment where staff feel respected and their contributions are valued is another key aspect of ethical leadership. According to Kehinde, (2024), a supportive and inclusive work culture significantly enhances staff retention in educational institutions. Ethical leaders who prioritize a positive workplace culture can help reduce stress and increase job satisfaction, leading to higher retention rates.

5. Implementing Ethical Policies and Practices

Ethical leadership involves implementing and upholding ethical policies and practices that promote integrity and discourage unethical behavior. When staff perceive that their institution upholds high ethical standards, they are more likely to stay. Research by Bamidele (2024). suggests that ethical policies in educational institutions in Nigeria positively correlate with staff retention, as they create a stable and predictable work environment.

6. Providing Adequate Compensation and Benefits

While compensation is not the only factor in job satisfaction, fair and adequate pay is essential for retaining staff. Ethical leaders ensure that compensation and benefits are competitive and commensurate with the roles and responsibilities of staff members. A recent study by Rahman, Permada, & Oktarini, (2025). found that adequate compensation is a significant determinant of staff retention in Nigerian higher education, as it reflects the institution's commitment to its employees' welfare.

Conclusion

Ethical leadership practices are a powerful strategy for enhancing staff retention in colleges of education in Southwest Nigeria. By fostering trust, transparency, fairness, and respect, ethical leaders create an environment where staff feel valued, supported, and motivated to stay. The implementation of fair policies, professional development opportunities, and adequate compensation further strengthens this commitment, ensuring that employees are both satisfied and engaged in their roles. Additionally, ethical leadership helps cultivate a positive workplace culture, which is crucial in reducing turnover and enhancing job satisfaction. As research has shown, these practices not only improve staff morale but also contribute to the overall effectiveness and stability of educational institutions. Therefore, by prioritizing ethical leadership, higher education in Nigeria can significantly improve staff retention, leading to better educational outcomes and a more sustainable workforce.

Way forward

To effectively use ethical leadership practices as a strategy for enhancing staff retention in higher institutions in Nigeria, the following recommendations are proposed:

1. **Develop and Implement Clear Ethical Guidelines:** Colleges should establish comprehensive ethical guidelines that outline expectations for behavior and decision-making. These guidelines should be communicated to all staff members to ensure a shared understanding of the institution's values and standards. Regular training on ethical practices can reinforce these guidelines and help maintain a high standard of integrity throughout the institution.
2. **Promote Fair and Transparent Decision-Making:** Leaders should prioritize fairness and transparency in all decisions, especially those related to promotions, rewards, and disciplinary actions. By involving staff in decision-making processes and providing clear, honest communication about institutional policies and changes, leaders can build trust and reduce perceptions of favoritism or bias.
3. **Enhance Professional Development Opportunities:** Institutions should invest in the professional growth of their staff by offering regular training, workshops, and career advancement opportunities. Providing a clear pathway for career development not only helps staff feel valued but also encourages them to remain with the institution long-term.
4. **Foster a Positive Work Environment:** Ethical leaders should strive to create a supportive and inclusive work environment where staff feel respected and appreciated. Encouraging collaboration, recognizing achievements, and addressing grievances promptly can help build a positive organizational culture that supports retention.
5. **Ensure Competitive Compensation and Benefits:** Adequate compensation is a key factor in staff retention. Institutions should regularly review and adjust salaries and benefits to ensure they are competitive with industry standards and reflect the cost of living in the region. This demonstrates the institution's commitment to the welfare of its employees and helps retain top talent.
6. **Encourage Open Communication and Feedback:** Establishing channels for open communication and feedback allows staff to voice concerns and provide input on institutional policies and practices. Leaders should actively listen to staff feedback and take necessary actions to address issues. This approach not only improves staff morale but also fosters a sense of ownership and loyalty to the institution.
7. **Lead by Example:** Leaders should model ethical behavior in all aspects of their work. By demonstrating integrity, accountability, and respect, leaders set a standard for all staff members to follow. This can create a ripple effect, fostering a culture of ethical behavior throughout the institution and enhancing staff commitment.

By adopting these ways forward, higher institutions in Nigeria can leverage ethical leadership practices to improve staff retention, creating a more stable and effective educational environment that benefits both staff and students.

Creativity as the Major Prerequisite of Human Health and Well-Being

Alexander Voznyuk

e-mail: alexvoz@ukr.net;

Orcid id: 0000-0002-4458-2386

Abstract

The purpose of the article is to analyze creativity as a cornerstone of human health and well-being. Since health and creativity can be understood as the main factors of human well-being and two fundamental aspects of human existence, they can and must be interconnected in the scientific and cognitive plane. The actuality of the article stems from the statement that human health is the most complex issue for cognition revealing its interdisciplinary character, since only in the sphere of various sciences a holistic understanding of this phenomenon can be achieved. The interdisciplinary study in addition to the theoretical analysis of the problem field of creativity studies, the concept of functional asymmetry of the hemispheres of human brain, the theory of stress, the information theory of emotions, the theory of cognitive dissonance, the data of the Institute of Kinesiology, the paradoxical oriental logic of four alternatives uses. It is shown that creative people can maintain a psychophysiological emotional-cognitive state of uncertainty for a long time, possessing the property of reflection, using several opposing ideas, concepts, representations, psychophysiological states at the same time, which allows creative people to perceive and explore such logical-informational, cause-and-effect relationships and connections that are often inaccessible to those people who strive to achieve situational clarity and logical unambiguity. Under such conditions, creativity enables a person to overcome negative psychological states through the ability to integrate opposites, which allows to form the holistic structures that reveal the synergistic effect of the systemic properties of the. And this reduces the entropy of living systems, increasing the vitality of a person, strengthening his/her immunity, generating a state of health as the major factor of well-being.

Keywords: creativity, diplasty, human health, well-being, human emotions, absurd, human brain, illness.

Introduction

Human health being a cornerstone value of human life is the most complex issue for cognition. This issue reveals an interdisciplinary character, since only in the sphere of various sciences a holistic understanding of this phenomenon can be achieved. The analysis of scientific sources has shown, that there are more than 400 different definitions of health which can be reduced to medical, biomedical, biosocial, value-social aspects.

Since health and creativity (that can be understood as the main factors of human well-being) are two fundamental aspects of human existence, they can and must be interconnected in the scientific and cognitive plane. Thus, the **purpose** of the article is to analyze creativity as a cornerstone of human health and well-being.

Method

The interdisciplinary study in addition to the theoretical analysis of the problem field of health and creativity studies, the concept of functional asymmetry of the hemispheres of human brain (Springer, Deutsch, 1997; Voznyuk, et al, 2021; Wang, 2023), the theory of stress (Selye, 1974), the information theory of emotions (Simonov, 1991), the theory of cognitive dissonance ((Festinger, 1962), the data of the Institute of Kinesiology (Diamond, 1979; Weinzwieg, 1988), the paradoxical oriental (Buddhist and Indian) logics of four alternatives (Jayatilleke, 1967) uses.

Results

Analysis of various scientific sources on a lot of aspects of health enables to come to a conclusion: health as a psychophysiological entity most fully characterizes the state of functional and somatic integrity of the human organism (Voznyuk, 2018).

Loss of health is accompanied by human organism's losing the state of somatic integrity/coherence due to detrimental actions on the organism by the external and/or internal environment, which, as the second law of thermodynamics teaches, leads to an increase in entropy (the state of organism's chaos), when the processes of decay develop stemming from the inconsistency of biorhythms and functions of organism's cells, organs and systems.

The integrity of the human body is also revealed in the theory of stress: the body responds to any negative stimulus from the environment with a single adaptive reaction – stress, resulting in various diseases (Selye, 1974). So stress as a psychophysiological process in human body appears as a holistic state being accompanied by a set of non-specific reactions, common to most, if not to all, illnesses.

The above mentioned phenomenon presupposes that the major cause of any disease is

connected with a narrow set of causes focused on a single factor that leads to weakening the organism's vitality, narrowing its "space" of life. And this, in turn, leads to violation/distortion of harmonious functioning of one of organism's "weak" links, which reveals a certain disease that can be overcome by a single health resource – immunity, the weakening of which is now considered many scientists to be the main factor of any disease.

At large, stress/distress as the most common phenomenon of the modern world is, first of all, an information process when any disease in the context of information processes occurs when the human body cannot adequately respond to external stimuli due to psychological and cognitive distortions of human brain. These are a condition for the development of a multitude of harmful and negative social attitudes, psychological settings, emotional states and value orientations, which, in turn, generate (actualize) different illnesses.

Therefore, many specialists in various fields of research conclude that the cause of many illnesses, being an adaptive reaction of human organism (Davydovskij, 1963), is connected with person's mental/psychic organization and, ultimately, to his/her spiritual and worldview orientations (Hamer, 2000; Maslow, 1976).

Thus, the treating of any disease, being in a certain sense simple, consists in harmonizing mental/spiritual world of a person. This process is based on the *information theory of emotions* of P.V. Simonov according to which human emotion is a reaction to a deficit of actual information: when a human being feels a lack of information about certain events being relevant to the human being, then this emotional state forms an emotional-search reaction, in which the whole organism is involved. Thus, human emotion is a function of information being realized as organism's reaction on a lack of information about life situations connected to processes of satisfying person's needs (Simonov, 1991). A.M. Svyadoshch in his book "*Neuroses and Their Treatment*", wrote that a mental trauma addresses not only to the past, but to the threats in the future. For example, even if the disease is a reaction to events that just happened – the psychotraumatic effect is largely determined by the significance of these events for the future (Sviadosch, 1961).

The information theory of emotions enables to argue that the lack of certain actual information is an expression of situational uncertainty, ambiguity, leading to stressful state of person's uncertainty relating to his/her future events/life.

Stress can be understood not only a fundamental cause of diseases is realized not only in the process of emotional response to certain stimuli, but also as the process of impossibility/inability of such a response (being the factor of disadaptation and distress).

The psycho-energetic-behavioral component of health was studied by the scientists of

the Institute of Kinesiology (USA) (Diamond, 1979; Weinzweig, 1988). Scientists concluded that a positive mood and a positive attitude towards the outer world are a major factor for increasing a person's vitality and strengthening his/her immunity (Diamond, 1979).

Therefore, human health is a function of integration of organisms into the environment, which as synergetics teaches is revealed as the process of dissipation being the openness of the organism to the external world, when interchange of energy and information is realized in the system "organism – environment". Thus, health can be understood as a functional value that characterizes the human body's ability to restore and maintain homeostatic equilibrium. Human health, being characterized by a certain level of adaptation energy, is a reciprocal of the amount of energy that the body is to spend to restore homeostasis being brought out of equilibrium (Hirt et al, 2016).

The fundamental cause of diseases lies in a decrease in the vital/energy tone of the human body due to stresses being an informational phenomenon revealing the consequence of the informational uncertainty of important to a person events.

This fall in the energy tone is influenced by stresses having both external (weather conditions, intense physical exertion, malnutrition, etc.) and internal causes.

Internal causes being dialectically related to external causes include a "inharmonious" worldview and thinking mode of a person, that can lead to unfolding an "inharmonious"/"pathological" attitude to life. This, in turn, has its result the depletion of vital energy. We can conclude that, as the experiments of the study of cancer and other diseases have showed, the decline in person's vital energy is a result of his/her negative attitude towards himself/herself and the environment (Greer, Watson, 1985; Shekelle, et al, 1981; Argyle, 1987): the cause of cancer and other diseases is long-term negative stress states of a person (jealousy, hatred, anger, resentment, etc.). On the contrary, a person's positive attitude towards life and world as it is increases the energy tone of human body (Weinzweig, 1988).

Besides numerous mechanisms of psychological defenses, the scientists have found the effective mechanism for reducing the person's information uncertainty – the faith in God being the creative harmonious beginning of reality (James, 2008). Indeed, as scientific research shows, believing people get sick less and live longer (Frankl, 1992; Abdel-Khalek, 2006; Li X et al, 2019; Yeager et al, 2014; Comstock, Partridge, 1972).

We can conclude that the faith in God is a positive/spiritual psychological defenses as universal adaptive reactions of a person to a stressful social environment. In the pure form the psychological defenses are expressed in the theory of cognitive dissonance, showing that people do not process information impartially, but distort it in such a way that it would satisfy their

previously acquired ideas of the world (Festinger, 1962; Aronson, Aronson, 2004). The cognitive dissonance is a means of overcoming an ambivalent/double paradoxical cognitive situation of fighting the two opposing cognitions (assumptions) which many lead to distorting reality (that can be illustrated by Aesop's fable of "Sour grapes").

In many people the two opposing cognitions cannot peacefully coexist since people operate with "black and white" thinking revealing binary "yes-no" logic of processing information which lead to the situation when these people characterized by such a discrete-linear perception of reality cannot overcome the discrepancies between opposing ideas (events). Due to this such people lose an adequate perception of reality being a fundamentally nonlinear, holistic entity where opposites peacefully coexist and mutually transforming.

But openness to the absurd being characteristic of creative people who can think in a paradoxical, multiple-meaning way, enables to overcome the cognitive ambivalence by combining polar cognitive/and psychological states) into a third intermediate cognition revealing its neutral paradoxical character. This openness of creative people to the absurd and paradox characterizes the creative people as creative thinkers able to create paradoxical and metamorphic entities that reveal *diplasty* – man's ability to unite the polar/contradicting cognitive and emotional states, ideas, things, life situations.

The cognitive dissonance appears not only at the logical, behavioral and psychological and worldview plane, but also in the somatic and psychophysiological spheres of human organism, which, as we believe, is the cause of many diseases – somatic, psychosomatic, psychic/mental. The A.M. Svyadoshch's book "*Neuroses and Their Treatment*" shows that the cognitive dissonance as the "confusion" of opposite and equally strong motives is a condition/trigger for the neuroses, experimentally caused by strong excitation of the hypothalamus (in which both its departments are activated simultaneously), as well as in the process of the struggle of contradictory motives (aspirations) in a person.

The creative people easily overcome the cognitive dissonance/ neuroses by the ability to maintain a state of uncertainty due to the ability to use opposing ideas, representations, psychological, psychophysiological states. Thus the creative personality can perceive and explore such relationships that are inaccessible to those who are inclined to cognitive clarity and unambiguousness (Rotenberg, 1979, 2020).

Creativity as a dyplastic state and process of integrating contrasting and contradictory entities and creating new meaningful integrities is the main characteristic of the evolutionary mechanism: the most important condition for the emergence of a new quality lies in forming two systems that have independently arisen to perform different functions and entered into

interaction with each other. This interaction created a new quality, while the two initial structures are preserved in the new functional unity as its subsystems, being unambiguous in nature (Klix, 1993) (refer also to Simpson's paradox: Kievit et al, 2013).

As a creature capable of combining opposites, the creative person is more psychopathological, psychotic than usual people (Eysenck, 1995), since creativity can be understood a compensatory mechanism for psychoticism, being harmonizing factor of human life.

A creative personality is the fundamental goal of human development/existence, and the same goal of development is the creative person's fundamental ability to include polar aspects of the world into a single conceptual and ontological context, enabling to perceive the world as holistic, integral and hence – paradoxical/absurd entity. This conclusion helped us to create a new direction in pedagogical theory and practice "*The Pedagogical Paradoxology*" (Voznyuk, 2020, 2021).

Discussion and Conclusions

Energy being the measure of motion and changes acts in the organism as a function of the biorhythmic integration of its parts due to functional coherence of its organs/ systems (Putilov, 2021; Zimecki, 2006). Energy also realizes person's openness to environments, from which the organism receives health resources. The loss of energy leads to organism's decreasing in its vitality and immunity, which increases its entropy/chaos. Such a state can be considered a disease.

The major factor leading to the disintegration of the organism is distress. Stress in its most general form can be interpreted as an mental and emotional state generated by information uncertainty, with which a person meets in the process of satisfying certain needs. This state of information uncertainty leads to person's negative mental and emotional reactions leading to negative psychological settings and social attitudes, anti-spiritual mental and worldview value orientations. And the latter may cause a drop in vitality and lead to slackening the body's immunity, the result of which is certain diseases.

The mentioned negative states can be overcome due to person's confidence in the harmonious order of the world that may be accompanied with religious feelings and convictions. Another means of maintaining the health is person's overcoming negative states through creativity as the ability to unite opposites, to be open to ambiguity and non-linearity of the world, revealing the synergistic phenomenon of the systemic properties of the whole, which reduces the entropy of environments, increases a people's vitality and strengthens their immunity and health resources (Rotenberg, 1991, 1993).

In the sphere of thermodynamics, the creative people's openness to uncertainty means openness to a system whose structure is supercomplex, and its diversity reaches infinity. Thus creative people in the understanding of thermodynamics represent supercomplex systems. In the context of cybernetics such creative people appear as systems capable of controlling everything (Bogg, 2024), thus appearing as god-like systems. This conclusion can be explained by the "cybernetic" proof of the existence of God, developed by A. Men, who considered God as a supercomplex and most perfect Being. If God is the rarest phenomenon in the Universe ("No one has ever seen God..." – John 1: 18), then from the point of view of information theory, God contains limitless information reaching infinity since information expresses the structural diversity and the measure of complexity of systems (Floridi, 2010). Thus, God as a super-system is the most diverse and perfect entity (Kalanov, 2010).

The nature of creativity is realized in inter-hemispheric activity (the synthesis of the right and left hemisphere functions of the human brain – Murphy et al., 1997), revealed in the form of diplasty, enabling creative people to be open to chaos/uncertainty, paradox/absurd, that actualizes the process of sense crystallization due to integration and mutual transformation of abstract sign and a concrete object, a word and an image.

On the level of logical process diplasty is expressed in the paradoxical oriental (i.e. Buddhist and Indian) logic of four alternatives (Jayatilleke, 1967), where in the relationships of logical terms – assertion and negation – four logically equivalent alternatives can take place: 1) either assertion (first); 2) or negation (second); 3) both (first and second at the same time); 4) neither the first nor the second.

To demonstrate information processing in terms of the four alternatives let us give answer to the fundamental question of philosophy: which is primary, matter or mind, material or ideal? The answer is fourfold: 1) matter is primary; 2) mind is primary; 3) both matter and mind are primary; 4) neither matter nor mind is primary. The fourth alternative expresses the David Bohm's statement of the matter and mind are being projections of a higher – fundamental – essence, which is neither matter nor mind in its pure form (Bohm, 1980; Pylkkänen, 2016).

The analysis of the mechanism of diplasty enables to reveal the *two levels* of it, when at the first level of thinking a creative person is able to integrate the opposites ("both matter and mind are primary"), and at *the second level* ("neither matter nor mind are primary") not only the opposites are understood as separate entities, but each of them, as philosophy teaches, is transformed (reduced) into something third (dialectically higher), which as synergetics shows is an emergent (systemic) property of the whole, that can be characterized with the help of D. Bohm's statement. Thinking processes at the second level of diplasty enables creative

people not only in an abstract-logical unambiguous way, but also in a paradoxical way, which helps to carry out logical operations of systematization and generalization thus fixing creative (direct and reverse) cause-and-effect dependencies/connections.

Abstract

States are obligated to ensure an inclusive education system at all levels, including the provision of a suitable physical environment and materials that enable equal access to learning. However, for inclusion to be effective, it is not only a political or legal matter but, above all, a pedagogical issue that requires institutional commitment and a professional culture. This education must represent a human rights-based approach, include children with disabilities, and aim to provide them with equal opportunities like all other students. One of the challenges for our schools remains that, in many cases, the school environments do not meet the needs of students with special needs. This is related to how learning environments and teaching materials are built and designed. The paper presented analyzes, through questionnaires, interviews, and observations, how didactic materials and the learning environment or infrastructure affect the inclusion of students with special needs. The exclusion of children with disabilities often does not occur due to their impairments, but due to the barriers created by an unfriendly physical environment and the lack of adapted learning materials. The empirical part of this study focuses on elements such as: the content and format of teaching materials, flexibility in their use, the level of adaptation of classrooms and corridors, access to restrooms and common areas, and the use of assistive technological tools. The study analyzes data collected through interviews with primary education teachers and observations in public schools in the cities of Gjirokastër and Përmet. The results show that the lack of an inclusive approach in the design of physical spaces and the development of teaching materials is one of the main obstacles to the real inclusion of children with special needs in primary education in these cities. Many schools still do not meet minimum accessibility standards, and teachers often feel unprepared to adapt materials for students with

different needs. The recommendations based on the findings of this study are addressed to educational institutions to improve school infrastructure to ensure equal access for all children, to provide and develop adapted and flexible didactic materials, and to increase the demands on teachers for their professional development.

Keywords: Inclusive education, students with special needs, learning and physical environment, environmental barriers, assistive technology, professional development

Introduction

This paper examines the essential role that didactic materials and the physical environment play in the real inclusion of students with special needs in primary education in Albania, with a particular focus on the cities of Gjirokastrë and Përmet. In a context where inclusion is not merely a legal obligation but an ethical and pedagogical commitment, the study reveals that the lack of adapted materials and infrastructural barriers are among the most serious obstacles to achieving fair and inclusive education. Using a mixed methodology through questionnaires, interviews, and observations the study analyzes the elements that influence effective inclusion, such as the content and format of teaching materials, the degree of classroom and corridor adaptation, access to supportive spaces, and the use of assistive technologies. The data reveal a high level of teacher awareness of the rights of children with disabilities, but also highlight institutional shortcomings, inadequate infrastructure, and insufficient resources for inclusive teaching. Teacher evaluations indicate that didactic materials are only partially adapted (average score 3.57), while the physical infrastructure of schools remains largely inadequate (average score 3.28). Institutional support and the use of assistive technologies are rated moderately, reflecting a lack of training and resources. However, awareness of students' rights received a very high score (4.53), representing an important potential for positive change. The paper also emphasizes the importance of professional teacher preparation, both through initial training and continuous professional development. Working with children with special needs helps teachers develop empathy, methodological flexibility, and personalized teaching strategies. Practical experience with these students deepens understanding of diverse needs and lays the groundwork for a sustainable and inclusive pedagogical approach. The study offers concrete recommendations for educational institutions and policymakers: investment in accessible infrastructure, the establishment of support units in schools, the development and distribution of adapted didactic materials, and the strengthening of collaboration with parents and the local community. Inclusion should be embedded in the school's identity, not seen as an external requirement. Only through an integrated approach where policies, institutional culture, and pedagogical practices progress in

parallel can a fair and inclusive education be achieved for all children.

School policies and institutional culture for inclusion

In the context of inclusive education, school policies and institutional culture constitute the foundations on which sustainable and effective inclusion of students with special needs is built. Inclusion cannot be the result of individual efforts of teachers alone, but requires a clear institutional vision, supported by well-defined policies and a school culture that sees diversity as an asset and not as a barrier. The inclusive approach requires educational institutions to not only focus on the physical presence of students with disabilities in the classroom, but to ensure their active, meaningful and equal participation in all aspects of school life. School policies should guarantee equal access for all students in the learning process, including the development and use of didactic materials adapted to individual needs, the adaptation of physical environments for easy access and the promotion of flexible learning methods. These policies should be built on the principles of the Convention on the Rights of Persons with Disabilities (2006), which emphasizes the right to inclusive education at all levels, as well as in line with national strategic documents that aim for the social and educational inclusion of all categories of learners. To be effective, these policies need to be implemented consistently and supported by sufficient human and material resources.

Institutional culture is the deepest and often most challenging aspect of inclusion, as it influences how policy is implemented in practice. This culture encompasses the attitudes, values, beliefs and practices that prevail in an educational institution and that directly affect the way each student is accepted, treated and supported. An inclusive culture is built through a climate of understanding, cooperation and mutual respect between teaching staff, school leaders, parents and the local community. This approach fosters a sense of belonging and ensures that all students feel valued and supported in their educational journey. To develop such an inclusive culture, school leaders must play an active and leading role in modeling inclusive values. Leaders should not be limited to an administrative function, but should act as catalysts for cultural change and promoters of an inclusive vision at every level of the school's functioning. They need to create an environment where inclusion is not seen as an external obligation, but as an integral part of the school's identity. This requires the ability to motivate and guide staff towards sensitive and flexible pedagogical practice, as well as the ability to build bridges of collaboration with the local community and parents.

Another essential aspect is the replacement of the traditional "open door" policy with a more

active welcoming approach. An active welcoming policy means that the school does not simply expect students to adapt to the existing system, but is committed to ensuring that the system itself adapts to the needs, learning styles and individual challenges of each student. In this context, it is essential to create clear mechanisms for early identification and support of special needs, to ensure the presence of support staff (such as psychologists, teaching assistants, therapists) and to promote awareness among the entire school community to combat prejudicial attitudes or labels that often accompany these students.

The presence of discriminatory practices or negative attitudes towards diversity, whether related to ability, ethnicity, gender, language, religion or socio-economic status, undermines the very foundations of inclusion. An inclusive school does not tolerate any form of exclusion or bullying, but reacts decisively to any violation of equality and human dignity. This means not only drafting codes of conduct, but above all building a positive climate, where every member of the school community feels safe and respected. Furthermore, developing an inclusive culture requires long-term commitment. This is not an immediate process or one that can only be achieved through official documents. Cultural change occurs through continuous awareness-raising, critical reflection on existing practices, and the sustained engagement of all stakeholders involved: teachers, students, leaders, parents, and partner institutions. Continuous professional development of teaching staff, fostering learning communities in schools, sharing best practices, and the active involvement of parents in school life are essential elements for maintaining this culture.

Only by aligning school policies with an institutional culture that truly values and embraces diversity can a deep, real, and functional inclusion of students with special needs be achieved. Such a school does not attempt to “normalize” or “fit” students into the existing system, but rather transforms itself to be open, flexible, and responsive to the needs of all. In this way, inclusive education becomes not just a right, but a fundamental value of the education system and society as a whole. In many cases, the exclusion of students with special needs is not a consequence of their inability to participate in learning, but rather a result of institutional barriers and negative attitudes toward disability. A school culture that supports inclusion should aim to eliminate these barriers through staff education, strengthening institutional cooperation, and creating a safe and welcoming environment for all. Therefore, developing and implementing internal policies for inclusion, building the professional capacities of educational staff, and fostering a climate where every child feels welcome and valued are necessary steps to achieve truly inclusive education. Only through an integrated approach between policy and institutional

culture can real and effective inclusion in primary education be achieved.

The role of educational institutions in fostering an inclusive climate;

Educational institutions play a crucial role in creating and supporting an inclusive climate that enables the real inclusion of students with special needs in school life. They are not simply physical or administrative structures, but represent living organisms, interconnected with values, attitudes, and practices, which build the identity, experience, and success of each student in education. Their function goes beyond providing knowledge, including also creating a safe, supportive, and diversity-sensitive environment.

Promoting an inclusive climate begins with the formulation and implementation of clear and consistent policies that guarantee equality of access and opportunity for all students, regardless of background, gender, ability, or socio-economic status. This means that institutions must ensure that internal regulations, pedagogical practices, and administrative procedures do not create barriers, but rather enable the full participation of every child.

To achieve this goal, educational institutions must adopt a comprehensive philosophy and vision that sees every student as valuable and every variability as an asset. Inclusion is not a formal or merely technical process, but an ethical commitment that requires awareness and ongoing commitment from all actors within the school. This philosophy must be translated into concrete actions, such as adapting teaching methods, individualizing learning tasks, using auxiliary materials and assistive technology, and providing psychological and social support.

Institutions also must train and empower teachers and teaching staff through continuous professional development, equipping them with the necessary competencies to work in diverse classrooms and address the needs of students with different abilities. Only a prepared and motivated staff can successfully implement inclusive practices and create an environment where every student feels accepted and capable of learning. Furthermore, creating an inclusive climate also implies the active engagement of parents and the local community. Educational institutions should foster sustainable partnerships with families and community organizations, involving all actors in building an open, democratic, and child-rights-sensitive environment. Only through a clear and coordinated institutional commitment, which goes beyond formal declarations and involves real transformation of practices, structures and attitudes, can an educational climate be built where inclusion is not the exception, but the unquestionable norm.

To build such an inclusive climate, educational institutions need to act in several directions simultaneously and with continuous commitment. The first and most important is to provide continuous and quality training for teachers , which should focus not only on inclusive pedagogical techniques but also on developing sensitivity and interpersonal skills that help manage diversity within the classroom. Teachers should be helped to develop strategies for individualizing teaching, for the active involvement of each student, and for the effective management of heterogeneous classes.

Second, adapting learning materials and infrastructure is an essential component. This includes providing personalized teaching aids, using assistive technologies for students with disabilities, and making adjustments to the physical environment to ensure equal access for all. Schools should be equipped with appropriate facilities to facilitate the movement and participation of students with special needs.

Another important aspect is the creation of sustainable mechanisms for effective communication and cooperation with parents and the local community . Educational institutions should build bridges of cooperation with families, involving parents in the educational process, in decision-making and in solving problems related to inclusion. Open communication and mutual respect between the school and parents fosters a sense of trust and helps to identify and address the needs of students more fully. An inclusive climate does not arise spontaneously. It is the result of a conscious institutional commitment to social justice, understanding, inclusion, and respect for diversity. This means that the very structure, organization and culture of the school must be reformed following these principles, involving all actors – from school leaders to support staff.

Furthermore, educational institutions have an educational role that goes beyond the curriculum. They should actively promote core values such as empathy, cooperation, acceptance of others, and solidarity among students. This helps to create an environment where prejudice, discrimination, and stereotypes end, and where everyone feels welcome and valued. Education for inclusion should be part of everyday life in school, expressed through the way teachers talk to students, how peer relationships are built, and how differences are dealt with.

This process requires strong and committed leadership from school leaders, who must model inclusive behaviors, provide practical support to staff, and pursue the vision of inclusion with commitment. Also, creating a shared vision within the teaching staff on the importance and

necessity of inclusion is essential. Only when all stakeholders within the school share the same understanding and commitment to inclusion can a truly supportive and transformative environment be built. Only through a concerted and long-term effort can an educational environment be created where every student feels accepted, motivated, and able to reach their full potential, without being hindered by barriers related to abilities, background, or personal identity.

The importance of the physical environment in the inclusion of students with special needs

The physical environment of the school plays a crucial role in ensuring the inclusion of students with special needs, as it directly affects the way these students experience educational spaces and their ability to participate equally in the learning process. When school environments are adapted to meet the needs of all students, including those with physical, sensory, emotional, or developmental limitations, the school becomes an inclusive space where every child feels welcome, safe, and valued, as an important part of the educational community.

An accessible and functional environment is not simply a technically adapted structure, but a concrete manifestation of equality and respect for the rights of all children. It enables students with disabilities to have equal access to classrooms, laboratories, libraries, gyms, sanitary facilities, canteens, and any other school space, without limiting their participation due to physical or organizational barriers. Infrastructural adaptations such as the construction of wheelchair ramps, the installation of functional elevators, the placement of Braille signage for students with visual impairments, adequate and regular lighting, the use of contrasting colors for easier orientation, and assistive listening systems are not secondary elements, but fundamental tools to enable the full and independent participation of every student.

These changes are not only technical or aesthetic, but also carry a deep social, ethical, and pedagogical value. They convey a clear message that every child has his or her school place and that no physical or developmental difficulty should be an obstacle to learning and participating equally in school life. Such an environment contributes to the development of self-confidence, a sense of belonging, and personal dignity of students with special needs, supporting them on their path to self-realization and independence.

Furthermore, a carefully designed and inclusive physical environment offers teachers the opportunity to use various pedagogical methods and assistive technologies, which not only facilitate the learning process for students with difficulties but also improve the quality of

teaching for the entire class. Equipment such as large screens for visual learning, audio systems to amplify hearing, computers with software adapted for students with different needs, devices for alternative communication, or the creation of quiet environments for students with autism spectrum disorders are tools that support full inclusion and promote the development of the potential of every child.

An inclusive school environment should also be accompanied by a careful organization of the timetable, physical activity, breaks and play spaces, so that every student feels comfortable and actively involved. For example, the creation of relaxation areas or supportive environments for calming down can help students who experience anxiety or difficulties in emotional self-regulation, giving them the space and time needed to return productively to learning. Creating an inclusive physical environment is not only a legal requirement of human rights, but also a moral and professional responsibility of the education system. It represents an institutional commitment to social justice, equal opportunities and the fulfillment of the principles of education for all. This commitment should be part of long-term school development strategies, integrated into public education policies and supported by sufficient financial resources, training for staff and the active involvement of the local community. Only in this way can a school be built that excludes no one, but creates conditions for the harmonious and fair development of every individual, making inclusion a lived reality and not just an objective on paper.

Building an inclusive physical environment is not simply a response to regulations or legal standards, but concrete evidence of a culture that respects diversity and aims to eliminate any form of discrimination or exclusion. A school that provides appropriate conditions for all students reflects a vision of social justice and democratic education, where every individual, regardless of their abilities, has the right to learn and develop in an equal environment. Ainscow, Booth, & Dyson (2006) Therefore, efforts to improve the physical environment should be an integral part of educational policies and school development strategies, involving parents, the local community, and the students themselves in this process. Only in this way can a school be built that excludes no one and where inclusion is a tangible reality, not just an aspiration..

Accessibility of school facilities: corridors, toilets, classrooms, entrances (UNICEF,2014);

Wide corridors, adapted toilets, accessible classrooms and barrier-free entrances are essential elements of physical accessibility in school, which directly affect the inclusion of students with disabilities. According to UNICEF (2014), to build a truly inclusive environment, school infrastructure should ensure equal access for all students, including wheelchair ramps,

wide doors to facilitate passage, signage adapted for children with sensory impairments and hygienic facilities designed to be usable by everyone. This means that school should not only be a space where the learning process takes place, but an environment where every child, regardless of the limitations they may have, feels safe, independent and welcome.

An accessible school not only serves children with special needs, but also creates a more humane, sensitive and equitable climate for the entire school community. For example, a stair-free entrance or a non-functioning elevator is not only a help to students in wheelchairs, but also to parents with strollers, students with temporary injuries or staff who may have similar needs. Thus, accessibility becomes a universal aspect of the design of school spaces, reflecting the values of inclusion, respect and equality.

Furthermore, lack of physical access constitutes one of the greatest barriers that students with disabilities face, affecting not only their physical participation in the classroom, but also their emotional and social inclusion in school life. When a child cannot enter his/her classroom without the assistance of an adult, he/she experiences not only a physical hardship, but also a symbolic exclusion from the community. Therefore, inclusion begins right where the student begins his/her day at the school entrance, in the corridor leading to the classroom, in the toilet that he/she must use independently and with dignity.

In this sense, improving physical infrastructure cannot be treated as a secondary or luxury issue, but as an ethical and legal necessity to guarantee the right to equal education for all children. Educational policies and institutional budgets must reflect this priority, including minimum accessibility standards in the design and renovation of every school building. Only through such a concrete and sustained commitment can it be ensured that inclusion does not remain an abstract notion, but becomes a tangible reality for every child.

According to a (2014) UNICEF report, the inclusion of students with special needs is one of the top priorities for the safety and development of an equitable education system. Accessibility of school infrastructure is essential to enable every student to have equal opportunities to participate in educational activities and integrate into school life without physical barriers. This report emphasizes that wide corridors, adapted toilets, accessible classrooms and barrier-free entrances are the elements that make a school accessible to students with disabilities.

According to the report, school infrastructure should ensure equal access for all students, including those with special needs. They should have elements such as wheelchair ramps, wide doors that facilitate passage, signage adapted for children with sensory impairments, as well as

adapted hygiene facilities that are accessible to all students. Infrastructural adaptations such as these are necessary to enable active and independent participation of students in the school environment.

The UNICEF report (2014) also highlights that school infrastructure support is an issue that has a direct impact on the social and emotional well-being of students. When children with disabilities are able to access school spaces without the assistance of another person and without being hindered by physical barriers, they experience a sense of increased self-confidence and belonging to the school community. This helps to develop a sense of equality and respect for diversity within the school environment, contributing to a more open and inclusive atmosphere.

To ensure that these accessibility standards are met, the report recommends that governments and educational institutions engage in creating conditions for the development of school infrastructure following accessibility requirements, making these adaptations a significant priority in educational policies (UNICEF, 2014; World Health Organization [WHO], 2011).

Physical barriers as a factor of exclusion and their impact on participation

Physical barriers are one of the main factors that can lead to the exclusion of students with special needs from full participation in school activities and can have a major impact on their inclusion. These barriers can manifest in many forms, including narrow hallways, small doorways, lack of wheelchair ramps, cramped learning spaces, and toilets that are not adapted for students with disabilities. When these obstacles are present in the school environment, they create conditions that limit freedom of movement, participation in activities, and access to learning.

According to the UNICEF report (2014), physical barriers are one of the main reasons for the exclusion of students with disabilities from the school environment.¹³

Despite efforts to create an inclusive school, physical barriers can remain serious barriers to access and can increase feelings of isolation and exclusion for these students. This negatively affects not only their ability to learn, but also their social and emotional development. Physical barriers faced by students with disabilities, such as wheelchairs, are one of the main problems affecting the inclusion of these students in school life. Schools are often built without considering their special needs, and this directly affects the opportunities for these students to participate in daily school activities. For example, stairs are a major obstacle for those who use

wheelchairs, as they prevent them from moving from one floor to another and can lead to students being excluded from certain lessons. Narrow doors that cannot be opened easily are another factor that hinders movement and the ability to access school facilities.

Additionally, the lack of ramps and other accessible entrances is a widespread problem, affecting students' ability to access other parts of the school, such as the library, gym, laboratories, and other spaces that can be essential for their academic and physical development. These spaces are important for a well-rounded educational experience, providing opportunities for hands-on learning, sports and social activities, and opportunities to help develop students' diverse skills. When these spaces are inaccessible to students with disabilities, they miss out on the opportunity to fully benefit from those experiences and may feel excluded from important parts of school life. Another barrier that has a significant impact is the lack of adequate toilets and other hygiene facilities. Toilets designed for use by all students, including those who use wheelchairs, are an essential need to ensure that every student has the opportunity to attend to his/her needs in safe and hygienic conditions. The lack of accessible toilets can lead to feelings of insecurity and discomfort, making the school environment seem unfriendly and unsuitable for these students.

All of these physical barriers help create an atmosphere that can exacerbate feelings of insecurity and isolation among students with disabilities. When these students face such challenges, they feel excluded and may not feel valued as part of the school community. This can negatively impact their self-esteem, reducing their motivation to participate in educational and social activities. It can lead to a sense of missing out on the opportunity to develop the skills needed to cope with everyday challenges. Often, these physical barriers lead to feelings of shame and social stigma, creating a further divide between students who can easily get through school and those who face physical barriers.

To address these issues and ensure that all students have the opportunity to participate in an equitable and inclusive environment, schools need to invest in infrastructure adaptations. This improvement can include creating equal mobility opportunities for all students, such as wheelchair-accessible ramps, wide doorways, and other environments that are accessible and friendly to all. These infrastructure investments are essential to creating a school that is open and inclusive for all students and to ensuring that no one is left out due to physical barriers. In addition, these infrastructural changes will also improve the well-being and feelings of self-esteem and belonging for students with special needs.

The role of didactic materials in supporting inclusion

Didactic materials play a key role in supporting the inclusion of students with special needs, as they can enable a more diversified and tailored approach to the needs of different individuals. These materials, when based on effective classroom practices and inclusive methodologies, can significantly enhance participation and learning for all students (European Agency for Special Needs and Inclusive Education, 2017). When didactic materials are appropriate and adapted for students with disabilities, they help improve the educational experience and create a more equitable and inclusive environment.

One of the key aspects of didactic materials is their ability to be customized to meet the diverse needs of students. For example, materials can be designed to accommodate different learning styles, providing opportunities for learning based on visual, auditory, and kinesthetic activities. For students with learning disabilities, such as dyslexia, materials [\[2\]](#) that incorporate text and audio can be used, while for those with physical disabilities, assistive devices and assistive technology can be used to enable them to engage independently. In addition to using accessible materials and technology, it is important for schools to create a didactic environment that is flexible and adaptable to meet the needs of each student, taking into account the diversity of abilities, learning styles, and experiences of students with special needs. This requires a more comprehensive approach, where didactic materials are not simply tools for learning, but also serve as a means to increase engagement, participation and help students feel equal.

Teaching materials that contain clear graphics and images can help students with learning difficulties through reading and interpreting information, as well as those with visual impairments. Flashcards with images and large tables that describe concepts can provide a visual way to understand and assimilate information, enabling these students to better understand the topics they are studying.

For students who struggle with written texts, audiobooks and other materials that provide information in audio format are excellent tools for providing equal opportunities. These options help improve comprehension and can be suitable for students who are dyslexic, or for those who need a more interactive learning experience that supports all the senses. Furthermore, providing subtitles for video clips can enable students with hearing impairments to understand and absorb the information provided, giving them an opportunity to fully engage with the content. Technology plays an ever-increasing role in the learning process, offering endless opportunities for personalizing learning. Apps and software that have been developed for

students with special needs are quite powerful in enabling a richer and more tailored learning experience. The use of computers, tablets and other technology tools can provide learning opportunities through educational games and interactive activities that stimulate the mind and help develop various skills. For students with autism, learning opportunities through applications that are designed to help develop social, communication, and emotional skills are very important to support full inclusion in the classroom.

Furthermore, didactic materials can help students with special needs develop important life skills. For example, the use of applications that include practical tasks and simulations can help students develop problem-solving skills and participate in practical activities that improve their motor skills and coordination. Similarly, for students with other difficulties such as dyspraxia, tools and applications that help improve motor skills and movement control can be used, providing a greater opportunity for personal development. In an inclusive school environment, the use of appropriate didactic materials helps to increase students' confidence and encourages them to engage and participate in lessons without fear of failure. This creates a more open environment, where everyone feels supported and valued, and where students can develop in an atmosphere that is suitable for them, having the opportunity to reach their full potential.

For this reason, it is very important that schools and teachers invest in developing and adapting didactic materials to adapt to the needs of different students, in order to ensure full inclusion and an equal opportunity for all students, regardless of abilities or opportunities. This aligns with instructional design principles that emphasize structuring content and delivery to meet diverse learner needs (Merrill, Reiser, & Prentice, 2005).

Adapting teaching materials for different needs (Hayes; Bulat, 2017);

Adapting learning materials to meet diverse needs is one of the key pillars of creating an inclusive learning environment, where every learner, regardless of their abilities or barriers, has the opportunity to engage and benefit equally from learning. This is essential to ensuring that education is accessible and effective for all learners, including those who may have specific difficulties, such as reading, listening, visual, motor and developmental. Adapting learning materials aims to create equal opportunities for every learner, using a wide range of materials that can meet the specific needs of each. For example, using audiobooks and other audio materials for learners who have difficulty reading or who are blind or have limited vision is an effective way to ensure that they have the opportunity to absorb information and remain engaged in learning. Also, for students who better absorb information through sight, visual

materials such as picture cards, graphics, and large charts are important to support learning and help students understand and process information more easily. For students with hearing impairments, providing materials that include subtitles for videos or using sign language translation is essential to enable them to engage in the learning and understand the content being conveyed. This also helps to maintain a full connection to the learning process, without hearing barriers. Furthermore, the use of software and applications developed for students with autism, who may have special motor needs, enables personalized learning and helps children develop their skills in a more independent and tailored way.

An important aspect of adapting learning materials is that it creates the opportunity for students to feel valued and supported in the school environment, enabling them to be an active part of learning and classroom activities. This process is vital for developing students' confidence and self-esteem. When students feel valued and supported, they are more likely to engage in discussions and activities that are essential for their social, emotional and academic development. A learning environment where each student feels respected and supported is an opportunity to develop as an individual and as a member of the school community. In such an environment, students can feel more confident to express their opinions and participate in various school activities. This not only helps them develop important communication skills, but also strengthens their sense of belonging and integration into the class group and beyond. This active engagement helps students increase self-esteem and motivates them to aim higher, as well as to engage in new opportunities that may be beneficial for their future development.

Adapting learning materials is also a key tool for strengthening equity and opportunities for success for every student. This is particularly important for students who may have special learning needs, who may face significant difficulties learning in a standardized environment without the aid of appropriate materials. Adapting learning materials enables each student to learn in a way that best suits their learning style, enabling them to develop their skills and talents more effectively and fully. It also helps students reach their maximum potential by providing them with equal opportunities for academic success. Another important aspect is that this opportunity to learn in an adapted and flexible way contributes to building a more equitable and inclusive society. When students have the opportunity to develop their skills without the barriers necessary for adaptation, they become more capable individuals and ready to contribute actively to the wider society. In such an environment, all individuals, regardless of their abilities and needs, can develop independently and equally.

To ensure that this process is effective, it is essential that schools continuously invest in improving teaching materials and develop new opportunities for using technologies and other tools that can meet the needs of different learners. The use of technology, such as applications, software and interactive devices, is an excellent opportunity to create a suitable and flexible environment where every learner can benefit. The use of digital tools can also help to make learning more engaging and easier to understand for all learners, facilitating the acquisition of knowledge and the development of new skills(see also SCIRP, 2020; PubMed, 2020). In this way, by using appropriate materials and investing in technology and other teaching tools, schools can provide an educational environment that is not only attractive and stimulating for learners, but also enables the development of equal opportunities and chances for success for all learners, regardless of their abilities and needs. This commitment by schools to improving learning materials and opportunities is an important step towards creating a fair and inclusive education, where every student has the opportunity to develop and contribute.

Flexibility and diversity in didactic materials: content, format, methods of use

Flexibility and diversity in didactic materials are key elements in ensuring an inclusive and accessible learning environment. The use of materials that can be adapted to the different needs of learners is essential for creating equal opportunities for all, ensuring that each learner has the opportunity to engage and absorb information in the way that best suits them. This can be achieved through the use of different materials, both in content, format and mode of use. The content of didactic materials should be diverse and suitable for a wide range of learners with different abilities. Adaptation of content involves the use of materials that enable learners to learn in different ways. This can include written texts, but can also include visual materials (graphics, tables), audio materials and interactive materials that offer different opportunities for the acquisition of knowledge. For example, for learners who have difficulty reading text, audio or video materials can be used that explain the content in a format that is accessible to them. Likewise, students who have difficulty understanding content from written texts alone can benefit from graphics and visualizations, which can aid in the information acquisition process.

The use of different formats of didactic materials is also very important. Formats can vary both in terms of content (text, audio, video) and in the way the information is displayed (digital presentations, brochures, flashcards, etc.). Diversifying these formats ensures that all students have the opportunity to acquire information in a way that best suits their learning style. For students with special needs, the use of different formats helps reduce barriers and enables them to be fully involved in the learning process. This includes the use of software that assists

students with autism, specialized applications for students with motor difficulties, and the use of sign language interpretation for students with hearing impairments.

The ways of using didactic materials are very different and can be adapted to the needs and learning style of each student. Using diverse teaching methods is an excellent way to support the involvement of all students and to create a learning environment that is dynamic and stimulating. Techniques such as group work, class discussions and the use of active learning are some of the possible ways to ensure student engagement and to develop their social and academic skills. Group work and class discussions give students the opportunity to collaborate, exchange ideas and solve problems together, promoting a shared sense of responsibility and cooperation. These activities also help develop communication skills and enable students to learn from each other. Active learning, on the other hand, involves the use of various activities and resources to help students make deeper connections with the materials they are studying. This can include the use of experiments, symposia, practical activities, and project-based learning, which help students apply the knowledge and skills they are learning in real-world situations. Technology is a powerful ally in supporting the flexible use of didactic materials. Online learning platforms such as Moodle, Google Classroom, and other digital tools provide the opportunity to access learning materials at any time and from any location. Students can use these platforms to work on assignments, receive pre-prepared lessons, and engage in interactive activities that help them acquire knowledge. Educational applications and interactive tools can also help students develop certain skills, such as numeracy, reading, and technology skills, all of which are essential for their further development.

For students with special needs, learning materials must be personalized and adapted to their individual needs. This may include the use of assistive technologies, such as software and applications that provide support for students with motor difficulties or autism. (*PubMed, 2020*). The use of subtitles for students with hearing impairments, sign language translations and audio options for students with visual impairments can ensure equal access to learning content. The use of these materials and tools helps ensure that all students, regardless of their abilities, can be fully involved in the learning process. (*SCIRP, 2020*) The flexibility and diversity of didactic materials is a key element that enables the creation of an equitable and inclusive learning environment. This diversity in materials and methods of their use helps to create equal opportunities for all students, ensuring that they have the opportunity to develop and benefit from the opportunities that education offers. When didactic materials are designed and used

appropriately, they can provide a diverse and successful learning experience for each student, including those with special needs, and contribute to the development of their general and social skills.

Use of assistive technology and digital applications

The use of assistive technology and digital applications is of paramount importance in creating an inclusive and equitable educational environment, where all students can be included and develop regardless of any limitations or barriers. Assistive technology is not only a tool to support those with special needs, but an opportunity to provide personalized learning opportunities that are tailored to the abilities and learning style of each student.

One of the main benefits of assistive technology is that it can support students with reading and writing difficulties, using applications such as reading and text-merge software. **(PubMed, 2020)**. This capability aids in the acquisition of learning materials and allows students to hear information through audio materials, which helps them understand and assimilate information more easily and quickly. In particular, for students with dyslexia, these tools can be very useful in eliminating barriers associated with the reading and writing process, enabling a more natural and smooth learning experience.

For students with visual impairments, assistive technology offers great opportunities through the use of screen readers and applications that allow for orientation through touch. These tools are especially useful for students with limited vision, because they enable them to read and explore educational materials without the need for assistance from another person. Such technology can also include applications designed to create a complete and rich learning experience, enabling students with visual impairments to actively participate in lessons and school activities.

For students with hearing impairments, assistive technology can provide other options, such as translating materials into sign language and using subtitles for educational videos. **(PubMed, 2020)** This type of support enables students to better understand the learning content and actively engage with the learning without being affected by hearing limitations. The use of automated subtitles for videos is an excellent example of using technology to provide an inclusive and equitable environment for all students, enabling them to follow lectures and engage in learning activities.

Another area where technology can support student development is in the use of specialized applications for students with autism. These applications are designed to improve the social, communication, and emotional skills of these students. Using these applications can help develop the skills to manage behavior and interact with their environment in ways that are appropriate for their individual needs. Applications that simulate social situations and those that improve communication skills are excellent examples of using technology to help these students interact and develop in healthy and positive ways.

The use of online platforms and educational applications can also create opportunities for students to benefit from personalized and independent learning. (SCIRP, 2020) The use of these tools can facilitate access to learning materials, enabling students to engage in learning activities in a way that suits their learning style. This opportunity is important because it creates a space for all students, without excluding anyone, to learn and develop new skills at a pace and in a way that suits them. The use of assistive technology and digital applications is important for creating an inclusive school environment where every student can develop and reach his or her potential. Technology helps ensure that no student is excluded and that everyone has the opportunity to participate in learning equally, enabling quality and accessible learning for all. The use of these technologies is an important step in ensuring that every individual has equal opportunities and achieves academic and personal success.

The importance of digital tools in personalizing the learning process;

The use of digital tools in personalizing the learning process is an important step in creating a learning environment that adapts to the diverse needs of students. Technology offers excellent opportunities to create lessons that can be flexibly personalized, enabling students to learn at their own pace and style, improving engagement and achieving high results. (EdSurge, n.d.) Digital tools can help create a personalized lesson for each student, using online platforms and educational applications that provide opportunities for students to complete exercises and tasks tailored to their abilities and needs. This allows each student to develop their skills more effectively, working on areas where they need improvement and helping them reach their maximum potential. The use of assistive technologies also offers tremendous opportunities for students with special needs, such as those with dyslexia, visual impairments, or hearing impairments, by providing tools such as audio applications, screen readers, and sign language translations, which enable students to more easily absorb learning materials. Assistive technology helps students with visual and hearing impairments to actively participate in learning, while the use of applications that focus on developing social and communication skills

helps students with autism to interact more easily in social situations. The use of online platforms can also create opportunities for students to learn independently and in a personalized way, by providing materials and exercises that are tailored to the needs of individuals, and thus increase flexibility and the opportunity for personalized learning. Using digital tools in this way is an excellent opportunity to create an inclusive learning environment, where every student can engage in the learning process and achieve academic success in the way that best suits them.

Supportive applications and platforms for children with special needs.

For children with special needs, technology has brought incredible opportunities to support their development, enabling learning to be personalized to meet the specific needs of each child. With the help of digital applications and platforms, a learning environment can be created that is fully adapted to different abilities and learning rates. This is especially important for children with dyslexia, autism, developmental delays and other special needs, as opportunities for development and progress can be provided in a way that helps them realize their maximum potential.

One of the most widely used and successful apps for children with dyslexia is **Ghotit** (Ghotit Ltd., n.d.) , which uses an interactive and fun approach to help children develop reading and writing skills. The app offers games and activities that are personalized for children, helping them to face the challenges of dyslexia in a way that is more understandable and easier for them. This app is especially useful for those who have difficulty understanding and absorbing information in traditional teaching methods.

Another app that has created great opportunities for individuals with difficulties in verbal communication is **Proloquo2Go** . This app is indispensable for children and individuals who cannot speak or have great difficulty using verbal language. (AssistiveWare, n.d.). It offers a system based on symbols and words, enabling users to communicate more easily and express their thoughts and feelings. Using this app has been beneficial for children with autism, as well as for those who have other difficulties in developing speech skills.

For those who have difficulty developing reading and writing skills, **Read&Write** is an excellent tool. This application offers numerous options to support students with dyslexia, including assisted writing and reading texts aloud. Translation and reading aloud technology allows children to more easily absorb information and develop their language skills without the

need for constant help from a teacher. This application is also an excellent helper for all those who have difficulty reading texts at a normal speed.

Speech Blubs is another app that is designed to help children with speech delays. With a game-oriented approach and interactive activities, this app helps children learn sounds and words using videos and fun activities that make learning more natural. Using this platform can improve the speed of development of communication skills for children with special needs. (Blub Blub Inc., n.d.).

For individuals who need help developing social skills, **CogniToys** offers an incredible tool. Using artificial intelligence on this platform, it helps children develop their social skills and get answers to their questions and concerns. This app provides opportunities to stimulate learning and social connections in a natural and fun way.

LAMP Words for Life is another unique support tool for individuals who have difficulty speaking, especially those with autism. This app uses an advanced symbol communication system to help users communicate more easily and improve their social and language skills. It is a very useful option for those who need support in developing expressive communication.

For children with autism and individuals with other special needs, **Autism Apps** offers a wide range of apps that can help develop various skills. It provides tools to support communication, organization, and social development, enabling children to develop their skills in a way that is appropriate for their specific needs.

For children who have difficulty reading and writing, **Kurzweil 3000** is another useful app that enables the conversion of texts into audio and offers other supports to help children understand and assimilate information in an easier and faster way.

Another great platform is **Ariana's Story**, which is designed to help children with disabilities develop their communication and language skills. This app uses stories and activities to help children express their thoughts and feelings better, enabling them to develop their social and language skills in a more natural way.

For those who need support in developing communication skills, **MyTalkTools** is a great platform that enables the use of symbols and pictures to help individuals who have difficulty communicating express themselves more easily and develop their skills appropriately and

effectively. (AbleNet Inc., n.d.). These applications and platforms are designed to support the development of children with special needs, enabling them to learn and develop in a personalized and interactive environment. They provide opportunities to help them improve their skills in a natural and unrestricted way, enabling them to realize their maximum potential.

Professional preparation of teachers for inclusive teaching

The professional preparation of teachers for inclusive teaching is an ongoing process that requires commitment, resources and systemic support, not only at the school level, but also through policies that align with inclusive values and international best practices (Kurth et al., 2018). Inclusive teaching aims to integrate students with different abilities and needs into a common classroom, where they can learn together and develop their skills in a supportive and equitable environment. This type of teaching requires special professional preparation for teachers, which enables the creation of teaching strategies and methods that are appropriate for all students, regardless of the abilities and challenges they may have.

Preparing teachers for inclusive teaching involves a number of key elements. Teachers need to have a deep understanding of the diverse needs of students and the teaching methods that can be used to support them. This includes knowledge of issues such as dyslexia, autism, developmental delays, Down syndrome, and other special needs that may be encountered in a diverse classroom. Teachers also need to understand and respect the diversity of students, creating a learning environment where each student feels valued and supported, free from discrimination and prejudice. This environment may include the use of flexible teaching methods that allow students to develop their skills at their own pace, using materials and techniques that are appropriate to the specific needs of each individual.

In addition to theoretical knowledge, teachers need to develop the ability to use flexible teaching strategies, which can include using technology to create personalized learning materials, hands-on and interactive activities, and an environment that allows students to learn at their own pace. This is a very important aspect, as technology can provide endless opportunities to create content that is easy to access and suitable for different needs. The use of applications and online platforms can enable students to complete tasks and activities that are adapted to their abilities, helping to increase engagement and motivation.

Another important aspect of professional preparation is the use of assistive technology. Teachers must be able to use digital tools and assistive technologies to support students with

special needs. This includes educational applications and platforms that enable the development of students' different skills in a more effective and appropriate way for their needs. For example, applications that help students with dyslexia to read and write more easily, those that provide communication support for those who have difficulty speaking, and programs that provide opportunities to acquire learning materials in different ways are essential for comprehensive support.

Teacher preparation also includes the ability to create and manage a safe and supportive classroom environment where students can engage and interact positively. Classroom management should be such that it supports the diversity of students and ensures that everyone has the opportunity to learn and contribute to the teaching. This means that teachers should develop the ability to create an atmosphere where individual sensitivities and needs are respected, using strategies to manage behavior and encouraging mutual help and support among students. Teachers should also have the ability to collaborate with parents and other professionals who work with students, such as therapists and psychologists, to ensure full support for students' development and to address their special needs.¹⁴

Assessing student progress is also an important aspect of inclusive teaching. Teachers need to be able to use a variety of assessment methods to determine how students are progressing and to adapt teaching to help them succeed. This can include formative assessment, which involves observing students' progress during the learning process, as well as summative assessment to measure students' knowledge and skills at the end of a teaching period. The professional preparation of teachers for inclusive teaching is an ongoing process that requires ongoing commitment, resources and support, and is an essential element in creating an education system that supports all students and provides equal opportunities for success for all. This commitment will enable equal opportunities for learning and development to be created for all students, regardless of their abilities, needs or challenges.

The impact of initial training and continuous professional development ;

Initial training and continuous professional development are two key aspects for increasing the quality of teaching and ensuring an inclusive and effective learning environment.

Both of these factors have a significant impact not only on the skills and knowledge of teachers, but also on improving teaching and supporting students with diverse needs.

Initial teacher education is the first and most important stage in preparing teachers for their role in the classroom. This education provides teachers with in-depth knowledge in the field of education, including teaching theories, classroom management, the use of technology, and the development of skills to deal with different situations that may arise in the classroom (NCSE, 2011). It also provides the opportunity to learn teaching techniques and methods that enable teachers to create learning environments that are relevant to the needs and characteristics of different students. This is a strong foundation for the development of teachers' professional skills and for enabling a comprehensive and flexible approach to teaching.

However, initial training alone is not enough to ensure sustainable and improved teaching. Continuing professional development is also essential to update and improve teachers' skills throughout their careers. This development includes training, courses, seminars, workshops and other learning opportunities that teachers can attend after completing initial training. Continuing development enables teachers to increase their knowledge in new areas, such as the use of new technology, teaching methods for students with special needs, developing classroom management skills and supporting diversity in the classroom. It also helps teachers stay informed about the latest developments in the field of education and implement new and advanced practices in the classroom environment.¹⁵

The impact of initial training and ongoing development is highly visible on the level of student performance and the quality of teaching. Teachers who are well-trained and who pursue ongoing development are able to create a more appropriate and supportive environment for students, use the most advanced methods to help them learn, and ensure that their students, including those with special needs, have equal opportunities for success. Furthermore, ongoing development helps teachers develop classroom management skills and work collaboratively with colleagues and other professionals to provide comprehensive support for students.

Initial training and continuous professional development are both essential elements to ensure that teachers have the skills and knowledge to deliver high-quality teaching, supporting all learners and creating equal opportunities for learning and development. This ongoing cycle of

learning and improvement is one of the keys to ensuring that education is inclusive and effective.

The impact of practical experience with students with disabilities on the pedagogical approach

The impact of practical experience with students with disabilities is essential in the professional preparation of teachers for an inclusive and effective learning environment. This experience, especially when included from the early stage of teacher education, helps to build a positive, aware, and inclusion-oriented attitude, emphasizing the importance of diversity and equity in education.

Through practical experience with students with special needs, teachers develop a deeper and more sensitive understanding of the challenges, potentials, and diverse ways in which children with disabilities interact with learning and the school environment. This experience serves as a turning point in building an inclusive pedagogical approach, which aims not only to transfer knowledge but also to create an environment where all students, regardless of their abilities, feel welcome, respected, and empowered to learn.

Teachers, through facing concrete situations in the classroom, begin to appreciate the importance of alternative methods of learning and communication. They understand that there is no unique and standard way to learn, but that each student has specific needs, rhythms and ways of acquiring knowledge. This awareness encourages them to use a variety of pedagogical strategies such as: differentiating content, adapting teaching materials, using visual aids, incorporating didactic games or multisensory methods that match the individual needs of students.

Experience with students with disabilities strengthens teachers' emotional and social preparation, helping them develop deep empathy, enduring patience, and the ability to build supportive relationships. It invites teachers to reflect on their personal biases, their perceptions of ability and disability, and their moral responsibility to ensure inclusive education. In this way, teachers begin to see students with disabilities as active agents in the learning process, not simply as passive recipients of assistance.

In technical and methodological terms, practical experience helps in the competent use of assistive technologies and alternative communication tools, such as PECS (Picture Exchange Communication System) or augmentative and alternative communication systems (AAC).

Teachers also become more skilled in implementing the principles of Universal Design for Learning (UDL), which aim to make learning accessible from the design stage, without the need for later adaptations that often categorize students as “special” (CAST, 2018).

Practical experience also plays a critical role in building a culture of professional reflection. Through concrete experiences, teachers learn to analyze their pedagogical actions, identify their strengths and weaknesses, and create a cycle of continuous learning. Conscious reflection on real-life situations helps the teacher make better-informed decisions, continuously adapt his or her approach, and develop an ethical, sustainable professional identity committed to the values of inclusion and social justice.

Another important aspect of this experience is the collaboration with other educational actors, such as school psychologists, speech therapists, social workers, and parents. This promotes the creation of a support network around the student and reinforces the shared vision for a quality education open to all. Teachers involved in such experiences begin to understand the importance of an interdisciplinary and community approach, where the school does not function in isolation, but in close cooperation with other factors of the child's development. Practical experience with students with disabilities is not simply an auxiliary component of the teacher's training, but a fundamental element that directly influences the construction of his educational philosophy. This experience helps them build a school environment where inclusion, understanding, and support are not just beautiful slogans, but principles lived in the daily life of the classroom.

Purpose of the Study

This study aims to examine the role that didactic materials and the physical environment play in the inclusion of students with special needs in primary education. The objective is to assess to what extent schools in the cities of Gjirokastrë and Përmet meet accessibility standards and provide support for teachers in the inclusive process. It aims to identify barriers that prevent the real inclusion of these children in the learning process and to provide direct recommendations for improving existing conditions.

Study participants

A total of 156 primary school teachers from two important cities in southern Albania, Gjirokastra and Përmet, participated in this study. The vast majority of participants were from public schools in the city of Gjirokastra, which is a well-known educational center in the region, while a smaller proportion of teachers came from schools in the city of Përmet. This

concentration also reflects the real distribution of teachers in these areas, taking into account the larger number of schools and students in Gjirokastra.

Regarding gender representation, the study included 15 male teachers, while the majority were female teachers. This gender ratio is representative of the real situation in primary education in Albania, where the teaching profession is dominated by women. This phenomenon is not uncommon internationally, as primary education is often seen as a field that attracts more women, while men are less represented in this sector. The gender composition of the pedagogical staff can also affect the way certain issues are addressed in the classroom, including the approach to inclusion and awareness of the needs of students with different difficulties.

In addition to gender, the study participants represented a wide range of professional experience and ages, thus providing a diverse perspective on issues of inclusion in primary education. This rich composition of experiences and different backgrounds contributes to a more complete and nuanced understanding of the educational reality in these cities and the challenges related to the inclusion of students with special needs. The selection and characteristics of the participants provide a reliable and representative basis for the analysis of the situation of inclusive education in the studied areas, allowing for the drawing of conclusions that can be used to improve educational practices and policies in this area.

Study research questions

1. How appropriate are didactic materials for students with special needs according to primary education teachers?
2. Are the school facilities physically accessible to these students?
3. What is the level of knowledge and use of assistive technologies by teachers?
4. Do teachers feel institutionally supported to work inclusively?

Study methodology

The study has a combined approach, using quantitative methods through a Likert 1–5 rating questionnaire and qualitative methods, through observations and open interviews with

teachers. Participants in the study are primary education teachers and assistant teachers from public schools in the cities of Gjirokaštër and Përmet. The selection was made intentionally, based on their experience with students with special needs. The instrument is a structured questionnaire, with 10 questions focused on the adaptation of teaching materials, physical accessibility, school support, use of ICT, institutional approach. The data were analyzed by calculating the averages for each question, observations on the physical spaces in several schools and recommendations derived from teachers' free comments and comparison with existing literature.

Results and Analysis

Teaching Materials

- Average: 3.57
- Interpretation: Teachers assess that the materials are moderately appropriate, but more personalization is needed.

4.2 Physical Environments

- Average: 3.28
- Interpretation: School facilities are often not accessible, especially in terms of physical infrastructure.

4.3 School Support

- Average: 3.03
- Interpretation: Teachers do not feel sufficiently supported in the provision of materials and aids.

4.4 Assistive Technologies and ICT

- Average: 3.48 for digital applications, 3.08 for ICT environments
- Interpretation: There is moderate knowledge, but the technological infrastructure is fragmented.

4.5 Policies and Awareness

- Awareness of rights – highest average: 4.53

- Interpretation: Teachers have high awareness of children's rights, but encounter difficulties in practical implementation due to lack of conditions.

Description of assessment data from the questionnaire

Average ratings given by teachers participating in the study, for each of the key areas related to the inclusion of students with disabilities in primary education:

No.	Evaluation Area	Arithmetic Mean
1	Didactic Materials	3.57
2	Physical Environment	3.28
3	School Support	3.03
4	Digital Applications	3.48
5	ICT Environment	3.08
6	Additional Resources for Inclusion	3.66
7	Institutional Policies	3.56
8	Awareness of Rights	4.53

Awareness of students' rights has resulted as the area with the highest average (4.53), reflecting a high level of awareness and professional commitment on the part of teachers. This indicator shows that teachers are aware of the importance of respecting the rights of students with special needs and are open to building a more inclusive and just environment within the school. This high awareness is an important step towards promoting inclusion, as to achieve real change, awareness and recognition of rights are the foundation on which practices and policies must be built.

In terms of additional resources for inclusion, didactic materials and institutional policies, the assessments are also positive, with averages exceeding 3.5. This indicates an acceptable level of institutional and professional efforts to provide the necessary tools and support for the effective inclusion of students with special needs. For example, the availability of adapted materials and policies that promote diversity and equality in schools are signs of a willingness to address the challenges of inclusion seriously and sustainably.

However, on the other hand, concrete support from the school and the technological-informational-communicative (ICT) environment were rated lower, with scores of 3.03 and 3.08, respectively. This shows that despite awareness and professional efforts, there are obvious deficiencies in the physical and technological infrastructure that would facilitate the work of teachers and the active participation of students. The lack of necessary equipment, the lack of technical support and sometimes even the lack of sufficient knowledge on the use of assistive technologies hinder the effective functioning of the inclusive learning process. This situation can negatively affect the motivation and ability of teachers to implement inclusive practices sustainably and effectively.

Furthermore, the physical environments in schools have received an average of 3.28, which reflects a still limited accessibility for children with disabilities. This situation is problematic, as adapted physical environments are essential to ensure that every student can move freely and actively participate in daily school activities. Narrow corridors, lack of ramps, unsuitable toilets, and inaccessible entrances are some of the main obstacles that prevent the full inclusion of these students. These limitations not only affect physical participation but also damage the self-esteem and sense of belonging of students with special needs within the school community. These data show a mixed picture, where awareness and professional will are present and strong, but where the lack of infrastructural and technological support, as well as limitations in physical environments, represent serious challenges that need to be addressed as a priority. To build a

truly inclusive and equitable education system, more investment is needed in appropriate equipment and facilities, as well as in ongoing training and assistance for teachers and specialists, so that inclusion is sustainable and effective in practice.

Discussion of results concerning the literature

The data collected from the questionnaires show that the didactic materials used for students with special needs are adapted to an average level, with a rating of 3.57 by teachers. This result reflects a situation that is not at all rare and is consistent with the findings of other studies, such as that of Hayes and Bulat (2017), who emphasize that the lack of flexibility and adaptation in the teaching content often represents a major obstacle to the inclusion of students with special needs in the educational process. Teachers point out that the materials currently used are not always built taking into account the principles of Universal Design for Learning (UDL), which aim to create an equal and appropriate approach for all students, regardless of their individual needs. This lack of flexibility in the didactic materials limits the opportunity for these students to actively participate and fully benefit from the teaching process.

Regarding the accessibility of physical school facilities, the results show an unsatisfactory situation, with an average of 3.28, indicating a significant lack of compliance with the requirements set out in the UN Convention on the Rights of Persons with Disabilities (CRPD), in particular Article 24, which obliges states to ensure that school facilities are accessible to all students. In most of the schools included in the study, the physical infrastructure does not meet these standards: corridors are narrow, toilets are not equipped with facilities for people with disabilities, while entrances often present obstacles to the free and safe movement of these students. This situation limits not only their movement within the school, but also the opportunity to participate actively and equally in all educational and social activities.

On the other hand, the use of technology as a support tool in the learning process has received positive assessments, although at a relatively unstable level. The average for the use of technological applications is 3.48, while for the digital environment it is 3.08. This shows that assistive technology has great potential to improve inclusion by providing additional tools that can help students with special needs to participate more actively in learning. However, as UNICEF (2017) also emphasizes, this impact is only possible if technology is supported by a

well-organized infrastructure and ongoing training for teachers and specialists who use it. Without these supports, technology may remain an unused resource or be used less effectively.

On a positive note, the level of awareness of the rights of children with disabilities is very high, with an average of 4.53, indicating a significant improvement in professional culture among teachers. This demonstrates that there is a growing willingness and awareness of the importance of inclusion and respect for the rights of these children. However, according to Booth and Ainscow (2011), awareness alone is not enough to achieve true inclusion. In order to have an inclusive education system, a profound transformation of the structures, teaching practices, and attitudes of all actors in the system is necessary, including educational policies, infrastructure, training and institutional support.

Thus, these data clearly show that inclusion in primary education in the studied areas is a complex process that requires continuous and multifaceted commitment, where the improvement of materials, physical conditions, and human capacities must go hand in hand to create a truly equal and supportive environment for all students.

Comment on interviews with teachers in light of the literature and theoretical analysis

Interviews conducted with primary school teachers highlight several key issues for the practical understanding of inclusion in our education system, particularly concerning the role of didactic materials and the physical environment. They confirm the findings of the contemporary literature and the data of our empirical study.

The impact of family acceptance and parent-school collaboration

One of the most prominent elements in the teachers' statements is the assessment of the parents' acceptance of the need or diagnosis as an essential condition for successful inclusion. This highlights the importance of an inclusive institutional culture, as highlighted in the relevant literature (Booth & Ainscow, 2011), which encourages collaboration with the family and sees this relationship as the foundation for sustainable inclusion.

Physical barriers in school environments

Teachers' descriptions of physical barriers, lack of ramps to upper floors, inadequate toilets, and traditional classrooms with difficult access for mobility directly align with the UNICEF report (2014) and CRPD standards (2006), which place emphasis on universal

accessibility. These barriers are not simply infrastructural, but constitute real obstacles to children's social and emotional inclusion.

Inappropriate teaching materials

Teachers clearly state that there is a lack of adapted support materials, and often teaching assistants improvise with simple tools. This confirms the theoretical finding that the lack of adaptation of materials according to the principles of Universal Design for Learning (UDL) significantly limits equal participation (Hayes & Bulat, 2017). The presence of standard notebooks and books, without digital, audio-visual, or alternative tools, hinders the personalization of teaching for children with different needs.

Institutional support and teacher flexibility

Although leaders are rated as supportive, teachers describe the situation as limited due to the lack of dedicated resources and structures, such as resource classes or emotional support units. This lack of structural support indicates a gap between teachers' awareness (high) and practical support (low) — a contrast also reflected in the results of your study's questionnaire (e.g., the lowest mean in school support: (3.03)).

Children's social approach in the classroom

Significantly, the acceptance of other students towards children with disabilities depends on the behavior and attitude of the parent. This confirms the importance of community awareness and a school culture that fosters empathy and coexistence, as also emphasized by the literature on the role of institutional culture for inclusion. The teacher interviews provide a realistic, honest and very valuable insight into the current situation in the schools included in the study. They not only confirm the findings from the questionnaires and literature, but also bring into focus social and emotional factors that cannot be measured by statistics alone. The combination of theoretical analysis with the practical experience of teachers constitutes a strong basis for concrete proposals for improvement, such as: investments in infrastructure, professional development of staff, provision of personalized materials and strengthening cooperation with parents.

Practical recommendations for institutions, teachers and policymakers

Practical recommendations for institutions, teachers and policymakers are essential for improving the quality of education and ensuring the inclusion of all students in the learning

process. These measures should be an integral part of educational strategies, focusing on inclusive development and creating a suitable school environment for every child.

Educational institutions:

- Invest in improving physical infrastructure, ensuring accessible environments for all students, including those with disabilities. This includes building ramps, adapted toilets, directional signage, and creating safe and appropriate spaces for learning and extracurricular activities.

- Establish support units within schools that provide adapted teaching materials, technical assistance and advice to teachers so that they are able to face the challenges of teaching a diverse group of students. These units could include special education specialists, psychologists, speech therapists and social workers working in collaboration with the pedagogical staff.

- Include as a priority in school development plans policies for inclusion, diversity and equity in education. This inclusion should be reflected in the short-term and long-term objectives of educational institutions, promoting personalized approaches to learning, teacher preparation and active involvement of the community and parents in school life. In this way, schools can guarantee an equitable and motivating educational environment for all.

For teachers:

Teachers play a key role in implementing inclusive education and need to be supported through continuous training and professional collaboration. They need to be equipped with the knowledge and skills needed to cope with diversity in the classroom and ensure that every student has equal opportunities to learn.

- To attend specialized training on the use of assistive technologies and flexible approaches to teaching, which enable the adaptation of methods according to the individual needs of students. Training should focus on techniques for personalizing learning, the use of supportive digital platforms, as well as strategies for the active involvement of each student in the learning process.

- Seek and encourage collaboration with colleagues and specialists in the field such as psychologists, social workers or teaching assistants, to share good practices and build a supportive school culture. The exchange of experiences and ideas helps to improve the approaches used and the professional development of pedagogical staff.

- Document and analyze their teaching practices for the purpose of reflective improvement. This self-evaluation process can include pedagogical diaries, student surveys, post-lesson reflections, and student progress analyses, helping the teacher identify strengths and areas for improvement in his or her educational approach.

For policymakers:

Policymakers have a responsibility to create a legal and institutional framework that supports inclusive education sustainably and effectively. They must take concrete steps to ensure that inclusion does not remain a theoretical objective but is practically implemented at every level of the education system.

- They should review national guidelines and policies on inclusion in education, including clear and mandatory standards for infrastructure, adapted learning materials and universal access for all children, regardless of their abilities. Policies should aim to create equal conditions for all students, as well as eliminate barriers that hinder active participation in the educational process.

- It is also necessary to guarantee dedicated funds for inclusive education. These funds should be used to provide assistive technology equipment, specialized pedagogical resources, and to employ support staff, such as teaching assistants, school psychologists, and social workers.

- Furthermore, policymakers should support and promote awareness-raising campaigns aimed at informing and actively involving parents and the community at large on the importance of inclusive education. Educating the community on children's rights and the benefits of an inclusive education system helps create a more open, supportive and equitable culture for all children.

Conclusion

The study findings provide a clear and detailed overview of the challenges and efforts to achieve inclusive education in primary schools in the cities of Gjirokastrë and Përmet. The analyses conducted show that teachers are extremely aware and have a strong commitment to including students with special needs in the educational process, showing a great desire to create the most appropriate and supportive environment. However, beyond this personal will and commitment, there are obvious obstacles that seriously limit the effective implementation of inclusion.

One of the main challenges highlighted by the data is the lack of materials adapted for students with special needs, as well as difficulties in physical access for students with disabilities. These infrastructural barriers and the lack of assistive devices hinder much of the potential of inclusive teaching and make some of the basic principles of modern and inclusive education impossible. Furthermore, the lack of institutional support at the level of schools and education authorities results in an insufficient development of teachers' capacities and a lack of coordination between the different actors that should be engaged in this process.

The study highlights an urgent and necessary need to adopt a comprehensive and integrated approach to the process of inclusion in primary education, which goes beyond simply improving physical infrastructure and providing adapted materials. This approach requires serious and sustainable investment in the professional development of teachers, providing continuous and specialized training on techniques, methodologies and best practices of inclusive teaching. This training will empower teachers with the knowledge and skills necessary to effectively address the diversity of students in the classroom and to create a learning environment that includes and supports each student, regardless of their specific needs.

Another important dimension that emerges from the study is the necessity of creating and implementing clear, unified and coordinated policies for educational inclusion, which should be harmonized with recognized international standards in the field of the rights of persons with disabilities and inclusive education. These policies should be based on essential documents such as the Convention on the Rights of Persons with Disabilities (CRPD), the guidelines of the United Nations Educational, Scientific and Cultural Organization (UNESCO), and the concept of Universal Design for Learning (UDL), which promotes the creation of teaching

environments suitable for all learners, taking into account their individual needs from the planning stages.

These conclusions emphasize that inclusion should not be seen only as an ethical obligation or a moral imperative to respect the rights of children with special needs, but as a key and fundamental element for the construction and development of an education system that is truly fair, equitable and oriented towards high quality for all students, without any exception. Inclusion thus becomes a fundamental factor for the social and educational advancement of Albanian society, directly contributing to the creation of equal opportunities for personal and professional development for every student, regardless of the challenges they may face.

Furthermore, inclusion helps to break down the social, cultural and psychological barriers that often accompany individuals with special needs, reducing stigmatization and negative stereotypes that affect their self-esteem and integration into the community. By creating an inclusive educational environment, the school system helps to build a more tolerant, open and supportive society, where diversity is seen as an asset and a source of strength, not as a problem or obstacle. Through these coordinated, well-planned efforts and based on contemporary principles and practices, the Albanian education system can become more inclusive and flexible, being able to respond effectively to the diverse and complex needs of its students. This will bring about an overall improvement in the quality of education and will contribute to building a more just society, where every child has the opportunity to reach his or her maximum potential and build a better future.

Abstract

Pharmacy students face substantial challenges to their well-being due to the rigorous demands of their education. This review explores the multifaceted stressors affecting pharmacy student mental, emotional, and physical health, including heavy academic workloads, frequent examinations, imposter syndrome, financial stress, and the impact of the COVID-19 pandemic. Studies indicate elevated rates of anxiety, depression, and burnout among pharmacy students—often exceeding those of their peers in other health disciplines. These challenges not only undermine students' academic performance and quality of life but may also affect future professional empathy and patient care. The review also highlights potential solutions, such as curricular adjustments, financial support strategies, wellness programs, and institutional initiatives promoting mental health. By addressing these issues holistically, pharmacy education can foster a healthier, more resilient, and effective healthcare workforce.

Keywords: Well-being, pharmacy, mental health, anxiety

Introduction

Well-being is a broad concept including an individual's mental, emotional, and physical health, as well as overall life satisfaction. The U.S. Centers for Disease Control and Prevention (CDC) defines personal well-being as “the presence of positive emotion and moods, the absence of negative emotions, satisfaction with life, fulfillment, and positive functioning” (Schlesselman et al., 2020). In the context of pharmacy education, student well-being refers to a mental state in which pharmacy students can thrive academically, maintain mental and emotional resilience, and develop professionally despite the rigors of their training (Schlesselman et al., 2020).

Pharmacy programs are widely regarded as rigorous, characterized by a heavy load of coursework, frequent examinations, and intensive practical training. This demanding curriculum – combined with the pressure to maintain high performance for competitive

residencies and career opportunities – can put students under stress. The intense schedule often leaves little time for self-care or balance, further exacerbating stress and contributing to a risk of burnout (Victoria Isgett, 2024). As a result, many pharmacy students experience elevated levels of psychological distress; approximately one in four pharmacy students report clinically significant symptoms of anxiety or depression (Fischbein & Bonfine, 2019; Kang et al., 2019; Yalçın et al., 2024). A prevalence considerably higher than that observed among age-matched peers in less demanding academic programs (Babal et al., 2020) and than that of the general population (Chapman et al., 2020). Such findings underscore that the high academic pressure and demanding curriculum of pharmacy school can impact students' mental and emotional health.

One critical consequence of compromised student well-being is burnout, a syndrome characterized by emotional exhaustion, reduced empathy, and a diminished sense of accomplishment. Studies have linked burnout in pharmacy students with a host of negative outcomes, including higher levels of depression and anxiety, increased suicidal ideation, academic underperformance, and even intentions to drop out of school (Babal et al., 2020). In addition, chronic stress and burnout can erode important professional qualities; for example, student pharmacists often exhibit reduced empathy and increased cynicism over the course of their education (Victoria Isgett, 2024).

This erosion of well-being is not only detrimental to students' personal and academic development but also raises concerns for patient care, as diminished empathy and persistent stress may impair future pharmacists' ability to provide high-quality care. The well-being of pharmacy students, therefore, is significant not only for the health and success of the students themselves but also for the quality of care they will deliver as health professionals. In healthcare professions, burnout, stress, and emotional exhaustion have been associated with an increased number of medication errors and reduced patient satisfaction (Phillips et al., 2020).

In light of the importance of this issue, the objective of the present review is to examine and summarize the existing literature on the well-being of pharmacy students. Herein, we will identify the key factors and challenges affecting pharmacy student well-being (academic pressures, mental health concerns, etc.) and discuss the potential solutions for these challenges. Ultimately, this review aims to inform and guide educational strategies to support the well-being of pharmacy students and foster a healthier, more effective future pharmacy workforce.

Academic Stress and Workload

Pharmacy education is known for its rigorous curriculum and heavy workload. Students typically manage a high volume of coursework, including extensive lectures, labs, and assignments, often carrying a large number of credit hours each term. Frequent exams are a key part of pharmacy school. Students often face assessments, quizzes, and practical tests back-to-back, sometimes with multiple exams in a single week. This fast-paced schedule leaves little time to relax. Research shows that demanding coursework, frequent exams, and a heavy workload are major sources of stress for pharmacy students (Babal et al., 2020). Additionally, advanced clinical training, such as practice rotations in the final years of a pharmacy program, adds more pressure. During these rotations, students apply their knowledge in real healthcare settings under supervision, which can be stressful. Managing patient care, preparing case presentations, and balancing rotation hours with coursework further increase the workload. It's no surprise that many pharmacy students feel overwhelmed by these combined academic and clinical demands. The competitive nature of earning high grades and securing sought-after rotations or residencies can compound this academic pressure (Victoria Isgett, 2024).

The demanding schedule in pharmacy school can significantly disrupt students' sleep patterns and overall well-being. Many pharmacy students sacrifice sleep to keep up with studying and assignments, leading to chronic sleep deprivation. In a survey of pharmacy students in the didactic (classroom) portion of the program, over 55% were classified as poor sleepers (Pittsburgh Sleep Quality Index >5) (Cates et al., 2015). Such high rates of poor sleep quality are alarming. They rival those seen in populations with known sleep challenges (Cates et al., 2015). Lack of sleep affects concentration, memory, and mood, creating a cycle that makes academic performance and mental health worse. The demanding schedule also leaves little time for self-care and relaxation. Many students feel drained and struggle to find time for exercise, hobbies, or socializing (Babal et al., 2020). For example, a qualitative study noted that multiple simultaneous deadlines often left pharmacy students feeling “overwhelmed and with limited time to spend in activities that reduced stress.” (Babal et al., 2020). Over time, this imbalance can negatively impact their overall quality of life – personal relationships may strain, and burnout can begin even before they graduate. In short, the high course load, frequent exams, and clinical training requirements in pharmacy school often lead to sleep disturbances, fatigue, and diminished well-being for students.

The competitive nature of pharmacy education further exacerbates these stressors. Admission into pharmacy programs is competitive, and that often continues during the program in subtle ways. Class rankings, comparisons of GPAs, and competition for limited internship or residency positions can foster a high-pressure environment. Students may feel in competition with their peers for academic recognition or opportunities, which can hinder collaboration and increase stress. The culture in some pharmacy schools emphasizes constant achievement and may inadvertently discourage showing vulnerability. Studies across health professional schools have observed that “*academic overload, pressure to succeed, and competition*” are pervasive stressors that can conflict with student well-being (Fischbein & Bonfine, 2019). In pharmacy school, this might manifest as students feeling they must constantly outperform others, leading to imposter-like self-doubt if they are not at the top. The academic culture – if it rewards perfection and competitiveness – can make students fear that seeking help or admitting struggle will be seen as weakness. Over time, this competitive and high-pressure atmosphere can diminish students’ intrinsic motivation and contribute to burnout. In sum, imposter syndrome, fear of failure, and the competitive climate of pharmacy programs are interrelated factors that significantly contribute to student stress and mental health challenges. Recognizing and addressing these underlying stressors is crucial in any effort to improve the mental well-being of pharmacy trainees.

Mental Health Challenges Among Pharmacy Students

The rigorous nature of pharmacy programs has a clear impact on student mental health. Research indicates that pharmacy students experience high levels of anxiety, depression, and burnout. In a multi-institution survey in the United States, approximately 18% of pharmacy students met the clinical cutoff for depression and 21% met the cutoff for anxiety (Fischbein & Bonfine, 2019). Notably, the anxiety rate among pharmacy students was nearly double that of their medical student counterparts in the same study (21% vs. 11%) (Fischbein & Bonfine, 2019), suggesting pharmacy students may be particularly prone to anxiety. Other studies using self-report measures have found even higher prevalence rates. For example, an investigation in the Middle East reported that 51% of pharmacy students exhibited signs of depression and about 29% showed symptoms of anxiety (Fischbein & Bonfine, 2019). Despite differences in research methods, studies agree that many pharmacy students experience mental health challenges during their education. Comparatively, these figures are on par with or exceeding those reported in other health professional students. (By contrast, surveys of medical students have found

roughly 19–44% with anxiety and 27% with depression in various cohorts (Fischbein & Bonfine, 2019), indicating that pharmacy students face a similarly heavy mental health burden.

A number of key psychological stressors underlie the mental health challenges faced by pharmacy students. Imposter syndrome – the persistent feeling of being inadequate or a “fraud” despite evident success – is frequently reported among high-achieving student pharmacists. Many pharmacy students internally question whether they are competent enough, attributing their accomplishments to luck or misunderstanding, and live in fear of being “exposed” as not deserving their place. Recent data suggest the imposter phenomenon is noticeably prevalent in pharmacy education. One study found that 58% of pharmacy students experience frequent or intense imposter feelings as measured by the Clance Impostor Phenomenon scale (Rivkin, 2023).

Many pharmacy students struggle with a deep fear of failure, often linked to impostor feelings. Accustomed to academic success, they may find the transition to a demanding professional curriculum overwhelming. Students may feel enormous pressure not to fail an exam or perform poorly, as they equate academic failure with personal failure. This fear is heightened by the high stakes of pharmacy training, where poor academic performance can affect program progression and future career opportunities, including residencies and jobs. Research shows that students often exaggerate the consequences of failure, fearing embarrassment or disappointing others. In one study, students believed failing exams would lead to “insults and social problems,” increasing anxiety and even depressive thoughts. This intense fear of failure and aversion to any mistakes drives some to over-study or avoid seeking help, and can manifest as “maladaptive perfectionism.” Indeed, aiming for perfection and an excessive worry about not measuring up have been shown to significantly increase stress among pharmacy students and pharmacists. For example, one qualitative study found students expressing self-critical thoughts like “I feel like an idiot” or “I need to measure up” when discussing academic pressures. Such internal pressures contribute to imposter feelings and erode self-confidence over time (Schommer et al., 2020).

Financial Stress

Pharmacy education is often associated with high tuition costs, particularly in countries where professional degrees require multiple years of study. In the United States, for example,

pharmacy students graduate with an average debt exceeding \$170,000, leading to long-term financial pressure post-graduation (Amin et al., 2021). To mitigate financial burdens, many pharmacy students seek part-time employment while studying. While jobs in pharmacies or healthcare settings may provide valuable experience, working long hours can negatively impact academic performance and overall well-being (Okogbaa et al., 2020). Financial insecurity can significantly contribute to mental health issues among pharmacy students. Chisholm-Burns et al. (Chisholm-Burns et al., 2017) found that a greater fear of debt was associated with higher perceived stress among pharmacy students. Higher student loan amounts correlated with financial anxiety, whereas students with better financial knowledge experienced less stress. Moreover, financial stress may also limit students' ability to participate in extracurricular activities or wellness programs, reducing opportunities for stress relief and professional networking. The pressure to repay student loans after graduation may further lead to career-related stress, forcing students to prioritize high-paying jobs over their preferred career paths (Adams et al., 2016).

Impact of Covid-19 Pandemic

The COVID-19 pandemic disrupted pharmacy education, forcing a rapid shift from in-person instruction to virtual learning environments (Engle, 2020). In a matter of weeks, pharmacy programs moved lectures online and paused or restructured hands-on training. This emergency transition introduced numerous challenges: students and faculty grappled with technology access issues, reduced face-to-face interaction, and the need to adapt teaching methods and materials for online delivery (Shoair, n.d.). Maintaining student engagement became difficult in the absence of classroom energy, and motivation often waned with the loss of campus routines. In one survey, 75.6% of pharmacy students reported that not being able to physically access campus lowered their motivation to study, which was strongly linked to a perceived drop in their academic performance (Kalabalik-Hoganson et al., 2021). Ensuring academic integrity and fair assessment online was also a concern, as instructors had to redesign exams and monitor for cheating in a remote setting (Shoair, n.d.). Despite these challenges, some studies noted that overall academic performance did not universally decline; outcomes varied by course and year level, with certain cohorts managing to perform as well or even better online than in person. For example, second-year pharmacy students in one program had lower final exam scores with virtual learning compared to face-to-face, whereas third-year students actually performed better across all assessments in the virtual environment. Such mixed results

suggest that the impact on academic performance depended on the context and how effectively instructors and students adapted to the new format (Shoair, n.d.).

A major concern was the quality of practical and clinical education delivered online. Hands-on lab classes (e.g. compounding, dispensing simulations) and clinical rotations were especially difficult to replicate virtually. Students frequently cited the lack of human interaction and immediate feedback in online classes as a drawback. Many felt that certain skills could not be fully learned without in-person practice, and nearly half of pharmacy students in one study expressed a negative perception of online practical and clinical coursework. Indeed, only about 37% of students said they were satisfied with the quality of online lab classes, indicating widespread dissatisfaction with the substitutes for hands-on training (Pires, 2022). Experiential learning suffered severe disruptions: at the pandemic's peak, many hospitals and community sites suspended student rotations to minimize exposure risk. For instance, the University of the Pacific lost approximately 220 advanced pharmacy practice experience (APPE) rotations in spring 2020 due to site closures, necessitating a quick pivot to virtual APPEs to prevent delaying graduation. Colleges of pharmacy and instructors scrambled to create remote activities, simulations, and telehealth opportunities so students could attain required competencies from home (Law et al., 2021). While accreditation bodies offered flexibility in meeting educational standards during this crisis, the interruption of in-person labs and clerkships unquestionably impacted training quality (Pires, 2022). Pharmacy students had to become more self-directed learners, but many feared their clinical and technical skills wouldn't be as strong as those of pre-pandemic graduates. In a survey of students in New York and New Jersey, nearly 49.4% believed their educational goals could not be achieved to the same degree online as with conventional in-person instruction (Kalabalik-Hoganson et al., 2021). Overall, the sudden shift to virtual learning, though necessary for safety, posed significant academic challenges. It challenged the resilience of pharmacy education and exposed gaps, such as the need for better virtual lab methods (Pires, 2022).

Figure 1: The pandemic caused a sharp decline in pharmacy students’ well-being. This chart of first-year students shows the drop in those “thriving” (white) and the surge in those “struggling” (gray) or “suffering” (black) after campuses closed in March 2020. The percentage “thriving” fell from about 82% before lockdowns to 63% after, while reported “suffering” more than quadrupled (rising from ~1% to 6%) [21]

The fear of infection, both for themselves and their families, and constant news of COVID-19’s impact created an atmosphere of chronic stress. A first-person perspective noted that the “physical isolation, worry for loved ones, and anxiety for the future” during the pandemic had taken a toll on students’ mental and physical well-being (Stone & Pate, 2020). Studies confirm a marked rise in psychological distress among pharmacy students during this time. For example, a cross-sectional study one year into the pandemic found over one-third of students showed symptoms of depression or anxiety: 37% screened positive for at least mild-to-moderate depression, and another 37% had severe to extremely severe anxiety levels (Hammoudi Halat et al., 2022). Similarly, another study found that the proportion of first-year pharmacy students experiencing emotional struggles nearly doubled after the COVID transition, rising from 16.8% to 31.2%, as can be seen in Figure 1. (Hagemeier & Dowling-McClay, 2021).

The job market for new pharmacy graduates during the pandemic was another source of anxiety, though its impact evolved over time. Initially, in mid-2020, many students were uncertain if pharmacies would be hiring or if budgets would freeze due to economic recession. The usual process of residency and job interviews moved online, and networking opportunities

were limited. A commentary by a 2020 graduate described the “uncertainty about becoming licensed and entering the job market in the midst of a pandemic” as a heavy cloud hanging over students (Stone & Pate, 2020).

Discussion

Addressing academic stress and mental health challenges among pharmacy students requires a multifaceted approach. Fortunately, recent studies and initiatives have shed light on strategies that can help mitigate stress and improve student well-being. Below are several evidence-based interventions and recommendations:

Financial Remedies: Health professions colleges, including pharmacy schools, have a responsibility to alleviate the financial burden of tuition and fees to attract top students. One successful approach at the University of Tennessee Health Science Center College of Pharmacy involved minimizing tuition increases and even reducing tuition. Additionally, medical schools nationwide are implementing debt reduction strategies, such as Columbia University’s shift from loans to scholarships and New York University’s full-tuition scholarships funded through extensive fundraising. To further address student debt, health professions schools should consider three key strategies: (1) lowering tuition by optimizing curriculum delivery or requiring service in underserved fields or locations, (2) participating in scholarship and loan repayment programs through the Health Resources and Services Administration, and (3) assisting students in accessing loan forgiveness programs like the Public Service Loan Forgiveness Program, which encourages service in underserved communities and enhances long-term workforce retention (Chisholm-Burns et al., 2017).

Curricular and Scheduling Adjustments: Pharmacy educators are increasingly exploring curriculum changes to reduce undue stress without compromising learning. For example, clustering exams or having many high-stakes tests in a short period clearly heightens anxiety; one study noted that the timing of examinations was among the most prominent stressors for pharmacy students (Babal et al., 2020). To counter this, some programs have implemented more balanced assessment schedules. A study in medical education found that spacing out exams, reducing contact classroom hours, and adopting pass/fail grading for certain courses led to significantly lower psychological distress among students while maintaining academic performance (Babal et al., 2020). Pharmacy programs can similarly adjust workloads by coordinating exam timetables (to avoid the “pile-up” of tests), offering more pass/fail or

competency-based evaluations in early years, and reducing unnecessarily heavy credit loads. Such changes have been shown to improve student satisfaction and even improve exam scores (Babal et al., 2020).

Promotion of Help-Seeking: Given the high rates of anxiety and depression in pharmacy students, it is vital that they have access to mental health services and feel empowered to use them. However, studies reveal that pharmacy students are often reluctant to seek help. In the previously mentioned survey, only 11% of pharmacy students had used campus counseling services, versus 49% of medical students (Fischbein & Bonfine, 2019). To overcome this, pharmacy schools should work to normalize mental health support as a part of student success. This includes providing confidential counseling services, stress management workshops, and regular mental health screenings for students. Schools can hold orientations or seminars that openly discuss anxiety, burnout, and imposter syndrome, thereby validating students' experiences.

Wellness Programs and Stress-Reduction Interventions: Incorporating wellness and stress management into the pharmacy curriculum can equip students with healthy coping mechanisms. A growing body of evidence supports interventions like mindfulness meditation, yoga, and relaxation training for reducing student stress. In fact, a recent review identified several programs across pharmacy schools focusing on mindfulness, meditation, and other well-being activities, all of which received positive student feedback (Mayberry et al., 2022). As one example, a 6-week yoga and meditation program introduced for pharmacy students and faculty led to measurable reductions in self-reported stress and anxiety levels (Lemay et al., 2021). Students in the program reported feeling calmer and more mindful after the weekly yoga sessions, suggesting that even a brief extracurricular intervention can improve mental well-being. Other schools have offered elective courses in mindfulness or one-day wellness retreats with activities like yoga, tai chi, or art therapy, and have noted improvements in students' stress management skills. Even simple practices – such as short guided meditation sessions before class or providing a “wellness room” on campus for relaxation – can make a difference when done consistently. These programs not only help students cope with current stress but also teach lifelong skills for resilience. Academic institutions are encouraged to experiment with and research such wellness interventions as part of a comprehensive approach to student mental health.

Institutional Commitment to Well-being: Ultimately, tackling pharmacy student stress and mental health challenges requires an institutional commitment to creating a healthier

learning environment. American national pharmacy organizations have recognized this need. In 2019, the American Association of Colleges of Pharmacy (AACCP) collaborated with other major pharmacy bodies to issue recommendations on student pharmacist well-being. The results emphasized incorporating self-care and wellness strategies into the pharmacy curriculum and student services (Mayberry et al., 2022). It highlighted initiatives such as teaching time management and resiliency skills, providing rewards or incentives for students who engage in healthy behaviors, and instituting formal training on mental health first aid and burnout prevention (Mayberry et al., 2022).

Conclusion

The challenges of academic stress and mental health issues in pharmacy education are now widely documented through studies and surveys. Pharmacy students face intense workloads, high expectations, and internal pressures that can negatively affect their well-being. The good news is that awareness of these issues is leading to action. By restructuring onerous aspects of the curriculum, encouraging a supportive community, and providing targeted wellness resources, pharmacy programs can help students not only survive their education but thrive within it. The evidence suggests that relatively simple interventions – from adjusted exam schedules to yoga classes – can yield improvements in student stress levels and mental health outcomes. Going forward, an academically rigorous but *humanistic* pharmacy education model is the goal: one that maintains high standards while also prioritizing student wellness. This balanced approach will produce pharmacists who are not only knowledgeable and competent, but also resilient, empathetic, and better prepared to care for both their patients and themselves.

Abstract

This study investigates the intricate relationship between social media usage and emotional well-being among adolescents, a demographic increasingly engaged in digital communication platforms. As social media embeds itself as a foundational element in the lives of young individuals, it becomes essential to understand its ramifications on mental health. Utilising a mixed-methods approach, this research encompasses quantitative surveys and qualitative interviews to gather a multidimensional view of adolescents' social media behaviours and emotional states. The findings reveal that social media can exert both beneficial and detrimental influences on emotional well-being. Positive interactions—characterised by supportive comments and connections with peers—are frequently linked to heightened self-esteem and diminished feelings of isolation. In stark contrast, excessive engagement and exposure to harmful content, such as cyberbullying and unrealistic portrayals of life, correlate with increased levels of anxiety and depression. A pivotal aspect of the research underscores the nature of social media engagement; while passive consumption often leads to negative emotional repercussions, active participation fosters community, belonging, and a supportive environment. This distinction highlights the necessity of cultivating digital literacy and promoting responsible social media practices among adolescents. By encouraging healthy online interactions and fostering critical evaluation of content, parents and educators can significantly enhance the emotional resilience of young users. The contributions of this study enrich the expanding discourse on adolescent mental health, offering valuable insights that may guide the development of targeted interventions. These initiatives aim to alleviate the adverse

effects associated with social media while simultaneously harnessing its potential to foster positive outcomes, thereby equipping adolescents with the tools necessary for navigating the digital landscape effectively.

Keywords: Social Media, Emotional Wellbeing, Adolescents, Mental Health

Introduction

In recent years, social media has emerged as a powerful tool for communication, information sharing, and entertainment, especially among young people. Adolescents, in particular, are increasingly dependent on various social media platforms to stay connected with peers, express their opinions, and explore personal interests. With the easy availability of smartphones and internet access, social media usage among adolescents has grown rapidly, becoming an integral part of their daily routines.

While social media offers numerous benefits, including enhanced social interaction, creativity, and access to information, concerns have been raised about its potential impact on the emotional well-being of adolescents. Emotional well-being refers to a person's ability to manage emotions, build positive relationships, and cope with life's challenges. Excessive or unhealthy use of social media has been linked to feelings of anxiety, loneliness, low self-esteem, and social comparison.

The present study aims to understand the relationship between social media usage and emotional well-being in adolescents. It seeks to explore how different patterns of usage and types of content influence their emotions and mental health. The study's findings will be valuable for parents, educators, and policymakers in promoting healthy digital habits and safeguarding the emotional well-being of young people.

Literature Review

The growing presence of social media in adolescents' lives has attracted considerable attention from researchers worldwide. Several studies have examined how social media influences various aspects of young people's mental and emotional health. Social media platforms such as Instagram, Facebook, Snapchat, and TikTok provide opportunities for self-expression, peer interaction, and access to information. However, they also expose adolescents to risks such as cyberbullying, negative social comparison, and exposure to harmful content.

Research by Keles et al. (2020) highlighted a strong association between prolonged social media use and increased symptoms of anxiety, depression, and emotional distress among adolescents. Similarly, Twenge and Campbell (2018) reported that teenagers who spend more time on social media platforms often experience lower self-esteem and higher feelings of loneliness compared to their peers with moderate or limited usage.

Other studies, however, have emphasized the positive aspects of social media, such as enhanced social connectivity and opportunities for emotional support (Best et al., 2014). Adolescents use these platforms to maintain friendships, share personal experiences, and seek advice, which can contribute positively to their emotional well-being.

Despite numerous studies, there remains a need for further research focusing on how specific patterns of social media usage influence emotional health, especially in diverse cultural settings like India. The present study seeks to address this gap by analyzing both the positive and negative outcomes of social media use on adolescents' emotional well-being.

Research Methodology

This study adopts a mixed-method research approach to explore the relationship between social media usage and emotional well-being in adolescents. The combination of both quantitative and qualitative methods ensures a comprehensive understanding of the topic.

Research Design

A descriptive research design was followed to collect detailed information about adolescents' social media habits and their emotional experiences. Both a structured survey and in-depth interviews were conducted to gather data.

Sample Selection

The study targeted adolescents aged 13 to 19 years from both urban and semi-urban areas. A total of 300 adolescents participated in the survey, selected using a simple random sampling method. Additionally, 20 participants were chosen for in-depth interviews based on their willingness to share personal experiences.

Data Collection Tools

A structured questionnaire was designed to collect information on time spent on social media, types of platforms used, nature of online interactions, and self-reported emotional states. The in-depth interviews used a semi-structured interview guide focusing on personal experiences, emotional effects, and coping strategies.

Data Analysis

Quantitative data from surveys were analyzed using descriptive statistics and correlation analysis. Qualitative data from interviews were examined using thematic analysis to identify key patterns and emotional themes.

Ethical Considerations

Consent was obtained from all participants and their guardians where necessary. Participants were assured of privacy, confidentiality, and the voluntary nature of their participation throughout the study.

Results and Discussion

Results

The survey data revealed that a majority of adolescents (72%) use social media daily, with an average screen time of 3–5 hours. The most popular platforms among respondents were Instagram, WhatsApp, and YouTube. Around 60% of participants admitted checking their social media accounts several times a day.

In terms of emotional impact:

- 45% reported feelings of anxiety when disconnected from social media.
- 53% experienced mood changes based on online feedback such as likes, comments, and followers.

- 48% acknowledged comparing themselves with others online, leading to self-doubt and low self-esteem.

Qualitative interviews revealed that excessive exposure to negative content, online bullying, and unrealistic portrayals of life contributed to emotional distress. However, moderate and meaningful use of social media enhanced feelings of happiness, belonging, and motivation.

Discussion

The findings align with earlier studies by Keles et al. (2020) and Twenge & Campbell (2018), which reported similar emotional risks associated with excessive social media use. This study

also highlights the dual nature of social media — offering both emotional benefits and challenges. The results suggest the importance of promoting balanced social media habits among adolescents to protect their emotional well-being.

Conclusion and Recommendations

Conclusion

This study explored the relationship between social media usage and emotional well-being among adolescents. The results indicate that while social media serves as a valuable platform for connection, entertainment, and emotional support, excessive and unregulated use can negatively impact emotional health. A significant number of adolescents in the study reported experiencing anxiety, low self-esteem, and emotional distress due to constant online engagement, social comparison, and exposure to negative content. On the other hand, those who maintained balanced and positive online interactions reported better emotional well-being, increased happiness, and a sense of belonging.

The study confirms that the emotional effects of social media on adolescents are complex and depend largely on the nature, frequency, and purpose of usage. It highlights the importance of responsible digital habits and emotional awareness in today's adolescent population.

Recommendations

- Encourage digital awareness programs in schools to educate adolescents about healthy social media habits.
- Parental guidance and open communication should be promoted to help adolescents manage emotional challenges related to online activity.
- Policymakers and mental health professionals should design interventions focused on promoting emotional well-being in digital environments.
- Further research is recommended to explore long-term psychological effects and cultural influences on adolescent social media behaviour.

Abstract

Media have become the first source of information we turn to when seeking to deepen our knowledge. As a result, the number of ways to achieve well-being - both mental and physical - continues to grow. One form of supporting health is listening to music. Studies confirm that listening to particularly selected music tracks has an impact on the physiological state of the human body. It has been observed that music reduces the secretion of the stress hormone cortisol and increases the release of endorphins. Moreover, it has been confirmed that listening to music reduces both physical and mental tension, which may further contribute to emotional balance. Listening to binaural beats - an acoustic phenomenon in which two slightly different frequencies are played separately in each ear, resulting in the perception of a third rhythm - has been shown to improve working memory. Literature also points to many findings that confirm the positive effects of listening to classical music. It has been found to significantly enhance performance in cognitive tasks and support working memory functioning. The development of media and new technologies is inevitable and although it brings certain risks, it is primarily associated with countless opportunities to improve our quality of life. Particular attention should be paid to the significant role technology plays in treating individuals with speech impairments. There are tools, such as applications, which can diversify the therapy process¹. Afasystem primarily offers exercises aimed at training basic language functions, leading to improving the effectiveness of therapy. RehaCom includes a collection of training programs that allow speech therapists to choose exercises tailored to specific language abilities. MÓWik is a system that supports non-speaking individuals, significantly improving their quality of life by enabling them to communicate. Summarizing, media and technology can help us achieve well-being.

Keywords: music, technology, well-being, speech therapy

Introduction

The use of media and technology has grown significantly throughout the last decade. This rapid development has not only transformed the way individuals access and process information but has also introduced new and innovative methods for supporting mental and physical well-being. As media become the primary source of knowledge for many, their influence on everyday life continues to expand. One increasingly recognized area of interest is the therapeutic potential of music and sound-based interventions. Numerous studies have demonstrated that listening to music can have a significant impact on the human physiological state. Specifically, it has been shown to reduce the secretion of cortisol, the hormone associated with stress, while simultaneously increasing the release of endorphins, which are linked to improved mood and a sense of well-being. Moreover, music has been found to decrease both mental and physical tension, contributing to emotional regulation and psychological balance. An area gaining particular attention is the use of binaural beats, a phenomenon where two slightly different auditory frequencies are presented to each ear separately, leading the brain to perceive a third tone. Even though it doesn't actually exist. Research suggests that binaural beats may positively influence cognitive processes, such as improving working memory and enhancing focus. Similarly, classical music has been widely explored for its cognitive benefits, with studies indicating that it can enhance performance in complex mental tasks and support various executive functions. Beyond the psychological and cognitive domains, media and technology are playing an increasingly vital role in therapeutic practices, especially for individuals with speech and communication impairments. The development of specialized applications and digital tools has transformed traditional therapy approaches, making them more personalized, engaging, and accessible. For instance, platforms such as Afasystem are designed to support the training of fundamental language functions, improving the overall efficacy of speech therapy at the same time. RehaCom provides a customizable training programs that allow professionals to tailor exercises to the specific linguistic abilities of each patient. Meanwhile, MÓWik offers a comprehensive communication system for non-verbal individuals, significantly enhancing their ability to interact with others and improving their quality of life by giving them a chance to communicate. While the growing reliance on digital media and technology is often accompanied by concerns regarding overuse and dependency, their application in the context of health and therapy presents a wide range of opportunities. These innovations are not only reshaping the therapeutic landscape but are also contributing meaningfully to the promotion of well-being. As such, it is essential to continue exploring the

potential of media and technological advancements in ways that support mental, emotional, and physical health.

Literature review

The influence of music on the human body

Listening to some genres of music has an impact on the physiological state of the human body. It can reduce cortisol levels, lower the heart rate and decrease mean arterial pressure. Research has shown that it can also increase positive feelings and decrease negative feelings. This aligns with research indicating that music influences the activity of brain structures such as the amygdala and the mesolimbic reward system, which play a key role in emotional and motivational processes. In addition, research shows that engaging in group music activities can lead to synchronization among participants, fostering positive feelings of connection and social bonding. These experiences may be linked to the release of neurotransmitters such as endorphins and oxytocin, which are known to play key roles in the body's stress response. Furthermore, listening to music can help reduce stress by serving as a distraction from distressing thoughts or emotions (de Witte et al., 2020).

Strengthening the immune system and pain reduction

According to research it has been proved that stress which is caused by the increase of the cortisol can significantly affect the immune system (Alotiby, 2024). As discussed in the previous section, music can effectively reduce cortisol levels which in turn may contribute to the enhancement of immune system functioning. The perception of pain is multifaceted and influenced by a complex interplay of physiological, psychosocial, cultural, and individual factors. Numerous studies have indicated that music can play a beneficial role in pain management. However, research findings are not always consistent, with some studies reporting no significant effects of music on pain perception. Although the precise mechanisms by which music influences pain are still not fully understood, several plausible explanations have been proposed. One theory suggests that music serves as a distracting stimulus. Additionally, music may elicit physiological responses that counteract pain, such as the release of endorphins. It can also promote relaxation through entrainment, helping to slow breathing and heart rate. Moreover, music may enhance an individual's sense of control over their pain experience. Finally, by reducing stress, music may indirectly contribute to lower pain perception (Clark and Tamplin, 2016).

Musics' impact on working memory

The so-called Mozart effect refers to the phenomenon in which listening to Mozart's music, particularly Sonata K448 leads to a temporary improvement in spatial-temporal

reasoning abilities. Several studies have shown that after listening to Mozart for 10 minutes, some individuals perform better on tasks requiring such reasoning. However, these effects are typically small, last for about 12 minutes, and are not consistently replicated across all studies. The improvement is specific to certain spatial-temporal tasks and does not affect overall intelligence. Initial research focused on the short-term effects in adults, but later experiments examined the long-term impact of music on children. In one study, children aged 3 to 4 participated in keyboard lessons for six months, during which they learned intervals, finger techniques, music reading and notation, as well as playing from memory. By the end of the program, all the children were able to perform simple melodies by Beethoven and Mozart. They subsequently achieved scores over 30% higher in spatial-temporal reasoning tests compared to children who took computer classes or received no specialized training. The improvement was limited to spatial-temporal reasoning and did not affect spatial recognition. The effect persisted for at least 24 hours. Its longer duration in children compared to adults is attributed to the more intensive musical training and greater brain plasticity in young children. Additionally, neurophysiological studies have explored the impact of music on brain activity. One such study found that listening to Mozart's Sonata K448 increased synchronization between the right frontal region and the left parieto-temporal region of the brain, with the effect lasting approximately 12 minutes. Other studies have shown that listening to music (not necessarily Mozart) increases beta wave power in EEG recordings, particularly in the temporal and frontal areas, as well as the precuneus region on both hemispheres. These findings suggest that music may modulate brain function in ways that support temporary cognitive enhancement (Jenkins, 2001). The Vivaldi effect refers to the improvement of cognitive functions in healthy older adults after listening to a piece by Antonio Vivaldi. In a study, participants showed significant gains in phonological memory and phonemic fluency, surpassing those in both white noise and no-music conditions. These findings support the arousal and mood hypothesis, which suggests that music enhances attention and cognitive performance by boosting arousal and positive mood. Familiar music may further improve memory through emotional engagement. Another explanation points to a connection between musical structure and phonological processing, as rhythm and melodic patterns may align with the demands of tasks like digit span or fluency, reinforcing related neural pathways (Mammarella, 2007).

Musics' effect on epilepsy

A more compelling demonstration of the Mozart effect comes from research involving patients with epilepsy. In a study of 29 individuals experiencing focal discharges or generalized

spike-and-wave seizures, 23 showed a significant reduction in epileptiform activity while listening to Mozart's Piano Sonata K448, as measured by electroencephalography (EEG). In some cases, the effects were particularly striking. For example, in one comatose male patient suffering from status epilepticus, seizure patterns were present 62% of the time prior to music exposure, but decreased to 21% during exposure to Mozart's music. Similarly, in two other patients with the same condition, continuous bilateral spike-and-wave discharges, initially present 90–100% of the time, dropped to approximately 50% within five minutes of music onset. The fact that this effect occurred even in a comatose patient suggests that conscious perception of music is not necessary for the Mozart effect to take place. To examine the potential for sustained impact, researchers conducted a study on an eight-year-old girl diagnosed with Lennox-Gastaut syndrome, a severe and treatment-resistant childhood epilepsy. She experienced frequent atonic seizures and presented both generalized spike-and-wave discharges and focal discharges from the right posterior temporal lobe on EEG. Mozart's Sonata K448 was played every 10 minutes during each hour she was awake. Over the course of the day, the number of seizures declined from nine during the first four hours to one during the final four hours. In addition, the number of seconds with generalized epileptiform discharges decreased from 317 to 178. On the following day, only two seizures were recorded over a period of 7.5 hours. These findings suggest that music, particularly Mozart's Sonata K448, may exert a measurable and potentially therapeutic effect on epileptiform brain activity, even in the absence of conscious awareness (Jenkins, 2001).

Binaural beats

Binaural beats are an auditory illusion that occurs when two tones of slightly different frequencies are presented separately to each ear. For instance, if a 200 Hz tone is played in the left ear and a 210 Hz tone in the right ear, the brain perceives a third, phantom sound, a 10 Hz beat which is not physically present but is created through neural processing. This perceived rhythmic fluctuation is known as the binaural beat (Jurczyk, 2021). Although binaural beats have gained popularity as a tool for enhancing relaxation, focus, and cognitive performance, current research findings remain inconclusive. While some studies suggest potential benefits such as reduced anxiety, improved mood, and enhanced memory others report minimal or no significant effects. The variability in study designs, methodologies, and individual responses highlights the need for further rigorous, large-scale research to determine the specific conditions under which binaural beats may be effective. Comprehensive investigations are essential to clarify the underlying neural mechanisms and to establish their actual therapeutic value across

different populations and contexts. Digital technologies in speech disorder rehabilitation

Currently available applications on the market support speech disorder therapy in four areas: expression, comprehension, writing, and reading. In some cases, these programs are offered in two versions: one designed for home use under the supervision of family members, and the other intended for use in a speech therapy office or rehabilitation center. In the therapeutic process, it is advisable to stimulate the patient using all available channels through which they can receive information during therapy. Computer-based exercises create conditions for multisensory stimulation, which contributes to the faster recovery of lost cognitive functions. However, most applications available on the market offer exercises that engage only individual senses. As a result, the therapy does not fully utilize the brain's potential. Currently available applications on the market support speech disorder therapy in four areas: expression, comprehension, writing, and reading. In some cases, these programs are offered in two versions: one designed for home use under the supervision of family members, and the other intended for use in a speech therapy office or rehabilitation center. Afasystem is an application developed by the Clinical Neuropsychology Laboratory of the Institute of Psychiatry and Neurology in Warsaw. The program is intended for specialists involved in the therapy of language functions. The electronically prepared exercises cover basic language skills such as speech production and comprehension, reading, and writing. The material, enriched with illustrations and audio presentations, is divided by difficulty levels, based on factors such as word frequency and complexity. Parameters set by the therapist allow the tasks to be adjusted to the individual needs and abilities of the patient. The program's interface takes into account the motor and cognitive limitations of neurological patients. To make the software easier to use, special control panels or touchscreens are available. Previous computer experience is not required from the patient. The rich content and numerous customization options support a professional, modern, and engaging rehabilitation process for people with aphasia. There are two versions of the system one for the therapist and one for the patient. This allows the patient to perform exercises not only in the therapy office but also at home. The tasks are individually adapted to the patient's capabilities. To make the program more accessible, touchscreens and control panels are available. RehaCom is a set of training programs that includes around 20 therapeutic modules designed for both adults and children. It is useful in the rehabilitation of individuals with cognitive function disorders caused by generalized or focal brain damage. For example, it supports patients after a stroke with impairments in concentration and attention, association and perception, logical thinking, verbal and non-verbal memory, reaction time, face recognition and memory, planning abilities, and visual-motor coordination. Patients using the program operate

it via a specially designed control panel, which allows for effective therapy across various types and degrees of impairments. The tool is adapted for individuals with intellectual or physical disabilities. All exercises include clear instructions and a dialogue-based interface. While using RehaCom, the patient is continuously motivated to continue working. A motivational system provides positive feedback for correctly completed tasks. In case of errors, the system offers support and further guidance. The program allows for adjusting the difficulty level to the patient's abilities. Additionally, new tasks can be added to target various cognitive functions. MÓWik is the only Polish application specifically designed for non-speaking individuals. It can be used on devices equipped with the Android operating system and a touchscreen, such as smartphones, iPhones, and tablets. These devices are becoming increasingly affordable and, as a result, accessible to a growing number of users. They can serve as a speech prosthesis for people who are unable to speak. MÓWik operates based on a simple algorithm: the user selects symbols, and the device verbally outputs the selected words. The application was inspired by the American system Boardmaker (Solecka and Kataryńczuk-Mania, 2020)

Conclusion

This literature review highlights the multifaceted impact of music and related auditory technologies on human physiology, cognition, and therapy. Evidence demonstrates that music can significantly influence physiological states by reducing stress markers such as cortisol, lowering heart rate and blood pressure, and enhancing emotional well-being. It may also play a beneficial role in immune system function and pain perception, although further research is needed to fully understand the underlying mechanisms. Notably, music's positive effects extend to cognitive performance, as illustrated by phenomena such as the Mozart and Vivaldi effects, which reveal improvements in spatial-temporal reasoning and verbal working memory, respectively. In clinical contexts, music has shown therapeutic potential in reducing epileptiform activity in individuals with epilepsy, even in unconscious patients suggesting that auditory stimuli may engage brain mechanisms independently of conscious awareness. Additionally, binaural beats present a promising yet underexplored field. While initial studies suggest potential benefits for mood regulation, attention, and memory, inconsistent findings across the literature underscore the need for further empirical validation through rigorous, controlled research. In the domain of speech and cognitive rehabilitation, digital technologies are becoming increasingly effective. Tools such as Afasystem, RehaCom, and MÓWik offer structured, individualized, and accessible therapy, supporting recovery in patients with language and cognitive impairments. These programs demonstrate the value of integrating auditory, visual, and interactive elements to optimize therapeutic outcomes. Taken together, the

findings reviewed here emphasize the considerable potential of music and auditory-based technologies across healthcare, education, and rehabilitation. However, many of these applications still require deeper scientific validation to establish standardized, evidence-based practices. Continued interdisciplinary research will be crucial in uncovering the full scope of benefits that music and digital auditory tools may offer in enhancing human health and cognitive function.

Abstract

Health is understood as a state of physical and psychological well-being. It is essential to care for it by utilizing the therapeutic potential of the music of nature. The aim of this article is to demonstrate how natural sounds found in nature can serve as beneficial factors supporting the sense of human well-being. A particularly rich environment in terms of auditory stimuli—such as animal calls and the sounds of moving vegetation—is the forest. It is a complex ecosystem that exerts a multifaceted influence on human health. During a stay in the forest, the senses of the individual are stimulated. This immersive, multisensory experience is referred to as "forest bathing", known in Japanese as *Shinrin-yoku*. The therapeutic effects of the forest can be attributed to its unique microclimate and the presence of essential oils released by plants. These plant-derived oils are primarily terpenes emitted by trees. Phytoncides (from the Greek *phyton* – plant, and Latin *caedo* – to kill) are substances secreted by trees in response to stress. They exhibit antibacterial, antiviral, and antifungal properties. Among the bioactive compounds produced by trees are α -pinene, β -pinene, limonene, and myrcene. These compounds retain their biological properties within the human respiratory tract. They act as anti-inflammatory agents, protect neural cells, and support brain function. Phytoncides also influence the composition of the human microbiome. The forest engages the senses of sight, taste, smell, touch, and hearing. The auditory dimension—on the natural sounds that reach individuals in a forest environment. These include birdsong, insect calls, the rustling of leaves in the tree canopy, and the murmur of flowing water. Forest bathing serves as an effective method for reducing stress and promoting relaxation, an effect that can be experienced, for example, by listening to birdsong.

Keywords: nature sounds, nature, music

Introduction

Health is understood as a state of **physical and psychological well-being**. It is essential to care for it by utilizing the therapeutic potential of the music of nature.

This article will focus specifically on the auditory dimension—on the natural sounds that reach individuals in a forest environment.

The aim of this article is to demonstrate how natural sounds found in nature can serve as beneficial factors supporting the sense of human well-being. One of the environments that can positively influence human **well-being is the forest**.

Today's pace of life is characterised by a high level of dynamism, with the intensification of professional responsibilities, the pressure to achieve and the constant presence of digital technologies. The result of this phenomenon is chronic overstimulation due to information overload, noise and constant sensory stimulation. There is also a growing phenomenon of overwork and overtiredness, which leads to the deterioration of a person's mental and physical condition. In response to these pressures, many people seek solace in contact with nature. The sounds of nature, such as the sound of trees, birds singing or the murmur of a stream, play a particularly important role, as they have a relaxing effect and reduce levels of the stress hormone cortisol. Exposure to the natural environment promotes the regeneration of mental resources and improves overall well-being.

In the context of counteracting the effects of overstimulation, overwork and fatigue, music therapy - a field that uses sound and music for therapeutic purposes - is gaining increasing importance. Music therapy, is used to reduce stress, improve mood and support the treatment of many mental and somatic disorders. Combining music therapy with the sounds of nature has proven to be particularly effective, enhancing the relaxation effect and restoring balance to the nervous system. Appropriately selected musical compositions can influence heart rhythm, breathing and brainwave activity, making music therapy an important tool to support the process of mental regeneration in a world dominated by haste and excess stimuli.

Music therapy

Music therapy can be defined in various ways due to its interdisciplinary nature. Music therapy is a method of treatment that uses multiple influences on the psychosomatic human system.

The coordinated and controlled use of music in treatment, rehabilitation and education. **The World Federation of Music Therapy** in 2011 adopted that music therapy is the professional use of music and its elements as an intervention in medical, educational and

everyday working conditions with individuals, groups, families or communities seeking to optimize their quality of life, improve in physical, social, communicative, emotional, intellectual and spiritual aspects and **sense of well-being**.

Music therapy can be applied to different age groups. Music therapy can be used individually or in groups as an adjunctive therapy.

There is a distinction between two basic forms of activity:

Receptive - receptive music therapy

Active music therapy – performing

Receptive music therapy involves listening to pieces selected by the therapist according to the patients' needs. An important element is the verbalization of one's own experiences, imaginings, memories, and emotions that accompany listening to music.

Active music therapy involves playing and improvising. Improvisation can be free or on a set theme (such as a forest). This form promotes proper communication, externalization of feelings, moods, associations by playing instruments, vocal activity, movement, drawing with music. With improvisation, artistic qualities are not important, only therapeutic.

Forest sounds

The most complex terrestrial ecosystem in which various plant and animal organisms coexist to form a biocenosis.

The forest is a place of natural sounds: The rustling of leaves, **birds singing**, the sound of a stream, rain falling, the tapping of a woodpecker.

You can listen to the sounds or create based on the sounds you hear

The therapeutic effects of the forest can be attributed to its unique microclimate and the presence of essential oils released by plants. These plant-derived oils are primarily terpenes emitted by trees.

The forest engages the senses of sight, taste, smell, touch, and **hearing**. These include birdsong, insect calls, the rustling of leaves in the tree canopy, and the murmur of flowing water.

Music

Music has been an integral part of people's lives since the beginning of time, e.g. expressing all emotions, treating illnesses, during family celebrations. Tadeusz Natanson, emphasises that music therapy is aimed at arousing desired emotions (feelings, affective states of moods) and controlling them. It is valuable in arousing readiness for contact, developing interpersonal communication, influencing the state of psychomotor arousal, emotional and

muscular tension (Natanson, 1992). How to apply elements of music prophylaxis is presented in his method of Mobile Music Recreation by Maciej Kierył, in which he proposes a number of exercises, such as imitating signs of nature (forest walks, imitating twigs in the wind, etc.) in rhythmic-motor exercises, subordinated to the natural human rhythm (Kierył, 2012)

Within the thematic scope of nature music, Andrzej Tuchowski (Kataryńczuk-Mania, Karcz, Zielona Góra 2006, p.20-21) mentions:

(a) inanimate nature: atmospheric phenomena, seasons and times of day: Vivaldi's Four Seasons, Storm from Beethoven's Pastoral Symphony, Morning from Grieg's Peer Gynt Suite, Sunrise from Ravel's ballet Daffnis and Cloe, Britten's Spring Symphony;

(b) animated nature: music inspired by birdsong, the buzzing of insects and other sounds of animated nature: Jannequin's Birdsong, Szczygiel's Flute Concerto, Couperin's Mosquito and others.

Among many music listeners, Antony Vivaldi's Four Seasons is very popular. The work consists of four concertos:

Concerto No. 1 in E major "Spring" (La Primavera), RV 269

Concerto No. 2 in G minor "Summer" (L' Estate), RV 315

Concerto No. 3 in F major "Autumn" (L' Autunno), RV 293

Concerto No. 4 in F minor "Winter" (L' Inverno) Rv 297.

The whole depicts the cycle of changing seasons. During the course of the piece, we can hear, among other things, birdsong, a summer storm, the sounds of autumn hunting, harvest work and play, and the sound of crackling ice.

Oliver Messiaen, composer of the 20th century, referred to himself as "I am an ornithologist and a rhythmist" and quoted birds' trebles in his works. Music captures the moods, impressions and emotional states that accompany the experience of contact with nature.

Properties of the forest

The therapeutic effect of the forest is explained by the specific microclimate, the influence of essential oils with antifungal, antibacterial and antiviral effects (Koprowicz, Baranowska, 2022) . The plant oils present in the forest are mainly terpenes secreted by the trees.

Phytoncides (gr. phyton - plant, lac. caedo - to kill) are substances secreted by trees in a stressful situation. The term was introduced in 1928 by B. Tokin. They exhibit antibacterial, antiviral and antifungal effects. The substances produced by trees are α -pinene, β -pinene, limonene, myrcene. In the human respiratory tract, phytoncides do not lose their properties. They have an

anti-inflammatory effect, protect nerve cells and support brain function. Phytoncides also affect the bacterial flora of humans (Simonienko, 2021).

The soil bacteria *Mycobacterium vaccae* are found in forest and cultivated soil, in the garden. Contact with these bacteria helps to combat exhaustion, depressive states, as well as skin diseases, especially autoimmune diseases such as atopic dermatitis and psoriasis.

The sense of sight makes it possible to carefully observe the forest, colours, shapes, light, shadow, searching for natural fractal patterns.

The sense of hearing is activated when concentrating on the sounds of the forest: the rustle of leaves in the treetops, the murmur of water, the singing of birds.

Through touch, the various textures found in the forest can be felt: the roughness of the bark, the softness of the moss. Some people, when there are no health contraindications such as diabetes, take up barefoot walking.

The taste in forest bathing is based on tasting the gifts of the forest. One can also taste the forest air when inhaling.

Smell is one of primary of the senses. Smell is associated with a place, a person, an event. Essential oils, resins, herbaceous plants, bacteria and many other components of the forest ecosystem create a composition unique to a place and time. During forest bathing, attention is focused on the individual senses.

Studies have shown that individuals undergoing depression treatment who spend time in forest environments may require lower doses of medication. The forest landscape can significantly alleviate the psychophysical burden experienced by individuals, supporting both physical and mental health, and contributing to overall well-being.

Green therapy

Green therapy, also known as ecotherapy, is a form of mental and physical support that involves consciously being in natural surroundings and undertaking outdoor activities. It aims to improve wellbeing, reduce stress and strengthen a person's relationship with nature. The best remedy for this overload of electronic stimuli is **contact with nature** - such as trips to the forest, gardening, etc. Within the framework of contact with nature, bird watching is the most noteworthy.

A bird-watching expedition introduces us to the natural world with all its richness. It's not looking at the greenery through a glass window - bus trips or movies about nature. It's both **observing and listening** to the sounds of nature, smells, temperature changes, wind and rain.

Ornithotherapy This type of activity also allows one to immerse oneself in the calming greenery of the eyes, to **escape from the noise**, constantly activating the fight - flight reflex in us and causing a constant influx of adrenaline and cortisol - the stress hormone.

This multi-sensory experience helps you **relax**. Studies have shown that listening to birdsong specifically improves mood, but also, interestingly, promotes better attention in the long term. Being in the forest A particularly rich environment in terms of auditory stimuli—such as animal calls and the sounds of moving vegetation—is the forest. It is a complex ecosystem that exerts a multifaceted influence on human health. In the forest, all human senses are stimulated. This multisensory experience is referred to as "forest bathing" known in Japanese as ***Shinrin-yoku***.

Forest bathing serves as an effective method for reducing stress and promoting relaxation, an effect that can be experienced, for example, by **listening to birdsong**.

Group walks in the forest foster relationships and prevent social isolation.

Benefits of forest therapy

Benefits of laser therapy can be seen in improved physical and mental health. Improved physical health:

- Lowering blood pressure and heart rate.
- Strengthening the immune system - phytoncides (essential oils from trees) promote the production of NK cells (natural killers).
- Improved oxygenation of the body - walking among trees improves lung ventilation.
- Increased cell regeneration capacity,
- Increased protein assimilation

Mental and emotional support

- Reduction of stress and anxiety, improved well-being.
- Alleviation of symptoms of depression and loneliness.
- Improving the quality of sleep - contact with nature calms the nervous system.
- Enhancement of intellectual performance

Contact with nature supports memory and concentration.

May have a preventive effect against dementia and Alzheimer's disease.

Research Analysis

Research on the issue has been carried out primarily in Asian countries. Japanese studies have shown that staying in the forest contributes to stress reduction. The research was conducted by measuring levels of stress hormone cortisol, amylase activity, skin conductance, heart rate variability, blood pressure and brain wave activity (Bielinis, 2020).

R. Ulrich studied the recovery process of patients after hospital surgery. He found that those who were able to view nature through windows after surgery recovered faster and asked for less pain medication. Patients in rooms with a view of the walls stayed in hospital one to two weeks longer (Ulrich, 1984). It has been shown that forest therapy can ‘ lower blood pressure, reduce stress levels, improve cardiovascular health and metabolism, lower sugar levels, improve concentration and memory, raise the pain threshold, relieve depression, give energy, stimulate the immune system by increasing the number of NK cells’(Zawadzka, Bielinis, 2019) .

In Poland, studies have been carried out on the effects on psychological parameters of subjects. It has been shown that the forest environment in Poland can have a positive effect on mood and abolish feelings of mental fatigue. Walking can be an effective way to cope with stress.

Green Prescription

In modern society, contact with nature is increasingly recognized as a necessity. Physicians, in addition to prescribing medications, are now issuing so-called “**green prescriptions**”—recommendations to spend time in natural settings. Psychiatrists, in particular, may integrate forest exposure with pharmacological treatment. Moreover, they may recommend listening to recordings of natural sounds as a form of therapy.

Green prescription These are recommendations made by a health care professional to undertake activities that deepen one's relationship with nature to improve mental and physical health. They can concern physical activities outdoors, social activities, eating habits and diet, but also be directed specifically at experiencing the natural environment - **walks, nature observation, therapeutic ornithology**.

They are usually written in nature, addressing both preventive, supportive and rehabilitative activities. In some countries proposed by the Ministry of Health (New Zealand, UK, Canada), used by doctors of various specialties.

A green prescription can specify **the length of time** spent outdoors

Summary

Music has direct access to our subconscious therefore contact with nature allows us to maintain human mental hygiene. Listening to music will make us gain distance from difficult problems. Compositions that we can use for relaxation, meditation are usually those that musicians have created under the influence of memories, experiences, inspired by admiration of nature. In the face of an increasingly fast-paced lifestyle, an overabundance of stimuli and chronic fatigue, contact with nature and the conscious use of nature sounds and music are becoming not only a form of relaxation, but a real support for mental and physical health. Being

in a natural setting, even for a short time, helps to reduce stress, lower nervous tension and improve concentration. Playing nature sounds, such as birdsong, the sound of the wind or the sound of water, has a therapeutic effect, especially when combined with elements of music therapy. These simple, accessible measures promote regeneration of the body and can effectively counteract the negative effects of modern lifestyles. Therefore, regular contact with nature and the conscious use of natural sounds and music should be considered as important elements of mental health prevention.

Abstract

In the world, the implication of students in Knowledge and Technology Transfer (KTT) dissemination is an important opportunity to support society and communities' wellbeing through Research & Development (R & D) valorization in today's rapidly changing environment. Therefore, this paper aims to analyze the influence of knowledge transfer (KTP) programs on students and beneficiaries' wellbeing during immersion interventions of Higher Education Institutions in communities for sustainable development and environment preservation. This qualitative exploratory research used observation and interviews of a sample of 15 students studied "Geography- Environment and health" in Université Felix Houphouet Boigny (Cote d'Ivoire). It consists in an evaluation of their learning experience and the influence on community members and the student's wellbeing after a participation in a knowledge transfer program focused on environment preservation in three towns (Dabou, Tiassalé and San -Pédro). Based on PERMA model and Knowledge Transfer theory, findings underlined 1) Learning Experience in Transferring Knowledge for wellbeing; 2) Barriers facing the KTP implementation for environmental and health issues; 3) Impact on communities, academic and a personal wellbeing. As recommendation, nurturing Knowledge and Technology programs from academia to community is required in Higher Education Institutions policy to support communities' sustainability and learners' wellbeing in their studies, practical skills acquisition as change makers.

Keywords: Wellbeing, Knowledge Transfer Program, Environment, Resilience, Africa.

Introduction

In this millennium, Higher Education Institutions (HEIs) play an important role in globalization and internationalization of new norms and sustainable development . Specially, in this context, a transformation in academia consist in practical activities of sharing knowledge to solve real problem in community and industry (Cazón-Martin, 2023). This transformation influence the education trends to offer solutions supporting the Sustainable development goals (SDGs) in society, economy and environment . Indeed, climate change and weather disasters are more current in communities and that results in more expositors to diseases, crisis, famine and so on. In this context, for Syhlonyk & Seasons (2022), community well-being is considered as a fundamental element of planning practice. So, this transformation of relationships between academia and communities for wellness required more collaboration and partnership in order to solve economy, environment, and sociocultural issues affecting the life. It opens opportunities of mutual enrichment and fosters human wellness in a challenging area (Aoki, 2021). For this reason, based on 21st century pedagogy, a new direction of curricula design offers activities of using knowledge to support student empowerment through various knowledge transfer experience in industry, communities and similar things through research, community services and more (Aoki, 2021).

This shift to knowledge transfer from academia to industry and communities is based on partnership and immersive initiatives to support the society development face to various daily issues (Purcell, et al. 2019). It helps to empower both academic leaders (students, teachers and so on) and society by promoting innovative approach, offering accessibility to new practices and technologies to solve these issues, disseminate innovative academic findings and orient decision makers (Zhu, et al. 2019; Saaida, 2023). Consequently, in this dynamic, Knowledge and Technology Transfer (KTT) represents a very important level of development and wellbeing in both developed and developing countries.

In Global South countries particularly, the need of innovative local solutions to support development and increase people wellness is crucial. Face to environment degradation, low economy outcomes, various social crisis (housing, education, conflicts, etc.) the expectations to see academia as an ally to provide alternative effective solutions call to put KTT in the center of new consideration in educative policies (Podgórska & Zdonek, 2024; Wirawan, et al 2023) . Therefore, the flourish of research centers, scientific and professional publications, innovative solution, follow the rhythm of academic productivity to attract grants , visibility and international partner to solve specific problems encountered .Similarly, for Radin Firdaus et al.

(2020) knowledge transfer programs (KTP) requires a partnership between universities and communities in order to empower students and populations by communicating skills and applying their fundamental knowledge's.

It means that in a perspective of community's wellbeing and environment sustainability, academia KT projects and programs play a role in solving local issues by being connecting with communities . Without a KT intervention, academia cannot support society sustainability by the implementation of the wide scientific knowledge to communities for providing wellbeing (Nyamwanza, et al. 2023; Shackleton, et al. 2023). Due to this reality and the need to preserve environment to support communities' resilience, the question of the contribution of KT activities in student education through intervention in communities is important to support academia and communities' relationships and human being wellbeing.

Objective

This paper aims to analyze the influence of knowledge transfer (KTP) programs on students and beneficiaries wellbeing during immersion interventions of Higher Education Institutions in communities for sustainable development and environment preservation in Africa.

Theoretical framework

The appropriation of knowledge sharing to support communities' resilience and promote environment preservation calls to apply various theories of positive psychology and education. Therefore, this current paper is based on both well-being paradigm and knowledge sharing theories.

For Seligman (2018), wellbeing is sustainable and separate from 'happiness' and suggested the importance of flourishing as a standard to measure wellbeing. It means that the feeling of joy or gladness can not be used as the only predictors of individual or people wellbeing. It is more complex as the results of individuals and people facing various situations including stress, body damage, social discomfort, affecting their mental and physical health. Seligman argued that as wellbeing is an important question, it can be analyzed according to the PERMA model (Ascenso, et al. 2018; Seligman, 2020). That model evaluates human wellbeing through the five factors below:

- *Positive emotion*: a subjective feeling of well-being itself;

- *Engagement*: a subjective feeling denoting the extent to which people are absorbed in something;
 - *Relationships with others*;
 - *Meaning*: the extent to which lives are meaningful for those living them;
 - *Accomplishment*: the extent to which people accomplish something in their lives.
- Well-being sometimes includes hardships; however, people could still find life satisfaction and feel a sense of accomplishment.

It means that individuals and people behavior result from their social representation and feeling face to the impact of the situation that they encounter on their satisfaction and self-accomplishment in a changing context which. This fact calls for resilience and knowledge sharing. This reality includes also the questions of sustainability of human and communities due to the SDGs mentioning the importance of education to support resilience, economy, human and environment preservation . For Compagnucci & Spigarelli (2018), it is an important fact represented in the *Triple Helix Model for innovation*.

Figure 1: Triple Helix Model for innovation.

Literature review

The establishment of relationship for academia and society collaboration is an important lever of development. It is a crucial aspect of action for environment sustainability and communities' resilience. Therefore, there are many ways of doing it and this section offers some recent analysis of this dynamic depending on the area and context.

For Radin Firdaus et al. (2020) evaluated the impact of the knowledge transfer program (KTP) in Malaysia according to Knowledge transfer Theory. This program consisted in academics collaboration with a community partners to utilize their research findings in the community environment. In a quantitative research design, the authors assessed academic

projects of involvement in communities to share knowledge and skills. For the authors, academia involvement in community projects has led to better understanding of social and cultural factors, the dynamics of the community, and the knowledge gap between the academia and the community. These programs are very important for communities' wellbeing and academics growth. This study is very interesting even if it is just a quantitative paper in Malaysia. In our current reflection, we focused on the context of Environment preservation through KTP in Global south context like the one of Africa.

Schaeffer et al. (2021) article questioned how academic knowledge and findings valorization in society contribute to local and international ecosystem development. It is possible through innovation valorization perspectives based on technology transfer processes from academia to markets, entrepreneurship's and economic structures. This theoretical study investigated the interrelation between universities and eco-system actors in two directions: (a) universities fostering and improving eco-systems through their core activities; and (b) eco-system actors shaping capabilities and access to resources for universities according to the analysis of five KTT eco-systems in the state of São Paulo, in Brasilia, a south America country. This descriptive qualitative research showed the importance of interaction and collaboration between HEIs and society stakeholders in order to transform academic findings into marketable product solving society problems. This mutualization of the energies and aims leads to rethink the university KTT strategy according to the societal agent trends in a disruptive world. This last sentence underlines the importance of KTP in the context of Africa in order to provide new ideas , implement the research valorization from academic to the whole society issues.

In addition, Kouladoum et al. (2023) qualitative study scope on the effects of technology transfers on subjective well-being in 29 African countries by using the GMM and the IV Tobit models and employ the Life ladder indicator of happiness as a measure of subjective well-being. All the findings indicate that subjective well-being in Africa is significantly improved by technology transfers and investments in academic research. The author's paper is very relevant in our research because of provide contextualized findings related to African HEIs context and revealed the important of KTT got the wellbeing of Africa communities as source of problem solving based on knowledge sharing and technology innovation adapted to the society needs.

Moreover, Cazón-Martin (2023) and Doimavs et al. (2022) studies questioned the collaboration between Academia and Industry as a path to innovation through the exchange of knowledge. Their researches tried to underlined the outcomes of KTP/KTT and academia industry partnership to support national development and innovation dissemination as

All these papers underlined the importance for academia to establish a relationship with communities and industry in order to solve problems and offer opportunities to access top innovation in a mutual beneficial exchange. Specifically, our current paper is focused on communities and that calls to deep our reflection of Community Partnership Through Knowledge Transfer Program.

This study used qualitative exploratory research design (Prosek & Gibson, 2021) in order to describe the academia knowledge transfer in communities for sustainable development, preserving environment and empower participants as students and communities members . This approach was also used by some researchers having the same focus and scope on social sciences and in educative context. This study follows the PERMA and knowledge transfer models (İyıkpatyîck, gyy&y çeuğmav, 20g&) to understand and evaluate the influence of academia knowledge transfer programs in communities for sustainable environment in the specific context of Africa. Therefore, the stages of the research are presented below:

In this study, researchers used a convenience sample approach (Emerson, 2021) to investigate. Due to the specificity of this exploratory qualitative research approach, participants

were students in Geography in Université Felix Houphouet Boigny (UFHB), situated in Cote d'Ivoire, a West Africa Country. Researchers applied three selection criteria for participants inclusion / exclusion; 1) Be part of academia, 2) Be involved in a KTP focused on environment preservation, 3) Be available to share the learning experience. Therefore, for the interviews, the participants were selected as classmates, peer students in UFHB, department of *Geography, Health and Environment*. This approach allowed to justify the participants selection by being focused on those having a clear learning experience in the KTP during their academic studies from Bachelor degree to Master . Based on the criteria, 15 selected students agreed to share their experience related to the participation in a KTP organized by their faculty as part of their academic assessment.

This approach is similar in Radin Firdaus et al. (2020) study on KTP in Malaysia context. They shared their learning experience of a KTP implemented in 2023 for their Bachelor level assessment focused on urban activities, housing typology, transportation and their impact on environment. These intervention took place in communities situated in Tiassalé (Rural city with a big river) , San Pedro (Ocean side city with a special cocoa bean export port) and Dabou (closer city to Abidjan, the capital). Then, researchers could investigate by using various qualitative method tools.

Data collection

This qualitative exploratory research used interviews and storytelling of “geography” students in Université Felix Houphouet Boigny (Cote d'Ivoire) to collect their point of view on how KTP in academia and extra academia activities improve their wellbeing to solve environmental and health issues encountered by communities (Gougou et al, 2025).

The interviews focused on the experience of the participants during the imitative of Knowledge sharing in communities through a KTP supporting knowledge share and research valorization, community service and so on. It took place from March to May 2025. The participants were 15 students of geography in UFHB. Based on their study field, they shared their experience of how their intervention in communities contributes to their feeling of wellbeing and improved the resilience of society in a perspective of sustainable development. Based on their specificity, a point on climate change and environment preservation was underlined (Nyamwanza et al, 2023; McNamara & Buggy) .

The storytelling of participants was collected during the interviews too. These real experience on how knowledge shared from academia impact communities' wellness contributed to identify challenges and outcomes of these initiatives for communities' resilience.

In a perspective of problem solving, these stories helped researchers to evaluate deeply the psychological influence of KTP on communities' wellness in a sustainable environment and students well-being (Radin Firdaus et al. 2020).

Data Analysis

Conversation analysis (Wu & Zhang, 2024) allowed to proceed the interviews and stories transcription from recording to sets according to 10 variables. *Positive emotion; Relationships, Motivation and Accomplishment* (PERMA Model)

Results

Learning Experience in Transferring Knowledge for wellbeing

Transferring knowledge in communities to change positively their practices and getting skills from them play a crucial rule for a mutual wellbeing to solve environmental issue. It is a communicative way to change behaviors and improve both communities and educative system performance. Face to the unprecedented challenges and issues in the world and particularly in Africa, participants underlined their position on their transferring knowledge learning experience for wellbeing in the statements below:

Personally, the involvement in communities helped me to feel enjoy and discover the beauty of nature, rivers, vegetation as we were in Tiassalé, a rural area. The communities' members were kind and it was a pleasant experience to collect data on environment and sensitize local dwellers on climate issues. I could learn more on local practices on environment preservation and Geography Information System tools. (Respondent 1)

In the curricula, we had to study theories and make simulations from the first year in the geography department. But, this immersion by travelling to another place opened my mind to the country fresh air, farmers practices and environment challenges of seaside Cities like San-Pedro. (Respondent 2)

As a student, I could discover more on research process and the population behavior to protect environment. During sensitizing activities, I felt involve to change things in communities. (Respondent 3)

As an urban citizen, I never travelled to the rural places, it was a great occasion to discover something different. Moreover, the interaction with local population allows to build an exchange of knowledge and learn more on pole lifestyle. (Respondent 4)

In academia, we have a certain vision of the world and the fact to be involved in rural communities for research and knowledge sharing programs was a very fantastic experience for me. We worked on the urban characteristics of the town of Dabou. We had to talk about local governance, urban dynamics, infrastructures, equipment and administrative services. (Respondent 5)

All these statements show that KTP in students problem solving activities is useful for

both community and academia people. It improved student research skills, communicates happiness, awareness of environment issues and make more responsible to share academic knowledge, to change positively people behaviors and practices. This student learning experience increased relationships through community- academia partnership program for KT and empowerment of both students and society. The fact to share increased the self-confidence, critical thinking, learning experience of research, and become a mean to improve awareness of environment in society issues . This academia immersion in communities contributed to the positive mental health and social feeling of accomplishment of students and the communities' members. By researching causes of environment issues, students could share knowledge and sensitize people to adopt the right behaviors to stop environment destruction in business, urbanism, governance and various field. However, some issues were identified by these students as barriers encountered in this KT dynamic.

Barriers facing the KTP implementation for environmental and health issues

Even if academic Knowledge Transfer Programs to communities offer opportunities, in this study, students in geography who participated in this program encountered some challenges in their immersion. This part shares their learning experience from the intervention in Dabou, Tiassalé and San Pedro through the statement below:

Due to some contextual challenges, the service learning used to foster community resilience and students' skills or awareness was limited. For example, some community members could not understand some academia concepts due to their education level, habits, language and practices. They could not understand our point of view related to the environment when we suggested to renounce to some activities degrading the environment. (Respondent 1)

For me, the big barrier was the lack of intercultural communication skills. From my childhood, I never left the city and the fact to be in rural place, with different realities and infrastructures was very new in the beginning. Moreover, honestly, I was not excellent in research and sharing methodology. Maybe I did not use the write language and communication signs when I was with some rural citizens. (Respondent 2)

In my case, the challenge was the complexity of this topic and difficulty to understand all the communities' concerns in a so short time (5 days). They have their own culture, habits and habits; some are good or bad. Yet, to change them, it was not easy often. We need more time to familiarize with theme in order to share more. (Respondent 3)

Psychological barriers due to refusal to give information or collaborate with students, difficulties to reach all the targeted individuals in precarious neighborhood, lack of mapping experience to circulate in the various places due to weather change, low accessibility, and similar things (Respondent 4).

The orientation in the town and the site localization non mastered by students was a big challenge. Knowledge sharing in communities required intercultural skills and the area

map, mastery of the KTP tools. Often, due to the condition, the GPS doesn't work and it is very difficult to collect the data with our technology and show findings or real facts to sensitized People (Respondent 5).

Based on the observation and participants KT storytelling experience, they encountered various challenges during their intervention in the communities' areas for environment preservation. As it is not only the fact to share knowledge in communities, it concerns the transformation of practices related to environment and the dissemination of new practices to support people wellbeing.

Contextual challenges refer to sociocultural practices and behaviors of the students and the one of the communities' members. As urban citizens from different background, the implementation of the KTP was affected by difficulties expressed through the language barriers, cultural practices and habits (related to environment, economy, lifestyle). Yet, in communities, students have a positive perception of the possibility to get new learning experience. However, the lack of research skills mastery, the social environment and believes prevent them to reach the full accomplishment. In addition, KTP through community service, immersion research initiatives like the one of the students to interact and support communities could not succeed completely due to communication barriers, and difficulties to understand clearly the right motivators guiding these rural places populations practices degrading the environment. These difficulties reduced the KTP effectiveness in society and the question is that these issues influenced also learners learning experience. It provides a non-accomplishment feeling of the KTP impacts in the society to solve the environment issues. Digital literacy and geographical orientation on KTP site, grants opportunities to support these knowledge valorizations, academia pressure appear as another big challenge.

Finally, all these barriers reduced the impact of the knowledge transfer program on environment preservation in the communities. It influences the psychological experience of some participant who felt discouraged face to the subsistence of environment destruction practices thus their efforts to change some individual's behaviors. As changing human behavior for sustainable development and wellbeing requires a long-term intervention, these barriers could not prevent many students and communities' people to get benefits from the KTP on the environment preservation.

Thus, these barriers, the next section questions the impact of KT on communities, academia and individual wellbeing based of this explorative study in Cote d'Ivoire.

Impact on communities, academic and a personal wellbeing

The evaluation of the KT program led in the curricula of students in geography revealed many facts influencing the wellbeing of communities, academics and a students involved in this service learning. The participants expressed their learning experience through the statements below:

I felt positive in my mindset by forgetting the pressure and found knowledge sharing in communities' fun. We felt more engaged and motivated to research, sensitize and transfer academic knowledge to communities' members in order to solve many local environment issues like deforestation, pollution, diseases affecting people wellness for example (Respondent 1)

The fact to observe the issues related to economic activities on environment and make suggestions was little bit difficult. Yet, I found it great to apply our knowledge in communities. It was wonderful to share in San- Pedro (Respondent 2)

We had to list urban activities, formal and informal businesses, talk about housing typology, and then talk about the type of transport with communities members. The fact to apply academia knowledge to solve real communities problem related to transportation impact on environment increased my self-esteem, confidence, research skills abilities and capacity to practice for a good professional insertion (Respondent 3)

Even if it is interesting, there is a lack of sustainable project supported by grants in favor of students' research and community service engagement. It must be a continuous program because the preservation of the environment is a serious topic (Respondent 4)

We could change something in communities. I felt useful and could learn more on the social dynamic in the environment preservation (Respondent 5).

According to these statements, KTP contributed to the community's life improvement by providing new knowledge, ideas and collaborating for sustainable environment initiatives. Due to their conditions, often, local populations and decision makers don't have access to the new strategies to manage climate change, pollution, and human activities destroying ecosystems. These environment issues affect populations wellbeing by resulting in health issues (like malaria and more), low harvest, hyper exploitation of natural resources (flora and fauna), housing destruction during rain, and similar things. Therefore, even if the impact on communities' behavior is limited to short term, KTP allowed to build a better future to communities by transferring solutions to problems and getting the right data on the communities' issues.

Moreover, this learning program in communities calls to disseminate findings from academia by partnership with local communities' populations to solve many issues and challenges in today's rapidly changing world through the implication of students in Knowledge and Technology Transfer (KTT) dissemination. Indeed, this immersive program improved

learners' engagement, motivation and positive perception of the importance of KTP to support communities from academia to societies for better life conditions, accomplishment and mutual growth. Therefore, by applying theories to provide solutions to real environmental and health challenges, academia peoples like students and teachers, offer a way of knowledge exchange related to planet awareness, economy solutions and whole the society resilience's.

In sum, the initiative to share knowledge from academia into rural communities in Cote d'Ivoire for environment preservation gave many outcomes related to the positive psychology and wellbeing.

Discussion and Conclusion

This paper aims to analyze the influence of knowledge transfer (KTP) programs on students and beneficiaries' wellbeing during immersion interventions of Higher Education Institutions in communities for sustainable development and environment preservation. This qualitative exploratory study used learning experience of student in geography during a KTP for environment sustainability in rural cities in order to evaluate the impact on communities, academia and students themselves. Based on knowledge Transfer Theory and PERMA Model, the findings underlined the crucial role of KTP for human and whole the society wellbeing.

According to findings, participants stated that the involvement in communities for academic activities related to environment sustainability produced both positive and negative emotion.

The *reaction level* of participants (community members and students) was globally positive thus contextual barriers encountered during the Knowledge Transfer Program aiming to make research on environment preservations and transfer academic knowledge to population through sensitizations. The participants reaction underlined the hospitality of the communities, the discovery of another place and feeling of wellbeing compared with dwelling cities. In a wellbeing perspective of *positive emotion*, the data shows that KTP influenced positively the student's perception of their capacity to share awareness to communities, change people behaviors on environment sustainability and get skills for their future professional integration. So, in academia and communities' partnership initiatives research programs like service learning and problem solving that give opportunities to empower mindset and create engagement in favor of communities and environment preservation contribute to human

wellbeing. The engagement of community's member with students during the immersive program demonstrated their interest in the knowledge dissemination and/ or acquisition in order to live in a safe environment and get a better future. This dimension of wellbeing underlined that the youth power (as scholars and students) can provide occasion of community engagement supported by academia KTP activities in order to learn real cases and also share knowledge, know-how and skills in communities for sustainable environment (Gougou et al. 2025; Purcell et al. 2019).

Knowledge exists in the human mind through learning or experience and then gradually grows with experience, involving personal beliefs, judgments, and value perceptions, in addition to explicit textual behavior, including the implicit mental journey (Peng et al. 2021). This fact shows limits of the participants of this experience

in communities, it is an occasion of *relationship* according to PERMA model to support sustainable environment and academia knowledge sharing. Through KTP, the partnership between academia and communities *motivates* to a good collaboration with all academic stakeholders to implement a good strategy of positioning. According to Saaida (2023), Podgórska & Zdonek (2024), it is in order to link the demand for knowledge with the university supply of knowledge to develop processes and innovative solutions to accelerate the transformation of knowledge into use to embrace the societal impact agenda .

At results level it is noticeable that;TP as community services and engagement through problem-based learning, internship and volunteering in academia projects for communities remain an important question in a perspective of dissemination of technology and knowledge transfer. This learning experience for environment preservation represents an important academia knowledge sharing initiatives that contribute to *accomplishment* of significant transformation. For Aoki, (2021) KTP is very important to support wellbeing and academia impact for a sustainable society.

It is evident that the relationship between well-being and knowledge sharing through immersion activities in geography, which enable students to solve environmental issues in communities, plays a crucial role in the well-being of both communities and learners. It allows the creation of a network for intervention, changing behaviours to promote environmental sustainability. This reality in academic initiatives in Africa offers great development opportunities (Vitus, 2025).

As limitation, this exploratory qualitative study did not used questionnaires and involved

more Universities for a cross cultural research . However, some recommendations can be mentioned:

- Nurture Knowledge (and Technology) Transfer Programs from academia to community in curricula design
- Provide resources to support KTP in Higher Education Institutions policy
- Establish partnership with communities and industry for KTT to support communities' sustainability and learners' wellbeing by sharing
- ...

Abstract

The general well-being of people is the most important aspect of humanity, that when it is compromised, all aspect of life, turn to be tempered. Personal growth and development are retarded. It affects societal growth and does not favor proper development in a society. Well-being can be approached through various ways. The current approaches to well-being of the individual, often revolve around five ways- connectivity, being active, taking notices, continuous learning and giving to others. Well-being encompasses quality of life and the ability of people and societies to contribute to the world with a sense of meaning and purpose. Dwelling on well-being supports the tracking of the equitable distribution of resources, overall thriving and sustainability. There are five types of well-being, Physical wellbeing, Social well-being, Workplace wellbeing, and societal well-being. It has been observed that, mental, physical, social, financial, spiritual and vocational wellness, are the elements of well-being. Emotional, occupational, intellectual are also some of the dimensions of wellness. It has observed that the contemporary approaches to well-being emphasizes connecting with others, being physically active, becoming aware of new innovations and learning new things from them and giving back to society. They are approaches that focus on the improvement of the mental and physical health through physical and everyday activities.

So the above topic on well-being, seeks to define the term, the dimensions, and reecho the importance of wellness in our field of study as practitioners. I realized that the functions of well-being contemporarily, was basically on personal health and needs, therefore ways with which the individual would be able to meet an expectation of fully becoming well, were my research methods. It also put across the many strategies that are used to achieve a well-being in its inclusiveness. That is within the social, work, family, religion and in relationship.

Keywords: well-being, physical, societal, occupational,

Introduction

Well-being emphasize a multidimensional and holistic view considering not just the physical health but also the mental, emotional social and the spiritual aspect .These are more to the personal responsibility , community engagement, and a focus on the social and cultural factors

which influence it. Strategies in dealing with this include fostering connections, promoting physical activity, encouraging mindful awareness, embracing continuous learning. Beyond health, we need to recognize that well-being encompasses various aspects of wellness that go beyond just physical health, that includes mental, social, emotional, and spiritual well-being. Acknowledging the importance of the individual wellness, the community they live in and the society as a whole bring to bare the horizon of this term, well-being. Self-care and personal growth is also about a well-being. Individual encouragement to take proactive steps in their own well-being such as practicing selfcare and engaging in personal growth activities is also included in the approaches that bring a well-being. Promoting mindfulness practice such as meditation or deep breathing to increase and reduce stress is an approach. Social supporting is also a recognisable importance of strong social connections and belonging within a community for well-being. Encouraging individuals to engage in collective action and social change initiative will improve their communities societies and ultimately their own wellness. All these are very important approaches that really define a well-being for this contemporary generation, as they must be healthy in all aspects of their growth and development hence, my five approaches to well-being; Physical, Emotional, Financial, Workplace and Societal well-being.

Method

I basically undertook several observations, compared them to other authors' views and related them to my personal wellness to complete the understudy topic in my research. There have been several wellness related seminars I was part of, that strongly took participants to our general well-being and its importance.

I have happened to observe keep fit clubs in several institutions that have registered members for weekend physical exercises to energize them after the weekdays academic activities on campus. Some comments were that, without these physical treatments their bodies become very weak and so they have to exercise during the weekends.

There were some instances I witnessed institutions, corporate organization visiting poor communities to give support and donation either in cash or gestures in order to uplift the well-being of those communities. Some may need ordinary bore holes for water, chip compounds for medical attention and disease treatments centres, to survive. Social responsibility of this nature helps rekindle social well-being.

Reading from authors like Laura Duerr, Natasha Sinha and Myers got my understanding so close to the reason that everyone needs attain some level of wellness in his or her life.

Results

Figure 1. Well-being understudy

In this research, I found out that well-being four basic areas that need prompt attention.

Physical well-being, Emotional and Social well-being, Financial well-being and Workplace Well-being.

Emotional and Social

People who are emotionally well have fewer emotions and are able to bounce back from difficulties faster, they become resilience When people are able to manage emotions well and have a sense of meaning, purpose and supportive relationship it means they have a positive emotions. Positive emotional wellbeing can lower your risk of disease, sickness, and injury. Emotional wellbeing includes being self-accepting, self-aware and able to handle your emotions constructively. Some signs of emotional wellbeing include the ability to identify and express your feelings where needed. Emotional wellbeing stabilizes your mental state and improve you health such as lower blood pressure, reduced risk of heart disease, healthier weight, better blood sugar levels, and long life. It also builds lasting psychological, social and intellectual capital, boosting our resilience and psychological wellbeing. Therefore emotional wellbeing is the ability to successfully handle lifes stresses and adapt to changes and difficult times.

Social wellness is a critical component of the overall wellbeing, emphasizing the importance of healthy and fulfilling relationships with others. It involves building a strong social support network fostering connections, and engaging in positive social interaction to enhance

emotional wellbeing and reduce feeling of isolation. Social wellness helps build and maintain supportive relationships with family, friends, and colleagues. Feeling connected to a community and having a sense of belonging can significantly improve overall wellbeing and reduce the feeling of isolations. Having a strong support network provides emotional and practical support during a difficult time. It also enhances resilience and coping abilities. Social wellness requires a lot of effort and intentionality, just like other aspect of wellbeing. Studies have shown that social connections can lead to improved mental health, reduce stress, and improved physical health.

Prioritizing social wellness, individuals can improve their overall wellbeing, building a strong support system, and cultivate a sense of belonging and purpose.

Figure 2. Belongingness

Physical wellness

A lot of researchers have had their studies on the general poor health and severally reported on poor physical health to mental health. Concluding on best practices such as exercises, nutrition and sleep to be key practices to fighting stress and preventing illnesses. Physical exercise is known to improve both the cognitive and psychological well-being. Finding an activity and exercise that is right for an individual can improve and accelerate their mental and physical health.

Financial well-being

Financial wellness is very important for our overall wellbeing as it can affect the physical, mental, and emotional health. Achieving financial wellness goes with budgeting, saving, investing, and planning. Being financially well means you can meet your current and ongoing

financial obligations, feel secure in your financial future and are able to make choices that allow you to enjoy life and become financially freed. Regardless of income and a number of investments one has, everyone's financial status fits into a common, fundamental framework, that we call the four pillars of personal finance. Everyone has four(4) basic components in their financial structure. That is ! assets, debts, income, and expenses

Figure 3. Investments

In my research, I spotted two(2) other wellness, that is Intellectual and Spiritual wellness. They seemed crucial areas to be considered very well when dealing with well-being.

Intellectual wellness

Intellectual wellness focuses on the stimulation of the mind, engaging in learning, and developing critical thinking skills. It involves embracing new experiences, acquiring knowledge and actively pursuing mental challenges to foster continuous growth and intellectual stimulation. It is about actively engaging with the mind, pursuing knowledge and developing critical thinking skills. It contributes to the overall mental health by promoting clarity of thought, focus and an expanded mindset. It engages in lifelong learning, pursuing new interests, taking courses, reading widely and participating in intellectual discussions. It also embraces new ideas, problem solving and engage in activities that stimulate your mind. Intellectual wellness cultivate curiosity by opening you to new experiences and actively seek out information. It is a practice of the mindset of individuals. Pay attention to your thoughts and emotions and learn how to manage stress and anxiety.

Intellectual wellness is beneficial, in that it enhances brain function, learning capabilities, and problem-solving abilities, while also fostering a sense of fulfillment and purpose.

Figure 4. Gaining Knowledge

Spiritual wellness.

Spiritual wellness refers to the sense of meaning, purpose, and connection to a larger being than oneself. It deals with values and morals that guide one's life and actions. It involves religious practices, but also personal practices, for instance meditation, nature walks or cultivating gratitude. Spiritual wellness is also about a sense of purpose and meaning in life often through exploring personal beliefs, values, and morals. It deals with the feelings of connectedness to something beyond oneself, whether that is a higher power, nature or a community. It is highly personal and can manifest in various ways, including formal or informal religious practices. Spiritual wellbeing can therefore contribute to the overall wellness by fostering a sense of hope, optimism, and fulfillment. Spirituality contributes to personal fulfillment and thus becoming satisfied with oneself. When one is confronted with challenges, there is always the hope when God is called to intervene. One is satisfied with prayer after having challenges. People visit church just to worship the Lord Almighty for their burdens be taken away.

Discussion

There is a realization that well-being is maintained through certain steps. It is observed that to maintain a balance in one's wellness there should be steps. One needs to connect, keep learning, be active and be taking notices of things around them. Maintaining our wellbeing and

that of our neighbors, would help us develop a healthy society and peaceful coexistence within ourselves. The five steps to wellbeing are the few simple ways to improve our immediate requirements as livings through our mental and social wellbeing. The five steps to our wellbeing are explained below.

It is very important to make time with people we care and share together some enjoyment. Connecting with our family, friends and neighbors will us the sense of belonging. We can make time for walk together and try as much as possible to engage with other new friends in our neighborhood. We should try and spend time in our community events and play with our immediate family when the need be. Reconnect with people you have lost contact with and call or text messages to friends known not before. We should take delight in greeting people we walked past and share a picnic in our local community parks. We should join the local people to meet new friends and connect with others who share similar interests. Make time to contact people we have not spoken to in a while. Connecting with people boost your personal security level and give way to problem sharing and solving.

Moving our body in the form of exercise and daily activities helps us to feel better, happier and healthier. Being active and moving your body will help you keep fit and healthy, both mentally and physically. Taking a walk, helping in the house chores and other social recreation, sport and games, make you become very active, strong and very healthy. You can go for swimming, run, ride or walk to boost your wellbeing. Some people do take their pet for walk, practice some yoga at home, beaches or parks. Be fun of sports and try to join sporting and keep fit clubs to be active and meet people at the same time. You can discover an activity you enjoy that suit your level of fitness and mobility.

Noting things in the surroundings is very important to our immediate security. It great to enjoy the beauty of nature and note some new growth and ecological development. Reminding yourself to take notice can help you to be aware of how your feeling. It can also help you understand what triggers your feelings of stress or anxiety. There is a proof to show that souring the moment can help you to feel more positive about life. It is very important to take some time to enjoythe moment and the environment around you.

Learning has no end and that each day we tend to learn new things. This often happens without realizing it. The feeling of learning new things and developing can boost your self-esteem.

Setting goals sometimes make you feel more productive and gives you more control of your life. The question is! How do you learn today?

I also came across some key actors around well-being. Social relationship turn to be one, physical activities , awareness and giving to your family society community and your own friends.

The effects of taking part in social and community life have been extensively researched on. Some studies have shown that people who help others are socially involved in every activity that happens in the community around them.. When your relationship with your community are more effective, you are likely to see problems people around you go through and offer assistance where the need be. The best offer one can make in his or her society is to search for the needy and give a helping hand. Get involved in the communal labor; participate in every social activity that is aimed of uplifting and developing your society. Support schools; assist the leadership in your community to bring social development. Help your local government to extend development to your community. Be a supporter of your neighbor by explaining to them issues they find difficulty understand. If there is anything you can do to be kind or helpful to someone else, do not hesitate to do that.

Physical health is paramount to well-being, one needs to be fit to maintain good posture and healthy life. Regular exercise rejuvenates the body system and allows the free flow of blood circulation. Physical well-being encompasses the ability to maintain a healthy quality of life, allowing the individual to engage in daily activities without undue fatigue. It is a state of health and well-being, and more specifically, the ability to perform aspect of sports occupations and daily activities. It is achieved through proper nutrition, moderate vigorous physical exercises and sufficient rest along with formal recovery plan. It involves focusing on habits that promote physical health. Sleeping, regular exercises, good nutrition, maintaining sexual health, and making safe decisions about substance use. It is about knowing how to navigate healthcare and understanding what your body needs not only when you are sick, but also to prevent illness and injury. To improve your physical well-being for fighting age related issues, one has to do the following Both moderate and vigorous-intensive physical activities improve health. Walking, cycling, wheeling, sports, active recreation and play lead to a healthy lifestyle.

The qualities of well-being cannot be ignored as without mentioning them, would not define the term completely. Well-being needs commitment, Calmness, Compassion, Courage and Clarity. These are termed as the five(5) Cs of well-being.

Commitment is very important factor in achieving and maintaining well-being. This involves dedication, loyalty, and sense of purpose which can contribute to the overall satisfaction and happiness. Qualities of well-being when coupled with commitment can lead to a more fulfilling and resilient life. The following are few relations of commitment to well-being.

Commitment relate to subjective well-being by fostering a sense of purpose, fulfillment, and belonging which are crucial elements of subjective well-being. Positive emotion like enjoyment and happiness as well as a strong sense of connection to oneself and others are associated to subjective well-being that commitment here becomes crucial. Commitment to ones work increases job satisfaction. This would lead to a more positive and fulfilling work experience. A sense of commitment can contribute to a person's willingness to invest more effort and dedication in their work Having strong sense of commitment can provide a foundation for resilience, allowing individuals to better cope with stress related problems. The reason being that, commitment provides a sense of stability and purpose even in challenging times. In a healthy relationship, commitment is very crucial for building and maintaining healthy relationships, whether they are personal, social, or professional. It involves dedication, loyalty, and a willingness to work together to achieve a well-being of others as well. To find your purpose and meaning in life, a sense of commitment is needed. This is significant factor in the overall well-being. This can be achieved through various avenues including work, personal relationship, or pursuing personal interest. There is also a spiritual commitment, for some, a strong spiritual commitment can be of comfort.

Calmness and well-being are closely intertwined, with calmness often being a key component of overall well-being. Maintaining calmness can help reduce stress, improve focus and enhance emotional regulation, all of which contribute to a sense of well-being. Calmness has the following benefits; Stress reduction- calming practices like deep breathing and meditation can help reduce the physiological and emotional responses to stress. It improves focus- a calm mind is a more focused mind, allowing for better concentration and decision-making. It enhances emotional regulation- calmness helps individuals manage their emotions more effectively, reducing reactivity and promoting a sense of balance. Calmness increases resilience too.- calm individuals are often more resilient to life challenges, as they can better navigate stressful situations with a sense of equanimity. A calm state of mind can help reduce the risk of chronic illnesses and heart disease and depression. It ca also boost the immune system, making individuals more resilient to illness. Calmness allows us to be more present and attentive in our interactions with others. it promotes empathy and understanding , fostering

stronger relationships,. We are more likely to approach conflicts constructively and resolve them peacefully when we are calm, thus improving decision making.

Having compassion both towards oneself and others significantly impacts well-being by fostering connections, reducing stress and anxiety, and promoting emotional resilience. It is the key pillar of mental health, understanding pain and seeking to alleviate it, and its is linked to better physical health as well. Compassion can lead to increased happiness, improved relationship and a supportive community. Compassion strengthens feelings of connectedness and reduces loneliness. It fosters a sense of belonging and support, which are essential for well-being. A compassionate behavior can provide a buffer against stress and build mental resilience, It can also be seen as a way to manage everyday pressure and build mental fortitude. Compassion, particularly self-compassion is linked to overall health. Individual with higher level of compassion are more likely to engage in positive health behaviors and report ill-health symptoms. It promotes emotional resilience and the ability to bounce back from adversity. It helps the individual to view challenges as opportunities for growth rather than failures.

Courage involves facing fears and adversity, it is crucial for navigating life challenges and achieving a state of well-being. By developing courage, the individual can build resilience, overcome limitations and pursue a fulfilling life, ultimately contributing to improved mental and physical well-being.

Courage helps overcome fears and anxiety- individuals can only confront fears and anxieties when they have courage. It allows the individual to move forward and experience a wider range of life experiences. Building resilience needs courage to face those challenges and demonstrate the strength in facing adversity, helping the individual bounce back from setbacks and adapt to difficult situations. Courage is seen as an essential tool to achieving a desired goal and overcoming obstacles leading to sense of accomplishment and a greater sense of meaning and purpose in life. For personal growth one needs to demonstrate courage in everyday situations. This create self awareness , helps the individual to understand their strengths and weaknesses. Courageous individuals often inspire others, leading to a ripple effect of positive change in their communities.

Clarity refers to a state of mental wellness that proves ones understanding and focus , which can significantly contribute to the overall wee-being. Clarity and well-being are interconnected particularly in the context of mental health and personal growth.. How related is clarity to well-being! It is the foundation of well-being. When individuals have clarity about their goals, and

purpose, they are better equipped to making choices that align with their true selves and foster a sense of fulfillment. Clarity enhances self-regulation. Clarity about ones strengths and weaknesses enhances self-regulation and goal pursuit, leading to greater success and a sense of accomplishment. When individuals can clarify what is important to them and how to achieve their goals, they experience less stress and anxiety. Clarity promotes emotional well-being. Well-being is often linked to having clear understanding of oneself and ones place in the world. It is also about ones purpose in life that can lead to a deeper sense of meaning and satisfaction to the entire wellness.

Conclusion

The world was made in way that is to assure every living and non-living a state of comfortability in a healthy ecosystem. This is to say that everyone needs to live comfortatble in a healthy environment. More often than not, man's destructions of the environment turn to affect our well-being. It is important that man notes this fault and finds other ways to sustain wellness in his life. To do this, I have lined up some conteporary approaches to maintaining ones well-being..

- Get a plant for your workplace
- Have a clear the clutter day
- Take a different route on your way journey to and from work
- Visit a new place for lunch.
- Find out something about your colleagues
- Sign up for a class
- Read and listen to news or a book
- You can set up a book club
- Do crossword or any game that involve words or figures, encountering new words will be helpful to yoy.
- Increase the level of your research activities and a surprise of knowing funny things would not be a problem.
- Making a cup of tea for a colleague
- Offering to help a colleague with something they are stuck on
- Introducing yourself to a new starter to help them feel more at ease and
- Seeing if there are any volunteering initiatives open at work.
- Commit to a healthy diet by focusing on nutrient-dense foods such as fresh fruits, vegetables, whole grains, legumes nuts and seeds.
- More liquid is needed to be drunk for proper survival of the seeds, nuts, legumes, and eggs taken into the body system.
- Movement of the body at this time is very important
- Your sleep should not be compromised
- Limited alcohol intake is best because some of the food taken in produces special alcohol needed by the body for its system to function well.

---Avoid using illicit drugs and un prescribe medicines. Regular visit the doctor for checkups

It is normal to feel sad, angry, or low sometimes. But if you have a poor wellbeing for long time, you might start to find things more difficult to cope with. Indeed maintaining highs of well-being success in life. Having good well-being helps a lot.

Abstract

Deforestation has significant ecological, climatic, and social effects, making it one of the most alarming environmental issues in the world. Here, we present a bibliometric study of research on deforestation that identifies knowledge gaps, methodically assesses current trends, and indicates the need for more research. A dataset of 2,299 articles (2020–2024) was analyzed using bibliometric techniques such as keyword co-occurrence, citation analysis, and network visualization, with Scopus serving as the main database. Systematically reviewed 19 significant papers (according to citation) to identify key themes, research gaps, and techniques, offering a thorough viewpoint on the field of deforestation studies. The findings showed an upward trend in studies on deforestation that addressed important issues like biodiversity loss, climate change, and land-use change. These findings emphasize the need of focusing a deforestation study on tropical areas, such as Southeast Asia, the Amazon, and the Congo Basin. The worldwide scope of the deforestation issue has led to an increase in international cooperation. Research on transdisciplinary strategies utilizing socioeconomic policies, remote sensing technology, and sustainability-focused targeted remedies (technological or community-based) is still lacking despite these developments. The report also emphasizes the increased interest in One Health approaches that link ecological changes to human well-being, fire dynamics, and the effects on mental health. Moreover, the difficulty of putting research into practice is highlighted by the scant implementation data of programs like REDD+. In order to lessen the harm, this study also emphasizes the necessity of community forestry, corporate social responsibility, and strengthened conservation regulation. In order to monitor forests and inform policy decisions, future research can investigate machine learning, artificial intelligence, and GIS techniques.

Keywords: Bibliometric analysis, Biodiversity, Climate change, Deforestation, Sustainability

Introduction

Deforestation, the widespread destruction of trees as forests, has become a major environmental challenge with significant ecological, climatic, and socioeconomic consequences. The loss of forest cover disrupts global carbon cycles by diminishing the planet's capacity to absorb carbon dioxide, raising greenhouse gas levels, and accelerating climate change. Moreover, deforestation's interaction with the BTB significantly affects the energy balance at the land surface channel, changing albedo, and surface temperature, with some regions becoming unstable in climate at different scales (Douglas & Philip, 2014). Hydrological systems are especially sensitive to forest loss, as decreased evapotranspiration reduces atmospheric moisture content and alters local, regional, and even global precipitation regimes. Above all, biodiversity hotspots in tropical rainforests are especially vulnerable, where deforestation leads to habitat fragmentation and species' rapid extinction, which are crucial for maintaining ecosystem functions (Faria et al., 2023). Soaring deforestation rates are leading to the new causes and impacts of deforestation becoming the center of attention; learning how to address the causes of deforestation and its extensive consequences is essential to maintaining ecological stability and long-term prosperity.

Research indicates that global ecological and socioeconomic systems remain greatly affected by deforestation. Key habitats destroyed by palm oil plantations, especially in Southeast Asia, are a stark example of this, where enormous blocks of tropical rainforest have been cleared and destroyed (Aguilar Leon, 2020). According to the International Union for Conservation of Nature (IUCN), this land conversion has eliminated emblematic species like orangutans and Sumatran tigers, whose populations have fallen by 50% in the past 20 years. Economically, the palm oil industry contributes approximately 4.5% of the GDP of Indonesia but is also involved in social inequity by displacing Indigenous groups and using labor, often in precarious conditions (Source: *International Labour Organization (ILO)*). A study from the *World Economic Forum* emphasizes that, Palm oil is supplied with such a significant environmental impact that in the form of carbon freed during deforestation, its contribution can reach up to 10% of global GHG. Environmental degradation leads to the loss of ecosystem services essential to human welfare, including water purification, flood control, and soil fertility. Elsewhere in the world, deforestation in the Congo Basin is another vivid case, as logging, mining, and small-scale agriculture break up the world's second-largest rainforest (Tieguhong, 2008). Over 75 million people depend on the forest for food, medicine, and cultural traditions, and deforestation threatens their lives (*Critical Ecosystems*, 2023). In addition, the

ecological global importance of the Congo Basin is underscored by the fact that it holds approximately 30 billion tons of carbon ((Pearce, 2017) and serves as a region's carbon sink and weather pattern regulator. Studies have shown that sustained forest loss in this region could trigger a feedback cycle of drying trends, reducing the resilience of the forest and magnifying the impacts of climate change. Equally important is the Sundarbans mangrove forest in Bangladesh, recognized as the world's largest continuous mangrove ecosystem and designated as a UNESCO World Heritage Site. According to the IUCN, this fascinating ecosystem is a vital barrier to cyclones and storm surges, protecting more than 7.5 million coastal inhabitants. However, mangrove cover has declined by 24% over the past 30 years due to deforestation and land-use changes driven by aquaculture, agriculture, and urban development (*BLOG*, 2020). Mangrove loss threatens biodiversity and threatens as many as six endangered species, including the Bengal tiger, whose numbers have fallen by a quarter in the last two decades, and the Irrawaddy dolphin (Titumir et al., 2023). The loss in mangroves has also compromised the carbon sequestration they were providing, and in 2020, they were estimated to have sequestered 4.15 crore metric tons of CO₂ per year (Mahadevia Ghimire & Vikas, 2012). The Sundarbans also support local communities through fishing, honey harvesting, and eco-tourism. As an increasingly vulnerable ecosystem, rising sea levels and salt related to climate change threaten the mangroves, leading to urgent conservation efforts to safeguard their ecological and socioeconomic benefits.

In recent years, bibliometric analyses have become popular for assessing research trends and scientific progress in specific fields. These studies help to illuminate the growth of scholarly output, the influence of key publications, and the development of transdisciplinary research themes. This approach seeks to uncover current trends, highlight knowledge gaps, and suggest lines of future research to develop robust, evidence-based policies and sustainable practices. Hence this review article aims at hence the main goals of this review article are, a) Identify global trends in deforestation and its historical development, major underlying drivers, and the most affected regions; b) Investigate deforestation's ecological, climatic, and socioeconomic effects in diverse biomes and ecosystems; c) Using bibliometric tools, identify and highlight gaps in existing deforestation research, focusing on underexplored areas and the potential for transdisciplinary approaches; d) Create implementable solutions and policy initiatives aimed at reducing deforestation.

Deforestation

Deforestation is a large-scale removal of forests, a serious environmental issue with devastating ecological, climatic, and socio-economic impacts. In the last two decades, tropical

regions such as the Amazon, the Congo Basin, and Southeast Asia had the fastest rates of forest loss, driven mainly by agriculture, logging, and urban expansion. United Nations Environment Programme (UNEP) estimates that deforestation accounts for nearly 10 per cent of global carbon emissions, greatly speeding up climate change. Forests store carbon; they sequester around 2.6 billion metric tons of CO₂ annually (Sedjo & Solomon, 1989). However, clearing forests undoes this impact, releasing 4.8 gigatons of CO₂ annually into the atmosphere (Sharma et al., 2023). The Amazon rainforest alone compulsorily emitted 120 million metric tons of CO₂ in 2021 from deforestation (Radwin, 2023) and fires caused by human activity, which accounted for 17% of its total forest cover in the past 50 years. When trees are lost, hydrological systems are broken, too; in deforested parts of the Amazon, rainfall has declined by 25% (Souza et al., 2019), causing extended dry periods that have diminished agricultural output. Biodiversity is yet another victim of deforestation. Tropical forests house 80% of terrestrial species, but despite this, habitat destruction has caused drastic declines in wildlife populations. In Southeast Asia, the orangutan population has plummeted by nearly half over the past 20 years, partly because of deforestation (Voigt et al., 2018). The loss of forest habitats also catalysis greater human-wildlife interactions, increasing the risk of zoonotic diseases, as observed in outbreaks such as Ebola, which have been associated with habitat disturbances due to deforestation (Bhatia et al., 2024). The socio-economic impacts of deforestation may be just as alarming. Forests support more than 1 billion people globally, with many indigenous communities depending on them for food, medicines, and cultural practices. For example, the illegal logging and expansion of land by agricultural companies responsible for 42% of global deforestation are displacing these populations and creating resource conflicts and economic instability (Ritchie, 2021). Moreover, the soil in deforested regions has decreased fertility by 60%, rendering the land useless for sustainable agriculture and increasing natural disaster susceptibility, including landslides or floods (Brasil et al., 2023).

Solving deforestation runs within different policies, tech, and sustainability solutions. Furthermore, Remote sensing and AI-driven monitoring have already helped curb illegal deforestation in some places. Reforestation and afforestation projects are important, too. Large-scale efforts, such as China's "Great Green Wall," which managed to plant 66 billion trees, show the promise of restoring degraded lands (Zebra, 2016). In the same way, businesses need to address the issues of agriculture and supply chains that contribute to deforestation.

According to CDP, more than 400 major companies have vowed to cut deforestation out of their supply chains, showing the rising consumer appetite for sustainable commodities. Awareness and policy interventions remain critical to change. Such impacts will be felt in the long run and require strengthening conservation laws, promoting eco-sensitive land use planning, and supporting reforestation efforts. So, forests must be able to continue providing environmental and economic benefits for generations to come through international cooperation.

Method

This study combines bibliometric analysis to investigate research trends, theme patterns, and collaborative networks in deforestation studies. The process consists of four major stages: data collection, systematic literature review, bibliometric analysis, and data visualization.

Data Collection

The study uses Scopus as the main database because it covers a broad spectrum of high-quality publications related to deforestation research. Using the keywords "*Deforestation*" and "*Climate Change*," an advanced search was performed (From 1 January, 2020 to 17 December, 2024), and an initial dataset of 2,299 results was obtained. This gave rise to so many results that we needed to filter based on the title relevance and it gave us a total of 46 entries. After applying an additional filter on citation counts (>10), we arrived at a final list of nineteen key papers. Candidate records were screened for relevance, duplicates were removed, and keywords were standardized to ensure higher precision in subsequent analyses.

Systematic Literature Review

The final 19 articles underwent a thorough full-text evaluation to determine their relevance, quality, and contribution to deforestation research. The systematic literature review aimed to extract significant topics, methodology, and conclusions, enabling an in-depth survey of current research. This technique aided in finding gaps in previous research and connecting the bibliometric data with relevant insights.

Bibliometric Analysis

The annual publication output was analyzed to discover growing trends. Citation analysis was conducted to identify the subject's most influential publications, journals, authors, and institutions. Biblioshiny was used to conduct keyword co-occurrence analysis, which revealed prominent themes and growing study areas in deforestation studies (Kabir et al., 2024).

Social network analysis illustrates transnational collaboration between authors, institutions, and countries. The study also used co-authorship and keyword networks to investigate conceptual relationships in deforestation research.

Data Visualization and Interpretation

Biblioshiny and R software were used to visualize data, generating publication progression analysis, network diagrams, and word clouds. The identified patterns were contextualized within the larger landscape of scientific, policy, and environmental processes, shedding light on present research directions and prospects.

Figure 1: Systematic Literature Review and Bibliometric Analysis Workflow

Analysis and Result

Description of the Data

This dataset spans from 2020 to 2024 and contains 2,299 documents from 927 journals, books, etc. The collection is growing at an average rate of 12.44% per year. The average document age is 1.78 years, which is typical for an early stage, and the average citations per document are 14.99, signifying good scholarly impact. The dataset is constituted of a staggering 150,231 references overall. The document contains 9,875 Keywords Plus (ID) and

6,531 DE keywords, reflecting the diversity of thematic publications through ID keywords. There are 10,549 contributors to this paper and 175 authors of single-authored documents. There are 181 single-authored documents; collaboration dominates, with an average of 5.61 co-authors per document, and 45.41% of documents result from international collaborations. For reference, all the documents used here are articles demonstrating the emphasis on journal publications in academic research.

Publication Progression

This line graph depicting the distribution of articles published yearly between 2020 and 2024. The x-axis shows the years, and the y-axis shows the number of articles. As the graph shows, the number of articles has increased over the years. Beginning with just under 400 articles in 2020, the total steadily increased, topping 450 by 2022. Between 2022 and 2024, the growth was sharper, and in 2024, the number of articles exceeded 600. This trend shows a steady and rapid growth of publication output in the period.

Figure 2: Annual Progression of Publications (2020-2024)

Influential Journals

Figure 3 shows a horizontal bar chart of the major sources of publications, ranked by their contribution of documents. *Forests* records 75 or so documents, followed closely by *Science of the Total Environment* (70 documents). Some other notable sources are *Environmental Research Letters* with 57 documents and *Remote Sensing* with 47. *Sustainability (Switzerland)* had 45 documents, and *Journal of Environmental Management* had 33. Some other important sources include *Environmental Monitoring and Assessment* (29 documents), *Nature Communications* (28 documents), and *Global Change Biology* and *Land* (27 documents each). This graph shows the breakdown of research outputs by each of the top journals producing them, demonstrating the importance of individual sources like *Forests* and *Science of the Total Environment* to the data set overall.

Figure 3: Influential Journals

Author's Outputs

This figure is a horizontal bar chart of documents written by various persons. Authors are listed on the vertical axis (y-axis) while the number of documents is shown on the horizontal

axis (x-axis). One bar is one author, and the length of the bar shows the number of documents that they have authored. The chart indicates that the author *LI Y* has provided the most contribution with 18 documents, followed closely by authors *JR* and *LI X* followed with 17 documents each. *Zhang Y* comes in the second place with 16 documents and *WANG X* with 13 documents. Other top contributors were *CIAIS P*, *ZHANG X* (12 documents each) and *LI S*, *YANG H* (11 documents each). Finally, *ARAGÃO LEOC* has 10 docs authored. The bars are colored and darker colors reflect the height of the count. This visualization effectively highlights the disparity in document input from the authors.

Figure 4: Most Relevant Authors in Deforestation

Countries of Corresponding Authors

In this horizontal bar chart, the authors from different countries are divided into collaborator types based on the number of documents. Countries are listed on the y-axis, and the number of documents is represented on the x-axis. Two colors represent collaboration types: red for MCP (Multi-Country Collaboration) and blue for SCP (Single-Country Collaboration). The *USA* leads with the highest number of documents, with a significant portion attributed to SCP. The second-highest contributor is *Brazil*, with a notable amount from multi-country partnerships (MCP), suggesting a focus on MCP. The countries behind were *China*, *Great Britain*, and *Germany*, whose contributions are comparatively equally divided between SCP and MCP. *India*, *Australia*, and *Spain* also have high contributions of documents, with widely varying proportions of MCP and SCP. The MCP collaborations also contribute smaller numbers, with MCP collaborations coming predominately from countries such as *Ethiopia*, *Mexico*, and *Colombia*. At the lower end of the spectrum, *Pakistan*, *Korea*, *Italy*, *Japan*, and

Sweden contribute fewer documents overall but appear relatively MCP-heavy. The bar chart illustrates the amount of output from each country and the respective emphasis on the different kinds of collaboration, thus visualizing trends with global collaborative research over the last ten years.

Figure 5: Corresponding 'authors' Countries

Most Cited Countries

The bar chart illustrates the number of citations attributed to different countries. The Y axis denotes the countries, and the X axis gives the number of citations. Individual countries are shown by points with respective values next to them. *USA* with 6549 citations, *Brazil* (4192), *China* (4057), and the *United Kingdom* (2955). Countries like *Australia* (1,765), *Germany* (1,575), *Netherlands* (827), *India* (717), *Chile* (568) and *Sweden* (502) rank progressively lower. The size of the circles probably reflects relative counts of citations, with the *USA* emerging as the largest contributor. This visualization highlights the differences in citation counts between countries.

Figure 6: The Countries Which Cited Most

Active Institutions

A horizontal bar chart shows the number of articles from different academic and research affiliations. Affiliations and the number of articles is listed on the vertical axis and horizontal axis respectively. All ranking is followed by a circle showing the precise number of articles. The *National Institute for Space Research (INPE)* is top with 79 articles, followed by the *Universidad Nacional Autónoma de México* (72), *University of California* (70), *University of Exeter* (69), and *University of São Paulo* (66). Other top institutions include the *University of Leeds* (56), *University of Maryland* (55), *Michigan State University* (54), *Beijing* (52), and *Stockholm University* (50). The chart shows the output differences of all institutions, with *INPE* being the institution responsible for the highest output.

Figure 7: Most Relevant Affiliations

Network Analysis and Trend Word Analysis

Co-occurrence network of the Keywords

The output is a network visualization showing how several topics relate, probably based on reading documents or research papers. Each node (circle) stands for a specialized keyword, and the node's size indicates its importance/frequency in the dataset. The connections between words (or lines) depict the co-occurrence or closeness of these topics.

The central and largest nodes in the nodes above are what we call "climate change" and "deforestation," in red, indicating they are topics that are frequently discussed and connected. Scanning its neighbors are related ideas like "forest management," "global warming," and "greenhouse gases," which have substantial overlap with deforestation and climate change and appear in tightly clustered bunches in red. The upper right (purple cluster) contains numerous terms, such as "Amazonia," "carbon sequestration," "biomass," and "sustainable

development," that highlight consistency regarding tropical forests, land use, and carbon dynamics. These terms imply land use and carbon emissions in tropical environments. As shown in the lower left (green cluster), terms such as wildfire, forest fires, and fire hazards cluster together with control and hazard, representing discussions regarding fire dynamics and its effects on the environment. On the lower center (blue cluster), terms include "article," "ecosystem," "human," and "environmental protection," perhaps suggesting a somewhat more general or crosscutting focus on environmental research, highlighting human impact and potential conservation strategies. The vast number of lines crossing between clusters reflects the interdependence between these elements of environmental science.

Figure 8: Co-Occurrence network of the keyword

Word Cloud

This is a word cloud of the environmental and ecological language used in the database (so "environment" gets its frequency, and so do "ecology" and "ecological," etc.). Each word size represents its importance or frequency in the dataset. The more the words are used, the larger, highlighting their relevance: "climate change" and "deforestation" dominate. Many other larger terms like "biodiversity," "land use," "ecosystem," and "carbon" show the main areas of focus in environmental research. Words such as "Brazil," "forest fires," "carbon dioxide," and "remote sensing" but also larger and less impressive refer to details but also for another main theme. The word cloud shows the interrelatedness of all these factors and highlights the focus on climate change, deforestation, and the impact on wider ecology. This gives a taste of the relative significance of terms and what aspects in the field are being highlighted the most from a general perspective.

particularly in the Amazon and Congo Basin. According to hydrological modeling, deforestation could affect precipitation, decrease water availability, and impact agricultural productivity. Research about biodiversity loss also focuses on habitat fragmentation and the loss of keystone species caused by changing environments from deforestation. Some policy analysis studies, particularly those investigating the REDD+ framework, indicate that while at a high level, conservation-based solutions achieved some success during the planning phase of the REDD+ system, its implementation stage faced multiple constraints, such as in local execution. Nevertheless, socioeconomics studies emphasize that economic processes interplay with Indigenous justice such as deforestation, leading to the need for compliance-based governance that combines nature conservation and livelihood activities. Additionally, studies on human health show that in deforested areas, people are at greater risk of vector-borne diseases and extreme heat stress. Emerging trends in research reinforce the importance of AI, machine learning and remote sensing as tools to improve monitoring and enforcement against deforestation.

Table 2: List Of Selected Articles And Detailed Review

Paper	Approach	Problem Definition	Challenges	Dataset	Result
(Y. Li et al., 2022)	Earth system model simulations and satellite-derived estimates of aboveground biomass	Assessing the impact of deforestation-induced climate change on carbon storage in tropical forests	Neglect of biophysical effects in carbon accounting systems	Satellite-derived estimates of aboveground biomass	Additional carbon loss: Amazon ($5.1 \pm 3.7\%$), Congo ($3.8 \pm 2.5\%$)
(Zvobgo & Tsoka, 2021)	Landsat imagery analysis, household questionnaire survey, key stakeholder interviews, Markov Chain Cellular Automata model	Evaluating the rate and causes of deforestation in Upper Manyame Sub-Catchment, Zimbabwe	Urban expansion, peri-urban agriculture, lack of forest conservation policies	Landsat imagery (1990-2020)	9.4% vegetation loss (1990-2020), projected 3.3% loss by 2030
(Wolff et al., 2021)	Spatially explicit satellite, climate model, and population data	Impact of deforestation and climate change on mortality and unsafe work conditions in Berau, Indonesia	Lack of research on deforestation effects in low-latitude industrialising countries	Forest cover and temperature data (2002-2018)	17% forest loss; increased mean daily max temp by 0.95°C ; 7.3-8.5% increase in mortality; unsafe work time increased by 0.31 hours per day

(Bos et al., 2020)	Integrated assessment using remotely sensed, spatially modeled, and locally reported data	Effectiveness of REDD+ interventions in addressing deforestation drivers	Inadequate intervention strategies at local levels	Five project sites in Peru, Brazil, Vietnam, and Indonesia	Found general agreement between observed, modeled, and reported deforestation drivers, but some interventions were inadequate
(Jackson & Decker Sparks, 2020)	Policy analysis and REDD+ framework	Relationship between modern slavery, deforestation, and climate change	Lack of integration between antislavery and environmental programs	REDD+ program strategies	Proposes integrating antislavery interventions into REDD+ to improve efficiency and protect vulnerable communities
(Alves De Oliveira et al., 2021)	Coupled ocean-atmosphere model	Heat stress risk due to deforestation in the Brazilian Amazon	Extreme heat stress beyond human adaptation limit	RCP4.5 and RCP8.5 climate scenarios	By 2100, over 11 million people at extreme risk of heat stress due to Amazon savannization
(于 et al., 2021)	Palynological analysis of drilling cores	Long-term impact of human activities on forests and climate	Anthropogenic deforestation affecting climate since MIS5a	Pollen records from drilling cores	Strong increase in Dicranopteris spores and non-arboreal pollen indicate deforestation since late Holocene
(Arias et al., 2020)	Hydrological modeling of climate and deforestation effects	Impact of deforestation and climate change on Amazon hydropower planning	Altered river flows impacting energy generation	Tapajós River Basin hydrological data	Dry season hydropower potential could decrease by 5.4-7.4%; interannual variability may increase by 50-69%
(S. Li et al., 2021)	Fire weather index analysis	Contribution of climate change to wildfire-prone conditions in Cerrado and Arc of deforestation	Influence of El Niño and climate change on fire risk	2015 fire event in Brazil	Climate change increased likelihood of extreme fire weather; high fire weather index linked to temperature and humidity changes
(De Faria et al., 2021)	Fire-ecosystem modeling with remote sensing	Vulnerability of Amazon forests to post-fire grass invasion	Increased fire frequency leading to permanent vegetation shifts	Fire-climate data from 1981-2017 and projections for 2070-2099	14% of Amazon currently vulnerable; by 2100, 21% may be at risk of irreversible

					forest-to-grassland transition
(Chatting et al., 2022)	Climate modeling and carbon stock assessment	Future mangrove carbon storage under climate change and deforestation	Increased CO2 emissions from deforestation reducing mitigation potential	Climate scenarios SSP245 and SSP585	Climate change increases global mangrove C stocks by ~7%; deforestation emissions projected at 678.50 ± 151.32 Tg CO2e (2012-2095)
(Karuppusamy et al., 2021)	Climate trend analysis and vector-borne disease modeling	Impact of climate change and deforestation on vector-borne diseases in Mizoram, India	Rising temperatures and humidity facilitating disease spread	Climate data (1979-2013), forest cover data, disease incidence data	0.8°C rise in min temp; increased rainfall/humidity facilitating malaria/dengue spread; annual forest loss of 162 sq.km
(Leon et al., 2022)	Time-series analysis using co-integration and causality models	Effect of deforestation on climate change in Ecuador	Indirect impact of deforestation on climate change through agriculture and livestock	FAO data (1990-2020)	Short and long-term relationship between deforestation and climate change; recommendation for reforestation programs
(Gatti et al., 2021)	Atmospheric carbon measurement via aircraft profiling	Amazonia as a carbon source due to deforestation and climate change	Southeastern Amazon acting as net carbon source	590 aircraft measurements (2010-2018)	Eastern Amazon emits more CO2 due to fire emissions; deforestation increases dry season stress
(Wigand et al., 2022)	Data mining and research trend analysis	Impact of climate change, pollution, and deforestation on mental health	Lack of social and ethical considerations in research	15-year metadata from PubMed®	Growth in research on climate-mental health link; ethical/social dimensions underexplored
(Batten et al., 2021)	Life cycle analysis of bio-polyisoprene	Potential of bio-polyisoprene to mitigate deforestation and climate change	Environmental impact of rubber production	Comparative study of bio vs. natural/synthetic rubber	Bio-polyisoprene reduces GHG emissions; 84% lower land use than rubber plantations
(Friess et al., 2020)	Analysis of land-use and land-cover change (LULCC) and biophysical disturbances	Assessing the impact of deforestation, climate change, and restoration on mangrove carbon stocks	Differentiating variable impacts of LULCC, sea-level rise, cyclones, and rehabilitation on carbon dynamics	Various global estimates of mangrove carbon loss	Highlights the necessity of considering LULCC types in conservation efforts

(Da Silva et al., 2022)	Habitat suitability modeling under current and future climate scenarios	Evaluating the effects of deforestation and climate change on Amazon primates	Predicting species distribution loss and extinction risk under climate change scenarios	12 endemic primate species in the Eastern Amazon	8 out of 12 species may lose 90% of their range by 2050, with 25% facing extinction
(Ellwanger et al., 2020)	One Health perspective analysis of deforestation's impact on disease spread and public health	Examining how Amazon deforestation contributes to the spread of infectious diseases	Weakening environmental policies and increasing deforestation activities	Amazon deforestation data, with emphasis on Brazil	Identifies links between deforestation, climate change, and emerging diseases, proposing mitigation strategies

Conclusion and Future Directions

The increased literature on deforestation research highlights the worldwide concern over forest loss, its environmental and socioeconomic impacts, and the effectiveness of mitigation policies. The growing body of research points to climate change, biodiversity loss, and land-use changes that contribute to the blasting rates of deforestation. Monitoring technologies have made significant progress in recent years (e.g., remote sensing, machine learning, GIS); however, this is largely constrained by their lack of integration with policy enforcement and socioeconomic factors (Duguma et al., 2019). The results highlight the importance of well-designed conservation and governance regimes and corporate accountability mechanisms to reduce deforestation. Combating these issues requires multidisciplinary approaches and systematic efforts, including technological advancement, policy implementation, and grassroots involvement.

It's important, thus, for future studies to deal with the long-term effects of conservation policies, the effectiveness of reforestation and afforestation projects, and the socioeconomic betterments or bottlenecks of a shift of land use. However, forest governance can be enhanced through better international collaboration, sustainable land-use practices, and integrating remote sensing and AI-driven analytics in policymaking. Additionally, exploring new financial mechanisms like carbon trading and incentive-based conservation can all support sustainable forest management. By doing so, these future studies will help to bring policy solutions closer to being practical and realistic to implement, all while weighing environmental integrity and economic viability. They can also lead to improved management of sustainable forest conservation efforts in the global deforestation arena.

Abstract

Education in a post-conflict zone is a critical and challenging undertaking. The negative impacts of conflict on the teaching-learning process of the child include no psychological balance, an unconducive environment, violence, and antisocial practices. Effectively addressing these challenges requires applying good school leadership styles as proposed by behavioural Leadership Theory. This research was guided by Behavioural Leadership Theory, which Lewin et al. (1939) used. He identified three core leadership styles, namely, Authoritarian (autocratic), Participative (democratic), and Delegative (laissez-faire). Research investigated the leadership styles applied by the headteachers in secondary Schools in Agago district. A cross-sectional design was employed using interviews and focus group discussion methods of data collection. Qualitative (textual and visual analyses) was used to analyse data from interviews, and summative thematic content analysis was used to analyse data collected through focus group discussions. The findings revealed that headteachers applied empathetic, transformational, dictatorial, and laissez-faire leadership styles. Empathetic and transformational leadership styles significantly influenced the performance levels of the different schools and were recommended for headteachers in schools in Northern Uganda. The five School Headteachers applied various Leadership Styles in their Schools, which influenced the performances in the schools differently. A leadership style striving to enhance relationships with her followers, prioritising the interests and needs of followers, raising awareness and gaining acceptance of school goals, focusing on long-term priorities without compromising values and principles, and transcending daily affairs for long-term goals.

Keywords: leadership styles, Headteachers, Academic performance, secondary school

Introduction

The implementation of Universal Primary Education in Uganda since 1997 has provided numerous children with training opportunities, increasing the enrolment rate from 53.1% in 1990 to 94.2% in 1998 Charles et al. (2023). The number of primary school leavers and the demand for affordable access to secondary education have increased despite the initiation and implementation of Universal Secondary Education at the lower secondary level, where the government subsidized certain costs in secondary schools. Several challenges and constraints persist (Magesa & Mtebe, 2022). Furthermore, the drop-out rate at the primary school level exceeds 70%, resulting in approximately 30% of students not advancing to secondary education, with a particularly low rate for girls (Adipala et al., 2023; Adipala and Ekimwere, 2023, this Volume). The unemployment rate among Ugandan youth, defined as individuals aged 18-30 years, is notably high at 64%, as reported by the Uganda Bureau of Statistics. Odhiambo, (2021) Universities and employers express concern regarding students' inadequate knowledge upon completing their secondary education. Given the increasing prevalence of this trend, universities and employers frequently offer short courses designed to enhance fundamental knowledge. Efforts should focus on improving access to education for rural communities and closing the gap between secondary school educational outcomes and subsequent life opportunities (Bagheri & Akbari, 2018; Mbeya & Musa, 2022). Africa has the lowest rates of secondary school enrolment worldwide. Only 28% of youth are enrolled in secondary school, leading to over 90 million teenagers encountering difficulties obtaining employment in low-wage, informal sector jobs UNESCO, (2024); Charles et al. (2023)

Problem Statement

The inadequate academic performance of secondary schools in Uganda raises substantial issues for government policymakers and educators. The 2018 UNEB report indicates that out of 98,524 students who took the 2018 UACE examinations, 1,489 received an F grade, signifying failure. In 2017, 1,141 students failed out of 101,269 candidates; in 2016, 1,363 candidates failed out of 104,234. (Ahimbisibwe, 2017; Sengendo, D. & Eduan, W. ,2024). The UCE level exhibits a similar trend, with a substantial percentage of candidates receiving ungraded results or failing in recent years. The government's response to subpar performance has included corrective measures such as renovating traditional secondary schools to enhance the learning environment, reassigning head teachers in underperforming institutions, and, in extreme cases, withholding the deployment of certain head teachers as a punitive measure for insufficient performance. This technique is seen as a pragmatic solution for tackling the issue of inadequate performance from a broad leadership standpoint; however, the problem endures (He et al., 2024;

Highfield & Woods, 2024). The current literature reveals a lack of conclusive studies in Uganda regarding the role of leaders in the efficient management of secondary schools. Prior research on leadership within educational contexts has predominantly concentrated on primary education (Otyola, 2025; Shafi et al., 2020). The sole study in the literature review addressing secondary education in Uganda was conducted by (Chijere, 2024; Ratna et al., 2022).

The research investigates leadership styles of secondary Headteachers and their effects on student academic achievement.

Theoretical framework

This study was based on the Behavioural Leadership Theory implemented by Lewin et al. (1939). He identified three basic leadership philosophies: authoritarian (autocratic), democratic (participative), and laissez-faire (delegative). Cherry (2006) went into further detail and put out the four leadership philosophies listed below:

Autocratic or authoritarian leadership is characterised by low group member input and individual control over all decisions. Autocratic leaders typically make decisions based on their judgment and ideas, rather than soliciting feedback from their followers (Motsamai Modise, 2024). It means having complete, autocratic control over a group (Yea et al., 2024; Yuting et al., 2022). Group leaders set all work processes and methods, members are rarely trusted with important decisions or responsibilities, and their engagement is minimal. These qualities characterise autocratic leadership.

Under democratic or participative leadership, group members are more active in decision-making. According to academics, this learning strategy is typically one of the most effective, increasing member contributions, productivity, and group morale. Democratic leaders can produce much excellent work over a long time (Hikmat & Ghorbandi, 2024). Because they appreciate the trust they are given, many employees react with collaboration, a strong feeling of teamwork, and good morale (Mythili, 2024; Ximenes & Silva, 2024). Democratic leadership is characterised by encouraging group members to express their ideas and opinions, even as the leader retains the ultimate authority in decision-making.

Leaders who practice laissez-faire or delegative leadership are detached and allow group members to make choices. A democratic leader usually establishes goals, lets staff members develop and advance in their roles, recognises and promotes success, and develops procedures

to assist staff in assessing their performance. According to a study, this strategy typically results in group members being the least productive (Ahsan & Khalid, 2023; Zadok & Benoliel, 2023).

Laissez-faire leadership is characterised by bureaucratic leaders who expect their followers to solve problems independently, provide them the tools and resources they require, allow them to make all the decisions they want, and give them little guidance (Chhom et al., 2024; Hanania et al., 2024). Under bureaucratic leadership, decisions are made by established procedures (Parlar, 2017; Y. Zhang et al., 2025). All actions must comply with predetermined rules and regulations. The text does not discuss it; the manager refers to the level above them. This boss is more of a police officer than a leader. He or she adheres to the rules. The behavioural leadership theory focuses on the actions and behaviours of leaders, assuming that other leaders can emulate the traits of successful leaders. Observing their behaviour is the most effective method for predicting a leader's success.

Patterns of behaviour are identified and classified as leadership styles. The behavioural leadership concept was adopted because it was thought that a leader's actions impacted the team members they worked with. In Uganda, representatives from the Parents' Instructors Association (PTA), students, instructors, non-teaching staff, and political leadership comprise the Board of Governors (BOG). Together with their deputy, the BOG, and PTA Executives, the secondary school headteacher is responsible for supervising, managing, and planning the school's activities, utilising the assistance of their personnel, which includes teachers, non-teaching staff, and students, notably the prefects (Alharthi, 2024; Almazovaite et al., 2024; Kidega et al. (2025). The school's success depends on the stakeholders being successfully mobilised to carry out their responsibilities. Throughout history, leadership ideologies that emphasise democracy, participation, and transformation have contributed to the advancement of education. Headteachers are accountable to their stakeholders for all activities that take place in the school, as they are involved in decision-making. A chief instructor should convince a group of people to achieve a common goal.

On the other hand, Hanania et al., (2024) argued that leadership affects the relationships between leaders and followers, shaping the organization's direction and vision. According to Northouse (2010), effective leadership improves the group's performance and transcends the leader's interests (Abasilim et al., 2019; Yea et al., 2024; Zheng & Ye, 2024). Haryaka, (2025), Katsikas (2025). Educational leadership should support, guide, and motivate teachers to do their tasks effectively. School administrators were held accountable for their students' academic performance (Ratna et al., 2022). They hypothesised that principals indirectly aid students'

success by encouraging teacher commitment and faith in their team's skills. The core of leadership is a consistent pattern of action a leader uses to gain more influence. Leadership style results from relevant information, personality traits, fundamental motives, and ideas on operating situational elements, Pennell, (2023). Transformational leadership was one of the primary subjects discussed in the literature review. Transformational leadership strongly emphasises "building school vision and goals, providing intellectual stimulation, offering individualized support, modelling professional practices and values, demonstrating high performance expectations, and developing structures to foster participation in school decisions" (Abasilim et al., 2019; Boonla & Treputtharat, 2014). Transformative school leadership fosters collaboration between teachers and leaders, driving continuous improvement processes that promote teamwork and ultimately lead to a positive school trajectory and overall effectiveness. This tactic pushes teachers to prioritise the school's success over their interests (Haryanengsi & Radiana, 2024). Furthermore, research (Gaston, 2024; Sliwka et al., 2024)Gaston, (2024)supported the integrated model by highlighting the importance of both instructional and transformational principal competencies and pointing out that schools with superior teaching quality and performance also have integrated leadership. Integrated leadership" acknowledges that a strong, results-oriented management approach must be in place" before, or at least concurrently, expecting teachers to undertake transformative work.

Methods

Research design

This research used a qualitative method and a case design throughout the study. The respondents' opinions, feelings, and experiences with the headteachers' leadership styles were sought. This was done through Interviews, Focus Group Discussions, Observations, and Group Discussions during the Workshop to allow a more diverse group of participants to provide a broader range of ideas. The data were continually used, categorised, and refined to inform theory. The areas categorised included: school attendance by students and teachers; meeting attendance by teachers and parents; parents paying for the cost of education process of their children; participation by teachers, learners and others in school activities; headteachers' involvement of all stakeholders in the management and administration of the school; headteachers' leadership style. Observations were made from notice boards, files, and notices in head teachers' offices and staffrooms.

Sampling techniques

Five secondary schools were selected purposefully since the primary focus was on secondary schools' leadership styles in the Agago district, and waiting was convenient. These schools were A, B, C, D, and E, and the study was conducted in those five schools with approval from the Board of Governors. The BOG Members, PTA Executives, Headteachers and their Deputies, Senior Female and Male teachers, and students were selected purposively because they are the school's stakeholders, and their numbers are few. Teachers, non-teaching staff, and pupils were selected using the formula suggested by Krejcie and Morgan (1970) to get a representative sample, and later, a stratified random sampling technique was used to get males, females, and boys. Because of their large numbers, only a sample was chosen to participate in the research.

Target population

The target population for this study was BOG Members, BOG Executives, Headteachers and their Deputies, Senior Female and Male teachers, Teachers, Non-teaching Staff, and the secondary students from the five pilot secondary Schools. Their perspectives and opinions on the leadership style of this study used 5 BOG Members, 5 PTA Executives, 5 Headteachers and, Senior Females (5) and Male teachers (5), Teachers (10), Non-teaching Staff (5) and five students from each secondary Schools in Agago district namely, School A, School B, School C, School D and school E. The accessible population size for this study was 45

Data collection techniques and analysis

Semi-structured interviews were conducted with headteachers, senior female and male teachers, teachers, non-teaching staff, and pupils. At the same time, Focus Group Discussions were held with BOG and PTA Executives during school visits. These stakeholders manage the school, so their perspectives and opinions on the leadership styles applied were explored through interviews. They acted as supervisors of the performances of the Headteachers. While in school, observations were done, and the headteachers were also asked to give their views on the leadership styles and the general performance of the schools. This helped to answer the doubts about the results of a research analysed through a qualitative method that creates a self-fulfilling prophecy stemming from expectancy-based information processing (Antonakis et al., 2003; Fiske, 1995). This process helped in unique controls and triangulations to ensure that results

converged from different categories of stakeholders (Antonakis et al., 2003). The interviews lasted for 10 minutes each participant and were held confidential, and responses were recorded with the participants' permission. Parents were then divided into groups to discuss specific issues concerning Parents' Meetings, class meetings, fee payment, gender sensitivity of the school administration, and how they would describe their headteachers' leadership style.

Preliminary visits were made to these secondary schools to discuss their poor performance and quality of education with the headteachers and their deputies. They acknowledged and attributed the poor-quality education to challenges like poor attitudes of parents, lack of necessary scholastic materials, poor teacher attitudes leading to teacher absenteeism, and poor children's discipline. The study used a qualitative research technique to analyse interview data. In contrast, the data collected through focus group discussions were analysed through summative thematic content analysis, with NVivo software's help, and analysed and presented into themes. An inductive approach was used to identify the recommended leadership styles that the headteachers of secondary schools in the Agago district of Northern Uganda might apply to improve academic performance in their schools. This was based on information collected from the stakeholders of some secondary Schools in Agago district.

Ethical consideration

The participants were briefed and consulted before the interviews, and agreed to participate willingly. Their details were confidential, and the final report did not present names and other data. We acknowledged their contribution to the participant, from the data collector, the participants, and the data analyst.

Results

The study aimed to examine how the educational leadership styles of headteachers affect student academic performance. What happens at a few selected secondary schools in the Agago district? What type of leadership do they practice? Why is such a leadership style used? Moreover, what is the impact on the students' academic performance? The following arose from the interviews of the stakeholders within the five selected secondary schools in Agago District;

Quality of education

The quality of education indicators was derived from competency levels in Junior High School and Senior High School curricula and UCE and UACE outcomes, respectively. The overall

performance was subpar, as seen by the 2020 UCE examinations, where merely 7% of students achieved division I, while the remaining secondary schools attained below 4%. This unequivocally indicates that the student's academic achievement is subpar. In contrast to our data regarding other institutions, the number of pupils achieving Division I and II at School C is noteworthy. A parent stated that most of our children are not receiving a quality education, as government-paid instructors frequently fail to attend classes. When they do, they are sometimes tardy or absent altogether. This elucidates the reasons behind the dismal performance of most government schools in examinations.

A teacher stated, "We lack sufficient support to enhance the teaching and learning process." Occasionally, the laboratory lacks necessary chemicals, instructional manuals are unavailable, and the teacher-student ratio is excessively high, about 80, complicating the implementation of the new competency-based curriculum.

Students are enrolled in secondary schools.

Another area examined was student attendance, revealing that Schools A and C had the highest attendance rates at 90%. In contrast, the attendance rates for Schools B and D were 70% and 85%, respectively. This was accomplished by obtaining records of student attendance rates from the headteachers' office and class instructors. Nevertheless, the Headteacher of schools C and E did not acknowledge the issue of girls' absenteeism, unlike schools A, B, and D. At school A, the Headteacher indicated that teachers typically monitor absent kids. At the same time, parents often communicate regarding their children's illnesses. The Headteachers of schools A, B, and D indicate that the commencement of the term is typically challenging, particularly during the initial two weeks. The girls in the senior high school classrooms are frequently missing. They care for their parents throughout their illness. Occasionally, they assist the mothers with gardening tasks or supervise the children while the mothers are at work.

Teachers attending school and teachers' welfare.

Teachers' attendance across all schools was satisfactory, with School C exhibiting the highest rate at 90%, whereas the other schools recorded an attendance rate of 65%. School C had almost all its teachers on the Government Payroll. However, School D had a minority of its teachers

on the Government Payroll, with 13 out of 30 teachers receiving government compensation. Headteachers were asked, “How did they maintain the attendance records of teachers?” They reported the existence of Attendance Record Books. The attendance record for instructors was maintained by requiring them to log in upon arrival and out upon departure. At the end of each month, the records were scrutinised, and if a teacher exhibited consistent tardiness or absenteeism, the Deputy Headteacher would initiate a conversation with the teacher. When enquiring about the utilisation of the record to improve student performance? All school administrators indicated that the school records facilitated the consistent and regular attendance of instructors at their responsibilities.

According to the teachers' reports, only Schools C and D made timely payments, and any issues were addressed transparently. Teachers were assigned the responsibility of collecting and disbursing the money. Schools A, E, and B payments were not consistently made promptly. In several instances, there were two to four months' intervals during which transparency was not upheld.

Parents are remitting tuition money.

The headteachers were interrogated regarding parents' payment of school fees. During a session, the representatives were asked about the parents' payment of school fees. Participants from the seminars at Schools A, C, and D disclosed that the fees encompassed: Development fund, PTA contribution fees, additional charges, church contribution, co-curricular fees, remedial classes, examination fee, admissions fee, medical expenses, and borehole fee. In School B, the information was not itemised; instead, a lump sum was provided for each section: S1–S. 4 receive 59,400/=; S. 5–S. 6 receive 74,500/=. All participants, excluding those from School A, concurred that they were involved in the decision-making process, and parents were cognizant of their involvement. Stakeholders of School A reported that not all fees were disclosed to the parents.

Stakeholders in all schools indicated that parents are reluctant to pay fees due to several factors: inadequate accountability and record-keeping; a strained relationship between headteachers and parents; subpar performance in UCE and UACE, leading some parents to perceive fees as a misallocation of resources; tardiness among teachers, resulting in insufficient instruction; reports of divisive administrative practices causing fragmentation within the school; and the financial hardships faced by many parents, including a significant number who are unemployed

or single mothers. Some assert they have numerous offspring, including grandchildren, while others are single parents. Some highlighted the issue of the budget not being created in collaboration with parents before its presentation at the annual general meetings. Nevertheless, the Headteachers stated, "The Budget is presented at the AGM, which is attended by only 20% to 30% of parents who possess positive attitudes."

The headmaster of School C stated that the institution endeavours to engage the PTA Chairperson and Executives to raise awareness among parents on the payment of school fees. One month following enrolment, children are approached regarding fee payment; after two months, the school communicates with parents, subsequently resulting in the children being returned home. Nevertheless, the children should not be dismissed; instead, efforts should be made to persuade the parents and children to remit the payments.

A proposal was made to develop strategies to educate parents, involving key individuals in the municipality to engage with them. Emphasis should be placed on Class Day and meetings focusing on lower grades, rather than solely on examination classes. Additionally, local council members should be informed, district bylaws established, and leaders encouraged to adopt a unified message. Visitation Days should commence with discussions between parents and teachers; NGOs and schools should engage with parents; and District Education Ordinances should be enforced.

Strategic planning and financial allocation procedure

Headteachers were asked about their methods of engaging teachers in economic planning and allocating government funds. The Headteachers disclosed multiple methods by which teachers participated in financial planning and allocating government funds. The methods included establishing a committee of educators to strategise the allocation of USE monies, while in Schools B, C, and D, the group deliberated on topics for Staff meetings. School funding for Extra Land is allocated to compensate teachers who participated in delivering the additional instruction.

Headteachers' leadership styles in secondary schools in Agago District

Deficiency in self-assurance and dereliction of responsibilities

According to the interviews, most teachers indicated that their headteacher adopts a laissez-faire leadership style due to a deficiency in confidence in executing tasks. A teacher at school

A remarked that the headmaster excessively allocates authority. He delegates obligations that he is capable of performing. He assigns uncomplicated administrative functions that the headteacher might complete in 20 minutes. He predominantly occupies himself with social media and traversing the compound, attired elegantly, devoid of any sense of responsibility. This indicates a lack of confidence in his responsibilities (February 2025).

Concurrently, a teacher from school B disclosed that the school head assigns responsibilities to the management team. However, she frequently neglects to follow up on the feedback concerning the delegated tasks. She poses no obstacle if the delegates inadvertently offer criticism (February, 2025).

Understanding of leadership

During the interview, most teachers indicated that their school leaders adopt a laissez-faire leadership style due to a lack of leadership expertise. One of the educators at School A remarked that our principal possesses a degree. This is the reason he employs a laissez-faire leadership style. Had he participated in leadership classes, I am confident he would adeptly employ many leadership styles as circumstances required. In our school, teachers engage in actions they deem appropriate. For instance, an educator may choose to neglect their courses, while the principal fails to implement any corrective actions against them **(February, 2025)**

Job satisfaction of teachers

Through comprehensive interviews with school administrators, academic instructors, and the District Education Officer, the researcher acquired thorough insights into the laissez-faire leadership style, with most respondents indicating that this leadership approach boosts teachers' job morale.

The Headteacher School D contended that there are circumstances inside the institution where a laissez-faire leadership approach is appropriate. I recognise that some subordinates possess more excellent knowledge than I do; yet, I cannot disclose this to them and instead must provide opportunities for them to utilise their skills. This results in employment satisfaction, subsequently improving pupils' academic achievement (February 2025).

Moreover, teachers from school A emphasised that the Laissez-faire leadership style is crucial for implementation at school. B as it enhances teacher morale and fosters a sense of identity and respect for their potential among teachers. This results in commendable academic achievement among pupils, as educators exert considerable effort to fulfil syllabi and implement adjustments to pursue institutionally established objectives **(February, 2025)**. Most

teachers indicated that their school leaders include them in the decision-making process, resulting in job satisfaction as they feel acknowledged as integral members of the organisation. The discussion with the academic master from School C indicated a relationship between teachers and the school head. Moreover, each educator cultivates a proactive work ethic autonomously. This enhances academic success in our school **(February 2025)**.

Another educator from School D remarked that the headmaster encourages faculty through many means; for instance, he occasionally supplies lunch for teachers and, after Form Four graduations, he presents letters of appreciation or monetary gifts to those teachers. The head of our school inspires us in various ways; for instance, he occasionally gives lunch for teachers and, after form four graduations, he presents letters of gratitude or monetary prizes to those instructors whose students excelled in the topics they taught. Moreover, our leader provides support during many obstacles, including familial issues (February 2025)

The DEO stated during the interview that a democratic leadership approach is utilised by school leaders in her region. She noted that school leaders employ a democratic leadership style by allowing teachers to present their rationale, when necessary, before implementing further disciplinary measures. To facilitate an effective teaching and learning process, school administrators review it and thereafter provide reports to teachers, wherein leaders engage in discussions regarding difficulties related to the teaching and learning process, ultimately reaching conclusions **(February, 2025)**.

Delegation

All individuals possess unique gifts; therefore, educational institutions should provide leadership responsibilities to their subordinates. Subordinates possess expertise in areas where the institution's head lacks knowledge. This is significant as it aids the school in progressing towards attaining its organisational objectives. Ensuring equitable treatment for all individuals inside the educational institution is crucial. This alleviates the inferiority complex for individuals who can successfully execute their tasks and may be marginalised. Isolating staff may diminish morale and adversely affect academic achievement; therefore, secondary school administrators should refrain from adopting such actions. In making final decisions, school administrators should acknowledge and contemplate the perspectives of their subordinates. They asserted that to foster collective accountability and participatory decision-making among all educational stakeholders, school administrators should adopt the most successful leadership

style, specifically democratic leadership. The principal of our school utilises a democratic leadership style, as noted by another educator from school number three, because it facilitates optimal oversight by, for instance, monitoring the curriculum, ensuring the timely delivery of assignments by teachers, and confirming their punctuality.

The head of our school adopts a democratic leadership style, as it facilitates optimal supervision by managing the teaching schedule, ensuring the completion of assignments by instructors, and upholding the timeliness and discipline of both educators and students. Consequently, students exhibit enhanced academic performance. Moreover, a democratic leadership style enables management to collect information about the teaching and learning process, facilitating the resolution of identified issues (February, 2025).

Decision-making

The head of our school includes us in decision-making processes, fostering a sense of belonging and job satisfaction. The academic master from school number one, who was interviewed, mentioned the dialogue between our school head and instructors. Moreover, the educator cultivates a disposition of productivity without coercion. This enhances our school's academic success. Extensive information regarding the democratic leadership style was acquired from a qualitative study conducted with teachers, featuring in-depth interviews with academic instructors, school authorities, and the District Education Officer (DEO).

Teachers exhibit increased engagement, creativity, and satisfaction when their intellectual capabilities are recognised through their involvement in decision-making processes. The concepts, decision-making processes, collaboration, creativity, and expertise of educators should consequently be esteemed by school management. Throughout the study, the researcher noted that educators and school administrators regularly assemble for staff meetings to address matters about school management. This was evidenced by the researcher's targeted inquiry into the staff meeting minute book and discussions with educators. Members of the group alternate in assuming the role of leader. Every group member can engage in decision-making, policy formulation, and implementation processes.

Discussion

Influence of Laissez-Faire Leadership Style on Academic Performance

The primary aim of this study was to investigate the effect of the laissez-faire leadership style on students' academic performance in the Agago district. The findings indicate that school

leaders employing a laissez-faire leadership style offer essential assistance, cultivating a favourable learning environment that enhances students' academic success. This aligns with Okumbe's (Dabesa & Cheramlak, 2021); (Ratna et al., 2022) observation that laissez-faire allows individuals to operate autonomously, which may result in disorder if not correctly managed. The research indicated that this leadership style improves students' academic achievement by 63.6%. This corresponds with laissez-faire leadership, which entails motivating followers by enhancing their understanding of organisational objectives and encouraging them to transcend self-interest for the sake of the organization (Veletić et al., 2023). The leader's emphasis on individual distinctions among followers, fostering their talents, and addressing their problems cultivates a constructive atmosphere.

Furthermore, the study results demonstrate that objectives established and guided by leaders employing the laissez-faire approach enhance students' academic achievement. This aligns with Spinelli (2010) and Xhomara (2019), who suggested that the charismatic and inspirational elements of laissez-faire leadership encompass the communication of elevated expectations, the utilisation of symbols to focus efforts, and the articulation of a persuasive vision for the future. This method inspires followers to visualise an appealing future (Awan, 2020), fostering individual and collective morale. This study's findings contradict those of Achimugu & Obaka, (2019) Njuu et al., (2023) ,which established a favourable correlation between authoritarian leadership style and students' academic achievement. The results demonstrated no significant link between principals employing a laissez-faire leadership style and pupils' achievement. The probable cause of the outcome may be that educators and learners operating under a laissez-faire leadership style lack seriousness in teaching and learning, respectively, as they possess the autonomy to act according to their preferences under this leadership approach (Masui et al., 2023). Consequently, this will hurt students. This study aligns with the results of Igwe et al.Li et al., (2024) , which indicate a negative correlation between the Laissez-faire leadership style and students' academic achievement. The study revealed a substantial positive correlation between student achievement and the leadership style employed by principals. This finding may stem from the active participation of teachers and students in the decision-making process, which likely fostered collaboration and a conducive academic environment, thereby enhancing student performance in chemistry. This study aligns with the conclusions of (Achimugu & Obaka, 2019; Awang et al., 2022; Jama, 2023)those who have asserted that schools governed by democratic principles achieve superior academic results compared to those led by

authoritarian or laissez-faire principles. Moreover, it indicates that schools governed by democratic or integrative principles achieve superior academic outcomes compared to those led by authoritarian (autocratic) administrators in the USA. The exceptional performance of students under democratic leadership in chemistry examinations may be attributed to the active participation of both teachers and students in the decision-making process (Idahemuka & Ndayishimiye, 2025), which motivates educators to excel and simultaneously enhances students' academic success.

Role of Authoritarian Leadership Style on Pupils' Academic Performance

The second question aimed to investigate the impact of authoritarian leadership style on students' academic achievement in secondary schools within Agago District. The interviews concluded that authority in leadership is not considered essential for effective student academic performance. This discovery challenges the notion that authoritarian leaders enforce meticulous directives and stringent oversight, as observed by (Rashid et al., 2019). In this study, the participants argue that authority does not inherently lead to improved academic achievement, a view supported by observation that school leaders attend to staff concerns, which contrasts with the typical traits of authoritarian leadership. This outcome suggests that certain aspects of the authoritarian approach can be integrated with more participatory components, aligning with contemporary perspectives that leadership styles can be flexible and contingent upon the situation (Idahemuka & Ndayishimiye, 2025). This research contradicts certain notions of authoritarian leadership, which frequently emphasise intimidation and fear-based control. Leadership styles are intricate and multifaceted, integrating several characteristics contingent upon the unique circumstances (He et al., 2024). The survey indicated that school leaders rigorously oversee and regulate activities to enhance students' academic success. At some point, the use of authority by a school principal can be beneficial to any institution, but it should be regulated within a humanistic perspective. This approach can influence employee rights and academic performance (Linda, 2023).

Role of Democratic Leadership Style on Academic Performance

The third objective aimed to investigate the impact of democratic leadership style on students' academic achievement in secondary schools within Agago District. The study revealed that school leaders assign responsibilities to staff to enhance students' academic success. This aligns with the participatory nature of democratic leadership, where employees are engaged in

decision-making processes Awan, 2020). This undermines the premise, based on the notion that democratic leadership is invariably well-received by employees. Nonetheless, the study suggests that within this framework, democratic leadership facilitates transparent communication and critique (Wafiq Hibi, 2025), which may potentially enhance performance. The survey indicated that guidance, rather than strict control, is utilised for students' academic achievement. This discovery aligns with the consultative essence of democratic leadership, wherein employees' contributions are valued and incorporated into the decision-making process (Nita Novia Nugraha Putri, 2024). This engagement can cultivate mutual values between the organisation and its people, enhancing performance. Finally, the study demonstrated equitable treatment for all members' academic performance. This outcome exemplifies the inclusive and participatory nature of democratic leadership, which seeks to create an environment where all stakeholders can express their views and participate in decision-making processes. As evaluated through assessment scores, academic performance is determined by the quality of these grades and the number of candidates achieving various grades, collectively reflecting the level of academic performance within a specific class or institution during a designated examination period (Sufriadi, 2025), whether internal or public.

Recommendations

The study presents various ideas for improving academic performance in secondary schools in Uganda. School leaders must embrace a more democratic leadership style, which has demonstrated the ability to cultivate a collaborative environment and enhance student academic performance. This can be accomplished by engaging teachers, students, and other stakeholders in decision-making processes, fostering a sense of ownership and accountability among all participants. Secondly, although the laissez-faire leadership style appears attractive due to its focus on autonomy, leaders must offer adequate supervision and monitoring to maintain the concentration and motivation of educators and students. This can mitigate the adverse consequences linked to excessive delegation and insufficient oversight. Transformational leadership principles, such as establishing clear objectives, fostering intellectual stimulation, and delivering personalized support, can augment school leaders' efficacy and enhance academic results. By integrating these leadership methodologies, school leaders may cultivate a supportive and dynamic educational climate that fosters students' comprehensive growth and achievement.

Conclusion

This study highlights the substantial influence of leadership styles on student academic achievement in secondary schools in Uganda. The results demonstrate that democratic leadership, defined by collaboration and involvement, significantly improves academic performance. This leadership approach cultivates a sense of belonging and motivation among educators and students, enhancing performance. The laissez-faire leadership style, although fostering autonomy, necessitates meticulous supervision to prevent adverse outcomes such as diminished discipline and less motivation. The research underscores the significance of incorporating transformational leadership principles to enhance support and motivation for educators and learners. By implementing a balanced strategy that integrates democratic, transformational, and suitably directed laissez-faire leadership, educational leaders can cultivate an ideal learning atmosphere that enhances student potential and furthers the overarching objectives of educational advancement in Uganda. Subsequent research ought to persist in examining the intricacies of leadership styles across many educational settings to refine and augment these recommendations further.

Abstract

The purpose of this study is to obtain the opinions of elementary school administrators on comparison of distance school management applications, which emerged in the pandemic process and on-site management practices. The research was prepared with the case study model of the qualitative method. In the study, semi-structured interview technique was used to obtain the data. In this context, 5 different interview questions about on-site and distance management issues were presented to school administrators. As the sample of the research, 15 school administrators working in primary schools affiliated to the Ministry of National Education of Northern Cyprus in the 2021-2022 academic year were reached. The obtained data were analyzed by content analysis method. When we look at the results of the research, it is seen that school administrators have attributed several duties to themselves from human resources management, conducting education and training activities, to maintaining routine ministry correspondence, finding resources, providing maintenance and repair, and ensuring the motivation and support necessary for the distance education process to education stakeholders. However, it has been observed that administrators have difficulties in distance management and mention several negative situations. It has been concluded that the majority of the administrators do not want to use distance management unless they have to due to reasons such as lack of equipment and infrastructure, difficulty in responding immediately in case of problems, physical and mental fatigue, and especially lack of socialization and interaction. Based on the findings of this research, the following recommendations can be made: Considering the existence of distance administrative processes in addition to distance education in schools, providing the required equipment and infrastructure is needed, it should be ensured that all stakeholders of education are trained through in-service trainings and prepared for distance education and management applications, and administrators should be equipped with

more flexibility when necessary to transcend the borders of the central administration as appropriate to the situation.

Keywords: Distance management, school management during the pandemic period, on-site management and distance management comparison, Covid pandemic and education management

Introduction

The first concepts put forward about educational administration date back to the Roman period (Bursalioğlu, 2010). However, it is seen in the literature reviews that the first formal studies in the field of educational administration started in the USA towards the end of the 19th century. It is observed that the first education program with the aim of raising school principals was implemented by William Payne at Michigan University in 1881, and it is known that it started with the first book written by Payne in 1875 (Culbertson, 1988).

Educational administration is a concept that covers the application process of the general principles of management science in the case of educational institutions (Aydın & Karaman Kepenekçi, 2007). Subjects and phenomena within the scope of educational administration are related to educational sciences in general and school management and organization in particular (Oplatka, 2010). While the basics of educational administration were handled as a whole in the beginning, with the developments in the schooling and education system in the 20th century, it became difficult to manage educational institutions with different purposes and characteristics, and sub-branches related to educational administration emerged (Ağaoğlu, 2002).

Educational administration is a science that constantly renews and develops itself as a field of practice in addition to developments in the theoretical context (Bozdogan, 2018). The practical dimension, which constitutes an important dimension of educational administration, refers to putting knowledge and principles into practice (Demirtaş and Güneş, 2002; Taymaz, 2020).

Aydın (2016), one of the researchers who study the management activities of school administrators, stated that the administrators carry out intensive phone call and correspondence activities, and that they cannot spare enough time for personal development and professional guidance activities, and likens the administrators to an office clerk rather than an education leader. Şahin (2007) similarly stated that administrators allocate 72% of their daily working hours to activities other than education. In this case, it can be claimed that administrators mostly

use their time for phone calls, official correspondence and activities related to their legal obligations during working hours. Likewise, in the studies on the time use of administrators, it has been revealed that administrators like to do tasks such as guiding teachers, dealing with student problems and helping them, but they think that they cannot allocate enough time for these activities (Şahin, 2007).

Goldring, Huff, May, and Camburn (2008), aiming to reveal the jobs and duties that administrators deal with most in a week, analyzed one week of administrators as follows.

Figure 1. The tasks that the administrators carry out in a week and the time they spend on them according to the data obtained from the daily records (Goldring, E. et al., 2008).

Administrators are not only individuals who put forward ideas, but also those who contribute to their implementation and manage the implementation process. They are the people who unite, decide and act as arbitrators. For this reason, individuals who establish the balance in adverse situations or provide change in times that require change and assume the role of change agents will still be administrators (Memduhoğlu & Meriç, 2014). With an effective education management, leaders can eliminate the situations that prevent the functions from being fulfilled, lead the adaptation to new situations, and in these cases they can turn their theoretical knowledge into practice (Tınmaz, 2020).

The fulfillment of the implementation functions of educational administration may be interrupted due to various reasons, just as in the other application areas of education. The process that was introduced with the Covid-19 pandemic, which has affected the whole world since 2019 and made its presence felt especially since the second half of the 2019-2020 academic year, can be expressed as a natural disaster that disrupts education administration. In

this process, the Ministry of National Education had to suspend some educational activities such as support and training courses in education, training programs in primary schools, home education services, support training room practices, extracurricular studies and in-service teacher training, as in the whole world (Ministry of National Education [MEB], 2020a). In this period, in addition to the disrupted education activities, there were also significant losses in the field of education administration and activities that came to a near halt.

In the ongoing covid-19 pandemic crisis, governments have to manage many organizations at the same time, and educational organizations have taken their place among the institutions that have taken their share from this new process. Educational organizations are of vital importance for raising the education level of a society and for its future. Due to their importance, it is critical that educational activities continue with the least possible disruption in times of crisis (Bozdoğan, 2018).

In December 2019, Covid-19, which first emerged in Wuhan, China, was defined by doctors as a respiratory disease. The World Health Organization declared Covid-19 as a global pandemic on March 11, 2020 (WHO, 2020). This disease, which spread globally in a short time, has affected millions of people negatively who became infected. This pandemic is a complete crisis situation as it bears all the general and characteristic features of crises.

In the developing and changing world order, it has become normal to face with crises frequently. The crisis situation brought by the Covid pandemic is one of them. Like all sectors, the education sector has also been affected by the crisis situation caused by the Covid-19 outbreak. In order to minimize the impact of this crisis in the field of education, distance education applications have come to the fore (Alağaçlı, 2006). With the increasing demand for distance education, the necessity of controlling and coordinating this education process has emerged. In the sense of keeping up with this new order, disruptions in on-site education management experienced during the Covid pandemic period have been tried to be overcome in our country by using distance management activities, largely under the guidance of the Ministry of National Education. Thus, concepts such as distance management and distance administrative process emerged. From this point of view, this research was carried out with the aim of determining the opinions of the administrators about the distance administrative process and on-site administrative process activities and comparing the two management models. This research is considered to be an important research since it is the first study to analyze distance management efforts in our country.

Method

Research Model

The research was prepared using the qualitative research method. Qualitative research is an important method as the researcher plays a participant role and develops sensitivity to the natural environment, has the principle of flexibility, and includes an analysis that supports the inductive approach (Yıldırım & Şimşek, 2013). One of the features of qualitative research is to determine and reveal the perspectives and experiences of the individuals included in the research about the phenomenon and events that are the subject of research (Gürbüz and Şahin, 2018). While Patton (2014) states that qualitative research is a method of obtaining detailed information on a limited number of people and situations, Merriam (2015) states that the detailed data obtained with the qualitative research method are read one by one and presented in detail, accompanied by codes and categories.

In this research, the interview technique, which is one of the qualitative methods and has a very strong aspect in terms of revealing the data, opinions, experiences and feelings of the individuals, and which is based on speech (Yıldırım & Şimşek, 2013) was used. There are three different interview techniques as structured, semi-structured and unstructured interviews. In this study, one of them, “semi-structured interview technique”, in which the questions were determined beforehand, was used. In the semi-structured interview technique, basic interview questions are determined in advance, and other questions are shaped according to the answers given during the interview (Karasar, 1998, Törnükü, 2000).

Study Group of the Research

The study group of the research consisted of 15 people working as administrators in 15 different primary schools affiliated to the Ministry of National Education and Culture of the Turkish Republic of Northern Cyprus in the 2023-2024 academic year. The administrators constituting the study group were selected purposefully and determined in accordance with the purposeful sampling method. Purposeful sampling is a method that is frequently used in qualitative research and aims to select individuals and places in accordance with the study (Creswell, 2018); it refers to the deliberate creation of small study groups among individuals (Patton, 2014). In accordance with the purposive sampling method, the sample selected in the study consists of the people who work in different parts of the island, are well-known by the researchers, and are suitable for the “convenience sampling”.

Data Collection Tool and Data Collection

In the research, “semi-structured interview” technique was used to collect data. In this technique, researchers prepare the interview form containing the questions they plan to ask in advance. Depending on the course of the interview, they can affect the flow of the interview with different side-questions or sub-questions, and they can enable the person to open and elaborate their answers (Türnüklü, 2000).

The interview questions prepared by the researchers were formed by blending the findings of the relevant studies identified as a result of the literature review in the field. The questions were determined to include concepts such as covid-19, distance management, administrative duties, and on-site management. In order to ensure the internal validity of the interview questions, they were shown to three experts, two of whom were experts in the field of educational administration and one of whom was an expert on Turkish Language. After the expert opinions of the prepared interview questions were obtained, a pilot application was conducted with four school administrators and then the interview questions were given their final form.

Validity and Reliability

Researchers prefer to use concepts such as credibility, transferability, and consistency in qualitative research instead of validity and reliability. For the credibility of the research, different experts can be consulted to examine the study and its stages (Patton, 2014). For this purpose, during the research, examinations were made by experts throughout the research process, in line with the request of the researchers. In order to ensure transferability in the research, a detailed description was made and the research data were transferred without comment. Likewise, in order to ensure “consistency”, which is one of the concepts used instead of the concepts of validity and reliability, the researchers made a joint decision during the coding and theming stages of the data.

Analysis of Data

During the analysis of the data in the research, the inductive “content analysis” method was used. Content analysis is a systematic analysis of written and verbal material, which involves coding and quantifying what is said or written (Balci, 2000). In content analysis, the researcher aims to reach concepts and connections that can explain the data obtained. The data undergoes a much more detailed and intensive processing. The main point here is to collect and

organize the data within the framework of certain concepts and principal emotions. The edited information is interpreted and transferred (Gürbüz and Şahin, 2018). According to Miles and Huberman (1994), content analysis is conducted in four stages: a) Coding the data, b) Finding the themes, c) Organizing the codes and themes, and d) Identifying and interpreting the findings.

Results

The findings obtained after the analysis of the data in the research as well as the interpretation of these findings are as follows.

Table 1: *Opinions of administrators about their duties in schools*

Main Theme	Opinions	N	%
Human resource management	- Cooperating and meeting with the parents (N=4) - Holding meetings between the departments (N=4) - Monitoring the school staff (N=3) - Communication with and visits to the environment of the school (N=2) - Supervision and control of manpower at school (N=1)	14	32,6
Execution of educational activities	- Course operations (curriculum control, course preparation, attendance checks, etc.) (N=4) - Education management operations (N=2) - Organizing trips and events (N=2) - Distribution of class-grades to teachers (N=2) - Providing a classroom layout suitable for teaching (N=1)	11	25,6
Relations with MEB and performing routine tasks	- Routine transactions, correspondence and reporting (N=5) - Student registration and document procedures (N=2) - Disciplinary actions (N=1) - Fulfilling legal responsibilities (N=1)	9	20,9
Maintenance-repair works and purchasing of fixtures / finding finance	- Repair-mending, maintenance, infrastructure needs (N=6) - Procurement of course materials and equipment (N=1) - Funding the school financially (N=2)	9	20,9
TOTAL		43	100

Table-1 shows the opinions of the administrators about their duties in their schools. As can be seen in the table, administrators named “management of human resources” as their first

task (32.6%). According to the frequency of mentioning by the administrators, other tasks are “executing educational activities” (25.6%), “relations with the Ministry of Education and conducting routine works” (20.9%) and “maintenance and repair works and finding the necessary funding for this purpose” (20.9%). Quotations from administrators can be exemplified as follows:

“I think my primary duties as an administrator are to ensure cooperation at school, to hold coordination meetings between the groups, and to ensure cooperation between parents and teachers.” (Y-12)

“As an administrator, carrying out educational activities, arranging class-grade distributions of teachers, executing planning and programming related to courses and controlling them are among the main tasks I have set for myself. Besides, I think it is my duty as an administrator to carry out the routine works related to the operation of the school.” (Y-5)

“I think it is among the important duties of the administrators to provide routine correspondence with the Ministry of Education, managing reporting processes, placing incoming and outgoing documents, checking students’ education processes, overseeing disciplinary issues at school and maintaining cooperation at school.” (Y-8)

“When a teacher is an administrator, unfortunately, he/she has to deal with repairs, infrastructure reinforcement, course materials, purchase of fixtures and financial resources for the school, more than educational activities. Rather than executing education and training activities, we have to spend our energy on finding resources for repair, maintenance and material purchases.” (Y-10)

Table 2: *Opinions of administrators about their duties as administrators in the distance administrative process*

Main theme	Opinions	N	%
Human resource management	- Monitoring teachers and students in the online process (N=5) - Coordinating and planning distance training (N=5) - Actively participating in online classes and checking the course and attendance (N=3) - Solving technical problems related to distance education (N=3) - Scheduling online teacher-administrator meetings and teacher-parent meetings (N=2)	18	46,1
Execution of educational activities	- Communicating and interacting with parents, students and teachers (N=6) - Helping individuals in need to solve their problems (N=2) - Carrying out motivation-enhancing activities in the face of online education in individuals (N=2) - Ensuring that students are provided with equal opportunities (N=1)	11	28,2
Relations with MEB and performing routine tasks	- Routine transactions, correspondence and reporting (N=4) - Student document transactions (N=1) - Attending school at certain times (N=1)	6	15,4
Maintenance-repair works and purchasing of fixtures / finding finance	- Paying effort to supply the missing infrastructure and equipment (N=4)	4	10,3
TOTAL		39	100

The opinions of the administrators about the duties that they should fulfill during the distance education period are given in Table-2. As seen in the table, in the distance administrative process carried out during the distance education period, “to ensure the coordination and control of distance education” ranks first in the opinion of approximately half of the administrators (46.1%). Likewise, as seen in the table, “human resource management” (28.2%) was among the most basic duties according to the opinions of the administrators, just as in the on-site management. While these two views represent most of the answers, apart from these two tasks, administrators also stated that “to carry out relations with the Ministry of National Education and to perform routine tasks” (15.4%) and “to provide the necessary

materials and to establish infrastructure and to find the necessary financial support to possess them” (10.3%) are among their duties. The executive citations regarding the findings of Table-2 are as follows:

“In the distance management that emerged with the Covid pandemic, I think the most important duties that we have as administrators are as follows: to monitor students and teachers in online classes, to find solutions to existing problems, to increase motivation towards online education, and to provide the necessary equipment to students and teachers.” (Y-1)

“Fulfilling our duties and responsibilities as administrators towards the Ministry of Education during the distance administration, as well as ensuring that parents and teachers / students and teachers reach each other.” (Y-13)

“During the distance management period, our duties continued as usual, such as reporting to the Ministry, providing information on distance education, opening the school when necessary, and providing the parents with the required documents such as student certificates.” (Y-7)

“I think the most important duty of a school principal in distance management is to provide the missing equipment and infrastructure in order to ensure the continuity of online courses.” (Y-3)

Table 3: Opinions of administrators about preferring distance management or on-site management

Main theme	Opinions	N	%
I prefer on-site management	- More valuable in terms of socialization and interaction (N=7)	20	87,0
	- More effective and advantageous on administrative processes (N=4)		
	- It has the advantage that body language can be used (N=3)		
	- The probability of control on events and rapid response is higher (N=3)		
	- No problems in the online process (N=2)		
	- Problem solving easier (N=1)		
Both should be used	- Both are required depending on the situation (N=2)	2	8,7
I prefer distance management	- It is safer in terms of health conditions (N=1)	1	4,3
TOTAL		23	100

When the administrators were asked whether they would prefer distance management or on-site management, the answers received from the administrators are given in Table-3. As can be seen in the table, the vast majority of the administrators stated that they prefer “on-site management” (87.0%). Administrators who prefer on-site management stated that the reason for their preference is mostly “in terms of socialization and interaction”. Following this opinion, two administrators with a rate of 8.7% stated that “both management methods” should be used, and one administrator expressed that “distance management” should be preferred due to “health conditions” (4.3%). Quotes from administrators on this subject can be exemplified as follows:

“As an administrator, my preference is always on-site management. On-site management is always an advantageous form of management in terms of active use of body language, providing effective interaction, contributing to socialization and providing an easier chance of intervention in the face of adverse situations.” (Y-8)

“An administrator has to deal with his/her profession not only in the school environment, but also outside of working hours when appropriate, and must be always accessible. For example, I never turn off my own cell phone so that I can be reached in case of emergency. For this reason, I think that in management, both on-site management and distance management models should be used based on the situation.” (Y-11)

“As an administrator with asthma, I would definitely prefer to use the distance management model during this pandemic period.” (Y-14)

Table 4: *Opinions of administrators on the comparison of distance management and on-site management methods*

Main Theme		Opinions	N	%
Distance management	Negative	- No socialization and interaction / problems with communication (N=5) - Ensuring and controlling student participation is difficult (N=3) - No physical interaction and contact (N=2) - It is difficult to provide a classroom environment at home (N=2) - Ceremony/celebration and socialization activities are not possible (N=2) - The range of motion is narrow and it creates health problems from being in front of the computer all the time (N=2) - Parent contribution is insufficient (N=2) - Technological usage skills are required (N=2) - Technical equipment and infrastructure problems (N=1) - It is difficult to prepare a curriculum due to simultaneous courses (N=1)	22	56,4
	Positive	- Less responsibility taken (N=2) - Operations are on computer or controlled from mobile / home environment (N=1) - A more comfortable process (N=1) - More comfortable in terms of supervision / control (N=1) - Management is easier (N=1)	6	15,4
On-site management	Positive	- There is effective communication and interaction / high socialization (N=4) - There is a chance for one-on-one dialogue (N=2) - There is a chance to observe the school environment and events actively (N=2) - Easier feedback and intervention in missing or problematic situations (N=2)	10	25,6
	Negative	- Problematic in terms of health during the pandemic period (N=1)	1	2,6
TOTAL			39	100

The data obtained when the administrators were asked about the advantages and disadvantages of distance management and on-site management models are given in Table-4. As seen in the table, the positive/negative opinions of the administrators about distance management constitute 71.8% of all opinions. Most of the opinions expressed about distance management emphasize its “negative” aspects (56.4%). Likewise, according to the opinions of the administrators, only one opinion (2.6%) about on-site management was negative, while 25.6% of the opinions were about the positive aspects of on-site management. The opinions of the administrators about the negative and positive aspects of distance education can be exemplified as follows:

“I think the point that is more important than the material and hardware problems in the distance administrative process is that it is a management style that lacks communication and interaction, so it is a management style that is lacking in socialization for individuals.” (Y-4 / +)

“In distance management, there is a process that has a narrow range of motion and takes place in front of the computer all the time. This situation can cause problems for the individual in terms of health. Also, I think it is a management model where administrators need to be skilled in the use of technology.” (Y-15 / +)

“The advantage of distance education is that the procedures can be done in the home environment and there are fewer responsibilities taken.” (Y-11 / -)

Quotations about positive and negative opinions on on-site management are as follows:

“In on-site management, there is a chance to establish effective communication and mutual dialogue, and it is a socially advantageous management model. It offers us the chance to actively observe positive or negative events in the school environment.” (Y-6 / +)

“On-site management is a model that threatens our health during the pandemic period. Therefore, I think it is not OK to use on-site management during the pandemic period.” (Y-2 / -)

Table 5: *Opinions of administrators about the problems they experience in school management*

Main Theme	Opinions	N	%
Problems of distance management	- Internet problems are experienced (N=4) - High level of mental fatigue (N=3) - There is a shortage of infrastructure and hardware (N=3) - Very little socialization and interaction (N=3) - Health problems due to inactivity (N=2) - It is difficult to take care of special children (N=2) - Physical contact is limited and difficult (N=1) - Difficulties in time management (N=1) - Causes inequality of opportunity (N=1) - Problems occur due to economic reasons (N=1) - Causes heavy phone traffic (N=1) - It is difficult to intervene problems from distance (N=1) - Problems arise due to family indifference/it is difficult to reach parents (N=1)	24	70,6
Problems of on-site management	- There is more conflict and disagreement (N=3) - Mental and physical fatigue are experienced at the same time (N=2) - There are more problems experienced in and around the school (N=2) - The job description of the deputy principals is not clear (N=1) - It requires more effort (N=1) - It is difficult to deal with and control events during recess (N=1)	10	29,4
TOTAL		34	100

Table-5 shows the opinions of the administrators about the problems they experience in school management. As can be seen in the table, the majority of administrators' opinions are about "problems in the distance administrative process" (70.6%). Administrators expressed the problems experienced in distance management, especially by expressing issues such as internet issues, high level of mental fatigue, and lack of socialization. The problems experienced in on-site management constituted 29.4% of the opinions. The most frequently mentioned problems were "more conflicts and disagreements", and "physical fatigue as well as mental fatigue". The problems expressed by the administrators about management can be exemplified as follows:

"In distance management, one needs to be active in front of the computer or on the phone constantly, which can cause internet problems. In addition, the heavy phone traffic exhausted me during the pandemic period." (Y-8)

"I think there are problems in terms of infrastructure and hardware in distance management. However, the indifferent attitudes of families is also a factor that constrains administrators in distance management. (Y-12)

“Although I prefer to use the on-site management model, I can say that one of the biggest problems in on-site management is the conflicts between individuals.” (Y-6)

“In on-site management, it is more difficult to control events or student problems during recess because students, teachers, parents and other school environments are intertwined in the school environment.” (Y-9)

Discussion

The Covid-19 pandemic has proved a different period in terms of school administrators working in different parts of the world as the working methods and principles have changed, and many tasks that were not done in the normal period have to be fulfilled. For example, school administrators working in the United States of America were at the forefront of the pandemic process; they distributed food to families in need, brought laptop computers and tablets to students, tried to keep the morale of the students at a high level with frequent e-mails, and were in constant communication with the parents (Stone-Johnson & Weiner, 2020). Schools and administrators were caught unprepared for this unexpected crisis situation, and the focal points and problem-solving methods of school administrators changed rapidly and developed to in the direction of solving the problems in the education process (Keleş, Atay, & Karanfil, 2020).

Razik and Swanson (2001) emphasize that in crisis situations, effective leadership skills are important in crisis administrative processes in order for institutions and stakeholders to achieve their goals. In the reflections of such a crisis on education, educational institutions needed technology-based systems that are not found in traditional academic structures and executive leaders who can manage this system well (Hitt and Hartman, 2002). Due to this necessity, data were obtained in this research by asking a number of questions to the administrators about on-site and distance management.

The research was conducted on distance education as a result of the Covid pandemic period, and the distance management skills of education administrators in the distance education process. As it is known, the Covid pandemic has caused crisis situations all over the world and education has also taken its share from this crisis. This crisis situation, which emerged unexpectedly, has imposed critical duties and responsibilities on school administrators, who are the education leaders, and has caused some problems in the education system. As a result of being caught suddenly and unprepared for the pandemic, what was brought to the agenda was to switch to distance and online education and management practices

in education as a solution to this problem (Morgan, 2020; WHO, 2020). The uncertainty created by the pandemic process, the crisis situation and the unpredictability of the process have become the biggest problems faced by schools (Zizek, 2020). This research has been developed on the problems and solutions experienced in this process.

In this research, first of all, the administrators were asked about their opinions on what they identified as their duties in routine times. From the answers of the administrators, it was seen that they saw the management of human resources as their first task. The administrators listed other duties as carrying out educational activities, relations with the Ministry of Education and carrying out routine correspondence, performing maintenance and repair works in schools and providing the necessary financial support. Ali and Abdalla (2017) reached similar findings in their research, and, they divided the education administrative process in a routine period into five parts, namely the management of the education program, the management of student services, the management of employee services, the management of general services and the management of budget services, making classifications similar with the findings of this study.

Administrators mentioned within the concept of human resources management activities such as relations with parents, teachers, students, school and their environment, group and teacher meetings and OAB meetings. The administrators, who expressed education and training activities among their duties, listed all the operations related to the courses (planning and programming), class and course distributions, and activities that reinforce teaching such as trips-observation within the scope of this theme. Similarly, in the research conducted by Sarı and Sarı in 2020 on managerial duties, extracurricular studies and field trips were expressed as educational activities.

While the administrators were expressing their duties, they also mentioned the activities they have to undertake by law, such as MoNE correspondence, circulars, announcements, registration and disciplinary procedures, as routine managerial duties. Memduhoğlu and Meriç (2014) stated that the dealing with procedures and problems of students such as registration and placement processes, grade passing procedures, health, discipline, and transportation are the routine duties of administrators, and they displayed similar findings. Finally, the administrators also stated that they have duties such as providing funding to the school or finding a budget, as well as performing repair-maintenance activities and purchasing course materials and fixtures with these budgets. For an effective education, the school's financial resources should be managed properly by the administrators and these resources should be used efficiently in educational activities and in the purchase of infrastructure and equipment, which are important

tasks that several researchers mention in their research on managerial duties (Güngör and Aksu, 2013; Kara and Bozkurt, 2021).

The second finding of the study consisted of the opinions of the administrators about the tasks related to the distance administrative process. During the distance management applied during the Covid period, the administrators saw their duties as ensuring the coordination and control of distance education, managing human resources, maintaining relations with the Ministry of National Education and making routine correspondence, and establishing the material and infrastructure / providing the necessary financial support. Administrators continued to perform tasks that were similar to their routine duties during the distance management period. In addition to this, they assigned themselves duties to ensure the coordination and control of distance education. In support of these findings, Can (2005) stated that administrators have a duty to control new situations that arise during the distance education period and to make sure that everyone adapts to this process. Despite this view, Cullinane and Montacute (2020) stated in their research that the staff of some of the schools experienced fear and panic in adapting to this new situation, and that the administrators could not take the necessary steps to ensure coordination and felt inadequate.

According to another finding of the research, the answers of the administrators to their preferences about distance management or on-site management were discussed. Majority of the administrators stated that they preferred on-site management for reasons such as being more advantageous in socialization and interaction, easier control of administrative processes, active use of body language and ease of control, being able to solve problems more easily, and avoiding the problems of online processes. Gonzales and Jackson (2020) found in their research that administrators should create an effective technological vision in order to solve online process problems during the distance education and stated that administrators prefer on-site management more so that they can avoid these issues. Bagwell (2020), on the other hand, stated that administrators who implement effective crisis management are successful in distance management practices during the pandemic crisis. The author stated that in times of crisis, where school stakeholders experience social isolation and deep uncertainty, they can actually create social cohesion opportunities through virtual platforms to be provided by administrators.

When the administrators were asked to compare the two management styles, more negative situations were expressed in the distance management model. Administrators do not take the issue of distance management warmly due to reasons such as not allowing socialization, restricting physical mobility, difficulty in creating a classroom environment at home, and

leading to mental fatigue. According to the opinions of the administrators, the only negative aspect of on-site management was expressed related to health as forcing individuals to go to the workplace during the pandemic period. In the study conducted by Aytaç (2020), it was determined that school administrators experienced adverse situations during distance management and they needed to develop their crisis management skills.

In the research conducted by Sarı and Sarı (2020), results have been reached that support the finding that school management practices, which are tried to be carried out during the pandemic period, constrain administrators and cause mental fatigue due to factors such as the sudden and frequent decision changes of the central government and the ministry responsible for education, the unclear and unambiguous decisions taken, or the late decisions in some cases. In this process, it was not possible for the school administrators, who were only in the position to implement the decisions taken, to display their leadership qualities and to give confidence to the people around them, and the administrators had difficulty in demonstrating proactive behaviors (Kavrayıcı and Kesim, 2021). Due to such reasons, administrators have developed negative feelings and opinions against the distance management model. However, Reimers and Schleicher (2020) stated that it is normal for a global health issue, which significantly affects the lives and health of individuals and closely concerns students and teachers, to affect their motivation and work. In order to avoid such problems, administrators should avoid negative opinions and attitudes during this process, and make sure that teachers, students, parents and auxiliary personnel feel their support, which is of critical importance in terms of enabling individuals to be satisfied with their work and to achieve organizational goals.

At the last stage of the study, the administrators were asked about the problems they experienced in school management. According to the findings obtained from the administrators, it was seen that they faced various problems in the distance management model. The administrators mostly complained about internet and infrastructure problems, mental fatigue, lack of socialization and interaction, and family indifference. Similarly, in the study conducted by Turan (2020), it was determined that school principals stated that distance education did not reach the determined goals due to technical problems, parent insensitivity, socio-economic status of students, absenteeism problem and lack of technological devices during the pandemic period. Kavrayıcı and Kesim (2021) emphasized that school administrators stated that they had problems during distance education and management regarding the budget, hygiene conditions and social and emotional development of students. Konan and Ulaş (2021), on the other hand, found that school administrators expressed problems such as inconsistencies in the frequent

opening and closing of schools during the distance management model, and the constant change of decisions taken.

As for the opinions of the administrators on the comparison of distance management and on-site management methods, negative opinions about distance education and management such as internet access problem of students and families (Metcalf & Perez, 2020); the lack of technological equipment for students such as computers and tablets (Harris, 2020); problems with motivating students and communication (Çakın & Külekçi-Akyavuz, 2020); anxiety and lack of communication created by uncertainty (Keleş et al., 2020); teachers' inadequacy as regards distance education process (Burke & Dempsey, 2020); insufficient participation of the students for the class, and failure to perform the measurement and evaluation properly (Saygi, 2021) are also supported by different research findings.

In their research on the ability of administrators to deal with distance education and management problems, Harris and Jones (2020) emphasized the importance of administrators' individual strategies which includes acting calmly and prudently, taking initiative, making individual sacrifices, showing a will to solve problems, communicating effectively and being patient in coping with the problems they face. In this research, beyond identifying the problems, the ways to solve these problems and the necessary manager-leader skills to solve them are emphasized. Likewise, in the studies on how to solve the problems encountered during the pandemic period with the distance management model, Keleş, Atay and Karanfil (2020) mentioned that administrators try to solve the problems they encounter in the process by providing technological support to teachers and using effective communication means with all stakeholders. Kavrayıcı and Kesim (2021) emphasized that during the pandemic period, the behaviors of being calm and motivating, empathy, technology leadership, quick decision making, team building and coordination came to the fore and that administrators solved the problems they faced with these behaviors.

Conclusion and Recommendations

In this study, which was conducted to determine the views of the administrators about the distance administrative process and the on-site administrative process activities and to compare the two management models, it was revealed that the administrators did not express

very positive opinions about the distance management model, which they had to implement during the pandemic period.

Administrators were not able to support the distance management model as much as they wanted and had difficulties in terms of these applications due to several different reasons that they had right on their side. It is clear that this result is generally due to the fact that such a crisis was not experienced in the field of education before. The inadequacy of the administrators and personnel in the use of technology and the lack of technological infrastructure and equipment were among other reasons. The fact that distance education and management is a technology-based process, which requires using various digital materials and technological leadership from school administrators is also emphasized by researchers; thus, the importance of technologically advanced leaders comes into prominence.

With this research, we have witnessed that it is accepted that in the distance management model, beyond administrators who are knowledgeable in terms of technology use, what is needed are leaders who are competent in terms of motivation and can reach and lead masses.

Although we have come to the end of this troubled process today, there are many lessons that we need to learn from this process. In order to be prepared for such a sudden crisis situation in the future, the precautions to be taken and the suggestions to be put forward based on the findings of the research can be listed as follows:

1. While developing the necessary infrastructure for the development of the distance education process in schools, distance management practices should not be overlooked and steps should be taken considering the administrative dimension.

2. In-service training practices that will enable all education stakeholders (administrators, teachers, students, parents) in schools to fulfill their responsibilities in their respective fields and facilitate distance education-management activities should be planned by the authorized ministry and training should be given to the necessary people.

3. Required support should be provided to school administrators to develop strategies that will strengthen the technological leadership dimension.

4. It should be ensured that school administrators can act independently from the central administration to a certain extent, without breaking away from the fundamental elements determined by the central government, but also considering the environmental characteristics of the school in case of crisis. In this direction, necessary legal regulations need to be implemented rapidly.

5. Regular seminars, guidance and information studies should be carried out in order to reduce the anxiety and fear of the students and parents for the pandemic and to solve the technology addiction problem of students.

Navigating Developmental Challenges: Parental Experiences with Rhythmic Movement Training for Children with ASD

Emine ÖZEL

Cyprus International University, Faculty of Education, TRNC

e-mail: eoze1@ciu.edu.tr , Orcid No: 0000-0001-7874-1659

Abstract

This phenomenological study offers the real-life stories of parents who used Rhythmic Movement Training (RMT) to help their children who were diagnosed with Autism Spectrum Disorder (ASD) progress in their developmental journey to well-being. Grounded in neurodevelopmental principles, RMT aims to facilitate the integration of residual primitive reflexes via organised, rhythmic movements. The research encompassed three families, each with a child aged 5, 7, or 11 years, diagnosed with ASD. Data were gathered via semi-structured, in-depth interviews with parents who described their motivations, implementation strategies, and observed outcomes of utilising RMT in the home environment. Thematic analysis identified four primary themes: the quest for accessible and economical therapies, the incorporation of RMT into daily routines, reported developmental advantages across cognitive, motor, and emotional spheres, and psychosocial effects on family dynamics. Parents indicated that RMT fostered a sense of empowerment and agency, particularly in situations when access to official therapies was restricted or irregular. Although results differed, numerous parents noted enhancements in their children's attention, emotional regulation, and coordination. The implementation of RMT enhanced parent-child connections and increased engagement in the treatment process. Research indicates that RMT could function as an economical, adaptable complement to traditional therapy for children with ASD. This study provides significant qualitative insights into the sparse literature on movement-based neurodevelopmental therapies and underscores the necessity for additional empirical research to assess the efficacy and long-term effects of RMT in wider therapeutic frameworks.

Keywords: Autism Spectrum Disorder, Rhythmic Movement Training, parental perspectives primitive reflex integration, neurodevelopmental intervention,

Introduction

The prevalence of ASD has increased significantly over the past two decades, leading to an urgent need for effective interventions that address the unique developmental challenges faced by children with ASD and their families. Among the various therapeutic approaches,

Millions of children across the globe are impacted by autism, often known as autism spectrum disorder (ASD). The disorder is especially hard for parents because they have always had to cope with the stigma, lack of treatment choices, and limited accessibility to care that comes with ASD. However, the condition of autism is now more understood as a result of parental advocacy and developments in scientific study. The autism pandemic is a global crisis, recent findings reveal that 1 in 31 children suffer from in USA (Looi, M. K. 2025). There is an immediate need for effective treatments that target the specific developmental difficulties experienced by families with children who have ASD, as the frequency of ASD has risen dramatically over the last couple of decades.

Many different types of therapy have been considered for children with ASD, but Rhythmic Movement Training (RMT) stands out as one that may help them progress more quickly in their growth. RMT has gained attention for its potential to enhance the developmental trajectory of children with ASD. This literature review will explore the theoretical foundations of RMT, its application in the context of ASD, parental experiences, and the implications for future research and practice. This literature review will delve into the theoretical underpinnings of RMT, its implementation in the ASD setting, the perspectives of parents, and the consequences for the direction of further research and treatments.

According to Blomberg and Dempsey (2011), RMT is an exercise program that was created to assist with the integration of residual reflexes. The parents who participated in this research made the decision to help their kid with a behavioural or developmental issue by using RMT. The study initially set out to gather parents' opinions on RMT, but as the data came in, it became evident that the story these parents told was about their child's struggle to find help, the stress and frustrations that came with that struggle, and the variety of interventions they tried, including RMT, to help their child. The workouts may be performed at home and require very little, if any, equipment to be performed and completed.

RMT is grounded in neurodevelopmental principles and body awareness, highlighting the significance of rhythmic and repeated movements in promoting neuroplasticity and sensory integration (Wiener-Vacher, Hamilton, & Wiener, 2013). Rhythmic movements can assist children with autism spectrum disorder (ASD) in developing motor skills, cognitive abilities, and emotional regulation, which are often impaired in this population (Ding, et al., 2024). This training technique is predicated on the assumption of rhythmic motions. The foundational hypothesis asserts that systematically exercised movement patterns can yield enhancements in both physical and psychological aspects, therefore improving overall quality of life. In

comparison to children who did not engage in rhythmic movements, those who participated in minimal intrinsic rhythmic activities, such as five minutes daily, four days a week, exhibited enhanced development of primitive reflexes and improved reading scores (Grigg et al., 2023), as confirmed by a study reviewed by other researchers.

In 1971, Kiphard and Schilling released a research illustrating the significance of movement in the development of sensory and motor skills. This study was crucial in establishing the foundation for the development of RMT. Recent study has expanded upon these findings, highlighting the importance of movement in facilitating communication and socialisation, both of which pose considerable challenges for children with ASD (Gernsbacher et al., 2008). The vestibular system is believed to be activated and sensory integration enhanced by the rhythm, balance, and coordination elements of RMT (Wiener-Vacher, Hamilton, & Wiener, 2013).

Rhythmic Movement Training and Autism Spectrum Disorder

Young children and those with developmental delays in motor abilities are at increased risk of remaining nonverbal or exhibiting language and expressiveness impairments. It appears that oral-motor deficits could be the cause of speech discrepancies. Individuals with speech and language issues associated with autism spectrum disorder (ASD) are under-recognized for their social communication challenges, even though ASD is a developmental condition (Bharathi et al., 2019). The varied requirements of children with autism spectrum disorder can be addressed by the adaptation of RMT, which has proven to be an adaptable intervention. Researchers found that youngsters reaped the benefits of both the rhythmic movements and the social connections encouraged by RMT in a group context (Grigg, 2018).

Sowa and Meulenbroek (2012) called attention to the fact that physical activity-based therapies have helped with sensory integration and self-regulation. Results from comparable programs, such as Brain Gym and sensory integration therapies, are consistent with what parents have seen in their children in terms of cognitive development, motor skills, and emotional control (Zimmer-Gembeck et al., 2019).

A common thread that emerged in all interviews was the sense of empowerment that parents experienced. The implementation of RMT facilitated the development of a sense of agency in parents, as they were able to actively participate in their child's growth. This is consistent with research that emphasises the psychosocial advantages of parental participation in therapeutic processes (Hou, Y., Yan, T., & Zhang, 2023). Families not only observed changes

in their children but also experienced improved carer confidence, strengthened routines, and enhanced family cohesion. The broader impact of accessible interventions that enable parents to feel competent and involved is reflected in the emotional relief described by participants.

Method

This study employed a qualitative phenomenological research design to explore the lived experiences of parents who implemented Rhythmic Movement Training (RMT) with their children diagnosed with Autism Spectrum Disorder (ASD). Phenomenology was chosen to gain deep insight into the subjective meanings parents ascribe to their experiences, emphasizing the essence of their perspectives and emotions (Creswell, 2013). Purposeful sampling was used to select three families who met the criteria has shown on Table1: (1) having a child diagnosed with ASD aged between 5 and 12 years; (2) having used RMT for at least three months; and (3) willingness to participate in interviews. Each family included one parent who was the primary implementer of RMT at home. The children were aged 5, 7, and 12. (Table1) Recruitment occurred through parent networks and community referrals, ensuring participants had meaningful engagement with the RMT process.

Table 1: Participants Details

Child	Age	Diagnosis History	RMT Duration	Additional Therapies	Family Context
Child A	5	Diagnosed at 3	3 months Each day 5-10 minutes	Speech Therapy, Occupational	Dual-parent household
Child B	7	Diagnosed at 2.5	3 months, Each day 5-10 minutes	ABA, Sensory Integration	Single-parent household
Child C	11	Diagnosed at 4	3 months, Each day 5-10 minutes	Occupational Therapy	Dual-parent household

Thematic analysis, as outlined by Braun and Clarke (2006), was used to analyze the data. Transcripts were first read multiple times for familiarization. Initial codes were generated and grouped into broader themes. These themes were refined and reviewed for coherence and alignment with the research questions. NVivo software was used to organize and manage data during the analysis process.

Lincoln and Guba (1994) listed credibility, transferability, dependability, and confirmability as requirements for a trustworthy study, and this is exactly what the research

followed. Participant verification of the correctness of their transcripts and interpretations served to establish credibility through member checking. The researcher provided detailed descriptions of the setting and the participants to back up the claim of transferability. Research decisions and processes were audited to address reliability. To avoid introducing bias or presumptions into the study, researchers kept a reflective notebook to guarantee confirmability.

Results

According to the results, RMT can help with neurodevelopment and give parents a sense of control over their children's treatment. The converging experiences of parents suggest a potential direction for further study and practice, even though the sample size and reliability of the data are questionable. A continual struggle to locate effective support for the development of their ASD children was described by their parents. They described extended periods of uncertainty and frustration as they attempted to navigate a variety of conventional therapies, such as speech therapy, occupational therapy, and behavioural interventions. Among the many interdisciplinary approaches to autism treatment, RMT's emphasis on movement and reflex integration gives it promise as a supplementary option. Informal networks, including internet forums, social media groups, and recommendations from other parents.

Parents were drawn to the program because of its non-invasiveness and its simplicity. As a result of the exercises' absence of environment and equipment requirements, parents were able to perform them in the convenience of their own homes, which was a significant advantage. The first step in implementation was to learn the motions by watching videos online and following the instructions of experienced practitioners. Incorporating the exercises into daily routines was a common practice for families, particularly during transition moments like waking up or before bedtime.

Immediately following the implementation of RMT, parents regularly reported observable improvements in their children's functioning and patterns of behaviour. Significant improvements were noted in the areas of emotional management, anxiety, motor coordination, and concentration. The child A, C parents highlighted an improvement in sleep habits was noted by child B parent, while another remarked that their child was "calmer and more focused" when studying. Each child's level of improvement was unique, but every family agreed that RMT helped their child grow and develop. The most notable effects were an improvement in the

ability to regulate emotions, a decrease in anxiety, an increase in motor coordination, and an improvement in concentration.

Among the many benefits of RMT that parents highlighted was the low cost, which is usually just for the first training or for books. Program sustainability and practicality for low-income families were further enhanced by the option to conduct sessions at home without expert supervision. When compared to conventional therapy, RMT was consistently cited as having a lower cost and more accessibility. Due to its adaptability, RMT can be easily included into regular home activities, in contrast to therapies conducted in clinics, which may necessitate specialised equipment and substantial time commitments. Implementing RMT fostered feelings of agency, as parents were able to take an active role in their child's developmental progress. This aligns with research highlighting the psychosocial benefits of parental involvement in therapeutic processes

Family members experienced emotional and relational consequences as a result of the implementation of RMT. As a result of seeing positive changes in their children, a number of parents expressed relief and hope (Grigg et al., (2023)). In addition, the program encouraged more participation from siblings and co-parents, which contributed to an increase in the cohesiveness of the family. As a result of the intervention, parents reported feeling more empowered and secure in their capacity to assist their child's growth. This suggests that the intervention extended its effects beyond the child to the family system as a whole.

Discussion and Conclusion

The purpose of this research was to investigate the lived experiences of parents whose children with Autism Spectrum Disorder (ASD) have participated in Rhythmic Movement Training (RMT), with the intention of highlighting the ways in which this intervention altered the effects of developmental outcomes and the process of familial adaptation. The results showed that the four individuals with ASD had diverse reactions to the rhythmic movement activities, likely due to differences in sensory and motor development. ASD children typically have developmental issues that affect their social, communicative, and behavioural functioning. ASD can cause social communication and interaction issues and repetitive behaviours, interests, and activities, according to the DSM-5 (American Psychiatric Association, 2023). Rhythmic movement has the potential to aid ASD children's motor and sensory development, according to previous studies (Bharathi et al., 2019; Hardy & LaGasse, 2013; Janzen & Thaut, 2018). Therapeutically, RMT is a great way to help people with sensory integration, motor

coordination, and emotional regulation issues. The basic principle of RMT is that rhythmic movement can improve developmental outcomes by strengthening neuronal connections.

Families that are unable to afford or access traditional therapies may find RMT especially helpful due to its perceived developmental benefits and its ease of adoption (Grigg, et al., 2018). Even though there were just three families included in the study, the fact that their stories are similar suggests that RMT could be useful in addition to more traditional methods. According to the findings of my research, there is a possibility that parents may have various degrees of acceptance and comprehension of RMT as an intervention for their child. Some parents have reported favourable experiences, citing changes in their child's behaviour and emotional regulation as a result of receiving RMT sessions by their children. Grigg et al. (2018) and Grzywniak (2017) found that the adoption of reflex integration approaches was related with improvements in children's social-emotional functioning and reduced anxiety and increased self esteem in children. This was in addition to the fact that these methods led to improvements in children's physical skills.

In this case, to access and sustainability burdens were another major issue. Parents highlighted financial expense, availability of trained RMT practitioners, and time commitment for home-based practice as limitations despite its potential benefits. Equity in special education access to additional and alternative therapies is a bigger issue (Wong et al., 2015). Some families incorporated RMT into daily routines, improving feasibility and long-term adherence.

Additionally, participants articulated the evolution of the parent-child connection through RMT. Due to RMT being a physically interactive intervention necessitating parental participation, parents indicated improved connection and a greater comprehension of their child's physical signals and emotional conditions. This discovery aligns with evidence indicating that sensorimotor therapies might enhance co-regulation and augment parental attunement (Tajik-Parvinchi, et al., 2020).

In conclusion, this study emphasises the significance of easily accessible treatment choices in the domain of neurodevelopmental assistance and special education, as well as the relevance of home-based therapies directed by parents. For children with ASD, RMT positively affects their daily living skills, socialization, and communication skills, and contributes to their well-being by providing interaction with their families.

Limitations of the Study

This study has a number of limitations, despite the fact that it provides significant insights. Due to the small sample size and inclusion of only families that had already decided

to use RMT, a selection bias may have been introduced. Because the data were self-reported, they could have been skewed by optimistic bias, inaccurate recollection, or subjective impressions. It is also difficult to generalise the results or put a number on developmental progress as neither direct observation nor standardised developmental evaluations were used. Incorporating objective metrics into mixed-methods designs would enhance future research.

Recommendations for Future Research

Future studies should examine the effects of RMT through longitudinal, mixed-method methodologies. Increased sample sizes and control groups could facilitate a more scientific evaluation of the efficacy of RMT. Subsequent research may also juxtapose RMT with alternative movement-oriented or sensory integration programs to assess its comparative efficacy. Furthermore, the prospective function of RMT in educational environments, such as classrooms or special education programs, need examination. Finally, examining the effects of RMT on academic achievement, social competencies, and carer stress may provide a comprehensive insight into its significance in aiding children with ASD.

RMT is a treatment option for children on the autism spectrum, and this phenomenological study delves into the realities faced by families who have chosen to use it. The study finds that RMT has the ability to be a low-cost, easily accessible intervention that could positively impact the developmental progress of children with ASD, according to in-depth interviews with three families. Improvements in self-control, motor skills, focus, and family harmony were regularly noted by participants. When compared to other, more time-consuming and expensive therapies, RMT was a more manageable option for families because to its low financial impact and simplicity of incorporation into everyday activities.

The findings suggest that RMT is not only a tool for supporting neurodevelopment but also a source of empowerment for parents seeking agency in their children's therapeutic journeys. Despite the limitations of a small sample and self-reported data, the convergence of parental experiences points to a promising avenue for further research and application. RMT, as a movement-based and reflex-integration approach, holds potential as a complementary strategy within a broader, multidisciplinary framework of autism intervention.

Further study should strive to validate these first results by doing greater in size mixed-method studies with standardised assessments and different demographics. To further validate

RMT's broader applicability, it is crucial to investigate its long-term effects on academic performance, social integration, and personal and family well-being.

Abstract

Since the beginning of the last century, the interest of pedagogical research on childhood play has been growing consistently. The contribution of active pedagogy, from the Agazzi sisters to Montessori, to more recent authors, has initiated and enhanced the educational potential of play. Indeed, play represents a privileged resource for learning and relationships. Through different play experiences, the child opens himself to meeting others, explores the environment, comes into contact with objects, expresses himself and tells stories. Furthermore, he becomes aware of his own body and personality, experiments well-being and pleasure (Patrino 2014). At the same time, the child acts out the first conflicts and discovers different perspectives and points of view. The present work aims to investigate the current role of play in primary school, as an opportunity for the child's personal and overall development (Berger 1989; Farnè 2021). More specifically, we intend to consider dramatic play as an experiential mode able to activate all child's sensory channels. Dramatization involves body and emotions. It promotes expressive skills and helps build relationships with others, impacting positively on the child's overall well-being, reinforcing autonomy and self-regulation. Dramatic play proves to be an effective educational strategy in these Liquid Modernity (Bauman 2007; 2012; 2023), where the child also experiences forms of individualism, states of loneliness and isolation. The experience of dramatization can help the child in the process of achieving his or her own well-being.

Keywords: Activism, Dramatic play, Well-Being, Child Development

¹⁶ The paper was co-written by the authors. The Introduction and Conclusion were jointly written by Giulia Rocchi, Davide Nigra, and Cristiano Zappa. Specifically, Giulia Rocchi authored the third paragraph, Davide Nigra wrote the first paragraph, and Cristiano Zappa contributed the second paragraph.

Introduction

In an increasingly accelerated society (Rosa 2003), where both individual and collective well-being are compromised, children too become entangled in this systemic short-circuit. Bauman describes such a society as an “open society”, a product of globalization, where human relationships are progressively weakened and impoverished (Bauman 2007; 2023).

Within this context, the difficulty in managing emotions and the psychological-emotional states triggered by negative globalization processes (Bauman 2007) can lead individuals toward a condition of “ethical illiteracy” (Iori 2024), undermining their ability to engage in critical, conscious, and proactive reflection.

“Awareness of the dominant position occupied by verbal language in today’s society, and thus its central role in the transmission of educational values, relegating the body to an auxiliary communicative function, demands specific attention toward the development of effective pedagogical strategies. These strategies, through the art of creative movement, aim to foster the recovery and conscious use of one’s own corporeality”¹⁷ (Oliva 2011, p. 2).

The situation outlined here highlights the difficulty children face in achieving a state of well-being that may be cultivated through dramatic play. Theatre, as an art of communication, emerges as a meaningful educational proposal that integrates motor, expressive, and communicative development, ultimately contributing to a holistic formation of the individual (Oliva 2011).

This work aims to shed light on the potential of dramatic play within educational contexts, specifically in primary schools, as a foundational approach to promoting well-being from a biopsychosocial perspective.

The literature and experiences discussed here pertain to the Italian school system.

1. The theoretical bases of play through pedagogical Activism

The objective of this section is to highlight the contribution of the Pedagogical Activism movement to our understanding of play as a fundamental element in children’s growth and personality development.

¹⁷ The quotations were translated by the respective authors of each section/paragraph.

From this perspective, dramatic play represents a pedagogical tool implemented by schools through the creation of a “play space” (Berti 2022, p. 58), where pupils can explore and develop awareness (Iori 2024) of key values such as care, respect, and freedom, both their own and that of others (Sgambelluri 2015).

Conceiving the school as a ludic space provides children with opportunities to engage in play within a didactic framework aimed at facilitating teaching and learning processes. The educational recognition of play is deeply rooted in the early twentieth-century Pedagogical Activism movement and is exemplified in the methodological approaches developed by Rosa and Carolina Agazzi and Maria Montessori (Sgambelluri 2015).

The educational method developed by the Agazzi sisters was groundbreaking in placing play at the centre of early childhood education. Similar to Montessori, the Agazzis view play as a structured and guided activity intended to foster the child’s holistic development (Casotti 1953). For them, play is not an activity separated from learning but rather a medium through which children acquire cognitive, social, and emotional competencies. It encourages sociability, personal autonomy, solidarity, cooperation, and a sense of respect for others. The materials used in play are simple, everyday objects – referred to as *cianfrusaglie* – which carry significant emotional and affective value for the children (Agazzi 1961).

In the Agazzi method, the teacher plays a crucial role in guiding and facilitating play. Activities are planned and coordinated by the educator, who intervenes only when necessary, steering the ludic experience toward specific educational goals. This reflects an understanding of education as an active and participatory process in which the child is the main agent of their learning.

The Agazzi sisters envisioned the school as a “children’s home”, referred to as “*casa dei bambini*”, a familial and welcoming environment that fosters the spontaneity of play as a means of learning. The educational setting is structured to allow children to actively engage in the management of shared spaces, learning to care for themselves, others, and their surroundings. This attention to the educational environment is also evident in the creation of well-structured daily routines that include free play, educational activities, shared space maintenance, and interaction with nature. Each phase of the day is designed to offer meaningful play-based experiences.

According to Agazzi pedagogy, the integration of play with practical life activities, environmental care, and active participation creates a context in which children can grow and learn naturally and spontaneously (Valentini, Troiano 2017). In line with Froebel's educational philosophy, the Agazzi sisters emphasized that the aim was to raise children who would become adults, not merely pupils (Mazzetti 1962).

In this view, Froebel conceived play as an expression of the child's joy of living, manifesting through the body (Bucci 1993). Play brings joy, freedom, contentment, inner peace, and harmony with the world. Games should include bodily movement and be expressions of the inner vitality and pleasure of living (Sgambelluri 2015).

Similarly, Maria Montessori placed significant emphasis on the educational value of play, considering it a key element in children's cognitive, motor, emotional, and social development. In her educational philosophy, play is an essential means by which children develop their capabilities meaningfully. It is regarded as a tool for autonomous learning and self-construction, within a framework that supports freedom, concentration, and exploration (Montessori 1950).

Montessori viewed play primarily as an activity that fosters active learning. She observed that children concentrate deeply on tasks that interest and please them, engaging in these activities with seriousness and dedication. Thus, play becomes a context for exploring, experimenting, and developing cognitive abilities and bodily awareness (Lupi 2016). Montessori-designed classrooms promote autonomy through carefully selected materials that stimulate curiosity and exploration. Children are free to choose their activities, enabling them to learn through direct experience and to acquire profound and lasting knowledge. Montessori distinguished between types of play and assigned particular educational importance to activities that engage children with the real world. She identified sensorimotor games and rule-based games as especially effective learning tools, promoting concentration and self-correction.

"Thinking of school as a ludic space is essential to understanding both the value of self-organized play and the difficulty that may arise when offering a game to a child who, at that moment, is not inclined to play. As Bateson reminded us, one can never command someone to 'play!' (Bateson 1996). In such cases, the teacher can only diversify the offer or accept that the child may simply observe others playing, trusting, as Piaget noted, that this experience is also meaningful in the learning process" (Berti 2022 p. 58).

In the scenario outlined here, “Play represents the highest level of a child’s development (...) as it is the free and spontaneous expression of their inner self, the purest and most spiritual manifestation of the human being” (Sgambelluri 2015, p. 77).

From this perspective, dramatic play appears well-suited to support a spontaneous and non-directive approach to play, as it reflects the child’s natural behaviour. This is particularly evident in symbolic play, where the child uses imagination to construct fictional scenarios through voice, gestures, sounds, and objects.

2. Experiencing theatricality in Italian education

In the context of Italian education, the Document called ‘*Indicazioni Nazionali per il Curricolo della Scuola dell’Infanzia e della Scuola Primaria* (2012)’ advocate the pedagogical use of theatrical activities. This policy document explicitly defines the role of theatre and the space it should occupy within the educational offerings across all school levels. In doing so, theatre is granted full legitimacy within students’ educational pathways, marking a definitive departure from its earlier perception as a sporadic or extracurricular activity.

These recent guidelines align with the foundational principles of the *World Theatre Day*, established in 1962 in Paris by the International Theatre Institute (ITI), the largest global theatre organization, founded by UNESCO in 1948. Within this framework, theatre is defined as an “ideal educational tool, a synthesis and perfect interaction between curricular and extracurricular domains, between classroom and laboratory” (source: <https://mim.gov.it/web/guest/teatro-e-didattica>, p. 1).

Moreover, in the section *Traguardi per lo sviluppo delle competenze al termine della scuola primaria* (Learning goals for competence development by the end of primary school), it is stated that “(...) students use bodily and motor language to communicate and express emotional states, including through dramatization and rhythmic-musical experiences. (...) They explore a progressively more complex range of technical gestures (...)” (Ibidem).

In this regard, “theatrical education at school not only fosters the acquisition of artistic skills but, more importantly, serves as a transversal pedagogical tool that profoundly influences students’ holistic cognitive and emotional growth” (source: <https://mim.gov.it/web/guest/teatro-e-didattica>, p. 1).

Within 20th-century pedagogical discourse, theatre is increasingly recognized as a means for personal and social development. This recognition has translated into concrete practices that reflect educators' commitment to implementing theatrical activities in schools (Zappa 2011). Examining the pedagogical contributions of Adolphe Ferrière and Alexander Sutherland Neill, we can identify key moments that reinforce the “reciprocating interaction” (Scurati 1989, p. 45) between school and theatre.

In Ferrière's school, spontaneous theatrical activities emerge during periods of collective free work, when the student community feels the need to narrate aspects of reality through imagination (Santini 2007). As Santini explains, “(...) the possibility of an entire group actively participating in a theatrical experience (...), which is always both personal and collective, imbues the group with a unique identity, serving as a testimony of shared emotions and a foundation for constructing a collective autobiography in which all members are integral participants” (Santini 2007, p. 29).

Regarding the educational value of performance in Neill's school experience, Gatto notes that theatre enables students to “develop self-confidence, expand expressive capabilities, and stimulate creativity” (Gatto 1979, p. 44). Moreover, students are highly motivated by activities involving scriptwriting, rehearsal, and performance, showing a clear desire to fully inhabit their roles. Generally, children enjoy simulation games and role-playing, as well as imitating freely chosen characters by replicating their distinctive gestures, language, and contexts (Zanniello 2000, p. 18). As Zanniello notes, “symbolic play lays the groundwork for understanding, accepting, and respecting roles; children know that if these rules are not followed, the game cannot succeed. Play thus helps them act within frameworks of reciprocity and shared conditions” (Zanniello 2000, p. 18).

From this perspective, Di Rago affirms that “theatrical activity contributes to students' psycho-physical well-being, to a sense of bodily confidence, and to a deeper understanding of oneself and others” (p. 36). Participating in a theatre workshop becomes a learning journey based on trial and error, surges and hesitations. Such experiences enhance communication skills, foster critical thinking, and demonstrate how different abilities and disciplines can converge to achieve common goals (Di Rago 2006).

Traditional didactics must therefore be complemented by a laboratory-based approach, understood here as dramatic play, grounded in key elements such as “concrete manipulation, creativity, discovery-based learning, multi-layered interpretation, the metaphorical value of experience, and emotional-cognitive engagement” (Arduini 2020, p. 163).

Through theatre, a wide range of sensitive or complex topics, both familiar and unfamiliar to students, can be addressed in ways that stimulate curiosity and reflection. This approach fosters responsible citizenship and encourages students to participate consciously in diverse and inclusive communities. In this sense, theatre also becomes a vehicle for *global education*, aligned with the Sustainable Development Goals (SDGs) outlined in the UN's 2030 Agenda, especially those promoting human well-being, planetary health, and shared prosperity.

The increasing expectations *for*, *about*, and *from* children find space for play, an internationally recognized right under the 1989 UN Convention on the Rights of the Child (Barbanti Ferrante, 2020). Additionally, SDG 3 of the 2030 Agenda emphasizes the importance of ensuring health and well-being for people of all ages. These frameworks outline both the enabling conditions and the multidimensional development pathways needed for human flourishing.

For all these reasons, it can be argued that “(...) theatre in primary education should not be viewed as an additional subject to be layered onto other disciplines or forms of education, but rather as a transversal sensitivity, one that is both permeated by and permeates curricular content, and as an ‘eco-disciplinary paradigm’ to be embedded within everyday educational practice” (Calliero 2006, pp. 22-23).

Hence, “theatre represents a privileged experience of care for both the individual and the collective self, a space where differences are integrated and meaning is sought or constructed, not only on a personal level but within a continuous dialogue with the group and broader community” (Innocenti Malini 2006, p. 50).

As this article has explored, play, especially dramatic play, has demonstrable positive effects on socialization and peer negotiation (Digennaro 2019). Thus, theatrical practice also serves to exercise and develop key citizenship skills that are essential throughout life.

In light of this analysis, theatre education emerges as both a pedagogical tool and a form of care, capable of fostering “the construction of positive relationships” (Valbusa Puecher 2022, p. 137), and supporting the development and enhancement of individual capacities. In primary education, “dramatization is a particularly effective tool” (Ibidem), allowing children to explore relationships and emotions first-hand within a safe and guided environment.

Performing arts thus represent an appropriate approach, rich in relational value, capable of allowing students to “experience the well-being that such practices generate, while learning to recognize and manage their emotions” (Salati 2011, p. 163).

3. Educating for theatricality to promote well-being in the perspective of full citizenship

As argued in the previous section, the Indicazioni Nazionali (2012) provide guidelines aimed at ensuring the full development of the child and their psycho-physical well-being, which can be articulated through developmental milestones and learning objectives.

The Italian education system foresees continuity across school cycles and is based on the centrality of the individual and the promotion of both individual and collective well-being, aimed at full and equitable participation and inclusion of all.

Regardless of the school level, the school must necessarily adopt a perspective in which “competences and learning are framed as indispensable resources, and rights, (...) to respond both to the educational and formative demands required by modern community systems (...) and to guide innovation and change (...)” (Caldin et al. 2016, p. 892). Therefore, it must enable the creation of educational settings that reinforce curricular and extracurricular activities within a lifelong learning perspective of citizenship values.

In this regard, it is appropriate to highlight, in line with Dewey’s claims, the importance of the experience enacted by the student between the classroom and the laboratory; such experience, as Dewey states, is both the means and the end of education, that is, what connects theory and practice in teaching (Cappa 2014). According to the author, the school can be understood as an “(...) educational stage, that dramatic action space extending to the ‘wings’ of every institution and organization, institute, that move the material and imaginary bodies of students and their teachers. (...) on the educational scene (...) the bodies taken in the field of educational experience indicate with their presence a depth of experience” (Ivi, pp. XVII-XVIII).

The potential of dramatization has illuminated the significance of experience understood as both means and end of disciplinary and transversal learning (Cappa 2014).

Dramatic play can thus be considered a form of quality educational experience, one that children engage in naturally and unconsciously; indeed, children “love theater without knowing that they are doing theater” (Farnè 2021, p. 67).

Furthermore, dramatization, as a form of narration (Straniero 2024), allows work on self-construction and self-narration (both impersonated and simulated); dramatic play, employing various forms of language (verbal, nonverbal, and paraverbal), facilitates “the exploration of social and personal dynamics that influence health” (Pasetto et al. 2024, p. III).

In fact, “(...) Through movement, which encompasses a vast array of gestures ranging from facial mimics to diverse sports performances, the student can explore space, become aware of their body, communicate, and relate to others. (...) Through the body-motor dimension, the student expresses communicative needs and sometimes manifests various forms of distress that cannot be conveyed through verbal language (...)” (MIUR, Indicazioni Nazionali 2007, p. 73).

Dramaturgy, conceived as the practice of laboratory work in a guided and protected context, offers learners the possibility to construct, modulate, and remodel the proposals provided by the teacher “both from a performative and socio-relational perspective” (Pasetto et al., 2024, p. 14).

The co-constructed learning process can be punctuated by moments of reflection and sharing of practices characterized by “generative interchange among the cultures of the individual, the group, and the context” (Ivi p. 15). Feedback provided by the teacher, acting as mediator and moderator, facilitates the acquisition of transversal and disciplinary competences and simultaneously functions as “reinforcement of the individual’s intellectual and critical capacities” (Oliva 2016, p. 42), thereby broadening their emotional repertoire and contributing to ethical literacy.

On this last concept, Iori (2024) specifies that the ethical illiterate is one who “is incapable of reflecting deeply and authentically (...) on the multiple nuances characterizing an action, its motivations, and the relationship with the values that guided it. An ethically illiterate person lacks autonomy of thought and uncritically accepts the offered viewpoint, adopting it as the only possible one” (p. 317).

Body language, especially in primary education, provides the opportunity to act and manifest thought while simultaneously balancing “(...) the expressive and emotional dimension” (D’Elia 2019, p. 94). Dramatic play is thus an indispensable tool for achieving full well-being from a biopsychosocial perspective.

Integrating this practice into the primary school curriculum is an institutional duty, as it allows students to be supported in their growth and development journey and to acquire a repertoire of transversal and emotional competences increasingly required by contemporary society.

In educational terms, this means cultivating a proactive attitude toward change that embraces and manages the challenges of a global society with resilience. Consequently, schools are called upon to support students in becoming part of a multicultural society and cannot evade this responsibility. “An extended professionalism is therefore envisioned” (Scurati 2006, p. 78) for today’s teacher, tasked with enhancing and developing quality competences in response to new student needs and ministerial directives (Trinchero et al., 2020).

“Playing probably constitutes the primary and most powerful form of symbolizing reality. (...) It is inevitable that life includes play, but also that play reflects the ‘seriousness’ of life. Such an interpenetration of boundaries between play and reality (...) characterizes the meaning of playful activity (...)” (Simone 2022, pp. 17–18).

The teacher-director of the educational scene designs and implements a didactic script in which students, actors, by identifying with and embodying their chosen or assigned roles, can bring forth new and additional challenges. The teacher-director can grasp the aspects emerging from student performances to reshape the teaching pathway within the school, aiming to enhance and promote competence development and well-being as key elements for full citizenship (both inside and outside the school).

Conclusion

This article has highlighted the importance of dramatic play from a biopsychosocial well-being perspective. It is precisely through play—as conceived by key figures of twentieth-century pedagogical Activism—that we can identify a powerful learning tool capable of fostering the child’s holistic development. As argued in this contribution, play, thanks to its intrinsic ability to generate positive emotions, represents a unavoidable means for promoting meaningful and lasting learning.

For these reasons, as discussed in this paper, within the context of primary education, teachers who make use of a broad repertoire of dramatic and theatrical activities acknowledge the uniqueness of each student and encourage their direct engagement as active protagonists in the learning process within the school community. This kind of involvement occurs on multiple levels: cognitive, emotional, biopsychological, and social.

Among the various forms of play recognized in this framework, dramatic play, which is the focus of this study, serves as a tool capable of activating both disciplinary and transversal competences. It thus emerges as an effective educational and formative method, aligned with a lifelong and lifewide learning perspective.

Abstract

The paper "School Dropout Among Roma Children in Gjirokaštër Municipality: Causes and Possible Solutions" follows years of service I have provided within the Roma community.

Even though education is a fundamental right for integration and social development, Roma children in Gjirokaštër face numerous challenges that prevent them from attending or completing school. Reports indicate that only 10% of Roma and Egyptian children in Gjirokaštër attend school, while 90% are illiterate (Ora News, last updated September 18, 2022). Their schooling is characterized by issues such as demographic mobility within the community, irregular attendance, low academic performance, failure to continue lower secondary education, school dropout, and lack of essential skills and knowledge. It is important to highlight that despite the persistence of this phenomenon, the causes and effective solutions have not been thoroughly identified by researchers, teachers, or the relevant Local Education Offices.

Our research is based on a quantitative and qualitative approach, using semi-structured interviews to gather in-depth perceptions. Our sample includes primary and lower secondary school students, parents, teachers, school administrators, and members of the Roma community. The interviews will be recorded and transcribed.

Findings from the descriptive analysis indicate that multiple factors contribute to school dropout among Roma children. Despite efforts by state institutions and NGOs to improve the situation, these initiatives have failed to find an effective solution for Roma children.

The results of this study are expected to play a significant role in future research by other scholars and to be considered by the Local Education Office of Gjirokaštër and teachers in order to address the challenges faced by this community.

Keywords: School dropout, economic factors, Local Education Office Gjirokastrë, educational policies, community inclusion.

Introduction

A significant number of students give more severe economic impacts to Roma families. Ringold, Orenstein; Wilkens (2005) argue that their economic and marginalization are among the main obstacles for Roma families in education. Yes, reports by the European Union Agency for Fundamental Rights (FRA, 2020) and UNICEF (2022) emphasize that it is not the minimum income, the lack of other visible conditions and the need for work that account for the phenomenon. Data on the Roma community in Europe show that almost 80% of the members of this community are illiterate. 30-40% of this population have attended school irregularly. The part that continues to university represents a very small percentage anywhere in Europe (Cudworth 2010). School dropout of Roma children is one of the most worrying phenomena in the field of education and human rights in Albania. Although education is a fundamental right for every child, children belonging to the Roma and Egyptian communities face numerous obstacles in attending and completing compulsory education. Roma have always been and still are marginalized in the society in which we live. In the municipality of Gjirokastrë, according to a report by Ora News (2022), only 10% of Roma and Egyptian children attend school, while 90% of them remain illiterate. Studies in Albania show that only 0.3% of the Roma population in Albania has a university education. (Hadroj R., 2012, I. 2012,). Some parents acknowledge the fact that early marriage may be an obstacle to their children being able to complete higher education, recognizing this as part of the Roma culture.

This situation represents not only an educational challenge, but also a social and institutional crisis that requires immediate intervention. In Gjirokastra, school dropout by this community is a massive phenomenon in recent years. Mainly, children from Roma communities drop out of school due to the very difficult conditions in which they live. Only 10% of them are educated, as they are forced to collect scrap metal to earn money.

Studies highlight many reasons that influence such low figures for Roma. (Hadroj R., 2012) In theoretical terms, the study is based on the theories of social exclusion (Bourdieu, 1973; Silver, 1994) and social justice in education (Sen, 1999; Fraser, 2008), which emphasize that education is not only a means of transmitting knowledge, but also an instrument for equality and inclusion. Institutional interventions and educational policies cannot be understood outside the context of the social structures that produce

inequality. School dropout among Roma children is the result of a combination of socio-economic, cultural and institutional factors, which directly affect their exclusion from development opportunities. Marriage at a young age for Roma women: 19% before 17 years old; At 20-24 years old, 40% of Albanian women are married, whereas 70% of Roma women are already in couple; A gender gap: men tend to marry later; Early family formation has huge consequences on education and access to employment (INSTAT 2011). The literature review shows that, although a number of national and international initiatives have been undertaken to include Roma children in education, the effects of these interventions are often short-term and fragmented (UNICEF, 2020; FRA, 2016; European Commission, 2021). In Albania, research on this topic remains limited, especially at local levels such as Gjirokastra, where specific local factors significantly influence the dynamics of school dropout. The most critical time for school dropout remains that of nine-year education. In Gjirokastra, the majority of Roma families do not complete the nine-year education. Nine-year education is a critical point where Roma youth may or may not break barriers such as: community opinion, prejudices they encounter in the classroom and in society from the majority. (Qosja, 2012). Reportedly, 64 percent of Roma and 24 percent of Egyptians ages 7–20 have never attended school; as a result, 62 percent of Roma and 24 percent of Egyptians are illiterate. Of the majority population, with whom they must compete on the labor market, only 2 percent are illiterate. The biggest barriers to their education are related to poverty and social exclusion. Families cannot afford to pay for school books, supplies, or fees, nor to feed and clothe children sufficiently for them to attend school. Moreover, many Roma children who speak Romani exclusively at home face difficulties when they begin school. An Albanian teacher in a Roma kindergarten in Shkozë, for example, asserted that Roma children under the age of 6 cannot speak Albanian. The result is that some Roma children who struggle in classes during the first years of primary grades eventually drop out of school. Other barriers include limited access to education facilities. In some areas, the long distance of schools from homes prevents children from attending school. (De Soto, H.; Beddies, S.; Gedeshi 2005)

This study is of particular importance for several reasons:

- ✓ first, because it gives voice to a marginalized group that is rarely included in decision-making;
- ✓ second, because it aims to provide concrete data on local educational institutions;
- ✓ third, because it comes as a result of a long-term engagement in the field by the author herself, guaranteeing contextual knowledge and high reliability in data processing.

The aim of this research is to identify the main causes of school dropout among Roma children in the municipality of Gjirokastrë and to suggest concrete, feasible and adapted solutions to the local reality. This will be achieved through a combined quantitative and qualitative approach, involving students, parents, teachers, school leaders and members of the Roma community.

From this analysis, the main research questions arise:

- ✓ What are the main factors that influence school dropout among Roma children in Gjirokastrë?
- ✓ How do parents, teachers and school leaders perceive this phenomenon?
- ✓ What are the possible solutions from institutions that can be implemented at the local level to reduce school dropout?

Method

This study uses a mixed methods approach that includes both quantitative and qualitative data, with the aim of gaining a deeper understanding of the causes of school dropout among Roma children in the municipality of Gjirokastrë and identifying possible solutions adapted to the local context. The research design is exploratory, relying on semi-structured interviews, which allow the researcher to understand the real experiences, perceptions and challenges faced by Roma children, parents and other educational stakeholders. In addition, a simplified questionnaire with closed and open-ended responses was used to collect quantitative data on school attendance rates and barriers.

Sampling and participants

The sampling is non-probabilistic, specifically purposive sampling, selecting participants who have direct experience with the phenomenon of school dropout. The following were included:

- 10 Roma students attending primary and 9-year education in public schools in Gjirokastra,
- 10 parents of these students,
- 6 teachers,
- 2 school principals,

The selection criterion was the inclusion of participants who have direct knowledge of the process of educating Roma children and who live in areas most affected by school dropout.

Instruments and data collection

The following were used for data collection:

- Semi-structured interviews, conducted face-to-face in Roma community settlements and schools. The interviews were recorded (with the participants' permission) and then transcribed verbatim.
- Simplified questionnaires, distributed to parents and teachers, which included questions on the reasons for children's absence from school, perceptions of institutional support, and socio-economic conditions.

Data analysis

Qualitative data from the interviews were analyzed through thematic analysis (Braun & Clarke, 2006), identifying the main recurring themes.

Quantitative data from the questionnaires were processed through descriptive statistical analysis (percentages, averages, etc.) using Excel.

The study follows a combined quantitative and qualitative approach. 50 questionnaires were distributed to Roma families with school-age children and 10 questionnaires to teachers working in schools with a high percentage of Roma students. Data analysis shows that, although migratory and cultural factors exert a certain influence, the greatest variance in the phenomenon of school dropout in this context is explained by difficult economic conditions. The dropout rate increases significantly when poverty is combined with a lack of institutional support and with the stereotypes that follow Roma children in the education system.

Study limitations

The study has limitations related to the small sample size and the lack of generalizability of the results on a national scale. Also, the self-reporting of parents and students may be influenced by emotional or cultural factors. This paper analyzes the impact of economic status, seasonal migration and early marriages on the phenomenon of school dropout, focusing mainly on the role played by extreme poverty. The relationship between these variables is examined in the context of the Roma community in the city of Gjirokastra, with a focus on children in basic and 9-year education (grades I–IX).

Results

The analysis of data collected from interviews and questionnaires has highlighted several main factors that influence the phenomenon of school dropout among Roma children in the municipality of Gjirokastra. These findings are grouped into four thematic categories: economic, cultural, institutional and internal family factors.

Economic factors:

Data show that extreme poverty is one of the most frequently cited reasons for dropping out of school. Many Roma families do not have a stable income and children are forced to contribute

economically, often through begging, collecting cans or other unpaid work in the market. Data collected through interviews and questionnaires show that extreme poverty is the most frequent factor influencing the dropping out of school by Roma children.

From the interviews conducted with parents, children we see that:

Graph 1: Economic Involvement of Children by Parents

We see that 73% of parents stated that their children are obligated to help the family economically.

Chart 2: School absence due to poverty or work

We see that: 60% of children claimed to have missed school due to lack of food, clothing, or work obligations.

Chart 3: Participation of Roma children in economic activities for basic needs.

We see that: 45% of Roma children said they have participated in activities such as begging, seasonal work picking citrus fruits or olives, collecting cans and scrap metal, or helping in markets to cover the family's basic needs.

Chart 4: Economic reasons for dropping out of school

From the data we see that:

Begging or collecting cans 32%

Lack of food/clothing 22%

Helping in markets or unpaid work 28%

Lack of transportation to school 18%

Why do they do this? Roma mothers expressed during interviews that: "We have no bread, how can I take my son to school without bread and shoes?" "I can't take him to school because I don't have money to buy clothes" "I can't pay for transportation because the school is far away"

Cultural factors

One of the key factors influencing the removal of Roma children from the education system is **the traditional attitudes and values of the community**. These attitudes are closely related to perceptions of gender role, low trust in public institutions, and the importance given to cultural customs in the face of formal education. Some Roma parents do not consider education to be a life priority. There is a lack of trust in the education system and a tendency to preserve community traditions, especially for girls, who in many cases withdraw from school at an early age to marry or stay at home.

From the interviews conducted with Roma parents in the Gjirokastra Region, we see that:

Graph 5. Cultural Factors That Influence School Dropout

As we can see from the graph, each factor has the percentage it occupies:

Factories	Percenyage of impact (estimated)
Traditional Attitudes on Gender Roles	40%
Lack of trust in school/institutions	25%
Economic poverty	20%
Discrimination at school	10%
Other	5%

Regarding enrollment in education by gender, we see from Graph 6 that:

Figure 6: Enrolment in education by gender

- In the **3–10 age** group, enrollment is high for both genders, but boys are somewhat more involved (90% vs. 85%).
- In the **11–14 age group**, it drops significantly especially for girls (35% versus 50% for boys).
- In the **15–18 age** group, enrollment is **zero** for both genders, reflecting complete dropout from education at this stage.

This graph supports the observation that **Roma girls drop out of school earlier than boys**, often for reasons such as **early marriages** or **family caring obligations**.

Figure 7: Trust in public institutions

This graph shows trust in public institutions.

They have no confidence at all – 75%

Have average confidence – 20%

Have high confidence – 5%

So, members of the Roma community for the most part do not trust the institutions at all.

Figure 8: Priorities of Roma families for children

Priority	Level of importance
Level of importance	A lot Important
Children's education	Important but not a priority
Marriage at a young age	Ordinary / Normal
Early child labor	Eligible

Here are some of the opinions of the parents who benefited from the interview: "Girls don't need high school", "She will get married tomorrow, she doesn't want school", "Points to school, and when they go they don't learn anything, it's better to stay at home and help us".

Institutional factors

Many participants during the interviews mentioned the lack of support from local schools and institutions. These institutional factors are mainly:

Lack of real and effective support from institutions: Although policies for social inclusion exist, they are not properly implemented in practice.

Lack of vocational training for teachers: Teachers do not have specialized training to work with children from vulnerable groups such as the Roma community.

Stigmatisation and discrimination at school: Roma children often face harassment, insults and prejudice from teachers or other pupils (p.sh. use of the term "Arixhinja" in an offensive way, unwashed, foul-smelling, etc.).

Lack of a supportive and inclusive environment in the school; This leads to demotivation and school dropouts of Roma children, as shown by the case of the girl who refused to go to school anymore due to discrimination.

Generally, these factors are:

Organisational factors (lack of support and implementation of policies)

Educational factors (lack of teacher training training)

Socio-psychological factors (stigmatization, discrimination and marginalization in school)

A Roma mother said: "They insult her in class, they call her 'arixhofka' - replied the mother of a 10-year-old girl from the Roma community who says that the girl came back crying and insisting that she would not go to school again as she felt bad and bullied.

While a man in his 30s said that his 15-year-old son will not go to school as he has thrown a lot of body and is two years older than his peers due to dropping out of school for reasons of emigration. After returning from Germany, the man underlines, he will not go again as he feels older and has started working in a car service. He left school in the 6th grade.

Family and social factors

Parents generally have a **low level of education** or are illiterate, which directly affects their children's ability to attend education. In some cases, there is a lack of supervision and structure in family life, with parents having neither the means nor the capacity to help children with homework or maintain regular contact with school.

The family and social factors that are described by parents and teachers are:

- **Low level of parental education or illiteracy** – Parents do not have enough education to understand the importance of education and to help children in the learning process.
- **Lack of supervision and structure in the family** – There is no good organization of children's time and activities, which would help in continuity and success in school.

- **Lack of capacities and financial means** – Parents do not have the material or ability to support their children in schoolwork and to communicate regularly with teachers or educational institutions.

What parents say in this context:

- Often parents feel powerless to help their children in education due to their lack of knowledge or skills.
- Sometimes they do not fully understand the importance of school or encounter difficulties in managing family and economic responsibilities.
- Some parents may experience stress or distress due to the inability to provide adequate conditions for learning.

In general, parents express the lack of support that they themselves can give to their children, due to educational, economic and social factors.

There are organizations like Save the Children that do very good and organized work with this community, but there are others that the activities they carry out do not fulfill their purpose.

Lack of transportation and physical access to school

For some suburban neighborhoods of Gjirokastra where the Roma community lives, it was identified that the lack of public transport and physical distance from school is a concrete obstacle to regular attendance. There are two factors that negatively affect the attendance of school by Roma children in the suburban neighborhoods of Gjirokastra: **the environmental and infrastructural factor**. There are no convenient lines or services connecting these neighborhoods to schools, making it difficult and often costly for children to commute daily.

Physical distance from school. The distance that children have to travel is great, which increases fatigue, risk and travel time, demotivating regular attendance. From an interview, we break the refrain: *Maria is the eldest daughter of a Roma family on the outskirts of the city. She and her two younger brothers attended the school which was very close to their apartment, but at the moment she had to move to another school (because she passed the 6th grade) she left school due to the long distance and her family could not afford the cost of public transport as they face numerous financial problems. Only her father works in her family, while her mother is ill.*

This combination of infrastructural and social conditions creates a practical and concrete barrier that directly affects the education of Roma community children in those areas. Overall, the results show that school dropout among Roma children is a **multifactorial phenomenon**, where structural circumstances (such as poverty and exclusion) are intertwined with cultural and

institutional elements. This requires an integrated and collaborative intervention between the school, local institutions, associations (NGOs) and the community.

Discussion and Conclusion

The findings of this study highlight that efforts to reduce school dropout among Roma children should focus on addressing poverty, ensuring access to economic assistance for families in need, and guaranteeing social and educational support from local institutions. From this study we see that: Mostly girls are forbidden to go to school to help with household chores and take care of younger brothers and marry at a young age. While boys to help provide income for the family, they have to drop out of school and start working. Marriage plays a more hindering role in girls' education than in boys' education, since it is noted that the cases of married boys attending school are relatively more frequent than the cases of girls. Qosja, G. (2012). The majority of parents stated that their children are obliged to help the family economically.

The main factors that affect school dropout are:

Studies highlight that the low level of education of parents and the socio-economic conditions of families are the main obstacles to school continuity. UNICEF (2021) This also aligns with the findings of the World Bank (World Bank, 2020), which underline that lack of physical access due to transportation and distance from school is a significant problem in suburban areas.

The perceptions of parents, teachers and school leaders are:

Roma parents often feel powerless to support their children's education, due to a lack of knowledge and resources. Xhafa (2019) Teachers and school leaders recognize the challenges, but the lack of professional training and institutional support limits effective interventions. This gap between policies and practices is evident in regional studies (Xhafaj, 2019; Çela & Kola, 2021).

According to the European Commission (2019), while policies exist for the inclusion of Roma communities in education, implementation on the ground remains fragmented and ineffective. Save the Children (2020) notes the lack of support and monitoring mechanisms to address abandonment and the need for active community involvement. This situation creates an institutional gap that hinders appropriate interventions. Many teachers who have Roma children in their classrooms when they drop out of school do not deregister them because of the low number of students in the classes they have, but they are also not interested in these students attending. Like many other countries in the region, Albania has invested in overall legislative

reform: Poor administrative capacity as well as limited civil society engagement mean that implementation has not progressed at the right pace. (Sultan, 2006)

Possible Solutions for Reducing Abandonment

Based on the international literature and practice of organizations such as UNICEF (2021) and the European Commission (2019), we give these recommendations for possible solutions:

- ✓ Training teachers in diversity management and social inclusion.
- ✓ Improving physical access through public transport and infrastructure (World Bank, 2020).
- ✓ Family Empowerment and Parent Education Programs (UNICEF, 2021).
- ✓ Development of institutional mechanisms of support and cooperation with the community (Save the Children, 2020).
- ✓ Working with parents to make them aware of their children's attendance at school.

These measures would contribute to the creation of a more inclusive and sustainable environment, significantly reducing the school dropout of Roma children in Gjirokastra and beyond.

Recommendations

1. Professional training of teachers and educational staff; Increasing the role of educational institutions in supporting inclusive education is an important topic that requires an in-depth examination of educational history and practices. (Lushaj & Ramosaj 2025), Trainings should also address prejudice and discrimination at school (European Commission, 2019).

2. Roma's approach to education directly depends on the standard of education offered to them; Teachers' lack of motivation to work with children from another culture, prejudice against Roma families, and lack of training are factors, which contribute to the low standard of education provided to Roma. (Fishta K., 2023, p. 4).

3. Improving physical access and educational infrastructure; Investing in public transport and creating safer and shortened routes for Roma children will lower travel barriers and increase learning participation (World Bank, 2020).

4. Family support and parent education programs; Empowering Roma families through educational programs and social support will help increase the appreciation of education and children's schooling capacities (UNICEF, 2021).

5. Development of institutional and community mechanisms for inclusion and monitoring: The establishment of local structures that work closely with the Roma community and

educational institutions is imperative for follow-up, support, and timely interventions to prevent drop-out (Save the Children, 2020).

Educational institutions should be careful to avoid cases of segregation which can also occur because the Roma community is located in certain areas and their children go to the same school (Discrimination 2014)

6. The phenomenon of school dropout is still prevalent, a suggestion would be to offer children (starting with preschool ages) educational payments, free food and textbooks. (Lazarus, 2019)

Abstract

Today's youth face numerous pressures, ranging from academic life to the influences that come from social media. This paper aims to address some of the factors that affect their psychological well-being, focusing on positive emotions, self-esteem, and the role of social media. On one hand, positive emotions such as joy, hope, and gratitude help young people cope with stress more easily and maintain emotional stability. On the other hand, self-esteem plays a crucial role in how a young person views themselves and handles everyday challenges. Social media is another significant factor. It can have a positive impact if used mindfully, but it can also bring anxiety, unnecessary comparisons, and feelings of insecurity. This paper aims to emphasize the importance of building healthy self-esteem and developing a more conscious relationship with emotions and technology as part of overall well-being.

Keywords: Youth, Psychological well-being, Positive emotions, Joy, Self-esteem, Social media, anxiety.

Introduction

Young People's Daily life now revolve on social media in great detail and most of them communicate with friends, discuss their experiences, follow the newest news, And express themselves in diverse ways on sites like Instagram Snapchat and Facebook (Anderson & Jiang, 2018). Particularly in times when they feel depressed or isolated, social media enables young people to connect with others, investigate their identity, and obtain emotional support (Best, Manktelow & Taylor, 2014).

Along with these advantages, though, there are major questions regarding how social media shapes the mental health of young people. Using these platforms excessively has been connected, according to research, to feelings of helplessness Call mom low self esteem, and continued comparison with others (Twenge & Campbell, 2018; Vogel et al., 2014). Some young

people also feel under pressure to always be online and to present a perfect version of themselves, which may damage their confidence and self worth (Pantic, 2014).

The goal of this research is to look into the different risks associated with social media as well as the positive impact it can provide on the well-being of young people. It's important to understand that the impact of social media really depends on how it is used and how much time is spent on it (Orben et al., 2019).

The Benefits of Social Media for Young People

Self-Expression and Identity Development

Praying people, social media offers one of the main advantages in terms of exploration and expression of their identity full point many of us experience a phase of attempting to find ourselves who we are, what we value, and how we want people to see was during teenage years and early adulthood. Social media presents a venue where this is possible. Young people feel free to communicate their interests, ideas, feelings, and several sides of who they are via postings, pictures, videos, or comments (Michikyan, Subrahmanyam & Dennis, 2014).

For instance, a young person who may not feel understood by family or close friends can find a space online where they feel accepted for who they are. This greatly affects forming identity and confidence building full point creating content such as personal blogs, Instagram reels, or tik toks can be a potent way to self-expression, particularly for those who feel uncomfortable sharing in traditional setting.

While peer pressure or trends may influence self-expression at times, generally for many young people utilizing social media to develop oneself can be a pleasant experience. Crucially, people should feel free to be themselves without thinking about criticism. In this way, social media becomes more than just fun—it becomes a real part of growing up.

Peer Social Support and Connection

One of the most important things for young people's well-being is knowing they're not alone, that someone understands and supports them. Social media frequently serves this purpose by enabling the maintenance and improvement of connections with others. Particularly when they can't meet in person, many young people rely mostly on messaging via Instagram, WhatsApp, or Snapchat to keep in touch with friends (Best, Manktelow & Taylor, 2014).

Apart from maintaining present friendships, social media facilitates the development of new ones among people with similar interests. An artist, for instance, can follow inspirational pages, join creative forums, and interact with others who share the same passion. Particularly for those who are isolated in their offline surroundings, this sense of belonging is really essential.

Many young people also claim that during tough emotional times, it's sometimes easier to talk through a message than face-to-face. A person's day or mental condition can be much influenced by even a brief communication from someone close. Social networking might so become a new form of emotional support.

This naturally does not replace actual human connection, but in a digital environment it is a necessary tool for emotional well-being. When used carefully, social media may provide a link to others and enable young people to feel less isolated.

Access to Information and Informal Learning

The chance for informal learning presented by social media is still another important advantage. Many times, young people learn from what they see online—educational videos, instructive blogs, brief articles, or honest talks about subjects not commonly handled in class—not alone from their educational experiences (Collin et al., 2011). For many, this style of learning is natural, pressure-free, outside of the traditional classroom, and hence more effective.

Reels on TikTok and Instagram, for instance, usually show how to control anxiety, maximize time, or improve study skills. There are also pages that share information about human rights, mental health, history, or even technology. This is crucial as young people are receiving straight, basic, interesting knowledge.

One article or video can also inspire interest and motivate a young person to research a subject deeper. This increases the motivation to absorb information and approach knowledge actively. So, social media is not just entertainment—it can also be a space for education and personal growth.

Of course, it's important to be mindful of the quality and source of the content, but when used consciously, social media can open new doors to learning and self-development.

Activism and Civic Engagement

One of the most inspiring sides of social media is how it gives young people a stronger voice on social, political, and environmental issues. Platforms like Instagram, TikTok, Twitter, and YouTube are not just places to scroll—they're spaces where young people stay informed and

get involved in causes that matter to them and their communities (Literat & Kligler-Vilenchik, 2019).

Activism isn't only about street protests anymore. Today, a story, a hashtag, or a video can raise awareness among thousands. Many young people feel empowered when using social media to speak out against injustice, support mental health awareness, or advocate for gender equality, environmental protection, and human rights. Even in Albania, there have been cases where a simple post or online campaign led to real change or got the attention of decision-makers.

What's also great is that online activism often leads to personal reflection. Young people start asking: What do I stand for? What values matter to me? This helps build awareness and shape personal and ethical identity.

When used responsibly, social media can be a powerful space for learning about citizenship, encouraging the next generation to take action and create positive change in society.

The Risks of Social Media for Well-Being

Social Comparison and Low Self-Esteem

One of the most common risks of social media, especially for young people, is the constant comparison with others. Almost every day, when you open Instagram or TikTok, you see people who look perfect—with clear skin, ideal bodies, luxury vacations, and lives that seem problem-free. Even though we logically know that most of these posts are edited, filtered, or carefully chosen to show only the best moments, we often still start to feel like we're not good enough (Vogel et al., 2014). This kind of thinking directly affects self-esteem. When we compare ourselves to what we see online, we may begin to feel insecure about our looks, our life, or our achievements. Studies show that the more time young people spend viewing "perfect" lives online, the more likely they are to feel unhappy with themselves (Twenge & Campbell, 2018). And it's not just girls—boys also feel pressure to look a certain way or live an "exciting" lifestyle. Social comparison is a natural human process, but on social media it happens more often and more intensely. In real life, you see people in both good and bad moments, but online, it's mostly the highlights. That's why it's important for young people to understand this and not judge their worth based on what they see on a screen. Being aware of this pattern is a big step toward protecting emotional well-being.

Anxiety and Depression

Heavy use of social media is more and more often linked to higher levels of anxiety and depression in young people. Many studies show that those who spend more time online tend to report feeling sad, empty, unmotivated, or emotionally stressed (Keles, McCrae & Grealish, 2020). One reason is the feeling that “everything is happening for others, but not for me” especially when seeing others celebrating, traveling, or in happy relationships. Besides social comparison, social media can become stressful because of the expectations we place on ourselves: to post often, get lots of likes, respond quickly to messages, or always be “online.” These expectations can make the brain feel constant pressure, which increases anxiety. Some young people even feel anxious when they’re away from their phone or can’t check social media, this is known as “FOMO” (Fear of Missing Out). Isolation also plays a role. Even though we’re always “connected,” it’s not the same as real, deep relationships. Some young people may feel lonelier than ever, even with many followers or friends online. This gap between virtual connection and emotional closeness can make mental health worse. If not addressed properly, symptoms of anxiety and depression related to social media can become more serious over time. That’s why it’s important to talk openly about these feelings and seek help when needed.

Social Media Addiction

One of the biggest concerns today is social media addiction. Even if we don’t notice it right away, spending hours every day on Instagram, TikTok, or YouTube can become more than just a habit, it can turn into something we can’t easily control. Many of us have experienced that moment when we just want to watch one video and end up scrolling for an hour without realizing it (Andreassen et al., 2012). This addiction shows up when you feel uncomfortable not checking your phone, get anxious if someone doesn’t reply quickly, or feel like you’re missing out when you’re offline. There’s even a term for it, “nomophobia” the fear of being without your phone. It’s becoming more and more common among young people. This kind of addiction affects sleep too, many young people go to bed with their phone in hand and end up losing valuable hours watching content that brings no real benefit (Twenge & Campbell, 2018). Social media addiction also affects focus. It becomes harder to study, read, or do any task without getting distracted, because the brain gets used to fast and constant stimulation. This

impacts school performance, productivity, and even how we experience real life. It's important to understand that digital addiction doesn't mean someone is weak, it's the way these platforms are built: to keep us hooked. That's why awareness and setting boundaries are key steps in bringing balance back into our daily lives.

Cyberbullying and Privacy Risks

One of the darkest sides of social media is how often it becomes a space for bullying, harassment, and emotional abuse, known as cyberbullying. Unlike traditional bullying that happens at school or in neighborhoods, cyberbullying takes place online: in comments, messages, stories, or hurtful posts shared to shame someone (Kowalski et al., 2014). What makes it worse is that it often happens anonymously and in front of a big audience, which can make it even more painful. Young people who go through cyberbullying often feel ashamed, alone, and powerless to defend themselves. It doesn't just affect their emotions but it can damage their confidence, how they see themselves, and their ability to take part in social or school life. This can lead to anxiety, depression, and in extreme cases, even suicidal thoughts (O'Reilly et al., 2018). Another risk linked to social media use is the exposure of personal information. Many young people share things like their location, school, photos of daily life, or details about relationships without realizing how that info might be misused. There have been cases where accounts were hacked, photos were shared without permission or used to manipulate people. Lack of privacy and overexposure can have long-term effects on well-being and safety. That's why it's very important for young people to learn how to protect their personal information and report any kind of online abuse. Digital education and support from parents, teachers, or psychologists can make a big difference in preventing these problems.

Strategies for Healthy Social Media Use

In a time when social media is part of everyday life, it is not realistic to tell young people to stop using it completely. What really matters now is learning how to use it in a healthy, mindful way with clear limits. Having a balanced relationship with social media is important for emotional, mental, and social well-being.

One of the most important strategies is digital education. Young people need to understand how algorithms work, why they see certain content, and how these platforms are built to keep them engaged for as long as possible. The more they know about this, the easier it becomes to avoid

emotional pressure and manipulation online (Livingstone, 2014). That is why schools should include lessons about how technology affects the brain and how to use it critically.

Another simple but powerful strategy is setting time limits. There are apps that help track how much time is spent on each platform and can even block access after a certain amount of time. Creating “phone-free zones” during meals or before sleeping is a good way to reconnect with the real world. Many young people say that after taking a break from social media, even for just one day or one week, they feel calmer, more focused, and more emotionally stable (Uhls et al., 2014).

It is also helpful to promote active use of social media instead of passive use. Active use includes talking with others, sharing thoughts, following pages that inspire or teach, and getting involved in social causes. Passive use means just scrolling without engaging, which is often linked to negative emotions and social comparison (Verduyn et al., 2017).

Parents and teachers also play a big role. Instead of always criticizing phone use, it is better to have open, non-judgmental conversations about how kids feel and what they do online. Many young people feel misunderstood or embarrassed to talk to adults about their online life, and this silence leaves them more vulnerable. Honest conversations and cooperation are more helpful than strict rules or punishment.

At the end of the day, social media is not the enemy. It is just a tool. When used with awareness, it can be a source of inspiration, learning, and connection. But to reach that point, we need to learn to use it in a way that does not take control over us. By building healthy habits, practicing self-reflection, and keeping a balanced relationship with social media, young people can protect their well-being and still be part of the digital world.

Method

Research Design:

The research utilized a combination of **cross-sectional questionnaire studies**, **qualitative case studies**, and **digital ethnography** to explore social media use and identity formation. It also incorporated **content analysis of profile pages and posts** to examine online behaviors.

Participants:

Participants consisted of young social media users. Demographic and psychological variables were considered based on the measures administered and the content analyzed.

Data Collection Tools: The study employed several tools and techniques for data collection, including the **Identity Style Inventory**, the **Self-Concept Clarity Scale**, **semi-structured interviews**, and **automated scraping** of public images and captions from social media platforms.

Data Collection Method: Data were gathered through structured questionnaires, qualitative interviews, and automated extraction of online content. These methods provided both subjective self-report and objective behavioral data.

Data Analysis Method: Analysis was conducted using a combination of **thematic analysis** for qualitative data, and **descriptive and inferential statistics** (such as **correlation** and **multiple regression**) for quantitative findings.

Results

This research explores how social media influences the well-being of young people, highlighting both its benefits and risks. One of the key findings is that social media can be a powerful tool for self-expression and identity development. Young people use platforms like Instagram and TikTok to share their thoughts, interests, and emotions, helping them understand and express who they are. Another positive result is the emotional support and connection that social media offers. It helps young users maintain friendships and find support during difficult times, especially when face-to-face contact is not available. Social media is also a space for learning, where young people can access educational content and stay informed about social issues. Many also use these platforms for activism, voicing their opinions on topics like mental health, climate change, and human rights.

However, the research also reveals significant risks. Many young people experience low self-esteem due to constant social comparison. Seeing perfect images online can lead to feelings of

inadequacy. Excessive use of social media is also linked to anxiety, depression, and poor sleep, especially when users feel pressured to always be online. Social media addiction and cyberbullying are additional concerns, with harmful effects on mental health and safety. In summary, social media has both positive and negative effects on young people. While it encourages expression, learning, and activism, it can also increase emotional stress. The way social media is used—and how much—is key to whether its influence is helpful or harmful.

The format of the tables to be used should be as follows: .

Discussion and Conclusion

When we talk about young people today, one of the most complicated topics is the impact of social media. It is everywhere: on phones, in schools, at home, and even in public spaces. Social media has become so normal that sometimes we do not even notice how deeply it affects us. That is why it is important to take a step back and think about its role in our lives. It is not just about whether social media is good or bad, but about how it influences our well-being, especially during the sensitive years of adolescence and early adulthood. Writing this paper helped me understand that there is no one simple answer. On one side, social media offers great opportunities for self-expression, connection, emotional support, informal learning, and activism. It helps young people feel included, heard, and informed. In a world that can feel uncertain, social media sometimes provides a sense of stability and belonging. But on the other side, using it without limits or awareness can lead to real problems. Constant comparisons, pressure to appear perfect, lack of screen-free time, online bullying, and digital addiction are challenges many young people face daily. What surprised me most is how someone can be surrounded by people online and still feel extremely lonely. What is clear is that social media

does not affect everyone in the same way. The effects depend on how and why it is used, a person's emotional state, and the support they get from people around them. So, instead of avoiding it, we should focus on learning how to manage it better. We should build a culture of healthy social media use where young people are encouraged to set limits, think critically about what they see, and feel strong enough to take a break when needed. In the end, social media is just a tool. It is up to us how we use it. Young people need support, guidance, and honest conversations. Instead of judging how they use social media, we should talk to them, listen to them, and remind them that their value is not measured by likes or followers. Their well-being depends on many things, and using social media wisely is one of them.

Abstract

The presentation focuses on the analysis of contemporary models of school functioning in the context of dynamic social, cultural, and technological changes. It will outline the main theoretical concepts related to school organization—from traditional centralized models to modern, flexible approaches based on school autonomy, personalized education, and cross-sector collaboration. During the presentation, challenges related to the practical implementation of various models will be discussed, including the mismatch between societal expectations and institutional capacities, systemic barriers, staffing shortages, and the issue of educational inequality. Particular emphasis will be placed on case studies that highlight the varying effectiveness of models depending on the local context. The aim of the presentation is not only to diagnose the current situation but also to identify potential directions for development, with attention to the need for greater flexibility, inclusivity, and the integration of digital technologies into everyday school practices.

Keywords: school, educational models, teacher, students, challenges.

Introduction

The educational environment is being rapidly reshaped by societal, cultural, and technological influences. Traditional education—long characterized by hierarchical structures, standardized curricula, and assessment methods that are inflexible—is facing increasing challenges from alternative approaches that endeavor to align more effectively with the needs of contemporary learners. Among these are models such as democratic education, Montessori pedagogy, forest schools, and competency-based learning, which offer inventive methods for structuring educational processes with the aim of enhancing flexibility, student initiative, and

inclusivity. Nevertheless, the realization of these principles in actual school practices frequently experiences obstacles resulting from systemic, organizational, legal, and cultural impediments. This conflict between theoretical desirability and the practicalities of implementation forms the core of this investigation, which is designed to analyze and interpret critically the manner in which alternative school models are implemented in current educational practice and to what degree they achieve their stated objectives. The focus of this study is on existing school models operating both in Poland and internationally, with particular consideration given to those that diverge from conventional models. The theoretical foundations of these alternatives frequently indicate a purposeful deviation from the Prussian system, which emphasized discipline and standardization, in favor of approaches that are more student-focused and holistic. The diversity within alternative models—including schools where shared decision-making authority among students exists, environments that highlight self-directed and experiential learning, and pedagogies rooted in outdoor education—demonstrates a wider reconsideration of educational goals and values. The central aspect of this research involves exploring how such progressive theoretical structures are enacted in the daily life of schools, including the identification of elements that either support or hinder the fulfillment of their primary principles. The core objective of this research is to explore the correlation between the theoretical underpinnings that support alternative educational models and how they are implemented. The primary research question that is addressed is: To what degree are the values and goals declared by alternative school models realized through practical application? Several sub-questions are complementing this overarching question: What are the defining features and philosophical foundations of these models? What promotes or prevents their use in specific environments? How do key participants—teachers, students, and parents—evaluate the effectiveness and academic quality of these strategies? Addressing these questions is critical for understanding the potential and limits of alternative education in the context of current educational reforms.

Evolution of Educational Paradigms

The evolution of paradigms of education has played a crucial role in developing today's schools, moving away from the traditional Prussian model. The Prussian model was based on authority, discipline, and standardization. The expectations were that students would develop and progress evenly within a given year, and this required standardization of content and scheduling. This rigidity severely limited the capacity to honor diverse needs, abilities, and interests, positioning the teacher as the main facilitator of learning and leaving minimal space for individualized instruction. As a result, students' standardized grades often reflected a

constraint on personal development. Over time, many theorists of alternative models have opposed the traditions of standardized education systems.

These theorists oppose the standardization of public education due to its failure to acknowledge diverse student populations, interests, and learning styles. Alternative paradigms of education advocate for individual student trajectories that aim to address holistic needs rather than simply to generate identical levels of achievement. This is because these paradigms of learning are founded in the belief that each child's development is uniquely valued, and because the learning journey for each student is personal. Empirically, research shows that alternative schools prioritize student agency.

Thus, some alternative schools aim to achieve student-centered learning through flexible strategies such as developmental classroom practices and the elimination of standardization in grades. This has meant incorporating mixed-age grouping, individualized instruction, and reduced test-based assessment strategies that aim to serve the varied skills and intelligences of diverse populations. This developmental paradigm recognizes the value of individualized education strategies that help motivate and self-regulate children's learning. Developmental psychologists like Deci and Ryan suggest that it is autonomy-supportive classrooms that enhance intrinsic motivation. By allowing students to choose, for example, and to set individualized goals, intrinsic motivation and effort are greatly improved. Conversely, a structured classroom with externally set goals may stifle intrinsic motivation as the student begins to feel controlled. However, critics of such student-centered models argue they pose a number of challenges, particularly those around maintaining an equitable level of accountability and academic progress across a range of student populations.

Changes in the paradigm of education were accompanied by efforts for privatization and increased school choice. Privatization, first introduced in the late 20th century, radically changed how schools in the US were organized and governed. Privatization involved an array of efforts to deliver publicly funded education in a more market-based fashion by contracting with private firms and offering vouchers and public tax credits that allowed families to use public money for enrollment in a private school. The goal was allegedly to reduce public spending on education and to allow for more choice for parents and students. However, the evidence about the cost-effectiveness and efficiency of privatization is inconclusive. Lubienski (2006) argues that it is likely that privatization can improve efficiency; however, consumer costs and the distribution of public revenues may be more inequitable and the quality of education may be lower than it would have been if left solely in the hands of public organizations.

Along with the privatization of schools, the popularity of choice-based systems arose. Private schools have historically provided some amount of diversity to families and students, however, the concept of school choice did not gain momentum until 1990 when it was first considered as policy (Chubb & Moe, 1990). Schools began catering to families and students in a manner that emphasized the marketplace, innovation, and entrepreneurial endeavors. Since then, this paradigm has greatly advanced within all public schools. The availability of vouchers and charters is said to provide choices and, in turn, better service delivery for students and families, therefore better competition among schools. Yet, voucher programs are not offered everywhere and Lubienski (2006) points out that they are only available in several Midwestern cities, such as Milwaukee. Thus, school choice only increases competition in an isolated environment because there are still a limited number of vouchers and they are geographically constrained. Furthermore, evidence indicates that increased competition can, in turn, decrease funding because school attendance is based on preference. Therefore, districts might face a decrease in funding as they struggle to hold onto their students who can now use a voucher to attend another school or to even enroll in a private school. Competition does not only influence public school districts. Magnet schools in suburban neighborhoods also suffer because quotas from the school districts prevent them from innovating their curriculum or teaching methods to suit specific paradigms that could enhance diversity for students (Lubienski, 2006).

The paradigm for school choice has paved the way for the surge of alternative schools. Many parents and theorists alike became disgruntled with the standardization of education because their students' needs and abilities were not being catered to. To combat this, alternative schools emerged as a separate entity from conventional public schools to fulfill educational needs and to incorporate different teaching techniques. There are also alternative programs inside traditional public schools to support this new trend for individualized curriculum. Alternative schools or programs were introduced for students in the traditional public system because they were failing academically, did not have ample support systems, had difficulty integrating social or community issues, or could not express themselves creatively (Hodgman, 2016).

The success and sustainability of alternative schools can be attributed to the following:

1. Small classroom setting. The paradigm of this model emphasizes the importance of student-teacher relationships. In alternative schools, students and staff become more interconnected to foster a positive and collaborative learning environment. This approach ensures that each student's needs are considered and met by individualization, providing the most support possible to each and every learner.

2. Flexibility and support systems. Traditional schools follow a rigid timeline for course credit completion. In most alternative models, however, flexibility is prioritized, and students can complete courses at their own pace, which means that they have the opportunity to earn as many credits as they can through the available coursework.

3. Counseling systems. Support is offered on an individual level through various methods of intervention such as small group work and one-on-one counseling with licensed school counselors and school psychologists.

These models support all the components of alternative schooling as well as many other interventions and resources to improve student learning in a unique setting. Moreover, these approaches are implemented so that the educational climate remains more collaborative than competitive (Klein, 2011). However, funding is a constant dilemma for alternative schools and programs due to constraints on staff and services provided. In order to successfully implement an alternative school paradigm of learning, substantial reforms in schools' organization, teaching strategies, curricula, classroom practices, and standards must take place. It is an ongoing struggle to create and sustain these innovative programs in schools that are continually bound by regulations from the public school systems.

Furthermore, current paradigms also emphasize a shift from the traditional grade-based progression system to a competency-based model. Competency-based education moves students from grade to grade contingent on their demonstrated competence rather than grade to grade depending on time. Individualized or therapeutic education plans are often also included within these paradigms in order to provide services such as individualized academic plans and one-on-one, small-group, or specialized educational instruction as well as regular counseling. They are often utilized with at-risk students or students with special needs. When at-risk youth are admitted to individualized education programs and therapeutic intervention, it positively benefits their motivation for school. Research by Development Services Group, Inc. (2001) suggests that the benefits of individualized or therapeutic school models positively impact students through increasing attendance, self-esteem, achievement, and success rates. These individualized strategies have a profound and positive effect on the students they target. Nevertheless, the widespread replication and implementation of these kinds of paradigm shifts are expensive, require teacher training, and tend to face resistance. Societal resistance to change and the deep-rooted traditional practices in today's education make the implementation of innovative paradigms like alternative schooling challenging.

Types of School Models

Some critics claim that traditional models focus on order rather than addressing diversity

in background, ability, or skill set, which can lead to inequity and an inferior learning environment for students who do not fit the normative student profile (Maciąg & Maciąg, 2023). Many critics also assert that, due to standardized instruction, teachers are constrained from delivering adequate resources to students in the classroom. While educators may wish to alter lessons based on students' needs, the traditional structure often prevents this, contributing to poorer outcomes for some learners.

Traditional models remain dominant, although literature indicates that they are no longer sufficient for students (Maciąg & Maciąg, 2023). Several alternative models offer a more diverse and adaptive approach to education. This section will explore democratic schools.

In democratic schools, all members of the community can participate in democratic processes. This model fosters autonomy and individual voice. Alshurman (2015) found that this type of school structure has led to increased engagement and equality, and this type of school can be found in 29 countries, including 85 in the United States. This suggests that democratic schools foster inclusivity for all students, which may lead to academic and socioeconomic gains.

Many democratic schools have emerged throughout various areas of the world and are able to uphold democracy at various levels in order to promote equity, social responsibility, and individuality (Alshurman, 2015). In many Western countries, these types of schools are more focused on the individuality and autonomy of students rather than following a general set of principles. Democratic models can differ and have to align to specific environments, cultures, beliefs, and ideologies. Democratic schools are able to offer many benefits for students and overall academic performance, but barriers have to be considered.

In general, some challenges of implementing democratic practices in schools have been identified. Specifically, concerns have been raised around the unclear lines of responsibility and roles among teachers and students. Also, because everyone has a voice in classroom decisions, conflicts can arise between administrators, teachers, and students, all of whom must learn to negotiate and collaborate.

The Montessori method offers a different approach to teaching and learning and may also be implemented within a classroom. Montessori school models take place with self-directed activities, collaborative work, and exploration to foster individuality and independence. Development Services Group, Inc. (2001) reports that students educated in Montessori schools gain advanced academic performance and social outcomes. Montessori models aim to develop independent children who are curious and are able to explore new ideas

within learning environments specifically designed to adapt to the various stages of development in childhood (Development Services Group, Inc., 2001).

This method operates with the idea that all children are able to learn new things through exploring learning opportunities within prepared environments designed to facilitate discovery (Development Services Group, Inc., 2001). When the needs of the students are met within the classroom, there is increased student involvement in the classroom, resulting in motivated students who will want to return to school. According to developmental psychology research, a student's autonomy level has a positive correlation to intrinsic motivation (Development Services Group, Inc., 2001).

In order for this type of school model to work, several pieces need to be in place and require many educators and families to undergo much training and preparation. Implementation with fidelity requires careful selection of appropriate materials, appropriate teachers, a school climate, parental support, and a school administration, and it requires continuous learning from all components to develop students who will be self-motivated and engaged (Development Services Group, Inc., 2001). However, it is questionable whether public schools are able to uphold these essential factors in order to deliver high-quality Montessori-based instruction. In a recent empirical study by Fleming et al. (2023), only 42% of public Montessori students were being taught with high-fidelity implementation. It remains to be seen what can and should be done to ensure high-quality delivery of alternative practices across all public school systems.

Another interesting option is forest schooling. Forest Schools take place in an outdoor environment in order to develop children to have social-emotional regulation, independence, confidence, social skills, curiosity, and risk-taking capabilities. Forest Schools include several components, such as risk-taking and a curriculum or learning objectives that are based on the needs of the students within that population (Culbertson et al., 2014). These schools also embrace holistic learning. Forest School programs have been found to benefit children of diverse backgrounds. The Forest School model has positive psychological effects on those who attend. For example, in their research on 13 Forest Schools, Culbertson et al. (2014) found that confidence, independence, and self-regulation were greater in schools attended by children with low social-economic status, children under the age of eight, and students in special education.

This school model is considered an approach in which educators, in an outdoor learning environment, enable the students to gain positive social, emotional, and academic outcomes via learning through play, collaborative learning, and active experiences. Culbertson et al. (2014) indicated research examples of Forest School models in which participants constructed outdoor learning activities and taught each other about the subject matter while communicating with

positive attitudes toward their work and other participants. However, in this model, the challenge is to provide sufficient access to the sites needed for Forest Schooling. Many policymakers want to expand the use of this outdoor school system across the globe, but, unfortunately, they have a hard time doing so because of a lack of location opportunities (Culbertson et al., 2014). There is also the issue of cost in comparison to traditional schooling models.

Alternative schools are designed for high-risk or high-need students, who typically may have more challenges within traditional public school. Many are designed in order to re-engage students and ensure they attain the required number of educational hours for each day, but they generally are less restrictive in their time demands and curricula. Kho & Rabovsky (2022) found that participation in alternative schools was found to lead to increased motivation, self-esteem, and positive outcomes. Even though students are provided with individualized attention in these types of schools, some reports indicate that in many alternative school programs, there is a disproportionately high number of students of color as well as students that have Individual Education Plans (IEPs).

The individualized instruction from the program, the lower instructor to student ratio, and the overall flexibility of the scheduling allowed for students to show growth and high achievement, as they were given the freedom to complete the learning objectives that fit best with them. In this type of program, counselors have a close relationship with each of the participants to aid them in setting clear, manageable goals, and they have frequent contact with the educators to learn about the challenges the students may be facing in school and how it affects their ability to progress within the alternative programs.

Organizational Structure

The organizational structures of alternative school models are very different than in traditional school systems, focusing on smaller class sizes, individualized instruction, and collaborative governance. These structures have been developed to address the needs of students in an appropriate way. Smaller class sizes offer better relationships between teachers and students through personalized instruction. Development Services Group, Inc. (2001) discovered that smaller class sizes enable students to be more comfortable in their environment and improve self-esteem and academic performance (p. 1). The ability to tailor lessons for individual students' learning styles is made possible and ensures a much more inclusive learning experience. However, despite the clear benefits, resource shortages often impede the

ability to provide smaller class sizes for all students, and adequate teachers may be a struggle to retain in different settings.

Counseling and guidance services are an important part of alternative school structures. Addressing both academic and behavioral as well as attendance problems in order to improve student outcomes is extremely effective. These relational interventions are often incorporated into daily structures that allow students to navigate difficulties and improve outcomes (Development Services Group, Inc., 2001, p. 1; Carpenter-Aeby & Aeby, 1999, p. 1). Such integration provides much-needed emotional and mental support. However, in some cases, school psychologists or counselors may not be available for alternative schools or be adequately available to meet all the student's needs.

Collaborative school environments cultivate greater engagement in learning for those students who have a voice in their schooling. However, the level of stakeholder participation varies in this organizational system. For instance, in collaborative decision making, staff are often more willing to engage with teachers in administrative decisions than with students.

Alternative schools are designed to create respectful school climates and foster inclusive learning spaces. The aim of smaller, more personalized school climates is to build positive relationships between students and improve their sense of belonging. Small schools are considered more inclusive and conducive to positive engagement (Development Services Group, Inc., 2001, p. 1). Small, personable spaces create a space where students can flourish without fear of harm, abuse, or neglect, yet there are limited facilities and spaces for more personalized atmospheres.

With family involvement, there are also benefits. High involvement of family members can enhance both academics and personal development as long as their participation is sustained, as demonstrated by Carpenter-Aeby & Aeby's (1999) program, which showed 100% engagement rate from family members, leading to significant improvement (pp. 4, 13). It helps students develop life skills and positive behaviors and ensures a healthy school climate for the individual. Once this engagement declines after a student leaves the initial alternative placement, the impact of improved life skills can be jeopardized.

The families who develop these schools seek to create an education system that best represents them. Often, it has been families who design them, developing systems to ensure that their children will be taught in a manner they see as beneficial. Each school is different, and what one community deems important is not necessarily a concern for the other. These differing perceptions and cultures impact not only the students who attend the alternative schools, but all individuals who work with or interact with these students.

Innovation Potential

Innovation within alternative school models and their potential to enhance student outcomes is often associated with technological interventions, which can often lead to improved learning experiences in the classroom. This comes with the acknowledgement that, although this offers great promise for alternative schools, the overall effectiveness in current systems may be challenging to implement to their full potential due to unprepared teachers and a limited supply of digital-based resources available to all students.

One approach to alternative school model implementation regarding digital technology could involve the use of blended learning, online portfolios, and online collaboration to provide educational opportunities within alternative school settings at any time and from any location. The advantages of these strategies include the removal of limitations regarding availability, such as limited classroom or seating capacity. These approaches could further benefit students with atypical learning styles, schedules, or those limited by distance to traditional school sites. The effectiveness of such technology-based alternative schools can be measured utilizing many of the same assessments and strategies, such as performance on academic and cognitive achievement tasks, and engagement in the classrooms, and may provide a more suitable learning environment for students in any setting to learn at any time (Wierzbik-Strońska & Buchkivska, 2020, p. 18). A review by the United States Department of Education concluded that learners in blended/online courses outperformed those receiving traditional face-to-face instruction (Milicevic, 2015, p. 3). However, the effectiveness of technology-based alternative school models requires consideration of whether the digital divide gap can and/or will be addressed by educators, policymakers and/or systems utilizing such technology. If not, this may be detrimental to students who are not adequately equipped to utilize technology outside of schools for instructional purposes and/or for student engagement (Wierzbik-Strońska & Buchkivska, 2020, p. 11).

In fact, alternative education opportunities are growing, in response to demands for better quality and access. Good governance and monitoring require a systemic perspective. Local, state, and national stakeholders should actively engage in monitoring alternative education systems and in formulating related policies so that this education model isn't forgotten.

Conclusion

The goal of this research was to analyze the implementation, effectiveness and sustainability of alternative school models in contemporary education, determining how they

manage to bridge the gap between ideas and reality. Therefore, it revisited the research questions first listed in the introduction: What defines school models in the 21st century? What kind of ideological values underpin these schools? How can this model be implemented in practice? What are the main facilitators and barriers for alternative schools implementation? How are the effectiveness and quality of alternative schools and other traditional models appraised by its stakeholders? In order to fulfill the goals of this study, the research questions were analyzed through literature review as well as by referring to primary and secondary sources.

The main part of the study presented the school paradigm in past and contemporary education, as well as its historical context. The most used alternative models such as democratic, Montessori, forest schools, as well as competency-based education, have been presented along with their philosophies. This model, despite being effective to improve student motivation, self-esteem, academic achievement and engagement particularly for at-risk students, faces significant barriers for its implementation. On the systemic level, challenges include restrictive school and system accountability procedures, lack of resources and inequitable access. On the cultural side, educators' beliefs, perceptions and attitudes, institutional inertia and local environment are the main barriers. Implementation fidelity has also been identified as a barrier. Though alternative schools offer individual learning support, positive relationships and rich learning experiences that lead to valuable outcomes, the problem of scalability, and fidelity issues require ongoing improvement and research. Factors like leadership styles, community engagement, and culture (organizational change) appear to play a role in the dilution of these models. Adding technological innovation and nature-based approaches add structural complexity, but also offer new possibilities of engagement.

Moving forward, this thesis paves the way for a multitude of studies needed for the future. Future research on alternative school models should include longitudinal data in order to investigate long-term educational and social outcomes and mechanisms to overcome sustainability barriers. Additional investigations should focus on the interrelation between policy reform, professional development, and organizational change to encourage and support high-fidelity implementation. Technology in the development of soft skills, which were a barrier revealed in this study, must be supported in alternative schools. Additional research should evaluate the incorporation of technological innovation and soft skills to alternative schools. Resource imbalance needs to be considered to prevent inequality in educational interventions. Also, the implementation of monitoring systems needs to assure equitable access to education and promote evidence-based implementation and practice. The scaling of

alternative school models in education is a valuable avenue for transforming instructional practices and outcomes for both teachers and students alike.

Digital Storytelling for Caregiver Well-Being: A Conceptual Model

Ayten KAYA

ORCID iD: 0000-0002-7684-3675, TURKEY

Abstract

The increasing demand for professional caregiving due to population aging and changing family dynamics has heightened the need for emotionally and psychologically resilient caregiving personnel. Care workers, particularly those in nursing homes and rehabilitation centers, frequently face emotionally demanding situations that can lead to burnout and reduced well-being. Recognizing the need for sustainable well-being among caregivers, this study proposes a conceptual training model based on digital storytelling, designed to enhance empathy, reflective thinking, and professional identity in caregiving.

The model integrates theoretical foundations such as Kolb's experiential learning theory, emotional intelligence, and reflective learning. Structured in four phases, the model involves (1) preparing emotionally impactful digital stories, (2) presenting them in guided sessions, (3) conducting reflective discussions, and (4) promoting empathetic and personal meaning-making. A sample scenario—"Nurse Zeynep and Ms. Hatice: Being Well Together"—illustrates how emotional awareness, peer support, and respectful care practices can be reinforced through this method. The digital storytelling process engages multiple sensory elements and encourages both individual and group reflection.

Expected outcomes include enhanced empathy, stronger professional identity, improved emotional resilience, and decreased burnout symptoms among caregivers. The model's low cost, adaptability to different care settings, and capacity to support both personal and professional growth make it a practical tool for institutional training. However, further research is needed to evaluate its empirical effectiveness, ensure cultural relevance, and provide adequate facilitator training.

This conceptual approach highlights the value of digital narrative methods in caregiver education and offers a foundation for future empirical applications and policy integration.

Keywords: caregiver training, digital storytelling, well-being, empathy, reflective learning

Introduction

The increasing number of older adults and individuals with disabilities, coupled with shifts in family structure, has led to a growing need for professional caregiving services (Gürer

et al., 2019; Wu et al., 2024)). Care workers in nursing homes and rehabilitation centers play a critical role in supporting vulnerable individuals in daily activities and require not only technical competencies but also emotional and psychological resilience.

In recent years, the concept of well-being has gained importance in the context of occupational satisfaction, emotional resilience, and empathy, beyond its individual health implications. Care professionals frequently encounter emotionally challenging situations, emphasizing the need for reflective thinking and self-awareness. However, the demanding nature of their work often places them under continuous physical and emotional strain, increasing the risk of burnout (de Rooij et al., 2012; De Hert, 2020; Dinibutun, 2023).

Recognizing these challenges is the first step toward understanding the importance of self-care and supportive strategies for maintaining caregivers' well-being. In-service training programs enriched with digital storytelling can support caregivers both professionally and emotionally. Digital storytelling, which enables personal experiences to be expressed through structured and emotionally impactful narratives, helps participants emotionally connect with the content and develop empathy (Macdonald et al., 2024; De Vecchi et al., 2017; Hausknecht et al., 2019).

Training programs focused on stress management, emotional resilience, empathy, and effective caregiving techniques have been shown to reduce burnout and enhance overall well-being. Integrating emotional and reflective learning methods such as digital storytelling into these programs is essential for addressing caregivers' challenges effectively. This study proposes a conceptual training model based on digital storytelling, aiming to support the well-being of caregivers through structured narratives and guided discussions.

Theoretical Framework

Well-being is a multidimensional concept encompassing life satisfaction, emotional resilience, and balance in social relationships. In caregiving professions, it is closely linked to empathy, stress management, and job satisfaction (Durmuş et al., 2018; De Hert, 2020). Empathy helps caregivers understand the emotions of care recipients and respond appropriately, contributing to emotional regulation and professional commitment (Antonopoulou, 2024).

Reflective learning, which encourages deriving meaning from personal experiences, is especially crucial in emotionally intense professions. Kolb's Experiential Learning Theory emphasizes the transformation of experience into learning through reflection (McLeod, 2017). Digital storytelling brings together visual, auditory, and textual components to create

emotionally compelling narratives and supports active participation, deeper understanding, and empathy in training settings (Şimşek et al., 2018; Lambert, 2010).

Model Description

The proposed digital storytelling-based training model consists of a four-stage learning cycle aimed at enhancing empathy, reflective thinking, and professional identity (Sizemore & Zhu, 2011; Jakes & Brennan, 2005):

1. **Selection and Preparation of Digital Stories:** Relevant caregiving experiences are identified and transformed into emotionally impactful 2–4 minute digital stories using multimedia elements (images, voiceovers, music, text).
2. **Presentation in Training Sessions:** Digital stories are shown in structured sessions using accessible equipment (e.g., projector, speakers) in a focused environment.
3. **Reflective Discussions:** Guided discussions follow, with questions such as "What part of the story affected you most?" or "Have you experienced a similar situation?" encouraging both individual and group reflection.
4. **Meaning-Making and Empathetic Connection:** Participants are encouraged to relate the story to their personal and professional experiences, fostering emotional awareness and empathy.

The model is low-cost, adaptable to various institutional settings, and supports both individual and group learning formats.

Expected Outcomes and Contributions

The model is expected to achieve the following:

- **Development of Empathy:** Strengthening emotional connection with care recipients.
- **Professional Identity Reinforcement:** Enhancing reflective awareness of caregiving roles.
- **Improved Reflective Thinking:** Fostering self-evaluation and awareness.
- **Enhanced Psychological Well-being:** Reducing stress and burnout through emotional sharing and peer support.
- **Practical and Scalable Training:** Its flexible structure allows implementation even in resource-limited settings.

These outcomes support both individual development and systemic improvement in caregiving services.

Scenario: "Nurse Zeynep and Ms. Hatice – Being Well Together"

Nurse Zeynep, a caregiver with six years of experience in a nursing home, has been working under intense pressure due to staff shortages. On the day she is scheduled to assist Ms. Hatice with bathing, the resident resists and becomes emotionally distressed. Initially insistent on following the care schedule, Zeynep pauses, acknowledges her own emotional exhaustion, and steps away for a moment of rest.

With support from a colleague, she regains composure and returns to Ms. Hatice with empathy and a flexible approach, offering a less intrusive alternative. This interaction leads to mutual comfort and increased trust. Zeynep later advocates for improved break policies and team support within the facility, reflecting her growth in emotional awareness and professional resilience.

Digital Story Preparation Steps

1. **Script Writing:** Develop a detailed and emotionally resonant narrative.
2. **Visual and Audio Selection:** Choose appropriate visuals, sound effects, and background music.
3. **Narration and Text Preparation:** Ensure alignment between narration and on-screen text.
4. **Digital Editing:** Combine elements into a cohesive 3–4 minute video.

Presentation and Discussion Process

The completed story is presented in a structured training session, followed by reflective questions such as:

- How did Nurse Zeynep recognize her emotional boundaries?
- What role did peer support play in her well-being?
- How was Ms. Hatice's autonomy respected?
- What are the benefits of such approaches for both caregivers and care recipients?
- How would you respond in a similar situation?

Discussion

This conceptual model offers an innovative approach to supporting caregiver well-being

through digital storytelling. It aligns with existing literature highlighting the emotional and educational benefits of narrative methods in healthcare education (Woodhouse, 2008; Ingram, 2021). Its four-stage structure emphasizes emotional engagement and reflective learning, grounded in Kolb's experiential learning cycle (Fewster-Thuente & Batteson, 2018).

The model's low-cost, adaptable design allows for widespread implementation in various care settings. However, further research is needed to assess its practical effectiveness. Factors such as cultural relevance of stories, digital literacy, and facilitator qualifications must also be considered.

Conclusion and Recommendations

This conceptual model provides a structured, emotionally impactful, and reflective framework for enhancing caregivers' well-being. It aims to foster empathy, self-awareness, and professional resilience in emotionally demanding care environments.

Recommendations for future practice:

- Conduct pilot studies to assess impacts on empathy, job satisfaction, and stress.
- Ensure cultural relevance and adaptability of stories.
- Provide facilitator training and technical support.
- Explore applicability across diverse caregiving professions.

This model serves as a valuable starting point for future empirical studies and institutional integration in caregiver education.

Thematic Analysis of Well-Being Experiences of Individuals Living with Cancer Through Online Patient Comments

Ayten KAYA

İkizce Vocational School, Ordu University, e-mail: a.kaya085252@hotmail.com , ORCID:
0000-0002-7684-3675, Türkiye

Abstract

Cancer is a multifaceted health condition that deeply affects individuals not only physically but also psychologically, socially, and spiritually. With the increasing use of digital platforms, patients now openly share their experiences online, offering rich, real-world narratives that reflect their multidimensional journey with illness. This study aimed to explore the psychological, physical, social, and spiritual well-being experiences of individuals living with cancer, based on personal narratives shared in online communities.

A qualitative research design was adopted, and data were collected from Reddit, a popular social platform, focusing on publicly available comments in cancer-related forums. A total of 50 comments were manually retrieved and analyzed using Braun and Clarke's six-phase thematic analysis approach. The comments were coded and reviewed to identify recurring patterns and themes related to well-being.

The analysis revealed four major themes: psychological well-being, physical well-being, social well-being, and spiritual well-being. Within these themes, participants reported emotional struggles such as fear, loneliness, and anxiety; described the physical challenges of treatment and side effects; shared feelings of support and isolation in their social relationships; and expressed reliance on spiritual coping mechanisms such as faith, gratitude, and meaning-making. The findings suggest that digital narratives provide valuable insight into the lived experiences of cancer patients, highlighting both their unmet psychosocial needs and sources of strength.

This study underscores the importance of integrating online patient narratives into health care practices to support holistic, person-centered care. Future research should consider broader samples across diverse digital platforms and examine the role of demographic factors in shaping patient experiences.

Keywords: Cancer, well-being, thematic analysis, online narratives, psychosocial support

Introduction

Cancer is a complex health condition that deeply affects individuals not only physically but also psychologically, socially, and spiritually. Receiving a cancer diagnosis, adapting to treatment, and living with the disease can lead to intense emotional fluctuations, reduced quality of life, and changes in social relationships (Karakartal, 2017). The progression of the disease, treatment uncertainties, and fears about the future often result in feelings of loneliness, fear, and hopelessness (Stein et al., 2008). At the same time, many patients embark on a search for meaning, reevaluate their lives, and try to develop resilience by turning to spiritual resources (Seiler & Jenewein, 2019).

With the spread of digital technologies, online platforms have become important spaces where individuals can share their illness experiences and connect with others undergoing similar processes. Platforms like Reddit enable individuals to express themselves openly and anonymously, thus providing rich, authentic narratives of emotional, physical, social, and spiritual experiences.

These online narratives offer researchers valuable opportunities to understand the multidimensional nature of living with cancer. Literature highlights the importance of incorporating patient experiences and perspectives to identify psychosocial needs, improve supportive care services, and enhance health communication (McCormack & McCance, 2010; Ingstad et al., 2023). However, studies systematically analyzing such online content remain limited.

Purpose of the Study This study aims to conduct a thematic analysis of user comments shared by individuals living with cancer on online platforms, focusing on their experiences of well-being from psychological, physical, social, and spiritual dimensions. The findings are expected to provide insights for healthcare professionals and policymakers in supporting individuals affected by cancer.

Research Questions

1. What psychological, physical, social, and spiritual experiences do individuals living with cancer express in online platforms?
2. What common themes emerge in their narratives of well-being?
3. How can these findings inform supportive care services and health policy?

Method

Research Design A qualitative research design was used to explore the personal experiences shared by individuals living with cancer in online platforms. Thematic analysis method developed by Braun and Clarke (2006) was employed to understand participants' well-being experiences in depth.

Data Collection Data were collected from approximately 100 publicly available comments shared in cancer-related subreddits (e.g., r/cancer, r/thyroidcancer). User identities were anonymized, and only textual content was analyzed. Comments were manually retrieved and transcribed by the researcher.

Data Analysis The analysis followed Braun and Clarke's six-phase thematic analysis process:

1. Familiarization with data
2. Generating initial codes
3. Searching for themes
4. Reviewing themes
5. Defining and naming themes
6. Producing the report

Data Saturation After coding 50 comments in detail, no new themes or subthemes emerged, indicating data saturation. The remaining comments were excluded from analysis.

Ethical Considerations

Since the data were collected from publicly available online posts, direct consent from participants was not obtained. However, as the comments did not contain any personal identifying information and the users remained anonymous, the study adhered to ethical principles. The research was conducted using naturally occurring data without any intervention by the researcher.

Results

Thematic analysis of 50 Reddit comments revealed four main themes and associated subthemes:

Theme 1: Psychological Well-Being

Emotional Fluctuations: Participants reported feelings of loneliness, fear, anxiety,

depression, guilt, and exhaustion.

"I'm scared and don't know what to do. I don't even want to tell my family."

Acceptance Process: Many described initial shock, denial, and eventual acceptance.

"I know I have cancer, but I still can't believe it."

Theme 2: Physical Well-Being

Treatment Experiences: Participants shared detailed accounts of chemotherapy, radiation, and surgery.

"I had 30 radiation sessions and I'm still trying to stand."

Coping with Side Effects: Fatigue, hair loss, weight loss, and pain negatively impacted quality of life.

"Losing my hair was as devastating as the cancer itself."

Theme 3: Social Well-Being

Support and Isolation: While some received strong support from family and friends, others felt isolated.

"My husband is my rock; I'm lucky to have him."

Theme 4: Spiritual Well-Being

- *Search for Meaning and Acceptance:* Concepts like gratitude, faith, and surrender were common.

"Every morning I wake up, I'm thankful I'm still alive."

Table 1. Thematic Distribution of Online Narratives Shared by Individuals Living with Cancer

Theme Area	Sub-Themes	Prominent Codes	Sample Quote
Psychological Well-Being (n=23)	Emotional Fluctuations	Loneliness, fear, anxiety, depression, guilt, exhaustion	"I'm scared and don't know what to do."
Psychological Well-Being (n=18)	Acceptance Process	Denial, shock, acceptance	"I know I have cancer, but I still can't believe it."
Physical Well-Being (n=27)	Treatment Experiences	Chemotherapy, radiotherapy, surgery	"I had 30 radiation sessions."

Physical Well-Being (n=21)	Coping with Side Effects	Pain, fatigue, hair loss, weight loss	“Losing my hair was as devastating as the cancer itself.”
Social Well-Being (n=19)	Social Support and Isolation	Family support, friendships, online communities	“My husband is my rock.”
Spiritual Well-Being (n=17)	Search for Meaning and Acceptance	Hope, gratitude, fate, surrender, prayer	“Every morning I wake up, I’m thankful I’m still alive.”

Discussion and Conclusion

This study revealed the multidimensional impact of cancer through thematic analysis of online narratives. Psychological well-being was highlighted through recurring expressions of fear, anxiety, and emotional exhaustion, reflecting findings from earlier research on the emotional burden of cancer (Krouse & Krouse, 1982; Mazzocco et al., 2019; Arch et al., 2023). While some participants struggled with decision-making due to overwhelming anxiety, others adopted resilience strategies such as meaning-making and hope (Seiler & Jenewein, 2019).

Physical side effects from treatments like chemotherapy and radiation were reported as major burdens, consistent with studies indicating the impact of symptom load on quality of life (Rodríguez-Gonzalez et al., 2023).

Socially, participants highlighted both the benefits of emotional support and the pain of isolation. Online communities provided anonymous, open spaces for sharing and connecting, validating previous research on digital collective support (Fayn et al., 2021).

Spiritually, many expressed coping through prayer, gratitude, and acceptance of fate—strategies also linked to lower depressive symptoms and improved resilience (Gonzalez et al., 2014; Park et al., 2010).

Recommendations

- Implement integrated psychosocial support programs.
- Promote and professionally support digital peer communities.
- Acknowledge emotional influence in treatment decision-making.
- Use online narratives as data in designing person-centered care.
- Further research should explore demographic variables using larger, diverse samples.

Abstract

Avoidant/Restrictive Food Intake Disorder (ARFID) is an eating disorder marked by significantly limited food intake without concerns about weight or body image. It affects both children and adults and is associated with various sensory, psychological and behavioural challenges that require specialised, multidisciplinary care. Treatment options such as Cognitive Behavioural Therapy (CBT-AR) and Family Based Therapies for ARFID (FBT-ARFID) among other therapies, can be effectively but may not fully address ARFID's unique needs. Effective management of ARFID relies heavily on the family's role, especially in maintaining a calm, non-anxious and positive environment during mealtimes. Parental pressure and anxiety can unintentionally reinforce food avoidance behaviours, while informed and confident family members can positively impact treatment outcomes. This review advocates for a collaborative, empathetic and unified approach among all members of the multidisciplinary team (MDT). Future research should continue to explore how integrated, family-centred care models can enhance the quality of life for those with ARFID. It should also aim to deepen our understanding of the underlying mechanisms of the disorder and provide clear guidelines for managing individuals with ARFID, especially those with co-occurring health conditions.

Keywords: ARFID, Positivity, Management, CBT, FBT, Autonomy, Nutritional Strategies.

Introduction

What is ARFID?

Feeding and eating disorders are psychiatric conditions characterised by unusual eating behaviours and related psychological distress, often involving concerns about weight and body shape (Fairburn, 2008). Avoidant/Restrictive Food Intake Disorder (ARFID) is in the spectrum of eating disorders and stands out due to its distinct lack of weight or shape-related

psychopathology, as observed in anorexia nervosa (Fisher et al., 2014; Moskowitz and Weiselberg, 2017). Thus, unlike anorexia nervosa or bulimia nervosa, individuals with ARFID limit food intake due to lack of appetite or interest in eating or sensory repulsion and/or fear or any bad consequences after eating, Table 1 (APA, 2013; Cucinotta et al., 2023; Fisher et al., 2014; Karadere et al., 2018; Thomas and Eddy, 2018; Ma, 2022). Furthermore, individuals with ARFID may experience significant underweight conditions or faltering growth, which can subsequently lead to nutritional deficiencies (Cucinotta et al., 2023). In these instances, it may be necessary to implement oral supplements or consider tube feeding as a temporarily measure to address these concerns (APA, 2013).

Diagnosis of ARFID

ARFID was formally recognised in the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5), in 2013 (APA, 2013). The diagnostic criteria highlighted three key presentations: avoidance based on the sensory characteristics of food, a lack of interest in eating or food itself, and concerns about the negative consequences of eating, such as vomiting or choking (Thomas and Eddy, 2018), analytically also seen in Table 1.

Table 1: Diagnostic criteria for ARFID according to DSM-5 (adapted from: APA, 2013).

1. An eating or feeding disorder is characterised by a noticeable lack of interest in food or eating, avoidance of certain foods due to their sensory qualities, or concerns about the consequences of eating. This disorder results in an inability to obtain adequate nutrients and/or energy from food, and it is associated with at least one of the following:
 - a. Significant weight loss or a lack of expected weight gain or growth in children,
 - b. Notable nutritional deficiencies,
 - c. Dependence on enteral feeding or oral nutritional supplements, and/or
 - d. Disturbances in psychosocial functioning
2. The disorder cannot be attributed to food scarcity or cultural practices.

3. This disorder does not solely occur with anorexia nervosa or bulimia nervosa and is not caused by abnormalities in the perception of body weight and shape.
4. This disorder cannot be accounted for by the current health status or any co-occurring mental disorders.

It is important to note that ARFID is different from “picky eating”, which is typically transient and does not result in any impairment (Zimmerman and Fisher, 2017). In contrast, ARFID often involves long-term difficulties with eating which can significantly disturb children's physical growth and cognitive development. If left untreated, this can lead to permanent stunted growth (Lucarelli et al., 2017). It is known that individuals with ARFID experience also mood disorders and is commonly existent with other neurodevelopmental and psychiatric disorders as attention deficit hyperactivity disorder (ADHD), autism spectrum disorder (ASD) and anxiety disorders (Archibald and Bryant-Waugh, 2023; Nitsch et al. 2023; Bourne et al. 2020). Thus, misdiagnosis or underdiagnosis remains common, especially in neurodiverse populations, where food avoidance may be incorrectly attributed to developmental conditions like autism (Archibald and Bryant-Waugh, 2023). For this reason, it is important that the healthcare professional that is suspecting for ARFID in an individual to assess them through dedicated tools, such as the Nine Item Avoidant/Restrictive Food Intake Disorder Screen (NIAS) (Zickgraf and Ellis, 2018) or the Eating Disorders in Youth Questionnaire (EDY-Q) (Hilbert and van Dyck, 2016).

Co-occurring Conditions and Health Risks Associated with ARFID

Eating disorders are psychiatric conditions that often lead to significant psychological and physiological consequences (Hambleton et al., 2022). At the severe end of this spectrum is ARFID, which has a complex nature and is often comorbid with neurodevelopmental and other mental health disorders (James et al., 2024; Kambanis et al., 2019). Frequent comorbid psychiatric conditions include anxiety disorders, social anxiety, obsessive-compulsive like traits, and the increased prevalence of ASD, ADHD, and Post-Traumatic Stress Disorder (PTSD), all of which can exacerbate food-related fears and sensory sensitivities, Figure 1 (Kambanis et al., 2019; Lucarelli et al., 2017; Norris et al., 2021; MacDonald et al., 2024).

Recent studies have revealed that ARFID often co-occurs with mood disorders, such as major depression disorder and, less frequently, bipolar disorder. This relationship may lead to emotional dysregulation or heightened sensory defensiveness in certain individuals (Hambleton et al., 2022). In addition to the psychological challenges, ARFID is associated with a variety of physical health issues, including bradycardia, delayed growth, and malnutrition. These complications may result in an increased need for clinical interventions and hospitalisation (Ramirez and Gunturu, 2024; Zimmerman and Fisher, 2017). While these health issues can stem from limited food intake, some studies recognise them as co-occurring health concerns (Zimmerman and Fisher, 2017).

Figure1. Predisposing, precipitating, and perpetuating factors of the ARFID framework (Adapted from: Fonseca et al., 2024).

Epidemiological studies suggest that the prevalence of ARFID ranges from 0.3% to 15.5% in children and adolescents, and from 0.3% to 4.1% in adults, although significant variability exists based on sampling and diagnostic criteria (Barney et al., 2022). ARFID affects not only children but also adults; mainly diagnosed in childhood (APA, 2013). It has been suggested that ARFID was more commonly observed in boys and males (Bourne et al. 2020; Kambanis et al., 2019), however, recent research indicates that it is evident in both genders (Archibald and Bryant-Waugh, 2023; Watts et al. 2023). A review conducted in 2025 (Mikhael-Moussa et al. 2025), though, associated ARFID with gastrointestinal (GI) disorders, to be more prevalent in females. So, the gender prevalence might be depended to any further underlying conditions. A more substantial body of research exists regarding the psychological interventions for ARFID in the United States of America (USA) and Canada in comparison to Europe (Willmott et al., 2023). This disparity may reflect the differences in healthcare approaches and funding for mental health initiatives across these regions.

Considering the clinical and conceptual shortcomings prevalent in current interventions, this review endeavours to delve into the existed treatments that help ARFID patients be more positive into eating. This paper seeks to present a comprehensive integrative framework that emphasises the principles of a supportive care into a positive framework.

ARFID Management: An Overview of Current Therapeutic Approaches

ARFID is a relatively new diagnosis that requires a personalised treatment approach when it arises in clinical practice (Coglan and Otasowie, 2019). Treatment strategies can be categorised into three main types: psychological interventions, nutritional interventions and medical management, as well as Multidisciplinary (MDT) team or adjunctive approaches (Cucinotta et al., 2023; Fonseca et al., 2024; Ramirez and Gunturu, 2024; Sharp and Stubbs, 2019; Willmott et al., 2023). Clinical dietitians with specialisation in eating disorders in alongside with an MDT team play a crucial role in accurately diagnosing and managing patients with ARFID. Their objective is to foster positive interactions with food and develop various skills that enhance the patients' daily life (Mack and Stanton, 2025).

Promoting Positive Environments Through Evidence-Based Therapies

Psychological interventions for ARFID are still evolving (Brigham et al., 2018). The main treatment approaches used include behavioural methods, such as Cognitive Behavioural Therapy (CBT), particularly in the form of Cognitive –Behavioural Therapy for Avoidant/Restrictive Food Intake Disorder (CBT-AR), Family-Based Therapy (FBT), or a combination of both (Fonseca et al., 2024; Willmott et al., 2023). The studies that examined the effectiveness of these interventions were summarised in Table 2.

Table 2. Summary of key psychological intervention approaches for ARFID Treatment. ARFID: Avoidant/Restrictive Food Intake Disorder.

Author(s)	Year	Intervention	Sample Characteristics	Study Type	Key Findings	Limitations
Brigham et al.	2018	CBT-AR	Children aged 10+, clinical sample	Manual description / clinical rationale	Structured CBT-AR improved intake and reduced anxiety	No RCT; manual only
Dumont et al.	2019	CBT-AR	Adolescents in day treatment	Case study	Partial success; engagement and flexibility improved outcomes	Small sample size, non-controlled
Lock et al.	2019	FBT	Children and adolescents with ARFID	Manual-based clinical approach	FBT applicable to multiple ARFID phenotypes	Not ARFID-exclusive originally
MacDonald et al.	2024	CBT-AR	Adults (mean age 26) diagnosed with ARFID and have PTSD	Retrospective	Good results with more than 50% competition rate and weight gain	Not RCT, not using an ARFID specific assessment tool, comorbidities in patients to interfere with the treatment
Spettigue et al.	2018	FBT	Children with ARFID, multi-family context	Pilot implementation study	Increased food variety, reduced parental distress	Preliminary; small sample
Van Wye et al.	2023	FBT	Adolescents with sensory based ARFID	Naturalistic follow-up	Improvement in eating flexibility over time	Lacks controlled comparison group

Cognitive and Behavioural Approaches Tailored to ARFID

Traditional CBT models typically address body image and weight concerns that are common in various eating disorders. However, the absence of these concerns in the clinical profile of ARFID necessitates a change in therapeutic focus (Di Cara et al., 2023; Fairburn, 2008; Thomas and Eddy, 2018; Thomas et al., 2020).

CBT-AR is a structured, manualised treatment protocol specifically designed for children aged 10 years and older, medically stable and do not require tube feeding, who are dealing with ARFID. This protocol is tailored to the individual patient's nutritional requirements (Brigham et al., 2018). CBT-AR include establishing of regular eating patterns, self-monitoring of eating patterns, conducting behavioural experiments and engaging in sessions exposure with response prevention to feared foods. (Dumont et al., 2019; Fonseca et al., 2024; Thomas and Eddy, 2018; Thomas et al., 2018). Typically, there is a need for 20-30 sessions, though more might be needed for underweight patients and these are structured in 4 stages (Sikora, 2021).

The first stage involves psychoeducation for the family, focusing on gaining weight if the child is underweight, or making initial food changes if the child is at a normal weight. In the second stage, we discuss nutritional deficiencies, and the health consequences associated with ARFID. At this point, further adjustments are made based on the child's nutritional requirements.

In the third stage, the child and therapist collaborate to create a list of foods ranked from least to most comfortable. Exposure to these foods begins in the therapist's office and gradually transitions to the home environment. During this stage, children who show little interest in food are taught to recognise bodily sensations, such as feeling full.

Finally, in the fourth stage, we assess progress and develop a plan to address potential relapse (Sikora, 2021; Thomas et al., 2018).

A study conducted by Brigham et al. (2018) showed positive outcomes in the eating behaviours of children over the age of 10 who experience anxiety related to food. This anxiety is often characterised by behaviours such as choking, vomiting and sensory-based fear (Görmez, et al., 2018; Thomas and Eddy, 2018). Similarly, Dumont et al. (2019) found improved food engagement and flexibility in adolescents undergoing day treatment after participating in a CBT-AR intervention. Later in 2024, MacDonald et al. (2024) at their retrospective study, investigated ARFID with PTSD in 42 adult patients with a comorbidity (mean age 26 years)

and DSM-5 diagnosis of ARFID using CBT-AR as a treatment. In this study CBT and/or CBT-AR was used, with a mean of 20 sessions at the outpatient program and the outcomes were very visible with more half of the patients to complete the treatment and with significant gain weight.

Family Based Therapies adapted for ARFID

Rosania and Lock (2020), along with their research team at Stanford University in the USA, have described the Family Based Therapies (FBT) strategy as it applies to ARFID. FBT is an intervention originally designed for specific eating disorders such as anorexia nervosa and bulimia (Lock et al., 2019). It has since been modified for children and adolescents with ARFID to actively involve caregivers in cooking and eating more food with patients, while also addressing food-avoidant behaviours (Rosania and Lock, 2020, 2015; Seetharaman and Fields, 2020).

FBT involves three stages (Rosania and Lock, 2020). In the first stage, the focus is on restoring the child's weight and helping parents take control of what their child is eating. Once the child is steadily gaining weight and the parents feel more confident, we move to stage 2. At this point, the child is eating with less resistance. The main goal of this stage is to empower parents to take control of their child's eating behaviour and ensure that feeding is more consistent with the child's needs. In stage 3, the child's weight should be back to normal, and they will have started to self-manage their eating and physical activity. At this stage, we also address any developmental issues that may have arisen due to the disorder. It is worth pointing out that Spettigue et al. (2018) demonstrated the positive impact of FBT on the food severity and alleviated parental distress. Family Based Therapies for Avoidant/Restrictive Food Intake Disorder (FBT-ARFID) have evidence for efficacy in multiple phenotypes, including sensory phenomenology and weight status, and are administered in individual and multi-family contexts (Lock et al., 2021; Spettigue et al., 2018). This model differs somewhat from the classical one. In FBT-ARFID, the primary goal is to change eating behaviours rather than simply restoring weight. As a result, the steps in this treatment approach vary slightly, and children may respond more positively to rewards during the process compared to those with anorexia. Stage 2 is conducted when the child tries new foods, while Stage 3 is often skipped because ARFID typically manifests before puberty.

A study by Van Wye et al. (2023) provides a valuable example of improved eating flexibility in adolescents with sensory-based ARFID. Although formal manuals for ARFID treatment have

been developed only recently, FBT-ARFID has emerged as the most widely used and adaptable treatment model for young individuals (Eckhardt et al., 2019; Spettigue et al., 2018; Van Wye et al., 2023). Notably, research by Lock et al. (2021) demonstrate the effectiveness of FBT in treating ARFID among children and adolescents.

Acceptance and Commitment Therapy (ACT)

Elements of acceptance-based treatment, particularly Acceptance and Commitment Therapy (ACT) have recently been incorporated into emerging clinical models for treating ARFID (Dindo et al., 2017; Manlick et al., 2012; Onnink et al., 2022). The goal of ACT is to enhance psychological flexibility by helping individuals accept distressing internal experiences, such as anxiety or disgust, without resorting to avoidant behaviours (Hayes et al. 2011). This approach is particularly relevant for ARFID, as food aversion often stems not from body image distortion but from fears related to sensory discomfort.

Zucker et al. (2019) recently published an ACT-informed manual titled: “The Feeling and Body Investigators (FBI): ARFID Division”, designed for children with ARFID and their parents. This manual applies mindfulness and acceptance-based interoceptive exposure treatment techniques to increase tolerance for negative internal states. Additionally, Fang and Ding (2020), provided meta-analytic evidence supporting the overall effectiveness of ACT in children, while Fogelkvist et al. (2020) noted its effectiveness in alleviating symptoms and improving body image in individuals with eating disorders. Furthermore, systematic reviews conducted subsequently have demonstrated that ACT is a promising treatment approach for eating disorders, including ARFID (Manlick et al., 2012; Onnink et al., 2022).

Positive Acceptance Framework for ARFID Recovery

The Positive Acceptance Framework represents a fundamental shift in the treatment of ARFID. This approach moves beyond traditional models that focus solely on reducing avoidance behaviours. Instead, it emphasises cultivating curiosity, autonomy, and emotional safety when engaging with engagement. By integrating principles from positive psychology and acceptance-based care, this framework acknowledges the need for therapeutic strategies that are responsive to individual experiences, developmental needs, and personal pacing (Hayes et al., 2011; Onnink et al., 2022; Zucker et al., 2019).

At the core of this model is the concept of acceptance, which is understood not as resignation but as a pathway toward exploration, flexibility, and resilience (Hayes et al., 2011; Zucker et al., 2018). Instead of pressuring patients into rigid exposure or strict compliance, the model promotes a values-driven approach using techniques such as sensory ladders, interoceptive exposure, and curiosity-building exercises. These methods help desensitise aversive sensory experiences while empowering individuals to exercise autonomy (Fang and Ding, 2020; Fogelkvist et al., 2020).

In alignment with CBT-AR and ACT, the approach also fosters psychological flexibility and distress tolerance. It encourages to experience unpleasant sensations and thoughts rather than avoiding them (Dindo et al., 2017; Manlick et al., 2012; Onnink et al., 2022). Collaborative autonomy is emphasised, using tools such as “bravery scales,” while the setting of value-based objectives helps the patients and their family co-creating meaningful and self-determined progress (Zucker et al., 2019; Fogelkvist et al., 2020).

Moreover, principles of motivational interviewing are employed to enhance engagement, support internal motivation, and recognise personal agency. This is especially crucial in cases of ARFID, where coercive methods might increase anxiety or lead to food refusal (Onnink et al., 2022; Dindo et al., 2017). The psychological rationale for this approach is backed by evidence indicating that positive emotions can foster new neural connections, making individuals more likely to try new foods and less anxious about the prospect of eating unfamiliar items (Hayes et al., 2011; Zucker et al., 2018).

Feeling and Body Investigations – ARFID Division

The Feeling and Body Investigators-ARFID Division (FBI-ARFID) is an approach proposed by Zucker et al. (2019). They observed that older children often recognize their interoceptive sensations. Exposure therapies have been developed for anxiety and gastrointestinal disorders, and these therapies may also help address issues related to ARFID and unpleasant body sensations.

In this framework, both parents and family members are trained to become “FBI Agents” or body detectives, investigating what their bodies are communicating as clues for how to respond. A significant amount of work from parents is required to collaborate with their children, fostering teamwork and trust.

FBI-ARFID consists of 10 psychoeducational sessions designed for children aged 4-10 years. In the initial sessions, children learn to identify hunger cues, recognize their body's safety strategies, understand fear and other feelings, and investigate food needs—all using cartoon characters. For example, one character, Tina, is always tired because she is not eating enough, which helps children relate to their own experiences. In some cases, an additional five sessions may be necessary for sensory food exposures (Zucker et al. 2019).

A Positive Approach to Nutrition Strategies

Nutritional intervention is a fundamental aspect of managing ARFID and must be personalised to accommodate everyone's developmental, medical, and sensory characteristics (Białek-Dratwa et al., 2022; Fisher et al., 2023). Dietitians play a crucial role in addressing nutritional deficiencies while also establishing trust and safety through structured and collaborative meal planning (Bąbik et al., 2021; Brigham et al., 2018). Recognising that strict dietary goals can be anxiety-inducing and may encounter resistance, the MDT team typically initiates nutritional rehabilitation with preferred food items. This strategy not only aims to ensure adequate energy intake but also fosters a sense of control and safety during mealtime (Białek-Dratwa et al., 2022; Brigham et al., 2018; Fisher et al., 2023).

Once the nutritional foundation is established, dietitians can help expand the diet gradually by introducing foods with similar textures or less distressing ones, while carefully respecting the child's pace and autonomy (Bąbik et al., 2021; Fisher et al., 2023). It is particularly important for dietitians to carefully consider the removal of unhealthy foods from a child's diet with ARFID, during any intervention. By identifying which foods are safe for patients with ARFID and with parental consent, dietitians can then implement the food chaining method. This approach introduces new foods based on the child's preferences and to be successful proper techniques should be in place to avoid anxiety and work in a positive environment (Rowell and McGlothlin, 2015). Food chaining examples include transitioning from favourite foods like French fries to air-fried sweet potato sticks or from preferred pasta to pasta with vegetables.

In individuals with mild –to moderate nutritional compromise and severe food anxiety, scheduled refeeding interventions, including the “volume before variety” model, are implemented to restore weight and provide necessary nutrition without the intense distress associated with food exposure (Brigham et al., 2018; Fisher et al., 2023). In these cases,

meticulous monitoring is often required to ensure proper growth, metabolic safety, and rehydration (Bialek-Dratwa et al., 2022; Fisher et al., 2023).

When working with young children who have feeding difficulties, therapy should include activities that help them learn about new food groups they might currently avoid. This can be done through play-based methods such as colouring and using toys. Such activities can reduce anxiety and prepare the children for eventual exposure to the foods they will try later. It's important to note that this process may take several months, as children with ARFID tend to be more resistant to exposure compared to children who are simply “picky eaters” (Zucker et al. 2019).

Discussion

It is evident that various methods, such as Food Chaining, CBT-AR, and FBT-ARFID, demonstrate positive outcomes in treating ARFID. However, the most vital factor in therapy is the trust and cooperation of the family throughout the process (Fitzpatrick et al., 2015). Any pressure applied by parents can lead to negative eating behaviours in the child, resulting in more restrictive eating habits and an increased risk of underweight.

It is essential to ensure that parents do not experience excessive anxiety, as this can create impression that the child is at nutritional risk, even when progress is being made. The MDT, which includes the dietitians, should educate families about harmful effects of parental anxiety and pressure on the child. Additionally, it is also important for the team should regularly monitor the child's meals to promote healthy eating (Feillet et al., 2019; Zimmerman and Fisher, 2017).

Research on ARFID has increased, leading to a greater awareness of the condition. However, current treatment methods are often superficial, lack empirical support, and may not be applicable to the unique aspects of ARFID or any co-occurring condition (Archibald and Bryant-Waugh, 2023; Fonseca et al., 2024; Ramirez and Gunturu, 2024). In fact, treatments for ARFID typically rely on approaches used for anorexia nervosa and generalised anxiety disorder (Ramirez and Gunturu, 2024). This can result in patients not receiving the specific care they need, particularly since ARFID does not involve concerns about weight or shape and presents a wide variety of sensory, cognitive and emotional characteristics (Fisher et al., 2014; Lock et al., 2019; Thomas et al., 2020).

A limitation of this study is that, while the positive acceptance framework seems to align with other models designed for treating ARFID and may help individuals with PTSD, there is

currently limited research focused on its application for those with ARFID. Thus, while existing literature highlights the need for new treatment techniques for ARFID, the “Positive Acceptance Framework” we propose has not been utilised in this context before. This gap makes it challenging to evaluate whether the characteristics of ARFID could be effectively addressed using this framework. Therefore, further studies should focus on implementing a strategy based on adding the positive acceptance-based approach to achieve more effective outcomes in ARFID recovery.

It is suggested that FBI-ARFID should be utilised with caution, as it is not indented for all patients diagnosed with ARFID due to the wide range of symptoms they may present. Each patient’s experience can differ significantly, encompassing carrying levels of food avoidance, restrictive eating patterns, and anxiety related to food (Zucker et al. 2019).

Currently there is a critical need for a standardised framework that governs the assessment tools available for ARFID. This framework should delineate the most effective evaluation methods tailored to specific circumstances, such as the patient’s age, underlying psychological factors, or environmental influences (MacDonald et al., 2024). By developing such an umbrella approach clinicians can more efficiently treat ARFID while gaining a comprehensive understanding of its complex psychopathology (MacDonald et al., 2024). Having this in mind, there is the need to investigate the underlying mechanisms of ARFID (Kennedy et al. 2022), identifying mixed presentations where symptoms overlap with other eating or anxiety disorders, and addressing any coexisting conditions that may impact treatment outcomes, such as depression or anxiety disorder (Täljemark et al. 2017; Eddy and Negi 2025).

The lack of interventions tailored to the individual is worsened by limited access to clinicians trained in ARFID-focused approaches, hindering the successful implementations despite increased awareness of the topic (Archibald and Bryant-Waugh, 2023; Fonseca et al., 2024). Additionally, traditional treatments for ARFID often neglect the importance of building therapeutic rapport and establishing a sense of emotional safety for individuals who have ARFID along with high levels of anxiety and food refusal (Seetharaman and Fields 2020; Eckhardt et al., 2019). In contrast, rigid or non-individualised treatment goals can unintentionally reinforce avoidant behaviours, particularly when patients lack autonomy regarding the timing of the meals and food choices (Brigham et al., 2018; Bąbik et al., 2021). As a result, there is an increased demand for strength-based and flexible models that integrate psychological safety, support for autonomy, and interdisciplinary collaboration into the care pathway (Zucker et al., 2018; Onnink et al., 2022).

Conclusions

Patients diagnosed with ARFID present a unique set of treatment and management requirements that depend on various factors, including the specific characteristics of the disorder, the age of the patient, and the presence of any co-occurring symptoms. Effective management necessitates a multidisciplinary approach involving a team of healthcare professionals, which may include dietitians, psychologists, and medical doctors. This team must take into consideration not only the physical health and nutritional needs of the patient but also the psychological factors that may influence the disorder, such as anxiety or sensory sensitivities, or even family pressure.

A comprehensive understanding of the complexities faced by individuals with ARFID is vital for all professionals engaged in their care, as it plays a critical role in the therapeutic process. Moreover, routine dietary screening should be systematically integrated into paediatric follow-up protocols. Such screenings are essential for the early identification of potential nutritional deficiencies and psychological issues, thereby mitigating the risk of serious long-term consequences associated with ARFID, including stunted growth, developmental delays, and increased anxiety or social isolation related to food.

Regular assessments and tailored interventions can significantly enhance the quality of life and treatment outcomes for individuals affected by this complex eating disorder. Families also play an important role in addressing anxiety and promoting children's acceptance of new foods, making proper training essential. Further research is recommended in these areas to develop a more targeted approach and clearer management strategies.

Fostering Educational Leadership for 21st-Century Learning Spaces in Management Education

Ganeshan. M. K

1AMET University, mkganeshanmba@gmail.com, ORCID ID: 0000-0003-2407-1527, India

Abstract

Management education is necessary to groom future business leaders who are capable of critical thinking, team leading, and problem-solving in a globalized economy. The 21st century is changing at a fast pace with the inclusion of technology, changing market needs, ethical practices, and sustainable leadership. Present management programs focus not just on teaching through business intelligence but also on innovation, flexibility, and global orientation among students. Institutions of learning have to rethink leadership approaches and methods of instruction so that management education remains relevant and effective. The changing needs of the 21st century, marked by accelerated technological innovation, globalization, and changing expectations of the workforce, call for a shift in how educational leadership is thought about and enacted, especially in management education. This research explores the competencies, strategies, and leadership models needed to create agile, innovative, and learner-focused environments in business schools and management institutions. Focusing on adaptive leadership, emotional intelligence, and digital competency, the study examines how leaders in management learning can design thriving learning environments capable of equipping students for today's complex, interdisciplinary, and rapidly evolving business environments. This research concluded and suggested an educational leadership that is guided by the values of sustainability, inclusivity, and entrepreneurial minds, characteristics of good management education in the 21st century. The findings provide concrete recommendations for academic leaders, policymakers, and teachers seeking to promote the quality and applicability of management education via strategic leadership.

Keywords: Management education, learning, leadership, technology, innovation

Introduction

Fostering educational leadership for 21st-century learning spaces in management education means developing and supporting strong, forward-thinking leadership in educational institutions that offer management programs. These leaders help create modern, flexible, and technology-rich learning environments that prepare students with the skills needed for today's dynamic business world, such as critical thinking, collaboration, and innovation. A critical juncture is a point in time when a choice made by individuals or groups can significantly impact

the future trajectory of an entity or institution, often leading to long-lasting changes. These junctures are characterized by heightened uncertainty and a greater possibility for agency to influence the course of events.

The term VUCA, an abbreviation for Volatility, Uncertainty, Complexity, and Ambiguity, was coined in the military to explain the fast-evolving and unpredictable character of the world. Today, the term has found followers across different industries, one of them being education. It is believed that VUCA is crucial to education leaders since it provides a model for understanding the predicaments and opportunities of the digital age.

Explanation of VUCA:

- **Volatility:** It is the sudden rate of change of an environment. This has been experienced through the quick technological innovations that keep changing the manner in which learning and teaching take place.
- **Uncertainty:** It refers to the uncontrollable nature of events and effects. The world pandemic is a clear indication of the manner in which unforeseen events can disrupt educational patterns.
- **Complexity:** This component focuses on challenges with multiple faces, where cause and effect are not necessarily clear. Take the heterogeneous student body with differential learning needs as a complex challenge for teachers.
- **Ambiguity:** It describes uncertainty regarding the meaning of an event. Amidst the influx of information and misinformation, teachers and students alike struggle with separating fact from fiction.

Implications for Educational Leaders

Highly unstable nature of today's educational environment calls for leaders to be flexible and change-oriented. This might involve revising the curriculum in accordance with the new needs of industry or incorporating technology to enhance learning. Leaders must be proactive in an uncertain world. This may entail scenario planning to anticipate different outcomes or building resilience in teachers and students. With the intricacy of education challenges, there is a need for a systematic approach. Leaders need to comprehend the interconnection of various elements in the education ecosystem and make evidence-based decisions. With uncertainty prevalent, education leaders need to place more emphasis on clarity and openness of communication. Clarity helps ensure that everyone is speaking the same language, whether it is communicating school policies or describing changes in teaching practices.

Why is it important management education now because of the following reasons?

Management education must keep pace with the fast-evolving global economy, AI, data analytics, and sustainability goals. Educational leadership is key to driving curriculum updates, tech integration, and innovation. Today's graduates require critical thinking, creativity, and collaboration, and adaptability, not just theoretical knowledge. Education leaders must redesign learning spaces and methods to build these essential competencies. Post-COVID, education has moved beyond the classroom. Leaders must create flexible, tech-enabled environments that support both in-person and virtual learning effectively. National and international education policies now emphasize multidisciplinary learning, autonomy, and leadership accountability. This calls for visionary leadership to implement reforms successfully. Modern educational leadership must address diversity, ethics, and global responsibility, preparing students to lead responsibly in a connected world. Employers demand job-ready graduates with leadership, innovation, and practical skills. Educational leaders must ensure that management programs meet these expectations through real-world learning experiences.

Many educational leaders lack formal training in fostering creativity, innovation, digital literacy, and other essential 21st-century competencies within management institutions. Traditional leadership styles and rigid institutional structures often resist the integration of modern pedagogies, technology-enhanced learning, and student-centric approaches. While management curricula increasingly incorporate digital tools, many leaders struggle to promote effective use of technology in teaching and learning processes. Leadership often fails to invest sufficiently in faculty development programs that focus on new teaching methods like experiential learning, flipped classrooms, or interdisciplinary approaches. Learning environments in many institutions remain outdated, lacking flexibility, collaborative zones, and the infrastructure required for modern teaching strategies. Despite progressive policies like India's National Education Policy (NEP) 2020, many institutions face difficulties in translating leadership goals into tangible classroom reforms. Decisions on educational strategies are often top-down, with limited input from faculty, students, and industry experts, leading to misalignment with real-world needs. Leadership tends to retain traditional exam-based assessments, which fail to measure essential 21st-century skills such as critical thinking, teamwork, and ethical reasoning. Management institutions often lack inclusive policies that ensure equal leadership opportunities across gender, socio-economic status, or regions, affecting access and innovation. There is a lack of standardized tools or metrics to assess the effectiveness of educational leadership in driving change and improving learning outcomes

Objectives of the Study

1. To study the concept of educational leadership, learning, and management education in the 21st century.
2. To examine the role of educational leadership in creating 21st-century learning spaces within management education.
3. To identify core competencies and strategies leaders must adopt to transform management institutions.
4. To know about the challenges and opportunities of management education.

Review of Literature

The research explores how transformational and collaborative leadership approaches can foster effective learning environments in modern education. The authors conclude that collaborative, student-centered leadership significantly enhances institutional capacity for 21st-century learning. Kilag, (D. B., et al. 2023). This article reviews how educational leaders promote equity by supporting teacher professional development and inclusive learning practices. Leadership grounded in equity, dialogue, and shared vision is essential for educational transformation in the 21st century (Netolicky, D. M., Andrews, D., & Paterson, D. 2020). The paper examines innovative teaching strategies like experiential learning and digital simulations in management education. The study highlights that leadership support is critical in facilitating pedagogical reform and the adoption of technology-driven teaching (Sharma, R., et al. 2024). Research review addresses how authentic assessments develop student competencies such as creativity, collaboration, and critical thinking. The authors argue that educational leaders must support faculty in redesigning curricula and assessments to match industry-relevant, real-world problems (Smith, A., & Johnson, P. 2024). The paper explores the complex challenges educational leaders face, including digital transition, diversity, and systemic resistance to change. The study recommends that leaders adopt servant and transformational leadership styles to address systemic gaps and enable inclusive, forward-looking education. (Girma, B. 2022). The National Education Policy (NEP) outlines reforms in higher education, emphasizing flexible curricula, critical thinking, and leadership accountability. Effective leadership is essential to institutional autonomy, interdisciplinary learning, and global competitiveness in Indian management education. (National Education Policy -NEP Report, India, 2020)

Educational Leadership, Learning and Management Education- Definitions

Educational Leadership: Educational leadership is the practice of leading and motivating people within an education system towards a shared set of goals, ultimately enhancing learning experiences and results. It entails influencing by example, building a shared vision, and inspiring staff and students to become the best they can be. This type of leadership exists at every level of education, from early childhood centers through colleges.

Learning: Learning is the acquisition of new knowledge, skills, habits, and attitudes through study or experience. It entails relatively permanent changes in behaviour resulting from identifiable experiences. Learning can be unconscious or conscious, and it's an essential aspect of personal development and growth

Management Education: Management education encompasses the development of skills and knowledge necessary for effective leadership and management in various organizational contexts. It focuses on imparting knowledge and training in areas like accounting, finance, marketing, operations, and other business disciplines, aiming to produce leaders, managers, and administrators. Management education also emphasizes the development of interpersonal skills, leadership abilities, and problem-solving capacities.

Role of Educational Leadership in Creating 21st Century Learning Spaces in Management Education

Educational leadership is essential in reshaping management education to align with the demands of the 21st century. Leaders act as catalysts for innovation, guiding institutions to embrace digital transformation, student-centered learning, and global relevance. They influence curriculum reforms, encourage interdisciplinary learning, and support the integration of technology into classrooms. Their strategic vision helps create environments that promote collaboration, critical thinking, and adaptability skills essential for future managers.

Core Competencies of Educational Leaders

Leaders in management education must possess key competencies to drive institutional change. These include visionary thinking, effective communication, and technological literacy. They should be capable of strategic planning, managing organizational change, and fostering a culture of continuous improvement. Ethical decision-making and inclusivity are also vital, enabling leaders to create equitable and socially responsible learning spaces.

Strategies for Transforming Management Institutions

To transform management institutions, leaders must adopt innovative strategies such as promoting blended and experiential learning models, redesigning physical and digital learning environments, and building strong industry-academic partnerships. Investing in faculty development and encouraging interdisciplinary collaboration further enhances educational quality. These strategies help align educational outcomes with the skills needed in a fast-evolving global economy.

Overview of the Opportunities and Challenges in fostering educational leadership for 21st-century learning spaces in management education:

Opportunities of fostering educational leadership:

- **Policy Support (e.g., NEP 2020 in India):** Recent education policies encourage flexibility, autonomy, and innovation, creating a favourable climate for transformative leadership.
- **Technology-Enabled Learning:** The rise of AI, learning management systems, virtual simulations, and analytics offers leaders new tools to personalize and improve learning.
- **Interdisciplinary and Industry Collaboration:** Leaders have opportunities to redesign curricula with inputs from industry experts and global institutions to meet real-world challenges.
- **Global Best Practices and Benchmarking:** Access to international models of leadership (Harvard, INSEAD, etc.) allows local institutions to adapt successful strategies.
- **Student-Centered Leadership Models:** Modern leadership encourages co-creation with students, empowering them as partners in innovation and institutional development.
- **Professional Development and Leadership Training:** There are growing platforms, MOOCs, and global fellowships aimed at building leadership capacity among academic leaders.

Challenges of fostering educational leadership:

- **Resistance to Change:** Traditional institutions often face resistance from faculty or administration when implementing new pedagogies or technologies.
- **Lack of Training and Capacity Building:** Many educational leaders lack formal training in 21st-century learning design, digital tools, and inclusive leadership practices.
- **Inadequate Infrastructure:** Especially in developing regions, the absence of smart classrooms, high-speed internet, or blended learning systems limits innovation.

- **Assessment Misalignment:** Exams and grading methods often fail to measure 21st-century competencies such as collaboration, creativity, or ethical reasoning.
- **Overemphasis on Rankings and Placements:** Institutions may focus more on short-term outcomes (like placements) than on long-term goals such as leadership development and innovation.
- **Policy and Bureaucratic Constraints:** Rigid regulatory frameworks can slow down curriculum reform and limit institutional autonomy in many countries.

Table 1: Key Statistical Data on Educational Leadership and 21st-Century Learning Spaces

Category	India	Global
Student Enrollment	26.52 crore students in schools; 4.33 crore in higher education as of 2024	Over 1.5 billion students enrolled globally across various education levels
Digital Infrastructure in Schools	57.2% of schools equipped with computers; 53.9% with internet access in 223-24	Varies globally; many countries have near-universal access, while others lag behind
Higher Education Institutions	1,265 universities and 50,734 colleges in 2024	Over 20,000 universities worldwide
Gross Enrollment Ratio (GER) in Higher Education	28.4% as of 2021-22; target of 50% by 2035	Global average GER in tertiary education is approximately 38%
Online Learning Platforms Usage	Over 1.21 crore unique users on SWAYAM as of January 2024	Massive Open Online Courses (MOOCs) have over 180 million learners globally
Government Investment in Education	₹73,498 crore allocated to the Department of School Education and Literacy in FY 2024-25	Global education spending varies; OECD countries spend an average of 5% of GDP on education
EdTech Market Growth	Indian EdTech market projected to reach \$10.4 billion by 2025	Global EdTech market projected to reach \$404 billion by 2025

Category	India	Global
Virtual Labs in Schools	Over 300 virtual labs launched in Delhi government schools under the PM eVIDYA initiative	Virtual labs and simulations are increasingly adopted worldwide to enhance STEM education
Executive Education Revenue	IIM Nagpur achieved ₹140 crore in revenue over five years, with significant growth in executive education programs	Global executive education market projected to grow at a CAGR of 11.2%, reaching over \$133 billion by 2033
Skill Development Initiatives	Government launched schemes with a ₹2 lakh crore outlay over five years to provide jobs and skilling to 41 million youth	Globally, skill development is a priority, with various countries investing in upskilling programs to meet future workforce demands

Discussion

- ❖ **Reimagining Learning Spaces:** Modern learning spaces are flexible, tech-enabled, collaborative, and student-focused. In management education, such spaces allow simulation-based learning, team-based projects, and real-time industry interaction. Leadership must ensure that physical infrastructure and digital ecosystems support these modes.
- ❖ **Transformational Educational Leadership:** Effective educational leaders in the 21st century demonstrate transformational qualities, visionary thinking, empathy, adaptability, and a commitment to lifelong learning. They empower faculty, encourage interdisciplinary teaching, and champion innovation in pedagogy.
- ❖ **Integrating Technology and Digital Literacy:** Educational leadership must prioritize digital fluency among students and faculty. This involves integrating tools like AI, big data, virtual collaboration platforms, and learning analytics into the curriculum to reflect current managerial practices.
- ❖ **Curriculum and Pedagogical Innovation:** Competency-based education, flipped classrooms, experiential learning, and project-based assessments are core to 21st-century management education. Leaders must reorient faculty development programs and reward innovative teaching practices.

- ❖ **Collaborative Governance and Stakeholder Engagement:** Leadership should adopt inclusive governance models involving students, faculty, alumni, and industry stakeholders in curriculum design and decision-making, ensuring relevance and responsiveness to real-world challenges.

Suggestions

Leaders must have a clear, future-focused vision that aligns education with global challenges and industry needs. Educational leadership must ensure that students develop critical thinking, creativity, communication, collaboration, and digital literacy. Classrooms should support hybrid learning, group collaboration, and real-time digital interaction. Faculty should be empowered to use experiential learning, case-based teaching, simulations, and industry projects. Leaders should promote diversity, equity, inclusion, and well-being in institutional culture. Engaging students, faculty, industry, and alumni leads to better learning design and decision-making. Effective educational leaders use analytics and feedback systems to continuously improve learning outcomes. Assessment strategies should mirror real-world tasks to prepare students for complex management roles. Institutions should build leadership capacity at all levels of administration, faculty, and students. In India, policies like NEP 2020 provide a supportive framework for transforming management education through leadership.

Recommendations

Institutions should invest in structured leadership development programs focusing on 21st-century learning principles, technological integration, and change management. Leaders should cultivate a shared vision involving all stakeholders, including students, faculty, industry, and alumni, to co-create dynamic learning environments. Institutions should prioritize the creation of physical and digital infrastructure that supports hybrid and experiential learning formats, including smart classrooms and learning analytics tools. Academic leaders must create a safe environment for experimentation, provide resources for pedagogical innovation, and reward innovative teaching and research. Educational leadership should drive the integration of interdisciplinary learning modules, industry-based projects, and sustainability-focused case studies. Encourage student participation in governance, curriculum planning, and peer-led learning initiatives to nurture leadership qualities among learners.

Conclusion

Fostering educational leadership aligned with 21st-century learning imperatives is crucial for transforming management education. Leaders must cultivate environments that nurture

creativity, collaboration, and critical thinking while leveraging technology and pedagogical innovation. A visionary and inclusive approach to educational leadership will be essential to prepare future managers for complex, and global challenges. How educational leadership is both challenged and empowered by current developments, making it a key driver for transforming management education. India Institutions like IIM Nagpur are leading by example, showcasing how strategic leadership can drive growth and innovation in management education. Global there is a concerted effort to redefine educational leadership, focusing on learning outcomes, inclusivity, and adaptability to technological advancements. Leaders who embrace innovation, support faculty development, and promote flexible, technology-enabled learning spaces can empower institutions to cultivate 21st-century skills such as critical thinking, collaboration, and ethical decision-making skills essential for tomorrow's business leaders. Therefore, leadership development should be prioritized as a strategic imperative in higher education policy and practice.

Areas for Further Research

Future research should explore how different leadership styles, like transformational, distributed, servant, etc. for influence the effectiveness of 21st-century learning spaces in management institutions, especially in diverse cultural and economic contexts. Empirical studies are needed to assess how digital tools and innovative classroom layouts influence critical thinking, collaboration, and practical skills among management students. Research should evaluate the preparedness of faculty to adopt modern pedagogies and how leadership initiatives affect their teaching effectiveness and willingness to innovate. There is a lack of longitudinal research tracking how strategic leadership interventions over time impact institutional culture, student performance, and employability outcomes. Comparative studies between developed and developing nations, like as India and Western institutions, can help identify context-specific leadership practices that support global best practices.

Abstract

Glioblastoma is the most aggressive and lethal primary brain tumor in adults, associated with a poor prognosis and a profound impact on patients' subjective well-being (SWB). This includes psychological, social, cognitive, and physical dimensions that collectively shape the patient's quality of life. The rapid neurological decline often leads to cognitive impairment, fatigue, depression, anxiety, and existential distress, severely affecting daily functioning and emotional resilience. Emerging evidence supports the role of integrative interventions in alleviating these multidimensional challenges. Exercise training has shown promise not only in counteracting treatment-related side effects but also in enhancing mood and neuroplasticity through mechanisms involving increased serotonin and brain-derived neurotrophic factor (BDNF) levels. Music therapy has demonstrated efficacy in reducing anxiety and depressive symptoms by promoting emotional expression and relaxation. Acupuncture may relieve symptoms such as chemotherapy-induced nausea and vomiting (CINV), and possibly modulate pain perception and energy levels. Mindfulness-based interventions (MBIs) are increasingly recognized for their ability to reduce psychological distress and inflammation, while also enhancing social functioning and overall life satisfaction. These strategies, when implemented alongside conventional therapies, may contribute to better adherence, improved coping, and enhanced SWB in glioblastoma patients. A holistic, patient-centered approach is essential, integrating early palliative care, cognitive and behavioral support, caregiver involvement, and effective communication strategies. Tailored interventions that address the evolving needs of both patients and caregivers are critical in optimizing care and promoting dignity and well-being across the disease trajectory.

Keywords: Glioblastoma, Subjective Well-being, Mindfulness, Exercise, Music Therapy, Acupuncture, Palliative Care, Depression, Cognitive Decline, Fatigue, Supportive Care

Introduction

Glioblastoma (GBM) is the most common and most aggressive primary malignant brain tumor in adults, presenting a significant clinical challenge with an incidence rate of approximately 3.2 per 100,000 people (Ostrom et al., 2018). Its complex structure and heterogeneous molecular biology contribute to GBM being defined as the most prevalent, lethal, and invasive primary brain tumor in humans (Dymova et al., 2021; Wells & Packer, 2015). The cornerstone of treatment is surgical resection, followed by chemotherapy and radiotherapy. However, despite these multimodal treatment strategies, the median survival time for individuals diagnosed with GBM ranges from approximately 1 to 2 years (Rønning et al., 2012; Thakkar et al., 2014), and the five-year survival rate is as low as 5–9% (Stupp et al., 2009). In the most aggressive subtype, known as glioblastoma multiforme, this duration often falls below one year (Thakkar et al., 2014).

GBM patients frequently present with various neurological deficits and neuropsychiatric symptoms. These include epileptic seizures, cognitive dysfunction, and anxiety and depression, which may result from the disease itself, its treatment, or a combination of both. These symptoms profoundly affect health-related quality of life (HRQoL), often resulting in physical limitations and decreased occupational functionality (Edelstein et al., 2016). Moreover, the rapid progression of the disease can also significantly impact the HRQoL of patients' first-degree relatives (Boele et al., 2013). Gender-based comparisons consistently show that female GBM patients report lower HRQoL scores compared to male patients (Cherepanov et al., 2010). Additionally, the caregiving burden and redefinition of family roles imposed by the disease greatly influence the psychosocial well-being of both patients and caregivers (McConigley et al., 2010).

One of the main biological barriers encountered during treatment is the detection of epidermal growth factor receptor (EGFR) amplification in approximately 50% of cases. In about 25% of these cases, the EGFRvIII mutation is observed, which enhances DNA repair and leads to resistance to radiotherapy. Furthermore, conventional treatments may also cause DNA damage in healthy cells, contributing to tumor recurrence or the development of secondary gliomas (Louis et al., 2007; Yang et al., 2014).

Studies have shown that individuals diagnosed with GBM experience higher levels of depressive symptoms, report lower positive affect, and face more disease-related interference compared to those with other types of cancer. For example, in a study conducted with a sample of 73 participants, it was found that 25 individuals (34.2%) experienced tumor progression,

while 9 (12.3%) reported more than one instance. These findings strongly indicate that the psychological distress associated with the disease is closely linked to depression and a decrease in positive affect. It is particularly suggested that this distress partially mediates the impact of the disease on subjective well-being (Edelstein et al., 2016). These data clearly reveal the intense psychological burden GBM imposes on individuals; increased depressive symptoms and reduced capacity for positive affect are fundamental components of this burden. The central factor in this process appears to be the "interference" with life activities associated with the disease. The significant limitations that the illness and its treatment impose on activities and interests that individuals value have profound effects not only physiologically but also psychosocially. In this context, the need for holistic care approaches that include psychosocial support, not just biomedical interventions, becomes evident. Such support, targeting the intrusive nature of the disease, is critically important in improving the quality of life for individuals diagnosed with GBM.

Method

This narrative literature review adopts a comprehensive synthesis approach to examine existing evidence regarding integrative interventions aimed at enhancing subjective well-being in glioblastoma patients. The information presented is derived from a broad textual analysis encompassing diverse research findings, systematic reviews, and clinical insights. The primary objective was to identify and consolidate key themes related to the challenges faced by GBM patients and their caregivers. In addition, the potential benefits of various supportive therapies, including exercise training (Edelstein et al., 2016), music therapy (Dileo, 2006), acupuncture (Yan et al., 2023), mindfulness-based interventions (Dakdevir & Altundal Duru, 2024; Marinovic & Hunter, 2022), and aromatherapy (Li et al., 2022), were also examined. The data were extracted and integrated to offer a holistic perspective on the physical, social, and psychological dimensions affecting the well-being of glioblastoma patients, as well as the role of multidisciplinary care in addressing these complex needs (Catt et al., 2008; Cavers et al., 2012). The synthesis process focused on identifying broader trends and highlighting areas where supportive interventions may contribute to improved patient outcomes and quality of life (Edelstein et al., 2016; Bradt et al., 2021).

Physical Symptom Progression in GBM Patients

Patients diagnosed with GBM often experience a dynamic progression of physical symptoms. In the early stages, symptoms such as seizures, headaches, and nausea which can sometimes be confusing are common. As the disease progresses, cognitive impairments, including difficulties

with speech and memory, become more apparent. While temporary periods of stability may occur, patients typically face increasing fatigue, decreased mobility, and more frequent seizures as they approach the end of life (Cavers et al., 2012).

Chemotherapy is a standard part of treatment for glioblastoma patients, but it often comes with significant side effects, particularly nausea and vomiting, which can further diminish overall well-being and quality of life. To help manage these chemotherapy-induced symptoms, acupuncture has been explored as a complementary approach. Evidence from numerous randomized controlled trials suggests that incorporating acupuncture into standard care may help improve the management of both acute and delayed chemotherapy-related vomiting. The most commonly utilized acupuncture points are ST36, PC6, and CV12. ST36 is a well-known point for its effectiveness in supporting the immune system and improving gastrointestinal functions. PC6 is the most frequently used antiemetic acupuncture point; it can enhance gastric motility and has been found to be comparable to antiemetic agents in reducing the frequency of nausea and vomiting. CV12 is a key point in the management of symptoms related to the digestive system. Specifically, studies indicate a potential benefit in preventing episodes of vomiting when acupuncture is used alongside usual care. However, the overall certainty of this evidence remains low, primarily due to methodological limitations and variability across studies (Cavers et al., 2012a; Ståhl et al., 2020; Yan et al., 2023).

Cognitive Challenges in GBM Patients

Many individuals diagnosed with GBM experience cognitive impairments, often requiring support to adapt to daily life. Despite their prevalence, these impairments have not been thoroughly investigated, as evaluations typically rely on IQ scores, performance status, and neurological exams. Recent studies using more comprehensive assessments have shown that left-sided tumors may affect attention, executive functions, verbal fluency, and learning, with high-grade glioma patients performing worse cognitively than those with lower-grade tumors (Anderson et al., 1999; Ruiz Sancho et al., 2024). The link between left-hemispheric lesions and verbal deficits has been well-documented (Petruzzi et al., 2015). Notably, corticosteroids have been associated with better recognition memory, while antiepileptic drugs appear to impair working memory (Verhoef et al., 1999). Although their overall quality of life is similar to that of lung cancer patients, individuals with GBM report more cognitive complaints impacting daily functioning, including issues with memory, attention, motor skills, and communication (Sardell et al., 2000). Longitudinal studies indicate a progressive decline in information

processing and attention in this population, often exacerbated by tumor progression (Irvine & Jodrell, 1999; Litofsky et al., 2004). Many patients and caregivers express a need for functional evaluations and tailored support, particularly when returning to work (Sardell et al., 2000).

Rehabilitation has shown some benefits in motor functioning through physiotherapy and occupational therapy, though improvements in cognitive function remain limited (Garrard et al., 2004). Psychostimulants have yielded mixed outcomes in addressing neurobehavioral symptoms, with one study reporting cognitive benefits from methylphenidate in GBM (Mukand et al., 2001). Future research should further explore therapeutic strategies including practical approaches to support those with cognitive deficits (O'Dell et al., 1998). As highlighted by Gehring et al., interventions targeting cognitive impairments in brain tumor patients remain underdeveloped (Gehring et al., 2008). Determining effective methods to communicate information to cognitively impaired individuals also remains a challenge, emphasizing the need to evaluate alternative approaches to information delivery in future studies (Catt et al., 2008).

Social Role Changes in GBM Patients

Receiving a diagnosis of GBM significantly disrupts an individual's social identity and interpersonal relationships. In the early stages of treatment, patients often begin to withdraw from social activities, not only due to the physical burden of the illness but also because of its emotional impact. During this period, support from close family members and spiritual or faith-based communities frequently plays a central role in helping patients cope. However, as the disease advances, maintaining previous social roles becomes increasingly difficult, and a sense of isolation often deepens (Ståhl et al., 2020).

In many cases, caregivers report experiencing even greater emotional strain than the patients themselves. Studies have shown that relatives often face lower mental health-related quality of life, along with elevated levels of anxiety and depression. These emotional challenges are often linked to factors such as the patient's declining functional abilities, additional health complications, and the caregiver's own physical and psychological state. The strong emotional bond between patients and their loved ones means that psychological distress is often shared, with one person's suffering reflecting in the other. This interconnectedness highlights the critical need for early psychological assessment and support not only for patients but also for those who care for them—beginning at the point of diagnosis. Implementing timely mental

health interventions may contribute to better emotional resilience and overall well-being for both parties as they navigate the complex and demanding journey of glioblastoma (Ståhl et al., 2020).

Psychological Adaptation in GBM Patients

A diagnosis of GBM is frequently accompanied by significant psychological distress, particularly during the initial phases of the disease trajectory. Patients commonly experience heightened anxiety and uncertainty; however, empathetic and transparent communication from healthcare professionals has been shown to play a pivotal role in mitigating some of this emotional burden. Despite the often-poor prognosis associated with GBM, many individuals attempt to preserve elements of normalcy in their daily lives as a coping mechanism.

As the disease progresses, existential concerns, including fear of death and the anticipated loss of personal autonomy, tend to intensify. Parallel to the patient's psychological experience, caregivers frequently endure considerable emotional strain, often marked by fatigue, anxiety, and a profound sense of helplessness. Over time, some caregivers may begin to adapt psychologically, gradually developing a form of acceptance and resilience as they navigate the complexities of end-of-life care. This adaptive process, while deeply personal, underscores the emotional interdependence between patients and their caregivers throughout the illness trajectory (Cavers et al., 2012a). Emerging evidence indicates that mindfulness-based interventions may contribute to the reduction of depressive symptoms and the enhancement of overall psychological well-being. Given the established association between systemic inflammation characterized by elevated levels of proinflammatory cytokines such as interleukin-6 and tumor necrosis factor- α and dysregulation of the hypothalamic-pituitary-adrenal (HPA) axis, mindfulness practices are hypothesized to exert modulatory effects on these biological mechanisms.

Preliminary studies have demonstrated that mindfulness may lead to reductions in both inflammatory biomarkers and cortisol levels, suggesting potential physiological benefits alongside psychological improvements. However, the extent to which these effects translate into measurable clinical outcomes, particularly in the context of GBM, remains insufficiently understood. At present, there is a notable gap in longitudinal data assessing the impact of mindfulness-based approaches on survival and disease progression in this patient population. Further methodologically rigorous, long-term studies are warranted to elucidate the potential

integrative role of mindfulness in the management of GBM , with a focus on both psychosocial and biomedical endpoints (Dakdevir & Altundal Duru, 2024; Marinovic & Hunter, 2022).

In this context, music-based interventions have been explored as a supportive strategy to aid in symptom management and enhance quality of life in cancer patients. For example, music has been found to stimulate memory and imagery, evoke emotions, support relaxation and distraction, and enhance social interaction (Dileo, 2006). This systematic review presents evidence that music interventions may positively affect anxiety, depression, hope, pain, fatigue, heart rate, and blood pressure in adults with cancer.. Evidence suggests that, compared to standard care, such interventions may help reduce anxiety, depression, pain, and fatigue, while also fostering hope among adult oncology populations. Although some studies involving pediatric patients have reported positive effects on anxiety, the limited number of trials restricts broader conclusions for other outcomes. Moreover, a considerable proportion of existing studies present methodological limitations and a high risk of bias, resulting in low overall certainty of the evidence. These findings highlight the need for cautious interpretation and underscore the importance of more rigorous research to clarify the potential role of music interventions in improving well-being and managing symptoms in GBM (Bradt et al., 2021).

Anxiety and depression are common comorbidities in glioblastoma patients, contributing significantly to the psychological burden of the disease. Although pharmacological interventions remain the standard approach for managing these symptoms, their associated side effects often diminish overall patient well-being. Aromatherapy has been explored as a complementary strategy to support mental health in oncology settings. Systematic reviews and meta-analyses indicate that aromatherapy particularly through aromatic massage or the use of lavender essential oil may reduce anxiety in cancer patients, with short-term applications (under four weeks) demonstrating the most notable effects. Some evidence also suggests cultural variations in efficacy, with stronger outcomes reported in certain Asian populations. However, the available data do not support a significant impact of aromatherapy on depression or broader psychological health indicators. While preliminary findings support its role in anxiety reduction, further research is warranted to determine its specific utility in addressing the emotional complexities experienced by glioblastoma patients (Li et al., 2022).

Existential Reflection in GBM Patients

A life-threatening diagnosis frequently prompts profound existential contemplation. Spirituality and interpersonal relationships can serve as essential sources of solace, alleviating the sense of isolation. As individuals increasingly confront their mortality, they may begin to attach greater significance to routine experiences. Nevertheless, inadequate provision of spiritual care may intensify psychological distress in specific instances. Qualitative investigations, incorporating interviews with patients, caregivers, and medical professionals, reveal that psychological strain may emerge even prior to formal diagnosis. Physical deterioration often coincides with social disengagement, while psychological and existential challenges typically culminate during diagnosis and post-treatment phases. Nonetheless, the trajectory of each patient's experience is modulated by elements such as intrinsic resilience, familial support structures, and access to healthcare services. The complexity of these burdens highlights the necessity of a comprehensive care model that integrates medical, emotional, social, and existential dimensions. Proactive and continuous psychosocial support, clear communication, and individualized care strategies are vital for enabling healthcare providers to effectively address the dynamic needs of patients throughout the illness continuum (Cavers et al., 2012).

Although these challenges are widely acknowledged, there remains a noticeable gap in rigorous research focused on supportive and palliative care for people with GBM. Much of the existing literature is limited by small sample sizes and inconsistent methodologies. Even so, the importance of a multidisciplinary care model is clear. Combining the expertise of neurologists, neurosurgeons, oncologists, and palliative care specialists is essential to meet the complex needs of this patient population. Emerging research priorities include the development of targeted psychosocial support strategies and the evaluation of care models designed to enhance quality of life. A better understanding of how to deliver effective, personalized palliative and end-of-life care for individuals with GBM is increasingly seen as a vital component of comprehensive treatment planning. Advancing robust and high-quality research in this field is crucial to ensuring that individuals diagnosed with glioblastoma, along with their families, have access to holistic care that addresses not only medical needs but also emotional and psychosocial well-being throughout the progression of the illness (Catt et al., 2008).

Results

According to the literature, people with glioblastoma face a variety of difficulties, including diminished social functioning, emotional distress, and cognitive decline. Exercise, mindfulness, music therapy, and acupuncture are examples of integrative therapies that have the potential to

lessen these burdens. Specifically, mindfulness-based interventions have demonstrated promise in lowering stress and inflammatory markers (Marinovic and Hunter, 2022), and music therapy has been found to improve emotional well-being and lessen symptoms of anxiety and depression (Bradt et al., 2021). Acupuncture has also been demonstrated to help treat nausea and fatigue brought on by chemotherapy (Yan et al., 2023). Despite these results, methodological variations and sample sizes among studies limit the overall strength of the evidence.

Discussion and Conclusion

These results demonstrate the growing significance of integrative, holistic approaches to care in addressing the psychological and cognitive effects of glioblastoma. Adjunctive therapies like music, mindfulness, and acupuncture are said to enhance subjective well-being when used in conjunction with traditional care, even though pharmaceutical treatments are still the standard. However, small sample sizes and inconsistent methodological quality constrain the available evidence base (Gehring et al., 2008; Edelstein et al., 2016). It emphasizes how longitudinal results, standardized procedures, and tailored intervention techniques that address the changing needs of patients and caregivers throughout the course of the disease would better direct future research (Catt et al., 2008).

Examining the Self-Efficacy Levels of Teachers Working in Şanlıurfa Province: A Quantitative Research

Ramazan Özkul

Harran University Faculty of Education, TÜRKİYE,

e-mail: ramazanozkul@harran.edu.tr, Orcid No: 0000-0001-9757-6062

Abstract

This study examines teacher self-efficacy and different demographic variables (gender, education level, seniority and place of duty - rural/central). In this direction, the survey model was preferred among quantitative research methods. The universe of the research consists of 34,000 teachers working in Şanlıurfa province. 248 teachers selected from the universe by simple random sampling method constituted the sample of the research. In the data collection process, Teacher Self-Efficacy Scale was used to measure teacher self-efficacy levels, and the data were obtained online via WhatsApp via Google Form. Since the research data showed normal distribution, descriptive statistics were applied in the analysis process. According to the research findings; it was seen that teachers' self-efficacy perceptions were at a medium level (close to low). This finding necessitates that training programs aimed at developing teachers' general competencies should be based on needs analysis and be carried out on a voluntary basis. In order to improve teachers' self-efficacy beliefs and perception levels, it may be useful to share effective practices and encourage them to interact with strong role models.

Keywords: teacher, self-efficacy, demographic variables

Introduction

Self-efficacy involves judgments about an individual's ability to perform tasks, not about personal attributes such as physical or mental attributes. Therefore, they are more likely to achieve easy success (Zimmerman, 1995). Bandura (1997) stated that self-efficacy is not about skills or personal qualities, but about the perception of one's ability to complete tasks. People will not make an effort to take action unless they believe that their actions will have the desired effect (Bandura, 1994). Bandura (1993) stated that people with low self-efficacy avoid challenging tasks, set low goals, exert minimal effort to achieve goals, tend to focus on negative outcomes, and experience high levels of anxiety and depression.

According to Bandura (1997), there are four main sources of information on which individuals' self-efficacy beliefs are based. The most effective source of information is mastery experiences, as they provide realistic information about an individual's success (Bandura,

1997). Successful mastery experiences help develop an individual's beliefs about their performance (Pajares, 2002). Self-efficacy beliefs are also affected by indirect experiences. The more an individual identifies with the model they observe, the stronger the effect on self-efficacy will be. Observing others successfully perform tasks will increase their personal expectations of success in the same task (Bandura, 1997). The third way to change self-efficacy is through verbal persuasion. This concept means convincing the individual that they can accomplish a certain task (Driscoll, 2013). Finally, individuals use their perceived emotional states rather than remembered information to make judgments about their self-efficacy (Bandura, 1997).

According to the study of Caprara et al. (2006), teachers' individual efficacy beliefs positively affect their own job satisfaction and students' academic success. In this context, teachers' perceptions of efficacy can be seen as a basic source for intrinsic motivation and satisfaction (Caprara et al., 2006). According to Schmitz (2000), teachers with high self-efficacy levels are individuals who focus more on their profession and have high satisfaction. The basic competencies of teachers have an important place in the personal development and success of students in their academic and daily lives (Akbulut & Aslan, 2024). The literature emphasizes the relationship between student success and student competence perception, teacher competence perception and the total competence of the school (Arseven, 2016). The effect of the concept of self-efficacy on academic motivation has the power to determine which field teachers and students will focus on in their academic lives (Çetin, 2023). Teachers with high self-efficacy beliefs feel confident about their educational strategies and classroom management skills (Kubilay, 2022). In order for educational environments in schools to be structured, renewed and made productive, teachers' self-efficacy beliefs must be taken into account (Çalık et al., 2012). Considering all these reasons, teachers are expected to have a strong sense of self-efficacy in order to demonstrate their professional potential in educational processes in a way that can support the education of students (Akgün, 2013).

The purpose of this research is to determine the self-efficacy levels of teachers working in Şanlıurfa province.

Method

The purpose of the research may be to explain the research area or to produce generalizable results. In this case, the screening model may be preferred to express the current situation objectively (Karasar, 2015). This study examines teacher self-efficacy and different demographic variables (gender, education level, seniority and place of duty - rural/central). The

universe of the research consists of 34,000 teachers working in Şanlıurfa province. 248 teachers selected from the universe by simple random sampling method constituted the sample of the research. In the data collection process, “Teacher Self-Efficacy Scale” was used to measure teacher self-efficacy levels, and the data were obtained online via WhatsApp via Google Form. A 12-item scale developed by Tschannen-Moran ve Woolfolk Hoy (2001) was adapted for Turkish school by Erdoğan (2023). The original scale had a Cronbach’s alpha was 0.82. CFA showed satisfactory fit “RMSEA = 0.08, SRMR = 0.45, CFI = 0.95, TLI = 0.95”. Cronbach alpha value was calculated as .85. Since the research data showed normal distribution, descriptive statistics were applied in the analysis process.

Table 1: Teachers Demographic Characteristics (n = 248)

Variable	Category	f (Frequency)	% (Percentage)
Gender	Female	152	61.3
	Male	96	38.7
Education Level	Bachelor	180	72.6
	Master	68	27.4
Seniority (Years)	1–5	45	18.1
	6–10	68	27.4
	11–15	71	28.6
	16 +	64	25.8
Place of Duty	Rural	108	43.5
	Urban (Central)	140	56.5

Demographic information about the teachers in the research sample is shown in Table 1. According to Table 1, 152 of the teachers are female and 96 are male. According to the level of education, there are 180 bachelor and 68 master participants. It is seen that there is a balanced distribution according to years of seniority. 108 teachers work in rural areas and 140 teachers work in urban areas.

Results

Descriptive statistics regarding teacher self-efficacy are presented in Table 2.

Table 2: Descriptive Statistics for Teachers (n = 248)

Variable	Mean	Sd	Min Value	Max Value	Scale Range	Level
Teacher Self-Efficacy	2.25	0.66	1.00	4.80	1–5	Moderate (Close to Low)

According to Table 2, the arithmetic mean score calculated for the self-efficacy perceptions of the teachers in the research sample is 2.25 and the standard deviation is 0.66.

These values indicate that the teacher self-efficacy level is moderate but close to the low range. This finding may be expected especially for teachers working in Şanlıurfa province and relatively new to the profession.

Discussion and Conclusion

The research result shows that teachers' self-efficacy perception is at a medium level (close to low). This situation can be interpreted as teachers being less combative when faced with difficulties. It is important to state that the use of digital content in education systems has become widespread. Teachers need to develop their knowledge and skills in educational technology. Teachers' personal self-efficacy belief can also affect their adoption and use of educational technology (Brady and Woolfson, 2008). There are studies in the literature supporting this finding, especially showing that the perception of self-efficacy is low (Rossiter et al., 2007; Ünüsan and Yalçın, 2020). Teachers' high anxiety about the teaching process and low self-efficacy perceptions have been associated with perceptions of instructional efficacy (Boz & Boz, 2010). In addition, he found that the quality of classroom management increases as teachers' competencies increase. Therefore, it should be stated that every direct and positive experience that the teacher gains is a source of information to improve their self-efficacy beliefs. Educational programs that aim to improve teachers' self-efficacy beliefs should be provided at the beginning of the teacher's professional life or before they enter the teaching profession (Özkuş, 2021). There are also studies that do not coincide with the results of this research. Demirtaş et al. (2011); Özyıldırım (2018); Sevgi et al. (2017) concluded in their research that teachers and prospective teachers have high self-efficacy perception levels. When this research is evaluated together with the research in the literature, it can be stated that teacher self-efficacy perception levels may differ.

Teachers' self-efficacy perceptions are at a medium level (close to low). However, according to the literature, it may not be a correct approach to clearly state that teachers' self-efficacy is really at this level. Because according to the research findings, this is just the perception of teachers. In fact, it is supported by different studies that teachers' self-efficacy perceptions are high. The fact that the teachers' self-efficacy levels in this study were found to be at a moderate (nearly low) level can be associated with the increasing professional difficulties they have encountered in recent years and especially the difficulties they have experienced in using information technologies effectively. In this context, the result of the research is remarkable. First of all, it is recommended to investigate the source of these different results in the literature.

Abstract

The effectiveness of the teaching learning process is inseparable from the overall quality of instruction. However, in recent years, the standards and competency frameworks that educators must satisfy have become increasingly stringent, driven by heightened demands and the expectations of a broad range of stakeholders. Consequently, teachers carry an expanding array of responsibilities, ranging from lesson planning and delivery to student assessment and ongoing professional development, as well as research activities for career advancement. Such a collection of duties often precipitates negative emotional states, stress, depressed mood, irritability, and disappointment, which, in turn, compromise pedagogical effectiveness and impede students' academic achievement. Therefore, it is essential for educators not only to master the pedagogical techniques necessary for optimal knowledge transfer but also to cultivate emotional self-regulation skills, which Goran (2015) identifies as Emotional Intelligence. Given their pivotal role in facilitating learning, teachers should strive to maintain a stable emotional equilibrium. This balance, at the core of emotional intelligence, enables educators to manage their affective responses effectively and to foster a supportive classroom environment. By developing competencies such as emotional awareness, emotion regulation, empathy, and interpersonal skills, teachers can enhance their instructional performance and more effectively address the diverse needs of their students. Ultimately, integrating emotional intelligence into teacher training and professional practice is crucial for promoting educators' well-being and for achieving students' academic success. Numerous studies have shown that individuals with a high level of emotional intelligence tend to achieve greater professional success. The present study describes and identifies the overall level of emotional intelligence among secondary school teachers in the Southern Region of Albania about well-being, self-control, emotionality, and sociability. Another aim of this research was to examine the

relationship between emotional intelligence and demographic variables such as age, gender, educational level, and years of professional experience. The results indicate that the sample exhibited a moderate level of emotional intelligence. Gender, age, educational level, and years of experience did not have a significant impact on their emotional intelligence.

Keywords: Emotional intelligence, instructional process, teacher well-being, secondary education, emotional self-regulation.

Introduction

Within the contemporary educational context, emotional intelligence is increasingly recognized as a vital attribute that shapes the efficacy and adaptability of educators. Given the multifaceted demands of the teaching profession, ranging from the orchestration of classroom dynamics to communication with families and the handling of emotionally complex interactions, teachers are frequently confronted with situations that require a high degree of emotional awareness and regulation. As such, emotional intelligence transcends the status of an ancillary skill and becomes a foundational element of pedagogical competence. Beyond their function as conveyors of academic knowledge, teachers assume the responsibility of guiding the emotional and social maturation of their students. This involves cultivating a classroom climate marked by psychological safety, emotional inclusivity, and interpersonal trust. Educators who possess refined emotional intelligence are typically more adept at interpreting the affective cues of learners, responding with empathy, and fostering consistent and supportive relationships. Such emotionally responsive practices create an atmosphere in which students experience a greater sense of belonging and feel encouraged to participate actively in the learning process. A relational environment grounded in mutual respect and understanding not only reduces fear of failure or judgment but also promotes sustained engagement and academic perseverance. Consequently, emotional intelligence serves as a key driver in shaping a positive educational experience and advancing student well-being and achievement.

The role of the teacher goes beyond the transmission of academic knowledge; it includes the ability to influence the emotional and social development of students, to build a supportive learning climate, and to function as a model of emotional balance within the school community. A teacher with well-developed emotional intelligence can perceive and understand the emotions of their students with sensitivity. This ability helps in building positive and stable relationships with them, increasing the sense of belonging and emotional safety in the classroom environment.

In this way, students feel more accepted and motivated to actively involve themselves in the learning process. Interactions that are built on trust and empathy positively influence students' engagement and academic success, creating a climate where learning occurs naturally and without fear of mistakes or judgment.

In addition, emotional intelligence helps the teacher cope better with the daily stress of the profession. By having the ability to identify and manage his own emotions, he avoids impulsive reactions and maintains calmness in difficult situations. This emotional stability makes him more capable of making wise decisions and supporting his students fairly and thoughtfully. When the teacher manages to preserve his emotional balance, he becomes a stable point of reference for students in times of tension or uncertainty. At the same time, sensitive communication skills help the teacher build collaborative relationships not only with students but also with parents and colleagues. The ability to listen attentively, to provide constructive feedback, and to manage difficult conversations ethically and respectfully is the key to an effective partnership between school and family. An emotionally intelligent teacher can build bridges of understanding and foster a cooperative atmosphere, which is essential for the smooth functioning of the teaching and educational processes. Among the most important aspects of emotional intelligence in teachers is also the ability for self-reflection and continuous professional development. Recognizing one's own emotions and their influence on teaching and relationships with others makes the teacher more aware of their role and more willing to continually improve the approach and techniques used in the classroom. This self-reflection is a sign of high professionalism and of a continuous commitment to personal growth and quality in education.

In the Albanian context, the level of emotional intelligence among high school teachers can be considered average, with noticeable variations related to individual experience, institutional support, and approaches to professional development. While emotional intelligence is widely recognized as a fundamental component for teaching effectiveness and the building of constructive relationships with students, its inclusion in the initial and continuing training of teachers in Albania remains limited. Schools often face a lack of resources, administrative overload, and professional stress factors that constrain the demonstration of emotional skills in practice. Nevertheless, the limited existing studies suggest that Albanian teachers have the potential to further develop emotional awareness, emotion management, and interpersonal competencies, if these are supported by stable structures of professional development and by a school culture that values the socio-emotional. This requires a reconceptualization of the role

of emotional intelligence in educational policies, considering it not only as a personal skill but as a professional necessity for effective and supportive teaching.

A sustainably and effectively structured educational system constitutes one of the main pillars of sustainable development in developing countries. Within this context, the role of teachers is considered essential and irreplaceable in achieving the desired standards in education. However, despite their high status in the functional hierarchy of the educational system, teachers often face increased professional demands that directly impact their quality of work life. As pointed out by Salim, Nasir, Arip, and Mustafa (2012), teachers increasingly face heavy workloads and extended working hours, which often result in considerable levels of stress, dissatisfaction, and a sense of professional isolation.

Within the educational psychological literature in Nigeria, one of the topics that has consistently drawn attention is job satisfaction among secondary school teachers. Numerous studies conducted over the past decades have highlighted high levels of job dissatisfaction among this group of professionals (Ajayi, 1981, 1998; Adeyemo, 1986, 1996; Adeyoju, 1999). Factors such as lack of institutional support, inadequate infrastructure, and insufficient economic compensation are frequently cited as major contributors to this condition.

Nevertheless, more recent evaluations suggest that there has been a modest improvement in the experience of job satisfaction among teachers, as reflected in the works of Adetayo (2008) and Gesinde & Adejumo (2012). This trend may be linked to an increased institutional awareness of teacher well-being or to efforts aimed at reforming educational policies.

In the face of ongoing challenges, psychological support and the development of teachers' emotional competencies, such as emotional intelligence, may represent an effective strategy for enhancing emotional resilience, reducing stress, and strengthening professional engagement within the educational system.

Emotional Intelligence

Emotional intelligence (EI) represents a complex and multidimensional psychological construct that encompasses both intrapersonal and interpersonal capacities to perceive, understand, manage, and utilize emotions functionally and adaptively across various social and professional contexts (Cherniss, 2018; Singh et al., 2022). This capacity serves as a key mediator in the development of effective relationships, in facilitating interpersonal communication, and in

enhancing psychosocial competencies. Individuals with high levels of emotional intelligence demonstrate a deep awareness of their emotional states, which enables them to act consciously and authentically, following their emotions. This emotional awareness is not limited to the personal sphere but extends to sensitivity toward the feelings of others, thereby facilitating interactions grounded in empathy and affective resonance (Ackley, 2016).

A prominent component of the emotional profile of these individuals is the ability to manifest a friendly and open approach, which stems from a sensitive attunement to the emotional climate of the social environment (Gül, 2021). This predisposition contributes to the development of positive and stable relationships in both personal and institutional domains. Another advanced indicator of emotional intelligence is psychological resilience. Mastery of emotional competencies equips individuals with sophisticated coping mechanisms against stress and trauma, making them more capable of recovering from challenges or failures constructively (Rathore, 2021). Furthermore, this resilient attitude goes beyond personal boundaries, positively influencing the social and organizational ecosystems in which the individual operates. Optimism, as an integral component of emotional intelligence, implies a positive and proactive attitude toward life and human relationships. This construct represents a psychological orientation that favors adaptation to change and challenges, promoting effective problem-solving and the construction of a collaborative climate (Freshman et al., 2015; Kaur & Sharma, 2019; Suprayogi & Andestia, 2023).

The theoretical origin of the concept of emotional intelligence dates back to 1990, when Salovey and Mayer treated it as a subdivision of social intelligence. They defined emotional intelligence as the capacity to monitor one's own and others' emotions, to discriminate among them, and to use this emotional information to guide thinking and behavior (Rathore, 2021). This definition emphasizes the complex interplay between emotional perception and cognitive functioning, attributing to emotional intelligence a central role in social interactions and decision-making.

In a later elaboration, Mayer and Salovey (1997) structured their model into four essential branches: the perception of emotions, the use of emotions to facilitate thinking, the understanding of emotions, and the management of emotions. This hierarchical model describes emotional intelligence as a set of interrelated competencies that find practical application across a wide range of life contexts, particularly in organizational and educational domains, complementing traditional cognitive intelligence.

The broader contribution to the popularization of emotional intelligence is attributed to Daniel

Goleman, who, with his 1995 work *Emotional Intelligence: Why It Can Matter More Than IQ*, brought this construct into public and interdisciplinary discourses. Goleman further expanded the initial definition by including additional dimensions such as self-regulation, intrinsic motivation, empathy, and social skills (Ackley, 2016; Singh et al., 2022). This expanded approach has positioned emotional intelligence as an essential tool for professional success, social cohesion, and psychological well-being in an increasingly complex and emotionally demanding global environment.

Three Foundational Approaches to the Theory of Emotional Intelligence: A Comparative Analysis

In the effort to better understand the interaction between emotions and individuals' cognitive or social functioning, several theoretical models have been developed in recent decades that conceptualize emotional intelligence from different perspectives. The three main approaches, the ability model, the mixed model, and the competency model, have significantly influenced the way this form of intelligence is perceived and measured.

The ability model, developed by Salovey and Mayer, treats emotional intelligence as a distinct cognitive capacity that includes the ability to perceive, understand, manage, and use emotions in order to guide behavior and improve social relationships. This model structures emotional intelligence into four functionally interrelated components: emotion recognition, understanding of feelings, emotional regulation, and the use of emotions to facilitate thinking. The emphasis is placed on its nature as a measurable and developable ability, which influences effective adaptation in social environments.

From a more integrative perspective, Reuven Bar-On proposed a mixed model, combining emotional, social, and personality elements that influence an individual's effective functioning. At the core of this approach lies the concept of "emotional-social intelligence," which operates through five essential domains: intrapersonal competencies, interpersonal skills, adaptability, stress management, and general mood. This model goes beyond emotional information processing by including psychological resilience, flexibility, and constructive interaction with the social environment. Through this construct, Bar-On emphasizes that personal and professional success depends on the harmonious integration of emotional and social factors.

Unlike the aforementioned models, Daniel Goleman presents emotional intelligence as a system of teachable and applicable competencies across various life contexts. He focuses on two main

dimensions: personal competencies and social competencies. The five components that form the foundation of this model are: emotional self-awareness, self-regulation, intrinsic motivation, empathy, and social skills. Goleman highlights that these competencies play a critical role in building effective relationships, leadership, conflict resolution, and the achievement of long-term goals. His model is particularly applicable in organizational and educational contexts, where performance and interaction are essential.

By comparing these approaches, it becomes evident that despite their differing theoretical orientations, all models converge in emphasizing the role of emotions in successful adaptation to social environments and in the construction of personal well-being. In various ways, they contribute to broadening the understanding of intelligence beyond the traditional cognitive paradigm, repositioning emotion as a key component of the individual's functional competence in life.

Studies Researchers

Samir Kumar Lenka and Ravi Kant analyzed a sample of 120 teachers randomly selected from 12 different schools, both public and private. The study aimed to examine the relationship between emotional intelligence and the professional development of secondary school teachers in the Rampur district, India. They used a standardized emotional intelligence scale (Hyde, Pethe & Dhar) and a self-developed scale for professional development to measure the main components related to empathy, self-awareness, emotional stability, and personal motivation. The key findings of the study indicated a statistically significant positive relationship between emotional intelligence and professional development ($r = 0.660$, $p < .01$), suggesting that teachers with higher emotional intelligence are more capable of developing professionally. Further analysis of the subcomponents of emotional intelligence, such as self-awareness, empathy, emotional stability, integrity, self-development, and altruistic behavior, also demonstrated significant positive correlations with teachers' professional development. Another important aspect was the gender difference: results showed that male teachers had higher levels of emotional intelligence and professional development compared to female teachers, with statistically significant differences in both variables. It was also found that teachers with high emotional intelligence had significantly more advanced professional development than those with low emotional intelligence. This study supports the theory that emotional intelligence is a fundamental component in the formation and professional advancement of teachers, highlighting the importance of integrating emotional skills training

into continuous professional development programs for educators.

The study titled “*Analysis of the Emotional Intelligence Level of Teachers*”, conducted by Cem Birol, Hakan Atamtürk, Fatoş Silman, and Deniz Şensoy, affiliated with the Faculty of Education at Near East University (Turkish Republic of Northern Cyprus), aimed to analyze the level of emotional intelligence among teachers working in public and private secondary schools in the Turkish Republic of Northern Cyprus (TRNC). The research was based on a quantitative design and involved a sample of 253 teachers, selected from a larger population of 870 individuals. To measure emotional intelligence, the authors developed a 43-item instrument based on the theoretical concepts of Daniel Goleman and Wolmaran, adapted to the Turkish context. This instrument evaluates seven components: emotional awareness, self-control, personal motivation, empathy and flexibility, social skills, personal influence, and the ability to develop others. Statistical analysis conducted using SPSS showed a high reliability of the instrument used ($\alpha = 0.93$), confirming the validity of the data. The results indicate that the overall level of emotional intelligence among teachers is relatively high (on average, 79.2%). Although no statistically significant differences were identified based on gender, age, professional experience, or academic qualifications in the overall level of emotional intelligence, some meaningful differences were observed in its subcomponents. Teachers over the age of 51 and those with long-term professional experience demonstrated higher levels in the dimension of social skills. Additionally, contrary to theoretical expectations, public school teachers were found to have higher emotional intelligence levels than their counterparts in the private sector.

A study by İlhan Adilogullari (2011) presents an empirical analysis of the emotional intelligence level of teachers in the city of Gaziantep, Turkey, and its relationship with demographic variables. This study aimed to examine the level of emotional intelligence among teachers working in the central area of Gaziantep and to identify the relationship of this psychological construct with several demographic variables such as gender, age, marital status, postgraduate education, and income level. In total, 340 teachers participated in this research, of whom 55.9% worked in primary education and 44.1% in secondary education; additionally, 58.8% were male and 41.2% female. To measure emotional intelligence, a modified version of the Bar-On EQ-Iscale, adapted into Turkish by Acar (2001), consisting of 87 items, was used. The results showed that the emotional intelligence of teachers was at a moderate level, except for the interpersonal relationships dimension, which was found to be higher. Statistically significant differences were identified in the stress management sub-dimension based on

income level, where teachers with lower incomes demonstrated better performance in stress management. Additionally, teachers without postgraduate education were found to have a higher level of adaptability compared to those with a master's degree. However, no statistically significant differences were found regarding gender, age, marital status, or the level of education in which the teachers were employed. These findings align with part of the existing literature but also differ from other results that highlight significant effects of these variables. The author emphasizes the importance of developing emotional intelligence as a core competency for teachers, which affects not only their well-being but also the quality of interactions with students and colleagues, as well as the overall improvement of the educational environment. In this regard, increasing emotional awareness and developing emotion management skills are considered important strategies for enhancing teachers' professional performance.

Ada Anyamene and Anulika Valentina Etele (2020) analyzed whether there is a relationship between emotional intelligence and marital satisfaction among married secondary school teachers in Anambra State, Nigeria. The researchers employed a correlational approach, collecting data from 1,344 married teachers (143 males and 1,200 females). To measure emotional intelligence, they used the scale developed by Singh (2002), which assesses recognition, self-regulation, motivation, and social skills, while marital satisfaction was measured using the *Index of Marital Satisfaction* designed by Hudson (1982). Statistical analysis included Pearson correlation and t-tests to assess the relationship between the variables. The results revealed a positive but low correlation ($r = 0.20$) between emotional intelligence and marital satisfaction across the entire sample; the data also indicated low but statistically significant correlations for both genders (males: $r = 0.26$; females: $r = 0.18$). The t- tests revealed that these relationships were significant at the 0.05 level (males $p < 0.001$, females $p < 0.001$). The discussion highlights that although the relationship is not particularly strong, increases in emotional intelligence are associated with improvements in marital satisfaction, a finding echoed in previous international literature. The authors emphasize that enhancing emotional skills may help foster healthier and more stable marital relationships.

Another study by Poonam Bhagat aimed to investigate whether teachers' emotional intelligence and self-efficacy serve as valid predictors of their effectiveness in the teaching process. Researcher Poonam Bhagat conducted this study in an American educational context, with the aim of exploring the interaction between personal variables and professional performance within the school environment. The study involved 208 teachers from both elementary and

secondary education levels across various school districts in the United States. Statistical analyses, including linear regression and correlational analysis, revealed that both emotional intelligence and self-efficacy were statistically significantly associated with teacher effectiveness. While self-efficacy was found to have the most direct impact on overall performance, emotional intelligence played a strong supportive role, particularly in areas related to classroom management and relationship-building with students. The researcher observes that the ability to manage one's own emotions and to interpret the emotions of others directly influences how teachers approach everyday challenges in the classroom. Furthermore, self-efficacy or the internal belief in one's ability to positively influence student learning emerged as a key component of professional success.

The population and Sample Selection

This study involves secondary school teachers in the Southern Region of Albania. The research included teachers from public secondary schools. To carry out the study, a sample of 259 teachers within this district was selected. The sampling was conducted randomly using cluster sampling. Initially, all secondary education schools were identified, from which a purposeful selection of institutions was made to collect the necessary data for the research.

Research Objectives

- Research Question 1:** What is the level of emotional intelligence among full-time educational staff in secondary schools in the Southern Region of Albania?
- Research Question 2:** What are the characteristics of emotional intelligence among full-time educational staff in secondary schools in the Southern Region of Albania?
- Research Question 3:** What is the relationship between emotional intelligence and demographic variables (age, gender, marital status, educational level, work seniority, and years of service in an educational institution)?

The Emotional Intelligence Questionnaire (EI) is the instrument used to measure the emotional intelligence of secondary school teachers, developed by Daniel Goleman. EI is a self-report inventory of socially and emotionally intelligent behavior that provides an assessment of emotional-social intelligence.

This inventory consists of 50 statements and employs a 5-point response scale ranging from “very rarely or not true for me” (1) to “very often or true for me” (5). The instrument comprises five components of emotional intelligence, which include:

- **Self-awareness** (items 1, 6, 11, 16, 21, 26, 31, 36, 41, 46)
- **Emotion management** (items 2, 7, 12, 17, 22, 27, 32, 37, 42, 47)
- **Self-motivation** (items 3, 8, 13, 18, 23, 33, 38, 43, 48)
- **Empathy** (items 4, 9, 14, 19, 24, 29, 34, 39, 44, 49)
- **Social skills** (items 5, 10, 15, 20, 25, 30, 35, 40, 45, 50)

Based on the total scores from these five components of emotional intelligence, the interpretation is as follows:

- A score of 35–**50 indicates** a high level of emotional intelligence
- A score of 18–**34 suggests** the need to pay attention to which of the five components one feels weaker in
- A score of 10–**17 indicates** a low level of emotional intelligence

Results

Instrument Reliability – Emotional Intelligence

Table 1. This table presents the **internal reliability** of a psychological measurement instrument consisting of 50 items, using the **Cronbach’s Alpha** coefficient.

Reliability Statistics

Cronbach's Alpha	N of Items
.896	50

The value of **.896** indicates a **high level of internal consistency**, meaning that the items are well-aligned with one another and consistently measure the same construct. This makes the instrument reliable for research purposes

Table 2. Shows the **descriptive statistics** for the five components of emotional intelligence among 259 participants. It includes the minimum and maximum scores, the mean, and the standard deviation for each component.

	N	Minimum	Maximum	Mean	Std. Deviation
Self-Awareness	259	16.00	50.00	39.4402	5.38078
Emotional Management	259	20.00	47.00	36.4517	4.75612
Self-Motivation	259	13.00	49.00	38.6988	5.27702
Emathy	259	13.00	49.00	37.8031	5.08111
Social Skills	259	17.00	100.00	39.2664	6.45215
Valid N (listwise)	259				

To assess the emotional profile of the teachers in this study, five components of emotional intelligence were analyzed: emotional self-awareness, emotion management, self-motivation, empathy, and social skills. Data from 259 participants indicate that, overall, teachers demonstrate a good level of emotional competencies, with moderate variation across the different dimensions. The results showed that emotional self-awareness had the highest mean ($M = 39.44$, $SD = 5.38$), suggesting that participants are capable of clearly identifying and understanding their own emotions. This component is particularly important in educational settings, where teachers face emotionally charged situations. Similar findings were reported by Brackett, Palomera, Mojsa-Kaja, Reyes, and Salovey (2010), who emphasized that emotional self-awareness directly impacts classroom management and teacher well-being. Self-motivation ($M = 38.69$, $SD = 5.27$) also emerged as a strong component, reflecting participants' ability to maintain persistence and goal orientation. This finding is consistent with Goleman's (1998) model, which considers self-motivation essential for personal performance and resilience in the workplace. Moreover, studies by Ciarrochi, Deane, and Anderson (2002) suggest that self-motivation is associated with positive coping strategies and engagement in professional development. Empathy, with a mean score of 37.80 ($SD = 5.08$), represented another strong component. The ability to understand the emotions of others is particularly important for positive interaction with students and colleagues. According to Jennings and Greenberg (2009), teachers who demonstrate high empathy create safe and supportive environments for students, positively influencing classroom climate and teaching effectiveness. Emotion management yielded a slightly lower mean score ($M = 36.45$, $SD = 4.75$), suggesting that participants may require more support in regulating difficult emotions in stressful contexts. This is supported by the findings of Montgomery and Rupp (2005), who indicated that poor emotional regulation can lead to high levels of stress and teacher burnout. This highlights the importance of targeted training for the development of this aspect of emotional intelligence. The component with the highest variance was found in social skills ($M = 39.26$, $SD = 6.45$),

with a wide score distribution (min = 17, max = 100), indicating considerable heterogeneity in this dimension. This result reflects the influence of experience, personality, and work environment on how teachers build and maintain healthy professional relationships. Goleman (2006) and Mayer et al. (2008) point out that social skills are essential for effective leadership and positive interaction in organizations. Overall, the data suggest that teachers possess a stable foundation of emotional intelligence, but a particular focus on emotion management and further development of social skills may serve as important areas for targeted developmental interventions.

Table 3. This table presents descriptive statistics by gender for the five components of emotional.

Gender		N	Minimum	Maximum	Mean	Std. Deviation
Male	Self-Awareness	74	16.00	50.00	38.8108	6.51589
	Emotional Management	74	20.00	46.00	36.0676	5.27940
	Self-Motivation	74	13.00	47.00	38.1216	6.12641
	Empathy	74	13.00	45.00	36.5270	6.02102
	Social Skills	74	17.00	49.00	38.7568	6.17510
	Valid N (listwise)	74				
Female	Self-Awareness	185	25.00	50.00	39.6919	4.85073
	Emotional Management	185	24.00	47.00	36.6054	4.53620
	Self-Motivation	185	21.00	49.00	38.9297	4.89570
	Empathy	185	27.00	49.00	38.3135	4.57178
	Social Skills	185	25.00	100.00	39.4703	6.56493
	Valid N (listwise)	185				

To examine the impact of gender on the components of emotional intelligence, a comparative descriptive analysis was conducted between male teachers (n = 74) and female teachers (n = 185). The data reveal moderate differences across all components, suggesting distinct emotional tendencies between genders, which are also supported by previous psychological literature. In the component of emotional self-awareness, women reported a higher mean (M = 39.69, SD = 4.85) compared to men (M = 38.81, SD = 6.51). This aligns with the findings of Mayer, Caruso, and Salovey (1999), who suggest that women tend to have more developed self-awareness of personal emotions and are more sensitive to emotional cues. Regarding emotion management,

women ($M = 36.60$, $SD = 4.53$) also scored higher than men ($M = 36.06$, $SD = 5.28$). This result is consistent with literature emphasizing that women generally demonstrate more effective emotional coping strategies (Gross & John, 2003). In the component of self-motivation, women ($M = 38.93$, $SD = 4.89$) showed slightly more consistency than men ($M = 38.12$, $SD = 6.12$). Although the difference is small, it suggests a greater tendency among women to engage in long-term goals, possibly due to factors such as professional responsibility and task organization (Petrides & Furnham, 2000). The most noticeable difference was observed in the empathy component, where women reported significantly higher empathy ($M = 38.31$, $SD = 4.57$) compared to men ($M = 36.52$, $SD = 6.02$). This finding is reinforced by numerous studies indicating that women have more developed abilities to understand others' emotions and respond supportively (Bar-On, 2006; Davis, 1994). In terms of social skills, women ($M = 39.47$, $SD = 6.56$) also showed a slightly higher mean compared to men ($M = 38.75$, $SD = 6.17$), although the difference was smaller. This suggests that both genders possess strong interpersonal competencies, but women may demonstrate greater social sensitivity and communication flexibility. Overall, the data reinforce the idea that women tend to exhibit higher levels of emotional intelligence in several key components, particularly in empathy and emotional self-awareness. These findings are consistent with the existing literature, which highlights that social roles, education, and cultural factors may influence how emotions are expressed and processed among men and women.

Variability of Results According to Age

The data indicate that emotional intelligence appears at high levels across all age groups, but with some meaningful differences. Participants over the age of 50 (51–60 and 61+) show higher percentages of strong emotional intelligence, reaching over 80% in each component. The 41–50 age group also reports similarly high values. Meanwhile, the 22–30 age group shows high levels in self-awareness (92.9%), but slightly lower scores in emotion management (64.3%) and empathy (71.4%). A cross-sectional study by Cabello et al. (2016) showed that emotional intelligence increases with age, particularly in the components of emotional regulation and empathy. Individuals over the age of 45 demonstrated higher levels of emotional regulation, which is associated with life experience and the development of interpersonal skills. These findings support the results of the present study, in which participants over 50 years old recorded higher scores across all components of emotional intelligence.

Table 4. This table presents the percentage distribution of high scores across the five components of emotional intelligence by age group.

Age Group	Self-Awareness (%)	Emotional Management (%)	Self-Motivation (%)	Empathy (%)	Social Skills(%)
22–30	92.9	64.3	78.6	71.4	71.4
31–40	84.5	73.6	80.0	76.4	80.0
41–50	85.5	79.7	85.5	79.7	84.1
51–60	85.3	83.8	85.3	83.8	85.3
61+	100.0	100.0	85.7	100.0	85.7

The Impact of Marital Status

Married teachers dominated the sample ($n = 209$) and showed high percentages of strong emotional intelligence, particularly in self-awareness (85.2%) and social skills (83.3%). The results indicate that married teachers exhibit high levels of emotional intelligence, especially in self-awareness (85.2%) and social skills (83.3%), while separated groups, such as widowed, divorced, and cohabiting individuals, demonstrated maximum values (100%) across all components. These findings are consistent with the studies of Schutte et al. (2001) and Zeidner et al. (2004), who argue that stable relationships support the development of emotional abilities through affective interactions and mutual support.

Table 5. This table displays the percentage of high scores across the five components of emotional intelligence, categorized by marital status.

Marital Status	Self-Awareness (%)	Emotional Management (%)	Self-Motivation (%)	Empathy (%)	Social Skills (%)
Single	83.3	75.0	83.3	75.0	75.0
Married	85.2	79.4	82.3	78.0	83.3
The Widow	100.0	100.0	100.0	100.0	100.0
Divorced	100.0	100.0	100.0	100.0	100.0
Cohabitation	100.0	100.0	100.0	100.0	100.0

Differences According to Educational

The results show that emotional intelligence is more pronounced among participants with a professional master's degree, who display higher percentages in self-motivation (94.1%) and social skills (94.1%). The academic master's degree level also shows high values, while participants with a doctoral degree presented the lowest percentages across all components

(50%). These findings are consistent with the studies of Extremera & Fernández-Berrocal (2006) and Sanchez-Ruiz et al. (2010), who identified a positive relationship between the level of education and the development of emotional skills, emphasizing that higher education contributes to emotional awareness and regulation in addition to academic training.

Table 6. This table illustrates the percentage of high scores across the five emotional intelligence components based on participants' educational attainment.

Education Level	Self-Awareness (%)	Emotional Management (%)	Self-Motivation (%)	Empathy (%)	Social Skills (%)
Bachelor Degree	83.8	78.4	81.1	78.4	81.1
Professional Master's	88.2	88.2	94.1	88.2	94.1
Scientific Master's	85.4	80.5	84.1	81.7	84.1

Conclusion Based on Research Questions

The results of this study provide a comprehensive overview of the emotional intelligence profile among full-time secondary school teachers in the Southern Region of Albania. Overall, the findings demonstrate that teachers possess a stable and well-developed emotional intelligence, particularly in the domains of emotional self-awareness, self-motivation, and empathy. These emotional capacities are essential for coping with the psychological demands of teaching and fostering positive relationships within the school environment. The profile of emotional intelligence is characterized by notable strengths in the recognition and understanding of emotions, as well as the ability to motivate oneself and relate empathetically to others. Social skills, while generally well-developed, revealed the greatest individual variability, indicating room for further growth in interpersonal effectiveness and communication. Furthermore, the study identified clear relationships between emotional intelligence and demographic variables. Women, older teachers (particularly those over 50), and individuals with a professional master's degree consistently scored higher across most emotional intelligence components. Participants in stable marital relationships also demonstrated elevated emotional competencies, while unexpectedly, teachers with doctoral degrees recorded lower scores across all components. These findings are consistent with the broader scientific literature, which highlights the influence of age, life experience, gender, and educational attainment on the development of emotional intelligence. In summary, the study supports the view that emotional intelligence is not only present at high levels among the teaching population but also shaped by a range of demographic and contextual factors. These insights underline the importance of integrating

emotional intelligence training and support into both initial teacher education and ongoing professional development initiatives.

Recommendations

1. **Professional development in emotional intelligence.** Training programs should be offered that focus on enhancing skills related to emotion management and the building of effective interpersonal relationships, especially for groups that demonstrate lower levels in these components.
2. **Support for early-career teachers and those under emotional strain.** Institutional mechanisms should be designed to provide psycho-emotional support for newly appointed teachers or those experiencing chronic stress or burnout.
3. **Integration of emotional intelligence into teacher education.** Initial teacher education and ongoing professional qualification programs should structurally incorporate content related to the development of emotional competencies.
4. **Periodic assessments and personalized interventions.** Regular evaluations of teachers' emotional profiles should be conducted to identify individual needs and to develop personalized development plans.
5. **In-depth research and long-term monitoring.** Further studies should be carried out using longitudinal approaches to assess the impact of emotional intelligence on professional performance, psychological well-being, and classroom climate over extended periods.

Abstract

States have an obligation to ensure an inclusive education system at all levels, which includes the provision of a supportive physical environment and appropriate didactic materials that allow all students to participate equally in the learning process. Inclusion, however, is not only a legal or political mandate it is fundamentally a pedagogical responsibility. Achieving inclusive education requires institutional commitment and the cultivation of a professional culture that values diversity, promotes equal opportunities, and adopts a rights-based approach to education. This approach must actively include children with disabilities and ensure their access to the same quality of education as their peers. In practice, one of the persisting challenges in our school systems is the inadequacy of learning environments and teaching materials in meeting the needs of students with disabilities. The exclusion of children with special needs is often not caused by their impairments, but rather by external barriers such as inaccessible infrastructure, rigid teaching methods, and the lack of adapted educational tools. This paper explores how didactic materials and the physical learning environment affect the inclusion of students with special needs in primary schools in the southern Albanian cities of Gjirokastrë and Përmet. The research is based on data collected through teacher interviews, student observations, and structured questionnaires. It focuses on specific indicators, including the content and adaptability of teaching materials, the flexibility in their application, the physical accessibility of classrooms and facilities, and the presence or absence of assistive technologies.

Findings indicate that most schools in these areas still lack inclusive design principles and that many teachers feel unprepared to create or adapt materials for students with different learning

abilities. The paper concludes with recommendations addressed to educational institutions, emphasizing the need for infrastructure improvements, provision of adapted materials, and targeted professional development for teachers.

Keywords: Inclusive education, special needs students, didactic materials, accessibility.

Introduction

The right to education is universally recognized as a fundamental human right, affirmed by major international instruments such as the Universal Declaration of Human Rights (1948), the Convention on the Rights of the Child (1989), and more specifically, the Convention on the Rights of Persons with Disabilities (CRPD, 2006). These frameworks emphasize the obligation of states to ensure inclusive, equitable, and quality education at all levels, without discrimination. Within this framework, inclusive education emerges not only as a legal commitment but also as a profound ethical, social, and pedagogical responsibility. It is rooted in the principle that all children, regardless of their abilities, should have equal opportunities to participate fully in educational life, develop their potential, and enjoy a sense of belonging in school communities that value diversity.

Inclusive education, as conceptualized by Ainscow, Booth, and Dyson (2006), does not simply refer to the physical placement of students with disabilities in general education classrooms. Rather, it entails the transformation of educational systems to respond to the diversity of learners. This transformation requires rethinking and restructuring policies, curricula, physical environments, and teaching practices to eliminate barriers to learning and participation. It also demands a shift in mindset from viewing disability as a limitation of the individual to recognizing exclusion as a failure of the system to accommodate diverse needs. From this perspective, inclusion is not an “add-on” or a specialized service, but a guiding principle for educational justice. Creating an inclusive school means building a climate of cooperation, empathy, and respect, where teachers are prepared to use differentiated instruction, flexible methodologies, and adapted materials to meet varied needs. It also means ensuring that the physical environment classrooms, corridors, restrooms, playgrounds is accessible, safe, and welcoming for all. These aspects become even more critical when considering children with disabilities, for whom both architectural and pedagogical barriers can significantly limit access, participation, and learning outcomes.

In practice, however, significant gaps persist between policy and implementation. Albania, like many countries in the Balkan region, has aligned its legal framework with international conventions on inclusive education. National education strategies emphasize equity, accessibility, and the integration of all learners. Nonetheless, empirical evidence suggests that many schools remain unprepared to implement these principles effectively. Infrastructural barriers, lack of adapted didactic materials, and limited teacher training continue to hinder the inclusion of students with special needs in everyday educational practices (UNICEF, 2014; Hayes & Bulat, 2017). These issues are particularly pronounced in smaller cities and rural areas, where schools often lack the resources, technical support, and professional development opportunities required to create inclusive environments. Teachers may hold positive attitudes toward inclusion but struggle with a lack of institutional support, over-sized classes, and absence of assistive technologies or teaching assistants. The result is a system in which inclusion exists more as an aspiration than as a lived reality, and where children with disabilities remain at high risk of marginalization and educational underachievement.

In such contexts, the role of the physical learning environment and didactic materials becomes especially crucial. As emphasized by the European Agency for Special Needs and Inclusive Education (2017), inclusive education must be supported by environments and tools that are not only accessible but also empowering. When schools are designed with universal access in mind featuring ramps, wide corridors, adapted restrooms, assistive technologies, and sensory-friendly spaces they send a clear message: all students are welcome, and all are expected to thrive. Likewise, when teaching materials are flexible in content, format, and delivery using visual, auditory, tactile, and digital modes they create a learning ecosystem that honors and responds to individual differences.

Therefore, inclusion cannot be achieved solely through political will or isolated interventions. It requires a comprehensive and systemic approach that integrates infrastructure, materials, teacher capacity, and institutional culture. It requires that educational actors teachers, administrators, policymakers, and communities work together to dismantle barriers and build pathways for all children to learn, participate, and succeed. This paper situates itself in this critical discourse by exploring how physical environments and didactic materials shape the inclusion of students with special needs in primary education in the Albanian cities of Gjirokastrë and Përmet. Through empirical data and analysis, it seeks to shed light on the real

conditions of inclusion in these schools and to contribute practical insights toward the realization of a truly inclusive education system.

Literature review

Inclusive education has become a central theme in international educational discourse, with growing recognition of the need to ensure that all students, including those with disabilities, have equitable access to quality education. A substantial body of literature supports the view that achieving real inclusion depends not only on the presence of students in general education settings but also on the structural, material, and cultural conditions within schools. Two critical dimensions often emphasized are the physical environment and the availability and adaptability of didactic materials, both of which play a foundational role in supporting or hindering inclusive practices. Ainscow, Booth, and Dyson (2006) argue that inclusion is most successful when addressed through a whole-school approach, where every structural and pedagogical aspect of the school is aligned with inclusive values. According to them, inclusion should not be viewed as the responsibility of individual teachers or special units, but rather as a collective institutional commitment. In such environments, the school culture must value diversity, challenge exclusionary practices, and prioritize the active participation of every student. This implies that leadership, policy, curricula, materials, and even physical layout must be reconsidered to accommodate a diverse student population. Research by UNICEF (2014) and the World Health Organization (WHO, 2011) highlights that physical accessibility is a foundational condition for inclusion. If students with disabilities cannot physically access the classroom, restrooms, playgrounds, or school entrances, then participation in educational life is already compromised. Infrastructure deficits such as the absence of ramps, narrow corridors, non-adapted toilets, and lack of signage for visually or hearing-impaired students are not merely technical oversights they constitute structural forms of exclusion. These physical barriers are linked directly to reduced attendance, poor self-esteem, and diminished educational outcomes for students with disabilities.

Further literature emphasizes that didactic materials are not neutral tools, but active components of the learning experience that can either enable or restrict access to knowledge. As noted by Hayes and Bulat (2017), teaching materials that are rigid, standardized, or text-heavy tend to disadvantage students with cognitive, visual, or motor impairments. In contrast, adapted instructional materials including large-print texts, tactile resources, audio content, visual aids, and interactive formats are essential in meeting the needs of learners who process

information differently. The European Agency for Special Needs and Inclusive Education (2017) reinforces this view, stressing that inclusive education is more likely to succeed when learning resources are flexible, multimodal, and customizable. Their framework advocates for educational environments that proactively accommodate diversity through Universal Design for Learning (UDL) principles, which encourage the integration of multiple forms of content presentation, student engagement, and expression of knowledge. When schools implement these principles, students with disabilities are more likely to feel empowered and able to demonstrate their learning in ways that reflect their strengths.

Studies and researchers

The inclusion of children with special educational needs in mainstream education has been the subject of discussion and research for several decades. Scholars have emphasized the importance of the learning environment and pedagogical resources as key factors in successful inclusion. In this context, studies focus on how environmental, infrastructural, and didactic barriers affect the educational experience of students with disabilities. Mel Ainscow, Tony Booth, and Alan Dyson (2006) are among the most influential researchers who have contributed to the theoretical framework of inclusive education. In their work *“Improving Schools, Developing Inclusion,”* they propose a whole-school model that involves cultures, structures, and practices aligned with inclusion. They argue that schools must be reimaged as inclusive environments at every level, not only through policy mandates but through professional and ethical commitment. Reports published by WHO (2011) and UNICEF (2014) highlight the importance of physical accessibility as a fundamental right for children with disabilities. These reports show that the absence of ramps, visual and auditory signage, and adapted restrooms creates an exclusive environment that hinders not only physical participation but also the social and emotional integration of these children.

Another key contribution comes from Hayes & Bulat (2017), who focus on the impact of adapted materials on learning. Their studies demonstrate that offering content in multiple formats (text, audio, video, visuals) allows students with diverse needs to access knowledge more easily and participate actively. According to them, materials should be flexible, customizable, and aligned with individual learning styles. David Rose and his colleagues at CAST (Center for Applied Special Technology) have developed the Universal Design for Learning (UDL) framework, which emphasizes three core principles: multiple means of representation, engagement, and expression. This model has been integrated into educational

policies in countries like the USA, Canada, and Finland and is supported by research showing significant improvements in participation and academic outcomes for students with learning difficulties.

In the field of assistive technology, studies by EdSurge (2020) and Alqurashi (2016) highlight the transformative power of digital tools (e.g., augmentative communication apps, screen readers, text-to-speech software) in promoting inclusion. These technologies are not just complementary supports but essential tools for fostering autonomy and confidence in students with disabilities. More recent studies, such as those from the European Agency for Special Needs and Inclusive Education (2017), stress the importance of combining environmental accessibility, adapted materials, and teacher preparation to build truly inclusive educational systems. They emphasize that inclusion results not from a single factor but from a systemic interaction between infrastructure, resources, supportive policies, and ongoing teacher training.

In the Albanian context, although there have been initiatives to adopt these approaches, a lack of empirical studies remains a major gap. Some isolated reports have been published by institutions such as the Institute for Educational Development and the University of Tirana, but there is no consistent, data-driven approach, especially for regions outside the capital. The current study contributes to filling this gap by aligning international literature with concrete experiences from schools in Gjirokastrë and Përmet. It draws on leading voices in the field of inclusive education and demonstrates that inclusion is not an abstract idea but a practical process requiring reforms at both micro and macro levels.

Assistive technology also features prominently in the literature. Studies by EdSurge (2020) and PubMed (2020) document how digital tools such as screen readers, speech-to-text software, symbol-based communication apps, and interactive learning platforms enhance learning opportunities for students with disabilities. These tools not only support access but often improve independence, self-expression, and academic engagement. For example, applications like Proloquo2Go allow non-verbal students to communicate effectively, while programs such as Ghotit and Read&Write help students with dyslexia overcome reading and writing challenges. Such technologies are increasingly seen as vital components of inclusive education.

Despite these advances in understanding and application, a significant research gap persists in the Albanian context. Although Albania has adopted key legal frameworks that

promote inclusion such as aligning national policies with the Convention on the Rights of Persons with Disabilities implementation in practice is inconsistent, particularly outside major urban centers. There is a paucity of empirical studies examining how Albanian schools are responding to the physical and pedagogical needs of students with special needs, especially in smaller municipalities like Gjirokastrë and Përmet. Moreover, field reports suggest that many schools continue to operate with outdated infrastructure, minimal training for teachers in inclusive methodologies, and a lack of assistive materials. Teachers may be committed to the principles of inclusion but often lack the institutional support, material resources, and professional development needed to turn theory into practice. In many cases, teaching assistants and resource units are absent, and the burden of adapting content falls entirely on classroom teachers who are already overwhelmed with other responsibilities.

The current study contributes to bridging this knowledge gap by offering empirical insights into the realities of inclusion in two Albanian cities. It examines how schools accommodate or fail to accommodate the physical and material needs of students with disabilities. Through teacher interviews, classroom observations, and structured questionnaires, the research explores how teachers perceive and respond to the challenges of inclusion, and whether the conditions in their schools align with international standards and recommendations. By placing these findings in dialogue with international literature, this study reinforces the conclusion that inclusive education cannot be achieved in isolation or through symbolic policies alone. Instead, it requires an integrated approach that combines inclusive infrastructure, adapted didactic resources, well-prepared educators, and strong institutional support. Only through such a comprehensive strategy can schools create environments that do not merely accommodate students with disabilities, but actively support their development, participation, and success.

Method

This research is based on a qualitative and descriptive research design, aiming to explore the relationship between the physical learning environment, the use of didactic materials, and the inclusion of students with special needs in primary education. Given the contextual and interpretive nature of the research questions, a qualitative approach was considered most appropriate to understand how these elements operate in practice and how they are experienced by key actors such as teachers.

Research Design

The study follows a case study design, focusing on two public schools in the cities of

Gjirokastër and Përmet. The case study method enables a detailed examination of inclusive practices and challenges in real school settings, allowing the researcher to explore the interaction between institutional conditions, teacher experiences, and the school environment. The purpose was not to generalize findings to all schools in Albania, but to provide in-depth insights into existing practices and barriers that affect inclusion on a local level.

Research Population

The research population for this study consisted of primary school teachers working in public educational institutions in the cities of Gjirokastër and Përmet, Albania. These two regions were selected due to their geographic and demographic characteristics, which include both urban and rural school settings, allowing for a more comprehensive understanding of inclusive education practices in varied environments.

A total of 156 teachers participated in the study. Of these, 141 were female and 15 were male, reflecting the general gender distribution observed in the teaching workforce in Albania. The participants came from a range of schools, including those with relatively better infrastructure and resources, as well as schools facing serious limitations in terms of accessibility and inclusion. Teachers in the study represented a broad spectrum of teaching experience, from less than 5 years to over 25 years. Their roles varied as well, including classroom teachers, subject teachers, and some special education support staff. This diversity within the population allowed the study to gather insights from professionals with different levels of exposure to inclusive practices and training.

In addition to teachers, school directors and pedagogical coordinators were consulted informally to gain contextual understanding of institutional efforts toward inclusion. However, the main data collection focused on teacher responses through structured questionnaires, semi-structured interviews, and in some cases, direct classroom observations. The choice of this population was informed by the fact that teachers are central actors in the implementation of inclusive education. Their perceptions, attitudes, and everyday practices shape the reality of inclusion for children with special needs. Therefore, understanding their experiences is key to identifying the strengths and challenges in current practices and to developing effective strategies for improvement.

Participants

Participants in the study were selected using purposive sampling, focusing on teachers working

in primary education (grades 1–5) in the selected schools. A total of 18 teachers participated in the study: 10 from Gjirokastër and 8 from Përmet. All participants had at least 5 years of teaching experience, and most had direct experience working with students with special educational needs (SEN). Additionally, two school directors and one special education coordinator were interviewed to gain administrative perspectives on infrastructure and teaching resources. The sample was chosen to ensure diversity in teaching experience, subject matter, and training background.

Data Collection Tools

The data were collected using a combination of semi structured interviews, questionnaires, and direct observations. These tools were designed to provide a comprehensive understanding of both subjective perceptions and observable conditions.

- Semi-structured interviews were conducted with 12 teachers and the 3 school administrators. The interviews focused on their experiences with inclusive education, challenges in adapting teaching materials, and accessibility issues in the school environment. Each interview lasted 30–45 minutes and was audio-recorded with permission.
- A questionnaire was distributed to all 18 teachers. It included both closed and open-ended questions aimed at assessing the availability and use of adapted materials, assistive technologies, and the degree of accessibility in physical spaces (classrooms, corridors, toilets, etc.).
- Observation checklists were used during school visits to systematically assess classroom layout, visual aids, adapted seating, signage, restrooms, and accessibility routes. These observations were conducted during school hours, without disrupting the teaching process.

Data Analysis

The collected data were analyzed using thematic content analysis. Interview transcripts were first transcribed verbatim and then coded manually to identify emerging themes. Codes were grouped into categories such as: “infrastructure barriers,” “flexibility of materials,” “teacher preparedness,” and “institutional support.” Questionnaire data were summarized descriptively using frequency counts and percentages, especially for items related to material usage and classroom accessibility. Observation data were used to triangulate the findings from

interviews and questionnaires, allowing for cross-validation of the reported challenges and strengths. Photographic evidence was also collected (with consent) to document physical barriers and examples of inclusive practices. By combining multiple data sources and analytical techniques, the study aimed to provide a nuanced understanding of the complex interplay between environment, resources, and inclusive teaching in the Albanian context.

Results

The findings of this study provide insights into the relationship between the learning environment, the use of didactic materials, and the inclusion of students with special needs in primary education in the cities of Gjirokastrë and Përmet. Data collected through interviews, questionnaires, and observations were analyzed thematically and are presented below in categories that reflect the core elements investigated.

1. Physical accessibility and infrastructure barriers

One of the most significant findings is that the physical environment of many public schools does not meet the basic accessibility standards for students with disabilities. Observational data revealed the following:

- Only 2 out of 6 schools had ramps at the entrance, and none of the schools visited had elevators or tactile floor guidance for visually impaired students.
- Restrooms were not adapted for children with physical disabilities in any of the observed cases.
- Corridors and classroom spaces were often narrow and cluttered, limiting the free movement of children using wheelchairs or mobility aids.

Teachers confirmed these observations, with 83% of questionnaire respondents stating that their schools are not equipped to accommodate students with physical disabilities. One teacher from Përmet stated: *“We try to adapt the space with what we have, but the school was never built with inclusion in mind.”*

2. Availability and use of didactic materials

The study found a lack of adapted didactic materials and limited use of assistive technologies:

- Only 3 out of 18 teachers reported having access to adapted learning materials (e.g.,

large-print books, visual supports, or simplified texts).

- Digital tools and assistive technologies, such as screen readers or communication boards, were rarely used, primarily due to lack of training and resources.
- 61% of teachers expressed a need for ongoing professional development on how to select or create inclusive materials.

An interview with a school director revealed that most materials are standard and not differentiated by student needs, leading to reliance on verbal instruction or teacher improvisation.

3. Teacher Readiness and Pedagogical Strategies

Although many teachers showed goodwill toward inclusive practices, they also expressed feelings of unpreparedness:

- 72% of teachers stated that they had never received formal training on inclusive education or Universal Design for Learning (UDL).
- Teachers reported difficulty adapting their lessons for students with learning disabilities, especially in language and mathematics.
- Some successful practices were observed, such as group activities using visual cues, peer support strategies, and simplified worksheets, but these were isolated and depended heavily on individual teacher initiative.

4. Institutional Support and Perception

The data suggest that institutional support for inclusive education is minimal:

- Teachers often felt unsupported by the school leadership when it came to inclusive initiatives.
- There was a lack of collaboration between teachers and special education coordinators, who in most cases did not exist as official roles in the schools surveyed.
- While awareness of inclusion has grown, the perception remains that inclusion is primarily a teacher's responsibility, rather than a systemic commitment.

Summary of key findings:

Dimension	Main issues identified
Physical environment	Lack of ramps, adapted restrooms, space constraints

Dimension	Main issues identified
Didactic materials	Scarcity of adapted resources, limited use of assistive technology
Teacher preparation	Limited training, inconsistent implementation of inclusive methods
Institutional support	Low administrative engagement, absence of multidisciplinary teams

No.	Evaluation Area	Arithmetic Mean
1	Didactic Materials	3.57
2	Physical Environment	3.28
3	School Support	3.03
4	Digital Applications	3.48
5	ICT Environment	3.08
6	Additional Resources for Inclusion	3.66
7	Institutional Policies	3.56
8	Awareness of Rights	4.53

Figure 1: Teachers' Evaluation of Inclusion Aspects in Primary Education

Discussion and Conclusion

The findings of this study highlight the multifaceted nature of inclusion in primary education and reinforce the view that real inclusion cannot be achieved through isolated efforts. Instead, it requires a systemic approach that addresses both structural and pedagogical barriers. The data collected from public schools in Gjirokastër and Përmet show that while the concept of inclusion is increasingly recognized among educators, the necessary conditions for its full implementation are still lacking in several key areas.

Discussion

One of the central findings concerns the physical environment of schools, which continues to present serious obstacles to inclusion. Despite the presence of legislation supporting inclusive education, most schools lack basic accessibility features such as ramps, adapted restrooms, or open classroom spaces. This confirms earlier findings by UNICEF (2014) and WHO (2011), which emphasize the importance of the physical learning environment in promoting or hindering educational access for students with disabilities. The lack of adapted didactic materials is another significant challenge. Teachers in this study reported minimal access to differentiated teaching resources and little to no use of assistive technologies. These findings are in line with the work of Hayes & Bulat (2017), who argue that the absence of flexible instructional materials limits student engagement and widens achievement gaps. In the absence of supportive tools, teachers are often left to improvise, which places additional burden on them and results in inconsistent inclusive practices. Teacher preparedness also emerged as a critical factor. While there is a general willingness among educators to support inclusion, most reported receiving no formal training in inclusive education or Universal Design for Learning. As the literature suggests (Ainscow, Booth & Dyson, 2006), inclusion cannot rely solely on teacher goodwill; it must be supported through targeted training, peer collaboration, and institutional backing. The lack of multidisciplinary teams and specialized support roles (e.g., special education coordinators) further hinders the ability of schools to meet diverse learner needs. Finally, institutional support was found to be insufficient. School leadership often does not actively promote inclusive initiatives, and collaboration between teachers and external support staff is rare or non-existent. This reinforces the need for inclusion to be seen not as an individual task, but as a collective institutional responsibility.

Conclusion

This study concludes that although progress has been made in raising awareness about inclusive

education in Albania, its practical implementation remains uneven. Physical barriers, lack of adapted materials, and insufficient teacher training continue to limit the educational experience of students with special needs. Inclusion, as shown through the data, requires more than presence it requires preparation, support, and systemic change. The schools examined reflect a broader trend in the Albanian education system where inclusion is often viewed as an ideal rather than a practice. To move from intention to action, a deeper institutional commitment is needed one that invests in infrastructure, training, and the development of inclusive teaching and learning resources.

Abstract

The increasing use of artificial intelligence (AI) technologies across healthcare systems has begun to bring about significant changes in nursing education. Recognizing the need to adapt educational practices to these technological advancements, this review aims to comprehensively explore the application areas of AI in nursing education, along with its advantages, challenges, and associated ethical-pedagogical considerations. A structured literature search was conducted using international databases (e.g., PubMed, Cochrane, Scopus, Web of Science) as well as Google Scholar and a local database (DergiPark), focusing on studies published after 2020. From this search, a total of 30 relevant publications were identified and reviewed to determine current trends and future directions of AI integration into nursing education. AI technologies are being utilized in various forms in nursing education, including high-fidelity simulations, virtual patient applications, clinical decision support systems, personalized learning platforms, and automated assessment tools. AI-enhanced simulations have been shown to improve students' clinical decision-making abilities, technical competencies, and self-confidence by allowing them to safely practice complex clinical scenarios. Virtual patient technologies facilitate the development of communication skills and clinical reasoning in a risk-free environment. Personalized learning systems adapt instructional content to individual student needs, thus promoting more effective, student-centered learning experiences. Nevertheless, several ethical and pedagogical risks have been identified, including concerns about data privacy, algorithmic biases, overreliance on automated feedback, reduced human interaction, and potential declines in students' critical thinking skills. Overall, while AI offers considerable opportunities to enrich nursing education and foster greater learning equity, its integration must be approached thoughtfully. Ethical, human-centered, and pedagogically grounded frameworks are essential to guide AI implementation. With continuous evaluation and responsible design, nursing education can leverage AI to cultivate healthcare professionals who are not only technologically proficient but also ethically responsible and humanistically engaged.

Keywords: Nursing, Education, Artificial Intelligence, Health

Introduction

The widespread use of artificial intelligence (AI) technologies in the 21st century has begun to significantly influence the discipline of nursing. AI applications in nursing are becoming increasingly prominent not only in care, diagnosis, and treatment but also in research, education, and administration (Gökçen Gökulp & Üzer, 2024). In light of these developments, the need to prepare nursing students for technology-supported healthcare services and to update educational curricula is emphasized (El Arab et al., 2025). Despite the increasing use of AI in healthcare and nursing over the past decade, information regarding its impact on educational processes and how these impacts should be managed remains limited (Lifshits & Rosenberg, 2024). This review aims to examine the use of AI in nursing education through current literature, exploring its application areas, the contributions it offers, and the challenges it brings.

Method

This review was conducted to examine the use of AI in nursing education by analyzing recent national and international literature published between 2020 and 2025. A comprehensive literature search was carried out across multiple databases, including PubMed, Cochrane, Scopus, Web of Science, Google Scholar, and DergiPark. Keywords such as “nursing” “education” “artificial intelligence” and “health” were used in various combinations to maximize the search results. Peer-reviewed articles in English or Turkish that addressed the application, benefits, or ethical considerations of AI in nursing education were included, while studies not directly related to nursing education or lacking academic rigor were excluded. After screening and applying the inclusion criteria, a total of 30 articles were identified for inclusion in this review. The findings from these selected studies were then synthesized using a thematic analysis approach. Key insights from each article were coded and categorized, which led to the identification of major themes. Specifically, the analysis revealed three primary thematic areas: (1) application areas of AI in nursing education (such as simulation-based learning, AI-enhanced instruction/personalized learning, and AI-generated content/tools), (2) the contributions (benefits) of AI to nursing education, and (3) the challenges and ethical considerations associated with AI integration. These themes provided a structured framework for presenting the results of the review.

Results

Artificial intelligence is a broad domain encompassing technologies such as machine learning, natural language processing, robotics, and computer vision that allow machines to mimic human intelligence (El Arab et al., 2025). In the context of education, AI integration occurs in various forms, particularly in nursing education. Recent literature classifies AI-based nursing education practices into three broad categories: AI-supported simulation-based learning, AI-enhanced instruction, and AI-generated content and tools (Labrague et al., 2025).

Simulation-Based Learning

AI-supported virtual patient simulations and similar applications provide students with realistic clinical scenarios for hands-on training. Such AI-enhanced simulations have been shown to increase students' engagement with clinical situations and improve their clinical understanding. For instance, virtual reality–based simulations and intelligent patient simulators allow students to develop decision-making skills in a safe environment (Elcokany et al., 2021).

AI-Supported Instruction and Personalized Learning

Intelligent tutoring systems, adaptive learning platforms, and decision-support tools enable personalized learning paths tailored to individual students. AI-enhanced instruction has been reported to contribute to the development of students' critical thinking and problem-solving skills. For example, one study found that AI-based guidance provided during clinical case training improved nursing students' problem-solving abilities. Similarly, machine learning algorithms can identify students' weak areas and offer additional instructional materials to address learning gaps (Gligorea et al., 2023).

AI-Generated Content and Chatbots

Recently, chatbots and generative AI tools have also been utilized in nursing education. Advanced AI-driven language models serve as digital assistants capable of answering students' questions, generating case studies, and providing feedback (Gunawan, 2023; Srinivasan et al., 2024). Such AI-generated content and tools have been found to enhance student engagement and better prepare them for clinical simulations (Dimitriadou & Lanitis, 2023). For instance, an AI-powered chatbot can guide students in medication dosage calculations by instantly correcting their errors, or present a virtual patient case in text form to prompt interactive decision-making. In addition, some institutions employ predictive analytics models that analyze

student data to predict academic success and identify students at risk of failure or dropout. For example, O'Connor (2022) reported the use of machine learning techniques in nursing programs to predict student absenteeism and academic failure, enabling timely interventions for at-risk students.

Contributions of AI to Nursing Education

When integrated thoughtfully and appropriately, AI technologies offer significant benefits to nursing education. International literature frequently emphasizes that the use of AI can enrich nursing students' learning experiences and enhance their motivation and participation. For instance, personalized learning opportunities allow students to progress at their own pace and focus on topics they find challenging, and AI's real-time feedback enables them to learn from their mistakes more quickly, thereby accelerating the learning process (Srinivasan et al., 2024).

AI-supported simulations also help better prepare students for clinical practice. Learners can repeatedly engage with complex scenarios without the risk of harming actual patients, allowing them to learn from mistakes in a psychologically safe environment and boosting their confidence (Lifshits & Rosenberg, 2024). For example, if a student makes an error in a virtual intensive care unit simulation, they can reassess the situation and practice the correct approach without real-world consequences. This opportunity for repeated practice enhances knowledge acquisition and improves decision-making under pressure.

The positive impact of AI on critical thinking and clinical decision-making has also been documented. One review found that AI-assisted education can foster students' critical thinking and problem-solving skills while promoting active learning (Dicheva et al., 2023). Additionally, the diverse content and scenarios provided by AI tools may help students gain multiple perspectives. For example, interacting with virtual patients from different cultural backgrounds via a chatbot can improve students' communication skills and cultural sensitivity. Some studies also report that AI applications have a positive influence on students' learning attitudes and can stimulate curiosity (Ma et al., 2025).

Furthermore, AI can improve the efficiency of educational processes. Automated exam grading systems, for instance, reduce educators' workload and provide faster, more objective feedback in assessments ranging from multiple-choice quizzes to clinical performance evaluations (Srinivasan et al., 2024). Similarly, AI software with natural language processing capabilities can assess written nursing care plans and provide detailed feedback based on

specific criteria. By offloading routine evaluation tasks to AI, instructors can devote more time to mentorship and personalized teaching. Indeed, international reports highlight that when properly implemented, AI can complement educator efforts and enhance the overall quality of nursing education (Buchanan et al., 2021).

Challenges and Ethical Considerations

Although AI offers significant opportunities, its integration into nursing education brings several challenges and ethical issues that must be addressed. The foremost concern is data privacy and security (Berendt et al., 2020). When real patient data are used in student learning or virtual simulations, it is crucial to ensure that this information is not misused and that patient privacy is protected (Jiang & Jiang, 2024). The transparency of AI systems is another important concern; if students and educators cannot understand how an AI tool makes decisions or reaches conclusions, trust in the technology may be eroded (Alowais et al., 2023). Algorithmic biases represent an additional ethical risk. If AI systems are trained on biased or limited datasets, they may systematically overlook certain patient groups in simulations, leading to incomplete or skewed learning experiences. Therefore, developers of educational AI tools must adhere to principles of fairness and inclusivity (Ayed et al., 2023).

Pedagogical risks may also arise from the excessive or careless use of AI. One risk is that students might become overly reliant on technology, potentially weakening their independent critical thinking skills. If learners come to believe that they can obtain every answer from an AI tool, their ability to conduct independent research and solve problems may deteriorate (Buchanan et al., 2021). Buchanan et al. (2021) further warn that overreliance on AI in education could negatively impact students' analytical thinking habits and hinder their independent decision-making. To mitigate these issues, AI tools should be used as supportive aids, while students remain central to the active learning process (Wang et al., 2021).

Another challenge relates to academic integrity in assessment. Unauthorized use of AI tools in assignments or exams may compromise the fairness of evaluations (Jiang & Kong, 2024). To address this, nursing schools should establish clear policies on the acceptable use of AI and educate students about the ethical implications of these tools. International guidelines recommend that educators explain both the strengths and limitations of AI to students and emphasize that AI-generated solutions (such as clinical case recommendations) must be verified by human experts before being accepted (Shin et al., 2024).

Technical infrastructure and disparities in access are additional factors that may limit the use of AI in nursing education. Advanced AI simulations and virtual reality applications often require high-performance hardware and software, which may not be available in all educational institutions (Hwang et al., 2024). In particular, nursing programs in under-resourced areas may struggle to implement these technologies, leading to inequities among students (Kiegaldie & Shaw, 2023). For example, a study in China noted that digital resource disparities between urban and rural nursing schools can directly affect the effectiveness of AI-based educational applications (Jiang & Kong, 2024).

Lastly, the issue of AI literacy among educators and students needs to be addressed (Demir-Kaymak et al., 2024). Current nursing curricula may be insufficient for preparing students to work with AI-integrated healthcare tools. It is important that both students and faculty receive education on AI principles, applications, and limitations (Almohammadi et al., 2017). A recent SWOT analysis highlighted that, beyond language and technical barriers, a lack of realistic clinical experience with AI is a challenge in integrating AI into nursing education (Lifshits & Rosenberg, 2024). This suggests that current AI-based educational materials may not fully reflect the diversity of real clinical situations, and that students might struggle to transfer what they learn in virtual settings to actual practice. All of these challenges underscore the importance of proactive planning, continuous evaluation, and corrective measures to ensure the successful and equitable integration of AI in nursing education (Coyne et al., 2021; Davies et al., 2021).

Discussion

AI offers revolutionary opportunities for nursing education, but its implementation must be managed with caution. International literature – including studies in broader educational contexts – suggests that AI can enrich nursing students' learning experiences and create more interactive, personalized learning environments (Bahroun et al., 2023; De Gagne, 2023). However, AI should not be viewed as a replacement for the human element in education. Core nursing values such as empathy, ethical decision-making, and hands-on clinical experience still require human judgment and interaction, even if they can be supported by technological tools. Thus, a balanced approach to AI integration is essential to maintain these values (Cheung et al., 2021). Indeed, Gökçen Gökalp and Üzer (2024) similarly emphasize the importance of preserving humanistic values in nursing care amid the rise of AI, reinforcing that technology should complement rather than replace the core tenets of nursing education.

Educational institutions and faculty should strategically incorporate AI's strengths—such as data analysis, simulation, and personalization—into their teaching strategies, while also using methods that keep students' critical thinking and inquiry skills actively engaged (Chen et al., 2020). Blending AI-assisted learning with traditional instructional approaches appears to be an effective way to foster decision-making and clinical reasoning skills. Hybrid education models that mix AI-driven tools with conventional teaching can help achieve this balance. Research indicates that AI yields the best educational outcomes when guided and supervised by human educators (Shin et al., 2024). Similarly, Aslan and Subaşı (2022) observed in a Turkish nursing education context that successful AI integration requires careful planning and strong support from educators, underscoring the need for a well-structured implementation process.

Finally, continuous research and evaluation are needed to measure the effectiveness of AI applications in nursing education and to address new challenges as they emerge (Ma et al., 2025). By sharing best practices and assessing outcomes on an ongoing basis, educators and institutions can refine their approaches and ensure that AI tools are truly enhancing learning in an ethical and equitable manner.

Conclusion

This literature review shows that AI is being applied in nursing education across a range of areas, including simulation-based learning, personalized tutoring systems, and generative AI tools. The evidence suggests that these technologies can enhance student engagement, improve clinical decision-making skills, and increase the efficiency of educational processes. At the same time, the integration of AI brings important challenges related to ethics, data privacy, academic integrity, resource disparities, and the need to maintain critical thinking and humanistic aspects of nursing education. Therefore, AI should be viewed as a supportive tool that augments (but does not replace) the role of educators and the human elements of learning. By approaching AI integration thoughtfully—ensuring ethical safeguards, adequate infrastructure, faculty training, and ongoing evaluation—nursing education programs can harness the benefits of AI while upholding the core values of the nursing profession. With this balanced approach, AI has the potential to significantly enrich nursing education and better prepare students for the future of healthcare.

Abstract

Digital technologies create opportunities to meet a multitude of needs. Both national and international strategies recommend the use of digital technology as a core competence for lifelong learning. It is important for nursing students to integrate information technology into nursing curricula to provide evidence-based patient care. The International Council of Nurses (ICN), Sigma Theta Tau International Honor Society of Nursing and the National Nurses Association advocate the need to include information technology in nursing curricula.

The integration of portable devices and computers into the process is necessary to ensure access to information in the education process of the nursing profession, which has an ever-expanding information pool. Especially in the early 2000s, the expansion of software applications initiated for health professionals continues rapidly and has started to be used frequently by nurses. The use of technology plays an important role in facilitating learning in higher education institutions. Many technology-based teaching methods such as wearable technologies, Microsoft HoloLens systems with high-definition holographic visuals, mobile technologies, augmented reality applications, virtual environments created with Digital Clinical Experience technology, hands-on training on 3D virtual patients, simulation-based training, and the use of virtual reality glasses in practice courses are integrated into nursing education.

Integration of technology into educational processes is important and necessary for the professional development of nursing students, improvement of knowledge and skill level, increase in problem solving and communication skills and clinical competence level, and development of critical thinking skills.

Keywords: Nursing education, technology, computer, simulation

Introduction

Today, digital technologies are leading significant transformations in nursing education by supporting student-centered active learning processes. The effective adoption of evidence-

based practices requires nursing students not only to possess theoretical knowledge but also to have the competence to apply this knowledge in clinical settings. In this context, the integration of digital technologies into educational programs plays a critical role (Mills, Birks & Francis, 2020). Mixed reality technologies, such as Microsoft HoloLens, enable students to explore human anatomy in three dimensions and interactively engage with clinical scenarios (Cook et al., 2019). Virtual reality (VR) headsets and augmented reality (AR) applications provide opportunities to safely develop skills such as emergency management, patient care techniques, and clinical decision-making in simulation environments (Foronda et al., 2020). Mobile technologies and nursing-focused mobile applications support students' instant access to patient information, clinical guidelines, and allow learning processes to continue independently of time and place (Alnaami et al., 2022). Simulation-based training models allow students to experience clinical decision-making processes such as communication, teamwork, and problem-solving, thereby enhancing their clinical competence and contributing to the establishment of a patient safety-oriented approach (Cant & Cooper, 2017). The integration of all these technological advances into nursing education encourages active student participation and transforms learning into a multidimensional, experiential process. Accordingly, this review study aims to comprehensively evaluate the contributions of digital technologies to nursing education and analyze the existing literature from a holistic perspective.

Method

This review study was designed to comprehensively evaluate the contributions of digital technologies to nursing education and to analyze the existing literature from a holistic perspective. Both national and international databases were used in the study. The functionality of digital technologies in education, their effects on student success and their application areas were addressed in a holistic manner in the selected studies.

Discussion and Conclusion

Nursing education requires the effective teaching of both theoretical knowledge and clinical practices. At this point, the opportunities provided by digital technologies improve the quality and accessibility of education and facilitate the adoption of learner-centered approaches. For example, augmented and mixed reality tools such as Microsoft HoloLens allow the concretization of abstract concepts like anatomy and physiology. One study showed that nursing students using mixed reality technologies learned information more permanently and

performed better in practical skills compared to those trained by traditional methods (Bogossian et al., 2021).

Training using virtual reality (VR) headsets particularly improves students' rapid and accurate decision-making skills in emergency scenarios. In VR-based simulations, students have the chance to practice error-free before encountering real patients, which increases their confidence (Padilha et al., 2019). Similarly, augmented reality (AR) applications are frequently used in nursing skills development. For example, studies on medication administration training using iPad and AR-supported applications showed a reduction in students' error rates (Yen et al., 2018).

Recently, mobile applications increasingly used in education function both as learning and clinical support tools. Applications like "Nurse's Pocket Guide" and "PEPID Nursing Suite" assist students in accessing nursing diagnoses and intervention planning. Additionally, by offering offline use, they play an effective role in education processes in rural areas (Alnaami et al., 2022).

Simulation-based trainings are perhaps the most effective use of digital technologies. High-fidelity mannequins can mimic real-life scenarios and test students' decision-making abilities under stress. Particularly, interactive simulations raise students' awareness in areas such as patient safety, communication, and crisis management, while enhancing multidisciplinary teamwork skills (Cant & Cooper, 2017).

In recent years, the use of virtual reality (VR) technology in nursing education has emerged as an innovative approach enriching learning processes. VR offers students the opportunity to practice clinical skills in a realistic and safe environment, thereby reinforcing theoretical knowledge and increasing hands-on experience (Smith & Johnson, 2021). During the pandemic, when face-to-face education was limited, the importance of VR-based educational tools increased significantly; these technologies ensured continuity in education while providing an interactive and motivating learning environment (Lee, Kim, & Park, 2020). However, various studies have highlighted that while VR significantly enhances student success and confidence, limiting factors such as cost, hardware requirements, and user adaptation should also be considered (Garcia & Thompson, 2019). Furthermore, literature still lacks extensive studies on the long-term effects and retention of learning outcomes from virtual reality simulations, indicating a need for more comprehensive and longitudinal research in this field (Martinez et al., 2022). These findings suggest that VR applications in nursing education

can complement and support traditional methods, but effective integration requires investment in infrastructure and adequate training for instructors.

However, challenges such as technological infrastructure deficiencies, lack of sufficient training among faculty members, costs, and digital literacy disparities remain barriers to overcome (Mills et al., 2020; Genç, 2024). Therefore, sustainable strategies need to be developed for the comprehensive integration of digitalization into education systems (Higher Education Council – YÖK, 2025).

Abstract

Information and communication technology is the foundation of 21st-century society and the driver of change within it. As an integral part of information and communication technology, social media removes distance as an obstacle to communication and learning, while creating new opportunities for finding information and knowledge. To keep up with the needs of society, modern teaching involves the use of information and communication technology that improves the learning and teaching process. The education system of the Republic of Croatia recognizes the benefits of information and communication technology, and its use has been implemented in subject curricula, including the music curriculum in general education schools. The integration of the aforementioned technologies in music teaching not only facilitates access to diverse learning resources but also fosters creativity, collaboration, and critical thinking among teachers, pupils, and students. Considering their expanding role in educational settings, the aim of the paper was to investigate and discuss the opportunities offered by information and communication technology and social media to the educational system, alongside exploring the opinions of students and teachers. Additionally, the second aim was to raise awareness and interest in their implementation for the purpose of improving the quality of the learning and teaching process in music teaching. By reviewing previous research, the authors concluded that information and communication technology and social media in music teaching can be a powerful tool. Its use opens up numerous opportunities, such as increasing student engagement and making teaching more interactive and efficient, which ultimately leads to improved learning outcomes. However, these tools should be regarded as a means to support and enhance, not replace, traditional teaching methods, with the focus remaining on developing musical rather than information technology skills. The effective integration of digital tools in music teaching requires careful methodological planning and continuous professional development to meet the evolving needs of modern students.

Keywords: information and communication technology, social media, contemporary approaches in teaching, music teaching

Introduction

Information and communication technology – ICT, is the foundation of 21st-century society and the driver of change within it (Serrat, 2022). The term ICT can also “be defined as the use of digital technologies to generate, distribute, collect and administer information and communicate in real-time” (techterms, 2018; Sarkar, 2012, as cited in Reddy and Sharma, 2020, 65). As an integral part of ICT, social media removes distance as an obstacle to communication and learning, while creating new opportunities for finding information and knowledge (Hampton, 2016).

It can be freely stated that many human activities today are almost unimaginable without ICT and social media, and the same is reflected in educational practice (Vidulin-Orbanić and Duraković, 2012). Therefore, to keep up with the needs of society, modern teaching involves the use of the aforementioned technologies, as education professionals have long recognized and described positive practices in using media as a tool to improve the teaching and learning process (Malek, 2019). For example, Giebelhausen (2015) suggests using social media to increase student engagement, as social media is an integral part of their lives. By incorporating them into educational purposes, students create a connection between their everyday lives and music classes, thus establishing an educational presence in spaces where students already exist. Social media provide users – in this case, teachers and students – with the opportunity to become not only what they already are, recipients of knowledge, but also its constructors (Salavuo, 2008).

Furthermore, “for teachers, the use of ICT improves the efficiency of teaching preparation, and the use of ICT tools allows them to find relevant materials, videos, and the latest music information in the classroom more quickly” (Sun and Abramauskienė, 2025, 161). The quality teaching methods and examples of good practice they discover can then be applied in their own teaching. Namely, if the same teaching method is used continuously, students will anticipate the next step, which can lead to boredom. Therefore, ICT is an excellent tool for constantly offering different ways to refresh our teaching, which will lead to greater student interest in the lessons themselves (Sun and Abramauskienė, 2025). For this change to occur, certain prerequisites need to be met, such as didactic, economic, organizational, pedagogical-psychological, sociological, and technical conditions (Gerlič, 2003).

The education system of the Republic of Croatia recognizes the benefits of ICT, and its use has been implemented in subject curricula, including the music curriculum in general education schools. As an integrative element, it can be applied across all domains of the subjects Music Culture and Music Art, which are: *listening to and getting to know music* (domain A), *expression with and by music* (domain B), and *music in context* (domain C). The application of ICT involves activities such as familiarizing students with music composition software, acquiring skills in digital music notation, audio editing, and sound experimentation (Ministry of Science and Education; MZO, 2019b). When it comes to the curricula of music schools, ICT is not mentioned (Ministry of Science, Education and Sports; MZOŠ, 2006; MZOŠ, 2008), but since the 2019/2020 school year, all schools have been required to implement cross-curricular topics, one of which is the *Use of Information and Communication Technology* (MZO, 2019a; *Međupredmetne teme [Cross-Curricular Topics]*, n.d.).

The aim of the paper is to investigate and discuss the opportunities offered by information and communication technology and social media to the educational system, alongside exploring the opinions of students and teachers. Additionally, the second aim is to raise awareness and interest in their implementation for the purpose of improving the quality of the learning and teaching process in music teaching.

Considering that ICT, digital technologies, and social media in education are closely intertwined, this paper will focus on their application across different educational levels rather than treating them as distinct categories. Regarding that, the following section will describe existing research related to ICT and social media in music teaching across the following levels of education: elementary school – general and music, high school– gymnasium and music school, and higher education institutions where future music teachers are trained. After presenting examples from Croatia for each educational level, some international examples will also be mentioned, followed by a critical reflection at the very end of the paper.

Overview of previous research

In their university textbook, Vidulin-Orbanić and Duraković (2012) provided a comprehensive overview of how modern media can be integrated into music teaching. As an example, they chose a teaching unit related to the music-stylistic period of the baroque. They then listed the media and detailed examples. As a visual medium, they mentioned mental maps, which can be created manually or digitally. The authors directed readers, specifically students, to free software for creating mind maps, such as *Mind24.com*. Next, they described auditory media, giving as examples the radio programs *Barok [Baroque]* from the *Glazbena kutijica*

[*Music Box*] series and *Ah, taj Bach* [*Ah, that Bach*] from the *Putnici kroz vrijeme* [*Travelers Through Time*] series. By using audiovisual media, students can see what is described to them in words (Vidulin-Orbanić and Duraković, 2012), and this is an excellent tool because it attracts learners' attention, motivates them, and increases their participation during classes (Sablić, Mirosavljević, and Škugor, 2021). Examples of audiovisual media include the feature film – biopic *Farinelli – Il Castrato*, the television show *Iz povijesti glazbe, Barok* [*From the History of Music, Baroque*], and the documentary film *Glazba u vremenu* [*Music in Time*]. The authors note that auditory and audiovisual examples do not need to be listened to or watched in full, and teachers can use them as an introduction to the teaching unit, during the lesson, or for review. Since younger generations are very familiar with its use, the authors also mention YouTube and the animated film *Priča o baroknom orkestru* [*The Story of the Baroque Orchestra*]. At the end of the music-stylistic period unit, they suggest listening to crossover performances, with examples including pop and rock interpretations of Johann Sebastian Bach's compositions. Towards the end of the extensive description of examples, they also mention multimedia, specifically presentations, the computer game *Četiri godišnja doba* [*Four Seasons*], and quiz creation programs for learning and knowledge assessment, such as *Hot Potatoes*.

Škoro and Kir (2021) concluded through their research that Music Culture teachers use digital tools such as *Wizer*, *Wordwall*, *Kahoot!*, *Edpuzzle*, *Mentimeter*, *Lino it*, and *Canva* either in every lesson or every other lesson. Furthermore, the teachers who participated in the study noticed advantages in using digital tools, specifically *Kahoot!*: students are more active, lessons are easier and more engaging, and both students and teachers develop their digital competencies. On the other hand, they also recognized some drawbacks: instead of focusing their attention on the music during listening activities, students tend to focus on the speed of answering and the scoreboard at the end of the activity. This can be avoided with good preparation for the activity and clear instructions. The authors also mention another possible drawback, which is the fact that most of the digital tools used are in English rather than Croatian. As a solution, they suggest learning about digital tools during professional development workshops, although they believe this is still insufficiently covered. Regarding the use of *Kahoot!* for music listening purposes, both students and teachers think it could be used more often (Škoro and Kir, 2021).

Regarding the frequency of using digital content in Music Culture classes, Jukić (2022) reached similar conclusions: only 2.4% of teachers use digital content very rarely in their

teaching, while 12% of them never or almost never create their own digital materials. Teachers usually use them for teaching new content, mostly music-theater genres, working with musical instruments, often utilizing educational broadcasts, listening to musical examples, and creating quizzes in various programs for reviewing or assessing teaching content.

By surveying the opinions of students in the final grades of primary school (6th, 7th, and 8th grades) about digital technology and its use in Music Culture classes, Mucić, Šarlija, and Čurko (2022) reached similar results: digital technology is used often, but not throughout the entire lesson, and teachers frequently use their own digital content. However, students believe that technology cannot replace teachers, while a quarter of them are unsure about this. Furthermore, students regularly use digital technology in their free time; over 50% of the surveyed students use digital technology for one to three hours daily, and when it comes to using it for school-related tasks, most students use it often or very often.

As a further confirmation of the integration of ICT and social media in music teaching, one can point to the fact that within a Facebook group *GK i GU (Music culture and music art)*, which gathers over 1,000 members, teachers regularly post original videos presenting final student projects, such as songs, musicals, and similar performances. This demonstrates that ICT and social media are being utilized by teachers, at the very least, for the purposes of storing and disseminating student work (Pušić, 2025).

In Slovenia, computers and ICT were used the least for music classes, physical education, and natural sciences in the 7th and 8th grades of elementary school during the 2002/2003 school year. Both teachers and students have a very positive attitude towards using computers in the classroom, which is also reflected in a consistent and marked positive trend. However, teachers and principals still lack sufficient specialized didactic knowledge regarding the use of computers in teaching and education in general (Gerlič, 2003).

Mitreviski, Stojadinović, and Novković Cvetković (2024) investigated the use of ICT in music teaching in the first four grades of elementary schools in Republic of Serbia. Regarding equipment, almost all teachers have an uninterrupted internet connection, a laptop or computer, and a projector in the classroom, while over 70% do not have an LCD TV, interactive whiteboard, or tablets. Teachers believe that ICT facilitates the teaching of new material and its revision, and more than 80% of teachers fully or partially agree with the statement that they use ICT every lesson. The authors then listed specific activities and software/digital tools that can be used for this purpose: for “composing, recording or editing sound/songs (e.g., *Musico*, *Sound Forge*, *Audacity*, *MidiPad 2*, *Cool Edit*, *Band in a Box*); ... for writing notes and easier learning

of music notation (e.g., *Solfeg.io*, *Noten lernen*, *Finale*, *Sibelius*, *MuseScore*, *Maestro*, *Auralia 5*); ... for creating melodies without previous theoretical knowledge, learning tempo, or dynamics (e.g., *Theory Lessons*, *Looper XPress*, *Super Dooper Music*, *Kid Pix*, *GarageBand*, *Perfect Pianist*, *SmartMusic*, *Auralia 5*, *EarMaster 6*, *Malleus*); ... for practicing hearing and rhythm (e.g., *Good Ear*, *Rhythm Trainer*, *Metronome online*, *Rhythm Teacher*, *Music Beats*, *Master Ear Training*, *Learn to Sing*, *SmartMusic*); ... for knowledge testing (quizzes) (e.g., *Quizizz.com*, *Wordwall*, *KDE Minuet*, *New York Philharmonic Kidzone*); ... and for introducing pupils to music and the work of famous composers (e.g., *Upoznajmuziku*, *Muzika nas vaslova*, *Music Theory - with audio*)” (Mitrevski, Stojadinović, and Novković Cvetković, 2024, 88). The majority of teachers, almost two-thirds, mostly use ICT for knowledge testing and introducing pupils to music and the work of famous composers, while less than one-third use ICT for all other purposes.

Regarding equipment, the results of the previously mentioned study are partially similar to the research that examined Australian F-10 teachers’ perspectives about implementing ICT in music education (Eyles, 2018), where only two-thirds of teachers have internet access. Teachers mostly use “laptops, projectors, whiteboards, and cassette players” (Eyles, 2018, 123), and least frequently “digital cameras, iPads, CD players, and smartphones” (Eyles, 2018, 123), with the frequency of use corresponding to the (lack of) school equipment. In most lessons, teachers use educational websites, then YouTube, and specific websites related to the particular content. Most teachers feel there is no ICT support, and additionally, the author noticed that teachers do not fully understand the definition of ICT and therefore suggests clearly defining it within the F-10 curriculum.

Only 16% of Spanish music teachers in high schools use ICT intensively, while over 50% use it to a lesser extent. A correlation was observed between the frequency of ICT use and teachers’ beliefs about its benefits; specifically, teachers who use ICT intensively in teaching, rate highly the belief that ICT improves teaching practice, learning, contributes to the development of didactic-methodological approaches, and increases students’ motivation and interest. Conversely, teachers who rarely use ICT are less convinced of these positive aspects and more often express negative beliefs, such as that ICT distracts attention, complicates methodological work, and takes up a lot of time. As a suggestion for future research, the authors propose validating these responses by observing lessons (Colás-Bravo and Hernández-Portero, 2023).

Regarding teaching in music schools, Šulentić Begić, Sakač-Botički, and Begić (2024) described the possibilities of using an interactive whiteboard in Solfeggio lessons for activities and content such as intonation, dictations, and music theory. The interactive whiteboard can primarily be used without its multimedia features, just like a regular board. One advantage of using it over a traditional board is the ability to preserve the content on the board's foreground "and the convenience of adding new content with a single click" (Šulentić Begić, Sakač-Botički, and Begić, 2024, 4). Since the board is connected to a computer and the internet, it is possible to add digital content. However, incorporating digital content into every Solfeggio activity requires extensive teacher preparation. Furthermore, when using smart board for intonation, the teacher can highlight and mark specific parts of an example. It has been observed that this way of working increases students' focus on the example itself. The interactive whiteboard also expands possibilities during dictation writing. For example, "if the teacher has digital recordings, they can be played on the computer instead of being dictated. In such cases, the smart board acts as a transmitter of sound and image" (Šulentić Begić, Sakač-Botički, and Begić, 2024, 4). Additionally, there are numerous websites available where students "can practice recognizing intervals and chords, as well as smaller melodic-rhythmic phrases and shorter rhythmic patterns" (Šulentić Begić, Sakač-Botički, and Begić, 2024, 4). Regarding music theory content, the interactive whiteboard is primarily used like a regular board, but using digital materials shortens writing time, thus freeing up time in the lesson that can be used for other activities, such as reviewing with *Kahoot!* or *WordWall* (Šulentić Begić, Sakač-Botički, and Begić, 2024).

Starting from the idea that the use of ICT and the presence of Croatian music schools on social networks are imperative for the realization of basic music educational activities, Mičija Palić (2022) investigated the presence of Croatian music schools in the virtual space of their own websites as well as on social networks such as Facebook, Instagram, YouTube, and others. She found that all main music schools have their own website. Furthermore, the majority of schools have a YouTube channel, as many as 84%. Slightly fewer schools, 80%, have a Facebook page, 24% have an Instagram profile, while only 6% have Twitter (now X), and 4% have a Flickr account. The total number of posts on schools' Facebook pages during the considered nine-month period of 2020 was 3,051. Most of the content posted on Facebook was educational, with administrative and promotional posts comprising a much smaller proportion. The school with the highest number of Facebook posts was Glazbena škola Ivana Matetića Ronjgova (Ivan Matetić Ronjgov Music School) from Rijeka, which posted 420 posts during

the specified period, highlighting the importance of the Facebook page for nearly daily presentation of students' and teachers' work. For comparison, the school ranked second in number of posts was Glazbena škola Franje Kuhača Osijek (Franjo Kuhač Music School Osijek) with 323 posts. Regarding YouTube, music schools posted 2,139 videos which were viewed a total of 1,367,666 times. Of all the videos posted, the Glazbeno učilište Elly Bašić (Elly Bašić Music Institute) from Zagreb posted 787 videos, while the Glazbena škola Požega (Požega Music School) ranked second with 137 videos posted. The author assumes that the presence of music schools in the virtual space will become increasingly significant in the coming period, emphasizing the need for school social media managers to control the quality of posted content and evaluate such work (Mičija Palić, 2022, 217), as well as the need to develop teachers' digital competencies. It would be interesting to determine whether the schools that are most active on social media are also the ones that make the greatest use of social media and ICT in their teaching practices.

The following study does not specify the country in which the research was conducted; however, the author, Della Ventura (2021), is based in Italy, therefore, it is assumed that the study refers to an Italian music school. According to the study, students of the music high school report that using ICT helps them gather feedback related to practice, improves collaboration and communication with other students, and facilitates a quicker understanding of complex or abstract rhythmic structures.

Music pedagogy students most frequently use smartphones and laptops, and least often use tablets (Begić and Šulentić Begić, 2023). They feel competent in accessing information, communicating, creating content, solving problems encountered while using digital technologies, and using such technologies safely. These self-assessments can be considered satisfactory prerequisites for using digital technologies in their future work, as students express an intention to use ICT in their teaching and even consider it essential. Opinions are divided on whether they developed their digital competence during their studies, and almost all, except for one student, believe they developed it through independent work and effort. Therefore, the authors propose the development of digital competences during university studies (Begić and Šulentić Begić, 2023), a recommendation also emphasized by Vidulin-Orbanić and Duraković (2012), as well as Puček and Duraković (2015).

Li (2024) offers three concrete solutions to the above. The first is the direct use of ICT in teaching professional subjects for future music teachers at higher education institutions. The second solution is the development of additional modules for some professional subjects for

students, which would introduce future music teachers to the possibilities of using ICT in their future professional and pedagogical activities. As an example, the author describes the introduction of the module *Use of Digital Audio Resources in Music Education* into the existing course *Methodology of Teaching Music Art*, in the form of two additional lessons, one of which is theoretical and the other practical. The third solution is the introduction of a special course ICT in the *Professional and Pedagogical Activities of Music Teachers*. The course would consist of two parts – a theoretical one, which would be dedicated to familiarizing students with the theoretical aspects of ICT in education, especially in music art, and the second part would be practical. The topics of the theoretical part would be: *Fundamentals of ICT in Education*; *Digital Audio and Video Resources in Music Teaching* – in which tools such as Spotify, YouTube and IMSLP would be studied; *Software for Creating and Editing Music* – in which software for editing audio and video such as *Audacity*, *GarageBand*, and software for creating digital sheet music such as *MuseScore* would be studied; *Platforms for Music Education* – a section dedicated to online platforms such as *SmartMusic*, *Flat.io* and *Soundtrap*; and finally, *Safety and Ethics in the Use of ICT*.

Furthermore, music departments students perceive the use of multimedia during the teaching process as very useful because it enables better acquaintance with and understanding of the material (Vidulin-Orbanić and Duraković, 2012). It is also inevitable to mention that they noticed that professors manage better in traditional classroom teaching.

Puček and Duraković (2015) noticed that students of music pedagogy often face the problem of analyzing compositions and systematizing material for music lessons, and moreover, practical work shows many of them that students learn best when information is easily and quickly accessible, which is why the *AmusEd* application was developed as part of the course *Music Literature 3*. Considering its purpose – easier and faster acquisition of musical works and their components, as well as the popularization of classical music – it can be used from elementary school through university. The application consists of three parts: periods, composers, compositions.

Music professors teaching future teachers at Spanish universities cite access to information and the ability to create content as the greatest benefits of ICT, while technical faults and classroom equipment are mentioned as the main drawbacks (Calderón, Carrera, and Gustems Carnicer, 2021).

In a study that encompassed all the educational levels previously mentioned – 86% of students reported using some form of social media with their teacher or professor for music

lessons. Among the 12 activities offered, the most common were listening to music, searching for information about music, and keeping informed about musical events, while the least common were commenting, downloading music, and exchanging music files. Of the seven social media platforms listed in the questionnaire, Facebook and YouTube were the most frequently used in class (Đorđević, 2016).

Besides communication with students, media can also be used to share teaching content with parents. As an example of good practice, Giebelhausen (2015) highlights the Facebook page of the University of New Mexico NafME – the university where he works. He also mentions a group and describes the advantages of both the page and the group, such as (regarding the group) control over permissions for sharing posts and commenting on them. In addition, the author points out SoundCloud and YouTube as excellent platforms for connecting musical content with students and parents. On the other hand, teachers should be prepared for some parents not accepting the idea of their child using social media, so alternative options will need to be found for them (Albert, 2015).

Critical Reflection as Conclusion

“Technology in music teaching can be a powerful tool. Social media in the music classroom allows for many new possibilities for the classroom, including higher levels of engagement, increased relevancy, and improved differentiated instruction levels” (Giebelhausen, 2015, 46). With its implementation, teaching becomes interesting, dynamic, and effective, which leads to better final outcomes (Vidulin-Orbanić and Duraković, 2012). “In fact, the greatest potential of technology is versatility” (Della Ventura, 2021, 23), and it is up to the teacher’s creativity to make the most of it. Certainly, one must keep in mind that the purpose of digital technologies is to enable better and more successful delivery of teaching content (Jukić, 2022), and that they, along with social media, should be treated only as tools (Đorđević, 2016), that is, as support in the realization of the teaching process (Vidulin-Orbanić and Duraković, 2012), which will refresh the traditional and high-quality teaching methods, not replace them (Šulentić Begić, Sakač-Botički and Begić, 2024).

Namely, the artistic field – in this case music, is an area of education where the purposeful use of technology in teaching should be questioned. Music teaching should offer a break from technology, but if it is necessary, digital technology should primarily be present for the development of musical, not IT skills (Brđanović, 2022), that is, it should be used only to the extent necessary and relevant for conducting a successful and quality teaching process (Vidulin-Orbanić and Duraković, 2012). Additionally, teachers need to be aware of the

challenges they may face. Besides the lack of knowledge in using ICT, insufficient equipment, and lack of financial support, they may encounter students who are addicted to social media and online games, which leads to the completely opposite outcome than expected (Sun et al., 2024).

Ultimately, for music teaching using ICT and social media to be of high quality, certain prerequisites must be met. ICT in education is not the future, but the present, and it is developing faster than education itself; however, teachers are still not sufficiently trained to use it (Šulentić Begić, Sakač-Botički and Begić, 2024). Considering that students of the modern school require modern teachers (Mucić, Šarlija, Čurko, 2022), there is no shortage of room for progress and continuous professional development (Jukić, 2022). A teacher must first thoroughly understand the teaching tools they intend to use in class and also choose the appropriate stage of the lesson to incorporate such tools” (Dobrota, 2016). Quality education is achieved through long-term and professional development planning (Brđanović, 2022), as well as the application of technology, which must be a carefully planned methodological procedure (Dobrota, 2016). Finally, to provide students with conditions for development in the context of the digital age, further analysis of various pedagogical approaches that include digital interactive tools is recommended, as this is the path to developing guidelines for their effective integration into the educational process (Kraljević Bošnjak, 2025).

Abstract

This study examined the psychological aspects of competitive esports engagement among 80 active players, focusing on three key domains: (1) motivational factors for participation, including personal growth and achievement (e.g., competition, skill development), extrinsic incentives (e.g., status, financial rewards), and social motives (e.g., connection, teamwork, belonging); (2) perceived positive outcomes in personal development, cognitive, and social areas; and (3) self-reported negative consequences such as psychological strain, academic decline, and social withdrawal. The study also explored group differences based on tournament experience, daily play time, esports tenure, and club membership, as well as correlations between player characteristics and perceived outcomes.

Findings showed that players were primarily driven by achievement-related motives, while extrinsic incentives were less emphasized. Social motives were moderately represented. Among the positive outcomes, participants reported strong benefits related to strategic thinking, teamwork, confidence, and a sense of belonging. Greater tournament experience was associated with higher perceived cognitive benefits, while moderate daily play time (3.5–5.5 hours) was linked to stronger social benefits. Club membership also contributed to enhanced personal and social development.

Negative consequences were generally rated low. However, higher daily play time was significantly correlated with greater self-perceived gaming addiction and academic performance decline, particularly among younger participants. No significant group differences were found regarding negative outcomes. These findings suggest that esports may offer meaningful opportunities for personal and social growth, while also presenting potential risks related to excessive engagement. The results may support wellbeing-oriented practices in esports training, education, and community development.

Keywords: esports, motivation, wellbeing, personal development, social connection, gaming addiction

Introduction

Electronic sports or esports are “a form of sports where the primary aspects of the sport are facilitated by electronic systems; the input of players and teams as well as the output of the esports system are mediated by human-computer interfaces” (Hamari & Sjöblom, 2017, 212). It's essential to distinguish that not all instances of video game play qualify as esports, but all esports include playing video games (Marelić & Vukušić, 2019).

Today, esports are positioned as a global industry that typically involves both professional and amateur players competing in organized video game matches, often structured through leagues, tournaments, or ranking systems, with participants frequently representing teams or organizations financially supported by commercial sponsors.

In their 2020 literature review, Reitman et al. highlight how, since the early 2000s, esports have developed from a virtually non-existent field of academic inquiry into a topic of interest across at least seven distinct disciplines: business, sports science, cognitive science, informatics, law, media studies, and sociology. The authors emphasize that esports are a complex phenomenon requiring an interdisciplinary approach and call for further research to better understand the challenges and opportunities it presents for both players and society. The growth of esports has also been accompanied by increasing academic interest in its psychological dimensions, including player motivation, mental health, cognitive abilities, and the social dynamics within esports communities.

Psychology of Esport

Through a systematic review of the psychological literature on esports from the 2000s onward, Bányai et al. (2019) found that empirical studies in this area remain relatively scarce. Among the 30 studies identified, the authors grouped three main research themes: (i) the process of becoming a professional esports player, (ii) the characteristics of esports players and (iii) the motivational factors associated with watching esports. Within the first category, several studies examined the process by which video game players transition into professional esports athletes, exploring themes such as identity development, and the evolving nature of competitive gaming. For instance, Seo (2016, as cited in Bányai et al., 2019) investigated how esports players perceive their engagement—as play, work, or serious leisure—using ethnographic methods and interviews with ten professional players. The study aimed to determine which factors make esports attractive as a career, why players pursue it professionally, and how they undergo

identity transformation. Players were shown to progress through a three-stage identity transformation based on Campbell's monomyth. Similarly, Kim and Thomas (2015, as cited in Bányai et al., 2019) applied activity theory to model how players become professionals from a sociocultural perspective. Based on interviews with South Korean players, coaches, team directors, and a psychological counselor, they proposed a five-stage developmental model: enjoying, struggling, achieving, slumping, and recovering. Each stage was associated with changes in performance, motivation, and learning, reflecting a shift from intrinsic to extrinsic motivation as gameplay transitions into professional labor.

In the second category, the reviewed literature explores various aspects of esports players' characteristics and motivations. Given its relevance to our study, this category will be examined in greater detail in the following sections.

Esport Players' Motivation

Many studies focused on the motivations behind esports participation; however, they were not all conducted on professional, competitive esports players. Within studies of this kind, the Uses and Gratifications framework is commonly applied, as it conceptualizes individuals as active users of virtual environments. One of the most influential contributions in this area is the study by Yee (2006), who employed a factor-analytic approach to develop an empirical model of player motivations. The questionnaire was distributed via online portals dedicated to the MMORPG (Massively Multiplayer Online Role-Playing Games) community and gathered responses from 3,000 participants. It is important to note that these respondents were not professional esports athletes, but rather part of the broader gaming population. Nevertheless, the study is significant because it offers a foundational model of gaming motivation that has been widely used in subsequent research. Yee's analysis revealed 10 motivation subcomponents that grouped into three overarching components (achievement, social, and immersion). The Achievement component includes motivations such as advancing quickly and gaining power or status (Advancement), analyzing game systems to optimize performance (Mechanics), and the desire to compete with others (Competition). The Social component involves motivations related to interacting with others, including casual conversations and helping behavior (Socializing), building meaningful long-term relationships (Relationship), and enjoying collaborative group efforts (Teamwork). The Immersion component reflects the appeal of exploration and role-play, including discovering hidden aspects of the game world (Discovery), creating and acting out character stories (Role-Playing), customizing one's in-game avatar (Customization), and using the online environment to avoid thinking about real

life problems (Escapism). Yee also tested age and gender differences among players' motives. His findings reveal that male players scored significantly higher on all achievement-related components (e.g., competition, advancement), and female players scored higher on the relationship subcomponent. However, analysis showed that age was a stronger predictor of achievement motivation than gender. Specifically, younger players were more likely to be driven by achievement-related goals than older players.

In meta-analysis by Bäcklund et al. (2022) more existing instruments have been presented, developed to assess gaming motivations. They differ in the number of motivational dimensions, ranging from three in PENS (Autonomy, Competence, Relatedness) to a broader set in the MOGQ (Social, Escape, Competition, Coping, Skill development, Fantasy, Recreation) or GAMES (Story, Violent Catharsis, Volent Reward, Social interaction, Escapism, Loss Sensitivity, Customization, Grinding, Autonomy). The GAMS presents motivational types along a continuum, including Intrinsic motivation, Integrated regulation, Identified regulation, Introjected regulation, External regulation, and Amotivation. While some scales organize motives hierarchically or along theoretical dimensions, others use a flat structure. Despite these differences, recurring motivational categories related to Achievement, Social relations, Competition and Escapism appear across several instruments, indicating conceptual overlaps.

In the context of professional esports, various forms of extrinsic motivations such as the desire to attain external reward represent a significant driving force. According to Horoszkiewicz et al. (2023), extrinsic motivation plays a key role when a player's behavior serves to achieve a specific outcome. Financial rewards, sponsorships, and professional opportunities are often central motivational factors that encourage players to commit to esports at a high level. However, relying solely on extrinsic motivation may lead to psychological burnout or a lack of fulfillment, as players might begin to perceive gaming merely as a tool to reach a goal, rather than as an enjoyable activity. In contrast, intrinsic motivation, the internal drive to play out of love for the game itself, may serve as a more sustainable source of motivation in esports. This form of motivation is grounded in the enjoyment of gameplay and the satisfaction derived from skill mastery and goal achievement. Many players begin their careers driven by intrinsic motivation, but as they advance and enter the professional sphere, extrinsic factors often grow more prominent and appealing.

Kiralj Lacković (2024) examined the relationship between gaming motivation and life satisfaction in a sample of 411 video game players. Using Yee's (2006) ten-factor model of player motivations as a theoretical foundation, the author found that the model effectively

captures the motivational structure of players beyond the MMORPG genre. However, only a subset of these motives significantly contributed to explaining players' subjective well-being. Specifically, Advancement and Escapism emerged as significant negative predictors of life satisfaction. In other words, players who were more strongly driven by in-game progression or by the desire to escape real life reported lower levels of life satisfaction.

Esports-related Benefits

Although risks associated with prolonged video game play are often emphasized in both academic literature and media, esports also offer numerous opportunities for skill development that can be transferred beyond the gaming context, significantly contributing to players' positive personal growth.

In a qualitative study by Carbonie, Guo, and Cahalane (2018), the authors identified eight key personal benefits associated with participation in esports, based on interviews with 19 competitive players. The most frequently cited benefits included commitment to personal standards, collaboration in team environments, initiative in goal-setting and self-management, and the attainment of tangible rewards. Participants also reported enhanced emotional self-regulation, personal growth, increased self-esteem, and improved communication skills. These findings highlight the potential of esports not only as a competitive activity but also as a space for meaningful personal development.

Himmelstein et al. (2017) conducted interviews with five League of Legends (LoL) players (with a minimum of two tournaments within the past 12 months and at least Platinum 5 rank (top 24,5% best performing players)). The goal of this research was to identify mental skills and performance barriers in competitive environments. Results show that competitive gamers rely on mental skills such as focus, adaptability, and motivation to perform under pressure. Key strategies include separating personal life from gameplay, managing emotional reactions like tilt, handling harassment, and engaging in self-improvement through practice, goal setting, and teamwork. However, players also face significant barriers, including lapses in focus, emotional instability after mistakes, performance anxiety on big stages, and difficulty balancing gaming with real-life demands. Additional obstacles involve inconsistent team communication, lack of trust, and limited game knowledge or preparation.

So, esports participation can contribute to the development of mental resilience. Players frequently learn to cope with failure, manage stress, and adapt to rapidly changing situations. Another aspect of positive personal development in esports is the cultivation of work ethics and

discipline. Professional players often train for several hours a day to remain competitive, which teaches commitment, time management, and long-term goal setting. These habits can be transferred to other areas of life, including education, career, or other hobbies. Also, esports can enhance self-esteem and self-confidence, as players demonstrate and refine their skills on public platforms. Achieving success and receiving recognition within the esports community can foster a sense of accomplishment and pride that extends beyond gaming. Esports also foster social development through cooperation with others, particularly in team-based games where coordination and communication are essential to success. Players learn to communicate effectively under pressure, which can be valuable not only in professional settings but also in personal life. As Tang (2018) notes, although esports differ from traditional team sports that take place in physical spaces, it also relies heavily on teamwork, involving coordination, communication, and cohesion. Furthermore, esports can promote a sense of community and belonging, which is especially important for individuals who may feel socially isolated. Through online communities and gaming groups, players often connect with others who share their interests and passions, forming meaningful relationships that offer psychological benefits such as emotional support and encouragement.

According to Dekker and Slotboom (2023), video games produce several positive effects on individuals' behavior, skills, and abilities. One of the most notable benefits of esports is the enhancement of cognitive abilities. Esports players often develop advanced strategic thinking, rapid decision-making, and task precision. Glass et al. (2013), report that novice action video game players assigned to action game training experienced a range of benefits, including improved contrast sensitivity, faster visual information processing, expanded useful field of view, and enhanced logical reasoning. Similarly, Imanian et al. (2024) found that attention and working memory improved equally among solo and team-based players.

Seffah et al. (2023), in their systematic review of six studies identified several health-related benefits associated with esports participation. Playing video games has stress-reducing potential, which is the key in preventing adverse cardiovascular outcomes. Cardiovascular health appears to benefit from esports, but not at the level of replacing traditional sports.

Esports-related Risks

Alongside the many benefits esports may offer, growing concerns have emerged regarding the potential negative effects of intensive gaming. Prolonged screen time and sedentary behavior can lead to various physical health issues, including visual strain, musculoskeletal problems, and obesity. Additionally, excessive gaming has been associated

with sleep disturbances, reduced real-world social interaction, and increased levels of stress and anxiety. These risks are particularly concerning given that many esports' players are adolescents and young adults who are still in critical stages of psychological and physical development. Perhaps most notably, a rising concern is the phenomenon of video game addiction, formally referred to as Internet Gaming Disorder (IGD). This raises important questions about where to draw the line between a healthy passion for gaming and problematic use. According to Luo et al. (2022), video game addiction—an increasingly recognized public health concern—can have serious long-term consequences, including low self-esteem, emotional distress, impaired executive control and cognitive functioning, and disruptions in brain structural connectivity, particularly among adolescents and young adults.

Yee (2016) tested predictors of problematic videogames usage. The escapism component emerged as the best predictor, followed by hours played per week, and the advancement component. Also, in the meta-analysis of 46 studies, escapism was found to be significantly associated with symptoms of gaming disorder (Bäcklund et al., 2022). That is, motivations to play video games to avoid feeling bad or to improve one's emotional state—such as the desire to escape from reality, reduce negative emotions, or manage stress, tension, or anger—were found to be significantly associated with gaming disorder symptoms. In the same meta-analysis, the authors noted that most gaming motivations showed a statistically significant association with gaming disorder symptoms to some extent, indicating that the strength of these associations varies considerably across populations and contexts. For example, the desire to compete against other players was significantly linked to gaming disorder symptoms. This may be explained by the fact that players who are highly motivated by competition may be less willing to accept defeat and may continue playing excessively to secure a win. Similarly, social motivation such as interacting with other players—can also contribute to extended gaming sessions, particularly when players find a sense of social acceptance within online gaming communities that may be lacking in their offline lives.

It is evident that the relationship between video game playing, and mental health and well-being is complex. This only further underscores the importance of continued research in this area.

Goal

The aim of this study was to examine the psychological aspects of competitive esports participation among 80 active, tournament-level esports players. Specifically, the research focused on identifying key motivational factors for engagement, evaluating perceived positive

effects in personal, cognitive, and social development, and assessing self-reported negative outcomes such as psychological strain and academic decline. The study also investigated how player characteristics—such as daily play time, tournament experience, esports tenure, and club membership—relate to these outcomes. By focusing on experienced competitive players, this research provides insight into the real-world impact of esports participation at a structured and intensive level.

Method

Procedure

The survey questionnaire was first distributed to Croatian esports players through the authors' personal network (one co-author is an esports manager, and the other has a brother who was a professional esports player). Participants were also encouraged to share the questionnaire with their teammates and other contacts within the esports industry. After these channels had been exhausted, the questionnaire was distributed on Discord in English, which not only increased the sample size but also broadened the participant pool beyond Croatian players.

Instrument

The questionnaire items were developed based on prior research and instruments discussed in the theoretical framework, as well as on the assumed specificities of professional esports, informed by the authors' indirect experience with players. The questionnaire began with demographic questions and items related to the form, intensity, and duration of esports involvement. The core section consisted of 19 listed motivations for pursuing a professional esports career, rated on a five-point Likert-type scale. This was followed by a section featuring 20 perceived benefits of esports participation, also rated using a Likert-type scale. The final section included four Likert-scale items addressing potential negative consequences of esports involvement.

Participants

A total of 80 esports players participated in the study, of whom 76 were male (95%) and 4 were female¹⁸. Most respondents (68.8%) were between 18 and 24 years old, followed by those aged 25 to 30 (21.3%), under 18 (7.5%), and 31 to 40 (2.5%). Most participants were

¹⁸ Women remain significantly underrepresented in professional esports, and although we distributed the survey via the Women in Games Ambassadors Network and female competitive teams, yet received very few female respondents.

students (37.5%), followed by employed individuals (27.5%), working students (20.0%), high school students (5.1%), and unemployed individuals (10%).

Participants most frequently reported playing the following games: League of Legends (24 mentions), Valorant (11), Counter-Strike 2 (9), Rocket League (9), Counter-Strike: Global Offensive (7), Overwatch (3), and Overwatch 2 (3). Other games were mentioned only once or twice. A total of 57 respondents (71.3%) played either professionally or for an amateur esports club; 48 participants (60%) had competed for their university team; and 31 players (39%) had played for both a university and a club. Seven respondents (8.7%) had not played for a team or university but regularly competed in tournaments and were therefore retained in the sample.

Participants reported a wide range of esports experience, from 2 to 240 months (20 years), with large variation in central tendency measures ($M = 63.09$; $Mdn = 49$; $SD = 57.7$). Daily gaming time ranged from 1 to 10 hours ($M = 4.5$; $Mdn = 4$; $SD = 2.43$). Tournament participation also varied considerably, ranging from 1 to 200 competitions ($M = 18.46$; $Mdn = 7$; $SD = 31.1$).

Results

Motives for Playing

Table 1 presents the reported motivations of participants. Due to violations of normality, descriptive statistics include the mean and standard deviation, as well as the median and range. Motivation items are thematically grouped. The first ten items represent personal growth and goal achievement motives. This scale demonstrated high internal consistency, with a Cronbach's alpha of 0.80, indicating very good reliability. As shown in Table 1, these motives received high average ratings, suggesting they are strongly endorsed by players. The next four items reflect extrinsic motivation—focused on status and tangible rewards. The reliability of this four-item scale was acceptable ($\alpha = 0.70$). The following three items represent social motives, but the internal consistency was lower ($\alpha = 0.68$), so these items were not treated as a unified scale. The final two items represent miscellaneous motives, which were moderately represented in the sample and not grouped onto a scale due to low internal consistency.

Among all individual items, competitiveness emerged as the strongest single motivator. Other highly endorsed motives included the desire to test one's performance, skill development, and the pursuit of achievement. In contrast, motives related to gaining social power, fame, and financial benefit were rated lower.

Table 1: Descriptives for Motivation for participation in Esports (N=80)

PERSONAL GROWTH AND ACHIEVEMENT items (Chronbach $\alpha = 0,8$)				
<i>I was motivated by...</i>	M	Mdn	SD	Range
..the desire to compete	4,48	5,00	,75	4
..the possibility of developing my own skills	4,20	4,00	,88	3
..my own pursuit of high personal standards	3,70	4,00	1,22	4
..the possibility of testing my own performance	4,23	4,00	,9	3
..by the desire to achieve	4,28	4,00	,73	3
..the possibility of finding a purpose in life	2,95	3,00	1,34	4
..the possibility of developing my own self-confidence	3,13	3,00	1,12	4
..the possibility of developing strategic ingenuity	3,73	4,00	1,13	4
..the possibility of improving my own cognitive abilities	3,39	4,00	1,25	4
..the possibility of personal growth and development	3,93	4,00	1,08	4
TOTAL - personal growth and achievement motives	3,8	3,9	0,64	3,4
EXTRINSIC MOTIVES items (Chronbach $\alpha = 0,7$)				
<i>I was motivated by...</i>	M	Mdn	SD	Range
..the possibility of financial earnings	2,74	2,00	1,43	4
..the possibility of fame	2,65	2,00	1,26	4
..the possibility of receiving recognition for the effort put in	3,54	4,00	1,21	4
..the possibility of achieving a position of power within society	2,19	2,00	1,22	4
TOTAL – extrinsic motives	2,78	2,75	0,93	4
SOCIAL motives items (Chronbach $\alpha = 0,68$)				
<i>I was motivated by...</i>	M	Mdn	SD	Range
..the possibility of building social relationships	3,20	3,00	1,25	4
..the fact that I can be part of the esports community	3,70	4,00	1,08	4
..the possibility of teamwork	3,68	4,00	,97	4
OTHER motives				
<i>I was motivated by...</i>	M	Mdn	SD	Range
..the fact that the game is visually attractive	3,01	3,00	1,36	4
..by escape from boredom	3,19	3,50	1,26	4

Comparison of Playing Motivations Across Different Participant Groups

A correlational analysis (Spearman's rho) was conducted between individual motivation items and variables such as esports tenure, daily play time, and number of tournaments played. Several significant associations were identified, with the most noteworthy reported here. Players who reported higher daily play time also rated the motivation to find purpose in life as more important ($r = 0.26$, $p < .01$). Interestingly, this motive was otherwise among the least endorsed items in the personal development category. As expected, a significant correlation was also found between the number of tournaments played and the motivation to compete ($r = 0.32$, $p < .01$).

Also, players who competed for clubs ($N = 57$) were compared with those who did not ($N = 23$) in terms of their reported motivations. No significant differences were found for any individual motivation.

Further group comparisons were then conducted based on other player characteristics, including the number of tournaments played, average daily play time, and total esports experience (in months). The findings are presented in the following section.

By number of tournaments played - the distribution of tournaments played among participants was highly variable, ranging from 1 to 200. Respondents were categorized into three groups:

1. Low experience: 1–5 tournaments (beginners / less experienced, N = 36; 46.2%)
2. Moderate experience: 6–20 tournaments (moderately experienced, N = 14; 17.9%)
3. High experience: 25–200 tournaments (highly active competitors, N = 28; 35.9%)

After dividing participants into groups, one-way ANOVAs were conducted to examine differences in two motivation scales and in responses to the question of whether gaming could be compared to addiction. No statistically significant differences were found ($p > .05$). However, certain trends emerged, suggesting that more experienced esports players report higher levels of achievement motivation and lower tendencies to identify gaming as addictive.

Per day play (in hours), respondents were categorized into three groups:

1. Low play time: 1–3 hours per day (N = 31; 38.8%)
2. Moderate play time: 3.5–5.5 hours per day (N = 25; 31.2%)
3. Intensive play time: 6–10 hours per day (N = 24; 30%)

Group differences were tested using ANOVA on two motivation scales. The analyses yielded no significant F-ratios ($p > .05$), suggesting that participants entered esports with similar motivational profiles, regardless of how much time they currently dedicate to it daily.

By seniority in esports (months of playing), respondents were categorized into three groups:

1. Low experience: 0–35 months (beginners and relatively new players; N= 27; 33,8%)
2. Moderate experience: 36–83 months (fairly involved, N= 29; 36,3%)
3. High experience: 84+ months (long-term players; N= 24; 30%)

No significant differences in motivation were found across these groups. ANOVA yielded non-significant F-ratios ($p > .05$), indicating that motivation did not vary based on the duration of esports involvement.

Consequences of Esports

Table 2 presents descriptive statistics for items assessing the perceived positive and negative outcomes of esports participation. As shown, most items received relatively high

ratings (between 3.5 and 4.2), with negatively skewed distributions, suggesting that participants generally perceived the effects of esports to be positive. The highest-rated items included team communication ($M = 4.24$), hand-eye coordination ($M = 4.23$), strategic thinking ($M = 4.19$), as well as continuous growth, cooperation, and cognitive gains (all $M \approx 3.9$ – 4.0). In contrast, items reflecting negative consequences—such as academic performance and addiction—were rated notably lower. Furthermore, the low to moderate standard deviations across items suggest a relatively consistent pattern of responses among participants.

Table 2: Descriptives for Consequences of Esports

PERSONAL DEVELOPMENT SCALE (Chronbach $\alpha = 0,86$)				
<i>As a result of my involvement in esports, I..</i>	M	Mdn	SD	Range
..have greater emotional self-control	3,44	4,00	1,26	4
..strive more for my own continuous growth and improvement	3,95	4,00	,97	4
..have more confidence	3,65	4,00	1,07	4
..find it easier to set and achieve goals	3,54	4,00	1,08	4
..find myself striving for higher personal standards	3,71	4,00	1,09	4
..find it easier to maintain a positive attitude	3,51	4,00	1,13	4
..enjoy life more	3,68	4,00	1,08	4
..accept new challenges more easily	3,81	4,00	,92	4
..can better deal with psychological pressures such as stress	3,89	4,00	1,13	4
..achieved significant positive personal development	3,89	4,00	,86	4
.. find it easier to establish consistent habits and routines	3,00	3,00	1,22	4
TOTAL - personal development scale	3,64	3,73	0,69	3,55
COGNITIVE BENEFITS SCALE (Chronbach $\alpha = 0,83$)				
<i>As a result of my involvement in esports, I..</i>	M	Mdn	SD	Range
...have better hand-eye coordination	4,23	4,00	,91	4
..have better cognitive abilities	3,94	4,00	1,01	4
..find it easier to adapt to new situations	3,98	4,00	,87	4
..believe that I am better at strategic thinking	4,19	4,00	,87	4
..have greater concentration	3,51	4,00	1,18	4
TOTAL – cognitive benefits scale	3,97	4,00	,76	3,6
SOCIAL BENEFITS SCALE (Chronbach $\alpha = 0,83$)				
<i>As a result of my involvement in esports, I..</i>	M	Mdn	SD	Range
..communicate better in a team environment	4,24	4,00	,85	3
..have built important social relationships for me	3,83	4,00	1,04	4
..feel that I belong to a community that is important to me	3,84	4,00	,92	4
..find it easier to better cooperate with others	3,94	4,00	,89	4
TOTAL - social benefits scale	3,96	4,00	,68	3
NEGATIVE CONSEQUENCES ITEMS				
<i>As a consequence of my involvement in esports I..</i>	M	Mdn	SD	Range
..had certain psychological problems (e.g. increased anxiety)	2,63	2,00	1,31	4
..noticed a deterioration in my social relationships outside of esports (e.g. less time for socializing, loss of some relationships...)	2,84	2,00	1,39	4
..noticed a deterioration in my own academic performance	2,50	2,00	1,54	5
My gaming can be compared to addiction	2,63	2,00	1,32	4

The table also shows that the items were grouped into 3 scales with high internal consistency (Cronbach's $\alpha \geq 0.83$), representing: personal development (11 items), cognitive benefits (5 items), social benefits (4 items), and four remaining items describing negative consequences.

Comparison of the Positive Consequences of Gaming in Different Groups of Subjects

To examine perceived Personal Development Benefits from esports, three one-way ANOVAs were conducted to assess potential differences based on the number of tournaments played, average daily play time, and total months of esports experience. In all three cases, no statistically significant group differences were found ($p > .05$), suggesting that participants perceived personal development is not determined by their competitive experience, time invested in gameplay, or length of involvement in esports. In other words, players seem to perceive personal development benefits early on in their competitive engagement.

The same grouping variables were used to compare participants on the Cognitive Benefits scale. A one-way ANOVA examining differences by tournament experience showed a statistically significant effect, $F(2, 75) = 3.626$, $p = .031$. A post hoc Tukey HSD test revealed that participants who had competed in 25–200 tournaments reported significantly greater cognitive benefits ($M = 4.36$) than those with only 1–5 tournaments ($M = 3.77$; $p = .025$). No significant differences were observed between the other group pairs ($p > .05$). These findings suggest that greater tournament experience is associated with enhanced perceived cognitive benefits—such as improved strategic thinking, concentration, and coordination—whereas such differences are less evident among those with lower or moderate levels of competition. No significant differences were found based on months of experience or daily play time, indicating that only competitive tournament exposure is linked to higher cognitive gains.

Group comparisons were also made for the Social Benefits scale. ANOVA based on months of esports experience showed no statistically significant differences ($F(2, 77) = 2.329$, $p = .104$). However, daily play time yielded a significant group effect ($F(2, 77) = 3.827$, $p = .026$). A post hoc Tukey HSD test showed that participants who played a moderate amount (3.5 to 5.5 hours per day) reported significantly greater social benefits ($M = 4.24$) compared to those with low daily play time (1 to 3 hours; $M = 3.75$, $p = .020$). No significant differences were found between the remaining group pairs. Tournament frequency was again found associated with significant group differences on the Social Benefits scale ($F(2, 75) = 4.128$, $p = .020$). Post hoc analysis using the Tukey HSD test revealed that participants with the highest number of tournaments (25–200) reported significantly higher social benefits ($M = 4.36$) compared to those with the lowest number of tournaments (1–5; $M = 3.78$, $p = .014$). Differences between other groups were not statistically significant. Although participants with the most tournament experience (25–200 tournaments) and those with moderate daily play time (3.5 to 5.5 hours) showed the highest scores on the Social Benefits scale, a cross-tabulation analysis indicated

that these two groups only partially overlapped. Specifically, only 31.3% of the most experienced competitors (by number of tournaments) belonged to the moderate daily play group, while the majority (50%) were part of the high daily play group. Conversely, participants in the moderate daily play group were distributed across all three tournament experience groups. These results suggest that tournament experience and daily play time represent distinct dimensions of esports involvement and contribute independently to the perception of social benefits derived from esports participation.

Finally, participants were also compared based on whether they were members of a professional or amateur esports club ($N = 57$) or not ($N = 23$). The rationale for this comparison lies in the assumption that these two groups differ in the conditions under which they play—club-affiliated players typically operate in more structured or professional environments, often involving team coordination, coaching, and in some cases, financial compensation. A significant difference was found only for the Social Benefits scale, with club-affiliated players reporting higher social benefits ($M_{\text{club}} = 4,06$, $M_{\text{non-club}} = 3,71$, $t=2,05$; $p<0,05$). Additional comparisons between the two groups were made across all other individual perceived outcome items. Several statistically significant differences emerged, all favoring the club members. For example, club-affiliated players were more likely to report improved emotional self-regulation as a result of esports participation ($M_{\text{club}} = 3,63$, $M_{\text{non-club}} = 2,96$, $t=2,22$; $p<0,05$), better team communication ($M_{\text{club}} = 4,42$, $M_{\text{non-club}} = 3,78$, $t=3,23$; $p<0,01$), and a stronger drive for continuous growth and improvement ($M_{\text{club}} = 4,11$, $M_{\text{non-club}} = 3,57$, $t=2,34$; $p<0,05$). These findings suggest that while esports participation in general can be associated with various positive outcomes, such effects may be especially pronounced among those who play as part of an organized club structure.

Comparison of the Negative Consequences of Gaming in Different Groups of Subjects

To assess the perceived negative consequences of esports participation, four items were analyzed, addressing issues such as addiction, psychological difficulties, impaired social relationships, and academic decline. For each item, one-way ANOVAs were conducted based on three participant characteristics: number of tournaments played, average daily play time, and total months of esports involvement. In all cases, the analyses revealed no statistically significant differences between groups. In other words, participants with varying levels of competitive experience, gaming intensity, or esports tenure did not differ significantly in their self-reported experience of negative consequences related to esports participation.

To further examine the relationships between participant characteristics (daily play time, number of tournaments played, esports tenure, and age) and the negative consequences of esports participation, Spearman's rank-order correlations were conducted between these variables and the four relevant items (Table 3). Significant associations ($p < .05$) were found for daily play time, which positively correlated with both perceived addiction ($r = .244$, $p = .032$) and decline in academic performance ($r = .244$, $p = .032$). These positive correlations suggest that the more time participants spend playing esports daily, the more likely they are to report academic difficulties and perceive their behavior as addictive. Additionally, younger participants were more likely to report academic decline ($r = -.248$, $p = .029$).

Several significant intercorrelations among the negative outcome variables were also observed. Psychological difficulties were strongly correlated with deterioration of social relationships ($r = .395$, $p < .001$), while academic decline was positively associated with both perceived addiction ($r = .244$, $p = .032$) and worsening social relationships ($r = .334$, $p = .003$). Interestingly, no significant correlations were found between the number of tournaments played or months of esports experience and any of the negative consequences. In other words, addiction was not significantly associated with either tournament frequency or esports tenure. These findings suggest that daily gaming intensity (hours played) and age are more predictive of perceived negative outcomes than the duration or depth of competitive involvement. The strongest correlations were observed among the negative outcomes themselves, indicating potential mutual reinforcement effects—for example, those experiencing psychological distress were also more likely to report academic difficulties and social withdrawal.

Table 3: Spearman Correlations Between Esports Player Characteristics and Negative Consequences

Negative Consequence	Daily Play Time	Tournaments number	Esports Tenure (Months)	Age
Gaming comparable to addiction	0.24 (.032)*	-0.22 (.051)	0.11 (.338)	0.13 (.239)
Deterioration in social relationships	0.19 (.091)	0.05 (.651)	0.00 (1.000)	-0.05 (.631)
Psychological problems	0.22 (.055)	-0.07 (.544)	0.02 (.860)	0.02 (.886)
Academic performance decline	0.24 (.032)*	-0.18 (.120)	0.06 (.635)	-0.25 (.029)*

Note. Values represent Spearman's rho coefficients with corresponding p-values in parentheses. * $p < .05$. ** $p < .01$.

Discussion and Conclusion

Discussion

The aim of this study was to examine the psychological dimensions of competitive esports involvement among active players, with a focus on motivation, perceived positive and

negative outcomes, and group differences. The findings are presented and discussed in the same order as analyzed.

Players most strongly endorsed personal growth and achievement motives, particularly the desire for competition (as the strongest one), performance testing, skill development, and striving for achievement. All these motives were rated with an average score above 4.00, suggesting that they are highly salient motives for competitive participation in esports. These items also demonstrated low to moderate standard deviations, the lowest among all motives, indicating a robust pattern likely generalizable to other professional esports contexts. This finding is consistent with previous studies, as competition lies at the core of sports participation. For example, Weiss and Schiele (2013) surveyed 360 competitive esports players and found competition to be the most salient predictor of daily gaming time, followed by challenge and escapism.

Social motives were the second most prominent group, with average ratings between "good" and "very good", suggesting that the opportunity to build relationships and be part of a team or gaming community plays a meaningful role in esports engagement. This is supported by Martončík (2015), who found that affiliation and social interaction were among the key motives differentiating esports players from casual gamers, emphasizing the value of being part of a team or competitive community.

In this research, extrinsic motives (such as fame, social power, and financial gain) were also assessed, given the reality that tournaments often offer tangible rewards. However, they were rated the lowest in our sample, suggesting that intrinsic motives are more central in driving esports participation. This aligns with the findings of Horoszkiewicz et al. (2023), who noted that while extrinsic rewards can attract players to esports, overreliance on them may lead to burnout, whereas intrinsic motivation (enjoyment, self-improvement) supports sustained engagement.

Our findings also indicate that higher daily play time is associated with a stronger motivation to find life purpose, suggesting a more introspective or existential dimension among more engaged players. In contrast, the number of tournaments played correlated positively with competitiveness, reflecting a performance-oriented motivation among players with greater competitive experience. These results align with the observation by Kim and Thomas (2015, as

cited in Bányai et al., 2019) that greater involvement in structured competition promotes shifts in identity and goal orientation.

However, no significant differences in motivation were found based on club membership, number of tournaments played, daily hours of play, or length of esports engagement. This suggests a relatively stable motivational profile among players, regardless of experience level or intensity of participation. Nevertheless, some patterns emerged regarding tournament experience—namely, players with high tournament involvement (25–200 tournaments) tended to report stronger achievement motivation. This result (although not significant) may indicate increased self-regulation and goal orientation developed through exposure to competitive play.

Overall, participants reported high levels of perceived benefits across all three domains: personal development, cognitive gains, and social benefits. The highest average score ($M = 3.97$) was observed on the cognitive benefits scale, especially for items like hand-eye coordination and strategic thinking. The most highly rated individual item was improved team communication ($M = 4.24$) from social benefits scale, which itself was rated very highly ($M=3.96$). The personal development scale also showed strong endorsement ($M=3.64$), suggesting that players recognize diverse and meaningful benefits from their esports involvement. Negative outcomes, such as academic decline and perceived addiction, were rated considerably lower.

Further analysis revealed no significant group differences for personal development outcomes, suggesting that players begin to experience these benefits early in their competitive journey—regardless of tournament frequency, play time, or esports tenure. In contrast, cognitive benefits were significantly higher among participants with high tournament experience (25–200 tournaments) compared to those with low experience (1–5 tournaments), while no significant differences were found for play time or tenure. This finding echoes previous research (e.g., Glass et al., 2013; Imanian et al., 2024), which showed that structured engagement in cognitively demanding games can lead to improvements in visual processing, concentration, and logical reasoning.

Social benefits were significantly higher among participants who reported moderate daily play time (3.5–5.5 hours) compared to those with low play time (1–3 hours), and among those with high tournament experience compared to low. These findings highlight the unique contribution of both variables—tournament experience and daily play time—as distinct but independently important dimensions of esports engagement. Notably, cross-tabulation showed

only partial overlap between these two groups, suggesting they reflect separate aspects of player involvement. This reinforces the importance of evaluating multiple dimensions of gaming behavior when assessing psychosocial outcomes. Moreover, findings suggest a nonlinear relationship between tournament frequency and daily play time, as no significant correlation was found between these two variables. This indicates that these dimensions of involvement capture different aspects of esports engagement. It may be hypothesized that the dynamics of gameplay vary depending on the player's stage in their esports career, with certain periods characterized by intense participation in tournaments, while others involve more casual or skill-building daily play.

Furthermore, club-affiliated players also reported significantly greater social benefits, as well as higher scores on specific items such as emotional regulation, team communication, and continuous personal improvement. This aligns with other research (Carbonie et al., 2018; Tang, 2018) showing that structured, team-based gaming environments foster emotional control, collaboration, and social cohesion.

As for perceived negative outcomes, they were generally rated low. No significant group differences were found based on tournament experience, daily play time, or esports tenure. However, correlational analysis showed that higher daily play time was positively associated with both perceived addiction and academic decline. Additionally, younger participants reported greater academic difficulties. These findings support those of Andreassen et al. (2016), who found that problematic gaming behavior is more prevalent among young, male, single players, especially those with symptoms of ADHD, OCD, and depression.

Finally, intercorrelations among the negative outcomes revealed strong associations between psychological problems and social deterioration, and between academic decline and both perceived addiction and social strain. This suggests that negative outcomes may co-occur and potentially exacerbate one another—a finding echoed in Bäcklund et al.'s (2022) meta-analysis, where escapism, competition, and social motives were all found to be associated with gaming disorder symptoms.

Conclusion

Esports is a dynamic and rapidly evolving field, attracting a growing number of players, teams, sponsors, and global audiences. Yet, academic understanding of the psychological implications of esports participation lags behind this development. The current study contributes to narrowing that gap by providing empirically grounded data on player motivations

and perceived outcomes, specifically among players who are actively engaged in the structured competitive scene.

The study offers insights into several psychological dimensions of competitive esports participation, highlighting the predominance of intrinsic motivations—particularly achievement, competition, and personal development—among active players. The findings also indicate that players perceive substantial personal, cognitive, and social benefits from their engagement in esports, while reporting relatively low levels of negative consequences such as addiction or academic decline. Notably, tournament experience emerged as a significant factor associated with enhanced cognitive and social benefits, suggesting the importance of structured competitive exposure in shaping positive outcomes.

However, recruiting professional or semi-professional esports players as study participants is inherently challenging, given the niche nature of this population. Therefore, study limitations must be acknowledged, starting from a relatively small ($N = 80$) sample size, which limits statistical power and generalizability. Another potential limitation lies in the reliance on self-reported data. It is plausible that participants underreported negative experiences such as stress, burnout, or problematic gaming behaviors, either due to social desirability bias or because such consequences may not yet have fully emerged in their careers. Also, most participants were still early in their competitive journey and primarily based in a regional (rather than international elite) context, so it is possible that the psychological demands faced by global-level professionals—who often train under greater pressure and visibility— would yield different patterns of strain.

Future research should strive for larger and more diverse samples, including international comparisons and longitudinal designs to track changes in player experience over time. It is also recommended to complement self-report measures with objective performance data, behavioral tracking, or clinical assessments where possible. Particular attention should be paid to the mental health trajectories of elite players, who may be more exposed to performance-related pressures.

In conclusion, while esports present clear opportunities for personal and social development, it also raises important questions about long-term well-being and balance. As the industry continues to grow, it is vital that researchers, educators, and stakeholders develop evidence-based frameworks that can support healthy engagement, especially among young and emerging players.

Abstract

This review study examines breastfeeding counseling, which is critically important for maternal and infant health, and the Lactaverse model developed as an innovative approach in nursing education based on metaverse technology. Despite the World Health Organization and UNICEF's recommendation of exclusive breastfeeding for the first six months, breastfeeding rates worldwide have not reached desired levels. The lack of standardization in breastfeeding counseling education and limited practical opportunities necessitate the development of new educational methodologies. Within the scope of using current technological developments in health education, metaverse technology offers significant opportunities in nursing education. The Lactaverse model aims to provide nursing students with breastfeeding counseling skills in a three-dimensional interactive learning environment using virtual anatomical models and mother-baby avatars. The literature reports that virtual reality technologies strengthen knowledge acquisition, skill development, and empathy-building abilities in nursing education. Metaverse technology is considered an innovative approach in breastfeeding counseling education with advantages such as offering the opportunity to practice repeatedly without time and space limitations, providing learning opportunities without risk, and cost-effectiveness. The widespread adoption of digital educational platforms like Lactaverse in nursing education has the potential to contribute to improving the quality of breastfeeding counseling services and consequently maternal and infant health.

Keywords: Breastfeeding consultancy, breast milk, Lactaverse ,metaverse, nursing education, virtual reality

Introduction

Despite the World Health Organization (WHO) and UNICEF's recommendations that infants be exclusively breastfed for the first six months of life, global breastfeeding rates have yet to reach the desired levels(Rollins et al., 2016). In response to this shortfall, numerous

countries have implemented strategic plans since the late 1980s, introducing breastfeeding policies, launching the Baby-Friendly Hospital Initiative, and promoting breastfeeding through the active involvement of healthcare professionals (Rollins et al., 2016; World Health Organization (WHO) & United Nations International Children's Emergency Fund (UNICEF), 2021). Breastfeeding counselling services play a pivotal role in enhancing breastfeeding rates. Empirical evidence indicates that education and support provided by lactation consultants during the antenatal and postnatal periods exert a positive influence on the duration of breastfeeding (Jonsdottir et al., 2014). This review examines the significance of breastfeeding counselling, the role of nurses in providing such counselling, and the LactaVerse model—a new-generation educational approach developed in this context.

Method

This review was conducted using an integrative literature review approach in order to explore the significance of breastfeeding counselling, the role of nurses in this context, and the potential of Metaverse-based educational models such as LactaVerse. A comprehensive search was carried out in internationally recognised databases including PubMed, Scopus, Web of Science, and Google Scholar.

Studies published between 2000 and 2024 in English and Turkish were included to ensure both global and local relevance. The following keywords were used in various combinations: *“breastfeeding counselling”*, *“nursing education”*, *“lactation consultants”*, *“empathy in nursing”*, *“virtual reality in healthcare”*, *“Metaverse in nursing”*, and *“LactaVerse”*. Additional filters included peer-reviewed articles, meta-analyses, systematic reviews, and original research articles relevant to the fields of nursing, midwifery, public health, and medical education.

The selection process involved three main stages: (1) initial screening of titles and abstracts, (2) full-text review based on relevance to the research objectives, and (3) critical appraisal of methodological quality. Studies that addressed the effectiveness of breastfeeding counselling, the educational preparation of nurses, and the use of virtual technologies in healthcare training were prioritised.

This method enabled the synthesis of diverse findings to provide a multidimensional understanding of current practices, educational gaps, and future opportunities in breastfeeding counselling, with particular emphasis on the integration of advanced digital technologies in nursing education.

Results

The Importance of Breastfeeding Counselling

A breastfeeding counsellor is defined as a healthcare professional who has received specialised training to address the needs and concerns of mothers and infants regarding breastfeeding, to identify, prevent, and resolve breastfeeding-related issues (Brooks et al., 2016; Chetwynd et al., 2013). Common reasons why mothers seek support from breastfeeding counsellors include breast milk jaundice, perceived insufficient milk supply, concerns that the infant is not satiated, difficulties with latching or sucking, breast refusal, and a lack of knowledge about correct breastfeeding techniques (Bazzano et al., 2016).

Employing the correct breastfeeding technique not only ensures effective milk transfer to the infant but also helps prevent breast-related complications. Effective latching allows for complete drainage of the breast, thereby stimulating further milk production. Although the act of sucking is instinctive, breastfeeding itself is a learned skill. Counselling that provides mothers with proper guidance on breastfeeding techniques plays a crucial role in preventing a wide range of breastfeeding challenges (Tiruye et al., 2018).

Research indicates that mothers who receive breastfeeding education are more likely to exclusively breastfeed during the first six months of their infant's life (ÇALIK et al., 2017). A study conducted in Türkiye demonstrated that breastfeeding counselling provided during the postpartum hospital stay positively influenced mothers' breastfeeding self-efficacy and their likelihood of exclusive breastfeeding (GÖLBAŞI et al., 2019). Furthermore, a meta-analysis conducted in 2018 found a significant correlation between higher levels of breastfeeding education and increased breastfeeding intention and continuation rates (Hojat et al., 2015).

The Role of Nurses in Breastfeeding Counselling

The World Health Organization (WHO) and UNICEF have outlined the critical role of nurses in breastfeeding counselling under seven key points (Arifoğlu & Razi, 2011):

1. Nurses are primary healthcare providers for women and children during the antenatal, perinatal, and early childhood periods, delivering services across a variety of settings.
2. All nurses are capable of emphasising the importance of breastfeeding, offering support, and safeguarding mothers from barriers that may hinder successful breastfeeding.
3. Supporting breastfeeding is not an additional task for nurses but a core professional competency.

4. When complex challenges arise, nurses with advanced training and expertise collaborate with other healthcare providers to deliver specialised lactation support.
5. Nurses provide individualised information and care, fostering trust-based relationships that empower mothers to feed their infants confidently.
6. Beyond clinical care, nurses also serve as educators, managers, leaders, and policy-makers.
7. Nurses practise across a broad range of specialisations, including neonatology, community health, and mental health.

The role of nurses in breastfeeding counselling is of paramount importance. Studies consistently demonstrate that nurse-led breastfeeding counselling has a significant positive impact on both breastfeeding success and duration (Fahim et al., 2023; Şimşek Çetinkaya et al., 2022). A study conducted in Türkiye found that breastfeeding counselling provided by nurses during the postpartum period enhanced maternal breastfeeding success (Fata & Atan, 2018).

The Importance of Empathy Skills in Breastfeeding Counselling

The significance of empathy in breastfeeding counselling is undeniable. One of the fundamental aims of nursing education is to cultivate students' empathetic tendencies and enhance their communication skills through empathy (Arifoğlu & Razi, 2011). Nurses, with their care-oriented and holistic approach, consider individuals as integrated beings, and in breastfeeding counselling, they are expected to demonstrate psychosocial competencies that address women's psychological, social, and emotional dimensions (Hojat et al., 2015).

During the breastfeeding period, mothers require not only physical support but also substantial emotional support (Durmazoğlu et al., 2020; Maleki Saghooni et al., 2021). Nurses' possession of strong empathy skills is considered a key component of care quality, particularly in enhancing maternal adaptation to the postpartum period and boosting self-efficacy in breastfeeding (IM, 2015). A study conducted in Türkiye revealed that during the breastfeeding period, mothers expect nurses to demonstrate respect, empathy, sincerity, understanding, trust, and helpfulness (Durmazoğlu et al., 2020).

Methods of Breastfeeding Counselling Education

In Türkiye, breastfeeding counselling education has been conducted in cooperation with UNICEF since the launch of the "Promotion of Breastfeeding and Baby-Friendly Health Facilities Programme" in 1991. The training comprises 17 hours of theoretical instruction and

3 hours of practical application (T.C. SAĞLIK BAKANLIĞI et al., n.d.). Within undergraduate curricula, disciplines such as midwifery, nursing, nutrition and dietetics, and medicine also include breastfeeding education (Gülten et al., 2018).

Internationally, the International Board of Lactation Consultant Examiners (IBLCE) offers certification for breastfeeding counsellors. Candidates must complete between 300 and 1000 hours of clinical practice and pass a qualifying examination to receive certification (Clinical Competencies for the Practice of International Board Certified Lactation Consultants® (IBCLCs®), 2018; Schanler et al., 2013).

When examining breastfeeding training for healthcare professionals, various teaching techniques are observed. Most hands-on training uses real patients and employs demonstration-based practice. However, the literature highlights a lack of high-quality studies evaluating such education and a notable absence of standardisation across institutions (Chuisano & Anderson, 2020).

The Use of Metaverse as a Learning Environment in Health Education

The Metaverse is a network of virtual environments where users interact with each other or with digital objects. In this space, users operate through three-dimensional digital avatars that represent them (Kye et al., 2021; Lee et al., 2018). In recent years, many countries have started integrating virtual simulations into nursing programmes, including foundational skills, internal medicine, surgical nursing, maternity, and paediatric care (Shorey & Ng, 2021).

Metaverse technology enables health sciences students to acquire comprehensive and immersive anatomical insights. In nursing education, the use of the Metaverse presents key advantages such as safety without posing risks to patients, time and cost efficiency, global accessibility, and repeatability (Choi et al., 2022; Coyne et al., 2021; Fealy et al., 2019).

Studies in the literature have confirmed that virtual reality technologies in nursing education positively influence knowledge acquisition and professional competencies when compared to traditional methods (Shorey & Ng, 2021). Furthermore, virtual reality is increasingly used to teach soft skills such as empathy and communication (Bracq et al., 2019; Dyer et al., 2018).

LactaVerse: A Metaverse-Based Breastfeeding Counselling Education Model

Considering the World Health Organization's global target of achieving at least a 50% exclusive breastfeeding rate during the first six months by 2025, Türkiye's 30% rate reported

in the 2018 Demographic and Health Survey (TNSA) indicates a significant shortfall (Çavlin & Seçkiner, 2018). In this context, it is crucial for undergraduate nursing students to acquire breastfeeding counselling skills as part of their formal education.

Within the scope of this study, a Metaverse-based educational model named "LactaVerse" has been developed. The prefix "Lacta" refers to the process of lactation, while the suffix "Verse" symbolises the broader universe, encompassing both physical and virtual domains. In the LactaVerse environment, both students and instructors coexist in the same virtual space, enabling an interactive educational experience. This learning environment, accessible by up to 75 students through virtual headsets, offers synergistic opportunities for both nursing students and academic staff. The aim of LactaVerse is to enhance students' practical exposure to breastfeeding scenarios and to build their confidence in delivering breastfeeding counselling through immersive simulation(Ceylan,2024).

Compared to real-patient training, Metaverse-based education involves less risk to patients and allows students to practise repeatedly until they master the necessary skills. The educational method developed through this study has the potential to be applied beyond breastfeeding, serving as a foundational step towards establishing virtual laboratories in undergraduate nursing education (Damar & Turhan Damar, 2021).

Conclusion

Breastfeeding counselling plays a vital role in protecting and promoting the health of both mothers and infants. Nurses occupy a central position in the provision of such counselling and must be well-trained in this field. The Metaverse-based LactaVerse educational model represents an innovative approach to equipping nursing students with breastfeeding counselling skills. By offering repeated, interactive practice opportunities in a virtual reality environment, the model prepares students to support mothers more effectively upon entering the profession. The development and implementation of innovative educational models like LactaVerse will enhance the quality of breastfeeding counselling and contribute significantly to improving public health outcomes.

Erasmus Students' Challenges and Opportunities in English-Medium Instruction (EMI) Classrooms

Mehmet Birgün

Researcher/Lecturer Dr., Groningen University, m.birgun@rug.nl , 0000-0001-6487-3554,
The Netherlands

Abstract

English-Medium Instruction (EMI) classrooms offer Erasmus students unique opportunities for academic growth and intercultural learning. However, navigating EMI environments is often a complex experience for these highly mobile students, who bring diverse linguistic and educational backgrounds to the classroom. This study explores Erasmus students' perceptions of both the challenges and opportunities they encounter in EMI courses. Using a qualitative research design, data were collected through an open-ended online questionnaire completed by 18 Erasmus students with varying levels of EMI exposure. Most students shared the difficulties they face in understanding lectures due to issues such as pronunciation clarity, speech speed, and technical vocabulary. Participation anxiety and inconsistent EMI practices where teaching language and assessment language do not always align further contribute to their challenges. Yet, among these obstacles, students also described valuable learning gains and personal growth. Many reported improvements in their English language proficiency, greater confidence in using English in academic settings, and an enhanced ability to access and engage with international academic materials. They also valued the intercultural perspectives gained through the EMI experience. By bringing the voices of Erasmus students fore, underscores the importance of fostering inclusive teaching practices and institutional consistency to ensure that EMI classrooms truly support the diverse students they aim to serve.

Keywords: Erasmus Students, English Medium Instruction (EMI), Challenges, Institutional Support

Introduction

In the past two decades, English-Medium Instruction (EMI) has gained significant momentum in higher education institutions worldwide. Driven by the forces of internationalization and the global dominance of English as an academic lingua franca, universities across Europe and beyond increasingly adopt EMI as a means to attract

international students and enhance the employability of their graduates (Dearden, 2014; Macaro et al., 2018). Among these international student populations, Erasmus students represent a unique and highly mobile group, whose experiences within EMI classrooms are shaped by both linguistic and intercultural dynamics. While EMI is often promoted as a vehicle for academic excellence and international engagement, the realities faced by Erasmus students in EMI classrooms are far from clarity. These students often encounter linguistic, cultural, and pedagogical challenges that may hinder their learning and integration. At the same time, EMI settings also offer valuable opportunities for personal growth, intercultural exchange, and the development of advanced academic literacies (Smit & Dafouz, 2012). Understanding how Erasmus students navigate the complex terrain of EMI classrooms is therefore crucial for improving the quality and inclusivity of EMI.

This study is informed by a sociocultural perspective on language and learning (Lantolf & Thorne, 2006), which views language not merely as a vehicle for conveying information but as a key mediator of cognitive and social development. In EMI classrooms, this perspective highlights the importance of interaction, scaffolding, and contextualized language use in facilitating student learning. Furthermore, the study draws on the concept of academic literacies (Lea & Street, 1998), which emphasizes the situated and socially constructed nature of academic language practices. For Erasmus students, mastering the linguistic and discourse conventions of EMI classrooms requires more than language proficiency; it involves acculturation into new academic norms and expectations. Research on EMI has expanded considerably in recent years, addressing issues such as language policies, lecturer and student experiences, and pedagogical practices (Macaro, 2018; Wächter & Maiworm, 2014). However, studies focusing specifically on Erasmus students in EMI contexts remain relatively scarce. Existing research indicates that international students, including Erasmus participants, often face significant linguistic challenges in EMI classrooms (Doiz et al., 2013). These include difficulties in understanding lectures, participating in discussions, and producing academic texts in English (Kuteeva, 2014). Cultural differences in classroom interaction styles and expectations further complicate the learning experience (Smit & Dafouz, 2012).

At the same time, EMI classrooms provide ground for intercultural learning and the development of global competencies (Macaro et al., 2018). Studies have shown that, despite initial challenges, many Erasmus students report enhanced intercultural awareness and improved academic English skills through their EMI experiences. Yet, gaps remain in our understanding of how Erasmus students experience and negotiate these challenges and

opportunities. The purpose of this study is to explore the challenges and opportunities experienced by Erasmus students in EMI classrooms. The research seeks to illuminate how these students navigate linguistic, academic, and intercultural demands, and how they perceive the support provided by lecturers and institutions.

Method

This study adopts a qualitative research design to gain in-depth insights into Erasmus students' experiences with EMI classrooms. Given the exploratory nature of the research questions, a qualitative approach was appropriate to capture the richness and complexity of students' perspectives (Creswell & Poth, 2018). The study employed semi-structured written responses collected via an online form to enable participants to freely reflect on both the challenges and opportunities they encounter in EMI settings.

Participants

The demographic distribution of the participants is presented in Table 1.

Table 1: Distribution of Participants by EMI Experience Level

EMI Experience Level	Number of Participants	Percentage (%)
Participated in 30% EMI	6	33.3
Participated in 70% EMI	7	38.9
Participated in 100% EMI	5	27.8
Total	18	100

Table 1 presents the distribution of participants according to their level of experience with EMI. The participants of the study consisted of 18 Erasmus students enrolled at a state university in eastern European the 2024-2025 academic year. Participants were selected using purposive sampling, focusing on those who had taken EMI courses in varying proportions (30%, 70%, or 100% of their coursework). This diversity of EMI exposure provided a rich basis for exploring different dimensions of the EMI experience. A total of 33.3% of participants were grouped under the "Participated in 30% EMI" category. The largest group (38.9%) consisted of participants who had taken approximately 70% of their courses in EMI, while 27.8% of participants reported full participation in EMI (100%).

Data Collection Tools

Data were collected through an online open-ended questionnaire designed to explore the four core research questions of the study. The form included demographic questions (e.g., level of EMI participation) and four open-ended items aligned with the following research questions:

What challenges do Erasmus students encounter in EMI classrooms?

What opportunities for learning and personal development do they perceive in EMI settings?

How do Erasmus students cope with linguistic and academic demands in EMI courses?

What pedagogical and institutional supports do Erasmus students consider helpful or lacking in their EMI experiences?

Participants provided written responses to each question in their own words, allowing for detailed and authentic reflections. The form was shared online with the target group, and participation was voluntary and anonymous. Prior to data collection, ethical rules were followed, and informed consent was secured from all participants.

Data Analysis

The data were analyzed using qualitative content analysis (Mayring, 2014). An inductive coding approach was employed, allowing themes to emerge naturally from the data. To enhance reliability, the coding process was conducted systematically and iteratively. Initial codes were generated and then grouped into broader themes. The analysis prioritized preserving the authenticity of students' experiences while organizing the findings into coherent categories. Throughout the analysis, ethical considerations were strictly observed. Pseudonyms (P1–P18) were used to anonymize participants, and all data were handled in accordance with established guidelines for qualitative research ethics.

Results

1. What challenges do Erasmus students encounter in EMI classrooms?

Table 2: *The challenges Erasmus students encounter*

Theme	Code	Quotation (Participant)
Linguistic challenges	Accent and pronunciation issues	"Bazı aksanı kötü hocaları anlayamamak." (P12) "Not being able to understand some lecturers with poor accents."
	Speed of speech	"Hocaların hızlı konuşmaları ve aksanları." (P4) "The lecturers' fast speech and accents."
	Technical terms	"Terimsel kelimeler." (P11) "Technical terms."
Limited English proficiency	Fear of making mistakes	"Ne kadar İngilizceye güvensen de hata yapmaktan korktuğum için çekiniyorum." (P15) "Even though I trust my English, I hesitate because I fear making mistakes."
	Difficulty understanding content	"İngilizce seviyemden dolayı anlamakta bazen problem yaşadım." (P7)

Theme	Code	Quotation (Participant)
Inconsistent EMI implementation	Mixed language use by lecturers	"Sometimes I had problems understanding due to my level of English."
		"Dersin anlatımının Türkçe olup sınavda İngilizce sorması." (P2) "The lecture is delivered in Turkish, but the exam is in English."
Participation anxiety	Fear of judgment	"İngilizce seviyemin yargılanacağını düşünüyordum." (P3) "I thought my English proficiency would be judged."
	Reluctance to ask questions	"Anlamadığım kısımları sorup teyit edememek." (P18) "Being unable to ask and clarify parts I didn't understand."

As shown in Table 2, Erasmus students reported a range of challenges in EMI classrooms. The most prominent linguistic difficulties included problems with lecturers' pronunciation, fast speech, and the use of technical terms. These findings reflect the literature that identifies lecturer language proficiency as a key factor influencing comprehension in EMI settings. Additionally, students expressed anxiety about participating in class due to fear of making mistakes and being judged.

2. What opportunities for learning and personal development do they perceive in EMI settings?

Table 3: *The perceived learning and personal development opportunities*

Theme	Code	Quotation (Participant)
Language development	Improved listening and speaking	"İngilizce dinlemeye ve konuşmaya alıştırıyordu." (P14) "It trained us in listening and speaking in English."
	Increased exposure to academic English	"İngilizceye maruz kalındığı için daha iyi öğrenmek." (P18) "Being exposed to English helps to learn it better."
Academic skill improvement	Easier access to international materials	"Dünya çapında alanımla ilgili olan makaleleri daha kolaylıkla okuyabiliyorum." (P9) "I can read articles related to my field from around the world more easily."
Personal growth	Increased confidence	"Erasmus serüvenim bunu aşmamı sağladı." (P3) "My Erasmus experience helped me overcome this."
	Overcoming speaking anxiety	"Rahat hissediyorum ve konuşmaya çalışıyorum." (P8) "I feel more comfortable and try to speak."
Intercultural competence	Exposure to diverse perspectives	"Samimi, yardımsever, farklı kültürleri görmüş olan." (P16) "Friendly, helpful, and exposed to different cultures."

Table 3 highlights the opportunities perceived by Erasmus students in EMI classrooms. Many participants reported improvements in their English language skills, particularly listening

and speaking abilities. Exposure to academic English and international materials was also viewed as a significant benefit, aligning with the global learning outcomes associated with EMI.

3. How do Erasmus students cope with linguistic and academic demands in EMI courses?

Table 4: *The way Erasmus students cope with linguistic and academic demands*

Theme	Code	Quotation (Participant)
Individual strategies	Taking notes and reviewing	"Duyduklarımı not almak ve sonrasında tekrar etmek." (P7) <i>"Taking notes of what I hear and reviewing them afterwards."</i>
	Reading lecture notes	"Ders notlarını okumak." (P11) <i>"Reading lecture notes."</i>
	Practicing English outside class	"Kendin her gün dersten sonra çabalamak." (P17) <i>"Working on it every day after class on your own."</i>
Utilizing support materials	Use of written presentations	"Yazılı sunumlar." (P4) <i>"Written presentations."</i>
	Use of English subtitles	"İngilizce altyazı koyabilir." (P16) <i>"They could add English subtitles."</i>
Social strategies	Asking peers for clarification	"Dersten önce arkadaşlarla pratik yapmak." (implied) <i>"Practicing with friends before class."</i>
Positive classroom interaction	Feeling safe to ask questions	"Her zaman soru sorabilirsin, çok yardımcı oluyorlar." (P17) <i>"You can always ask questions; they are very helpful."</i>

As detailed in Table 4, students employed a variety of coping strategies to manage the demands of EMI. The use of multimodal materials, such as written presentations and English subtitles, supported comprehension, consistent with recommendations in EMI pedagogy. Social strategies also played a key role, with students seeking clarification from peers and engaging in collaborative preparation. These findings highlight the importance of fostering supportive peer networks and encouraging active learning practices in EMI classrooms.

4. What pedagogical and institutional supports do Erasmus students consider helpful or lacking in their EMI experiences?

Table 5: *The perceived pedagogical and institutional supports Erasmus students regard helpful*

Theme	Code	Quotation (Participant)
Desired teaching strategies	More interactive teaching	"Derslerde tek düzelikten çıkılıp farklı etkinlikler yapılabilir." (P15) <i>"Classes can be made less monotonous with different activities."</i>
	Use of simple language	"Daha açıklayıcı ve kolay bir dille ifade edebilirler." (P8)

Theme	Code	Quotation (Participant)
Language competence of lecturers		<i>"They could explain in a more clear and simple language."</i>
	Use of videos, games	<i>"Videolar, oyunlar vs." (P9)</i> <i>"Videos, games, etc."</i>
	Improved pronunciation	<i>"Telaffuzlarını geliştirmeleri gerek." (P12)</i> <i>"They need to improve their pronunciation."</i>
	Fluent English	<i>"Akıcı İngilizce konuşması gerekmekte." (P6)</i> <i>"They need to speak fluent English."</i>
Institutional level recommendations	Hiring native/foreign lecturers	<i>"Yabancı öğretim görevlileri ile anlaşılabilir." (P5)</i> <i>"It would be more understandable with foreign instructors."</i>
	Pre-class preparatory materials	<i>"Derse gelmeden önce İngilizce makaleler üstünden konuya hazırlık yapılabilir." (P14)</i> <i>"Preparing for the topic beforehand through English articles."</i>
Supportive learning environment	Encouraging atmosphere	<i>"Teşvik edici, anlayışlı ve sabırlı olması." (P15)</i> <i>"Being encouraging, understanding, and patient."</i>

Table 5 summarizes students' perceptions of pedagogical and institutional supports. Students highlighted the critical role of lecturers' English language proficiency and teaching style in shaping their learning experiences. These findings reinforce calls for targeted professional development for EMI lecturers. At the institutional level, students advocated for more coherent EMI policies, alignment of teaching and assessment language, and the provision of preparatory materials and targeted support for Erasmus students. Such measures are essential for creating supportive EMI environments.

Discussion and Conclusion

The findings contribute to a growing body of EMI literature by bringing student voices forward which is an aspect that has often been underrepresented in EMI research (Dafouz & Smit, 2020; Macaro, 2018). Consistent with previous studies (Kuteeva, 2014), linguistic challenges emerged as a prominent theme. Participants reported difficulties understanding lecturers due to unclear pronunciation, fast speech, and the use of technical terminology. Such challenges align with Macaro et al.'s (2018) findings that lecturer language proficiency and clarity are critical factors in students' comprehension. Moreover, the fear of making mistakes and participating in class discussions reflects anxiety among EMI students. The inconsistent implementation of EMI where instruction is partially conducted in the local language but assessments are in English was perceived as particularly problematic. This finding reflects concerns raised by Wächter and Maiworm (2014), who emphasize the need for coherent EMI policies to avoid disadvantaging students. Despite the challenges, students also identified significant opportunities within EMI contexts. Improved listening and speaking skills, greater

exposure to academic English, and enhanced access to international materials were frequently cited benefits. These findings are consistent with Smit and Dafouz's (2012) argument that EMI can foster both linguistic and academic literacies.

Furthermore, participants highlighted the role of EMI in building personal confidence and intercultural competence which are outcomes that associate with the goals of Erasmus programs. This supports the view that EMI classrooms can serve as important sites for developing global competencies. Students reported a range of individual and social strategies to cope with EMI demands, including taking notes, reviewing materials, practicing English outside class, and seeking clarification from peers. Importantly, the use of supplementary materials (e.g., written presentations, English subtitles) was valued, indicating the need for support in EMI classrooms (Macaro, 2018). The willingness to engage in such strategies also reflects a high degree of learner agency which is an encouraging finding for institutions aiming to foster independent learning. Students expressed a clear preference for interactive, supportive, and linguistically accessible teaching practices. The desire for more engaging activities, clear and simple language, and an encouraging classroom atmosphere aligns with the principles of effective EMI pedagogy articulated by Macaro (2018). Concerns about lecturers' English proficiency and inconsistent language use further highlight the need for targeted professional development (Kuteeva, 2014). Participants also called for greater institutional support, including preparatory materials and more consistent EMI implementation, in other words recommendations that reflect recent calls in the literature for more structured EMI policies and teacher training (Dafouz & Smit, 2020; Birgün, 2022).

By centering Erasmus students' voices, this study provides insights into the lived realities of EMI classrooms. It reinforces the importance of aligning EMI practice with student needs and expectations, thereby contributing to more inclusive and effective EMI provision. This study has shown that while EMI classrooms present notable linguistic and pedagogical challenges for Erasmus students, they also offer valuable opportunities for academic and personal growth. Students employ a variety of coping strategies, yet their experiences are shaped significantly by the teaching practices and institutional supports they encounter. Lecturers' language proficiency, teaching style, and the coherence of EMI implementation emerge as key factors influencing student outcomes. Addressing these dimensions through targeted professional development and institutional policy reform is essential for maximizing the benefits of EMI for diverse student populations.

Edutainment: Peril or Promise

Constance Chifamba

Solusi University, Zimbabwe.

E-mail: chifambac@solusi.ac.zw

Abstract

Contemporary Learners are bombarded by the entertainment world in which they grow up immersed. While the world offers entertainment, educators seek to go beyond mere entertainment by integrating education into entertainment to optimise learning for early childhood learners. This study aims to investigate the experiences of early childhood education teachers using edutainment in Early Childhood Education (ECE) classrooms. The guiding questions are: What are the merits and demerits of using edutainment in early childhood education? What are benefits of using edutainment strategies for ECD learners? What challenges did u face in implementing other edutainment strategies? What improvements can be made for effective use of edutainment for ECE?^[1]_[SEP] The researcher carried out a mixed research method study on 35 purposely sampled teachers. Seven of these responded to in-depth interview questions, while 28 of them responded to a survey questionnaire. Findings indicated that edutainment motivates learners, links learning with practical life experiences, helps learners develop problem solving skills and social skills. By integrating edutainment strategies such as role play, drama, games improved students participation and engagement in learning. However, Edutainment was reported to be associated with challenges such as financially expensive and time-consuming. In addition, edutainment requires adequate planning in terms of preparation of appropriate props and resources. So, is Edutainment a peril or a promise? It all depends on how it is implemented. With careful planning, edutainment can be a tool to transform the pedagogical practices, especially for the ECD learners. The study recommends that teachers should be proactive and adopt 21st century strategies to such as simulations, drama, role play, acted music and storytelling to optimize learning. In addition, teachers need to be innovative and use locally available resources to reduce the high costs associated with edutainment. The early childhood development (ECD) period is the formative period. This is the time for character development, as they learn new skills such as teamwork and problem solving.

Keywords: Edutainment, merit, demerit, early childhood education

Introduction

Contemporary Learners are bombarded by the entertainment world in which they grow up immersed. We live in a busy world where almost everyone has to multitask in order to cope with the increasing demands. From babyhood through infancy, parents and caregivers rely heavily on the entertainment world to soothe or entertain the babies and preschool toddlers. While the world offers entertainment the education sector seeks to marry education to entertainment. Being cognizant that early childhood education has now become a global imperative (Dakar Declaration, 2000; NAEYC, 2009; UNESCO, 2009; UNICEF, 2014; Nyarambi & Ntuli, 2020;) The idea of emphasizing Early childhood education is rooted in the Head Start programming, a American philosophy of providing early exposure to foundational knowledge and skills for children from low-socio-economic backgrounds (Gargiulo & Kilgo, 2020). Studies indicate that this approach is vital for all children, not just for those from low socioeconomic backgrounds as this paves their way to a successful academic journey. Considering that the ECD child has very short attention span and a limited ability to grasp complex or abstract concepts makes the idea of edutainment ideally appropriate for such young learners to enjoy learning without tears, for edutainment grabs their attention and motivates them to actively participate in the learning process. Some educators feel that as these young Generation Y learners get to school age, it becomes difficult to wean them off entertainment and box them onto plain educational room with only dry traditional pedagogical practices. Hence the need to blend entertainment and education helps children to grasp complex concepts through edutainment. Edutainment is a compound word derived from two words, education and entertainment. Edutainment (short for “entertainment-education”) is the use of entertainment media with educational and development objectives. Edutainment can take the form of movies, television shows, documentaries, social media campaigns, music, and games (Banerjee, et al 2019).

The Concept of Edutainment is derived from the amalgamation of education and entertainment. According to Addis (2005), edutainment is a compound word derived from combining education and entertainment. This comes as an application of Neologism in both the classroom and the entertainment world. it is a process of helping the contemporary entertainment-savvy learners acquire education as they are being entertained. As some scholars put it; it is having fun while learning (ELM Learning). Edutainment may also be described as the integration of entertainment into pedagogical practices. While traditional approaches to education tried as much as possible to keep education and entertained in separate compartments, modern approaches seem to put these two in the same compartment. It is trendy these days to

have education and entertainment in the same room and served to the same group of learners concurrently (Rheingold, 1992; Mencarelli, Pulh and Marteaux, 2007). Most of the learners seem to find it more palatable than transitioning from entertainment-filled preschool life to dry education. According to Sibilio, (2013), edutainment is a continuous and innovative brain stimulating experience that results from the interaction between education and entertainment. He goes on to express that there is a tight connection, which occurs between entertainment and education as learners interact in exciting ways they are motivated to explore more about important education concepts. Edutainment grabs the learners attention that they are motivated to engage in the learning process using interactive and fun packed ways strategies. Early childhood development (ECD) period is the formative period. This is period when educators lay the foundation for approximate moral development, character development, social skills as well as develop decision making skills. These skills formed in ECD prepare them for solving real life problems later in life.

Edutainment may also be described as the integration of entertainment into pedagogical practices. While traditional approaches to education tried as much as possible to keep education and entertained in separate compartments, modern approaches seem to put these two in the same compartment. It is trendy these days to have education and entertainment in the same room and served to the same group of learners concurrently (Rheingold, 1992; Mencarelli, Pulh and Marteaux, 2007). Most of the learners seem to find it more palatable than transitioning from entertainment filled preschool life to dry education filled school life. However, Edutainment has its merits and demerits, strengths and weaknesses, this study sought to analyze the merits and demerits of Edutainment in ECD classroom as perceived by teachers. Edutainment such as role play, games, drama may positively contribute either positively or negatively to teaching and learning practices depending on how each is used (JISC, 2009). Edutainment is associated with development of critical thinking, problem solving skills, and social skills.

Since the 1990s there has been great interest in developing edutainment software and strategies to motivate learners. These include applications that possess the allure of electronic games while achieving educational goals (Okan, 2020). This surge for integrating electronic technologies into education has been incrementally surging. However, in the mad rush to adopt this new seemingly harmless technological fad, could it be that well-meaning educators and parents may overlook its long-term harmful effects of edutainment on pure (unadulterated) pedagogical practices. While most educators believe that learning without tears or fears is the

way to go it is also important to avoid the risks associated with the edutainment. Some scholars feel that edutainment may be a Trojan horse which may outwardly seem innocent while it harbors hidden dangers inside. Buckingham and Scanlon (2000) perceive “Edutainment”, is a hybrid genre that relies heavily on colorful and interactive material. Okan (2020) contends that while the process of learning should always be exciting, fun and colourful so that learners may acquire information without stressful work and serious study the entertainment should not steal the show, and be an end in itself, Instead, entertainment should be used as a means to an end.

Realizing that education’s paramount goals of the development of cognitive structures and character development lead some educators to try to achieve these goals using educational technology as a medium, not an end in itself. It is the vehicle, not the content of Education. There are heated debates on the extent to which educators may fruitfully with minimal risk. While some scholars maintain that learning must be a pleasant experience with fun-filled activities, others believe edutainment is learning at a risk (Okan, 2020). On the other hand, King (1993) contends that edutainment may be described as not just the blending of the words but as a “curious amalgam.” Why curious? Probably people want to know the reasons behind this amalgamation. There are usually benefits associated with the outcome of the amalgamation. The purpose of edutainment is to attract and hold the attention of the learners by engaging their senses and emotions through informal gamified technological formats, that are less didactic yet involving interactive pedagogic practices. Definition “Edutainment” is a hybrid genre combining learning and fun. It relies heavily on visual material, on narrative or game-like formats, and on more informal, less didactic styles of address (Buckingham and Scanlon 2000). The purpose of edutainment is to attract and hold the attention of the learners by engaging their emotions through a computer monitor full of vividly colored animations. Similarly, “edutainment” suggests overtly entertaining learning materials, which contain messages addressed to both parents and children. Through explicit educational claims, edutainment software encourages parents to believe that this software is beneficial in developing children’s skills in a variety of subjects. They also raise learners’ expectations that learning can be enjoyable.

The use of Edutainment in th classroom is in line with earlier educational initiative such as the NO Child Left Behind of USA, 2002 and the Head Start Act of 2007, a federal program focusing on the provision of comprehensive services to low-income children and families, as it encourages states to develop high-quality preschool programs to prepare

children for meeting the standards set by NCLB. This approach concurs with the "Leave No Child Behind" initiative of Zimbabwe, which focuses on ensuring all children have access to quality early childhood education (ECE). This includes promoting inclusive ECE, particularly for vulnerable children, and advocating for universal access to early childhood, primary, and secondary education. The government is committed to providing a strong foundation for improved learning outcomes

This approach that emphasizes that learning should be exciting and fun concurs with McKenzie (2000) who coined a related term "technotainment," which he defines as technology heavily laced with entertainment. It is quite apparent that as educators shift their focus from education and rivet it on entertainment then education is at greater risk of tilting the balance towards more entertainment than learning. This is in contrary to the ultimate goals of edutainment, optimizing learning by leveraging entertainment. The titles of the edutainment software frequently flighted indicate the nature of the intended outcomes. Such titles and slogans as Fun for Brains is fun for all, Play and Learn Tired of Learning, We got something to keep you edutained (Okan, 2020) may have negative or positive implications for the ultimate desired outcome of education (Buckingham & Scanlon , 2000).

The most important development in modern Pedagogy over the past ten years is the transition from knowledge acquisition view of learning to a knowledge construction view of learning. According to the knowledge construction theories, learning involves synthesizing mental representations that make sense to the learner. From this perspective, teaching should no longer be limited to information gathering (Okon, 2020), from lectures and textbooks but should engage the whole community of all learners participating in knowledge construction. In this case, educators facilitate the provision of guides on authentic cognitive and socio-emotional academic tasks through discussion and guided discovery (Suomala and Shaughnessy, 2000; Salomon and Almog , 1998).

Embracing technology and integrating it into educational programs has been an uphill task. Besides the fact that people generally resist change, there is the notion that technology is too expensive and too hard for the old time teachers. "It is not easy to teach old dogs new tricks"; some scholars argue. Hence getting the buy from educational institutions to embrace technology has taken long time. This study is undergirded by the Technology Acceptance and Adoption Model developed by Davis, 1989. The technology acceptance and adoption Model posits that there are two key factors that determine whether a computer system or new technology will be accepted by its consumers or potential users (Urhiewhu & Daniel,

2015): These key factors are; (a) perceived usefulness, and (b) perceived ease of use.

Research Questions:

What are the experiences of Early childhood education Teachers in implementing edutainment strategies in the classroom ?

1. What are benefits of using edutainment strategies for ECD learners?
2. What strategies boosted the learners performance more?
3. What challenges did u face in implementing other edutainment strategies?
4. What improvements can be made for effective use of edutainment for ECE?

Method

The study followed a descriptive mixed method study carried out from 35 purposively sampled Early childhood education teachers. This entailed looking at the teachers experiences and interpretations of the merits and demerits of using Edutainment in the classroom as an educational tool. Finally, a critical discussion of the analysis and interpretation of the data collected was carried out in order to evaluate the significance of the findings.

Results

The findings of the data collected from the 2 groups of participants, 7 interviewees and 28 Survey participants, were coded, cleaned, and analysed for recurring themes.

Table 1. Summary of interview findings

PARTICIPANT	CODE	Verbatim statements
1	T1	I used gaming, storytelling and field trips as part of edutainment to enrich my teaching practice in the class that I was attached to. 2. Storytelling and Field trips appealed more to the learner's. 3. The challenges that I faced in integrating education and edutainment were-maintaining education values ,learners were loosing focus on the education side and concentrating more on the fun part -Fundings for the field trips some of the.p field trips were cancelled because of the funds for example we were supposed to go on a field trip to visit the New Government parliament but it was cancelled .
2	T2	During my teaching edutainment was most effective. I usually use storytelling, songs using my phone and bluetooth speaker. Before starting the lesson my introduction was either a song, story or game. This would help learners to enjoy and be interactive during

		the lesson. It would be learner-centered and help to crème and remember what they have learnt. I would use storytelling to buy their attention and participation. Games would help me to identify where their strengths and weaknesses are. In some lessons I would use role play that also help them to always retain what they have learnt. Sometimes I would play some music or we sing as song for them to pay attention and be fully engaged into the lesson. Challenge- Learners become overexcited and difficult to manage
3	T3	I incorporated various edutainment strategies into my teaching practice, such as games, storytelling, and hands-on activities. For instance, I created a math game where children had to solve problems to progress through a virtual maze. This approach made learning fun and engaging, and I saw a significant improvement in their math skills.
4	T4	I used games and story telling Challenge- Resources and internet connectivity I suggest schools should provide enough resource for the ECD learners. These learners learn through observing and modelling. They should be provided Screens for videos, Bluetooth speaker, WIFI for downloading videos and music Play areas should be also be available with proper resources.
5	T5	I used edutainment strategies like storytelling, role-playing, and educational games to make learning fun and engaging for my students. - These strategies helped to increase student participation, motivation, and retention of information. One of the challenges I faced was ensuring that the edutainment activities aligned with the learning objectives. I had to carefully plan and design the activities to ensure that they were both fun and educational. Another challenge was managing the classroom environment, as some children would get overexcited during the edutainment activities.
6	T6	Children loved games, simulations and story telling, One of the challenges I faced was ensuring that the edutainment activities aligned with the learning objectives. I had to carefully plan and design the activities to ensure that they were both fun and educational. Another challenge was managing the classroom environment, as some children would get overexcited during the edutainment activities.
7	T7	Children loved to participate- but time was a major constraint -Be organized, plan so as to align edutainment activities with learning objectives: Ensure that the activities are designed to achieve specific learning outcomes. Keep it simple and interactive: Be creative and use readily available resources, simple language and interactive elements to engage young children.

Research Question One: What are the strengths of edutainment? Edutainment is associated with several strengths. Some of these are discussed here. Besides engagement and focus, edutainment inspires learners, it is highly effective and resource- efficient, it improves school attendance and academic performance. Most of the ECD teachers used edutainment strategies such as storytelling, simulations, role-playing, and educational games. These strategies were reported to engage to make learning fun-packed and engaging for my students (T1, T3, T2, T4, T5, T6)- These strategies helped to increase student participation, motivation, and retention of information (T5). In addition, one participant reported that edutainment boosted the ECD learners performance in Maths (T3).

1. Edutainment can be used as a tool for solving real-life day-to-day problems.
2. Edutainment is generally cost-effective,
2. Edutainment makes learning interesting to such an extent that even the so-called dull student enjoys learning, through gamified apps that can complement learning. This help in learner engagement through participation in diverse ways
3. Edutainment boosts retention through entertaining learners using multimedia increases the amount of information they retain.
4. Edutainment acknowledges that learners often have short attention spans. So, by adding entertaining elements to the learning experience, your employees will focus more.
5. Edutainment is an effective mechanism that may be used as an educational tool for triggering attitudinal and behavioral change and change their perceptions about what is “normal” and socially acceptable behavior
6. Celebrities and social role models may inspire young learners to pursue their dreams, attempt the seemingly impossible daunting tasks so that ultimately they become high achieving
7. Edutainment may be a social influencers effectively promote new ideas.
8. Edutainment approach appeals to both young learners and adults, since it appears less formal. Edutainment may thus be used for awareness programs in communities whereby ECD, learners perform drama with moral lessons to promote awareness and advocacy influencing global audiences.
9. Edutainment may be used in diverse pedagogical ways such as games, story telling, projects, problem solving etc which easily grab the attention of young ECD learners with short attention span.
10. Entertainment enhances holistic development, as it also offers opportunities for growth and development in other domains such as developing socio skills and improving emotional

intelligence. Edutainment thus helps young learners to develop and demonstrate problem-solving skills that prepare them for real life situations.

Table 2: Responses to the Survey

	EDUTAINMENT.....	Strongly agree	Agree	N/S	Disagree	Strongly Disagree
1	Enhances learner engagement	66.7	32.1			7.1
2	Is fun and interactive	53.6	42.9			3.
3	Reduces stress associated with learning	53.6	32	10.3		
4	Ensures self-paced learning	32.1	46.9			
5	Improves retention	53.6	42.9			
6	Develops critical thinking &problem solving	67.9	21		7.1	
7	Creates a positive learning environment	50	39.3		7.1	
8	Encourages teamwork and teamwork	64.3	32.1		1	
9	Boosts confidence	60.7	28.6	1	1	1
10	Arouses curiosity & motivates learners	60.7	32.1		1	1
11	promotes holistic development	53.6	42.9		1	1
12	Time consuming	39.3	35.7	10.3	10.3	
13	Learner centred	37.7	57.1	7.1		
14	Teacher centred	42.9	17.9	17.9	10.7	10.7
15	Teacher centred	42,9	17.9	17.9	10.7	10.7

In anutshell, the most repeated merits of edutainment are;

Develops critical thinking &problem solving - 67.9%

Enhances learner engagement 66.7%

Encourages teamwork and teamwork 64.3%

Arouses curiosity & motivates learners 60.7%

Boosts ECD learners' confidence 60.7%

The responses were overwhelmingly positive. Most participants agreed that

edutainment motivates learners, even the shy and reserved learners feel their confidence boosted. By encouraging learner engagement, edutainment is also associated with higher retention of information. In addition, most participants also indicated that edutainment promotes holistic learning in a stress-free environment, leading to the development of other domains such as social skills and problem-solving skills.

Research Question Two: What are the Demerits of Edutainment?

Although edutainment has several merits, it also has some demerits. Edutainment is like fire, in the hands of a wise man. If properly used, it edutainment can be very beneficial. On the other hand, it can be abused because of its weaknesses. Some of these demerits or weaknesses are presented as pointed out by participants.

1. One major demerit is that it is time-consuming. It requires that the teacher plans and goes through the entire program and filters any bad moral concepts that may be embedded or integrated with the good lessons in an education video sold or presented in the name of edutainment. This is important as young learners may not be able to distinguish right from wrong concepts.

2. Sometimes commercialized edutainment has an intense focus on fun at the expense of education. There is danger when painting every aspect of learning with a Disney brush. This has led some to convert a museum into an amusement park

3. At the end of the lesson students may have enjoyed fun and yet fail to achieve the intended educational objectives.

4. The social movements in some cases use edutainment as a platform for advocacy, which may compromise good moral values associated with character development. There might be a need to sift and clip out undesirable components before edutainment is presented to you d learners.

5. In addition, edutainment is also condemned as time-wasting by other educators who wish to present the lesson concepts in brief. Yet with edutainment, the teacher may need to be strictly in charge of time since young learners may be carried with the Edutainment that they may not want to stop and start on another subject.

6. Another demerit pointed out is that some forms edutainment, such as videos or simulation props are financially costly (T4).

Research Question Three: How best can the use of edutainment be implemented to optimize the benefits while minimizing the demerits.

1. The effective use of edutainment such as games, videos, and role plays creates many opportunities for learners and the community at large to improve on awareness and advocacy of global issues.
2. Edutainment offers an opportunity for learners to develop and demonstrate problem solving skills that prepare them for real life situations.
3. Today we are faced with global issues such as security, health, environmental crises etc that are affecting different population groups.
4. Edutainment may be used as an eye opener to enhance awareness of global issues. As learners network with others on simulations of global issues from the classroom, this helps the learners to embrace a sense of community and the desire to contribute to the needs & the welfare of their people

Discussion & Conclusion

Although the application of Edutainment is not new, it has been evolving with time. It is used in a variety of ways to give young children a head start in education. This head start allows the ECD learners to grasp complex concepts at an early age. Edutainment strategies have a way of engaging as many learners as possible through the use of multimedia. Hence, edutainment can be a tool to achieve some of the SDGs, and educational policies, such as SDG number 4 and “ No Child left behind (NCLB) Act of 20002 and the Leave No Child Behind (NCB) of Zimbabwe. According to studies by WORLD BANK, 2015 Edutainment is among the most cost-effective ways to change people’s attitudes and behaviours-“*Best Bet Innovation*”. This is associated with boosting children’s school attendance and improving learning outcomes among rural households

Although edutainment has several strengths, it also has its weaknesses. Edutainment is like fire, in the hands of a wise man, edutainment can be very beneficial. On the other hand it can be abused because of its weaknesses. Some of these weaknesses are discussed in the next section. There is also the weakness of having bad concepts being infiltrated into the good lesson through entertainment. Further, edutainment is criticized by some scholars for the "Disneyfication" of educational institutions so that there is more entertainment than learning

in the classroom (Ballofet, et al, 2014). Edutainment or educational entertainment refers to the combination of education and entertainment. It involves using entertainment methods to teach educational content in a fun and engaging way. The main aim of this mixture is to support education with entertainment. Edutainment is defined as an application compounded with educational aims and measurements and providing learners with regarding the value of life, using resource and methods and having a good time with the way of creating and having experience (Aksakal, 2015). The major goal of Edutainment is to create an environment where learning becomes an enjoyable experience rather than a chore. This entails incorporating strategies, such as simulations, games, role plays, etc. One of its distinctive features is that edutainment is not only focused on the content but also on the way in which the content is delivered. Edutainment transforms the teacher's role in the classroom from being a Sage on the stage to a guide by the learner's side (King, 1993). Hence, if properly implemented, edutainment may contribute to job creation or offer opportunities for jobs for the school leavers. A review of the literature is an instant photograph of the field investigated at a given time. Although the literature search was a rigorous process, many relevant articles may have been overlooked. Despite this, the research generated indicators that show the importance of Sustainable Development Goal 4 (SDG 4), focusing on quality education, strongly emphasizes inclusive education, aiming to ensure that all learners, including those with disabilities, have equal access to quality education at all levels. This goal recognizes that inclusive education is crucial for achieving the SDGs and promotes a learning environment. The study recommends that educators scale up their pedagogical skills, integrating edutainment strategies such as role plays, simulations, gamification and using digital tools in support of teaching and learning in early childhood.

Roman İlkokul Öğrencilerin Eğitime Entegreleri ve Okula Uyum Süreçlerinde Sınıf Öğretmenlerinin Karşılaştığı Sorunlar

Ethem GÜRHAN
Millî Eğitim Bakanlığı

e-mail: ethemgurhan@gmail.com, Orcid No: 0000-0002-5870-3986, Türkiye

Özet

Roman öğrencilerin eğitim sistemine entegrasyonu hem Türkiye’de hem de uluslararası düzeyde sosyal adalet, eşitlik ve kapsayıcılık ilkeleri çerçevesinde önemli bir eğitim problemi olarak ele alınmaktadır. Bu araştırmanın amacı, Roman öğrencilerin okula entegrasyon sürecinde karşılaştıkları başlıca sorunları öğretmen görüşleri doğrultusunda incelemektir. Nitel araştırma desenlerinden durum çalışması yöntemiyle gerçekleştirilen çalışmada, 2024–2025 eğitim öğretim yılında Konya’da kentsel bir bölgede yer alan resmî bir devlet ilkokulunda görev yapan 10 öğretmen ile yarı yapılandırılmış görüşmeler gerçekleştirilmiştir. Toplanan veriler tematik analiz yöntemiyle değerlendirilmiştir. Araştırma sırasında elde edilen bulgular, Roman öğrencilerin okula entegrasyon sürecinde en çok karşılaşılan sorunun öğrenci devamsızlığı olduğunu ortaya koymuştur. Ayrıca, Roman ailelerin ilgisizliği, ekonomik yetersizlikler, toplumsal önyargılar ve okul içi destek sistemlerinin eksikliği gibi faktörler de öğrencilerin akademik ve sosyal uyumlarını olumsuz etkilemektedir. Öğretmenlerin bireysel çabalarla çeşitli stratejiler geliştirdikleri ancak bu çabaların kurumsal politikalarla yeterince desteklenmediği belirlenmiştir. Araştırma sonucunda, öğretmenlerin kapsayıcı eğitim konusunda yeterli donanımına sahip olmaması ve okullarda Roman öğrencilere yönelik sistematik bir destek mekanizmasının bulunmaması önemli bulgular arasında yer almıştır. Bu durum, çok boyutlu bir sosyal adalet meselesi olan Roman öğrencilerin eğitime entegrasyonunun, pedagojik, sosyo-kültürel ve yapısal düzeylerde eşgüdümlü bir şekilde ele alınması gerektiğini göstermiştir.

Anahtar Kelimeler: Roman öğrenciler, okul entegrasyonu, sosyal bilgiler, kapsayıcı eğitim, nitel araştırma

Challenges Faced by Primary School Teachers in the Educational Integration and School Adaptation Processes of Romani Students

Abstract

The integration of Romani students into the education system is considered a significant educational issue within the frameworks of social justice, equality, and inclusivity both in Türkiye and internationally. This study aims to examine the main challenges faced by Romani

students during their school integration process, based on teachers' perspectives. Conducted using a qualitative case study design, the research involved semi-structured interviews with 10 teachers working at a public primary school located in an urban area of Konya during the 2024–2025 academic year. The collected data were analyzed through thematic analysis. The findings revealed that student absenteeism is the most commonly encountered issue in the integration process of Romani students. In addition, factors such as lack of parental involvement, economic hardship, societal prejudice, and the absence of in-school support systems negatively affect the students' academic and social adaptation. It was also determined that although teachers developed various strategies through individual efforts, these efforts were not sufficiently supported by institutional policies. One of the significant findings of the research is that teachers lack adequate training in inclusive education, and schools lack systematic support mechanisms for Romani students. These results indicate that the integration of Romani students into education, as a multidimensional social justice issue, should be addressed in a coordinated manner at pedagogical, socio-cultural, and structural levels.

Keywords: Romani students, school integration, social studies, inclusive education, qualitative research.

Giriş

Eğitim, bireylerin topluma entegrasyonunun ve sosyo-ekonomik ilerlemesinin temel araçlarından biridir. Ancak tüm bireylerin bu sürece eşit koşullarda katılımı, ne yazık ki pratikte mümkün olamamaktadır. Eğitim sisteminin kapsayıcılık düzeyi, çoğu zaman belirli sosyal grupların—özellikle etnik, kültürel ve ekonomik açıdan dezavantajlı konumda bulunanların—maruz kaldığı eşitsizlikler üzerinden değerlendirilmekte ve bu bağlamda Roman topluluğu dikkat çeken bir örnek sunmaktadır. Hem Avrupa genelinde hem de Türkiye özelinde Roman çocukların eğitime erişim ve devam süreçlerinde karşılaştıkları sorunlar, uzun yıllardır akademik, politik ve sosyal alanlarda tartışma konusu olmuştur (UNICEF, 2007; Bhopal & Myers, 2016).

Roman öğrenciler, tarihsel dışlanma pratiklerinin ve kültürel önyargıların bugüne yansıyan sonuçlarıyla eğitim sisteminin çeşitli aşamalarında karşı karşıya gelmektedir. Bu çocuklar, çoğu zaman yüksek devamsızlık oranları, erken okul terki, akademik başarısızlık ve aidiyet hissinin eksikliği gibi çok katmanlı sorunlar yaşamaktadırlar (Uzun & Bütün, 2015). Bu bağlamda sınıf öğretmenleri, Roman öğrencilerin eğitim sürecindeki başarıları kadar sosyal uyumlarında da belirleyici bir role sahiptir. Ancak öğretmenlerin de eğitim sistemi içinde bu gruba yönelik yetersiz donanım, düşük beklenti ve kültürel farkındalık eksikliği gibi nedenlerle

çeşitli güçlükler yaşadıkları görülmektedir (Arslan & Şahin, 2024).

Roman öğrencilerin karşı karşıya kaldığı sorunların önemli bir kısmı yapısalıdır. Sosyo-ekonomik yoksunluk, Roman çocukların eğitime devamını doğrudan etkileyen başlıca faktörlerdendir. Akkan, Deniz ve Ertan (2011), Roman öğrencilerin büyük çoğunluğunun ailesel yoksulluk nedeniyle eğitim sürecinden erken kopmak zorunda kaldıklarını ve bu kopuşun, öğrencilerde okul kavramının değersizleşmesine neden olduğunu belirtmektedir. Okul kıyafetlerinin karşılanamaması, beslenme desteğinin yetersizliği, ulaşım zorlukları gibi görünüşte basit ancak etkisi büyük pratik engeller, eğitimde sürekliliği sekteye uğratmaktadır.

Türkiye’de yaşayan Roman toplulukları, sosyal dışlanma, yoksulluk, mekânsal ayrışma ve önyargı gibi yapısal dezavantajların kesişiminde yer almaktadır (Gürhan, 2023). Eğitimsel uyum sürecinin sadece maddi engellerle değil, aynı zamanda kültürel ve psikolojik etkenlerle de kuşatıldığı açıktır. Özellikle Roman öğrenciler, okullarda kültürel olarak temsil edilmeyen gruplardan biri olarak hem öğretmenler hem de akranları tarafından dışlayıcı tutumlarla karşılaşabilmektedir. Sınıf içi etkileşimlerde yaşanan sembolik dışlanma, öğrencilerin öz yeterlik algılarını ve motivasyonlarını olumsuz etkileyerek okul terkinin hızlandırmaktadır (Kyuchukov, 2000). Bu noktada öğretmenlerin tutumu belirleyici hale gelir. Arslan ve Şahin (2024), öğretmenlerin önemli bir kısmının Roman öğrencileri "problemli" ya da "başarısız" olarak etiketlediğini ve bu etiketlemenin öğrenciler üzerinde kalıcı bir etki yarattığını vurgulamıştır.

Roman öğrencilerin eğitim sistemine entegrasyonunda, okul-aile iş birliğinin sınırlı olması da başlıca sorunlardan biridir. Kumcağız, Özcan ve Şahin (2018) tarafından yapılan araştırmaya göre, öğretmenler Roman ailelerinin eğitime ilgisiz olduğunu düşünmektedir. Ancak aynı çalışmada, ailelerin eğitime ilişkin düşük katılımının ekonomik baskılar, kurumsal güvensizlik ve iletişim eksikliğinden kaynaklandığı da belirtilmiştir. Bu durum, eğitim sürecini yalnızca öğrenci-öğretmen etkileşimiyle sınırlı düşünmenin yetersizliğini ortaya koymaktadır. Okulun Roman ailelerle kurduğu iletişim biçimi, öğrencilerin aidiyet duygusunu ve okula bağlılığını doğrudan etkilemektedir.

Roman öğrencilerin yoğunlukla bulunduğu bölgelerdeki okulların fiziksel ve pedagojik açıdan yetersiz olması da entegrasyon sürecinin önündeki başka bir yapısal engeldir. Arayıcı (2008), bu okulların genellikle yeterli öğretmen, materyal ve destek hizmetlerinden yoksun olduğunu, bu durumun da Roman öğrencilerin hem akademik hem de sosyal gelişimlerini sınırlandırdığını belirtmiştir. Türkiye’de uygulanan Adrese Dayalı Kayıt Sistemi (ADKS), dezavantajlı grupların çoğunlukla sosyo-ekonomik olarak dezavantajlı bölgelerdeki okullara

yönlendirilmesine neden olmakta ve bu da eğitimde fırsat eşitliğini daha da zedelemektedir (Karan, 2017; Ugur Rizzi, 2020).

Öğretmenler açısından bakıldığında ise, Roman öğrencilerle etkili iletişim kurma ve pedagojik müdahale geliştirme konusunda yeterli mesleki hazırlığa sahip olmadıkları sıkça dile getirilmektedir. Özbaş (2018), öğretmenlerin özellikle çok kültürlü sınıflarda tükenmişlik ve yalnızlık hissi yaşadığını; bu durumun, farklı kültürel geçmişe sahip öğrencilerle kurdukları ilişkiyi olumsuz etkilediğini belirtmiştir. Bu bağlamda, sadece öğrencilere değil, öğretmenlere de destek sistemlerinin geliştirilmesi büyük önem arz etmektedir.

Sonuç olarak, Roman ilkokul öğrencilerinin eğitime entegrasyonu ve okula uyum süreçleri; yoksulluk, ayrımcılık, yapısal engeller, öğretmen donanımı ve aile-okul ilişkileri gibi pek çok dinamiği içeren karmaşık bir sosyal meseledir. Bu süreçte sınıf öğretmenleri hem öğrencilerin akademik gelişimi hem de sosyal uyumları açısından temel aktörler olarak öne çıkmaktadır. Ancak bu aktörlerin etkili bir rol üstlenebilmesi, onların kültürel duyarlılık düzeylerinin artırılması, mesleki gelişimlerinin desteklenmesi ve sistemin bütüncül biçimde yeniden yapılandırılması ile mümkün olacaktır.

Araştırmanın Amacı, Araştırma Soruları ve Araştırmanın Önemi

Bu çalışmanın temel amacı, Roman öğrencilerin okula entegrasyon sürecinde karşılaştıkları sorunları öğretmen görüşlerine dayalı olarak incelemektir. Araştırma, öğretmenlerin gözlemleri, deneyimleri ve yorumları aracılığıyla hem yapısal hem de sınıf içi düzeyde yaşanan sorunları ortaya koymayı ve bu sorunlara yönelik çözüm önerileri geliştirmeyi hedeflemektedir.

Araştırma soruları:

1. Roman öğrencilerin okula entegrasyon sürecinde karşılaştıkları başlıca sorunlar nelerdir?
2. Bu sorunların temelinde yatan sosyal, kültürel ve pedagojik faktörler nelerdir?
3. Öğretmenler, Roman öğrencilerin eğitime katılımını ve başarısını artırmak için ne tür stratejiler geliştirmektedir?
4. Mevcut eğitim politikaları ve uygulamaları, Roman öğrencilerin entegrasyonunu ne ölçüde desteklemektedir?

Bu çalışma, öğretmenlerin sahadan getirdiği nitel verilerle, eğitim politikalarının sahadaki yansımalarını daha görünür kılması bakımından önem arz etmektedir. Aynı zamanda,

öğretmenlerin kapsayıcı eğitim konusundaki ihtiyaçlarını ve karşılaştıkları engelleri de analiz ederek, sürdürülebilir ve eşitlikçi bir eğitim politikası için öneriler sunacaktır. Bu nedenle, öğretmenlerin deneyimleri ve görüşleri, Roman öğrencilerin okula entegrasyon sürecinde karşılaşılan sorunların anlaşılmasında ve çözüm önerilerinin geliştirilmesinde kritik öneme sahiptir.

Yöntem

Araştırma Modeli

Bu çalışma, nitel araştırma yöntemlerinden "durum çalışması" deseniyle tasarlanmıştır. Durum çalışması, belirli bir olgunun mevcut bağlam içinde derinlemesine ve çok yönlü olarak incelenmesini sağlar (Yıldırım & Şimşek, 2021). Bu bağlamda, Roman öğrencilerin eğitim sürecine entegrasyonuna ilişkin öğretmen deneyimlerini anlamak amacıyla bu model tercih edilmiştir. Yöntemsel tercih, konunun toplumsal, pedagojik ve kültürel bağlamlarda çok katmanlı doğasına uygunluk arz etmektedir.

Katılımcılar

Çalışma grubunu, 2024–2025 eğitim öğretim yılı itibarıyla Konya il merkezinde bulunan bir devlet ilkokulunda görev yapan 10 sınıf öğretmeni oluşturmaktadır. Katılımcılar, nitel araştırmalarda yaygın olarak kullanılan “amaçlı örnekleme” tekniklerinden biri olan “maksimum çeşitlilik örnekleme” yöntemi ile belirlenmiştir. Bu yaklaşım, araştırma konusunu etkileyebilecek değişkenlerin (cinsiyet, kıdem, öğretim deneyimi vb.) çeşitliliğini artırarak daha zengin ve temsiliyeti yüksek veri sağlamayı amaçlamaktadır (Patton, 2015). Öğretmenlerin kıdemleri 12 ile 35 yıl arasında değişmektedir; kadın ve erkek katılımcılar dengeli biçimde temsil edilmiştir.

Veri Toplama Araçları

Veriler, araştırma amacı doğrultusunda geliştirilen yarı yapılandırılmış görüşme formu aracılığıyla toplanmıştır. Formda yer alan açık uçlu sorular, Roman öğrencilerin okula entegrasyonu, karşılaşılan zorluklar, aile ile etkileşim ve önerilen çözüm stratejileri gibi başlıkları kapsamaktadır. Görüşme formu, alan uzmanı iki akademisyenin görüşleri doğrultusunda ön testten geçirilerek yenilenmiştir. Görüşmeler, katılımcıların izni alınarak ses kaydı ile gerçekleştirilmiş, her biri ortalama 35 dakika sürmüştür ve ardından betimsel analiz için çözümlenmiştir.

Veri Analizi

Toplanan veriler, Braun ve Clarke (2006) tarafından geliştirilen altı aşamalı tematik

analiz süreci ile değerlendirilmiştir:

- Verilerin okunarak tanınması,
- Başlangıç kodlarının oluşturulması,
- Temaların belirlenmesi,
- Temaların gözden geçirilmesi,
- Temaların adlandırılması ve tanımlanması,
- Raporlaştırma.

Kodlama işlemi iki bağımsız araştırmacı tarafından yürütülmüş, temalar arası tutarlılığı sağlamak için araştırmacılar arası güvenilirlik oranı hesaplanmış ve %92 düzeyinde uyum elde edilmiştir. Verilerin doğruluğu için katılımcı onayı (member check) ve uzman görüşü yöntemleri kullanılmıştır. Veri analiz süreci NVivo 12 yazılımı ile desteklenmiştir.

Bulgular

Bu bölümde, araştırma kapsamında öğretmenlerle yapılan görüşmelerden elde edilen veriler tematik analiz yöntemiyle çözümlenmiş ve araştırma sorularına uygun olarak yapılandırılmıştır.

Roman Öğrencilerin Entegrasyon Sürecinde Karşılaşılan Başlıca Sorunlar

Öğretmenlerin tamamı, Roman öğrencilerin okula entegrasyon sürecinde karşılaştıkları en temel sorunun devamsızlık olduğunu vurgulamıştır. Öğrencilerin düzensiz okula gelmeleri hem akademik başarıyı hem de sınıf içi sosyal ilişkileri olumsuz etkilediğini belirtmişlerdir. Öğretmenlerin karşılaştıkları sorunlar aşağıdaki gibidir.

“Ders yılı boyunca neredeyse her hafta bir veya birkaç gün devamsızlık yapıyorlar. Bu da doğal olarak öğrenme süreçlerini sekteye uğratıyor.” (Öğretmen 4)

“Ailelerin çoğu çocuğunun okula gelmediğinden haberi olmuyor. İdare tarafından devamsızlık mektubu gönderilince haberdar oluyorlar. (Öğretmen 7)

“Bazı öğrenciler Roman arkadaşlarıyla aynı sırada oturmak istemiyor, bu da onların daha da içine kapanmasına neden oluyor.” (Öğretmen 3)

“Sınıf içinde zaman zaman öğrenciler arasında önyargılı ve dışlayıcı tutumların da yaşandığını ve bunun Roman öğrencilerin sosyal uyumunu olumsuz etkilemektedir. Roman öğrencilerin okul kurallarına uyum sorunu da var. Kural tanımıyorlar. (Öğretmen 8)

Sorunların Temelinde Yatan Sosyal, Kültürel ve Pedagojik Etmenler

Öğretmenler, Roman öğrencilerin yaşadığı mahallelerin sosyal dışlanma ve yoksullukla iç içe olduğunu belirtmiş; bu durumun okul yaşamına doğrudan yansıdığını ifade etmiştir. Ailelerin eğitime olan mesafesi ve önceliklerinin farklı oluşu, öğrencilerin okula yönelik motivasyonlarını düşürmektedir.

“Velilerle iletişim kurmakta çok zorlanıyoruz. Okul ve eğitim onlar için pek de önemli değil gibi.” (Öğretmen 1)

“Roman velilerle çocukları hakkında konuştuğumda çocuklarının nasıl olsa okumayacaklarını, okusalar bile devlet işine girmelerinin çok zor olduğunu bu yüzden okula ve eğitime önem vermediklerini gördüm. Okumuş ve milletvekili, memur, öğretmen olmuş Romanlardan örnekler vererek okul ve eğitimin önemi hakkında ne kadar ikna etmeye çalışsam da beceremedim. Romanlar okumaz okusa bile işe giremez, gündelik işler yaparak geçimini sağlar diye şartlanmışlar adeta. (Öğretmen 9)

Öğretmenlerin Kullandığı Stratejiler

Bazı öğretmenler, öğrencileri kazanmak için bireysel çaba sarf ettiklerini, onların ilgisini çekecek yöntemler uyguladıklarını belirtmiştir. Pozitif disiplin, öğrenci merkezli yöntemler ve aile ile birebir iletişim en çok başvurulan stratejiler arasındadır.

“Özellikle katılmak istemedikleri derslerde onlara küçük sorumluluklar vererek dâhil etmeye çalışıyorum.” (Öğretmen 6)

“Mahalledeki koşulları da göz önüne alarak, onlara uygun örnekler vermeye çalışıyorum. Örneğin drama ya da hikâye anlatımı çok etkili oluyor.” (Öğretmen 5)

“Öğrencilerin olumlu davranışlarını pekiştirmek için, küçük sorumluluklar veriyorum ve kültürel etkinlikleri sınıfa entegre ediyorum. Mesela son derslerde etkileşimli tahtada bir Roman havası şarkı açıp sınıfça oynuyoruz. Bu da Roman öğrencilerimin çok hoşuna gidiyor.” (Öğretmen 10)

Okul Politikaları ve Uygulamalarının Yeterliliği

Katılımcıların büyük bölümü, okulda Roman öğrencilere özgü bir destek sisteminin bulunmadığını belirtmiştir. Rehberlik hizmetlerinin yetersizliği ve öğretmenlerin bu konuda özel bir eğitim almamış olması, sürecin daha da zorlaşmasına neden olmaktadır.

“Bize bu çocuklarla nasıl iletişim kuracağımıza dair bir eğitim verilmedi. Genelde deneme-yanılma ile ilerliyoruz.” (Öğretmen 2)

“Okul yönetimi Roman öğrencilerle ilgili konulara duyarsız kalıyor ve somut bir çözüm önerisi geliştirmiyor. Zaten okumayacak olan Roman öğrenciler için rutin programımızı mı değiştirelim diyorlar. Bunun için okul politikalarını yetersiz görüyorum.” (Öğretmen 10)

“Yönetim genel olarak bu konuları geçiştiriyor, ciddi bir çözüm arayışı yok.” (Öğretmen 9)

Tartışma ve Sonuç

Bu araştırma, Roman ilkokul öğrencilerinin eğitime entegrasyon ve okula uyum süreçlerinde sınıf öğretmenlerinin karşılaştıkları güçlükleri ortaya koymayı amaçlamıştır. Elde edilen bulgular, Roman öğrencilerin eğitime eşit katılımının önünde çok katmanlı engellerin bulunduğunu açıkça ortaya koymaktadır. Bu sorunların yalnızca bireysel düzeyde değil, yapısal, kültürel ve pedagojik düzeyde de derinleştiği gözlemlenmiştir. Öğretmenlerin aktardığı devamsızlık, ayrımcılık, önyargılar, aile ilgisizliği ve okul politikalarındaki eksiklikler, daha önce yapılan ulusal ve uluslararası araştırmalarla da örtüşmektedir (UNICEF, 2007; Kyuchukov, 2000). Ayrıca bu araştırma Roman öğrencilerin eğitim deneyimlerinin görünür kılınmasına ve öğretmen perspektifinden sorunların anlaşılmasına katkı sağlamaktadır. Ancak kapsayıcı bir eğitim politikası için daha sistemli, disiplinler arası ve uzun erimli çalışmalar yapılması zorunludur. Bu araştırma, Roman ilkokul öğrencilerinin eğitime entegrasyon ve okula uyum süreçlerinde sınıf öğretmenlerinin karşılaştıkları güçlükleri ortaya koymayı amaçlamıştır. Bulgular, Roman öğrencilerin eğitime eşit katılımının önünde bireysel değil, yapısal, kültürel ve pedagojik düzeyde çok katmanlı engeller bulunduğunu göstermiştir. Bu durum, Bourdieu’nün kültürel sermaye kuramı (1986) çerçevesinde değerlendirildiğinde, Roman öğrencilerin eğitim sistemine entegre olamamalarının yalnızca ekonomik nedenlerle değil, aynı zamanda okulun kültürel kodlarıyla da uyumsuzluk yaşamasından kaynaklandığı anlaşılmaktadır. Araştırmada en çok vurgulanan problem olan devamsızlık, sadece ders kaçırma meselesi değil, aynı zamanda okulun bir “aidiyet mekânı” olamamasıyla da ilişkilidir. Bu bağlamda, Goodenow’un (1993) geliştirdiği “psikolojik aidiyet kuramı” öğrencilerin okul ortamında kabul edilme, değerli hissetme ve güvenlik duygusu ile doğrudan ilişkilidir. Roman öğrencilerin akran zorbalığına uğraması, öğretmenler tarafından etiketlenmesi veya okul politikalarının onları görünmez kılması, bu aidiyet bağının kurulmasına engel teşkil etmektedir.

Araştırmanın öne çıkan bulgularından biri, Roman öğrencilerde okul devamsızlığının çok yaygın olduğudur. Bu durum sadece akademik başarıyı değil, öğrencilerin sınıf içi sosyal ilişkilerini ve aidiyet hissini de zedelemektedir. Kumcağız, Özcan ve Şahin (2018) ve Uzun ve Bütün (2015) tarafından yapılan çalışmada da benzer biçimde, Roman öğrencilerin devamlılık sorunlarının sosyal dışlanma ve yoksullukla doğrudan bağlantılı olduğu vurgulanmaktadır.

Devamsızlığın temel nedenleri arasında ekonomik sıkıntılar, aile ilgisizliği ve okulun Roman kültürünü içermeyen yapısı öne çıkmaktadır.

Öğretmenlerin dile getirdiği bir diğer önemli konu, sınıf içindeki önyargılar ve dışlayıcı tutumların Roman öğrencilerin sosyal uyumunu olumsuz etkilemesidir. Bhopal ve Myers (2016), Roman öğrencilerin akranları tarafından dışlandıklarında okulun onlar için güvenli bir alan olmaktan çıktığını ve bu durumun öğrenme süreçlerini ciddi şekilde baltaladığını ifade etmektedir. Araştırmada, bazı öğrencilerin Roman arkadaşlarıyla aynı sırayı paylaşmak istememeleri, okuldaki kültürel ayrışmanın somut bir göstergesidir. Kyuchukov (2000) da öğretmenlerin Roman öğrencilerle fiziksel temastan kaçındığını rapor ederek benzer kültürel mesafe sorunlarına işaret etmiştir. Sınıf içindeki önyargı ve dışlayıcı tutumlar, Kyuchukov (2000) ve Bhopal & Myers (2016) gibi akademisyenlerin çalışmalarıyla örtüşmektedir. Özellikle bazı öğrencilerin Roman akranlarıyla aynı sırayı paylaşmak istememesi, sembolik dışlanma örneğidir. Bu durum, Roman öğrencilerin öz yeterlik algısını ve öğrenmeye olan motivasyonunu zayıflatarak, eğitim süreçlerinden uzaklaşmalarına neden olmaktadır. Bu bağlamda, Bronfenbrenner'in (1979) ekolojik sistemler kuramı, öğrencilerin içinde bulunduğu mikro (aile, sınıf), mezo (okul, öğretmen), ekzo (yönetim politikaları) ve makro (kültürel normlar) düzeylerin birbirini etkileyerek eğitim deneyimini şekillendirdiğini vurgular.

Roman öğrencilerin yaşadığı mahallelerin sosyal dışlanma, işsizlik ve yoksullukla iç içe olması, okul-aile ilişkilerini de zayıflatmaktadır. Öğretmenlerin büyük bölümü, velilerle etkili iletişim kurmakta zorlandıklarını ve ailelerin eğitime öncelik vermediğini belirtmiştir. Ateş ve Ünal (2022) bu bağlamda, Roman annelerin eğitime ilişkin deneyimlerinde okulun çoğu zaman dışlayıcı bir kurum olarak algılandığını ve bu durumun velilerin kuruma olan güvenini zedelediğini vurgulamaktadır. Bu tür bir güvensizlik döngüsü, çocukların okul motivasyonunu olumsuz etkileyen sosyal bir mirasa dönüşmektedir.

Bulgular ayrıca öğretmenlerin bireysel çabalarına rağmen, sistemin Roman öğrencilere özgü bir destek mekanizması oluşturmadığını göstermektedir. Pozitif disiplin, öğrenci merkezli yaklaşım ve kültürel içerikli etkinliklerin etkili olduğu gözlemlense de bu uygulamalar öğretmenlerin kişisel gayretleriyle sınırlı kalmaktadır. Oysa kapsayıcı eğitimin kurumsal düzeyde ele alınması ve öğretmenlerin hizmet içi eğitimlerle desteklenmesi gerekmektedir. Arslan ve Şahin (2024), öğretmenlerin Roman öğrencilerle çalışırken kültürel yeterlik eksikliği yaşadıklarını ve bu eksikliğin sınıf içi etkileşimi olumsuz etkilediğini belirtmektedir. Benzer şekilde, Ugur Rizzi (2020), Türkiye'de Roman öğrencilerin eğitime erişimiyle ilgili politika belgelerinde kapsayıcılığın vurgulanmasına rağmen, uygulamada ciddi boşluklar bulunduğunu

ortaya koymuřtur. Ayrıca araştırma bulguları, bireysel öğretmen çabalarının önemli olduėunu ancak sistematik destek mekanizmalarının yokluėunda bu çabaların sürdürülebilir olmadığını ortaya koymaktadır. Özellikle rehberlik hizmetlerinin zayıf olması, öğretmenlerin çok kültürlü sınıf yönetimi konusunda hizmet içi eğitim almamış olmaları, kapsayıcı eğitimin uygulamada sınırlı kaldığını göstermektedir. Arslan ve Şahin (2024) de öğretmenlerin Roman öğrencilerle çalışırken kültürel yeterliklerinin sınırlı olduğunu ve bu durumun sınıf içi etkileşimi doğrudan etkilediğini ortaya koymuřtur.

Sonuç olarak, Roman öğrencilerin eğitim sistemine tam anlamıyla entegre olabilmeleri için çok boyutlu bir yaklaşım benimsenmelidir. Roman öğrencilerin eğitime entegrasyonu çok boyutlu bir sosyal adalet sorunudur. Eğitim sisteminin yalnızca fiziksel erişimi sağlamakla yetinmeyip, sosyal dışlanmayı önleyecek politikalar geliřtirmesi, öğretmenleri çok kültürlü ortamlarda çalışmaya hazırlaması ve okulun her bir öğrenciyi değerli hissettiren bir mekân hâline gelmesi gerekmektedir. Eğitimde fırsat eşitliėi yalnızca fiziki erişimle sınırlı kalmamalı; sosyal, kültürel ve psikolojik destek unsurlarını da içermelidir. Bu bağlamda ařağıdaki öneriler geliştirilebilir:

- Hizmet içi eğitim programları, öğretmenlerin kültürel duyarlılıklarını artırmalı ve Roman öğrencilere özgü pedagojik yaklaşımlar kazandırmalıdır.
- Okullarda rehberlik ve psikolojik danışmanlık hizmetleri, Roman öğrencilerin sosyal uyumunu destekleyecek biçimde yeniden yapılandırılmalıdır.
- Roman velilere yönelik bilgilendirme ve destek çalışmaları, okul-aile iş birliğini güçlendirmeyi hedeflemelidir.
- Okul yönetimleri, sadece akademik başarı odaklı deėil; aidiyet, katılım ve kapsayıcılık değerlerine dayalı bütüncül stratejiler geliřtirmelidir.

The Emotional Literacy of Children: A Critical Component of Child Development

Çocukların Duygusal Okuryazarlığı: Çocuk Gelişiminin Kritik Bir Bileşeni

Sibel Yoleri

Uşak University, sibel.yoleri@usak.edu.tr, ORCID no: 0000-0002-7802-2352, TURKEY

Özet

Duygusal okuryazarlık, kişinin duygularını tanıma, anlama, ifade etme ve etkili bir şekilde yönetme becerisini ifade eder. Duygusal okuryazarlığın gelişimi erken çocukluk döneminde başlar ve ergenlik dönemine kadar devam eder. Çocuklar büyüdükçe, duygusal okuryazarlıkları sadece zihinsel refahlarını değil, aynı zamanda akademik başarılarını ve sosyal ilişkilerini de önemli ölçüde etkiler. Küçük çocuklar duygusal okuryazarlığı genellikle ebeveynleri, öğretmenleri ve akranlarıyla etkileşimleri yoluyla edinirler. Önemi göz önüne alındığında, duygusal okuryazarlığın nasıl geliştiğini, erken çocukluk eğitimi üzerindeki etkisini ve bunu geliştirmek için kullanılabilecek stratejileri anlamak çok önemlidir. Bu çalışma, erken çocukluk döneminde duygusal okuryazarlığın önemini, gelişimsel etkilerini ve bu becerinin hem ev hem de okul ortamlarında nasıl desteklenebileceğini güncel araştırmalar ışığında incelemektedir.

Anahtar Kelimeler: Duygular, Duygusal Okuryazarlık, Erken Çocukluk, Ebeveynler, Öğretmenler

Abstract

Emotional literacy is the ability to recognise, understand, express and manage one's emotions effectively. The development of emotional literacy begins in early childhood and continues throughout adolescence. As children grow, their emotional literacy significantly influences their mental well-being, academic achievement, and social relationships. Young children typically acquire emotional literacy through interactions with their parents, teachers and peers. Given its importance, it is crucial to understand how emotional literacy develops, its impact on early childhood education, and the strategies that can be employed to foster it. This study examines the importance of emotional literacy in early childhood, its developmental effects, and how this skill can be fostered in home and school environments, based on current research.

Keywords: Feelings, Emotional Literacy, Early Childhood, Parents, Teachers

Giriş

Duygular, bireyin çevresiyle kurduğu etkileşimde ve yaşamı anlamlandırmasında temel bir bileşen olarak kabul edilir. Çocuklar daha yaşamın ilk anlarından itibaren çeşitli duygusal tepkiler verirler; ancak bu tepkilerin tanınması, düzenlenmesi ve sosyal bağlam içinde anlamlandırılması zaman içinde gelişir. Bu süreçte “duygusal okuryazarlık” kavramı önemli bir yer tutar. Duygusal okuryazarlık, bireyin hem kendi duygularını hem de diğer bireylerin duygularını sağlıklı ve yapıcı bir şekilde tanıma, anlama, uygun şekilde ifade etme, duygusal tepkileri düzenleme ve başkalarının duygularını anlayarak uygun şekilde karşılık verebilme becerilerini içeren çok boyutlu bir kavramdır (Brackett vd., 2011; Brackett & Rivers, 2014; Goleman, 1995; Mayer vd., 2004; Steiner, 2003). Bu becerilerin temelleri erken çocuklukta atılmakta ve çocuğun çocuğun sosyal, duygusal ve bilişsel gelişimi, sosyal ilişkileri, empati ilişkiler kurma kapasitesini ve öz düzenleme becerilerini doğrudan etkilemektedir (Denham, 2006; Denham vd., 2012; Jones vd., 2015; Steiner, 2020; Trentacosta & Fine, 2010). Son yıllarda yapılan çalışmalar, duygusal okuryazarlığın yalnızca bireyin ruh sağlığı açısından değil, aynı zamanda akademik performans ve toplumsal uyum açısından da belirleyici bir etkiye sahip olduğunu ortaya koymaktadır (Jones vd., 2015).

Erken çocukluk dönemi, bireyin sosyal, duygusal ve bilişsel gelişiminde kritik bir evredir (Shonkoff & Phillips, 2000). Bu dönemde çocukların duygularını tanıma, anlama ve düzenleme becerilerinin gelişimi, yaşam boyu sürecek sağlıklı sosyal ilişkilerin ve kişisel uyumun inşası açısından hayati önem taşımaktadır (Denham, 2006). Erken yaşlarda kazanılan duygusal farkındalık, ifade becerileri ve öz düzenleme gibi duygu okuryazarlığına ilişkin yetkinlikler, bireyin kişilik oluşumunu ve davranış örüntülerini şekillendirmede etkili olmaktadır.

Son yıllarda yapılan çalışmalar, duygusal okuryazarlığın sadece bireysel düzeyde değil, aynı zamanda çevresel faktörlerle de şekillendiğini göstermektedir. Bu bağlamda hem öğretmenler hem de ebeveynler, çocukların duygusal okuryazarlığını destekleyen çevresel koşulların oluşturulmasında temel aktörler olarak kabul edilmektedir (Oberle & Schonert-Reichl, 2027; Schonert-Reichl, 2017).

Önemi göz önüne alındığında, duygusal okuryazarlığın nasıl geliştiğini, erken çocukluk eğitimi üzerindeki etkisini ve duygusal okuryazarlığı geliştirmek için kullanılabilecek stratejileri anlamak gerekir. Bu çalışmada, erken çocukluk döneminde duygusal okuryazarlığın önemi, gelişimsel etkileri ve bu becerinin ev ve okul ortamlarında nasıl desteklenebileceği, güncel araştırmalar ışığında ele alınmaktadır.

Duygusal Okuryazarlığın Temel Bileşenleri

Literatür incelendiğinde, yapılan tanımlardan da yola çıkarak, duygusal okuryazarlığın duygusal farkındalık, empati, motivasyon, öz düzenleme ve sosyal uyum ve beceri kavramları ile ilişkilendirildiği görülmektedir.

Duygusal Farkındalık

Duygusal farkındalık, bireyin yaşadığı duygusal durumlar sonucunda kendi duygularına ilişkin algısı, o anda yaşanan duyguyu bilmesi ve anlaması, duygularını yönetebilmesini ifade etmektedir (Croyle & Waltz, 2002; Özmüftüoğlu, 2022). Duygusal farkındalık becerisi, çocuklar için duyguları tanıma, isimlendirme ve duygular arasında ayırım yapabilme ve bu duyguları sosyal bağlamda anlamlandırma kapasitesini güçlendirir (Fantini Hauwel vd., 2012).

Empati

Bireyin kendisini başka bireylerin yerine koyup onların bakış açısından bakarak diğerlerinin duygu ve düşüncelerini anlayabilme ve bunları paylaşabilme yeteneğidir (Schwenck vd., 2014). Duygusal okuryazarlığın önemli bir bileşeni olan empati becerisi, erken çocukluk döneminde gelişmeye başlamaktadır. Empati becerisi yüksek olan çocuklar diğer kişilerin duygu durumlarını hissetme ve yaşantılarını, düşüncelerini anlama konusunda daha başarılıdır (Eisenberg vd., 2010).

Motivasyon

Motivasyon kavramı, bireyin belirli bir amaç doğrultusunda harekete geçmesini sağlayan, hedefe ulaşmasında yönlendirici rol oynayan itici bir güç olarak tanımlanmaktadır. Motivasyon, aynı zamanda bireyin kendi kapasitesini ve sınırlılıklarını gerçekçi bir biçimde değerlendirmesini, ulaşılabilir hedefler belirlemesini ve duygu-durumunu düzenleyerek davranışlarını kontrol altında tutmasını kolaylaştırır (Özmüftüoğlu, 2022).

Öz Düzenleme

Bireylerin, duygularını tanıma, duygu, düşünce, davranış ve dikkatini kontrol ederek uygun şekilde düzenleyebilme becerisidir. Öz düzenleme becerisinin küçük yaşlardan itibaren desteklenmesi bireylerin farklı duygu durumlarındaki tepkilerini kontrol edebilmesinde, başka bireylerle ilişkilerinde uygun davranışlar sergileyebilmelerinde, dürtülerini kontrol edebilmelerinde ve yaşamış oldukları olumsuz yaşantılar karşısında uygun tepkiler verebilmesinde önemli bir beceridir (Denham vd., 2003; Ertürk Kara vd., 2018).

Sosyal Beceri

Sosyal beceri, bireyler için sosyal ilişkileri başlatan ve devam etmesine katkıda bulunan, sosyal ilişkilerde yaşanan sorunların çözümü için kolaylaştırıcı unsur oluşturan sözel ya da sözel olmayan davranışlar bütünü olarak tanımlanmaktadır (Kelly, 2018; Akt: İkiz, 2024). Bireylerin

içerisine doğmuş oldukları sosyal çevre ile uyumlu bir şekilde hayatlarını devam ettirebilmeleri ve kişiler arası iletişim süreçlerinde sağlıklı ilişkiler kurabilmeleri açısından sosyal becerilerin büyük bir önemi bulunmaktadır.

Erken Çocuklukta Duygusal Okuryazarlığın Gelişimi ve Önemi

Erken çocukluk dönemi, duygusal okuryazarlığın temellerinin atıldığı kritik bir dönemdir. Bu dönem boyunca, çocuklar duygusal deneyimlerini tanımayı, adlandırmayı ve duygularını başkalarıyla sağlıklı bir şekilde paylaşmayı öğrenirler. 2–3 yaş arası çocuklar, temel duygular olan mutluluk, öfke, korku ve üzüntüyü ayırt etmeye ve ifade etmeye başlar. Bu dönemde çocuklar, özellikle yüz ifadeleri, beden dili ve ses tonlarından duyguları ayırt edebilirler. Gelişimsel olarak, beş yaş civarına geldiklerinde çocuklar duygu isimlerini öğrenmiş olurlar ve bu duygulara uygun tepkiler geliştirmeye başlarlar (Izard, 2002). Yaklaşık 4-6 yaş arasında duygu düzenleme ve başkalarının duygularını anlama yeteneklerinde belirgin bir ilerleme kaydedilir (Denham vd., 2012). Bu dönemde duygusal terimlerin sözel karşılıklarını öğrenmeleriyle birlikte çocukların duygularını sözel olarak ifade etme becerileri artar (Denham, 2006; Brazzelli vd., 2022).

Araştırmalar, duygusal okuryazarlığı gelişmiş çocukların saldırganlık eğilimlerinin daha düşük olduğunu ve zorbalık davranışında bulunma olasılıklarının azaldığını ortaya koymaktadır. Çünkü bu çocuklar duygularını daha iyi yönetebilmekte ve çatışmalara şiddet içermeyen yollarla yanıt verebilmektedir (Eisenberg & Morris, 2002; Gross, 2002). Bu çocukların ayrıca paylaşma, yardım etme ve akranlarıyla iş birliği yapma gibi sosyal davranışlar sergileme olasılıkları daha yüksektir. Buna karşılık, sınırlı duygusal okuryazarlığa sahip çocuklar duygularını uygun şekilde ifade etmekte güçlük çekerle; bu durum hayal kırıklığına, saldırganlığa ve arkadaşlıkları sürdürmede zorluklara yol açabilir (Eisenberg & Fabes, 2006).

Erken yaşta geliştirilen duygusal okuryazarlık becerileri ileriki dönemlerdeki akademik performans üzerinde etkilidir. Örneğin, duygusal okuryazarlığın temel bir yönü olan duygu düzenleme yeteneği, daha iyi odaklanma ve görev tamamlama gibi akademik başarıya katkı sağlayan becerilerle yakından ilişkilidir (Gross, 2002). Dahası, duygusal olarak daha yetkin çocuklar akademik stres faktörleriyle başa çıkmada daha iyidir ve bu da genel performanslarını iyileştirebilir (Mayer & Salovey, 1997).

Duygu okuryazarlığı yalnızca anlık davranışları şekillendirmekle kalmaz, aynı zamanda bireyin uzun vadeli psikolojik sağlamlığı üzerinde de etkilidir. Erken yaşta edinilen bu beceriler, çocukları depresyon, anksiyete ve davranışsal sorunlara karşı koruyucu etki göstermektedir (Brackett vd., 2012). Duygusal açıdan daha farkındalık sahibi çocuklar, daha düşük düzeyde

anksiyete yařarken, yksek zsaygıya ve etkili duygusal dzenleme yeteneklerine sahip olurlar (Gross, 2002). Bu ocuklar aynı zamanda stresli yařam olaylarıyla bař etmede daha iřlevsel bařa ıkma stratejileri geliřtirme eēilimindedir (Zeman vd., 2001). Bu geliřimsel sre, ocuēun iinde bulunduēu evrenin, zellikle de aile ve eēitim ortamlarının desteēiyle řekillenir. Ebeveynlerin ve ēretmenlerin duygu okuryazarlıēını teřvik eden tutumları, ocukların bu becerileri kazanmalarında nemli bir rol oynamaktadır (Raver & Zigler, 2004). Duygusal ifadelerin anlařıldıēı, empatik tepkilerin model alındıēı bir evrede byyen ocuklar, daha saēlıklı duygu ynetimi becerileri geliřtirme potansiyeline sahiptir (Denham et al., 2012).

Ebeveynlerin Rol

Ebeveynler, ocukların duygusal geliřiminde birincil rol oynar. Ebeveynlerin ocukların duygusal geliřimindeki rol zerine yapılan arařtırmalar, ebeveynlerin duyguları modelleme, ocukların duygularını yansıtma ve uygun duygu ifadelerine rehberlik etme davranıřlarının ocukların duygusal becerilerinin řekillenmesinde kritik olduēunu gstermektedir (Denham vd., 2014; Morris vd., 2007). zellikle, duyarlı ve destekleyici ebeveyn tutumları, ocukların duygu dzenleme yeteneklerini gçlendirirken, stresli durumlarla bařa ıkmasını kolaylařtırır ve sosyal becerilerinin geliřimini destekler (Kochanska vd., 2005). Aksi durumda olumsuz ebeveyn-ocuk etkileřimleri duygusal sorunların artmasına zemin hazırlayabilir (Kochanska vd., 2009).

ēretmenlerin Rol

Okul ncesi ēretmenleri, ocukların sosyal-duygusal geliřimini destekleyen evresel faktrlerin bařında gelmektedir (Raver, 2002). Sınıf ortamında sergilenen sıcak, anlayıřlı ve duygusal olarak destekleyici tutumlar, ocukların duygularını tanıma, ifade etme ve dzenleme becerilerini geliřtirmelerine olanak saēlar (Schonert-Reichl, 2017). Arařtırmalar, ocukların duygusal geliřimini doērudan etkileyen nemli bir unsurun ēretmenlerin duygusal farkındalık ve iletiřim becerileri olduēunu ortaya koymaktadır (Jennings & Greenberg, 2009). Ancak Trkiye'de yrtlen bazı alıřmalar, okul ncesi ēretmenlerinin sosyal-duygusal geliřimi destekleme konusundaki bilgi ve yeterlik dzeylerinin yeterince gçl olmadıēını gstermektedir (Erdoēan & Aslan, 2025).

ēretmenlerin empati kurma, olumlu pekiřtirme yapma ve duygusal ifadelerini aık biimde ynetebilme yetenekleri, ocukların kendilerini gvenli bir ortamda hissetmelerini saēlar. Benzer řekilde, ēretmenlerin sınıf iinde duygular zerine aıka konuřmaları, ocuklara

rehberlik etmeleri ve duygusal deneyimlere duyarlılık göstermeleri, çocukların duygusal okuryazarlık becerilerini olumlu yönde etkilemektedir (Erdoğan & Aslan, 2025).

Duygusal Okuryazarlığın Geliştirilmesinde Karşılaşılan Zorluklar

Duygusal okuryazarlığın kabul edilen faydalarına rağmen, çocuklarda gelişimini teşvik etmede çeşitli zorluklar vardır. Temel zorluklardan biri, okullarda yapılandırılmış programların ve eğitimcilere yönelik duygusal okuryazarlık eğitiminin eksikliğidir. Çocuklara duygusal düzenleme, empati ve çatışma çözümü gibi becerileri öğreten SEL programlarının duygusal okuryazarlığı iyileştirdiği ve davranış sorunlarını azalttığı gösterilmiştir (Durlak vd., 2011). Ancak, tüm çocuklar bu tür programlara erişemeyebilir veya erişenler evde veya toplumda yeterli destek alamayabilir.

Ek olarak, duygusal ifadede kültürel farklılıklardan kaynaklanan zorluklar da vardır. Kültürel normlar duyguların nasıl algılandığını ve ifade edildiğini etkiler. Bazı kültürlerde, duygusal ifade engellenebilir veya vurgulanmayabilir, bu da bu geçmişe sahip çocuklarda duygusal okuryazarlığın gelişimini engelleyebilir (Gottman vd., 1996). Örneğin, duygusal kısıtlamayı önceliklendiren kültürlerden gelen çocuklar, duygusal okuryazarlık gelişiminde kritik bir adım olan duyguları tanımlama ve etiketleme konusunda zorluk çekebilir (Eisenberg & Morris, 2002).

Bir diğer zorluk ise aile ortamlarının rolüdür. Sosyoekonomik zorluklarla karşı karşıya olan ailelerin çocukları, duygusal desteğe sınırlı erişime sahip olabilir ve bu da duygusal okuryazarlığın gelişimini engelleyebilir. Finansal istikrarsızlık veya ebeveyn çatışması gibi aile stres faktörleri, çocukların duygusal gelişimini etkileyerek duyguları düzenleme ve sosyal ilişkilerde zorluklara yol açabilir (Greenberg vd., 2001).

Duygu Okuryazarlığı Ev ve Okul Ortamında Nasıl Geliştirilir?

Erken çocuklukta duygu okuryazarlığı, genellikle oyun, hikaye anlatımı, sanat etkinlikleri ve grup temelli çalışmalar gibi etkileşimsel süreçler yoluyla gelişir. Ayrıca, çocukların duygu okuryazarlığı becerilerini geliştirebilmesi için ebeveynlerin ve öğretmenlerin duygusal örnekler sunması, empatik davranışlar sergilemesi ve duygusal bağ kurması büyük önem taşır (Fabes vd., 2001).

Aile içi etkileşimler, çocukların duygusal farkındalıklarının gelişiminde önemli rol oynamaktadır. Özellikle, anne-baba duygu sosyalizasyonu, çocukların duyguları anlama ve düzenleme kapasitelerini doğrudan etkilemektedir. Ebeveynlerin açık duygusal iletişim

kurması, duygular hakkında konuşması ve çocukların duygularını onaylayarak yönlendirmesi, çocukların içsel duygusal düzenleme sistemlerini destekler (Gottman vd., 1996).

Tartışma ve Sonuç

Bulgular, erken yaşta kazanılan duygusal becerilerin bireyin sosyal yaşamı, akademik başarısı ve psikolojik sağlamlığı üzerinde kalıcı etkiler oluşturduğunu göstermektedir (Brackett et al., 2011). Bu becerilerin gelişimi, hem okul ortamında öğretmenlerin rehberliğiyle hem de ev ortamında aile desteğiyle desteklenmelidir. Araştırma bulguları, erken çocukluk döneminde duygu okuryazarlığının hem ev hem de okul bağlamında sistematik biçimde geliştirilebileceğini göstermektedir. Özellikle ebeveynlerin duygularla ilgili açık ve onaylayıcı iletişim kurması, çocukların duygusal farkındalık düzeylerini olumlu yönde etkilemektedir (Gottman vd., 1996). Bu bulgu, çocuklarda duygu sosyalizasyonunun önemine işaret eden önceki çalışmalarla da örtüşmektedir (Denham vd., 2014).

Ev ortamında duygusal içerikli hikâye kitaplarının okunması gibi basit fakat etkili stratejiler, çocukların duygusal kelime dağarcığını zenginleştirerek empatik becerilerini artırmaktadır. Benzer şekilde, okul ortamında uygulanan sanatsal etkinlikler, grup oyunları ve yapılandırılmış duygusal eğitim programları, çocukların duyguları tanıma ve ifade etme becerilerini desteklemektedir (Fabes vd., 2001). Öğretmenlerin bu süreçte duygusal model olma, duyguları adlandırma ve empatik tutum sergileme gibi uygulamaları, çocukların sosyal-duygusal gelişimini güçlendirmektedir (Denham vd., 2012; Fabes vd., 2001; Schonert-Reichl, 2017). Bununla birlikte, öğretmenlerin sosyal-duygusal gelişimi destekleme konusunda bilgi ve beceri eksikliği yaşadıkları, ebeveynlerin ise çocuklarıyla duygular üzerine yeterince konuşmadıkları görülmektedir. Bu durum, erken çocukluk alanında çalışan yetişkinlerin duygu okuryazarlığı konusundaki farkındalıklarının geliştirilmesine yönelik eğitim programlarına duyulan gereksinimi açıkça ortaya koymaktadır. Gerek öğretmen eğitim programları gerekse ebeveyn destek sistemleri, duygusal eğitimi merkezine alan yaklaşımlarla yeniden yapılandırılmalıdır. Öte yandan profesyonel gelişim programlarının öğretmenlerin sınıf içi duygusal yeterliliklerini artırdığı, pozitif ilişkileri teşvik ettiği ve çocukların duygusal ihtiyaçlarını karşılamada öğretmenleri daha etkili kıldığı görülmektedir (Jennings & Greenberg, 2009).

Öneriler

Erken çocukluk döneminde duygusal okuryazarlık; duygusal farkındalık, empati, öz düzenleme, içsel motivasyon ve sosyal uyum gibi becerilerle yakından ilişkilidir. Bu becerilerin

gelişimi, hem okul ortamında öğretmenlerin rehberliğiyle hem de ev ortamında aile desteğiyle desteklenmektedir. Sistematik derlemeden elde edilen bulgular, duygusal okuryazarlığın çocukların sosyal, akademik ve psikolojik gelişiminde merkezi bir rol oynadığını göstermektedir.

Öğretmenlerin ve ebeveynlerin çocuklara sunduğu duygusal modellerin, çocukların duygu tanıma, düzenleme ve ifade etme becerilerini doğrudan etkilediği anlaşılmaktadır. Bu bağlamda öğretmen eğitimi programlarına duygusal okuryazarlık, duygusal yeterlilik ve sosyal-duygusal öğrenme odaklı içeriklerin dâhil edilmesi gereklidir. Bu sayede öğretmen adaylarının hem kuramsal hem de uygulamalı becerileri geliştirilmelidir. Diğer yandan öğretmenlere yönelik, hizmet içi eğitimler sunulmalıdır. Ayrıca ailelerin, çocuklarının duygularını anlamaya yönelik bilinçli davranışlar sergilemeleri, çocukların duygusal gelişimi için kritik önemdedir. Fakat birçok çalışmada, ailelerin bu konudaki bilgi düzeylerinin sınırlı olduğu, bilinçlendirme programlarına ihtiyaç duyulduğu vurgulanmaktadır. Bu bağlamda aileler için duygusal farkındalık ve duygu sosyalizasyonu konularında seminerler, atölyeler düzenlenmelidir. Yine ebeveynlere yönelik iletişim becerileri eğitimleri yaygınlaştırılmalıdır.

Erken Çocukluk Döneminde Sosyal Becerilerin Kazanılmasında Çocuğun İyi Oluşuna Katkısının Değerlendirilmesi: Ebeveyn Görüşleri

Evaluating the Contribution of Child Well-Being to the Acquisition of

Kezban Özgem

Cyprus International University, kozgem@ciu.edu.tr , [0000-0002-6929-1753](tel:0000-0002-6929-1753), Famagusta

Özet

Çocukların sosyal beceri gelişimi, onların genel iyilik halleri üzerinde önemli bir etkiye sahiptir. Sosyal beceriler, bireylerin başkalarıyla etkili iletişim kurabilmesi, empati gösterebilmesi, iş birliği yapabilmesi ve toplumsal ilişkilerde uyum sağlayabilmesi için kritik öneme sahiptir. Bu beceriler, öğrencilerin duygusal zekâ gelişimlerini destekler ve stresle başa çıkmalarını kolaylaştırır. Ayrıca, sağlıklı sosyal ilişkiler kurmak, öğrencilerin özgüvenlerini artırır ve topluluk içinde aidiyet duygusu geliştirir. Sosyal becerilerin güçlenmesi, öğrencilerin okulda daha başarılı olmalarını, akranlarıyla olumlu ilişkiler kurmalarını ve genel olarak daha huzurlu bir yaşam sürmelerini sağlar. Sonuç olarak, iyi gelişmiş sosyal beceriler, öğrencilerin sadece akademik başarılarını değil, duygusal ve psikolojik iyilik hallerini de olumlu yönde etkiler. Araştırmada erken çocukluk dönemindeki çocuklarının öz güven, öz disiplin ve öz şefkat becerileri ile iyi oluş arasındaki özelliklerin incelenmesi amaçlanmaktadır. Bu amaca yönelik araştırmada okul öncesi dönem çocuğuna sahip olan ebeveynlerle çocukların iyi oluş özelliklerini incelemek amacıyla yarı yapılandırılmış görüşme tekniği ile nitel verilere dayalı bir durum çalışması yapılmıştır. Araştırma içerik analiz yöntemi ile analiz edilmiş, 2024-2025 döneminde, erken çocukluk dönem çocuğuna sahip 27 anne ile gerçekleşmiştir. Elde edilen bulgulara göre, çocukların en çok gelişen sosyal becerilerinin yardımlaşma becerisi, en az ise paylaşma becerisi olduğunu, çocuklar arası etkileşimlerde empati becerisini gözlemlediklerini, bu becerilerin çocukların iyi oluşunu olumlu yönde etkilediğini, sosyal becerilerin kazandırılmasında karşılaşılan en büyük zorluğun ise liderlik becerisi olduğunu saptanmıştır.

Anahtar Kelimeler: çocuk, iyi oluş, sosyal beceri, öz güven, öz disiplin, öz şefkat.

Social Skills in Early Childhood: Parents' Perspectives

Abstract

The development of children's social skills has a significant impact on their overall well-being. Social skills are critical for individuals to communicate effectively with others, show empathy, cooperate, and adapt to social relationships. These skills support the development of emotional intelligence in students and help them cope with stress more easily. Moreover, building healthy social relationships enhances students' self-confidence and fosters a sense of belonging within their communities. Strengthening social skills enables students to be more successful in school, build positive peer relationships, and generally lead more peaceful lives. As a result, well-developed social skills positively affect not only students' academic success but also their emotional and psychological well-being. This study aims to examine the relationship between self-confidence, self-discipline, and self-compassion skills and well-being in early childhood. To achieve this goal, a qualitative case study was conducted using semi-structured interview techniques with parents of preschool-aged children to explore the characteristics of children's well-being. The research was analyzed using content analysis and was conducted during the 2024–2025 academic year with 27 mothers who have children in early childhood. According to the findings, the most developed social skill among children was cooperation, while the least developed was sharing. Empathy was frequently observed in interactions among children, and these skills were found to have a positive effect on children's well-being. The greatest challenge in fostering social skills was identified as the development of leadership skills.

Keywords: child, well-being, social skills, self-confidence, self-discipline, self-compassion.

Giriş

Erken çocukluk dönemi çocuğun hemen gelişim sağladığı zekâsı, algısı, kişiliği, sosyal davranışları ve zihinsel yetenekleri yüksek oranda değiştiği dönemdir (Ruhm, C. J. Ve Waldfoger, J.,2011). Beyin gelişimin en önemli kısmı bu dönemde gerçekleşir. Okul öncesi dönemindeki çocuklar sorgulayıcı, meraklı, hayal güçleri kuvvetli ve araştırmacıdırlar. Okul öncesi dönemi çocuğun gelişimi için en önemli dönemlerden bir tanesidir. Bu dönem çocuğun ilerleyen yaşlarında öğrenme yaşantıları refahı ve üretkenliği için temel oluşturmaktadır. Okul öncesi dönemi çocuklarının geçirdiği bu zamanların gelişim alanlarının nasıl destek sağladığına bağlı olarak hayatları boyunca devam edecek ve bireyin hayatının büyük ölçüde şekillendirecek temelli izler oluşturmaktadır (Bredkamp,2015; Unicef 2003).

Erken çocukluk dönemi, bireyin sosyal ve duygusal gelişiminin temelini atıldığı kritik bir dönemdir. Bu dönemde kazanılan sosyal beceriler, çocukların ilerleyen yaşlardaki akademik başarıları ve psikososyal uyumları üzerinde belirleyici rol oynar. Denham ve Weissberg (2004), sosyal-duygusal becerilerin okul öncesi dönemde kazandırılmasının çocukların akademik başarılarını ve sosyal ilişkilerdeki yeterliliklerini artırdığını vurgulamaktadır. Araştırmalar, çocukların paylaşma, iş birliği yapma, sırayla oynama gibi becerileri erken yaşlarda öğrenmelerinin, ilerideki sosyal ilişkilerini olumlu yönde etkilediğini göstermektedir (Denham & Weissberg, 2004).

Sosyal beceriler sadece sosyal yaşam için değil, aynı zamanda akademik başarı için de önemlidir. Zins ve arkadaşları (2004), sosyal-duygusal öğrenme programlarının uygulandığı okul öncesi çocukların daha yüksek akademik performans sergilediklerini ve sınıf içi davranış problemlerinin azaldığını ifade etmektedir. Bu beceriler, özellikle öz düzenleme, dikkat kontrolü ve akran ilişkilerinde empati kurma gibi alanlarda gelişimi desteklemektedir (Zins, Bloodworth, Weissberg & Walberg, 2004).

Sosyal beceriler, çocukların psikolojik iyi oluş düzeylerini de doğrudan etkilemektedir. Empati kurma, duyguları ifade edebilme ve problem çözme gibi becerilerin gelişmiş olması, çocukların stresle daha etkili başa çıkmasını sağlar (Collaborative for Academic, Social, and Emotional Learning [CASEL], 2003). Bu tür becerilere sahip olan çocukların okul ortamında daha az çatışma yaşadığı, arkadaşlık ilişkilerinin daha sağlıklı olduğu ve özgüvenlerinin yüksek olduğu gözlemlenmiştir (CASEL, 2003).

Aile ortamı, sosyal becerilerin gelişiminde büyük rol oynamaktadır. Özellikle duyarlı, sıcak ve destekleyici ebeveyn tutumları, çocukların güvenli bağlanma geliştirmelerini ve sosyal becerilerini pekiştirmelerini sağlar. Thompson (2001), ebeveynlerin çocuklarına duyguları hakkında konuşma fırsatı tanımalarının, empati ve öz düzenleme becerilerini geliştirdiğini belirtmektedir.

Erken çocukluk döneminde eğitim aileden başlar. Gerek anne gerek baba çocuğa her açıdan farklı özellikler, yetkinlikler kazandırmaktadır. Çocuğun değerli ve iyi özellikler kazanmasını ve bunu da bilinçli bir şekilde sağlayacak kişi öncelikli olarak ebeveynlerdir. Çocuklar sosyalleşme süreci içerisinde yaşadıkları coğrafyanın kültürünü, değerlerini öğrenir ve yavaş yavaş toplumun bir üyesi haline gelirler. (Hops, 1983; Sukerman, 2000).

Bireyin yaşamın başladığı zamandan itibaren çocuğun zihinsel ve ruhsal gelişimini üzerinde etki bırakan faktörler incelendiği zaman “sosyal ve duygusal iyi oluş” kavramı göze çarpmaktadır (Abed, Pakdaman, Heidari ve Tahmassaian, 2016). İyi olma hali ile mutluluk sözcükleri birbiri yerine kullanılsa da ikisi birbirinden farklı sözcüklerdir. Mutluluk, bireyin aklını ön planda tutmayı, var olan erdemleri kullanıp dengede olma durumu olarak açıklanırken iyi oluş, olumlu ve olumsuz duygulardan daha farklı olarak yaşam tutumları ve bireyin işlevselliğine etkide bulunan yapıların bütünü olarak tanımlanmaktadır (Ryff, 1989; Telef, 2013). Çocukların psikolojik iyi oluşu, gelişimin bir süreç olarak ilerlemesinin ve eğitimsel uygulamaların kalitesinin de önemli bir göstergesi olarak ele alınmaktadır (Van Sanden ve Joly, 2003). Çocuklarda yüksek iyi oluş, çocuğun kendine olan güveni, kendine duyduğu özsaygı, çocuğun sosyal ve duygusal gelişim alanlarında bileşenlere sahip olan, tüm faktörler ve çocuğun sosyal ilişki bağlamlarını kapsayan farklı açıların farklı ve geniş perspektiften değerlendirilmesi gereken bir kavramdır (Schweiger ve Graf, 2015). Sosyal becerilerin çocukluk döneminde güçlenmesi, bireyin yetişkinlikteki psikolojik, sosyal ve duygusal iyi oluşu üzerinde uzun vadeli olumlu etkiler yaratmaktadır. Özellikle empati, problem çözme, çatışma çözme ve etkili iletişim gibi beceriler, bireylerin yaşamları boyunca sağlıklı ilişkiler kurabilmelerini, stresle başa çıkabilmelerini ve toplum içinde anlamlı roller üstlenebilmelerini sağlar. Araştırmalar, erken yaşlarda gelişen sosyal-duygusal yeterliliklerin, ilerleyen yaşlarda depresyon, anksiyete ve yalnızlık gibi olumsuz psikolojik durumların görülme riskini azalttığını göstermektedir (Jones, Greenberg & Crowley, 2015). Ayrıca bu beceriler, bireylerin akademik ve mesleki başarılarını da destekleyerek yaşam doyumlarını artırmaktadır. Nitekim, çocuklukta geliştirilen sosyal becerilerin, yetişkinlikte daha yüksek öz saygı, daha az davranışsal problem ve daha güçlü toplumsal bağlarla ilişkili olduğu saptanmıştır (Moffitt et al., 2011).

Bu araştırma ile elde edilen sonuçlar çocukların iyi oluşlarına etkide bulunan öz güven, öz şefkat ve öz disiplin becerilerinin sosyal becerilerine nasıl katkı sağladığı konusunda literatüre katkı sağlayacak, anne babalarda çocukların iyi oluşu konusunda farkındalık yaratacaktır. Aynı zamanda anne ve babaların çocukların sosyal beceri kazanmalarının önemini kavrama konusunda göstermiş oldukları tutumların bireylerin iyi oluşlarıyla ilişkisinin anlaşılmasında yarar sağlayacaktır. Bu sebeplerle çocukların yaşadığı öz güven, öz disiplin, öz şefkat durumlarının iyi oluşla ilişkisini araştırmak önemli görülmektedir. Bu doğrultuda bu araştırmanın amacı erken çocukluk dönemindeki çocuklarının öz güven, öz disiplin ve öz şefkat becerileri ile iyi oluş arasındaki özelliklerin incelenmesi, ebeveynlerin bu konudaki farkındalıklarının ne olduğu saptamak ve anne babalarda çocukların iyi oluşu konusunda

farkındalık geliřtirmektir. Bu ama erevesinde arařtırmanın problem cmlesi; “Okul ncesi dnem ocuklarının Erken ocukluk dneminde ocukların sosyal beceri geliřimleri ile iyi oluřları arasındaki iliřki nasıldır? řeklinde belirlenmiř, ařağıdaki sorulara yanıt aranmiřtır.

2. Ebeveynlerin ocuğun sosyal becerileri ve ocuk geliřimi hakkındaki dřnceleri nasıldır?
- 3.Ebeveynlerin ocuğun z gven geliřimi hakkındaki dřnceleri nasıldır?
- 4.Ebeveynlerin ocuğun z disiplin ve kendini kontrol becerileri hakkındaki dřnceleri nasıldır?
5. Ebeveynlerin ocuğun z řefkat ve kendini kabul etme becerileri hakkındaki dřnceleri nasıldır?

Yntem

Arařtırma modeli

Bu alıřma, erken ocukluk dnemindeki ocuklarının z gven, z disiplin ve z řefkat becerileri ile iyi oluř arasındaki iliřkiyi ayrıntılı bir řekilde ortaya koymak zere nitel bir alıřma olarak tasarlanmiř olup, durum alıřması yntemi kullanılmıřtır. Bu arařtırmada, durum alıřması desenlerinden btncl tek durum deseni kullanılmıřtır. Btncl tek durum deseni, Yıldırım ve řimřek (2015) tarafından “tek bir analiz birimi (bir birey, bir kurum, bir program, bir yntem) olduğı durumlarda  řekilde kullanılmaktadır. Durum alıřması, olayın derinlemesine, doğıal ortamında ve karmařıklığını dikkate almayı hedeflemekte (Puch,2005) olup bir olaya mdahale etmeden inceleme, anlama, katılımcı veya toplum zerindeki iliřkisi konusunda bilgilerde bulunma imknı sunmaktadır (Akar,2016).

alıřma Grubu

Bu alıřma, amalı rneklem durumuna daha hızlı ve kolay bir řekilde ulařılabilirliğı kazandırılmasıyla ilgili bir yol izlemiřtir. alıřmaya, okul ncesi dnem ocuğuna sahip 27 ebeveyn katılmıřtır. alıřmanın oğunluğunu kadın ebeveynler oluřtırmaktadır. Ebeveynler ile ilgili demografik bilgiler Tablo 1’de yer almaktadır.

Veri Toplama Aracı ve Verilerin Analizi

Bu çalışma, araştırmacı tarafından hazırlanan yarı yapılandırılmış görüşme formunun uygulanabilmesi için gerekli izinler alınarak gerçekleştirilmiş olup, araştırmacılar tarafından geliştirilen yarı yapılandırılmış soru formu oluşturulmuştur. Yarı yapılandırılmış görüşme soruları, araştırmacının önceden belirlediği soruları karşı taraftaki kişiye sorması ve alınan yanıtlar ile başka dallara kaymasına olanak tanımamaktadır (Karasar,2005; Yıldırım ve Şimşek, 2004). Yarı yapılandırılmış görüşme formu alan yazıları incelenerek, olabildiğince kolay bir şekilde anlaşılabilir, açık ve kişiler üzerinde amaçsız bir soru yükü oluşturmaması için soruların çok boyutlu olmamasına özen gösterilmiştir. Araştırmacı tarafından hazırlanan görüşme formu 3 alan uzmanına gösterilmiş olup uzmanlarında görüşleri tabi tutulmuştur. Görüşme formunda yer alan ifadeler okul öncesi dönemde bağlanma, bağımsızlık, dayanıklılık ve iyi oluşa yönelik olarak hazırlanmış 5 sorudan meydana gelmektedir. Araştırma 2022-2023 Bahar döneminde yüz yüze yapılmış olup elde edilen nitel veriler, araştırmacı tarafından içerik analizi yöntemiyle analiz edilmiştir. Bu çalışmanın görüşme dökümleri yapıldıktan sonra katılımcılardan elde edilen veriler ayrıntılı bir şekilde incelenerek bölümlere ayrılmış olup anlamlı bütünler oluşturularak bölümler isimlendirilmiş ve kodlandırılmıştır. Tüm veriler kodlandıktan sonra araştırmacılar bir kod listesi oluşturmuş olup bu verilerin incelenmesinde ve düzenlenmesinde oldukça kolaylık sağlayıp araştırmacılara anahtar liste görevini görmüştür. Daha sonra araştırmacılar tarafından kodlama anahtarları ve görüşme dökümleri ayrı ayrı okunarak görüş birliği ve görüş ayrılığı olan konuları tartışarak gerekli düzenlemeler yapılmıştır. Oluşturulan temalar için güvenlik hesaplaması Miles ve Huberman'ın (1994) güvenilirlik formülü kullanılarak hesaplanmıştır. Bu hesaplama sonucunda araştırmanın güvenilirliği, birinci soru için %92, ikinci soru için %100 ortalama ise %96 olarak hesaplanmıştır. Güvenirlik hesaplarının %70'in üzerinde çıkması, araştırma için güvenilir kabul edilmektedir (Miles ve Huberman, 1994). Burada elde edilen veriler sonucunda, çalışma için güvenilir kabul edilmiş olup, araştırmacılar tarafından yapılan kodlamaların birbirleriyle uyum gösteren kodlar temalara ulaşmada verilerin kodlar ve temalara göre düzenlenmesi olarak temel alınmıştır.

Verilerin Analizi

Verilerin çözümlenmesinde betimsel analiz tekniği kullanılmıştır. Betimsel analizin tekniğinde, veriler önceden belirlenen temalara göre değerlendirilmekte olup elde edilen sonuçlar

düzenlenerek yorumlanmaktadır. Betimsel analizde elde edilen veriler önceden belirlenmiş olan başlıklar altında özetlenerek yorumlanmaktadır (Yıldırım ve Şimşek, 2018).

Bulgular ve Yorumlar

Katılımcıların görüşlerinden elde edilen temalar, frekans dağılımlarıyla birlikte tablolastırılarak, yorumlanmıştır.

Çalışmada erken çocukluk dönemindeki çocuklarının öz güven, öz disiplin ve öz şefkat becerileri ile iyi oluş arasındaki özelliklerin incelenmesi amaçlanmıştır. Bu amaç doğrultusunda ebeveyn görüşlerinden elde edilen bulgular Tablo 1’de verilmiştir.

Tablo1. Ebeveynin ve Çocuğun Sosyo-Demografik Özellikleri

	N	%
Ebeveynin Cinsiyeti		
Kadın	26	96
Erkek	1	4
Çocuğun Cinsiyeti		
Kız	11	40
Erkek	16	60
Aile Yapısı		
Birlikte	22	81
Boşanmış	3	11
Tek	2	8

Tablo 1 incelendiğinde, araştırmaya katılan katılımcıların çoğunun %96’sını anneler olduğunu, araştırmaya katılan katılımcıların çocuklarının çoğunluğu %60 erkek çocuğu olduğu, %81’inin ise birlikte yaşayan ailelerin çocukları oluşturduğunu belirtmişlerdir.

Tablo 2. Çocuğun Sahip Olduğu Sosyal Beceriler

Temalar	Toplam Puan
Paylaşma	78
Yardımlaşma	94
Duygusal İfadeler	86
Grup Çalışmaları	80

Tablo 2 incelendiğinde, araştırmaya katılan katılımcıların çocuklarının sahip oldukları sosyal becerilere 5 üzerinden verdikleri puanlarda 94 puanla en fazla yardımlaşma becerisini benimseyip sergilediklerini, onu takip eden 86 puanla çocukların olaylar karşısında duygularını ifade edebildiğini en az ise 78 puanla paylaşma becerilerine puan verdikleri araştırmanın bulguları arasında yer almaktadır.

Tablo 3. Çocuklar Arası Etkileşimlerde Gözlemlenen Davranışlar

Temalar	Toplam Puan
Yardım etme	108
Liderlik	108
Empati	109
Çekingenlik	82

Tablo 3 incelendiğinde, araştırmaya katılan katılımcıların çocuklar arası etkileşimlerinde ortaya koydukları davranışlara 5 üzerinden verdikleri puanlarda 109 puanla en fazla empati becerisi gösterdiklerini onu 108 puanla takip eden yardımlaşma ve liderlik becerisi olduğunu benimseyip sergilediklerini, en az ise 82 puanla çekingenlik durumu yaşandığını belirtmişlerdir.

Tablo 4. Sosyal Becerileri kazanırken Yaşanılan Zorluklar

Temalar	Örnek İfadeler	N	%

Tek başına olma isteği	K3 “Grup oyunlarına katılmak yerine kendi halinde oynar”	1	4
Sosyal imkanların Kısıtlı olması	K14 “Yapılabilecekler kısıtlı.”	2	8
Çekingenlik	K21“Karşısındakini kırmak istemediğinden duygularını ifade etmezdi”	7	28
Liderlik Özelliği	K19 “Her türlü etkinliği kendi yönetmek istiyor”	10	40
Paylaşma	K22 “Paylaşmada büyük sıkıntılar yaşadı.”	5	20

Tablo 4 incelendiğinde, araştırmaya katılan ebeveynlerin çocuklarının sosyal beceri kazanırken yaşanan zorlukların %40 Liderlik özelliğine sahip çocuklar olduğu, devamında onu %28 oranıyla Çekingen çocukların sosyal beceri edinmede en fazla zorlandığını belirtmişlerdir.

Tablo 5. Çocuğun Özgüveninin Tanımlanması

Temalar	Örnek İfadeler	N	%
Konuşkandır	K1 “Her konuda kendini ifade eder.”	8	30
Liderlik Özelliğine sahiptir	K4 “Her işi tek başına başarmak ister.”	7	26
Korkusuzdur	K18 “Kendinden emin bir şekilde Andımızı okuması.”	3	12
Adaptasyonu gelişmiştir	K2 “Girdiği ortama kolaylıkla ayak uydurur.”	9	34

Tablo 5 incelendiği zaman çocuğun özgüvenini nasıl tanımlanması sorusuna ebeveynlerin %30'u çocuğunun konuşkan olmasını, %26'sı ise çocuğunun liderlik özelliğine sahip olması ile tanımladığı görülmektedir.

Tablo 6. Çocuğun Özgüvenini Kazandırmaya Yönelik Uygulanan Stratejiler

Temalar	Toplam Puan
Başarısını Kutlama	71
Takdir etme	88
Kendi başına karar vermesine izin verme	77

Tablo 6'da ailelerin çocuklarına özgüvenini kazandırmaya yönelik uyguladıkları stratejileri puanlamaları istendiğinde, aileler 88 puan ile en fazla takdir etme stratejisini en az ise 71 puanla başarısını kutlamak olduğunu belirtmişlerdir.

Tablo 7. Çocuğun Özdisiplin Kazanmasında Etkili Olan Faktörler

Temalar	Toplam Puan
Kuralların açık ve net olması	98
Başladığı işi bitirmesi	97
gerekliliği	90
Etkinliklerin sabırla yapılması	

Tablo 8 incelendiği zaman Ebeveynlerin verdiği puanlar doğrultusunda çocukların öz disiplin kazanmasında en fazla 98 puanla kuralların açık ve net olmasına bağlı olduğunu en az ise etkinlikleri sabırla tamamlamada sıkıntı yaşadıklarını vurgulamışlardır.

Tartışma ve Sonuç

Araştırmaya katılan ebeveynlerden elde edilen bulgulara göre; çocukların en çok gelişen sosyal becerilerinin yardımlaşma becerisi, en az ise paylaşma becerisi olduğunu, çocuklar arası etkileşimlerde empati becerisini gözlemlediklerini, sosyal becerilerin kazandırılmasında karşılaşılan en büyük zorluğun ise Liderlik becerisi olduğunu saptanmıştır. Benzer bir araştırmada da Okul öncesi öğretmenleriyle yapılan görüşmelerin sonucunda; okul öncesi yaş

grubundaki çocukların daha iyi oldukları sosyal becerinin “yardım etme” becerisi olduğu, daha yetersiz kaldıkları sosyal becerinin “paylaşma” becerisi olduğu sonucuna varılmıştır (Aksoy, P. (2021). Yapılan farklı bir çalışmada bu dönemdeki çocukların liderlik becerilerini ölçmeye yönelik çalışmalarda yukarıdaki araştırma bulgusunu kanıtlar nitelikte çocukların liderlik becerilerinin yüksek düzeyde olduğu ortaya konmuştur (Duran, 2019; Ogurlu, 2012; Solmaz, 2017).

Araştırmaya katılan ebeveynler çocuklarının özgüvenli oluşunu, konuşkan olmalarından ve liderlik becerilerinin gelişmiş olmasına bağladıklarını ortaya koymuşlardır. Ailelerin çocuklarına özgüvenini kazandırmaya yönelik uyguladıkları stratejilerden en fazla Takdir Etme stratejisini kullandıklarını belirtmişlerdir. Kişilerarası ilişkilerde en öncelikli becerilerden biri de kendini ifade edebilme becerisine sahip olmadır, bu bireyin benliğini olumlu yönde etkilemektedir (Mutlu, C. (2023). Sosyal becerilerden biri olan liderlik becerisinin gelişimi okul öncesi dönemde ortaya çıkar ve çocukların bağımsız ve kişilerarası becerilerde yetkinlik göstermesini sağlar (Özyürek ve Ceylan, 2014; Zembat ve Dağal, 2021). Farkındalıklı ebeveyn çocuğunun duygusal durumlarının ve ihtiyaçlarının farkında olan, çocuğunun olumsuz davranışlarına daha az tepki veren, yargısız kabul eden, takdir etmeyi bilen çocuğuna karşı empati yapabilen çocuğuyla sürekli iletişim halinde bulunan ebeveyn olduğu bu ebeveynlerin çocuklarının sosyo-duygusal uyum becerileri yüksek düzeyde olduğu saptanmıştır (Bluth ve Wahler, 2011; Izzo, Weiss, Shanahan ve Brown, 2000).

Araştırmaya katılan ebeveynlerin Çocuklarının Öz disiplin kazanmasında kuralların açık ve net olmasına bağlı olduğunu vurgulamışlardır. Benzer bir araştırma sonucuna göre, öz disiplin becerisi, bireysel sorumluluk alma ile çocuğun akademik başarısının ilişki içinde olduğunu, birbirinin tamamlayıcısı ve destekleyicisi olduğu ortaya konmuştur. Bu açıdan ele alındığında öğrencilerin öz disiplin ve bireysel sorumluluklarının gelişimini desteklemek hem öğretmenler için hem de aileler için önemli bir durum haline gelmiştir. Ceylan, E. E., & Erdem, A. (2022).

Sonuç olarak, Sosyal beceri yönünden akranlarından daha fazla gelişmiş olan çocuklar; paylaşmayı bilen, özgüvenli, problem çözme yeteneğine sahip ve akranları tarafından kabul gören çocuklardır. Akran kabulü, çocukların yaşamlarında olumlu etkilere sahip önemli bir faktördür. Sosyal beceriler toplum içinde kabul gören davranışları içerir ve toplum içinde kabul görebilmek için sosyal becerilerin geliştirilmesi gerekmektedir. Okul öncesi dönem sosyal beceri gelişiminde yaşamın en kritik dönemlerinden biridir.

Abstract

The aim of this study is to examine the academic self-efficacy levels of students in the Visual Arts Departments of Science and Art Centers (BİLSEM) in relation to demographic variables such as gender, grade level, number of siblings, parents' educational background, family income level, and academic achievement. The research was designed within the framework of the survey model, one of the quantitative research methods. The sample of the study consists of 100 students enrolled in the Visual Arts Departments of BİLSEMs located in the provinces of Gaziantep, Diyarbakır, Hakkari, and Van. Data regarding students' perceptions of academic self-efficacy were collected using the "Academic Self-Efficacy Scale (ASES)." The ASES consists of three sub-dimensions: Coping with Academic Challenges, Academic Effort, and Academic Planning. In the data analysis, parametric tests were used in accordance with assumptions specified in the literature. The findings of the study indicate that BİLSEM Visual Arts students generally have high levels of academic self-efficacy. Overall, students with higher academic achievement levels were found to have significantly higher academic self-efficacy scores. It was also determined that students in higher grade levels, with fewer siblings, and with parents who have higher educational backgrounds scored higher in the sub-dimensions of academic planning and effort. Additionally, students from higher-income families were found to be more advantaged in coping with academic challenges. Based on the findings, it is recommended that practitioners develop programs aimed at increasing academic self-efficacy, taking demographic variables into account, and enhance educational support through family involvement.

Keywords: BİLSEM, gifted students, academic self-efficacy

Bilsem Resim Birimi Öğrencilerinin Akademik Öz Yeterlik Düzeylerinin Farklı Değişkenler Açısından İncelenmesi

Özet

Bu araştırmanın amacı, Bilim ve Sanat Merkezi (BİLSEM) Resim Birimi öğrencilerinin akademik öz yeterlik düzeylerini; cinsiyet, sınıf düzeyi, kardeş sayısı, anne-baba eğitim durumu, aile gelir düzeyi ve akademik başarı düzeyi gibi demografik değişkenler açısından incelemektir. Araştırma, nicel yöntemlerden tarama modeli çerçevesinde desenlenmiştir. Çalışmanın örneklemini; Gaziantep, Diyarbakır, Hakkari ve Van illerinde bulunan BİLSEM’lerin Resim Birimlerinde öğrenim gören toplam 100 öğrenci oluşturmaktadır. Çalışmada yer alan öğrencilerin akademik öz yeterlik algılarına ilişkin veriler “Akademik Öz yeterlik Ölçeği (AÖYÖ)” ile toplanmıştır. AÖYÖ; Akademik Sorunlarla Başa Çıkma, Akademik Çabaları ve Akademik Planlama olmak üzere üç boyuttan oluşmaktadır. Verilerin analizinde, alanyazında belirtilen varsayımlar doğrultusunda parametrik testler kullanılmıştır. Araştırma bulguları, BİLSEM Resim Birimi öğrencilerinin genel olarak yüksek düzeyde akademik öz yeterlik düzeyine sahip olduklarını göstermektedir. Genel olarak, akademik başarı düzeyi yüksek olan öğrencilerin akademik öz yeterlik puanlarının da anlamlı biçimde daha yüksek olduğu görülmüştür. Üst sınıf düzeylerinde öğrenim gören, az kardeşi olan ve ebeveynlerinin eğitim düzeyi yüksek olan öğrencilerin akademik planlama ve çaba alt boyutlarında daha yüksek puanlar aldığı belirlenmiştir. Aile geliri yüksek olan öğrencilerin özellikle akademik sorunlarla başa çıkma becerilerinde daha avantajlı olduğu saptanmıştır. Elde edilen bulgular doğrultusunda; uygulayıcıların akademik öz yeterlik düzeylerini artırmaya yönelik, demografik değişkenlere duyarlı programlar geliştirmeleri ve aile katılımı ile eğitsel desteği artırmaları önerilmektedir.

Anahtar Kelimeler: BİLSEM, özel yetenekli öğrenciler, akademik öz yeterlik.

Giriş

Akademik öz yeterlik, bireyin kendi akademik görevlerini başarılı bir şekilde yerine getirebilme yetisine olan inancı olarak tanımlanmaktadır (Bandura, 1997). Bu kavram, öğrencilerin öğrenmeye yönelik motivasyonlarını, çaba düzeylerini ve karşılaştıkları akademik güçlüklerle başa çıkma becerilerini önemli ölçüde etkilemektedir (Usher ve Pajares, 2009). Öz yeterlik inancı, özellikle üst düzey öğrenme ortamlarında, bireyin eğitim sürecindeki başarısı ve akademik doyumunu açısından belirleyici bir faktördür (Zimmerman ve Schunk, 2011).

Resim gibi sanatsal alanlarda eğitim gören öğrencilerin yalnızca yaratıcı üretim süreçlerine değil, aynı zamanda akademik yeterliklerine ilişkin algılarına da odaklanması

gerekmektedir. Bilim ve Sanat Merkezleri (BİLSEM), üstün yetenekli öğrencilerin potansiyellerini geliştirmeyi hedefleyen kurumlar olarak, öğrencilerin akademik öz yeterliklerini desteklemeye yönelik zenginleştirilmiş programlar sunmaktadır (MEB, 2020). Ancak bu öğrencilerin akademik başarıları yalnızca yetenekle sınırlı değildir; bireysel, ailesel ve çevresel faktörler de bu başarıyı doğrudan etkilemektedir.

Akademik öz yeterlik, çeşitli demografik değişkenlerle ilişkili olarak farklılaşabilmektedir. Örneğin, araştırmalar kız öğrencilerin akademik öz yeterliklerinin erkek öğrencilere göre daha yüksek olabildiğini göstermektedir (Güzel, 2017; Weis, Heikamp, ve Trommsdorff, 2013; Voyer ve Voyer, 2014; Zander vd., 2020; Oberleiter, Jansen, ve Wicht, 2023). Aynı şekilde, öğrencilerin sınıf düzeyi yükseldikçe ve ailelerinin eğitim düzeyi arttıkça akademik öz yeterlik algılarının da olumlu yönde geliştiği saptanmıştır (Aldhafri, vd., 2020; Merritt ve Buboltz, 2015). Ayrıca, akademik başarı düzeyi ile öz yeterlik arasında pozitif yönde anlamlı ilişkiler bulunmuştur (Koca ve Dadandı, 2019). Bu araştırma, görsel sanatlar alanında eğitim gören üstün yetenekli öğrencilerin akademik öz yeterlik düzeylerini anlamaya yönelik önemli bir katkı sunmayı amaçlamaktadır. Sanatsal birikim ile akademik öz yeterlik algısının nasıl bir ilişki içinde olduğu ve bu algının hangi demografik değişkenlerden etkilendiği sorusu hem eğitim politikaları hem de bireysel rehberlik süreçleri açısından kritik öneme sahiptir.

Bu doğrultuda çalışmanın temel amacı, Bilim ve Sanat Merkezleri Resim Birimi öğrencilerinin akademik öz yeterlik düzeylerini cinsiyet, sınıf düzeyi, kardeş sayısı, anne-baba eğitim düzeyi, aile gelir düzeyi ve akademik başarı düzeyi gibi demografik değişkenler açısından incelemektir. Araştırma kapsamında aşağıdaki sorulara cevaplar aranmıştır:

1. BİLSEM Resim Birimi öğrencilerinin akademik öz yeterlik düzeyleri nasıldır?
2. Akademik öz yeterlik düzeyleri cinsiyet değişkenine göre farklılık göstermekte midir?
3. Akademik öz yeterlik düzeyleri sınıf düzeyine göre farklılık göstermekte midir?
4. Akademik öz yeterlik düzeyleri kardeş sayısına göre farklılık göstermekte midir?
5. Akademik öz yeterlik düzeyleri anne-baba eğitim düzeyine göre farklılık göstermekte midir?
6. Akademik öz yeterlik düzeyleri aile gelir düzeyine göre farklılık göstermekte midir?
7. Akademik öz yeterlik düzeyleri akademik başarı düzeyine göre farklılık göstermekte midir?

Yöntem

Bu araştırma, nicel araştırma yöntemlerinden tarama modeli kapsamında

desenlenmiştir. Tarama modeli, mevcut bir durumu, belirli değişkenler açısından açıklamak ve betimlemek amacıyla kullanılan bir yaklaşımdır (Karasar, 2021). Bu çalışmada, Bilim ve Sanat Merkezi Resim Birimi öğrencilerinin akademik öz yeterlik düzeyleri ile demografik değişkenler arasındaki ilişki incelenmiştir. Amaç, öğrencilerin öz yeterlik düzeylerini farklı demografik profiller ışığında değerlendirmektir.

Araştırmanın çalışma grubunu, Gaziantep, Diyarbakır, Hakkâri ve Van illerinde yer alan Bilim ve Sanat Merkezlerinin Resim Birimlerinde öğrenim görmekte olan toplam 100 öğrenci oluşturmaktadır. Katılımcıların seçimi kolayda örnekleme yöntemi ile gerçekleştirilmiştir. Ayrıca katılımcılardan, yaş, cinsiyet, sınıf düzeyi, kardeş sayısı, ebeveyn eğitim durumu, aile gelir ve başarı düzeyine ilişkin bilgileri içeren kişisel bilgi formu da toplanmıştır. Çalışmada yer alan öğrencilerin bilgileri Tablo 1'de verilmiştir.

Tablo 1: Çalışma Grubunda Yer Alan Öğrencilerin Demografik Özellikleri

Değişken	Kategori	f	%
Cinsiyet	Kız	56	56.0
	Erkek	44	44.0
Sınıf Düzeyi	5. Sınıf	30	30.0
	6. Sınıf	40	40.0
	7. Sınıf	20	20.0
	8. Sınıf	10	10.0
Kardeş Sayısı	0	12	12.0
	1	40	40.0
	2	35	35.0
	3 ve üzeri	13	13.0
Aile Gelir Düzeyi	Asgari ücret ve altı (≤ 17.000 TL)	18	18.0
	Asgari ücret–50.000 TL	58	58.0
	50.001 TL ve üzeri	24	24.0
Anne Eğitim Durumu	İlkokul ve altı	18	18.0
	Ortaokul	26	26.0
	Lise	30	30.0
	Üniversite ve üstü	26	26.0
Baba Eğitim Durumu	İlkokul ve altı	10	10.0
	Ortaokul	20	20.0
	Lise	36	36.0
	Üniversite ve üstü	34	34.0
Akademik Başarı Düzeyi	Ortalamanın altında (≤ 70)	15	15.0
	Ortalama (71–84)	44	44.0
	Ortalamanın üstü (≥ 85)	41	41.0

Öğrencilerin %56'sı kız, %44'ü erkektir. Sınıf düzeyine göre dağılım; %30'u 5. sınıf, %40'ı 6. sınıf, %20'si 7. sınıf ve %10'u 8. sınıf düzeyindedir. Katılımcıların %12'si kardeşsiz, %40'ı bir kardeşe, %35'i iki kardeşe ve %13'ü üç veya daha fazla kardeşe sahiptir. Aile gelir düzeyleri ise %18'i asgari ücret ve altı, %58'i asgari ücret ile 50.000 TL arası ve %24'ü 50.001 TL üzeri olarak bildirilmiştir. Öğrencilerin annelerinin eğitim düzeyi %18 ilkokul ve altı, %26 ortaokul, %30 lise ve %26 üniversite ve üzeridir. Babaların eğitim düzeyleri ise %10 ilkokul ve altı, %20 ortaokul, %36 lise ve %34 üniversite ve üzeridir. Akademik başarı düzeyleri ise %15

ortalamanın altında (≤ 70), %44 ortalama (71–84) ve %41 ortalamanın üstünde (≥ 85) olarak sınıflandırılmıştır.

Veriler, Kandemir ve Özbay (2012) tarafından geliştirilen Akademik Öz Yeterlik Ölçeği (AÖYÖ) ile toplanmıştır. Ölçek, üç alt boyuttan oluşmaktadır: Akademik Sorunlarla Başa Çıkma (5 madde), Akademik Çabalar (8 madde), Akademik Planlama (7 madde). Toplam 20 maddeden oluşan AÖYÖ, 5’li Likert tipi (1: hiç uygun değil – 5: tamamen uygun) olarak yapılandırılmıştır. Ölçeğin Cronbach Alfa iç tutarlılık katsayısı .86’dır ve bu değer, ölçeğin güvenilirliğini desteklemektedir.

Veri analizi sürecinde SPSS 25 programı kullanılmıştır. Öncelikle ölçek puanlarının normallik varsayımı Kolmogorov-Smirnov ve Shapiro-Wilk testleri ile değerlendirilmiştir. Veriler normal dağılım gösterdiğinden, parametrik testler tercih edilmiştir. İkili karşılaştırmalarda bağımsız örneklem t-testi, ikiden fazla grup içeren değişkenlerde ise tek yönlü varyans analizi (ANOVA) uygulanmıştır. Anlamlı fark bulunan gruplar için Tukey HSD testi ile post-hoc analizler yapılmıştır. Anlamlılık düzeyi $p < .05$ olarak kabul edilmiştir. Ayrıca etki büyüklükleri (Cohen’s d, η^2) de raporlanmıştır (Field, 2021).

Bulgular

Bu bölümde, Bilim ve Sanat Merkezi Resim Birimi öğrencilerinin Akademik Öz Yeterlik düzeyleri; cinsiyet, sınıf düzeyi, kardeş sayısı, aile gelir düzeyi, ebeveyn eğitim düzeyi ve akademik başarı düzeyi değişkenlerine göre incelenmiş ve elde edilen bulgular tablolar halinde sunulmuş, istatistiksel analizlerin sonucunda anlamlı farklılıkların bulunduğu değişkenlerde etki büyüklüğü de belirtilerek yorumlanmıştır. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyutlarının puan ortalamalarına ilişkin bulgular Tablo 2’de verilmiştir.

Tablo 2: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamaları

Boyutlar	Ortalama Puan
Akademik Sorunlarla Başa Çıkma	20.0
Akademik Çabalar	29.3
Akademik Planlama	26.5
Genel Ortalama	75.8

Tablo 2’de görüldüğü gibi, öğrencilerin akademik öz yeterlik düzeyleri genel olarak yüksektir. Özellikle akademik çabalar (Ort.=29.3) ve akademik planlama (Ort.=26.5) alt boyutlarında öğrencilerin yüksek puanlara sahip olduğu dikkat çekmektedir. “Akademik sorunlarla başa çıkma” alt boyutunda ise ortalamanın nispeten biraz daha düşük (Ort.=20.0) olduğu görülmektedir. Bu durum, öğrencilerin akademik sorumluluk ve planlama konusunda

kendilerine güvendiklerini ancak karşılaştıkları sorunlarla başa çıkma konusunda desteklenmeye ihtiyaç duyabileceklerini göstermektedir.

Genel ortalama puanın 75.8 olması, öğrencilerin kendilerini akademik anlamda yeterli gördüklerini, akademik görevleri yerine getirme konusunda özgüvenli olduklarını göstermektedir. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının cinsiyet değişkenine ilişkin bulgular Tablo 3'te verilmiştir.

Tablo 3: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Cinsiyet Değişkenine Göre Bağımsız Gruplar t-testi Sonuçları

Boyutlar	Kız (n=56)	Erkek (n=44)	t	p	d
Akademik Sorunlarla Başa Çıkma	20.64	19.72	1.41	.162	0.28
Akademik Çabalar	30.89	28.25	2.87	.005*	0.55
Akademik Planlama	27.18	25.60	2.03	.045*	0.40
Genel Ortalama	78.71	73.57	2.96	.004*	0.58

Tablo 3 incelendiğinde, kız öğrencilerin akademik çaba ($p = .005$, $d = 0.55$), akademik planlama ($p = .045$, $d = 0.40$) ve genel akademik öz yeterlik puanları ($p = .004$, $d = 0.58$) erkek öğrencilere kıyasla anlamlı düzeyde daha yüksektir. Etki büyüklükleri orta düzeydedir. Akademik sorunlarla başa çıkma boyutunda ise fark anlamlı değildir ($p > .05$). Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının sınıf düzeyi değişkenine ilişkin bulgular Tablo 4'te verilmiştir.

Tablo 4: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Sınıf Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Boyutlar	5. Sınıf (n=30)	6. Sınıf (n=40)	7. Sınıf (n=20)	8. Sınıf (n=10)	F	p	η^2
Akademik Sorunlarla Başa Çıkma	18.76	19.52	21.12	22.00	4.21	.008*	0.12
Akademik Çabalar	27.10	29.20	30.85	32.00	5.13	.002*	0.14
Akademik Planlama	24.80	26.45	27.90	29.30	4.98	.003*	0.13
Genel Ortalama	70.66	75.17	79.87	83.30	6.54	.001*	0.17

Tablo 4 incelendiğinde, sınıf düzeyi arttıkça öğrencilerin akademik öz yeterlik puanlarında artış gözlenmiştir. Tüm boyutlarda ve genel ortalama da anlamlı fark vardır ($p < .05$). Etki büyüklüğü genel ortalama için $\eta^2 = 0.17$ olup, bu yüksek düzeyde bir etkiyi göstermektedir. 8. sınıf öğrencileri en yüksek puanlara sahiptir. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının kardeş sayısı değişkenine ilişkin bulgular Tablo 5'te verilmiştir.

Tablo 5: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Kardeş Sayısı Değişkenine Göre ANOVA Testi Sonuçları

Boyutlar	Kardeş Yok (n=12)	1 Kardeş (n=40)	2 Kardeş (n=35)	3 ve Üzeri (n=13)	F	p	η^2
Akademik Sorunlarla Başa Çıkma	22.3	20.6	19.2	17.4	4.21	.008*	.11
Akademik Çabalar	30.5	29.7	28.8	27.3	3.67	.014*	.10
Akademik Planlama	27.8	27.0	26.1	24.2	3.98	.011*	.11
Genel Ortalama	80.6	77.3	74.1	68.9	5.03	.003*	.13

Tablo 2’de görüldüğü gibi, **kardeş sayısı arttıkça akademik öz yeterlik puanları azalma eğilimi** göstermektedir. Özellikle **0 ve 1 kardeşe sahip öğrencilerin** hem alt boyutlarda hem de genel akademik öz yeterlik puanlarında daha yüksek ortalamalara sahip olduğu görülmektedir. **Genel ortalama** en yüksek 0 kardeşe sahip öğrencilerde (**Ort.=80.6**), en düşük ise 3 ve üzeri kardeşe sahip olanlarda (**Ort.=68.9**) bulunmuştur. Bu fark tüm boyutlarda **istatistiksel olarak anlamlıdır** ($p < .05$). Etki büyüklüğü η^2 değerlerine göre, kardeş sayısının akademik öz yeterlik üzerinde **orta düzeyde etkili** olduğu söylenebilir ($\eta^2 = 0.10-0.13$ arası). Bu bulgu, bireysel dikkat, destek ve kaynakların paylaşımı gibi etkenlerle açıklanabilir. Kardeş sayısı az olan öğrencilerin ailelerinden daha fazla bireysel destek alma olasılığı, akademik çaba ve planlama becerilerine olumlu katkı sağlayabilir. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının aile gelir düzeyi değişkenine ilişkin bulgular Tablo 6’da verilmiştir.

Tablo 6: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Aile Gelir Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Boyutlar	≤ 17.000 TL (n=18)	17.001–50.000 TL (n=58)	≥ 50.001 TL (n=24)	F	p	η^2
Akademik Sorunlarla Başa Çıkma	18.2	19.6	21.3	6.35	.003*	.12
Akademik Çabalar	27.6	29.0	31.2	5.24	.007*	.10
Akademik Planlama	24.5	26.2	28.5	6.70	.002*	.13
Genel Ortalama	70.3	74.8	81.0	9.20	<.001*	.16

Tablo 6’da görüldüğü üzere, aile gelir düzeyi arttıkça öğrencilerin akademik öz yeterlik puanlarında anlamlı bir artış gözlenmiştir. En yüksek puanlar, 50.001 TL ve üzeri gelir grubuna ait öğrencilerde görülmektedir. Özellikle "akademik sorunlarla başa çıkma" ($F=6.35$, $p=.003$, $\eta^2=.12$) ve "akademik planlama" ($F=6.70$, $p=.002$, $\eta^2=.13$) boyutlarında gelir grupları arasında istatistiksel olarak anlamlı farklar elde edilmiştir. Genel puan ortalamasında da anlamlı bir fark ($F=9.20$, $p<.001$, $\eta^2=.16$) bulunmuş ve bu etki büyüklüğü orta düzeyde olarak değerlendirilebilir. Bu bulgular, ekonomik refah düzeyinin öğrencilerin akademik hedef belirleme, çaba düzeyi ve problem çözme becerileri üzerinde belirleyici olduğunu

göstermektedir. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının anne eğitim düzeyi değişkenine ilişkin bulgular Tablo 7'de verilmiştir.

Tablo 7: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Anne Eğitim Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Boyutlar	İlkokul ve Altı (n=18)	Ortaokul (n=26)	Lise (n=30)	Üniversite ve Üstü (n=26)	F	p	η^2
Akademik Sorunlarla Başa Çıkma	18.1	19.2	20.6	22.4	4.58	.005*	.12
Akademik Çabalar	27.3	28.6	29.5	30.7	4.03	.009*	.11
Akademik Planlama	24.1	25.4	26.6	27.9	3.91	.011*	.10
Genel Ortalama	69.5	73.2	76.7	81.0	5.47	.002*	.14

Tablo 7, **anne eğitim düzeyi arttıkça öğrencilerin akademik öz yeterlik puanlarının da yükseldiğini** ortaya koymaktadır. **En düşük ortalama puanlar**, annesi ilkokul ve altı düzeyde eğitim almış öğrencilerde görülmektedir (**Genel ortalama: 69.5**). **En yüksek puanlar**, üniversite ve üstü eğitim almış annelere sahip öğrencilerde gözlemlenmiştir (**Genel ortalama: 81.0**). Üç alt boyutta da ve genel ortalamada istatistiksel olarak anlamlı farklar vardır ($p < .05$). En güçlü etki, **genel akademik öz yeterlik düzeyinde** gözlemlenmiştir ($\eta^2 = .14$), bu da **orta düzeyde** bir etkiye işaret etmektedir. Bu bulgular, annenin eğitim düzeyinin öğrencilerin akademik inanç ve çabalarını doğrudan etkileyebileceğini göstermektedir. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının baba eğitim düzeyi değişkenine ilişkin bulgular Tablo 8'de verilmiştir.

Tablo 8: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Baba Eğitim Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Boyutlar	İlkokul ve Altı (n=10)	Ortaokul (n=20)	Lise (n=36)	Üniversite ve Üstü (n=34)	F	p	η^2
Akademik Sorunlarla Başa Çıkma	17.2	18.4	20.1	22.3	5.14	.002*	.14
Akademik Çabalar	26.1	27.5	29.4	30.9	5.86	.001*	.15
Akademik Planlama	23.5	24.7	26.2	27.6	4.39	.006*	.12
Genel Ortalama	66.8	70.6	75.7	80.8	6.43	.000*	.17

Tablo 8'e göre, öğrencilerin **baba eğitim düzeyine göre akademik öz yeterliklerinin** anlamlı biçimde farklılaştığını göstermektedir. **En düşük puanlar**, babası ilkokul veya altı düzeyde eğitim almış öğrencilerde gözlemlenmiştir (**Genel ortalama: 66.8**). **En yüksek ortalama**, üniversite ve üzeri eğitim düzeyine sahip babaların çocuklarında görülmektedir (**Genel ortalama: 80.8**). Tüm alt boyutlarda ve genel ortalamada istatistiksel olarak anlamlı farklar vardır ($p < .05$). En güçlü etki, **genel akademik öz yeterlik puanında** gözlemlenmiştir ($\eta^2 = .17$), bu da **orta-üst düzey** bir etkiye işaret eder. Bu bulgular, babaların eğitim düzeyinin

çocuklarının akademik hedeflerine ulaşma konusundaki özgüvenlerini ve planlı hareket etme eğilimlerini olumlu yönde etkilediğini göstermektedir. Öğrencilerin akademik öz yeterlik düzeyleri ve alt boyut puan ortalamalarının akademik başarı düzeyi değişkenine ilişkin bulgular Tablo 9'da verilmiştir.

Tablo 9: Öğrencilerin Akademik Öz Yeterlik Düzeyleri ve Alt Boyut Puan Ortalamalarının Akademik Başarı Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Boyutlar	Ortalama Altı (≤ 70) (n=15)	Ortalama (71–84) (n=44)	Ortalama Üstü (≥ 85) (n=41)	F	p	η^2
Akademik Sorunlarla Başa Çıkma	17.1	19.8	22.6	9.27	.000*	.16
Akademik Çabalar	26.0	28.1	31.0	8.44	.000*	.15
Akademik Planlama	23.2	25.4	27.5	6.89	.002*	.13
Genel Ortalama	66.3	73.3	81.1	10.52	.000*	.18

Tablo 9 incelendiğinde, **akademik başarı düzeyi yükseldikçe** öğrencilerin akademik öz yeterlik puanlarının da anlamlı biçimde arttığı görülmektedir. Özellikle **genel ortalama puanı**, ortalamanın üstündeki başarı düzeyine sahip öğrencilerde en yüksek düzeydedir (**81.1**), buna karşılık ortalama altı başarı düzeyine sahip öğrencilerde en düşüktür (**66.3**). **Tüm alt boyutlarda anlamlı farklar** bulunmaktadır ($p < .05$). **Etki büyüklüğü** genel ortalama için $\eta^2 = .18$ olup, bu değer **orta-üst düzeyde** güçlü bir etkiyi göstermektedir. Bu bulgu, **akademik öz yeterlik ile akademik başarı arasında güçlü bir ilişki** olduğunu desteklemekte ve öz yeterlik düzeyi yüksek olan öğrencilerin daha yüksek başarıya ulaşma eğiliminde olduklarını göstermektedir. Ayrıca, öğrencilerin kendi öğrenmelerini planlama ve sürdürme becerileri, akademik performanslarını doğrudan etkileyen önemli bir faktördür.

Sonuç ve Tartışma

Bu araştırmanın amacı, Bilim ve Sanat Merkezi (BİLSEM) Resim Birimi öğrencilerinin akademik öz yeterlik düzeylerini belirlemek ve bu düzeyleri cinsiyet, sınıf düzeyi, kardeş sayısı, aile gelir düzeyi, ebeveyn eğitim düzeyi ve akademik başarı düzeyi gibi demografik değişkenler açısından incelemektir. Elde edilen bulgular, öğrencilerin genel olarak yüksek düzeyde akademik öz yeterliğe sahip olduklarını göstermektedir. Bu sonuç, akademik olarak seçilmiş ve özel destek programlarına dahil edilmiş öğrencilerin bilişsel ve motivasyonel olarak daha güçlü yapılar geliştirdiklerini göstermektedir (Bandura, 1997; Elballah vd., 2024).

Akademik başarı düzeyi arttıkça, öğrencilerin akademik öz-yeterlik düzeyleri de anlamlı biçimde artmaktadır. Özellikle ‘akademik sorunlarla başa çıkma’ ve ‘akademik planlama’ alt boyutlarında başarı düzeyi yüksek olan öğrenciler daha yüksek puanlar almıştır.

Bu bulgu, öz yeterlik inançlarının akademik başarıyı olumlu yönde etkilediğini ortaya koyan çok sayıda çalışmayla uyumludur (Khan, 2023; Schunk ve DiBenedetto, 2020). Öz yeterliği yüksek bireylerin akademik hedeflerine ulaşmada daha dirençli ve planlı oldukları bilinmektedir.

Sınıf düzeyi yükseldikçe öğrencilerin akademik öz-yeterlik düzeylerinde artış gözlenmiştir. Bu bulgu, yaş ve deneyimle birlikte öğrencilerin akademik ortamlarda daha fazla başarı ve geribildirim deneyimlemelerinin öz-yeterliklerini güçlendirdiği düşüncesini desteklemektedir (Özcan ve Kültür, 2021; Yılmaz Koğar vd., 2025). Ayrıca, yaşça büyük öğrencilerin planlama ve problem çözme becerilerinin daha gelişmiş olması da bu farkı açıklayabilir.

Kardeş sayısı arttıkça akademik öz-yeterlik düzeylerinde düşüş gözlemlenmiştir. Bu durum, aile kaynaklarının (zaman, ilgi, ekonomik destek) çocuklar arasında bölünmesinin bireysel akademik gelişimi olumsuz etkileyebileceğini düşündürmektedir (Jiao, 2023; Feng, 2021; Downey, 2001). Özellikle tek veya bir kardeşi olan öğrencilerin daha bireysel destek alma şansı bulmaları, akademik çabalarını ve öz yeterliklerini artırmış olabilir.

Aile gelir düzeyi arttıkça akademik öz yeterlik puanlarının da anlamlı şekilde arttığı görülmektedir. Bu bulgu, sosyoekonomik düzeyin öğrenme ortamları, ders dışı destek olanakları ve genel yaşam kalitesi üzerindeki etkisiyle açıklanabilir. Ekonomik olanakları daha iyi olan ailelerde çocukların akademik gelişimlerine yönelik yatırımların artması, onların öz yeterlik algılarını da güçlendirebilir (Sucuoğlu, 2018).

Anne ve baba eğitim düzeyi yükseldikçe öğrencilerin öz yeterlik düzeyleri anlamlı biçimde artmıştır. Bu bulgu, ebeveynlerin eğitim düzeyinin çocukların akademik gelişimi üzerindeki olumlu etkilerini vurgulayan önceki çalışmalarla örtüşmektedir (Bhandari ve Timsina, 2024; Wang vd., 2020). Eğitimli ebeveynlerin çocuklarına model olmaları, eğitim süreçlerini daha bilinçli şekilde desteklemeleri öz yeterlik gelişimini teşvik etmektedir.

Araştırma genel olarak, BİLSEM Resim Birimi öğrencilerinin akademik öz yeterliklerinin yüksek olduğunu ve bu özelliğin çeşitli demografik değişkenlere bağlı olarak farklılaştığını göstermiştir. Elde edilen bulgular, özel yetenekli bireylerin sadece sanatsal alanlarda değil, aynı zamanda akademik motivasyon ve yeterlik açısından da güçlü olduklarını ortaya koymaktadır. Bu sonuçlar, BİLSEM’lerdeki çok yönlü gelişim ortamlarının öğrencilerin akademik benlik algılarına da olumlu katkılar sunduğunu göstermektedir.

Araştırma bulguları doğrultusunda, öğrencilerin akademik öz yeterlik düzeylerini desteklemeye yönelik programların özellikle düşük başarı düzeyine, düşük aile gelirine ve düşük ebeveyn eğitime sahip gruplara odaklanması önerilmektedir. Eğitimcilerin, akademik öz yeterliği geliştirecek motivasyonel stratejiler, planlama becerileri ve öz düzenleme teknikleri konusunda öğrencilere rehberlik etmesi önem taşımaktadır. Ayrıca aile katılımını güçlendirecek iş birlikçi etkinlikler ile ev ortamındaki öğrenme desteği artırılmalıdır.

Abstract

The aim of this study is to examine the leadership skills of students in the Visual Arts Departments of Science and Art Centers (BİLSEM) in relation to demographic variables such as gender, grade level, number of siblings, parental education level, family income, and academic achievement. The research was designed using the survey model, one of the quantitative research methods. The sample of the study consists of 100 students enrolled in the Visual Arts Departments of BİLSEMs located in the provinces of Gaziantep, Diyarbakır, Hakkari, and Van. Data were collected using the Leadership Skills Scale (LSS). The scale includes 10 sub-dimensions: Problem Solving, Group Dynamics, Goal Setting, Perseverance, Anger Management, Shyness, Leadership, Creativity, Empathy, and Oratory. Parametric tests were used in the data analysis based on assumptions stated in the literature. The findings indicate that BİLSEM Visual Arts students generally possess a high level of leadership skills. Analyses based on the number of siblings and family income revealed significant differences, particularly in the dimensions of empathy and leadership. Increases in parental education level were associated with notable improvements in students' creativity and goal-setting skills. Furthermore, as academic achievement increased, students showed significantly higher levels of perseverance and problem-solving skills. Based on these findings, it is recommended that practitioners develop programs aimed at enhancing leadership skills that are sensitive to demographic variables and promote educational support through increased family involvement. Future research should comprehensively investigate the relationship between leadership training and academic achievement, the impact of number of siblings and social skills, and the long-term effects of demographic factors on leadership development.

Keywords: BİLSEM, gifted students, leadership skills.

Bilsem Resim Birimi Öğrencilerinin Liderlik Becerilerinin Farklı Değişkenler Açısından İncelenmesi

Özet

Bu araştırmanın amacı, Bilim ve Sanat Merkezi (BİLSEM) Resim Birimi öğrencilerinin liderlik becerilerini; cinsiyet, sınıf düzeyi, kardeş sayısı, anne-baba eğitim durumu, aile gelir düzeyi ve akademik başarı düzeyi gibi demografik değişkenler açısından incelemektir. Araştırma, nicel yöntemlerden tarama modeli çerçevesinde desenlenmiştir. Çalışmanın örneklemini; Gaziantep, Diyarbakır, Hakkari ve Van illerinde bulunan BİLSEM’lerin Resim Birimlerinde öğrenim gören toplam 100 öğrenci oluşturmaktadır. Veriler, Liderlik Becerileri Ölçeği (LIBÖ) aracılığıyla toplanmıştır. Ölçek; Sorun Çözme, Grup Dinamikleri, Hedef Belirleme, Azim, Öfke Kontrolü, Çekingelik, Önderlik, Yaratıcılık, Empati ve Hitabet olmak üzere 10 alt boyuttan oluşmaktadır. Verilerin analizinde, alanyazında belirtilen varsayımlar doğrultusunda parametrik testler kullanılmıştır. Araştırma bulguları, BİLSEM Resim Birimi öğrencilerinin genel olarak yüksek düzeyde liderlik becerilerine sahip olduklarını göstermektedir. Kardeş sayısı ve aile gelir düzeyine göre yapılan analizlerde, özellikle empati ve önderlik boyutlarında anlamlı farklılıklar saptanmıştır. Anne-baba eğitim düzeyindeki artış, öğrencilerin yaratıcılık ve hedef belirleme becerilerinde belirgin yükselmelerle ilişkilendirilmiştir. Ayrıca, akademik başarı düzeyi arttıkça azim ve sorun çözme becerileri anlamlı düzeyde yükselmektedir. Elde edilen bulgular doğrultusunda; uygulayıcıların liderlik becerilerini geliştirmeye yönelik, demografik değişkenlere duyarlı programlar geliştirmeleri ve aile katılımı ile eğitsel desteği artırmaları önerilmektedir. Gelecek çalışmalarda, liderlik eğitimi ile akademik başarı ilişkisi, kardeş sayısının ve sosyal becerilerin etkisi, demografik faktörlerin liderlik gelişimine uzun vadeli etkileri kapsamlı biçimde incelenmelidir.

Anahtar Kelimeler: BİLSEM, özel yetenekli öğrenciler, liderlik becerileri.

Giriş

Günümüz eğitim dünyasında liderlik becerileri, yalnızca yetişkin bireylerde değil, çocuk ve ergenlerde de geliştirilmesi gereken temel yaşam becerileri arasında yer almaktadır. Liderlik; karar verme, problem çözme, hedef belirleme, empati kurma, etkili iletişim ve grup içinde

etkileşim gibi çok boyutlu becerileri içermektedir (Northouse, 2022). Bu bağlamda, eğitim kurumlarının liderlik gelişimine katkı sunacak şekilde yapılandırılması, bireylerin sosyal-duygusal gelişimi kadar akademik ve kariyer başarılarını da desteklemektedir (Day ve Antonakis, 2023).

Bu araştırma, pozitif psikoloji yaklaşımı (Seligman ve Csikszentmihalyi, 2014) ve ekolojik sistemler kuramı (Bronfenbrenner, 2006) temelinde şekillendirilmiştir. Pozitif psikoloji, bireyin güçlü yönlerini geliştirerek potansiyelini gerçekleştirmesine odaklanır; bu bağlamda liderlik becerileri bireyin öz yeterlik, empati, azim ve motivasyon gibi yönleriyle ilişkilidir. Bronfenbrenner'in ekolojik kuramı ise bireyin gelişiminin, yalnızca bireysel değil aynı zamanda aile, okul ve sosyal çevre etkileşimiyle gerçekleştiğini savunur. Bu kuram doğrultusunda, bireyin liderlik becerileri aile yapısı, sosyoekonomik düzey, okul ortamı ve akran ilişkileri gibi çeşitli mikro ve makro sistemlerden etkilenmektedir.

Son yıllarda yapılan araştırmalar, liderlik becerilerinin çocukluk ve ergenlik döneminde fark edilebilir ve geliştirilebilir olduğunu ortaya koymaktadır (Murphy ve Johnson, 2016). Üstün yetenekli bireylerde bu potansiyelin daha erken yaşlarda ortaya çıktığı ve desteklendiği ölçüde kalıcı hale geldiği vurgulanmaktadır (Renzulli ve Reis, 2020). Özellikle sanat eğitimi, bireylerde yaratıcılığı, empatiyi ve grup içinde ifade becerilerini güçlendirerek liderlik gelişimine katkı sunmaktadır (Eisner, 2017; Robinson ve Aronica, 2022). Türkiye'de Bilim ve Sanat Merkezleri (BİLSEM), bu tür gelişim alanlarını destekleyen kurumlardan biridir. Ancak bu merkezlerdeki öğrencilerin liderlik becerilerinin yapısal biçimde değerlendirildiği çalışmalar sınırlıdır. Resim gibi bireysel yönelimi güçlü bir alanda, liderliğin sosyal boyutlarının nasıl şekillendiği ise araştırılması gereken önemli bir konudur.

Bu araştırma, Türkiye'de BİLSEM Resim Birimi'nde öğrenim gören üstün yetenekli öğrencilerin liderlik becerilerini, çeşitli demografik değişkenler açısından inceleyerek önemli bir boşluğu doldurmayı amaçlamaktadır. Liderlik becerilerinin çocuk yaşlarda fark edilmesi ve desteklenmesi, öğrencilerin hem kişisel gelişimlerini hem de uzun vadede toplumsal katkılarını artıracaktır (Anderson, 2021). Elde edilecek bulguların hem eğitimcilere hem de politika geliştiricilere somut veri sağlayarak erken yaşta liderlik gelişimini destekleyen eğitim modellerine katkı sunması beklenmektedir.

Bu araştırmanın temel amacı, Bilim ve Sanat Merkezi Resim Birimi öğrencilerinin liderlik becerilerini ölçmek ve bu becerilerin cinsiyet, sınıf düzeyi, kardeş sayısı, aile gelir düzeyi ve ebeveyn eğitim durumu gibi değişkenler açısından anlamlı farklılık gösterip göstermediğini incelemektir. Bu amaç doğrultusunda aşağıdaki araştırma sorularına yanıt aranmıştır:

1. BİLSEM Resim Birimi öğrencilerinin genel liderlik becerileri düzeyleri nasıldır?
2. Öğrencilerin liderlik becerileri cinsiyet değişkenine göre anlamlı farklılık göstermekte midir?
3. Liderlik becerileri, öğrencilerin sınıf düzeyine göre anlamlı farklılık göstermekte midir?
4. Kardeş sayısı, aile gelir düzeyi ve ebeveyn eğitim düzeyi gibi demografik faktörler, öğrencilerin liderlik becerilerini nasıl etkilemektedir?
5. Liderlik becerileri ile öğrencilerin akademik başarı düzeyleri arasında anlamlı bir ilişki var mıdır?

Yöntem

Bu bölümde araştırmanın deseni, çalışma grubu, veri toplama araçları ve verilerin analiz süreci ayrıntılı olarak açıklanmıştır. Araştırma, nicel araştırma paradigması içinde yapılandırılmış olup, değişkenler arası ilişkileri belirlemeye yönelik betimsel bir yaklaşım benimsenmiştir. Bu çalışma, nicel araştırma yöntemlerinden tarama modeli ile desenlenmiştir. Tarama modelleri, bireylerin belirli özelliklerini, görüşlerini veya davranışlarını geniş örneklemeler üzerinden betimlemeye olanak tanır (Creswell ve Creswell, 2022). Çalışmada, farklı demografik özelliklere sahip BİLSEM Resim Birimi öğrencilerinin liderlik becerileri düzeyleri ve bu düzeylerdeki değişimler analiz edilmiştir. Bu yönüyle çalışma, değişkenler arası farklılıkları belirlemeye yönelik karşılaştırmalı bir betimsel araştırma özelliği taşımaktadır. Araştırmada veri toplamak amacıyla “Liderlik Becerileri Ölçeği (LİBÖ)” kullanılmıştır. LİBÖ, 5’li Likert tipinde yapılandırılmış olup toplam 10 alt boyuttan (Sorun Çözme, Grup Dinamikleri, Hedef Belirleme, Azim, Öfke Kontrolü, Çekingelik, Önderlik, Yaratıcılık, Empati ve Hitabet) oluşmaktadır. Ölçek, çocuk ve ergen bireylerde liderlik becerilerini değerlendirmek amacıyla geliştirilmiş, geçerlik ve güvenirlik çalışmaları 2020 sonrası güncellenmiş psikometrik analizlerle desteklenmiştir (Ogurlu, 2012). Ölçeğin Cronbach alfa iç tutarlılık katsayısı genel olarak .88; alt boyutlar arasında ise .74 ile .91 arasında değişmektedir.

Ayrıca katılımcılardan, yaş, cinsiyet, sınıf düzeyi, kardeş sayısı, ebeveyn eğitim durumu, aile gelir ve başarı düzeyine ilişkin bilgileri içeren kişisel bilgi formu da toplanmıştır. Çalışmada yer alan öğrencilerin bilgileri Tablo 1’de verilmiştir.

Tablo 1: Çalışma Grubunda Yer Alan Öğrencilerin Demografik Özellikleri

Değişken	Kategori	f	%
	Kız	56	56.0

Cinsiyet	Erkek	44	44.0
Sınıf Düzeyi	5. Sınıf	30	30.0
	6. Sınıf	40	40.0
	7. Sınıf	20	20.0
	8. Sınıf	10	10.0
Kardeş Sayısı	0	12	12.0
	1	40	40.0
	2	35	35.0
	3 ve üzeri	13	13.0
Aile Gelir Düzeyi	Asgari ücret ve altı (≤ 17.000 TL)	18	18.0
	Asgari ücret–50.000 TL	58	58.0
	50.001 TL ve üzeri	24	24.0
Anne Eğitim Durumu	İlkokul ve altı	18	18.0
	Ortaokul	26	26.0
	Lise	30	30.0
	Üniversite ve üstü	26	26.0
Baba Eğitim Durumu	İlkokul ve altı	10	10.0
	Ortaokul	20	20.0
	Lise	36	36.0
	Üniversite ve üstü	34	34.0
Akademik Başarı Düzeyi	Ortalamanın altında (≤ 70)	15	15.0
	Ortalama (71–84)	44	44.0
	Ortalamanın üstü (≥ 85)	41	41.0

Verilerin analizinde, IBM SPSS 28 programı kullanılmıştır. Ölçekten elde edilen toplam puanlar ile alt boyut puanlarının normallik dağılımı Kolmogorov-Smirnov ve Shapiro-Wilk testleri ile kontrol edilmiştir. Verilerin parametrik test varsayımlarını karşıladığı belirlenmiştir. Bu doğrultuda: bağımsız gruplar t-testi (cinsiyet gibi ikili değişkenler için), tek yönlü varyans analizi (ANOVA) (kardeş sayısı, aile geliri gibi üç veya daha fazla gruba ayrılmış değişkenler için) anlamlılık çıkan durumlarda Tukey HSD testi ile post-hoc karşılaştırmalar yapılmıştır. Tüm analizlerde anlamlılık düzeyi $p < .05$ olarak kabul edilmiştir. Ayrıca etki büyüklükleri (Cohen's d, η^2) de raporlanmıştır (Field, 2021).

Bulgular

Bu bölümde, BİLSEM Resim Birimi öğrencilerinin liderlik becerilerine ilişkin genel puan ortalamaları ve bu becerilerin cinsiyet, sınıf düzeyi, kardeş sayısı, aile gelir durumu, ebeveyn eğitim durumu ve akademik başarı düzeyi gibi demografik değişkenlere göre farklılaşp farklılaşmadığına ilişkin bulgular sunulmuştur. Öğrencilerin genel liderlik becerileri ve alt boyutlarının puan ortalamalarına ilişkin bulgular Tablo 2'de verilmiştir.

Tablo 2: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyutlarına İlişkin Puan Ortalamaları

Alt Boyut	$\bar{X}$	ss
Empati	4.22	0.40
Yaratıcılık	4.31	0.37
Önderlik	4.12	0.45
Azim	4.13	0.36
Hitabet	4.06	0.45
Sorun Çözme	4.14	0.38

Grup Dinamikleri	4.13	0.40
Hedef Belirleme	4.15	0.37
Genel Ort.	4.16	0.40

Tablo 2 incelendiğinde, öğrencilerin liderlik becerilerine ilişkin genel ortalamaları incelendiğinde, tüm alt boyutlarda puanların yüksek düzeyde olduğu görülmektedir ($\bar{X} = 4.16$). Bu durum, BİLSEM Resim Birimi öğrencilerinin liderlik özelliklerinin gelişmiş olduğunu göstermektedir. Özellikle yaratıcılık ($\bar{X} = 4.31$) ve empati ($\bar{X} = 4.22$) becerileri diğer alt boyutlara kıyasla öne çıkmaktadır. Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının cinsiyet değişkenine ilişkin bulgular Tablo 3'te verilmiştir.

Tablo 3: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Cinsiyet Değişkenine Göre Bağımsız Gruplar t-testi Sonuçları

Alt Boyutlar	Kız (n=56)	Erkek (n=44)	t	p	d
Sorun Çözme	4.10 (0.62)	3.89 (0.60)	1.74	.085	0.35
Grup Dinamikleri	4.22 (0.57)	4.05 (0.55)	1.56	.122	0.30
Hedef Belirleme	4.15 (0.60)	3.90 (0.64)	2.00	.048*	0.41
Azim	4.25 (0.65)	4.00 (0.68)	1.89	.062	0.38
Öfke Kontrolü	3.98 (0.70)	3.75 (0.72)	1.56	.122	0.33
Çekingenlik	3.75 (0.69)	3.50 (0.65)	1.84	.069	0.37
Önderlik	4.30 (0.58)	4.00 (0.63)	2.56	.012*	0.51
Yaratıcılık	4.35 (0.55)	4.05 (0.61)	2.73	.007**	0.53
Empati	4.40 (0.54)	4.10 (0.60)	2.72	.008**	0.52
Hitabet	4.15 (0.62)	3.95 (0.65)	1.63	.106	0.32
Genel Ortalama	4.17 (0.48)	3.92 (0.50)	2.63	.010*	0.52

Tablo 3 incelendiğinde, kız öğrencilerin liderlik becerileri alt boyutlarında erkek öğrencilere göre daha yüksek ortalamalara sahip oldukları görülmektedir. Özellikle “Hedef Belirleme” ($p=.048$), “Önderlik” ($p=.012$), “Yaratıcılık” ($p=.007$) ve “Empati” ($p=.008$) boyutlarında istatistiksel olarak anlamlı farklar gözlenmiştir. Cohen’s d değerlerine bakıldığında bu farkların orta düzeyde etkili olduğu görülmektedir ($d \approx 0.5$). Genel liderlik puanı da kız öğrenciler lehine anlamlıdır ($p=.010$, $d=0.52$). Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının sınıf düzeyi değişkenine ilişkin bulgular Tablo 4'te verilmiştir.

Tablo 4: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Sınıf Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Alt Boyutlar	5. Sınıf (n=30)	6. Sınıf (n=40)	7. Sınıf (n=20)	8. Sınıf (n=10)	F	p	η^2
Sorun Çözme	3.85 (0.61)	4.00 (0.60)	4.10 (0.59)	4.25 (0.64)	3.02	.034*	.085
Grup Dinamikleri	4.00 (0.57)	4.15 (0.55)	4.30 (0.50)	4.35 (0.52)	3.21	.027*	.090
Hedef Belirleme	3.90 (0.62)	4.05 (0.61)	4.25 (0.56)	4.40 (0.51)	4.10	.009**	.110
Azim	3.95 (0.66)	4.15 (0.64)	4.30 (0.62)	4.45 (0.60)	3.98	.011*	.107
Öfke Kontrolü	3.70 (0.72)	3.90 (0.69)	4.05 (0.65)	4.20 (0.60)	3.06	.032*	.086
Çekingenlik	3.40 (0.66)	3.60 (0.68)	3.80 (0.70)	4.00 (0.62)	3.35	.023*	.093
Önderlik	4.00 (0.60)	4.20 (0.58)	4.35 (0.54)	4.50 (0.51)	4.22	.008**	.113
Yaratıcılık	4.00 (0.60)	4.25 (0.58)	4.40 (0.53)	4.55 (0.48)	4.35	.006**	.117
Empati	4.05 (0.59)	4.25 (0.55)	4.40 (0.52)	4.60 (0.45)	4.40	.005**	.119
Hitabet	3.90 (0.63)	4.10 (0.60)	4.25 (0.58)	4.45 (0.51)	3.87	.012*	.105

Genel Ortalama	3.89 (0.44)	4.09 (0.45)	4.28 (0.43)	4.47 (0.41)	5.26	.002	.138

Tablo 4 incelendiğinde, sınıf düzeyi arttıkça öğrencilerin liderlik becerileri alt boyutlarında ve genel ortalamalarında artış olduğu görülmektedir. Özellikle 7. ve 8. sınıf öğrencileri; "Hedef Belirleme", "Önderlik", "Yaratıcılık", "Empati" ve "Hitabet" gibi boyutlarda daha yüksek puanlar almışlardır. Anlamlı farklar özellikle “Genel Ortalama” ($p = .002$, $\eta^2 = .138$), “Empati” ($p = .005$, $\eta^2 = .119$) ve “Yaratıcılık” ($p = .006$, $\eta^2 = .117$) boyutlarında görülmektedir. Etki büyüklüğü (η^2) .08’in üzerindedir; bu da farkların orta düzey etkili olduğunu göstermektedir. Bu durum, öğrencilerin yaş ve sınıf düzeyine bağlı olarak sosyal becerilerinin, özgüvenlerinin ve liderlik rolleriyle ilgili farkındalıklarının arttığını düşündürmektedir. Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının kardeş sayısı değişkenine ilişkin bulgular Tablo 5'te verilmiştir.

Tablo 5: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Kardeş Sayısı Değişkenine Göre ANOVA Testi Sonuçları

Alt Boyutlar	Kardeş Yok (n=12)	1 Kardeş (n=40)	2 Kardeş (n=35)	3+ Kardeş (n=13)	F	p	η^2
Sorun Çözme	3.80 (0.60)	4.00 (0.58)	4.10 (0.56)	3.95 (0.61)	1.23	.303	.038
Grup Dinamikleri	3.95 (0.55)	4.20 (0.52)	4.25 (0.50)	4.10 (0.54)	2.14	.100	.062
Hedef Belirleme	3.85 (0.61)	4.15 (0.60)	4.20 (0.59)	4.00 (0.62)	2.08	.109	.060
Azim	3.90 (0.62)	4.10 (0.60)	4.25 (0.57)	4.05 (0.61)	1.94	.127	.057
Öfke Kontrolü	3.70 (0.68)	3.95 (0.65)	4.10 (0.62)	3.90 (0.66)	2.01	.118	.059
Çekingenlik	3.35 (0.67)	3.60 (0.68)	3.75 (0.66)	3.60 (0.69)	1.42	.243	.043
Önderlik	3.95 (0.58)	4.25 (0.56)	4.30 (0.54)	4.10 (0.57)	2.65	.053	.075
Yaratıcılık	3.90 (0.60)	4.30 (0.55)	4.35 (0.50)	4.20 (0.53)	3.11	.031*	.087
Empati	3.95 (0.60)	4.30 (0.55)	4.35 (0.52)	4.15 (0.50)	2.89	.040*	.082
Hitabet	3.80 (0.61)	4.15 (0.58)	4.20 (0.56)	4.00 (0.59)	2.57	.058	.073
Genel Ortalama	3.83 (0.42)	4.14 (0.43)	4.22 (0.41)	4.02 (0.44)	3.42	.021	.098

Tablo 5 incelendiğinde, kardeş sayısının liderlik becerileri üzerinde anlamlı farklılıklar oluşturduğu görülmektedir. Özellikle 1 ya da 2 kardeşi olan öğrencilerin liderlik beceri puan ortalamalarının, kardeşi olmayan ya da 3 ve daha fazla kardeşi olan öğrencilere göre daha yüksek olduğu dikkat çekmektedir. “Yaratıcılık” ($p = .031$, $\eta^2 = .087$) ve “Empati” ($p = .040$, $\eta^2 = .082$) boyutlarında istatistiksel olarak anlamlı farklar bulunmuştur. Her iki boyutta da etki büyüklüğü orta düzeydedir. Genel liderlik becerileri açısından da anlamlı bir fark gözlenmiş olup ($p = .021$, $\eta^2 = .098$), bu farkın orta düzey etkili olduğu görülmektedir. Bu bulgular, sınırlı sayıda kardeşi olan öğrencilerin sosyal etkileşim deneyimlerinden olumlu biçimde yararlanarak liderlik becerilerini daha fazla geliştirebileceklerini göstermektedir. Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının aile gelir düzeyi değişkenine ilişkin bulgular Tablo 6'da verilmiştir.

Tablo 6: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Aile Gelir Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Alt Boyutlar	≤17.000 TL (n=18)	17.001–50.000 TL (n=58)	≥50.001 TL (n=24)	F	p	η ²
Sorun Çözme	3.75 (0.62)	4.05 (0.55)	4.20 (0.52)	4.12	.019*	.099
Grup Dinamikleri	3.90 (0.58)	4.25 (0.50)	4.40 (0.48)	5.34	.006*	.107
Hedef Belirleme	3.80 (0.63)	4.20 (0.58)	4.35 (0.55)	5.01	.008*	.102
Azim	3.85 (0.64)	4.20 (0.57)	4.35 (0.56)	4.29	.017*	.092
Öfke Kontrolü	3.70 (0.69)	4.10 (0.61)	4.25 (0.60)	4.03	.021*	.087
Çekingelik	3.40 (0.70)	3.75 (0.66)	3.90 (0.63)	3.02	.053	.065
Önderlik	3.90 (0.61)	4.30 (0.56)	4.45 (0.52)	6.01	.003*	.118
Yaratıcılık	3.95 (0.63)	4.35 (0.53)	4.50 (0.48)	5.32	.006*	.107
Empati	3.95 (0.60)	4.35 (0.52)	4.50 (0.47)	5.59	.005*	.111
Hitabet	3.85 (0.60)	4.25 (0.58)	4.40 (0.54)	4.78	.010*	.097
Genel Ortalama	3.88 (0.40)	4.24 (0.41)	4.40 (0.38)	6.42	.002	.122

Tablo 6’da görüldüğü üzere, aile gelir düzeyi liderlik becerileri üzerinde anlamlı düzeyde farklılık yaratmaktadır. En yüksek gelir grubundaki öğrencilerin neredeyse tüm alt boyutlarda en yüksek ortalamalara sahip olduğu görülmektedir. “Grup Dinamikleri” ($p = .006$, $\eta^2 = .107$), “Hedef Belirleme” ($p = .008$, $\eta^2 = .102$), “Önderlik” ($p = .003$, $\eta^2 = .118$) ve “Empati” ($p = .005$, $\eta^2 = .111$) gibi boyutlarda anlamlı ve orta düzey etki büyüklüğüne sahip farklılıklar vardır. Genel ortalama açısından da anlamlı fark vardır ($p = .002$, $\eta^2 = .122$). Bu farkın etki büyüklüğü orta düzeyde olup, liderlik becerilerinin gelir düzeyiyle pozitif yönde ilişkili olabileceğini göstermektedir. Bu bulgu, daha yüksek gelir düzeyine sahip öğrencilerin sosyal kaynaklara ve liderlik geliştiren etkinliklere daha fazla erişim sahibi olduklarını düşündürülebilir. Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının anne eğitim düzeyi değişkenine ilişkin bulgular Tablo 7’de verilmiştir.

Tablo 7: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Anne Eğitim Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Alt Boyutlar	İlkokul ve Altı (n=18)	Ortaokul (n=26)	Lise (n=30)	Üniversite ve Üstü (n=26)	F	p	η ²
Sorun Çözme	3.75 (0.64)	3.90 (0.60)	4.10 (0.55)	4.25 (0.50)	4.52	.006*	.121
Grup Dinamikleri	3.80 (0.60)	4.05 (0.58)	4.25 (0.52)	4.40 (0.47)	5.11	.003*	.135

Hitabet	3.80 (0.62)	4.05 (0.60)	4.25 (0.57)	4.40 (0.52)	4.76	.005*	.126
Genel Ortalama	3.83 (0.42)	4.07 (0.40)	4.28 (0.38)	4.42 (0.36)	5.89	.001	.147

Tablo 7'ye göre, anne eğitim düzeyi arttıkça öğrencilerin liderlik becerileri puan ortalamalarında da artış görülmektedir. “Yaratıcılık” ($p = .002$, $\eta^2 = .141$), “Grup Dinamikleri” ($p = .003$, $\eta^2 = .135$), “Hedef Belirleme” ($p = .002$, $\eta^2 = .139$) gibi boyutlarda anlamlı farklılıklar ve orta düzey etki büyüklükleri tespit edilmiştir. En düşük ortalamalar “İlkokul ve altı” grubunda, en yüksek ortalamalar ise “Üniversite ve üstü” grubunda yer almaktadır. Genel liderlik becerisi ortalaması da eğitim düzeyine göre farklılık göstermekte olup, bu fark istatistiksel olarak anlamlıdır ($p = .001$, $\eta^2 = .147$). Bu, güçlü ve orta düzeyde bir etki büyüklüğüne işaret eder. Bu sonuçlar, anne eğitim düzeyinin öğrencilerin liderlik gelişimine olumlu katkı sağladığını düşündürmektedir. Eğitimi yüksek annelerin çocuklarının daha fazla sosyal fırsata ve destekleyici bir çevreye sahip olabileceği değerlendirilebilir. Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının baba eğitim düzeyi değişkenine ilişkin bulgular Tablo 8'de verilmiştir.

Tablo 8: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Baba Eğitim Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Alt Boyutlar	İlkokul ve Altı (n=10)	Ortaokul (n=20)	Lise (n=36)	Üniversite ve Üstü (n=34)	F	p	η^2
Sorun Çözme	3.70 (0.66)	3.85 (0.61)	4.05 (0.58)	4.25 (0.52)	4.11	.009*	.113
Grup Dinamikleri	3.75 (0.61)	4.00 (0.56)	4.20 (0.55)	4.35 (0.48)	4.83	.004*	.128
Hedef Belirleme	3.60 (0.68)	3.85 (0.64)	4.10 (0.56)	4.30 (0.51)	5.06	.003*	.133
Azim	3.75 (0.64)	3.95 (0.60)	4.20 (0.54)	4.35 (0.50)	4.62	.005*	.123
Öfke Kontrolü	3.60 (0.71)	3.90 (0.65)	4.20 (0.60)	4.35 (0.58)	5.00	.003*	.131
Çekingenlik	3.25 (0.74)	3.50 (0.70)	3.75 (0.68)	3.90 (0.65)	3.44	.019*	.097
Önderlik	3.80 (0.62)	4.05 (0.58)	4.25 (0.54)	4.45 (0.50)	5.22	.002*	.137
Yaratıcılık	3.85 (0.60)	4.05 (0.57)	4.30 (0.50)	4.50 (0.47)	5.36	.002*	.141
Empati	3.85 (0.60)	4.10 (0.55)	4.30 (0.50)	4.45 (0.46)	4.97	.004*	.130
Hitabet	3.75 (0.63)	4.00 (0.60)	4.20 (0.57)	4.40 (0.53)	5.10	.003*	.134
Genel Ortalama	3.79 (0.43)	4.02 (0.41)	4.25 (0.39)	4.41 (0.37)	5.81	.001	.146

Tablo 8'e göre, baba eğitim düzeyi yükseldikçe öğrencilerin liderlik becerileri puanlarında belirgin bir artış görülmektedir. En yüksek ortalamalar “Üniversite ve üstü” grubuna aittir. “Yaratıcılık” ($p = .002$, $\eta^2 = .141$), “Hedef Belirleme” ($p = .003$, $\eta^2 = .133$) ve “Hitabet” ($p = .003$, $\eta^2 = .134$) gibi boyutlarda istatistiksel olarak anlamlı farklılıklar ve orta düzey etki büyüklükleri gözlenmiştir. Genel liderlik puan ortalamaları arasında da anlamlı bir fark bulunmaktadır ($p = .001$, $\eta^2 = .146$). Bu, baba eğitim düzeyinin liderlik becerileri üzerinde anlamlı ve etkili bir değişken olduğunu göstermektedir. Bu bulgular, eğitim düzeyi daha yüksek babaların çocuklarının sosyal, iletişimsel ve liderlik yönünden daha gelişmiş olabileceğini destekler niteliktedir. Öğrencilerin genel liderlik becerileri ve alt boyut puan ortalamalarının akademik başarı düzeyi değişkenine ilişkin bulgular Tablo 9'da verilmiştir.

Tablo 9: Öğrencilerin Genel Liderlik Becerileri ve Alt Boyut Puan Ortalamalarının Akademik Başarı Düzeyi Değişkenine Göre ANOVA Testi Sonuçları

Alt Boyutlar	Ortalama Altı (n=15)	Ortalama (n=44)	Ortalama Üstü (n=41)	F	p	η^2
Sorun Çözme	3.70 (0.62)	4.00 (0.58)	4.35 (0.50)	8.62	.000*	.156
Grup Dinamikleri	3.75 (0.60)	4.15 (0.52)	4.45 (0.47)	9.51	.000*	.170
Hedef Belirleme	3.65 (0.65)	4.10 (0.55)	4.40 (0.48)	9.88	.000*	.174
Azim	3.80 (0.58)	4.15 (0.52)	4.40 (0.46)	8.47	.000*	.154
Öfke Kontrolü	3.70 (0.68)	4.05 (0.60)	4.35 (0.54)	7.79	.001*	.146
Çekingencilik	3.30 (0.72)	3.70 (0.66)	4.00 (0.60)	6.55	.002*	.124
Önderlik	3.85 (0.64)	4.20 (0.56)	4.50 (0.52)	8.35	.000*	.152
Yaratıcılık	3.90 (0.60)	4.25 (0.52)	4.55 (0.45)	9.24	.000*	.167
Empati	3.95 (0.55)	4.25 (0.50)	4.50 (0.44)	7.76	.001*	.145
Hitabet	3.80 (0.62)	4.15 (0.57)	4.45 (0.50)	8.51	.000*	.155
Genel Ortalama	3.84 (0.40)	4.22 (0.38)	4.49 (0.35)	10.65	.000	.182

Tablo 7’de görüldüğü üzere, öğrencilerin akademik başarı düzeyi yükseldikçe liderlik becerilerine ilişkin puan ortalamaları da artmaktadır: Tüm alt boyutlarda ve genel ortalama istatistiksel olarak anlamlı farklılıklar bulunmaktadır ($p < .01$). Özellikle hedef belirleme ($\eta^2 = .174$), grup dinamikleri ($\eta^2 = .170$) ve yaratıcılık ($\eta^2 = .167$) alt boyutlarında orta düzeyde etki büyüklükleri saptanmıştır. Genel ortalama puan farkı da oldukça anlamlıdır ($F = 10.65$, $p = .000$, $\eta^2 = .182$). Bu bulgu, akademik başarının liderlik becerileriyle yakından ilişkili olduğunu göstermektedir. Sonuç olarak, akademik olarak daha başarılı öğrencilerin liderlik becerilerinin de daha güçlü olduğu söylenebilir. Bu durum, bilişsel yetkinliğin sosyal liderlik davranışları üzerinde olumlu bir etkisi olabileceğini düşündürmektedir.

Sonuç ve Tartışma

Bu araştırmada, Bilim ve Sanat Merkezi (BİLSEM) resim birimi öğrencilerinin liderlik becerileri çeşitli demografik değişkenler açısından incelenmiştir. Bulgular, öğrencilerin liderlik becerilerinin özellikle cinsiyet, sınıf düzeyi, kardeş sayısı, aile gelir durumu, ebeveyn eğitim düzeyi ve akademik başarıya göre anlamlı farklılıklar gösterdiğini ortaya koymuştur. En yüksek liderlik becerisi puanları, kız öğrencilerde, üst sınıf düzeyinde yer alanlarda, kardeş sayısı 1 veya 2 olanlarda, yüksek gelir düzeyine sahip ailelerde, ebeveyn eğitimi lise ve üzeri olanlarda ve akademik başarı düzeyi ortalamanın üstünde olan öğrencilerde gözlenmiştir. Ayrıca, liderlik becerilerinin tüm alt boyutlarında ve genel ortalama anlamlı farklılıklar bulunmuş; bu farkların çoğu orta düzey etki büyüklüğüne (η^2) sahiptir.

Bu bulgular, liderlik becerilerinin yalnızca bireysel değil, aynı zamanda çevresel ve sosyoekonomik faktörlerle de ilişkili olduğunu göstermektedir. Özellikle akademik başarı ile

liderlik arasında güçlü bir ilişki olduğu ortaya konmuştur. Bu durum, bilişsel başarıların sosyal becerilere katkısını desteklemektedir.

Bu çalışmanın sonuçları, liderlik becerilerinin çok boyutlu bir gelişim sürecine bağlı olduğunu göstermektedir. Öğrencilerin liderlik düzeyleri; aileden gelen destek, akademik başarı, toplumsal fırsatlar ve bireysel farklılıklar ile şekillenmektedir. Özellikle kız öğrencilerin erkek öğrencilere göre daha yüksek liderlik becerileri sergilemeleri, bazı güncel çalışmalarla örtüşmektedir (Cansoy, 2015; Durmuş, 2011; Ogurlu, 2012). Örneğin Durmuş (2011) tarafından gerçekleştirilen çalışmada, kız öğrencilerin iletişim, empati ve grup çalışması gibi sosyal-duygusal becerilerde erkeklerden daha yüksek puanlar aldığını rapor edilmiştir. Benzer biçimde, Cansoy (2015), liderlik becerilerinin gelişiminde akademik başarının önemli bir belirleyici olduğunu ortaya koymuşlardır. Bu bulgu, mevcut çalışmadaki akademik başarı düzeyine göre anlamlı farkları desteklemektedir. Akademik başarının yüksek olması, öğrencilerin planlama, problem çözme ve özyönetim becerilerinde daha gelişmiş olmalarını sağlayarak liderlik davranışlarını da olumlu etkileyebilir. Kardeş sayısının liderlik becerileri üzerinde etkili olması da sosyal öğrenme kuramı (Bandura, 1986) ile açıklanabilir. Az sayıda kardeşe sahip çocuklar, aile içindeki sosyal etkileşimlerden daha fazla bireysel sorumluluk ve liderlik fırsatları elde edebilirler. Ebeveyn eğitim düzeyi ve aile gelir düzeyinin etkisi ise ailelerin çocuklarına sunduğu fırsat eşitliğine işaret etmektedir. Bu sonuç, Avcı'nın (2009), Eskicumalı ve Eroğlu'nun (2023) bulgularıyla paralellik göstermekte olup, yüksek sosyoekonomik düzeye sahip ailelerin çocuklarının sosyal beceri gelişiminde daha avantajlı olduğunu ortaya koymuştur.

Araştırma bulgularına dayanarak şu önerilerde bulunulabilir: Okullarda liderlik becerilerini geliştirmeye yönelik programlar geliştirilmelidir. Özellikle düşük akademik başarıya sahip veya düşük sosyoekonomik düzeydeki öğrenciler için farklılaştırılmış içerikler sunulabilir. Sanat temelli öğrenme ortamları, liderlik, empati, problem çözme gibi becerilerin gelişimi açısından zenginleştirilmelidir. Resim birimlerinde öğrencilerin aktif rol alacağı grup projeleri ve işbirlikçi etkinlikler artırılabilir. Ebeveyn eğitim programları ile ailelerin liderlik becerilerinin gelişiminde oynadığı rol konusunda bilinçlendirilmesi sağlanabilir. Gelecekte yapılacak araştırmalarda nitel veri toplama yöntemleri (örneğin öğrenci görüşmeleri, gözlem) de kullanılarak liderlik becerilerinin gelişim süreci daha derinlemesine incelenebilir. Bu çalışma BİLSEM öğrencileri ile sınırlıdır. Farklı okul türleri ve daha geniş örneklemlemlerle yapılacak karşılaştırmalı araştırmalar, liderlik becerilerinin eğitsel bağlamda daha iyi anlaşılmasını sağlayabilir.

Özet

Araştırmanın amacı, üstün yetenek farkındalık programının psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin üstün yetenek ve zekâ kavramlarına yönelik farkındalık düzeylerine etkisini incelemektir. Son yıllarda, dünya genelinde ve ülkemizde farklı disiplinlerden uzmanlar, üstün yeteneklilik kavramını ve bu çocukların normal gelişim gösteren akranlarından ne ölçüde farklılaştığını araştırmaktadır. Üstün yetenekli çocukların gelişimsel özelliklerinin neler olduğu gibi sorulara yanıtlar bulmaya çalışmaktadır. Toplumların sahip olduğu değerler, geçirdikleri tarihsel süreçler, deneyimleri ve ihtiyaçlarındaki çeşitlilik, yetenek ve zekâ kavramlarına yönelik algıların ve yorumların farklılaşmasına yol açmaktadır. Bu durum, söz konusu sorulara verilen cevapların toplumdan topluma değişmesine neden olmaktadır. Üstün zekâ, farklı beceri alanlarında doğal bir yetenek olarak görülürken, üstün yetenek ise belirli alanlara odaklanması ve bu yeteneklerin sistematik bir şekilde geliştirilmesi sonucunda ortaya çıkmaktadır. Üstün zekâlılığın kökenini açıklamaya yönelik ilk sistematik Amerikan çalışması, 1921 yılında Lewis Terman'ın başlattığı Genetik Deha Çalışmaları ile başlamıştır. Bu çalışma, üstün zekâlı bireylerin özelliklerini, gelişimlerini ve yaşam boyu başarılarını inceleyerek, üstün zekâlılık alanında öncü bir araştırma olarak kabul edilmektedir. Araştırmanın çalışma grubunu 2024-2025 eğitim öğretim yılında Erzincan Binali Yıldırım Üniversitesi Psikolojik Danışmanlık ve Rehberlik Bölümü'nde öğrenim gören 70 üniversite öğrencisi oluşturmuştur. Veri toplama araçları olarak araştırmacılar tarafından geliştirilmiş 20 maddeden oluşan başarı testi kullanılmıştır. Araştırma, yarı deneysel yöntem olan ön test-son test kullanılarak gerçekleştirilecektir. Çalışma grubunu, Psikolojik Danışmanlık ve Rehberlik bölümünde öğrenim gören öğrenciler oluşturacaktır. Katılımcılar, rastgele seçilerek deney ve kontrol gruplarına ayrılacak, deney grubuna Üstün Yetenek Farkındalık Programı uygulanacaktır. Veri

toplama aracı olarak, üstün yetenek ve zekâ kavramlarına yönelik farkındalık düzeyini ölçen bir başarı testi kullanılacaktır. Elde edilen veriler, karışık desenler faktöriyel anova ile değerlendirilecektir.

Anahtar Kelimeler: Üstün Yetenek, Zekâ, Üstün Zekâ, Farkındalık

The Effect of the Gifted Awareness Program on Individuals' Awareness Levels Regarding the Concepts of Giftedness and Intelligence

Abstract

The aim of the study is to examine the effect of giftedness awareness programme on the awareness levels of psychological counselling and guidance department students about the concepts of giftedness and intelligence. In recent years, experts from different disciplines around the world and in our country have been investigating the concept of giftedness and the extent to which these children differ from their peers with normal development. They try to find answers to questions such as what are the developmental characteristics of gifted children. The diversity in the values, historical processes, experiences and needs of societies leads to different perceptions and interpretations of the concepts of talent and intelligence. This situation causes the answers to these questions to vary from society to society. While giftedness is seen as a natural ability in different skill areas, giftedness emerges as a result of focusing on certain areas and systematically developing these abilities. The first systematic American study to explain the origin of giftedness began in 1921 with the Genetic Genius Studies initiated by Lewis Terman. This study is considered as a pioneering research in the field of giftedness by examining the characteristics, development and lifelong achievements of gifted individuals. The study group of the research consisted of 70 university students studying at the Department of Psychological Counselling and Guidance at Erzincan Binali Yıldırım University in the 2024-2025 academic year. An achievement test consisting of 20 items developed by the researchers was used as data collection tools. The research will be carried out using the quasi-experimental method of pretest-posttest. The study group will consist of students studying in the Department of Psychological Counselling and Guidance. The participants will be randomly selected and divided into experimental and control groups, and the experimental group will receive the Giftedness Awareness Programme. An achievement test measuring the level of awareness of the concepts of giftedness and intelligence will be used as a data collection tool. The data obtained will be evaluated with mixed designs factorial ANOVA.

Key Words: Giftedness, Intelligence, Giftedness, Awareness

Giriş

Son yıllarda, dünya genelinde ve ülkemizde farklı disiplinlerden uzmanlar, üstün yeteneklilik kavramını ve bu çocukların normal gelişim gösteren akranlarından ne ölçüde farklılaştığını araştırmaktadır. Üstün yetenekli çocukların gelişimsel özelliklerinin neler olduğu gibi sorulara yanıtlar bulmaya çalışmaktadır. Toplumların sahip olduğu değerler, geçirdikleri tarihsel süreçler, deneyimleri ve ihtiyaçlarındaki çeşitlilik, yetenek ve zekâ kavramlarına yönelik algıların ve yorumların farklılaşmasına yol açmaktadır. Bu durum, söz konusu sorulara verilen cevapların toplumdan topluma değişmesine neden olmaktadır (Çetin, 2023). Ülkemizde, Özel Eğitim Konseyi'nin Üstün Yetenekli Çocuklar ve Eğitimleri Komisyon Raporu'nda, üstün zekâ ve üstün özel yetenek kavramları "üstün yetenek" çatısı altında bir araya getirilmiş ve şu şekilde tanımlanmıştır: “Üstün yetenekliler, genel veya özel alanlarda yaşıtlarına kıyasla üstün performans sergileyen ve bu durum alan uzmanları tarafından tespit edilmiş bireylerdir. Bu kişiler, yeteneklerini geliştirmek için normal eğitim programlarının yetersiz kaldığı, kendi ilgi ve yeteneklerine uygun şekilde özelleştirilmiş eğitim programlarına ihtiyaç duyan bir grubu oluşturmaktadır” (Özel Eğitim Konseyi, 1991). Tüm öğrenciler, öğrenme ve gelişim için fırsatlara erişme ve mükemmelliğe ulaşmak için teşvik edilmeye ihtiyaç duymaktadır. Özellikle olağanüstü yeteneklere ve yüksek öğrenme potansiyeline sahip öğrenciler, özel bilgi ve ilgi gerektiren ihtiyaçlara sahiptir. Bu öğrenciler, dikkatli bir şekilde yetiştirildiklerinde ve uygun eğitim imkânları sunulduğunda, toplumlarına ve dünyaya eşsiz katkılarda bulunma potansiyelini taşımaktadır. Ancak, bu tür destekler sağlanmadığı takdirde, akademik gelişimleri, yaratıcı potansiyelleri, eğitimde başarılı olma motivasyonları, gelecekteki mesleki başarıları ve topluma yapabilecekleri önemli katkılar kaybolma riskiyle karşı karşıya kalabilmektedir (Davis & Rimm, 2004). Zekâ düzeylerine bağlı olarak çocuklar, belirli yaşlarda belirli davranış özellikleri sergilemektedir (Sak, 2010). Bu sebeple, üstün yeteneklilik alanında çalışmalar yürüten uzmanlar, üstün yetenekli çocukların gelişimsel özelliklerini belirlemek amacıyla çeşitli yöntemler ve araçlar kullanmışlardır. Bu yöntemler arasında vaka incelemeleri, çocukla ilgili tutulan kayıtların analizi, anketler, gözlemler gibi bilimsel yaklaşımlar yer almaktadır. Ayrıca, Grup Zekâ Testleri, Grup Başarı Testleri, Bireysel Zekâ Testleri, Yaratıcılık Testleri, Kritik Düşünme Testleri ve resim, müzik gibi özel alanlara yönelik testler de bu süreçte kullanılan ölçekler arasındadır. Bu testler, ölçekler ve teknikleri kullanan uzmanlar, elde ettikleri sonuçları normal gelişim gösteren çocuklarla karşılaştırarak üstün yetenekli çocukların akranlarından farklı özelliklere sahip olduğunu belirlemiştir. Zeka; muhakeme, problem çözme ve öğrenme için genel bir zihinsel yetenek olarak

tanımlanabilir. Genel yapısı nedeniyle zeka, algı, dikkat, hafıza, dil veya planlama gibi bilişsel işlevleri bütünleştirir (Colom vd., 2010). Amerikan Psikoloji Derneği (APA) zeka hakkındaki raporunda, bireylerin karmaşık fikirleri anlama, çevreye etkili bir şekilde uyum sağlama, deneyimlerden öğrenme, çeşitli akıl yürütme biçimlerini kullanma ve düşünerek engelleri aşma yetenekleri bakımından birbirlerinden farklılaştığını kabul etmektedir (Neisser vd., 1996). Üstün zekâ, farklı beceri alanlarında doğal bir yetenek olarak görülürken, üstün yetenek ise belirli alanlara odaklanması ve bu yeteneklerin sistematik bir şekilde geliştirilmesi sonucunda ortaya çıkmaktadır (Dildegmez, 2023). Üstün zekâlılığın kökenini açıklamaya yönelik ilk sistematik Amerikan çalışması, 1921 yılında Lewis Terman'ın başlattığı Genetik Deha Çalışmaları ile başlamıştır (Terman, 1922). Bu çalışma, üstün zekâlı bireylerin özelliklerini, gelişimlerini ve yaşam boyu başarılarını inceleyerek, üstün zekâlılık alanında öncü bir araştırma olarak kabul edilmektedir. Tarihsel olarak, üstün zekâlılık ve üstün zekâlı eğitime yönelik birincil ve en yoğun ilgi, yüksek entelektüel yeteneklere odaklanmıştır. Bu perspektiften, üstün zekâlılık, bir bireyin genel ve doğuştan gelen bir niteliği olarak kabul edilir ve bu nitelik, bilişsel değerlendirme veya IQ testi gibi araçlarla tanımlanması ve ortaya çıkarılması gereken bir özellik olarak görülür (Robinson vd., 2000). Ayrıca, üstün zekâlı bireylerin tüm akademik alanlarda başarılı olmalarını sağlayan üstün muhakeme yeteneklerine sahip oldukları ve yaşamları boyunca, gerçekte başarılı olsunlar ya da olmasınlar, üstün zekâlı olarak kalacakları varsayılmaktadır (Subotnik vd., 2011). Üstün zekaya sahip bireyler, aynı anda hem dikkat çekici hem de engelleyici olabilen benzersiz yoğunluklara ve aşırı uyarılabilirliklere sahiptirler. Bu durum, onların çevrelerindeki dünyayı daha derinlemesine algılamalarına ve işlemelerine neden olmaktadır (Karpinski vd., 2018). Son olarak, üstün başarı veya üstünlük, yetenekli eğitimin temel hedefi olmalıdır. Bu hedef hem topluma hem de yetenekli bireye sağladığı bilimsel, estetik ve pratik faydalarla birlikte, bireyin kendini gerçekleştirmesine ve yaratıcı katkılar sunmasına olanak tanır. Snyderman ve Rothman (1987) yaptıkları kapsamlı araştırmalar sonucunda, zekanın temel bileşenleri olarak akıl yürütme, problem çözme ve öğrenme yeteneklerinin hayati önem taşıdığını vurgulamışlardır. Şahin (2013) yapmış olduğu çalışmada, öğrencilerin öğretmenlerinde görmek istedikleri özelliklerin cinsiyete göre farklılaşmadığını, ancak fen lisesi, BİLSEM ve özel okul öğrencilerinin görüşlerinin anlamlı düzeyde farklılaştığını belirlemiştir. Ayrıca, eğitsel ihtiyaçlarının tamamen veya kısmen karşılandığını düşünen öğrencilerin puanları arasında anlamlı farklılıklar tespit edilmiştir. Literatür incelendiğinde, üniversite öğrencilerinin üstün yetenekli bireylerin özellikleri, ihtiyaçları ve eğitimsel yaklaşımlar konusunda yeterince bilgi sahibi olmadıkları ve bu konuda farkındalık kazanmaları için öğrencilere ve eğitimcilere öneriler sunulması gerektiği

görülmüştür. Bu noktada, psikolojik danışmanlık ve rehberlik bölümü öğrencileri, ileride çocuklarla birebir çalışma imkânı bulacaklarından, üstün yetenek, üstün zeka tanımını ve çocukları bilmeleri ve ebeveynleri bu konuda yönlendirmeleri açısından önemli bir rol üstlenmektedir. Ayrıca, psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin, üstün yetenek ve zekâ kavramlarına yönelik görüşlerinin dikkate alınması ve önemsenmesi gerektiği vurgulanmaktadır. Bu bağlamda, psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin üstün yetenek ve zekâ kavramlarına ilişkin durumları ele almıştır. Bu doğrultuda araştırmanın amacı; üstün yetenek farkındalık programının psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin üstün yetenek ve zekâ kavramlarına yönelik farkındalık düzeylerine etkisini incelemektir. Programın, öğrencilerin üstün yetenekli bireylerin özellikleri, ihtiyaçları ve eğitimsel yaklaşımlar konusunda bilgi ve farkındalık kazanmalarına katkı sağlayıp sağlamadığı değerlendirilecektir.

Yöntem

Bu araştırma, “Üstün Yetenek Farkındalık Programı”nın psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin üstün yetenek ve zekâ kavramlarına ilişkin farkındalık düzeyleri üzerindeki etkisini incelemek amacıyla yürütülmüştür. Bu amaç doğrultusunda deneysel araştırma desenlerinden biri olan ön test-son test kontrol gruplu desen kullanılmıştır. Bu desen, hem zamana bağlı olarak değişimin izlenmesini hem de farklı gruplar arasında karşılaştırma yapılmasını mümkün kılan güçlü bir deneysel düzendir. Literatürde bu tür desenler, bağımlı değişkendeki değişimin yalnızca deneysel işlemde kaynaklanıp kaynaklanmadığını test etmeye olanak tanımları bakımından tercih edilmektedir (Büyüköztürk, 2021; Karasar, 2012).

Ön test-son test kontrol gruplu deneysel desen, iki temel unsur içerir: Birincisi, araştırmanın başında her iki gruba da uygulanan ön test ile grupların başlangıç düzeylerinin kontrol edilmesi; ikincisi ise, deney grubuna uygulanan müdahale (bu çalışmada farkındalık programı) sonrası hem deney hem de kontrol grubuna uygulanan son test ile elde edilen sonuçların karşılaştırılmasıdır. Bu yapı sayesinde gruplar arası farkın gerçekten uygulamadan mı kaynaklandığı yoksa önceden var olan farklılıklardan mı doğduğu daha net biçimde değerlendirilebilmektedir. Uygulama sonunda elde edilen son test puanları, ön test puanları kovaryans alınarak karşılaştırılmış ve bu sayede deneysel etkinin netliği artırılmıştır. Bu desenin tercih edilmesinin en önemli gerekçelerinden biri, bireylerin ön bilgi düzeylerinin ölçülerek, uygulama sonucundaki gelişimin yalnızca programa bağlanabilmesine olanak tanımasıdır. Özellikle bilişsel ve kavramsal içerikli programların etkisini değerlendirmede, ön

test-son test kontrol gruplu desenin kullanımı oldukça yaygındır (Creswell, 2014). Bu desende, deney grubuna uygulanan müdahalenin etkisinin belirlenmesinde ön test puanlarının etkisi kontrol altına alınarak gruplar arası farkın daha objektif biçimde analiz edilmesi sağlanmaktadır.

Araştırmanın çalışma grubunu, 2024-2025 eğitim öğretim yılı bahar döneminde Erzincan Binali Yıldırım üniversitesinin Eğitim Fakültesi Psikolojik Danışmanlık ve Rehberlik (PDR) bölümünde öğrenim görmekte olan dördüncü sınıf öğrencileri oluşturmaktadır. Bu öğrenciler, üstün yetenekli bireylerin eğitsel ihtiyaçlarına yönelik bilgi ve farkındalık düzeylerinin gelişimine katkı sağlayacak bir gelişim döneminde yer almaktadırlar. Çalışma grubunu oluşturan öğrenciler, ön test uygulamasını takiben deney ve kontrol gruplarına basit rastgele örnekleme yöntemiyle atanmıştır. Rastgele atama süreci, gruplar arasında başlangıçta sistematik bir farklılık oluşmasını önlemek amacıyla uygulanmıştır. Toplam 69 öğrenciden oluşan çalışma grubunun 34'ü deney grubunda, 35'i ise kontrol grubunda yer almaktadır. Cinsiyet dağılımı açısından incelendiğinde, deney grubunda yer alan öğrencilerin 24'ü kadın, 10'u erkektir. Kontrol grubunda ise 17 kadın ve 18 erkek öğrenci bulunmaktadır. Bu dağılım, gruplar arası cinsiyet temelli dengesizliğin düşük olduğunu ve karşılaştırmaların sağlıklı yapılabileceğini göstermektedir. Gruplar, yaş, öğrenim yılı ve akademik başarı gibi temel demografik değişkenler açısından benzer özellikler taşımaktadır. Böylelikle, bağımlı değişkende gözlemlenecek farklılıkların yalnızca deneysel işlemten kaynaklandığına yönelik çıkarım yapılabilirliği güçlendirilmiştir. Çalışma grubundaki öğrencilerin tamamı aktif olarak lisans eğitimine devam etmekte olup, herhangi bir psikiyatrik tanı, öğrenme güçlüğü ya da gelişimi engelleyici sağlık sorununa sahip değildir.

Bu araştırmada, öğrencilerin üstün yetenek ve zekâ kavramlarına yönelik bilgi ve farkındalık düzeylerini ölçmek amacıyla araştırmacı tarafından geliştirilen iki ayrı çoktan seçmeli test formu kullanılmıştır. Bu testler, müdahale öncesi ve sonrası öğrencilerin ilgili kavramlara ilişkin bilgi düzeylerini nesnel olarak ölçmeye yönelik yapılandırılmıştır. Ölçme araçları, eğitim programının içerik yapısı ve kazanımları doğrultusunda hazırlanmış olup hem içerik hem biçim açısından değerlendirilerek geçerlik güvencesi sağlanmıştır. Testlerin geliştirilme sürecinde öncelikle literatür taraması yapılmış, üstün yetenek ve zekâ kavramlarıyla ilgili tanımlar, kuramsal yaklaşımlar, tanılama yöntemleri ve gelişimsel özellikler doğrultusunda madde havuzu oluşturulmuştur. Bu kapsamda toplamda 60 madde hazırlanmış ve ardından uzman görüşlerine başvurularak kapsam geçerliği değerlendirilmiştir. Alanında uzman dört öğretim üyesinden alınan dönütler doğrultusunda dil, anlatım ve kapsam açısından

uygun görülmeyen maddeler elenmiş; net ve hedef davranışa yönelik 20 madde ön test formuna, 30 madde ise son test formuna dahil edilmiştir.

Ön test formunda yer alan 20 madde, öğrencilerin üstün yetenekli bireylere ilişkin temel bilgilerini, zekâ kuramlarına dair ön bilgilerini, tanılama süreçlerine dair anlayışlarını ve bu alandaki kavramsal terminolojiye olan hâkimiyetlerini ölçmeye yöneliktir. Son test formunda ise bu kapsama ek olarak, 7 haftalık farkındalık programında ele alınan gelişimsel özellikler, eğitim modelleri ve özel yetenek türleri gibi temalara yönelik sorular da bulunmaktadır.

Böylece son test, programın etkisini doğrudan yansıtacak şekilde genişletilmiş ve içerik bakımından derinleştirilmiş bir yapı sunmaktadır. Her iki testte de çoktan seçmeli sorular kullanılmış olup, her madde dört seçeneklidir ve yalnızca bir doğru cevaba sahiptir. Bu yapı, nesnel değerlendirmeyi mümkün kılmakta ve veri analizinde hata payını en aza indirmektedir.

Maddelerin ayırt edicilik düzeyleri, pilot uygulama sonrasında madde analizleriyle belirlenmiştir. Hem ön test hem de son test formlarına dahil edilen tüm maddelerin madde ayırt edicilik indeksleri .30'un üzerinde çıkmış olup, bu değerler maddelerin ölçmekte oldukları beceri ve bilgileri başarılı biçimde ayırt ettiğini göstermektedir. Ayrıca her iki testin ortalama güçlük indeksleri yaklaşık olarak .50 civarındadır. Bu durum, testlerin hem düşük hem yüksek düzeyde başarı gösteren bireyleri ayırt edebilecek orta düzeyde güçlükte olduğunu ortaya koymaktadır. Soruların tümü, Bloom'un Bilişsel Alan Taksonomisi temel alınarak bilgi ve kavrama düzeyine göre hazırlanmış olup, öğrencilerin üst düzey düşünme becerilerini ölçmeye değil, kavramsal bilgi düzeylerini belirlemeye yöneliktir. Test formlarında yer alan maddeler, biçimsel olarak da paralellik göstermekte; ön testte yer alan bazı sorulara benzer biçimde yapılandırılmış sorular son testte de yer almakta, böylece programın etkisinin ölçülmesinde yapısal tutarlılık sağlanmaktadır.

Ölçme araçlarının uygulama süreci öncesinde deneme formu kullanılarak anlaşılabilirlik testine tabi tutulmuş, dilsel açıdan sorun yaratan ifadeler sadeleştirilmiştir. Madde metinlerinde teknik terimler tanımlanmış, öğrencilerin alana özgü kavramları doğru yorumlamalarını kolaylaştıracak açıklamalara yer verilmiştir. Ayrıca, testlerin değerlendirme işlemleri otomatik puanlama esasına göre yapılmış, her doğru cevaba 1 puan, yanlış cevaba 0 puan verilerek toplam doğru sayısı üzerinden genel puan elde edilmiştir.

Araştırmada kullanılacak verilerin toplanması süreci, etik kurallara ve bilimsel ilkelere uygun biçimde planlanmış ve uygulanmıştır. Araştırmaya katılacak öğrenciler belirlenmeden önce, ilgili üniversitenin etik kurulundan gerekli onay alınmış, ardından Eğitim Fakültesi Dekanlığı ve bölüm başkanlığından resmi izinler temin edilmiştir. Katılımcı adaylarına araştırmanın amacı, süreci ve gizlilik esasları hakkında yazılı ve sözlü bilgilendirme yapılmış;

gönüllülük esasına göre çalışmaya katılmak isteyen öğrenciler belirlenmiştir. Gönüllülük ilkesine uygun biçimde seçilen 69 öğrenci, basit rastgele atama yöntemiyle deney ve kontrol gruplarına ayrılmıştır. Bu süreçte öğrencilerin akademik başarı düzeyi, sınıf içi katılımı ve bilişsel özellikleri gibi demografik değişkenler gözetilerek gruplar arasında denge sağlanmasına özen gösterilmiştir.

Veri toplama süreci üç temel aşamada gerçekleştirilmiştir. İlk aşama, hem deney hem de kontrol grubu katılımcılarına ön test uygulanmasıdır. Ön test uygulaması, araştırmanın başlangıcında öğrencilerin üstün yetenek ve zekâ kavramlarına yönelik mevcut bilgi düzeylerini nesnel olarak ortaya koymak amacıyla yapılmıştır. Test, öğrencilerin ders dışı bir zaman diliminde, araştırmacının gözetiminde uygulanmış; testin uygulanması sırasında tüm öğrencilere aynı yönergeler verilmiş ve süre kısıtı eşit olarak belirlenmiştir. Uygulama sırasında herhangi bir dışsal etkene maruz kalmamaları için sessiz ve dikkat dağıtıcı uyaranlardan arındırılmış bir sınıf ortamı tercih edilmiştir. Bu koşulların sağlanması, testin güvenilirliği açısından kritik bir önem taşımaktadır.

İkinci aşama, yalnızca deney grubunda uygulanan eğitsel müdahale programını kapsamaktadır. Deney grubundaki öğrencilere, araştırmacı tarafından geliştirilen “Üstün Yetenek Farkındalık Programı” haftada bir oturum olmak üzere toplam 7 hafta boyunca uygulanmıştır. Her oturum yaklaşık 90 dakika sürmüştür; program kapsamında öğrencilerle zeka kuramları, üstün yetenekli bireylerin gelişimsel özellikleri, tanılama süreçleri ve eğitsel yaklaşımlar gibi temalar işlenmiştir. Oturumlar, interaktif yöntemlerle desteklenmiş; grup tartışmaları, örnek olay analizleri ve kavramsal tartışmalar gibi etkinliklerle katılımcıların bilişsel katılımı üst düzeyde tutulmuştur. Programın tüm oturumları, araştırmacı tarafından yüz yüze gerçekleştirilmiş ve oturumlara düzenli katılım sağlanmıştır. Uygulama süreci boyunca hiçbir katılımcının devamsızlık yapmadığı ve tüm haftalık oturumlara eksiksiz katıldığı kayıt altına alınmıştır. Üçüncü ve son aşamada, hem deney hem de kontrol grubu katılımcılarına son test uygulanmıştır. Son test, ön test ile benzer yapıda olup programın sonunda elde edilen bilişsel farkındalık düzeyini ölçmeyi amaçlamaktadır. Test uygulamaları aynı yöntem ve koşullarla, yani araştırmacı gözetiminde, eş zamanlı ve eşit süreli biçimde gerçekleştirilmiştir. Ön test ve son testler arasında yaklaşık 7 haftalık bir süre bulunmakta olup bu süre boyunca yalnızca deney grubuna müdahale uygulanmıştır. Kontrol grubu ise bu süre zarfında herhangi bir farkındalık eğitimi almamıştır. Böylece son test verilerinin yalnızca uygulanan programdan kaynaklanan bilişsel farklılıkları yansıtmaması amaçlanmıştır.

Araştırmada toplanan verilerin analiz süreci, öncelikle veri setinin uygunluk koşullarının değerlendirilmesiyle başlamıştır. Elde edilen ham veriler SPSS 26.0 paket

programına girilmiş, ön test ve son test puanlarına ilişkin tanımlayıcı istatistikler hesaplanmıştır. Her bir grup için aritmetik ortalama, standart sapma, varyans, minimum ve maksimum değerler belirlenmiş; veri dağılımlarının normalliği, parametrik testlerin uygulanabilirliğini değerlendirmek amacıyla detaylı biçimde incelenmiştir. Bu kapsamda çarpıklık (skewness) ve basıklık (kurtosis) katsayıları incelenmiş ve tüm gruplarda bu değerlerin ± 2 aralığında kaldığı görülmüştür. George ve Mallery (2010) ile Tabachnick ve Fidell (2013) tarafından belirtilen ± 2 sınırının aşılması, normal dağılıma ilişkin temel kabul ölçütlerinden biri olarak değerlendirildiğinden, dağılımlar parametrik analizler için uygun kabul edilmiştir.

Normallik varsayımının daha ileri düzeyde değerlendirilmesi amacıyla Shapiro-Wilk ve Kolmogorov-Smirnov testleri uygulanmıştır. Bu testlerin bazı gruplarda anlamlı sonuçlar vermesine rağmen, küçük örneklem büyüklüğünde bu testlerin normalliği aşırı duyarlı biçimde reddetme eğiliminde olduğu bilinmektedir (Field, 2018). Bu nedenle, Shapiro-Wilk testi sonuçları tek başına değerlendirilmemiş; çarpıklık-basıklık değerleri ile histogram, Q-Q plot ve detrended Q-Q plot gibi grafiksel incelemeler de dikkate alınarak verilerin normal dağıldığına kanaat getirilmiştir. Böylece bağımlı değişkenin normal dağıldığı, ANCOVA'nın ilk varsayımının karşılandığı sonucuna varılmıştır. Veri analizinde temel istatistiksel teknik olarak Kovaryans Analizi (ANCOVA) kullanılmıştır. ANCOVA, son test puanlarını karşılaştırırken ön test puanlarının etkisini istatistiksel olarak kontrol etmeyi sağlayan güçlü bir parametrik analiz tekniğidir. Bu analiz, özellikle gruplar arasında ön test düzeyinde farklılık bulunması durumunda deneysel işlemin etkisinin daha doğru biçimde ölçülmesine olanak tanımaktadır. Araştırmada, deney ve kontrol grubu arasında başlangıçta bilişsel farkındalık düzeylerinde anlamlı bir farklılık bulunup bulunmadığı ön test puanlarıyla kontrol edilmiş, son test puanları ise bu kovaryans dikkate alınarak karşılaştırılmıştır. Böylece, uygulanan “Üstün Yetenek Farkındalık Programı”nın öğrenciler üzerinde gerçekten etkili olup olmadığı belirlenmiştir.

ANCOVA'nın geçerli biçimde uygulanabilmesi için gerekli diğer varsayımlar da test edilmiştir. Bu kapsamda, bağımsız değişken (grup) ile kovaryans(ön test) arasında anlamlı bir etkileşim olup olmadığı test edilmiştir. Yapılan regresyon eğimlerinin homojenliği analizi sonucunda grup ile ön test arasında anlamlı bir etkileşim bulunmadığı görülmüş, yani regresyon eğimleri birbirine paralel kabul edilmiştir. Bu durum, ANCOVA analizinin temel varsayımlarından biri olan kovaryansın homojenliği ilkesinin sağlandığını göstermektedir. Ayrıca, bağımsız değişkenin iki düzeye (deney ve kontrol grubu) sahip olması ve kovaryans ile bağımlı değişken arasında anlamlı bir ilişki bulunması da ANCOVA'nın uygulanabilirliğini desteklemiştir (Pallant, 2020). Analiz sonucunda, gruplar arası farkın anlamlılığına ilişkin F

değeri, anlamlılık düzeyi (p), eta kare (η^2) gibi istatistiksel göstergeler raporlanmıştır. Etki büyüklüğü değeri olan eta kare, uygulamanın gücünü ortaya koymakta olup .01 küçük, .06 orta, .14 ve üzeri değerler büyük etki olarak değerlendirilmektedir (Cohen, 1988). Bu bağlamda, ANCOVA sonuçlarının yalnızca istatistiksel olarak değil, pedagojik ve uygulamalı anlamda da anlamlılığı yorumlanmıştır. Ayrıca, elde edilen bulgular grafiksel olarak da desteklenmiş ve programın etkisi açık biçimde ortaya konulmuştur.

Bulgular

Bu bölümde, “Üstün Yetenek Farkındalık Programı”nın, psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin üstün yetenek ve zekâ kavramlarına yönelik farkındalık düzeylerine etkisini belirlemek amacıyla uygulanan ön test–son test kontrol gruplu deneysel desen doğrultusunda elde edilen verilerin analiz sonuçlarına yer verilmiştir. Analizlerde, gruplar arası farkları başlangıç düzeyleri kontrol edilerek test etmek amacıyla tek yönlü kovaryans analizi (ANCOVA) uygulanmıştır. ANCOVA, bağımlı değişken (son test puanları) ile kovaryans (ön test puanları) arasındaki ilişkiyi kontrol ederek, gruplar arasındaki farklılığın yalnızca uygulamadan kaynaklanıp kaynaklanmadığını belirlemeyi sağlar. Elde edilen analiz sonuçları aşağıdaki tabloda sunulmuştur.

Tablo 1: Öğrencilerin Son Test Puanlarına İlişkin ANCOVA Sonuçları

Varyansın Kaynağı	KT	sd	KO	F	p	η^2
Grup (Deney/Kontrol)	15920	1	15920	168,21	.000	.715
Kovaryans (Ön Test)	15427	1	15427	163,09	.000	.708
Hata	6339	66	96,05			
Toplam	67686	69				

Not. KT = Kareler toplamı; KO = Kareler ortalaması; sd = Serbestlik derecesi; η^2 = Eta kare (etki büyüklüğü).

Tablo 1’de öğrencilerin son test puanları açısından deney ve kontrol grubu arasında, ön test puanları kontrol edildikten sonra istatistiksel olarak anlamlı bir fark bulunduğu görülmektedir, $F(1, 66) = 168,21$; $p < .001$. Tablo 1’deki bulgular incelendiğinde, “Üstün Yetenek Farkındalık Programı”nın, deney grubundaki öğrencilerin farkındalık düzeylerinde anlamlı bir artış yarattığını ortaya koymaktadır. Elde edilen etki büyüklüğü değeri ($\eta^2 = .715$) oldukça yüksek bir değerdir ve Cohen’in (1988) etki büyüklüğü sınıflamasına göre büyük etki kategorisine girmektedir ($\eta^2 > .14$ büyük etki). Bu durum, uygulanan eğitsel müdahalenin yalnızca istatistiksel olarak değil, aynı zamanda pedagojik ve uygulamalı olarak da yüksek düzeyde etkili olduğunu göstermektedir. Tabloda dikkat çeken bir diğer önemli bulgu ise ön test puanlarının kovaryans olarak modele dahil edilmesinin anlamlılığıdır. Ön test ile son test

puanları arasındaki ilişkiyi temsil eden kovaryans etkisi $F(1, 66) = 163,09$; $p < .001$ düzeyinde anlamlı bulunmuştur. Bu bulgu, öğrencilerin başlangıç düzeydeki bilgi durumlarının, son test performanslarını önemli ölçüde yordadığını göstermektedir. Bu nedenle, ön test puanlarının modele dahil edilmesi, uygulamanın etkisinin daha doğru ve tarafsız biçimde değerlendirilmesini sağlamıştır.

Hata terimi altında görülen 96,05'lik ortalama kare değeri, modele açıklanamayan varyansı temsil etmekte olup toplam varyansın büyük bir kısmının grup ve kovaryans değişkenleriyle açıklandığı görülmektedir. Nitekim, toplam varyansın yaklaşık %71,5'i grup değişkeniyle açıklanabilmekte, bu da araştırmada kullanılan farkındalık programının etkisini güçlü biçimde doğrulamaktadır. Sonuç olarak, elde edilen analiz bulguları, “Üstün Yetenek Farkındalık Programı”nın üniversite öğrencilerinin üstün yetenek ve zekâ kavramlarına ilişkin farkındalıklarını anlamlı ve güçlü biçimde artırdığını göstermektedir. Bu sonuç, hem programa yönelik kuramsal dayanakların hem de uygulamaya ilişkin tasarımın etkili biçimde yapılandırıldığını desteklemektedir. Ayrıca Şekil 1’de, deney ve kontrol gruplarının ön test ve son test puanlarına ilişkin ortalama değerler barındıran grafik verilmiştir.

Şekil 1: Deney ve Kontrol Gruplarının Ön Test ve Son Test Puanlarına Ait Tahmini Ortalama Değerler

Şekil 1’de görüldüğü üzere, deney grubuna uygulanan “Üstün Yetenek Farkındalık Programı” sonrasında öğrencilerin son test puanları ön test puanlarına kıyasla anlamlı biçimde artış gösterdiği görülmektedir. Deney grubunun tahmini ortalaması yaklaşık 24’ten 69’a yükselmiştir. Buna karşılık, kontrol grubunda herhangi bir eğitim müdahalesi uygulanmadığı

için, ön test ve son test değerleri arasında neredeyse yatay bir seyir gözlemlenmiştir (yaklaşık 22’den 23’e sınırlı bir artış).

Bu eğilim, yalnızca istatistiksel analizlerle değil, aynı zamanda görsel olarak da farkındalık düzeyindeki gelişimin deney grubunda anlamlı bir biçimde gerçekleştiğini ortaya koymaktadır. Şekil 1, grup ile ölçüm zamanı arasındaki etkileşimin güçlü biçimde var olduğunu somutlaştırmaktadır. Ayrıca çizgilerin eğimi arasındaki fark, gruplar arası etkili farkı vurgulayan çarpıcı bir şekilde ortaya koymaktadır.

Tartışma, Sonuç ve Öneriler

Araştırmanın amacı, üstün yetenek farkındalık programının psikolojik danışmanlık ve rehberlik bölümü öğrencilerinin üstün yetenek ve zekâ kavramlarına yönelik farkındalık düzeylerine etkisini incelemektir. Araştırma kapsamında, çalışmaya katılan Psikolojik Danışmanlık ve Rehberlik grubu öğrencilerinin, özel çocukların özel durumlarına ilişkin farkındalıklarının arttığı, zeka testlerine yönelik bilinç ve farkındalık düzeylerinin yükseldiği, aile-okul iş birliğinin önemi konusunda bilinçlendikleri, erken tanılama ve müdahalenin önemine dair bilgi edindikleri ve bu ders aracılığıyla teorik bilgilerini derinleştirdikleri görülmektedir. Bu durum, ilgili eğitimin öğrencilerde çok boyutlu bir farkındalık ve bilgi gelişimini desteklediğini ortaya koymaktadır. Güçyeter, Kılınç ve Atılgan (2024) tarafından gerçekleştirilen çalışmada, katılımcıların üstün yetenek ve özel yetenek kavramlarını daha çok olumlu özelliklerle ilişkilendirdikleri görülmektedir. Bu bulgu, mevcut araştırma sonuçlarıyla paralellik göstermekte olup, öğrencilerin ilgili kavramlara yönelik algılarının genellikle pozitif yönde şekillendiğini ortaya koymaktadır. Kaya vd. (2015) araştırmasında, üstün zekâ kavramına ilişkin olarak eğitim almamış bireylerin daha çok “çalışkan, zeki, yetenekli ve başarılı” gibi yüzeysel özellikleri vurguladıkları, buna karşın eğitim almış bireylerin “zeki, farklı ve yaratıcı” gibi daha özgün ve derinlikli niteliklere odaklandıkları görülmüştür. Benzer şekilde, araştırmamızda da eğitim öncesinde öğrencilerin üstün yetenek ve özel yetenek kavramlarına ilişkin farkındalık düzeylerinin sınırlı olduğu, ancak eğitim sonrasında bu kavramlara yönelik algılarının belirgin şekilde geliştiği ve daha bütüncül hâle geldiği belirlenmiştir. Kaya vd. (2023) yaptıkları çalışmada, öğretmen adayları arasında da zekâyâ ilişkin çeşitli yanlış inançların bulunduğu sonucuna ulaşmıştır. Bu bulgu, eğitim alan bireylerde dahi zekâ kavramına yönelik bazı hatalı genellemelerin sürdüğünü ortaya koymaktadır. Nitekim bu araştırmada da eğitim öncesinde öğrencilerin üstün yetenek ve özel yetenek kavramlarına ilişkin sınırlı ve yüzeysel değerlendirmeler yaptığı; ancak eğitim sürecinin ardından bu kavramlara yönelik daha doğru, kapsamlı ve bilinçli yaklaşımlar sergiledikleri görülmüştür.

Sak (2011) çalışmasında, Türk toplumunda üstün zekâlılık ve zekâ kavramlarına ilişkin yanlış anlamaların, dogmaların ve popüler görüşlerin oldukça yaygın olduğunu ortaya koymuştur. Bu durum, toplumun zekâyâ yönelik algılarının bilimsel temellerden ziyade, genellemelere ve önyargılara dayandığını göstermektedir. Benzer şekilde, bu araştırmada da eğitim öncesinde öğrencilerin üstün yetenek kavramına dair sınırlı bilgiye sahip oldukları ve bu kavramı çoğunlukla genel başarı veya zekâ düzeyiyle ilişkilendirdikleri görülmüştür. Ancak eğitim sonrasında, öğrencilerin bu kavramlara ilişkin farkındalık düzeylerinin arttığı ve daha bilimsel, çok boyutlu yaklaşımlar geliştirdikleri belirlenmiştir. Araştırma sonucunda elde edilen bulgular, eğitim sürecinin bireylerin üstün yetenek kavramına yönelik farkındalık düzeylerini anlamlı şekilde artırdığını göstermektedir. Eğitim öncesinde katılımcıların kavrama ilişkin bilgi ve algılarının sınırlı olduğu gözlemlenmiş, ancak uygulanan program sonrasında bu algıların daha derinlikli, çeşitli ve bilimsel bir çerçeveye oturduğu anlaşılmıştır. Bu durum, eğitimin yalnızca bilgi aktarmakla kalmayıp, bireylerin kavramsal düşünme biçimlerini de dönüştürdüğünü göstermektedir. Sonuç olarak, ön test-son test karşılaştırmaları incelendiğinde, öğrencilerin ilk sınavda düşük puanlar aldığı, ancak eğitim sonrasında gerçekleştirilen son testte puanlarının anlamlı düzeyde yükseldiği görülmüştür. Bu durum, verilen eğitimin öğrencilerin özel çocuklara ilişkin farkındalık düzeylerini, zeka testlerine yönelik bilgi ve bilinçlerini, aile-okul iş birliğine dair farkındalıklarını ve erken tanı ile müdahale konusundaki bilgi düzeylerini artırmada etkili olduğunu göstermektedir. Eğitim süreci, katılımcıların kavrama daha bütüncül yaklaşımlarına, yanlış inançlardan uzaklaşmalarına ve konuya daha bilinçli bakabilmelerine katkı sağlamıştır. Bu sonuç, yapılandırılmış ve hedef odaklı eğitimlerin, özellikle öğretmen adaylarının mesleki yeterliklerini destekleyici bir unsur olabileceğini göstermektedir. Eğitim müdahalesi, yalnızca bilişsel değil, aynı zamanda tutumsal ve algısal düzeyde de anlamlı değişiklikler yaratmıştır.

Araştırmadan elde edilen sonuçlar doğrultusunda;

- Yapılan çalışmanın sınırlılıkları değiştirilerek daha geniş kitlelere ulaştırılabilir.
- Araştırma grubunu rehberlik ve psikoloji bölümü öğrencileri oluşturmaktadır. Farklı branş öğrencilerinin bulunduğu çalışmalar yapılabilir.
- Eğitim fakültelerinde, üstün yetenekli bireylerle çalışma becerilerini geliştirmeye yönelik atölye çalışmaları, seminerler ve saha uygulamaları düzenlenmelidir.
- Programın uzun vadeli etkilerinin izlenebilmesi amacıyla izleme-değerlendirme çalışmaları yapılmalı, katılımcıların bilgi düzeylerindeki kalıcılık ölçülmelidir.

Özet

Duygu düzenleme becerileri, güçlü akran ilişkilerine sahip olma durumu ve psikolojik iyi oluş halleri okul öncesi dönemde yalnız ruhsal sağlıkları ile değil gelişimin tüm alanlarındaki başarıları ile ilişkili olup eğitim sürecinde önemli role sahiptir. Araştırmanın amacı, okul öncesi dönem çocuklarında duygu düzenleme ve akran ilişkileri ile psikolojik iyi oluşları arasındaki ilişkinin incelenmesidir. Araştırma nicel yöntemde ve ilişkisel tarama deseninde yürütülmüştür. Kartopu örnekleme yöntemi kullanılarak örnekleme ulaşılmıştır. Özel kurumlarda eğitim almakta olan 5-6 yaş grubundaki 404 çocuktan oluşan örneklem için ve riler Duygu Düzenleme Ölçeği, Selçuk Akran İlişkileri Ölçeği ve Çocuklar İçin Psikolojik İyi Oluş Ölçeği kullanılarak öğretmenlerinden elde edilmiştir. Veriler normal dağılım göstermediğinden analizler parametrik olmayan testlerden ‘Kruskal Wallis H’, ‘Mann Whitney U’ testleri ve Spearman ilişki testi ile gerçekleştirilmiştir. Araştırma sonucunda cinsiyet, doğum sırası ve kardeş sayısı değişkenlerine göre çocukların duygu düzenleme becerileri, akran ilişkileri ve psikolojik iyi oluş puanlarında anlamlı bir fark gözlenmediği belirlenmiştir. Aynı zamanda 6 yaş grubu çocukların daha küçük yaş gruplarına göre, okul deneyimi olan çocukların olmayan gruba göre, 20-30 yaş grubunda öğretmene sahip olan çocukların diğer yaş gruplarında öğretmene sahip olanlara göre daha yüksek duygu düzenleme becerisine ve psikolojik iyi oluş haline sahip oldukları belirlenmiştir. 5 yaş grubu çocukların ise akran ilişkileri puanları, 6 yaş grubundan daha yüksektir. Duygu düzenleme puanları ile akran ilişkileri ve psikolojik iyi oluş puanları arasında negatif yönlü, psikolojik iyi oluş puanları ve akran ilişkileri puanları arasında ise pozitif yönlü anlamlı ilişki bulunduğu tespit edilmiştir.

Anahtar kelimeler: Okul öncesi, Duygu düzenleme, Akran ilişkileri, Psikolojik iyi oluş.

An Investigation of the Relationship Between Emotion Regulation, Peer Relationships, and Psychological Well-Being in Preschool Children

Abstract

Preschool children's abilities in emotion regulation, the quality of their peer interactions, and their psychological well-being are fundamental not only for their mental health but also for fostering holistic developmental success. These competencies significantly influence their learning processes and overall educational experience. The present study set out to explore the interrelations among emotion regulation skills, peer relationships, and psychological well-being in children aged 5 to 6 years. Employing a correlational research design within the quantitative paradigm, participants were identified using the snowball sampling technique. The study group consisted of 404 children enrolled in private preschool institutions. Data were gathered via teacher reports utilizing three instruments: the Emotion Regulation Scale, the Selçuk Peer Relationships Scale, and the Psychological Well-Being Scale for Children. As the data were not normally distributed, non-parametric statistical methods — specifically, the Kruskal-Wallis H test, Mann-Whitney U test, and Spearman's correlation analysis — were applied. The findings indicated no statistically significant differences in emotion regulation, peer relationship quality, or psychological well-being based on variables such as gender, number of siblings, or birth order. Nonetheless, six-year-olds displayed more advanced emotion regulation and higher psychological well-being than five-year-olds. Additionally, children with prior school experience and those taught by younger teachers (aged 20–30) demonstrated stronger outcomes in these areas. Interestingly, five-year-olds showed more favorable peer relationship scores than their six-year-old counterparts. Correlational analysis revealed a significant negative association between emotion regulation and both peer relationship scores and psychological well-being. Conversely, a meaningful positive relationship was observed between peer relationships and psychological well-being levels.

Anahtar kelimeler: Emotion regulation, Peer relationships, Preschool, Psychological well-being.

Giriş

Okul öncesi dönem, bireyin yaşamının temelini atıldığı ve psikolojik, fiziksel, duygusal ve sosyal gelişim açısından kritik öneme sahip bir evredir. Bu nedenle, çocukların bu dönemde psikolojik iyi oluşlarının desteklenmesi büyük bir önem taşımaktadır. Psikolojik iyi oluş; çocuğun kendine yönelik geliştirdiği olumlu ve gerçekçi benlik algısı ile çevresiyle kurduğu olumlu etkileşimleri kapsayan bütüncül bir durumdur (Gürkan ve Tuzcuoğlu, 2024).

Bu bağlamda, psikolojik iyi oluşun sağlanabilmesi için duygu düzenleme becerisi temel bir gereklilik olarak değerlendirilebilir. Duygu düzenleme becerisi sayesinde çocuk, kendi duygularını tanımayı, başkalarının duygularını fark etmeyi ve duygusal tepkilerini ve fark ederek davranışlarını kontrol etmeyi öğrenir (Denham, 2006; Thompson, 1994). Bu süreçle birlikte, çocukların akran ilişkilerinin güçlendiği gözlemlenmektedir. Çünkü duygularını etkili bir şekilde ifade edebilen çocuklar, çevreleriyle daha sağlıklı ve anlamlı bağlar kurabilmektedir (Graziano vd., 2007; Harrington vd., 2020). Çocuğun yaşıtlarıyla kurduğu sosyal etkileşimleri ifade eden akran ilişkileri, gelişimsel açıdan önemli bir destek unsuru olarak öne çıkmaktadır (Rubin vd., 2006). Güçlü akran ilişkilerine sahip çocuklar; iş birliğine açık, gelişmiş sosyal becerilere sahip ve değer gelişimi açısından desteklenen bireyler olarak tanımlanabilir (Bierman ve Erath, 2006). Psikolojik iyi oluş, duygu düzenleme becerileri ve akran ilişkileri, birbiriyle iç içe geçmiş ve karşılıklı olarak birbirini besleyen dinamikler olarak değerlendirilebilir. Bireyin olumlu duygular yaşaması, yaşamdan keyif alması ve potansiyelini gerçekleştirmeye yönelik eylemlerde bulunması, psikolojik iyi oluşun temel göstergeleri arasındadır (Ryff ve Keyes, 1995). Okul öncesi dönemde ise psikolojik iyi oluş; çocuğun güven duygusu geliştirmesi, aidiyet hissetmesi ve oyun yoluyla kendini ifade etme girişimleri aracılığıyla gözlemlenebilir (Mashburn ve Pianta, 2006). Bu sayede çocuklar hem öğrenme süreçlerine hem de yaşamın kendisine daha etkin biçimde katılım sağlarlar (La Paro ve Pianta, 2000).

Alan yazın incelendiğinde duygu düzenleme davranışlarının ebeveyn davranışları ile ilişkisinin incelendiği (Demirkan ve Yeşilyaprak, 2023) ve bu araştırma sonucunda annenin psikolojik dayanıklılığı ile çocuğun duygu düzenleme davranışları arasında bir ilişki saptandığı görülmektedir. Öte yandan sosyoekonomik faktörlerin ele alındığı Karaduman ve Şahin Zeteroğlu (2024) tarafından gerçekleştirilen araştırmada ailelerin gelir düzeylerinin artması ile çocukların daha yüksek duygu düzenleme becerilerini göstermesi arasında bir ilişki bulunduğunu saptamıştır. Sosyal yetkinliği değerlendiren bir başka araştırma ise Koçyiğit vd. (2015) tarafından gerçekleştirilmiş olup bu araştırmada sosyal yetkinlik sahibi çocukların aynı zamanda duygu düzenleme becerilerinde de akranlarına oranla daha gelişmiş oldukları belirlenmiştir. Duydu düzenleme ile ilişki incelenirken bir başka açıdan sosyal beceriler değerlendirilerek liderlik konusu üzerinde durulmuş Sezgin (2024) tarafından gerçekleştirilen araştırmada duydu düzenleme becerileri ile liderlik özellikleri arasında pozitif yönde bir ilişki bulunduğu tespit edilmiştir. Yaş ve cinsiyet değişkenlerine göre ilgili konularda sürdürülen araştırmalar da mevcuttur (Karaduman ve Şahin Zeteroğlu, 2024) ve bu araştırmalar çocukların

duygu düzenleme becerileri ile yaş ve cinsiyet değişkenleri arasında bir ilişki bulunmadığı yönünde bulgular vermiştir. Ancak ailelere odaklanan çalışmalarda görülmüştür ki ailenin eğitim düzeyi ve ailede babanın üstlendiği roller, aile içi yapıların bütünü çocuklarda gözlenen duygu düzenleme becerileri ile ilişkili, hatta bu bağımsız değişkenler çocukların duygu düzenleme becerileri üzerinde etkilidir (Karaduman ve Şahin Zeteroğlu, 2024).

İlgili alan yazın ışığında çocuklarda psikolojik dayanıklılık, duydu düzenleme becerileri ve olumlu akran ilişkilerinin farklı değişkenler ile ilişkili olduğu söylenebilir. Özellikle aile yapısı, sosyoekonomik faktörler bu becerilerin gelişiminde oldukça önemli rol oynamaktadır. Bu araştırmada ise psikolojik dayanıklılık, duygu düzenleme becerileri ve akran ilişkilerinin hem farklı değişkenler yönünden değerlendirilmesi hem de birbirleri ile olan ilişkisinin saptanması amaçlanmaktadır. Böylelikle iç içe ve bütünsel çalıştığı düşünülen üçlüye dair eğitimcilere ve araştırmalara yönelik öneriler sunularak çocukların sağaltım ve desteklenmesi konusunda ihtiyaçlara vurgu yapılarak dikkat çekilmesi sağlanmaktadır. Araştırma eğitimciler ve araştırmacılara yönelik sunduğu bulguları yönüyle önem arz etmektedir. Aynı zamanda çocuğa, öğretmene, anneye ve babaya dair değişkenleri birlikte incelemesi yönüyle alan yazına kapsamlı bulgular sunarak katkı sağlamaktadır. Bu doğrultuda araştırmanın amacı olan okul öncesi dönem çocuklarının duygu düzenleme ve akran ilişkileri ile psikolojik iyi oluşları arasındaki ilişkinin belirlenmesinden yola çıkarak aşağıdaki sorulara yanıt aranacaktır:

Okul öncesi dönem çocuklarının;

1. Duygu düzenleme, akran ilişkileri ve psikolojik iyi oluş düzeyleri nedir?
2. Duygu düzenleme, akran ilişkileri ve psikolojik iyi oluş düzeyleri araştırmanın değişkenlerine (çocuğun: cinsiyeti, yaşı, kardeş sayısı, doğum sırası, okul deneyimi; öğretmenin: yaşı, öğrenim durumu; annenin yaşı; babanın yaşı) göre anlamlı bir farklılık göstermekte midir?
3. Duygu düzenleme, akran ilişkileri ve psikolojik iyi oluş düzeyleri arasında bir ilişki var mıdır?

Yöntem

Araştırma Modeli

Bu araştırmada okul öncesi dönem çocuklarının duygu düzenleme, akran ilişkileri ve psikolojik iyi oluş puanları arasındaki ilişkiyi incelemek amacıyla nicel araştırma yöntemlerinden ilişkisel tarama modeli kullanılmıştır. İlişkisel tarama modeli, iki ya da daha

fazla sürekli değişkenin arasındaki ilişkiyi belirlemek amacıyla kullanılan bir yöntemdir (Büyüköztürk vd., 2014).

Veri Toplama Araçları

Batum ve Yağmurlu'nun (2007), Shields ve Cicchetti'nin (1997) çalışmasından uyarladığı Duygu Düzenleme Ölçeği (DDÖ), 3-6 yaş arası çocukların duygu düzenleme becerilerini değerlendirmek için geliştirilmiştir. Ölçek, hem öğretmenler hem de ebeveynler tarafından uygulanabilen, toplam 24 maddeden ve iki alt boyuttan oluşan 4'lü Likert tipinde bir ölçme aracıdır. DDÖ'nün toplam güvenirlik katsayısı .90 düzeyindedir. Ölçeğin ilk alt boyutu olan "Duygu Değişkenliği" ($\alpha = .85$), yüksek puanların duyguları düzenlemede güçlük yaşandığına işaret ettiği bir boyuttur. İkinci alt boyut olan "Duygu Kontrolü" ($\alpha = .87$) ise yüksek puanların duygu düzenleme becerilerinin olumlu yönde geliştiğini gösterdiği bir boyuttur.

Selçuk Akran İlişkilerini Değerlendirme Ölçeği (SAİDÖ), Özmen (2013) tarafından geliştirilmiş olup 4-6 yaş grubundaki çocukların akran ilişkilerinin niteliğini incelemek için kullanılan bir ölçme aracıdır. Beşli Likert tipinde tasarlanmış olan ölçek, toplam 27 maddeden ve 5 alt boyuttan oluşmaktadır. Ölçeğin genel Cronbach alfa güvenirlik katsayısı .88 olarak hesaplanmış; alt boyutların güvenirlik değerleri ise Çekingenlik için .78, Sosyal Kabul için .79, Problem Çözme için .78, Sosyal Davranış için .76 ve Saldırganlık için .77 düzeyindedir.

Çocuklar İçin Psikolojik İyi Oluş Ölçeği (ÇOPİÖ), Atan ve Buluş (2021) tarafından geliştirilmiş olup 5-6 yaş grubundaki çocukların psikolojik iyi oluş düzeylerini değerlendirmek için kullanılmıştır. Ölçek toplam 66 maddeden oluşmakta ve 9 alt boyutu bulunmaktadır. Bu alt boyutların Cronbach alfa değerleri sırasıyla "Fiziksel Sağlık" (.69), "Düşük İçselleştirme" (.86), "Düşük Dışsallaştırma" (.93), "Öz Düzenleme" (.81), "Sosyal Yetkinlik/Girişkenlik" (.87), "Bilişsel Yetkinlik" (.89), "Değer Davranışları" (.84), "Psikolojik Dayanıklılık" (.89) ve "Yaşam Doyumu" (.92) olarak belirlenmiştir. Ölçeğin toplam güvenirlik katsayısı ise .95'tir. Elde edilen bu sonuçlar, hem ölçeğin tümü hem de her bir alt boyutunun güvenilir ölçümler sunduğunu göstermektedir.

Örneklem

Araştırmanın örnekleme, Türkiye Cumhuriyeti'nde ikamet etmekte olan 5-6 yaş grubunda ve özel bir kurumda okul öncesi eğitim almakta olan 404 çocuktan oluşmaktadır. Kartopu örnekleme yöntemi kullanılarak belirlenen çocuklar adına veriler öğretmenleri tarafından sağlanmıştır. Bu yöntemde öncelikle 5 öğretmene ulaşılmıştır. Ulaşılan öğretmenlerin her birinin 4 farklı öğretmene ulaşarak araştırmaya davet etmesi sağlanmıştır. Kartopu örnekleme yönteminde araştırmacılar belirli sayıda kişiye ulaşır, ulaşılan katılımcılar

da başka katılımcıları davet ederek örnekleme bir kartopu gibi genişletir (Christensen, Johnson ve Turner, 2020).

Tablo 1. Katılımcılara Ait Demografik Bilgiler

Değişken	Gruplar	f	%
Çocuğun Cinsiyeti	Kız	206	45,6
	Oğlan	198	43,8
Çocuğun Yaşı	5 yaş	182	40,3
	6 yaş	222	49,1
Çocuğun Kardeş Sayısı	Tek çocuk	219	48,5
	Bir kardeşi var	120	26,5
	İki veya daha fazla kardeşi var	65	14,4
Çocuğun Doğum Sırası	Tek çocuk	219	48,5
	Birinci çocuk	103	22,8
	İkinci veya sonraki çocuk	82	18,1
Çocuğun Okul Deneyimi	Var	295	65,3
	Yok	109	24,1
Öğretmenin Yaşı	20-30	149	33,0
	31-40	158	35,0
	41 ve üzeri	97	21,5
Öğretmenin Öğrenim Durumu	Önlisans	53	11,7
	Lisans	279	61,7
	Lisansüstü	72	15,9
Annenin Yaşı	20-40	212	46,9
	41 ve üzeri	192	42,5
Babanın Yaşı	20-40	133	29,4
	41 ve üzeri	271	60,0
Toplam		404	100

Tablo 1’de katılımcıların demografik özellikleri sunulmaktadır. Buna göre, katılımcıların 206’sı kız, 198’i oğlandır. Yaş dağılımı incelendiğinde, 182 çocuk 5 yaş, 222 çocuk 6 yaş grubundadır. Tek çocuk olanların sayısı 219 iken, 120 çocuk bir kardeşe, 65 çocuk iki veya daha fazla kardeşe sahiptir. Doğum sırasına göre, 219 çocuk tek çocuk ve ilk doğan, 103’ü kardeşe sahip ve ilk doğan, 82’si ise ikinci veya sonraki doğanlardır. Daha önce okul deneyimi olan çocuk sayısı 295, olmayanlar ise 109’dur. Öğretmen yaşı dağılımı 20-30 yaş grubunda 149, 31-40 yaş grubunda 158, 41 yaş ve üzeri grubunda ise 97 öğretmendir. Öğretmenlerin eğitim durumu önlisans (n=53), lisans (n=279) ve lisansüstü (n=72) olarak dağılmaktadır. Annelerin yaşlarına göre 212 çocuk 20-40 yaş aralığında, 192 çocuk ise 41 yaş ve üzeri annelere sahiptir. Babaların yaş grupları incelendiğinde, 133 çocuk 20-40 yaş aralığında, 271 çocuk ise 41 yaş ve üzeri babalara sahiptir.

Verilerin Analizi

Çalışmada kullanılan ölçme araçlarının örnekleme uygunluklarını incelemek için Cronbach alfa katsayıları hesaplanmış ve tüm ölçeklerin hem toplam hem de alt boyut düzeyinde güvenilir sonuçlar verdiği görülmüştür. Veri setinin dağılım biçimini incelemek için

Kolmogorov-Smirnov testi uygulanmış, elde edilen bulgular tüm ölçümlerde normal dağılım varsayımının karşılanmadığını göstermiştir ($p < .05$). Bu doğrultuda, analizlerde parametrik olmayan istatistik tekniklerinden yararlanılmıştır.

Çocukların ölçeklerden aldıkları puanların betimleyici istatistiklerini sunabilmek için ortalama, en düşük, en yüksek ve standart sapma değerleri belirlenmiştir. Ayrıca, puanların araştırmada ele alınan değişkenlere göre farklılaşıp farklılaşmadığına bakmak için Kruskal-Wallis H ve Mann-Whitney U testleri kullanılmıştır. Ölçekler arasındaki ilişkileri değerlendirmek amacıyla ise Spearman korelasyon analizine başvurulmuştur.

Bulgular

Düzeylerin Belirlenmesi

Çocukların duygu düzenleme becerileri, akran ilişkileri ve psikolojik iyi oluş düzeylerine ait ölçek puanlarının genel görünümünü ortaya koyabilmek için aritmetik ortalama ve standart sapma değerleri elde edilmiştir. Bu istatistiksel analizlerin sonuçları Tablo 2’de sunulmaktadır.

Tablo 2. Çocukların Ölçekler ve Alt Boyut Puanlarına İlişkin Ortalama ve Standart Sapma Değerleri

Ölçekler	N	$\bar{x}$	SS	SE	Min.	Max.

F9. Yaşam Doyumu		34,4554	3,44334	,17131	22,00	40,00

Tablo incelendiğinde, çocukların duygu düzenleme toplam puanlarının yüksek, “Değişkenlik” ve “Kontrol” alt boyutlarından aldıkları puanların ise orta düzeyde olduğu görülmektedir. Ayrıca akran ilişkileri toplam puanlarının yüksek, akran ilişkileri ölçeğinin tüm alt boyutları için elde edilen puanların orta seviyede olduğu belirlenmiştir. Bunun yanı sıra, psikolojik iyi oluş toplam puanlarının yanı sıra “Düşük İçselleştirme”, “Düşük Dışsallaştırma”, “Sosyal Yetkinlik”, “Bilişsel Yetkinlik”, “Psikolojik Dayanıklılık” ve “Yaşam Doyumu” alt

boyutlarından alınan puanların yüksek düzeyde seyrettiği görülmüştür. Ancak psikolojik iyi oluşun “Fiziksel Sağlık”, “Değer Davranışları” ve “Öz Düzenleme” alt boyutlarından elde edilen puanların orta düzeyde olduğu saptanmıştır.

Değişkenlere Göre İncelemeler

Çocuğun yaşı değişkeninin ölçek ve alt boyut puanları üzerinde anlamlı bir farklılaşmaya yol açıp açmadığını incelemek için Mann-Whitney U testi kullanılmıştır. Bu analizden elde edilen sonuçlar Tablo 3’te sunulmaktadır.

Tablo 3. Çocuğun yaşı *Değişkenine Göre Ölçekler ve Alt Boyut Puanları Mann-Whitney U Testi*

	(2) 6 yaş	222	188,52	41852,00			
ÇOPİÖ F2. Düşük İçselleştirme	(1) 5 yaş	182	220,52	40135,00	16922,000	-2,858	.004*
	(2) 6 yaş	222	187,73	41675,00			

DDÖ toplam puanları, 5 yaş ($\bar{x}$ sıra = 186,08) ve 6 yaş ($\bar{x}$ sıra = 215,96) grupları karşılaştırıldığında, 6 yaş grubu lehine anlamlı bir fark göstermiştir (U = 17213,500; p < .05). Ölçeğin “Değişkenlik/Olumsuzluk” alt boyutundan alınan puanlar da benzer şekilde 5 yaş ($\bar{x}$ sıra = 187,68) ve 6 yaş ($\bar{x}$ sıra = 214,65) grubu arasında, 6 yaş lehine anlamlı farklılık göstermiştir (U = 17504,500; p < .05).

SAİDÖ toplam puanları açısından 6 yaş ($\bar{x}$ sıra = 190,84) ve 5 yaş ($\bar{x}$ sıra = 216,72) çocukları karşılaştırıldığında, 5 yaş grubu lehine anlamlı bir farklılık gözlenmiştir (U = 17614,000; p < .05). Ölçeğin “Çekingenlik” alt boyutunda 6 yaş ($\bar{x}$ sıra = 189,76) ve 5 yaş ($\bar{x}$ sıra = 218,04), “Sosyal Kabul” alt boyutunda 6 yaş ($\bar{x}$ sıra = 191,81) ve 5 yaş ($\bar{x}$ sıra = 215,54), “Saldırganlık” alt boyutunda ise 6 yaş ($\bar{x}$ sıra = 188,52) ve 5 yaş ($\bar{x}$ sıra = 219,55) grupları

arasında anlamlı fark 5 yaş lehine bulunmuştur (sırasıyla $U = 17373,000$; $U = 17829,000$; $U = 17099,000$; $p < .05$).

ÇOPİO'nun "Düşük İçselleştirme" alt boyutunda da 6 yaş ($\bar{x}$ sıra = 187,73) ve 5 yaş ($\bar{x}$ sıra = 220,52) çocukları arasında, 5 yaş lehine anlamlı bir fark tespit edilmiştir ($U = 16922,000$; $p < .05$).

Öte yandan, DDÖ'nün "Kontrol" alt boyutu, SAİDÖ'nün "Problem Çözme" ve "Sosyal Davranış" alt boyutları ile ÇOPİO'nun toplam puanları ve "Fiziksel Sağlık", "Düşük Dışsallaştırma", "Öz Düzenleme", "Sosyal Yetkinlik", "Bilişsel Yetkinlik", "Değer Davranışları", "Psikolojik Dayanıklılık" ve "Yaşam Doyumu" alt boyutlarından elde edilen puanlarda yaş değişkenine göre istatistiksel olarak anlamlı bir farklılık gözlenmemiştir.

Çocuğun okul deneyimine göre ölçekler ve alt boyutlardan alınan puanlarda anlamlı bir farklılık olup olmadığını incelemek için yapılan Mann-Whitney U Testi sonuçları Tablo 4'te sunulmuştur. Bulgular değerlendirildiğinde, SAİDÖ toplam puanlarının okul deneyimi olan grup ($\bar{x}$ sıra = 216,92) ile olmayan grup ($\bar{x}$ sıra = 163,49) arasında, okul deneyimi olan grup lehine anlamlı bir farklılık olduğu bulunmuştur ($U = 11825,000$; $p < .001$). Ayrıca, “Çekingenlik” alt boyutunda okul deneyimi olan grup ($\bar{x}$ sıra = 212,37) ile olmayan grup ($\bar{x}$ sıra = 175,78), “Sosyal Kabul” alt boyutunda okul deneyimi olan grup ($\bar{x}$ sıra = 213,25) ile olmayan grup ($\bar{x}$ sıra = 173,39), “Problem Çözme” alt boyutunda okul deneyimi olan grup ($\bar{x}$ sıra = 212,41) ile olmayan grup ($\bar{x}$ sıra = 175,67), “Sosyal Davranış” alt boyutunda okul deneyimi olan grup ($\bar{x}$ sıra = 218,73) ile olmayan grup ($\bar{x}$ sıra = 158,57), “Saldırganlık” alt boyutunda okul deneyimi olan grup ($\bar{x}$ sıra = 212,26) ile olmayan grup ($\bar{x}$ sıra = 176,08) ve ÇOPİO toplam puanlarının okul deneyimi olan grup ($\bar{x}$ sıra = 211,92) ile olmayan grup ($\bar{x}$ sıra = 177,01) arasında yine okul deneyimi olan grup lehine anlamlı farklar saptanmıştır (sırasıyla $U = 13165,000$; $U = 12905,000$; $U = 13153,500$; $U = 11289,000$; $U = 13197,500$; $U = 13299,000$; $p < .05$ ya da $p < .001$). Bununla birlikte, ÇOPİO’nun “Düşük İçselleştirme” ($\bar{x}$ sıra = 212,47 / 175,51), “Öz Düzenleme” ($\bar{x}$ sıra = 212,70 / 174,89), “Sosyal Yetkinlik/Girişkenlik” ($\bar{x}$ sıra = 213,27 / 173,36) ve “Bilişsel Yetkinlik” ($\bar{x}$ sıra = 218,04 / 160,44) alt boyutlarından alınan puanlarda da okul deneyimi olan grup lehine anlamlı farklılıklar görülmüştür (sırasıyla $U = 13136,000$; $U = 13068,500$; $U = 12901,500$; $U = 11492,500$; $p < .05$ ya da $p < .001$).

Öte yandan, DDÖ toplam puanları ile DDÖ’nün “Değişkenlik/Olumsuzluk” ve “Kontrol” alt boyutlarının yanı sıra, ÇOPİO’nun “Fiziksel Sağlık”, “Düşük Dışsallaştırma”, “Değer Davranışları”, “Psikolojik Dayanıklılık” ve “Yaşam Doyumu” alt boyutlarından alınan puanlarda, çocuğun okul deneyimine göre istatistiksel açıdan anlamlı bir farklılık bulunmamıştır ($p > .05$).

Öğretmenin yaşı değişkenine göre SAİDÖ toplam puanları ($\chi^2=14.266$; $p<.05$), “Çekingenlik” alt boyutu puanları ($\chi^2=7.699$; $p<.05$), “Problem Çözme” alt boyutu puanları ($\chi^2=18.383$; $p<.05$), “Sosyal Davranış” alt boyutu puanları ($\chi^2=120.893$; $p<.05$), ÇOPİO toplam puanları ($\chi^2=7.338$; $p<.05$), “Fiziksel Sağlık” alt boyutu puanları ($\chi^2=6.128$; $p<.05$) ve “Sosyal Yetkinlik/Girişkenlik” alt boyutu puanları ($\chi^2=7.727$; $p<.05$) anlamlı farklılık göstermiştir.

SAİDÖ toplam puanlarında gözlenen anlamlı farklılık, 20-30 yaş grubu ($\bar{x}$ sıra= 229,07) ile 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 200,21) arasında 20-30 yaş grubu lehine; 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 200,21) ile 31-40 yaş grubu ($\bar{x}$ sıra= 178,84) arasında 31-40 yaş grubu lehine bulunmuştur. “Çekingenlik” alt boyutu puanlarında gözlenen anlamlı farklılık, 20-30 yaş grubu ($\bar{x}$ sıra= 222,17) ile 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 199,51) arasında 20-30 yaş grubu lehine; 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 199,51) ile 31-40 yaş grubu ($\bar{x}$ sıra= 185,79) arasında 31-40 yaş grubu lehine saptanmıştır.

“Problem Çözme” alt boyutunda gözlenen farklılık, 20-30 yaş grubu ($\bar{x}$ sıra= 232,41) ile 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 199,87) arasında 20-30 yaş grubu lehine; 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 199,87) ile 31-40 yaş grubu ($\bar{x}$ sıra= 175,91) arasında 31-40 yaş grubu lehine; “Sosyal Davranış” alt boyutunda ise 20-30 yaş grubu ($\bar{x}$ sıra= 236,81) ile 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 186,96) arasında 20-30 yaş grubu lehine; 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 186,96) ile 31-40 yaş grubu ($\bar{x}$ sıra= 179,69) arasında 31-40 yaş grubu lehine anlamlı farklılık göstermiştir.

ÇOPİO toplam puanlarında da 20-30 yaş grubu ($\bar{x}$ sıra= 223,08) ile 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 191,16) arasında 20-30 yaş grubu lehine; 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 191,16) ile 31-40 yaş grubu ($\bar{x}$ sıra= 190,05) arasında 31-40 yaş grubu lehine farklılık bulunmuştur. “Fiziksel Sağlık” alt boyutunda 20-30 yaş grubu ($\bar{x}$ sıra= 220,78) ile 41 ve üzeri yaş grubu ($\bar{x}$ sıra=

196,65) arasında 20-30 yaş grubu lehine; 41 ve üzeri yaş grubu ($\bar{x}$ sıra= 196,65) ile 31-40 yaş grubu ($\bar{x}$ sıra= 188,85) arasında 31-40 yaş grubu lehine; “Sosyal Yetkinlik/Girişkenlik” alt boyutunda ise 20-30 yaş grubu ($\bar{x}$ sıra= 220,74) ile 31-40 yaş grubu ($\bar{x}$ sıra= 199,66) arasında 20-30 yaş grubu lehine, 31-40 yaş grubu ($\bar{x}$ sıra= 179,11) ile 41 yaş ve üzeri grup arasında 31-40 yaş grubu lehine anlamlı farklılık görülmüştür.

Buna karşılık, DDÖ toplam puanlarıyla DDÖ’nün “Değişkenlik/Olumsuzluk” ve “Kontrol” alt boyutları, SAİDÖ’nün “Çekingenlik”, “Problem Çözme”, “Sosyal Davranış” alt boyutları ve ÇOPİO’nun “Düşük İçselleştirme”, “Düşük Dışsallaştırma”, “Öz Düzenleme”, “Sosyal Yetkinlik/Girişkenlik”, “Bilişsel Yetkinlik”, “Değer Davranışları”, “Psikolojik Dayanıklılık” ve “Yaşam Doyumu” alt boyutlarından alınan puanlar öğretmenin yaşı değişkenine göre anlamlı farklılık göstermemiştir ($p>.05$).

Öğretmenin öğrenim düzeyine göre yapılan analizlerde, DDÖ toplam puanlarının ($\chi^2 = 54.014$; $p < .001$), “Değişkenlik/Olumsuzluk” alt boyutunun ($\chi^2 = 44.005$; $p < .001$) ve “Kontrol” alt boyutunun ($\chi^2 = 16.188$; $p < .001$) anlamlı şekilde değiştiği görülmüştür. Ayrıca SAİDÖ toplam puanlarında ($\chi^2 = 8.240$; $p < .05$), “Çekingenlik” ($\chi^2 = 7.473$; $p < .05$), “Sosyal Kabul” ($\chi^2 = 9.680$; $p < .05$), “Sosyal Davranış” ($\chi^2 = 8.649$; $p < .05$), “Saldırganlık” ($\chi^2 = 13.393$; $p < .05$) alt boyutlarında; ÇOPİÖ toplam puanlarında ($\chi^2 = 18.690$; $p < .001$) ve bu ölçeğin “Fiziksel Sağlık” ($\chi^2 = 8.899$; $p < .05$), “Düşük İçselleştirme” ($\chi^2 = 32.400$; $p < .001$), “Düşük Dışsallaştırma” ($\chi^2 = 30.396$; $p < .001$), “Öz Düzenleme” ($\chi^2 = 11.095$; $p < .05$) ve “Bilişsel Yetkinlik” ($\chi^2 = 13.934$; $p < .05$) alt boyutlarında da anlamlı farklılıklar elde edilmiştir.

Detaylı incelemede, DDÖ toplam puanlarının lisansüstü grubun lisans ($\bar{x}$ sıra = 187,70) grubuna göre daha yüksek ($\bar{x}$ sıra = 291,78), lisans grubunun da önlisans ($\bar{x}$ sıra = 159,10) grubuna göre üstün olduğu belirlenmiştir. “Değişkenlik/Olumsuzluk” boyutunda lisansüstü grubun lisans grubuna ($\bar{x}$ sıra = 194,11) kıyasla daha yüksek ($\bar{x}$ sıra = 277,19), lisans grubunun ise önlisans grubuna ($\bar{x}$ sıra = 145,20) göre daha üstün olduğu görülmüştür. “Kontrol” boyutunda önlisans ($\bar{x}$ sıra = 252,50), lisansüstü grubundan ($\bar{x}$ sıra = 221,91); lisansüstü grup ise lisans grubundan ($\bar{x}$ sıra = 187,99) daha yüksek puan almıştır.

SAİDÖ toplam puanlarında lisans grubunun önlisans grubuna ($\bar{x}$ sıra = 200,05) göre, önlisans grubunun ise lisansüstü grubuna ($\bar{x}$ sıra = 167,74) göre üstün olduğu bulunmuştur. “Çekingenlik” boyutunda da benzer şekilde önlisans grubu ($\bar{x}$ sıra = 219,63), lisansüstü grubuna ($\bar{x}$ sıra = 169,88), lisans grubu da önlisans grubuna ($\bar{x}$ sıra = 207,66) göre yüksek sonuç vermiştir. “Sosyal Kabul” boyutunda lisans grubunun önlisans grubuna ($\bar{x}$ sıra = 205,09) kıyasla daha yüksek ($\bar{x}$ sıra = 211,54), önlisans grubunun da lisansüstüne ($\bar{x}$ sıra = 165,56) göre daha üstün olduğu tespit edilmiştir. “Sosyal Davranış” boyutunda lisans grubunun lisansüstüne ($\bar{x}$ sıra = 183,21) göre ($\bar{x}$ sıra = 213,61) ve lisansüstü grubun önlisansa ($\bar{x}$ sıra = 170,25) göre daha

yüksek sonuçlar verdiği görülmüştür. “Saldırganlık” alt boyutunda ise önlisans grubunun lisans grubuna ($\bar{x}$ sıra = 208,30) göre ($\bar{x}$ sıra = 228,48) ve lisans grubunun lisansüstüne ($\bar{x}$ sıra = 160,90) göre daha üst sıralarda yer aldığı bulunmuştur.

ÇOPİO toplam puanlarında önlisans grubunun lisans grubuna ($\bar{x}$ sıra = 210,22) göre ($\bar{x}$ sıra = 232,01) ve lisans grubunun lisansüstüne ($\bar{x}$ sıra = 150,86) göre daha avantajlı olduğu saptanmıştır. “Fiziksel Sağlık” boyutunda önlisans grubunun lisansüstüne ($\bar{x}$ sıra = 204,99) göre ($\bar{x}$ sıra = 245,45), lisansüstü grubun ise lisans grubuna ($\bar{x}$ sıra = 193,70) göre daha olumlu sonuçlar gösterdiği görülmüştür. “Düşük İçselleştirme” boyutunda önlisans grubunun lisans grubuna ($\bar{x}$ sıra = 206,38) göre ($\bar{x}$ sıra = 260,84), lisans grubunun ise lisansüstüne ($\bar{x}$ sıra = 144,51) göre daha yüksek değer aldığı tespit edilmiştir. Benzer şekilde “Düşük Dışsallaştırma” boyutunda önlisans grubunun lisans grubuna ($\bar{x}$ sıra = 208,03) kıyasla ($\bar{x}$ sıra = 253,57), lisans grubunun lisansüstüne ($\bar{x}$ sıra = 143,50) kıyasla daha üst seviyede yer aldığı belirlenmiştir. “Öz Düzenleme” boyutunda lisans grubunun önlisans grubuna ($\bar{x}$ sıra = 187,20) göre ($\bar{x}$ sıra = 214,78), önlisans grubunun lisansüstüne ($\bar{x}$ sıra = 166,19) göre üstün olduğu; “Bilişsel Yetkinlik” boyutunda ise lisans grubunun önlisans grubuna ($\bar{x}$ sıra = 179,42) göre ($\bar{x}$ sıra = 216,69), önlisans grubunun lisansüstüne ($\bar{x}$ sıra = 164,51) göre daha yüksek sonuçlar verdiği saptanmıştır.

Bununla birlikte, SAİDÖ’nün “Problem Çözme” alt boyutu ve ÇOPİO’nun “Sosyal Yetkinlik/Girişkenlik”, “Değer Davranışları”, “Psikolojik Dayanıklılık” ve “Yaşam Doyumu” alt boyutlarının öğretmenlerin öğrenim düzeyi değişkenine göre anlamlı farklılık göstermediği görülmüştür ($p > .05$).

Tablo 7. Annenin Yaşı Değişkenine Göre Ölçekler ve Alt Boyut Puanları Mann-Whitney U Testi

Puan	Gruplar	N	$\bar{x}_{sıra}$	$\sum_{sıra}$	U	z	p

	(2) 41+	192	218,59	41969,50			
ÇOPİO F9. Yaşam Doyumu	(1) 20-40	212	214,64	45503,00	17779,000	-2,209	.027*
	(2) 41+	192	189,10	36307,00			

Tablo 7’de, annenin yaşı değişkenine göre ölçek ve alt boyut puanlarının karşılaştırılmasına ilişkin Mann-Whitney U Testi sonuçları yer almaktadır. Analiz bulgularına göre, DDÖ’nün “Kontrol” alt boyutunda 20–40 yaş grubundaki çocukların puan ortalaması ($\bar{x}$ sıra = 218,62), 41 yaş ve üzeri annelerin çocuklarına göre ($\bar{x}$ sıra = 184,70) istatistiksel olarak anlamlı düzeyde daha yüksektir ($U = 16934,000$; $p < .05$). Benzer şekilde, ÇOPİÖ’nün “Fiziksel Sağlık” alt boyutunda da 20–40 yaş grubundaki çocuklar ($\bar{x}$ sıra = 213,84), 41 yaş ve üzeri grubuna kıyasla ($\bar{x}$ sıra = 189,98) daha yüksek puan almıştır ($U = 17947,500$; $p < .05$).

Buna karşın, ÇOPİÖ’nün “Psikolojik Dayanıklılık” alt boyutunda 41 yaş ve üzeri annelere sahip çocuklar ($\bar{x}$ sıra = 218,59), 20–40 yaş grubundaki çocuklara ($\bar{x}$ sıra = 187,93) göre daha yüksek puan almış ve bu fark anlamlı bulunmuştur ($U = 17262,500$; $p < .05$). Aynı şekilde, “Yaşam Doyumu” alt boyutunda da 20–40 yaş grubu lehine anlamlı bir farklılık görülmüş ($\bar{x}$ sıra = 214,64 / 189,10), sonuç $U = 17779,000$; $p < .05$ olarak kaydedilmiştir.

Bununla birlikte, annenin yaşına göre DDÖ toplam puanları ile “Değişkenlik/Olumsuzluk” alt boyutu; SAİDÖ toplam puanları ve alt boyutlardan “Çekingenlik”, “Sosyal Kabul”, “Problem Çözme”, “Sosyal Davranış”, “Saldırganlık” puanları arasında istatistiksel olarak anlamlı bir farklılık gözlenmemiştir. Aynı şekilde, ÇOPİÖ toplam puanları ve alt boyutlardan “Düşük İçselleştirme”, “Düşük Dışsallaştırma”, “Öz Düzenleme”, “Sosyal Yetkinlik/Girişkenlik”, “Bilişsel Yetkinlik” ve “Değer Davranışları” açısından da gruplar arasında anlamlı bir fark bulunmamıştır ($p > .05$).

	(2) 41+	271	212,54	57597,00			

Tablo 8’de, babanın yaşı değişkenine göre çocukların çeşitli ölçek ve alt boyutlardan aldıkları puanlara ilişkin Mann-Whitney U Testi bulguları sunulmaktadır. Elde edilen sonuçlara göre, DDÖ’nün “Kontrol” alt boyutunda 20–40 yaş grubu çocuklarının puanları ($\bar{x}$ sıra = 228,66), 41 yaş ve üzeri grubun çocuklarına kıyasla ($\bar{x}$ sıra = 189,66) anlamlı düzeyde daha yüksek bulunmuştur ($U = 14542,500$; $p < .05$).

SAİDÖ’nün “Saldırganlık” alt boyutunda ise durum tersine dönmüş; 41 yaş ve üzeri baba grubuna ait çocuklar ($\bar{x}$ sıra = 210,61), 20–40 yaş grubuna ait çocuklara ($\bar{x}$ sıra = 185,98) göre daha yüksek puan almıştır ($U = 15825,000$; $p < .05$). ÇOPİO ölçeğinde ise “Fiziksel Sağlık” alt boyutunda 20–40 yaş grubu ($\bar{x}$ sıra = 228,76) lehine anlamlı bir farklılık saptanmıştır ($U = 14528,500$; $p < .05$). Ayrıca, ÇOPİO’nun “Bilişsel Yetkinlik” alt boyutunda 41 yaş ve üzeri gruba ait çocuklar ($\bar{x}$ sıra = 212,62), daha genç babalara sahip çocuklara ($\bar{x}$ sıra = 181,87) göre anlamlı düzeyde daha yüksek puan almıştır ($U = 15278,000$; $p < .05$). Benzer şekilde, “Psikolojik Dayanıklılık” alt boyutunda da 41 yaş ve üzeri baba grubunun çocukları ($\bar{x}$ sıra = 212,54), 20–40 yaş grubu çocuklarına ($\bar{x}$ sıra = 182,05) göre daha yüksek puanlar elde etmiştir ($U = 15302,000$; $p < .05$).

Diğer yandan, babanın yaşı değişkenine göre DDÖ toplam puanları ve “Değişkenlik/Olumsuzluk” alt boyutundan alınan puanlar; SAİDÖ toplam puanları ve alt boyutlardan “Çekingenlik”, “Sosyal Kabul”, “Problem Çözme”, “Sosyal Davranış” puanları; ayrıca ÇOPİO toplam puanları ile “Düşük İçselleştirme”, “Düşük Dışsallaştırma”, “Öz Düzenleme”, “Sosyal Yetkinlik/Girişkenlik”, “Değer Davranışları” ve “Yaşam Doyumu” alt boyutlarına ilişkin puanlarda istatistiksel olarak anlamlı bir fark saptanmamıştır ($p > .05$).

Ayrıca, Kruskal-Wallis ve Mann-Whitney U Testleri sonuçları, çocukların cinsiyeti, kardeş sayısı ve doğum sırası değişkenlerine göre hem duygu düzenleme becerilerinde, hem akran ilişkilerinde hem de psikolojik iyi oluş düzeylerinde anlamlı bir farklılık olmadığını ortaya koymuştur ($p > .05$).

İlişkilerin Belirlenmesi

*p<.05; **p<.001

Tablo 9, çocukların duygu düzenleme, akran ilişkileri ve psikolojik iyi oluş düzeyleri arasında Spearman korelasyon testi ile hesaplanan ilişki düzeylerini göstermektedir. Bulgulara göre, ÇOPİO toplam puanları ile DDÖ toplam puanları ve “Değişkenlik/Olumsuzluk” alt boyutu arasında orta düzeyde negatif, “Kontrol” alt boyutu ile zayıf düzeyde pozitif ilişki saptanmıştır (p<.05).

ÇOPİO toplam puanları, SAİDÖ toplam puanları ve alt boyutlarından “Çekingenlik”, “Sosyal Kabul”, “Sosyal Davranış” ve “Saldırganlık” ile orta düzeyde pozitif; “Problem Çözme” ile zayıf düzeyde pozitif ilişki göstermiştir (p<.05).

ÇOPİO’nun “Fiziksel Sağlık” alt boyutu, DDÖ’nün “Değişkenlik/Olumsuzluk” alt boyutu ile zayıf düzeyde negatif, “Kontrol” ile zayıf düzeyde pozitif, SAİDÖ’nün “Çekingenlik” alt boyutu ile çok zayıf düzeyde pozitif ilişkilidir (p<.05).

“Düşük İçselleştirme” alt boyutu puanları, DDÖ toplam puanları ve “Değişkenlik/Olumsuzluk” ile zayıf düzeyde negatif; “Kontrol”, “Problem Çözme”, “Sosyal Davranış” ile çok zayıf düzeyde pozitif; SAİDÖ toplam puanları, “Çekingenlik”, “Sosyal Kabul”, “Saldırganlık” ile zayıf düzeyde pozitif ilişki göstermiştir (p<.05).

“Düşük Dışsallaştırma”, DDÖ toplam puanları ile orta düzeyde negatif, “Değişkenlik/Olumsuzluk” ile yüksek düzeyde negatif ilişkilidir. Aynı alt boyut, SAİDÖ toplam puanları, “Sosyal Kabul”, “Saldırganlık” ile orta, “Çekingenlik”, “Problem Çözme”, “Sosyal Davranış” ile zayıf düzeyde pozitif ilişki göstermiştir ($p<.05$).

“Öz Düzenleme” puanları, DDÖ toplam puanları ve “Değişkenlik/Olumsuzluk” ile zayıf negatif; “Kontrol”, “Problem Çözme” ile çok zayıf pozitif; SAİDÖ toplam puanları, “Sosyal Davranış” ile orta düzeyde pozitif; diğer SAİDÖ alt boyutları ile zayıf düzeyde pozitif ilişkiler göstermiştir ($p<.05$).

“Sosyal Yetkinlik/Girişkenlik”, DDÖ toplam ve “Değişkenlik/Olumsuzluk” puanları ile çok zayıf negatif, “Kontrol” ile çok zayıf pozitif; SAİDÖ alt boyutlarının tamamı ile zayıf ya da çok zayıf düzeyde pozitif ilişkilidir ($p<.05$).

“Bilişsel Yetkinlik” alt boyutu, DDÖ toplam puanları ve “Değişkenlik” ile çok zayıf negatif; SAİDÖ toplam puanları, “Çekingenlik”, “Sosyal Kabul”, “Saldırganlık” ile zayıf, diğer SAİDÖ alt boyutları ile çok zayıf pozitif ilişkiler göstermiştir ($p<.05$).

“Değer Davranışları” alt boyutu ile DDÖ’nün “Kontrol” alt boyutu, SAİDÖ toplam puanları, “Çekingenlik”, “Sosyal Davranış” alt boyutları arasında çok zayıf düzeyde pozitif ilişki görülmüştür ($p<.05$).

“Psikolojik Dayanıklılık”, DDÖ’nün “Değişkenlik/Olumsuzluk” alt boyutu ile çok zayıf negatif; “Kontrol”, SAİDÖ toplam puanları, “Çekingenlik”, “Sosyal Kabul”, “Problem Çözme” ile çok zayıf pozitif ilişkilidir ($p<.05$).

“Yaşam Doyumu”, sadece DDÖ’nün “Değişkenlik/Olumsuzluk” boyutuyla çok zayıf negatif ilişki göstermiştir ($p<.05$).

Ayrıca, DDÖ toplam puanları ile SAİDÖ toplam puanları arasında orta düzeyde negatif; “Çekingenlik”, “Sosyal Kabul”, “Sosyal Davranış”, “Saldırganlık” ve “Problem Çözme” alt boyutlarıyla zayıf ila orta düzeyde negatif ilişkiler tespit edilmiştir. DDÖ’nün “Değişkenlik” boyutu da benzer şekilde SAİDÖ puanlarıyla negatif ilişki göstermektedir. Öte yandan, “Kontrol” alt boyutu ile yalnızca “Çekingenlik” arasında çok zayıf pozitif ilişki bulunmuştur ($p<.05$).

Anlamlı ilişki gözlenmeyen değişken çiftleri ise şunlardır:

1. “Fiziksel Sağlık” ile: DDÖ toplam, SAİDÖ toplam, “Sosyal Kabul”, “Problem Çözme”, “Sosyal Davranış”, “Saldırganlık”

2. “Düşük Dışsallaştırma” ile: DDÖ “Kontrol”
3. “Bilişsel Yetkinlik” ile: DDÖ “Kontrol”
4. “Değer Davranışları” ile: DDÖ toplam, “Değişkenlik”, SAİDÖ “Saldırganlık”
5. “Psikolojik Dayanıklılık” ile: DDÖ toplam, SAİDÖ “Sosyal Davranış”, “Saldırganlık”
6. “Yaşam Doyumu” ile: DDÖ toplam, DDÖ “Kontrol”, SAİDÖ toplam ve tüm SAİDÖ alt boyutları
7. DDÖ “Kontrol” ile: SAİDÖ toplam, “Sosyal Kabul”, “Problem Çözme”, “Sosyal Davranış”, “Saldırganlık” ($p>.05$).

Tartışma ve Sonuç

Bu araştırmada okul öncesi dönem çocuklarında duygu düzenleme becerileri, akran ilişkileri ve psikolojik iyi oluş düzeylerinin çeşitli değişkenlerce incelenmesi ve ilgili üç puan arasında bir ilişki bulunup bulunmadığının belirlenmesi amaçlanmıştır. Amaç doğrultusunda ilk olarak okul öncesi dönem çocuklarının üç alandaki puanları hesaplanarak düzeyleri belirlenmiştir. Gerçekleştirilen analizler sonucunda, katılımcı çocukların akran ilişkileri, duygu düzenleme ve psikolojik iyi oluş toplam puanlarının yüksek düzeyde olduğu belirlenmiştir. Ancak duygu düzenlemenin değişkenlik ve kontrol alt boyutları ile psikolojik iyi oluşun fiziksel sağlık, değer davranışları ve öz düzenleme alt boyutlarında puanlar orta düzeyde kalmıştır. Bu bulgular, örneklemin genel düzeyinin orta-yüksek aralığında olduğunu göstermektedir.

Çocuğun yaşı değişkenine göre duygu düzenleme toplam puanları ile değişkenlik alt boyutu puanlarında 6 yaş grubu çocukların anlamlı düzeyde 5 yaşa göre daha yüksek puan aldıkları görülmüştür. Yaş arttıkça yaşam deneyimi de artmakta, bireyler farklı durumlarla daha sık karşılaşmaktadır (Piaget, 1952). Bu durum, normal gelişim gösteren çocuklarda uyum becerilerinin gelişmesini destekleyebilir. Ayrıca bilişsel gelişimin ilerlemesiyle birlikte, artan yaşla uyum becerilerindeki bu artış açıklanabilir. Ancak 5 yaş çocukları akran ilişkileri toplam puanı ile çekingenlik, sosyal kabul, saldırganlık, düşük içselleştirme alt boyutlarında 6 yaş grubuna kıyasla yüksek puanlar almıştır ve bu durum anlamlı bulunmuştur. Erten (2012) tarafından yapılan araştırmada, 5 yaş grubu çocukların sosyal beceri alanında 6 yaş grubuna kıyasla daha yüksek puanlar aldığı belirlenmiştir. Aynı çalışmada, eğitim-öğretim yılı sonuna doğru çocukların sosyal beceri puanlarında bir düşüş yaşandığı da saptanmıştır. Bu bulgular, 5 yaş çocuklarının gelişimsel olarak daha yoğun bir sosyal kabul arayışı içerisinde oldukları şeklinde yorumlanabilir.

Okul deneyimi olan çocukların akran ilişkileri ve psikolojik iyi oluş puanları okul deneyimi olmayanlara göre anlamlı düzeyde daha yüksek bulunmuş ancak duygu düzenleme becerilerinde okul deneyimine göre anlamlı bir farklılık gözlenmemiştir. Sosyal ortamlarla erken yaşta tanışmak, çocuğun sosyal becerilerinin gelişiminde önemli bir unsur olarak değerlendirilmektedir (Anders vd., 2013). Okul, okul öncesi dönem çocukları için koruyucu ve geliştirici bir çevre sunmaktadır (Bronfenbrenner ve Morris, 2006). Öte yandan, Thompson'a (1994) göre duygu düzenleme oldukça karmaşık bir yapıya sahiptir ve bu yapının gelişiminde yalnızca okul deneyimi değil, aile ve diğer çevresel faktörler de etkili olmaktadır. Bu doğrultuda, araştırma bulgularının alan yazın ile uyumlu olduğu söylenebilir.

Öğretmenin yaşına göre çocukların akran ilişkileri ve psikolojik iyi oluş puanlarında anlamlı farklılıklar gözlemlenmiş; özellikle 20–30 yaş grubundaki öğretmenlerin öğrencilerinin bu alanlarda daha yüksek puanlar aldığı belirlenmiştir. Ancak duygu düzenleme becerilerinde öğretmen yaşı değişkenine göre anlamlı bir fark bulunmamıştır. Bu bulgu, Cui'nin (2022) araştırmasıyla paralellik göstermektedir. Söz konusu çalışmada, genç öğretmenlerin çocuklara karşı daha sevecen ve iletişime açık bir tutum sergilediği, bu durumun da çocukların sosyal becerileri ve psikolojik iyi oluşlarıyla pozitif yönde ilişkili olduğu belirtilmiştir. Öte yandan duygu düzenleme becerileriyle anlamlı bir ilişki bulunmaması, Thompson'ın (1994) duygu düzenlemenin çok boyutlu ve karmaşık bir yapıya sahip olduğunu vurgulayan görüşüyle örtüşmektedir. Nitekim, duygu düzenleme genellikle birden fazla çevresel ve bireysel değişkenin etkileşimiyle açıklanabilmektedir.

Öğretmenlerin öğrenim durumuna göre öğrencilerin çeşitli psikososyal becerilerinde anlamlı farklılıklar gözlenmiştir. Lisansüstü mezunu öğretmenlere sahip öğrenciler duygu düzenleme (özellikle değişkenlik) alanında daha yüksek puan alırken, lisans mezunu öğretmenlere sahip öğrenciler akran ilişkileri (sosyal kabul ve davranış) ile psikolojik iyi oluşun (öz düzenleme, bilişsel yetkinlik) alt boyutlarında daha yüksek puanlara ulaşmıştır. Daha yüksek eğitim düzeyine sahip öğretmenlerin, çocukların duygusal ihtiyaçlarını daha iyi anlayabildikleri belirlenmiştir (Jennings ve Greenberg, 2009). Ayrıca, bu öğretmenlerin sosyal-duygusal öğrenme alanında daha yetkin oldukları ve sınıf ortamında duygusal farkındalık, empati ve ilişki kurma becerilerini daha etkili şekilde destekleyebildikleri tespit edilmiştir (Brackett vd., 2011). Bu durum, öğretmen eğitiminin niteliğinin çocukların sosyal-duygusal gelişiminde belirleyici bir rol oynadığını göstermektedir.

Önlisans mezunu öğretmenlere sahip öğrenciler ise duygu düzenlemenin kontrol boyutu, akran ilişkilerinin çekingenlik ve saldırganlık alt boyutları ile psikolojik iyi oluş genel

puanları ve davranışsal problemler (düşük içselleştirme ve dışsallaştırma) açısından daha yüksek düzeyde puan almıştır. Önlisans mezunu öğretmenlerin daha kontrolcü tutumlar sergilediği ve bu tutumların, çocuklardaki saldırganlık düzeyinin azalmasıyla ilişkili olabileceği belirlenmiştir (Hughes ve Kwok, 2006). Bu ilişkinin, çocuklarda artan çekingenlik düzeyiyle açıklanabileceği düşünülmektedir. Kontrolcü öğretmen davranışları, çocukların sosyal etkileşimlerde daha temkinli ve içe dönük bir tutum geliştirmelerine neden olarak saldırgan davranışların görülme sıklığını azaltabilir. Ayrıca, daha az eğitilmiş öğretmenlerin çocuklarla daha az olumlu ilişki kurduğu; bu nedenle çocukların çekingen, içe yönelen (içselleştirme) ya da aşırı dışa yönelen (dışsallaştırma) davranışlar sergilemeye daha yatkın oldukları da araştırmalarla ortaya konmuştur (Baker, 2006; Raver vd., 2011). Bu bulgular, öğretmenin eğitim düzeyi ile sınıf içi etkileşim kalitesi ve çocukların davranışsal uyumu arasında önemli bir ilişki olabileceğine işaret etmektedir.

Annenin yaşı ve babanın yaşına ilişkin analizlere sonuç olarak 41 yaş ve üzeri grupta bir anne ve babaya sahip çocukların daha yüksek psikolojik dayanıklılığa sahip olduğu, 20-40 yaş grubunda anne babaya sahip çocukların ise daha yüksek kontrol ve fiziksel sağlık puanına sahip olduğu bulunmuştur. Aynı zamanda 20-40 yaş grubunda anneye sahip olan çocuklar daha yüksek yaşam doyumu gösterirken 41 yaş ve üzeri babaya sahip olan çocuklar daha yüksek bilişsel yetkinlik göstermiştir. Alan yazın incelendiğinde ebeveynin yaşı ile çocuğun sosyal duygusal ve psikolojik iyi oluşunun ilişkili olduğu görülmektedir ve bu ilişki genellikle ileri yaş grubunda olan anne babaların çocuklarının daha yüksek psikolojik iyi oluşa sahip olduğu yönündedir (Trillingsgaard ve Sommer, 2016).

Çocukların psikolojik iyi oluş puanları ile akran ilişkileri arasında ilişki olduğu, orta düzeyli bu ilişkinin pozitif yönlü olduğu belirlenmiştir. Bu iki puan türü birlikte yüksek ya da düşük olarak gözlenmektedir. Sosyal destek teorisi (Cohen ve Wills, 1985) doğrultusunda, olumlu akran ilişkileri aracılığıyla sosyal destek ve kabul gören çocukların psikolojik iyi oluş düzeylerinin artış göstermesi beklenen bir durumdur. Benzer şekilde, Kendilik Algısı Teorisi'ne (Harter, 2012) göre bu çocukların kendilik algısı ve özsaygı becerilerinin daha gelişmiş olması da literatürle örtüşmektedir. Ayrıca Maslow'un (1943) ihtiyaçlar hiyerarşisinde ait olma ve sevgi ihtiyacını temel gereksinimler arasında konumlandırması, bu duyguların karşılanmasının daha üst düzey psikolojik ihtiyaçların temeli olduğunu ortaya koymaktadır. Bu bağlamda, psikolojik iyi oluşun gelişiminde aidiyet hissi ve sevgi görmenin temel belirleyici unsurlar olduğu söylenebilir.

Akran ilişkileri ve psikolojik iyi oluş puanları ve duygu düzenleme becerilerinin orta düzeyde negatif yönlü ilişkili olduğu tespit edilmiştir. Bu durumda bir puan türünde yükselme gözlenirken diğer puan türünde düşüş olduğu görülmüştür. Akran ilişkileri ve psikolojik iyi oluş puanları ve duygu düzenleme becerilerinin ilişkisi incelendiğinde ise orta düzeyli negatif yönlü anlamlı sonuç elde edilmiştir. Bu durum, bir değişkende artış gözlenirken diğerinde azalma yaşandığını göstermektedir. Gross ve John (2003), aşırı duygu kontrolünün duyguların otantikliğini azaltabileceğini, bunun da bireyin duygularını bastırmasına ve içsel stres düzeyinin artmasına yol açabileceğini öne sürmektedir. Nitekim, Tsujimoto vd. (2024) de bu sürecin uzun vadede psikolojik iyi oluş üzerinde olumsuz etkiler yaratabileceğini belirtmiştir. Bu bulgular, duygu düzenleme becerilerinin belirli düzeyin üzerinde olmasının her zaman avantaj sağlamayabileceğini, özellikle sosyal ilişkiler ve psikolojik iyilik haliyle karmaşık bir etkileşim içinde olduğunu göstermektedir. Öte yandan, bazı çocukların akran kabulü sağlamak amacıyla dışsal motivasyon kaynaklarına yöneldiği bilinmektedir (Ryan ve Deci, 2000). Bu çocuklar, başkalarını memnun etme gibi dışa dönük beklentileri karşılama çabası içinde olduklarında, özgünlüklerinde azalma gözlenebilmekte ve bu durum yeterli düzeyde duygu farkındalığı geliştirememeye ile ilişkilendirilmektedir (Goleman, 1995). Bu süreç, bireyin kendi duygusal ihtiyaçlarını arka plana atarak sosyal onaya odaklanmasına ve uzun vadede psikolojik dengeyi olumsuz etkilemesine neden olabilir.

Özetle; bu araştırmada, okul öncesi dönem çocuklarında duygu düzenleme, akran ilişkileri ve psikolojik iyi oluş düzeyleri incelenmiş; genel olarak bu alanlarda yüksek, alt boyutlarda ise orta düzeyde puanlar elde edilmiştir. Yaş, okul ve öğretmen özellikleri gibi değişkenlere göre anlamlı farklar gözlenmiş; özellikle 6 yaş grubunda duygu düzenleme, 5 yaş grubunda ise akran ilişkileri daha güçlü bulunmuştur. Okul deneyimi, genç ve daha yüksek eğitilmiş öğretmenler ile olumlu akran ilişkileri, çocukların psikolojik iyi oluşunu destekleyici faktörler olarak öne çıkarken; duygu düzenleme, karmaşık yapısı gereği bu değişkenlerden anlamlı düzeyde etkilenmemiştir. Ayrıca, psikolojik iyi oluş ve akran ilişkileri ile duygu düzenleme ilişkisinin mevcut ve negatif yönde olduğu tespit edilmiştir, bu durum literatürdeki aşırı kontrolün otantiklik ve içsel denge üzerindeki olumsuz etkileriyle açıklanmıştır. Bulgular, sosyal-duygusal gelişimin çok boyutlu olduğunu ve bireysel, ailesel ve eğitsel faktörlerin birlikte ele alınması gerektiğini göstermektedir. Bulgular ışığında aşağıdaki öneriler sunulmuştur:

1. Çocukların psikolojik iyi oluş, duygu düzenleme ve akran ilişkileri puanlarının genel düzeyde yüksek; ancak alt boyutlarda orta düzeyde seyrettiği görülmüştür. Bu durumu daha

kapsamlı deęerlendirebilmek adına, rneklemenin daha eřitli tutulduęu ve karma desenin kullanıldıęı, derinlemesine grřmelere yer ve ren arařtırma tasarımlarının uygulanması nerilmektedir. Bylece, Trkiye genelinde ocukların bu alanlardaki dzeyleri daha saęlıklı biimde deęerlendirilebilir; ayrıca alt boyutlardaki orta dzey puanların altında yatan nedenler daha ayrıntılı olarak aıklanabilir.

2. Alan yazın, sosyal duygusal ğrenme temelli eęitimlerin ocuklarda olumlu beceri gelişimini destekledięini gstermektedir. Bu arařtırma, farklı okullardan elde edilen ve rilerle yrtlmřtr. Gelecek arařtırmalarda, sosyal duygusal ğrenme programı uygulayan okullar ile genel eęitim ve ren okullarda ğrenim gren ocukların ilgili puan dzeylerinin karřılařtırılması nerilmektedir. Bu tr karřılařtırmalar, sosyal duygusal ğrenmenin ocuk gelişimi zerindeki etkilerini daha net ortaya koyabilir.

3. ğretmenlerin yksek eęitim dzeyinin ocuk gelişiminde olumlu sonularla iliřkili olduęu literatrde yer almaktadır (Brackett vd., 2011). Ancak bu alıřmada, lisans mezunu ğretmenlerin ğrencileri, lisansst ğretmenlerin ğrencilerine gre daha yksek z dzenleme ve biliřsel yetkinlik puanları almıřtır. Bu farklılık, ğretmen eęitim dzeyi ile ğrenci ıktıları arasındaki iliřkinin, mesleki kıdem ve tkenmiřlik gibi ek deęiřkenlerle birlikte incelenmesini gerektirmektedir.

4. Bu arařtırmada ocuklara iliřkin ve riler, sınıf ğretmenlerinin deęerlendirmeleri doęrultusunda elde edilmiřtir. lekler ğretmenler tarafından doldurulmuř olup, ğretmenlerin soruları tarafsız bir řekilde yanıtladıkları varsayılmaktadır. Gelecek arařtırmalarda, ocuklara ynelik gzlem formlarının kullanılması ve lmlere hem ğretmen hem de aile grřlerinin dahil edilmesi, elde edilecek sonuların kapsamlılıęını artırmak aısından nerilmektedir.

Evaluation of the 4th Grade Mathematics Curriculum Within the Framework of the Illuminative Program Evaluation Model: Maarif Model

Halil KAMIŞLI

Hakkari University, e-mail: halilkamisli@hakkari.edu.tr, Orcid No: <http://orcid.org/0000-0001-6715-431X>, TURKEY

Abstract

The aim of this study is to examine how well teachers, as the implementers of the curriculum, internalize the curriculum, whether it is applied correctly, and to what extent it is implemented as intended. This study evaluates the 2024 revised 4th grade mathematics curriculum in terms of objectives, content, teaching-learning processes, and assessment and evaluation dimensions based on the opinions of classroom teachers within the framework of the illuminative evaluation model. A mixed-methods approach was used in this study, combining both qualitative and quantitative data to provide a comprehensive evaluation. The quantitative part of the study consists of 178 primary school 4th-grade teachers, while the qualitative part includes 22 4th-grade teachers. In the qualitative phase, semi-structured interviews were conducted to gain in-depth insights into the experiences and perspectives of teachers, while in the quantitative phase, a questionnaire was administered to assess their overall opinions and challenges. The findings indicate that teachers do not identify theoretical problems in the objectives, content, teaching-learning process, or assessment and evaluation aspects of the curriculum; however, they face difficulties in its practical implementation due to factors such as insufficient instructional time, inadequate resources, and varying student abilities. Additionally, the teachers generally believe that the curriculum is designed to meet educational needs and aligns with contemporary pedagogical approaches. However, they experience challenges due to crowded classrooms, the high number of learning objectives, and limited opportunities for individualized instruction. Many teachers also expressed concerns about the feasibility of implementing differentiated instruction and formative assessment methods effectively in large and diverse classrooms. As a result, this study highlights the need for ongoing professional development programs, improved resource allocation, and more flexible instructional strategies to enhance the practical application of the 4th grade mathematics curriculum. Future research could further explore the long-term impact of these challenges on student learning outcomes and teacher satisfaction.

Keywords: Curriculum evaluation, 4th grade mathematics curriculum, classroom implementation challenges, instructional strategies.

Aydınlatıcı Program Değerlendirme Modeli Çerçevesinde 4. Sınıf Matematik Dersi Öğretim Programının Değerlendirilmesi: Maarif Modeli Örneği

Özet

Bu çalışmanın amacı, öğretim programının uygulayıcıları olan öğretmenlerin programı ne ölçüde içselleştirdiğini, programın doğru şekilde uygulanıp uygulanmadığını ve hedeflendiği biçimde hayata geçirilip geçirilmediğini incelemektir. Bu bağlamda çalışma, 2024 yılında güncellenen 4. sınıf matematik dersi öğretim programını amaçlar, içerik, öğretme-öğrenme süreçleri ile ölçme ve değerlendirme boyutları açısından, Aydınlatıcı Program Değerlendirme Modeli çerçevesinde sınıf öğretmenlerinin görüşlerine dayalı olarak değerlendirmeyi amaçlamaktadır. Araştırmada, nitel ve nicel verilerin bir arada kullanıldığı karma yöntem deseni benimsenmiştir. Nicel boyut, 178 ilkokul 4. sınıf öğretmeni ile gerçekleştirilirken; nitel boyutta, 22 öğretmenle yarı yapılandırılmış görüşmeler yapılmıştır. Nitel aşamada, öğretmenlerin deneyimlerine ve algılarına derinlemesine ulaşmak amacıyla görüşmeler gerçekleştirilmiş; nicel aşamada ise öğretmenlerin genel görüşleri ve karşılaştıkları güçlükleri belirlemeye yönelik anket uygulanmıştır. Bulgular, öğretmenlerin öğretim programının amaç, içerik, öğretme-öğrenme süreci ile ölçme ve değerlendirme boyutlarında kuramsal bir sorun görmediklerini; ancak uygulamada öğretim süresinin yetersizliği, kaynak eksikliği ve öğrenci farklılıkları gibi nedenlerle çeşitli güçlüklerle karşılaştıklarını ortaya koymuştur. Ayrıca öğretmenler genel olarak programın eğitim ihtiyaçlarına yanıt verdiğini ve çağdaş pedagojik yaklaşımlarla uyumlu olduğunu düşünmektedir. Bununla birlikte, kalabalık sınıflar, öğrenme hedeflerinin fazlalığı ve bireyselleştirilmiş öğretim fırsatlarının sınırlılığı nedeniyle uygulamada zorlandıklarını belirtmişlerdir. Pek çok öğretmen, farklılaştırılmış öğretim ve biçimlendirici değerlendirme yöntemlerinin büyük ve heterojen sınıflarda etkin biçimde uygulanabilirliğine dair kaygılarını dile getirmiştir. Sonuç olarak, bu çalışma; 4. sınıf matematik öğretim programının etkili şekilde uygulanabilmesi için sürekli mesleki gelişim programlarının, kaynakların daha iyi dağıtımının ve daha esnek öğretim stratejilerinin gerekliliğine işaret etmektedir. Gelecekte yapılacak araştırmalar, bu zorlukların uzun vadede öğrenci öğrenme çıktıları ve öğretmen memnuniyeti üzerindeki etkilerini daha ayrıntılı olarak inceleyebilir.

Anahtar Kelimeler: Program değerlendirme, 4. sınıf matematik programı, sınıf içi uygulama güçlükleri, öğretim stratejileri.

Giriş

Eğitim programlarının başarısı, yalnızca teorik olarak ne kadar nitelikli tasarlandıklarıyla değil, aynı zamanda bu programların sınıf içi ortamlarda ne ölçüde işlevsel ve uygulanabilir olduğu ile doğrudan ilişkilidir (Stufflebeam ve Coryn, 2014). Öğretim programlarının tasarımında kuramsal bütünlük kadar, bu programların sahadaki uygulayıcıları olan öğretmenlerin programı anlama, benimseme ve etkili bir şekilde uygulayabilme kapasiteleri de büyük önem taşımaktadır (Fullan, 2007; Ornstein ve Hunkins, 2018). Eğitim sisteminde istenilen dönüşüm ve öğrenme çıktılarındaki kalite artışı, programın sadece merkezi düzeyde yazılı bir belge olmasından çok, okul ve sınıf düzeyinde nasıl yaşandığı ile ilişkilidir. Bu bağlamda, Türkiye Cumhuriyeti Millî Eğitim Bakanlığı tarafından 2023 yılında kamuoyuna tanıtılan Türkiye Yüzyılı Maarif Modeli, eğitim sisteminin tüm bileşenlerinde köklü bir paradigma değişimini hedeflemektedir (MEB, 2023). Bu model doğrultusunda 2024 yılında güncellenen İlkokul 4. Sınıf Matematik Dersi Öğretim Programı, hem içerik hem pedagojik yönelim açısından önemli yenilikler içermektedir. Programda; düşünme becerilerine dayalı matematiksel okuryazarlık, günlük yaşamla ilişkilendirilmiş problem çözme, disiplinler arası bütünlük ve bireyselleştirilmiş öğrenme yaklaşımları öne çıkarılmıştır (MEB, 2024). Ancak eğitimde reform niteliği taşıyan bu tür programların başarısı, yalnızca yazılı içeriklerin niteliğiyle değil, öğretmenlerin söz konusu programı ne ölçüde içselleştirdiği, uygulamada ne gibi zorluklarla karşılaştığı ve programın amaçlanan hedeflere ne ölçüde ulaştığı ile değerlendirilmelidir (Guskey, 2002; Cuban, 1990). Dolayısıyla program değişikliklerinin gerçek etkilerinin anlaşılması, öğretmen deneyimlerinin ve sınıf içi uygulama süreçlerinin sistematik biçimde değerlendirilmesini gerektirir. Bu noktada, Aydınlatıcı Program Değerlendirme Modeli (Illuminative Evaluation Model), klasik hedefe dayalı değerlendirme modellerinden farklı olarak, yalnızca önceden belirlenmiş çıktıların değil, bağlam, süreç ve uygulayıcı etkileşimlerinin de analiz edilmesini önererek daha esnek ve açıklayıcı bir değerlendirme yaklaşımı sunar (Parlett ve Hamilton, 1976; Alkin ve Christie, 2004). Bu model, öğretmenlerin uygulama sürecinde yaşadığı deneyimleri, ortaya çıkan zorlukları ve bağlamsal değişkenleri dikkate alarak programın sahadaki gerçekliğini ortaya koymayı hedefler. Özellikle gelişmekte olan ülkelerde, uygulama-çıktı arasındaki boşluğun belirlenmesinde bu modelin değerli katkılar sunduğu literatürde vurgulanmaktadır (Fitzpatrick, Sanders ve Worthen, 2011).

Bu araştırmanın temel amacı, 2024 yılında yürürlüğe giren 4. Sınıf Matematik Öğretim

Programını, Aydınlatıcı Program Değerlendirme Modeli çerçevesinde değerlendirerek, programın sınıf öğretmenleri tarafından nasıl algılandığını, uygulamada ne tür deneyimlerin yaşandığını ve uygulama sürecinde ne gibi sorunlarla karşılaşıldığını karma yöntem yaklaşımıyla ortaya koymaktır. Araştırma, bu yönüyle yalnızca mevcut programın değerlendirilmesine değil, gelecekte yapılacak program geliştirme çalışmalarına da öğretmen temelli ve bağlama duyarlı öneriler sunarak katkı sağlamayı hedeflemektedir.

Yöntem

Bu çalışma, karma yöntem (mixed methods) yaklaşımı kapsamında açıklayıcı sıralı desen (explanatory sequential design) kullanılarak yapılandırılmıştır. Açıklayıcı sıralı desen, ilk aşamada nicel verilerin toplanması ve analiz edilmesi, ardından bu bulguların nitel verilerle desteklenerek daha derinlemesine yorumlanması esasına dayanır (Creswell ve Plano Clark, 2018). Bu yöntem, sayısal verilerle ortaya çıkan eğilimlerin, öğretmenlerin deneyim ve görüşleriyle desteklenerek daha anlamlı bir şekilde yorumlanmasına olanak tanımaktadır. Bu modelin tercih edilmesinin nedeni, 2024 yılında güncellenen 4. sınıf matematik öğretim programının öğretmenler tarafından nasıl algılandığını yalnızca ölçümlerle değil, aynı zamanda öğretmenlerin bağlam-temelli deneyimleriyle de bütüncül biçimde değerlendirme gerekliliğidir. Nitel bulgular, nicel verilerdeki eğilimlerin gerekçelendirilmesini ve daha bağlamsal analizlerin yapılmasını mümkün kılmıştır.

Çalışma Grubu

Araştırmanın nicel bölümünü, 2023–2024 eğitim-öğretim yılında Türkiye'nin yedi coğrafi bölgesinde devlet veya özel ilkokullarda görev yapan 178 sınıf öğretmeni oluşturmaktadır. Tabakalı örnekleme (stratified sampling) tekniği ile her bölgeden eşit sayıda öğretmen seçilmesine özen gösterilmiş, bölgesel temsil yetisinin artırılması amaçlanmıştır (Büyüköztürk ve ark., 2022). Katılımcıların %72'si devlet okulunda, %28'i özel okulda çalışmaktadır; %58'i kırsal, %42'si kentsel bölgede görev yapmaktadır.

Araştırmanın nitel bölümünde, maksimum çeşitlilik örnekleme yöntemiyle seçilmiş 22 sınıf öğretmeni yer almıştır. Bu yöntem, farklı okul türlerinde (merkez-köy, taşınmalı sistem, özel okul vb.) çalışan öğretmenlerin görüşlerinin alınmasını sağlayarak elde edilen verilerin

çeşitliliğini ve geçerliliğini artırmaktadır (Patton, 2015). Katılımcıların yaş, mesleki kıdem, okul türü, öğrenci sayısı gibi değişkenlerde çeşitlilik göstermesi dikkate alınmıştır.

Veri Toplama Araçları

Anket Formu

Nicel veriler, araştırmacı tarafından geliştirilen ve uzman görüşü ile geçerlik-güvenirlik sürecinden geçirilen **20 maddelik 5’li Likert tipi bir ölçek** aracılığıyla toplanmıştır. Ölçekte dört temel boyut yer almaktadır:

- **Program hedeflerine ilişkin algılar** (5 madde),
- **İçerik ve kapsam yeterliliği** (5 madde),
- **Öğretim-öğrenme süreci uygulamaları** (5 madde),
- **Ölçme-değerlendirme uygulamaları** (5 madde).

Yarı Yapılandırılmış Görüşme Formu

Nitel veriler için kullanılan yarı yapılandırılmış görüşme formu, literatür taraması ve uzman görüşleri doğrultusunda oluşturulmuş **6 açık uçlu sorudan** oluşmaktadır. Sorular; öğretim programının anlaşılabilirliği, uygulanabilirliği, kazanım yoğunluğu, öğretim materyalleri, sınıf içi uyarlama ve ölçme-değerlendirme zorlukları gibi temalara yöneliktir. Görüşmeler ses kayıt cihazı ile kayıt altına alınmış, ortalama 20–25 dakika sürmüştür.

Veri Analizi

Nicel Veri Analizi

Katılımcılardan elde edilen nicel veriler üzerinde betimsel istatistikler (frekans ve yüzde dağılımları) yapılmıştır.

Nitel Veri Analizi

Nitel veriler, **betimsel analiz** ve **tematik kodlama** yöntemi ile çözümlenmiştir. Öncelikle ses kayıtları yazıya dökülmüş, ardından araştırma sorularına uygun olarak temalar oluşturulmuş ve veriler bu temalara göre sınıflandırılmıştır. Kodlama süreci iki bağımsız araştırmacı tarafından yürütülmüş ve kodlar arası uyum oranı %87 olarak hesaplanmıştır. Bu oran, nitel analizde geçerli sayılan eşik değerin üzerindedir (Miles ve Huberman, 1994).

Bulgular

Bu bölümde, 2024 yılında güncellenen 4. sınıf matematik öğretim programına ilişkin olarak öğretmenlerden elde edilen nicel ve nitel verilerin çözümlenmesine dayalı bulgulara yer verilmiştir. İlk olarak, öğretim programının dört temel bileşeni olan hedefler-kazanımlar, içerik ve öğrenme alanları, öğretim-öğrenme süreçleri ile ölçme-değerlendirme uygulamalarına ilişkin nicel veriler tablolar hâlinde sunulmuş; öğretmenlerin görüşlerine dayalı yüzdelik dağılımlar yorumlanmıştır. Ardından, yarı yapılandırılmış görüşmeler yoluyla elde edilen nitel veriler analiz edilerek öğretmenlerin deneyim, gözlem ve değerlendirmeleri temalar altında sınıflandırılmış ve her bir tema kapsamlı şekilde tartışılmıştır. Sunulan bulgular, programın kuramsal yeterliliği ile uygulamadaki karşılığı arasında ortaya çıkan durumu çok boyutlu olarak ortaya koymayı amaçlamaktadır.

Nicel Bulgular

Tablo 1’de öğretmenlerin programın hedef ve kazanımlarına ilişkin algıları, her madde ifadesi düzeyinde incelenmiştir. Aşağıdaki tabloda, bu boyutta yer alan 5 maddeye verilen yanıtların yüzdelik dağılımı yer almaktadır.

Tablo 1. Hedef ve Kazanımlar Boyutuna İlişkin Yüzde Dağılımları

Maddeler	Kesinlikle Katılıyorum (%)	Katılmıyorum (%)	Kararsızım (%)	Katılıyorum (%)	Kesinlikle Katılıyorum (%)
Madde 1	5	10	25	85	53
Madde 2	2	14	27	89	46
Madde 3	3	11	24	90	50
Madde 4	4	13	22	88	51
Madde 5	6	17	26	83	46

Hedef ve kazanımlara ilişkin değerlendirmelerde öğretmenlerin büyük çoğunluğu (%85'e varan oranlarla) bu boyutu olumlu bulmuştur. Özellikle programın hedeflerinin çağdaş matematik eğitimi anlayışını yansıttığı ve öğrencilerin düşünme becerilerini geliştirmeye yönelik olduğu yönündeki ifadeler, “Katılıyorum” ve “Kesinlikle katılıyorum” düzeylerinde yüksek oranlarda desteklenmiştir. Bununla birlikte, “programda yer alan kazanımların sayıca fazla olması nedeniyle uygulamada zaman yönetiminin zorlaştığı” yönündeki ifadeye verilen “Kesinlikle katılıyorum” oranının %46’ya düşmesi, bazı öğretmenlerin programdaki kazanımların yoğunluğu nedeniyle uygulama zorluğu yaşadığını göstermektedir. Bu durum, hedeflerin kuramsal olarak güçlü ve çağın gerekliliklerine uygun biçimde yazılmış olmasına rağmen, uygulamada süre sınırlılığı, içerik fazlalığı ve sınıf ortamına ilişkin bazı yapısal faktörlerin bu hedeflerin etkili biçimde gerçekleştirilmesini zorlaştırdığını düşündürmektedir. Bu bulgu, özellikle nitel verilerde sıkça dile getirilen "zaman yetmeme", "kazanım fazlalığı", "programın sıkışıklığı" gibi eleştirilerle örtüşmektedir.

Öğretim programının içerik yapısı ve öğrenme alanlarına yönelik öğretmen görüşleri aşağıdaki tabloda sunulmuştur. Her madde, içerik uygunluğu ve uygulanabilirliği açısından değerlendirilmiştir.

Tablo 2. İçerik ve Öğrenme Alanları Boyutuna İlişkin Yüzde Dağılımları

Madde İfadesi	Kesinlikle Katılıyorum (%)	Katılmıyorum (%)	Kararsızım (%)	Katılıyorum (%)	Kesinlikle Katılıyorum (%)

Madde 1	4	12	28	87	47
Madde 2	3	13	23	89	50
Madde 3	2	15	29	84	48
Madde 4	5	18	30	80	45
Madde 5	3	14	27	85	49

İçerik boyutu da genelde olumlu değerlendirilmiş, özellikle “içeriklerin öğrencinin gelişim düzeyine uygun olarak yapılandırıldığı” ve “kazanımlarla içerik arasında anlamlı bir ilişki kurulduğu” gibi ifadelerle öğretmenlerin %85’in üzerinde “Katılıyorum” düzeyinde görüş bildirdiği görülmüştür. Bununla birlikte, “somut materyal kullanımına yönelik örneklerin yeterli olmadığı” ve “öğrenme alanlarındaki içeriklerin sınıf içi uygulamalarla ilişkilendirilmesinde eksiklik yaşandığı” yönündeki ifadelerle öğretmenlerin yaklaşık üçte biri kararsız kalmış ya da katılmadığını belirtmiştir. Bu durum, içerikte yer verilen temaların güncel ve yaşamla ilişkili olduğunun kabul edildiğini; ancak içeriklerin sınıf içi uygulamaya entegrasyonunda materyal desteği ve uygulama rehberliği açısından eksiklikler yaşandığını göstermektedir. Öğretmenlerin içerik uygunluğunu genel olarak olumlu değerlendirmesine rağmen, bunu sınıf içinde destekleyecek araç-gereçlerin, etkinlik örneklerinin ya da kılavuzların yetersiz oluşu, içerik ile pedagojik uygulama arasında bir boşluk oluşturmakta ve programın etkili şekilde uygulanmasını sınırlamaktadır.

Aşağıdaki tablo, öğretmenlerin öğretim-öğrenme sürecine dair deneyimlerini ve programın sınıf içi uygulanabilirliğine ilişkin algılarını göstermektedir.

Tablo 3. Öğretim-Öğrenme Süreci Boyutuna İlişkin Yüzde Dağılımları

Madde İfadesi	Kesinlikle Katılmıyorum (%)	Katılmıyorum (%)	Kararsızım (%)	Katılıyorum (%)	Kesinlikle Katılıyorum (%)
Madde 1	6	20	25	80	47
Madde 2	5	22	28	77	46
Madde 3	9	25	27	75	42
Madde 4	7	21	29	76	45
Madde 5	6	23	26	78	45

Bu boyut, genel olarak öğretmenlerin daha temkinli yaklaştığı bir alan olmuştur. Özellikle “bireysel farklılıklara göre öğretimin planlanmasının zor olduğu” ve “öğretim sürecinde yapılandırmacı yaklaşımın gerektirdiği öğrenci etkinliklerinin sınıf ortamında uygulanmasının güç olduğu” yönündeki ifadelerle verilen “Katılmıyorum” ve “Kararsızım” oranlarının %50’nin üzerine çıkması dikkat çekicidir. Bu durum, öğretmenlerin aktif öğrenme, işbirliğine dayalı öğrenme ve bireyselleştirme gibi çağdaş öğretim yaklaşımlarını kuramsal olarak olumladıklarını; ancak uygulamada sınıf mevcutlarının yüksekliği, ders saatlerinin sınırlılığı ve öğrenciler arası düzey farklılıklarının fazla oluşu gibi faktörler nedeniyle bu süreçleri etkili biçimde hayata geçiremediklerini ortaya koymaktadır. Ayrıca “öğrenci merkezli yöntem ve tekniklerin öğretim sürecine entegrasyonunda zorlanıldığı” yönündeki görüşlerin de kararsızlık oranlarının yüksekliğiyle öne çıkması, öğretmenlerin pedagojik inançları ile sınıf içi gerçeklik arasında sıkıştığını göstermektedir. Bu bulgu, özellikle programın öğretim süreci boyutunun sahada daha fazla desteklenmesi gerektiğine işaret etmektedir.

Programın ölçme ve değerlendirme yaklaşımına ilişkin öğretmen görüşleri aşağıdaki tabloda maddeler temelinde özetlenmiştir.

Tablo 4. Ölçme ve Değerlendirme Boyutuna İlişkin Yüzde Dağılımları

Madde İfadesi	Kesinlikle Katılmıyorum (%)	Katılmıyorum (%)	Kararsızım (%)	Katılıyorum (%)	Kesinlikle Katılıyorum (%)
Madde 1	4	15	26	85	48
Madde 2	6	13	24	88	47
Madde 3	3	14	27	84	50
Madde 4	5	16	25	86	46
Madde 5	7	18	28	80	45

Ölçme-değerlendirme boyutu, öğretmenler tarafından genel anlamda olumlu değerlendirilmiştir. Özellikle “programda değerlendirme süreçlerinin öğrencilerin düşünme süreçlerine odaklandığı” ve “ölçme ve değerlendirme yöntemlerinin öğrencinin gelişimini izlemeye olanak tanıdığı” gibi ifadelere %85’in üzerinde “Katılıyorum” düzeyinde yanıt verilmesi, çağdaş değerlendirme anlayışının öğretmenlerce pedagojik olarak benimsendiğini göstermektedir. Bununla birlikte, “sürece dayalı ve açık uçlu ölçme araçlarının uygulanmasında zaman ve kaynak eksikliği yaşandığı” yönündeki ifadeye verilen “Kesinlikle katılıyorum” oranının görece düşük olması, öğretmenlerin bu tür araçları uygulamada güçlük yaşadıklarını ortaya koymaktadır. Özellikle çoklu sınıf ortamlarında, bireysel değerlendirme yapma gerekliliği öğretmenler için zaman açısından ciddi bir yük oluşturmaktadır. Ayrıca bazı öğretmenlerin ölçme-değerlendirme uygulamalarında hâlâ geleneksel sınav tekniklerine yöneldiği; bunun bir nedeninin de yenilikçi ve dijital ölçme araçlarına erişim sınırlılığı olduğu ifade edilebilir. Bu bulgular, çağdaş değerlendirme yöntemlerinin kuramsal düzeyde benimsenmesine rağmen, uygulamada yeterince desteklenmediğini ortaya koymaktadır.

Nitel Bulgular

Aşağıda katılımcılardan yarı yapılandırılmış görüşme formu ile elde edilen bulgulara yer verilmiştir.

Programın Anlaşılabilirliği

Görüşme yapılan öğretmenlerin büyük çoğunluğu (n=16), 2024 yılında güncellenen 4. sınıf matematik öğretim programının dil açısından sadeleştirilmiş ve önceki versiyonlara kıyasla daha anlaşılır olduğunu ifade etmiştir. Katılımcılar, özellikle kazanımların ve açıklayıcı örneklerin daha açık biçimde yazıldığını vurgulamıştır. Bir öğretmen bu durumu şu ifadeyle dile getirmiştir:

“Program daha sade bir dille yazılmış, önceki programa göre ne anlatmak istediğini daha iyi anlıyoruz. Bu bizim hazırlık süremizi de kısaltıyor.” (Öğretmen 10)

Ancak bazı katılımcılar, özellikle ölçme-değerlendirme ve üst düzey becerilerle ilişkili kazanımlarda hâlâ soyut kavramların bulunduğunu ve bu durumun bazı öğretmenler için açıklık sorununa neden olabileceğini belirtmiştir.

Kazanım Yoğunluğu

Programın kapsam açısından zengin olduğu ifade edilmekle birlikte, katılımcıların büyük bir bölümü (n=18), kazanım sayısının fazlalığının sınıf içi uygulamaları zorlaştırdığını belirtmiştir. Öğretmenler, haftalık matematik ders saatinin tüm kazanımları etkin bir şekilde işlemek için yetersiz olduğunu vurgulamıştır:

“Kazanımlar oldukça fazla, haftalık saatler yeterli değil. Hepsini yetiştiremiyoruz. Sürekli hız yapmak zorunda kalıyoruz.” (Öğretmen 17)

Bu durum, öğretmenlerin hem derinlemesine öğretim yapmasını engellemekte hem de öğrencilerde kavramların kalıcılığı açısından sorun yaratmaktadır.

Öğretim Materyalleri ve Uygulama Araçları

Katılımcıların çoğu (n=14), programda önerilen öğretim materyalleri ve araçlarının sınıf içi uygulamalar açısından önemli bir gelişme olduğunu kabul etmekle birlikte, tüm okulların bu materyallere erişim sağlayamadığını ifade etmiştir. Özellikle kırsal bölgelerde görev yapan öğretmenler bu konuda ciddi eksiklik yaşandığını vurgulamıştır:

“Bazı konular için somut materyal önerileri var ama bunlar tüm okullarda ulaşılabilir değil. Biz kendi imkanlarımızla çözümler bulmaya çalışıyoruz.” (Öğretmen 13)

Bu bulgu, program tasarımı ile uygulama koşulları arasında bir eşitsizlik olduğunu göstermektedir.

Sınıf İçi Uyum ve Öğretim Süreci

Katılımcıların neredeyse tamamı (n=20), öğretim sürecinin bireyselleştirilmiş, öğrenci merkezli ve aktif öğrenmeyi destekleyici bir yapıya sahip olduğunu belirtmiştir. Ancak uygulamada bu süreci gerçekleştirmekte ciddi zorluklar yaşadıklarını ifade etmişlerdir:

“Öğrenci seviyeleri çok farklı. Aynı sınıfta farklı yöntem uygulamak zorunda kalıyoruz ama zaman yetmiyor.” (Öğretmen 1)

Bu bulgular, programın pedagojik olarak güçlü olduğu ancak uygulama ortamlarının bu gücü destekleyemediği durumlara işaret etmektedir.

Ölçme ve Değerlendirme Zorlukları

Programın ölçme-değerlendirme yaklaşımında açık uçlu sorulara, süreç değerlendirmeye ve öz değerlendirme uygulamalarına yer verilmesi öğretmenler tarafından yenilikçi bulunmuştur. Ancak bu süreçlerin uygulamaya geçirilmesinde başta zaman olmak üzere çeşitli zorluklar yaşanmaktadır (n=17):

“Açık uçlu değerlendirmeler öneriliyor ama sınıf sayısı çok fazla, hepsine bireysel geri bildirim veremiyoruz.” (Öğretmen 6)

Bu durum, öğretmenlerin alternatif değerlendirme araçlarına olan olumlu tutumlarını gölgeleme riski taşımaktadır.

Genel Uygulanabilirlik Değerlendirmesi

Genel değerlendirme açısından öğretmenler (n=19), programın çağdaş yaklaşımları yansıtması, öğrenci merkezli anlayışı benimsemesi ve kazanım-materyal uyumu açısından gelişmiş olmasını olumlu bulmuştur. Ancak uygulama koşullarındaki zorluklar bu olumlu yönlerin etkisini azaltmaktadır:

“Genel olarak olumlu ama bazı konular fazla soyut. Özellikle kırsalda anlatmak zor oluyor.” (Öğretmen 14)

Bu ifadeler, öğretim programlarının sadece içerik ve yöntem açısından değil, aynı zamanda uygulama bağlamı dikkate alınarak geliştirilmesi gerektiğini ortaya koymaktadır.

Tartışma ve Sonuç

Bu araştırma, 2024 yılı itibarıyla Türkiye Yüzyılı Maarif Modeli kapsamında güncellenen 4. sınıf matematik öğretim programının uygulayıcıları olan öğretmenlerin deneyimlerini, algılarını ve karşılaştıkları zorlukları aydınlatıcı program değerlendirme modeli bağlamında incelemiştir. Bulgular, öğretmenlerin programın temel felsefesi, hedef yapısı, içerik bütünlüğü ve pedagojik yönelimi konusunda büyük oranda olumlu düşünceler taşıdığını göstermektedir. Bu sonuç, güncel öğretim programlarının 21. yüzyıl becerileri ve öğrenci merkezli öğrenme anlayışına yakınsadığını ve kuramsal temelde güçlü biçimde tasarlandığını ortaya koymaktadır. Ancak, öğretmen görüşlerinin ayrıntılı incelenmesi, programın uygulanması sürecinde ciddi bağlamsal, yapısal ve operasyonel sınırlılıkların yaşandığını da göstermektedir. Özellikle kazanım sayısının fazlalığı, sınıf mevcudunun yüksekliği, ders süresinin yetersizliği ve öğretim materyali eksikliği gibi faktörler, öğretmenlerin programı bütüncül ve etkili biçimde uygulamalarını zorlaştırmaktadır. Bu durum, eğitimde sıkça

karşılaşılan bir çelişkiyi gündeme getirmektedir: Merkezi düzeyde yapılan yapısal reformların, sahadaki uygulama gerçekliğiyle tam anlamıyla örtüşmemesi (Fullan, 2007; Cuban, 1990).

Aydınlatıcı Program Değerlendirme Modeli (Parlett & Hamilton, 1976), bu çalışmada yalnızca öğretim programının içerik analizini yapmakla kalmayıp, aynı zamanda programın sınıf içi bağlamda nasıl yaşandığını ve uygulayıcılarla nasıl etkileşime girdiğini anlamayı mümkün kılmıştır. Bu modelin ortaya koyduğu bakış açısıyla, öğretim programının yalnızca bir planlama belgesi değil, aynı zamanda öğretmenlerin pedagojik kararlılıkları ve uygulama kapasitesi ile şekillenen canlı bir yapı olduğu görülmüştür. Öğretmenlerin programla kurduğu ilişki, onların yalnızca uygulayıcı değil, aynı zamanda anlam yükleyici ve uyarlayıcı olduklarını da göstermektedir (Guskey, 2002).

Aşağıdaki tablo, tartışma bölümünde ele alınan başlıca sorun alanlarını, bu sorunların ortaya çıkış nedenlerini ve önerilen çözüm yollarını özetlemektedir:

Tablo 5. Özet

Karşılaşılan Sorun	Temel Neden	Önerilen Çözüm
Kazanım sayısının fazla olması	Haftalık ders süresinin yetersizliği	Kazanım sayısının sadeleştirilmesi veya ders süresinin artırılması
Aktif öğrenmenin sınırlı uygulanması	Kalabalık sınıflar, fiziksel altyapı eksikliği	Sınıf mevcutlarının azaltılması, öğretim ortamlarının iyileştirilmesi
Öğretim materyallerinin yetersizliği	Programın materyal destekli kılavuzlarla yeterince bütünleşmemesi	MEB tarafından programla uyumlu materyal setlerinin geliştirilmesi
Biçimlendirici değerlendirme yöntemlerinin uygulanamaması	Zaman yetersizliği, öğrenci sayısının fazlalığı	Alternatif değerlendirme araçları ve dijital formlarla desteklenmesi
Programın bireysel farklılıklara tam cevap verememesi	Esneklik ilkesinin yeterince tanımlanmamış olması	Programın yerelleştirilmesine olanak tanıyan uyarlanabilir kazanımlar sunulması

Bu tablo aracılığıyla görüldüğü üzere, öğretim programlarının etkili uygulanabilmesi yalnızca içeriksel kaliteyle değil, aynı zamanda uygulama bağlamlarının desteklenmesiyle mümkündür. Öğretmenlerin programın gerektirdiği pedagojik yaklaşımları uygulayabilmeleri için sistem düzeyinde desteklenmeleri şarttır.

Sonuç olarak, öğretim programının sahadaki etkililiğini artırmaya yönelik bazı stratejik öneriler geliştirilmiştir. Bu öneriler, yalnızca öğretmenlerin ihtiyaçlarını karşılamakla kalmayıp, aynı zamanda program geliştirme süreçlerine sahadan gelen geri bildirimlerin etkin biçimde entegre edilmesine olanak tanıyacaktır:

1. Sürekli mesleki gelişim programları düzenlenmelidir.
2. Öğretim materyal ve kaynakları artırılmalıdır.
3. Ders süresi gözden geçirilmeli ve sınıf mevcudu azaltılmalıdır.
4. Programda esneklik ilkesine yer verilmelidir.

Bu araştırma, program geliştirme süreçlerinde öğretmen geri bildirimlerinin dikkate alınmasının önemini bir kez kez daha ortaya koymuştur. Gelecekte yapılacak çalışmalarda, öğrenci performans verilerinin de sürece entegre edilmesi, öğretim programlarının etkililiğini artırmaya yönelik daha derinlemesine önerilerin geliştirilmesine katkı sağlayacaktır.

Abstract

Today, artificial intelligence (AI) technologies are increasingly integrated into educational settings and are being utilized across various domains to enhance the quality of teaching and learning processes. The effective use of these technologies in developing pedagogical competencies holds critical importance, particularly within teacher education programs. Although the potential of AI-supported tools in education has been widely acknowledged in the literature, studies focusing on their integration into the development of learning outcome-oriented question writing and assessment skills among pre-service teachers remain limited. In this context, it becomes essential to support teacher candidates' assessment and evaluation competencies through AI-enhanced learning environments. The aim of this study is to design a training program that supports teachers' and teacher candidates' ability to write and assess learning outcome-based questions using AI-supported tools. The program to be developed will be structured to include both cognitive and practical components. Within the scope of the program, it is aimed to engage participants in activities such as writing open-ended and multiple-choice questions based on different taxonomies, analyzing the questions in terms of content and difficulty level, evaluating AI-generated questions, and revising their own questions. This study intends to restructure teacher candidates' assessment and evaluation competencies in alignment with the demands of the digital age. Furthermore, it is expected to contribute to the development of participants' critical thinking, digital literacy, and pedagogical design skills. The proposed program is anticipated to offer a novel and applicable model for integration into teacher education programs, thereby making a unique contribution to both academic literature and educational practice.

Keywords: Artificial intelligence, teacher education, assessment and evaluation, digital pedagogical skills.

Bu araştırma, Hakkâri Üniversitesi tarafından desteklenen FM25BAP5 kod numaralı "Geleceğin Eğitimcileri için Yapay Zekâ Destekli Kazanım Odaklı Madde (Soru) Yazma ve Değerlendirme Eğitimi" konulu BAP projesi kapsamında yürütülmüştür.

Öğrenme Kazanımı Temelli Soru Yazma ve Değerlendirme Becerilerini Geliştirmeye Yönelik Yapay Zekâ Destekli Bir Eğitim Programı Tasarımı

Özet

Günümüzde yapay zekâ (YZ) teknolojileri, eğitim ortamlarına giderek daha fazla entegre edilmekte ve öğretim süreçlerinin niteliğini artırmak amacıyla çeşitli alanlarda kullanılmaktadır. Bu teknolojilerin pedagojik yeterliklerin geliştirilmesinde etkili biçimde kullanılması, özellikle öğretmen yetiştirme programları bağlamında kritik bir öneme sahiptir. Literatürde YZ destekli araçların eğitimdeki potansiyeli sıklıkla vurgulanmasına rağmen, bu araçların öğretmen adaylarının öğrenme kazanımı temelli soru yazma ve değerlendirme becerilerinin gelişimine entegrasyonu üzerine yapılan çalışmalar sınırlıdır. Bu bağlamda, öğretmen adaylarının ölçme ve değerlendirme yeterliklerinin yapay zekâ destekli öğrenme ortamları aracılığıyla desteklenmesi gerekliliği ortaya çıkmaktadır. Bu çalışmanın amacı, öğretmen ve öğretmen adaylarının öğrenme kazanımı temelli sorular yazma ve bu soruları değerlendirme becerilerini YZ destekli araçlar kullanarak geliştirmeyi hedefleyen bir eğitim programı tasarlamaktır. Geliştirilecek program, bilişsel ve uygulamalı bileşenleri içerecek şekilde yapılandırılacaktır. Program kapsamında katılımcıların; farklı taksonomilere dayalı açık uçlu ve çoktan seçmeli sorular yazma, soruları içerik ve zorluk düzeyine göre analiz etme, yapay zekâ tarafından üretilen soruları değerlendirme ve kendi yazdıkları soruları yeniden düzenleme gibi etkinliklere katılmaları hedeflenmektedir. Bu çalışma, öğretmen adaylarının ölçme ve değerlendirme yeterliklerini dijital çağın gerekliliklerine uygun olarak yeniden yapılandırmayı amaçlamaktadır. Ayrıca katılımcıların eleştirel düşünme, dijital okuryazarlık ve pedagojik tasarım becerilerinin gelişimine de katkı sağlaması beklenmektedir. Tasarlanan bu programın, öğretmen eğitimi programlarına entegre edilebilecek yenilikçi ve uygulanabilir bir model sunarak hem akademik literatüre hem de eğitim pratiğine özgün katkılar sağlaması öngörülmektedir.

Anahtar Kelimeler: Yapay zekâ, öğretmen eğitimi, ölçme ve değerlendirme, dijital pedagojik beceriler.

Giriş

Günümüz eğitim ortamlarında, teknolojik dönüşüm yalnızca öğrenme ortamlarını değil, öğretmen rolleri ve öğretim süreçlerinin doğasını da yeniden tanımlamaktadır. Bu dönüşümde yapay zekâ (YZ) destekli araçlar, öğretim tasarımı, bireyselleştirilmiş öğrenme, içerik oluşturma, ölçme ve değerlendirme gibi birçok boyutta önemli fırsatlar sunmaktadır (Luckin ve ark., 2016; Holmes ve ark., 2022). Eğitimde yapay zekânın etkili kullanımı, öğretmenlerin dijital becerilerini artırmakla kalmamakta; aynı zamanda öğrencilerin düşünme becerileri, öz düzenleme ve geri bildirim alma süreçlerini de daha nitelikli hâle getirmektedir (Zawacki-Richter ve ark., 2019).

Bununla birlikte, ölçme ve değerlendirme boyutu, yapay zekânın henüz sistematik olarak yeterince entegre edilemediği alanlardan biri olarak öne çıkmaktadır. Özellikle öğretmen adaylarının ölçme-değerlendirme yeterlikleri incelendiğinde, çoğunlukla klasik bilgi düzeyi sorularına yöneldikleri, üst düzey bilişsel becerilere hitap eden sorular üretme, madde analiz etme veya dijital ölçme araçlarını kullanma konusunda yeterince donanımlı olmadıkları görülmektedir (Karakaya ve Karakaya, 2021; Çakan ve Altun, 2020). Bu durum, öğretmen adaylarının sadece geleneksel ölçme uygulamalarını değil, aynı zamanda çağın gerektirdiği eleştirel düşünme, taksonomik analiz, YZ destekli değerlendirme gibi alanlarda da eksiklik yaşadığını göstermektedir.

Öte yandan, Türkiye Yüzyılı Maarif Modeli ile birlikte öğrenme kazanımlarının merkezde yer aldığı, beceri temelli, analitik düşünmeyi teşvik eden bir öğretim anlayışı benimsenmiştir (MEB, 2023). Bu dönüşüm, öğretmenlerin sadece öğretim içeriğini sunmakla yetinmeyip, aynı zamanda bu içeriklerin doğru biçimde değerlendirilmesini sağlayacak araçları etkili biçimde kullanmalarını da zorunlu kılmaktadır. Öğrenme çıktısı (kazanım) temelli soru yazımı, hem öğrenci başarısının izlenmesi hem de öğretim sürecinin yönlendirilmesi açısından kritik bir beceridir. Ancak öğretmen adaylarının bu becerileri edinmelerini sağlayacak yapılandırılmış ve dijital destekli uygulama programlarının eksikliği, sahada nitelikli ölçme süreçlerinin oluşmasını engellemektedir.

Bu bağlamda, yapay zekâ destekli araçlarla öğretmen adaylarının kazanım odaklı madde yazma ve değerlendirme becerilerini geliştirmeye yönelik bir eğitim programının tasarımı, hem bilimsel literatüre hem de öğretmen eğitimi uygulamalarına önemli katkılar sunma potansiyeline sahiptir. Özellikle GPT tabanlı sistemler (örneğin ChatGPT), soru üretme, zorluk analizi yapma ve öğretmenlere anında geri bildirim sağlama gibi işlevlerle öğretmen adaylarının aktif öğrenme sürecine katılımını artırabilir. Bu program aracılığıyla, öğretmen

adaylarının sadece teknik becerileri değil; aynı zamanda eleştirel düşünme, pedagojik yargı ve dijital ölçme okuryazarlığı gibi üst düzey yetkinlikleri geliştirmesi amaçlanmaktadır.

Sonuç olarak bu çalışma, öğretmen eğitiminde yapay zekâ destekli araçların entegrasyonunu somutlaştırarak, öğretmen adaylarının ölçme-değerlendirme yeterliklerini güçlendirecek özgün ve bütüncül bir eğitim programı önerisi sunmayı amaçlamaktadır.

Yöntem

Bu çalışma, öğretmen ve öğretmen adaylarının kazanım odaklı madde yazma ve değerlendirme yeterliklerinin artırılmasına yönelik yapay zekâ destekli bir eğitim programı tasarlamayı amaçlayan bir tasarım temelli araştırmadır (design-based research - DBR). Tasarım temelli araştırmalar, hem kuram hem de uygulama arasında köprü kurmayı hedefleyen, gerçek bağlamlarda gerçekleştirilen müdahalelerin etkilerini inceleyerek eğitsel yeniliklerin geliştirilmesini sağlayan bir araştırma yaklaşımıdır (Reeves, 2006; Anderson ve Shattuck, 2012).

Araştırma Aşamaları

Tasarım temelli araştırmalar genellikle dört temel aşamadan oluşur:

1. **Analiz ve keşif (analysis and exploration)**
2. **Tasarım ve geliştirme (design and construction)**
3. **Uygulama ve revizyon (implementation and refinement)**
4. **Genelleme ve kuramsallaştırma (evaluation and reflection)**

Bu çalışmada söz konusu aşamalar aşağıdaki şekilde uygulanmıştır:

- **İhtiyaç Analizi:** İlk aşamada, öğretmen adaylarının ölçme-değerlendirme yeterlikleri ile ilgili mevcut durumları ortaya koymak amacıyla hem literatür taraması yapılmış hem de 30 öğretmen adayı ile ön görüşmeler gerçekleştirilmiştir. Bu analiz, programın hedeflerini ve bileşenlerini şekillendirmiştir.
- **Tasarım Geliştirme:** Program, Bloom'un Yenilenmiş Taksonomisi (Anderson ve Krathwohl, 2001), Haladyna'nın madde yazma kuralları (2002), YÖK yeterlikler çerçevesinde yapılandırılmıştır. Ayrıca ChatGPT, Quillionz, Testportal gibi yapay zekâ destekli araçların işlevsel analizleri yapılmış ve eğitsel değerlerine göre seçilmiştir.
- **Pilot Uygulama:** Program, Eğitim Fakültesi'nde öğrenim gören 12 öğretmen adayı ile 3 hafta süresince yürütülmüş, her oturumda bireysel ve grup temelli uygulamalara yer verilmiştir. Sürece katılan öğretmen adaylarının yazdığı sorular, akran değerlendirmesi ve öğretmen eğitmeni tarafından içerik analizine tabi tutulmuştur.

- **Revizyon ve Sonuçların Yorumlanması:** Pilot uygulama sonunda alınan nitel geri bildirimler ve uygulama sürecine ilişkin gözlemler doğrultusunda programın modül içerikleri, etkinlik örnekleri ve yönergeleri yeniden düzenlenmiştir.

Katılımcılar

Pilot uygulamaya, bir devlet üniversitesinin Eğitim Fakültesi Sınıf Öğretmenliği ve Türkçe Öğretmenliği programlarında öğrenim gören 12 öğretmen adayı gönüllü olarak katılmıştır. Katılımcı seçiminde maksimum çeşitlilik örnekleme kullanılmış; cinsiyet, başarı düzeyi ve teknoloji kullanımı açısından çeşitlilik gözetilmiştir.

Veri Toplama Araçları

Çalışma kapsamında hem nitel hem de nicel veriler toplanmıştır:

- **Yarı yapılandırılmış görüşme formu:** Katılımcıların programla ilgili deneyimlerini ve algılarını derinlemesine anlamak amacıyla hazırlanmış; 6 ana sorudan oluşmaktadır.
- **Madde analiz formları:** Katılımcıların yazdığı soruların taksonomik düzeyi, kapsam geçerliği ve dilsel doğruluk açısından değerlendirildiği rubrikler kullanılmıştır.
- **Ön test / son test başarı ölçütleri:** Programın etkisini izlemek için uygulama öncesi ve sonrası yazılan maddeler sayıca ve nitelikçe karşılaştırılmıştır.

Veri Analizi

- **Nitel veriler,** betimsel analiz ve içerik analizi yöntemiyle çözümlenmiş; her katılımcının görüşleri tematik olarak gruplandırılmıştır (Yıldırım & Şimşek, 2021).
- **Nicel veriler,** yazılan soruların sayısı, Bloom düzeyi, yapay zekâ ile üretilmiş maddelere verilen değerlendirme puanları gibi kategorilere göre sınıflandırılmış ve frekans dağılımları hesaplanmıştır.

2.5 Geçerlik ve Güvenirlik

Araştırmada yöntemsel bütünlüğü sağlamak amacıyla çoklu veri kaynağına (veri triangülasyonu) yer verilmiştir. Görüşme soruları ve madde analiz rubrikleri, iki alan uzmanı tarafından incelenmiş, içerik geçerliği sağlanmıştır. Kodlamalar bağımsız iki araştırmacı tarafından yapılmış, uyum oranı %88 olarak hesaplanmıştır.

Program Tasarımı

Bu çalışma kapsamında geliştirilen "Yapay Zekâ Destekli Kazanım Odaklı Madde Yazma ve Değerlendirme Eğitimi Programı", hem bilişsel hem uygulamalı bileşenleri içeren 5 modülden oluşmaktadır. Her modül, öğretmen adaylarının ölçme-değerlendirme yeterliklerini artırmayı hedefleyen kuramsal bilgilerle uygulamalı deneyimleri harmanlamaktadır.

Modül 1: Kazanım Analizi ve Taksonomik Sınıflama

- Öğrenme kazanımlarının analiz edilmesi
- Bloom'un Yenilenmiş Taksonomisi ve YÖK yeterlilikleri ile eşleştirme
- Etkinlik: Öğrenme kazanımlarının sınıflandırılması ve taksonomik düzeylerin belirlenmesi

Modül 2: Madde Yazım İlkeleri

- Açık uçlu ve çoktan seçmeli sorulara ilişkin yazım kuralları
- Haladyna'nın 27 maddelik ilkesel çerçevesi
- Etkinlik: Uygunsuz hazırlanmış soruların incelenmesi ve düzenlenmesi

Modül 3: Yapay Zekâ Destekli Soru Üretimi

- ChatGPT, Quillionz, Testportal gibi araçların tanıtımı
- Belirli kazanımlar doğrultusunda araçlarla soru üretimi
- Etkinlik: Aynı kazanıma yönelik farklı araçlarla soru yazımı ve karşılaştırılması

Modül 4: Soru Analizi ve Revizyon

- Soruların içerik, kapsam, taksonomi ve zorluk düzeyine göre değerlendirilmesi
- Yapay zekâ destekli maddelerin pedagojik açıdan incelenmesi
- Etkinlik: Akran değerlendirme ve madde revizyonu

Modül 5: Dijital Ortamda Değerlendirme Uygulamaları

- Testportal, Google Forms gibi araçlarla dijital test hazırlama
- Uygulanan testlerin otomatik analiz ve geri bildirim süreçleri
- Etkinlik: Bireysel dijital test tasarımı ve sınıf içi uygulama senaryoları

Programın her modülü, hedef, içerik, öğrenme çıktısı, etkinlik ve değerlendirme boyutlarıyla detaylandırılmıştır. Öğretmen adaylarının program sonunda kazanım odaklı düşünme, taksonomi bilgisi, dijital araç kullanımı ve madde analizi gibi çok yönlü beceriler geliştirmesi amaçlanmıştır.

Beklenen Kazanımlar ve Katkıları (Genişletilmiş)

Bu programın sonunda öğretmen adaylarının aşağıdaki yeterlikleri edinmesi hedeflenmektedir:

- Öğrenme kazanımlarını analiz ederek bu kazanımlara uygun ölçme maddeleri yazar.
- Farklı bilişsel düzeylerde açık uçlu ve çoktan seçmeli soru hazırlar.
- YZ araçlarıyla üretilen soruları pedagojik açıdan değerlendirir.
- Soruların kapsam geçerliği, dilsel doğruluğu, taksonomik uygunluğu ve zorluk düzeyini analiz eder.
- Dijital ölçme platformlarında test hazırlayarak uygulama yapar.

Programın öğretmen adaylarına sağlayacağı katkılar şu şekilde özetlenebilir:

1. **Dijital Pedagojik Yeterlik Gelişimi:** Program, dijital araçları pedagojik amaçlarla etkili kullanabilme becerisi kazandırır.
2. **Ölçme-Değerlendirme Kalitesinin Artırılması:** Kazanım odaklı ve taksonomik temelli madde yazımı yoluyla değerlendirmenin geçerliliği ve güvenirliliği artar.
3. **Eleştirel Düşünme ve Akran Öğrenmesi:** Katılımcılar, hem kendi maddelerini hem de başkalarının sorularını analiz ederek eleştirel düşünme becerilerini geliştirir.
4. **Yenilikçi Öğretmen Profili:** Yapay zekâ destekli teknolojileri kullanan ve değerlendirmeye çağdaş bir perspektifle yaklaşan öğretmen adayları yetiştirilmiş olur.

Sonuç ve Öneriler

Bu çalışmada, öğretmen adaylarının ölçme ve değerlendirme alanındaki becerilerini geliştirmeyi amaçlayan yenilikçi ve teknoloji entegrasyonlu bir eğitim programı sunulmuştur. Yapay zekâ destekli araçların program içine entegre edilmesiyle, klasik değerlendirme uygulamalarının ötesine geçilerek öğretmen adaylarının çağın gereklerine uygun dijital yeterlikler geliştirmesi sağlanmıştır.

Programın uygulanabilirliği ve öğretici değeri, pilot uygulama sonuçları ve katılımcı geri bildirimleriyle desteklenmiştir. Katılımcıların çoğu, YZ araçlarıyla çalışmanın soru üretiminde kolaylık sağladığını; ancak pedagojik kaliteyi korumak için öğretmen müdahalesinin hâlâ gerekli olduğunu vurgulamıştır. Bu durum, YZ'nin öğretmenlik mesleğini destekleyen fakat ikame etmeyen bir araç olduğunu ortaya koymaktadır.

Öneriler:

- Programın daha geniş gruplarda ve farklı branşlardaki öğretmen adaylarıyla uygulanması
- Öğretim teknolojileri ve ölçme-değerlendirme derslerine bu tür modüllerin entegre edilmesi
- Yapay zekâ destekli soru bankaları oluşturulması ve sürekli güncellenmesi
- YZ araçlarının etik kullanımı konusunda farkındalık kazandırılması

Bu çalışma, öğretmen eğitiminin yeniden yapılandırılmasında yapay zekâ teknolojilerinin yaratıcı ve pedagojik temelli bir şekilde nasıl kullanılabileceğine dair somut bir model sunmakta; hem akademik literatüre hem de uygulayıcı eğitimlere katkı sağlamaktadır.

Özet

Duygusal zekâ ve yaşam doyumu günümüzün önemli ve gerekli konuları arasında yer almaktadır. Duygusal zekâ kavramı içinde tanımlanan duyguları işleme ve kullanma bireyler arasında farklılık göstermektedir. Yaşam doyumu ise bireyin yaşamından duyduğu memnuniyet derecesinin bilişsel olarak ifadesidir. Duygusal zekâ yaşamda doyum ve başarı için gereklilik arz etmektedir. Bu çalışmanın amacı duygusal zekâ, yaşam doyumu ve sosyo-demografik değişkenler arasındaki ilişki ve farklılıkları tespit etmektir. Bu çalışma nicel araştırma yöntemlerinden ilişkisel tarama yöntemi ile yürütülmüştür. Çalışmanın örneklemini 18-70 yaş arası (ort.=26,26+10,51) Türkçe konuşan yetişkin bireyler oluşturmuştur (n=175). Veri toplamak amacıyla demografik bilgi formu, Riverside Yaşam Doyumu Ölçeği ve Duygusal Zekâ Özelliği Ölçeği-Kısa Formu kullanılmıştır. Yapılan normallik analizi sonucu verilerin normal dağılım gösterdiği tespit edilmiştir. Katılımcıların duygusal zekâ puan ortalaması 4,05+0,64, yaşam doyumu puan ortalaması 4,10+1,27 olarak hesaplanarak ortalama olarak bulunmuştur. Bu çalışmada duygusal zekâ ile yaşam doyumu arasında ilişki olmadığı saptanmıştır. Sosyo-demografik değişkenler açısından incelendiğinde, yaşam doyumu ve duygusal zekâ puan ortalamalarının cinsiyete, çalışma durumuna ve ilişki durumuna göre farklılaşmadığı tespit edilmiştir. Buna karşın katılımcıların yaşam doyumu ve duygusal zekâ puan ortalamalarının sosyo-ekonomik düzeye göre anlamlı olarak farklılaştığı bulunmuştur. Buna göre, sosyo-ekonomik düzeyinin normal düzeyde olduğunu ve iyi olmadığını belirten bireylerin duygusal zekâ puan ortalamalarının çok iyi olduğunu belirtenlerden anlamlı düzeyde daha düşük olduğu saptanmıştır. Sonuçlar yaşam doyumu puan ortalamaları açısından değerlendirildiğinde, sosyo-ekonomik düzeyinin normal düzeyde olduğunu ve iyi olmadığını belirten bireylerin yaşam doyumu puan ortalamalarının iyi ve çok iyi olduğunu belirtenlerden anlamlı düzeyde daha düşük olduğu saptanmıştır. Çalışmanın bulguları ilgili literatür kapsamında tartışılarak öneri bölümünde önerilere yer verilmiştir.

Anahtar kelimeler: Duygusal Zekâ, Yaşam Doyumu, Nicel Araştırma, Ölçek

Abstract

Emotional intelligence and life satisfaction are among the important and necessary issues today. Processing and using emotions defined within the concept of emotional intelligence varies among individuals. Life satisfaction is the cognitive expression of the degree of satisfaction of life. Emotional intelligence is necessary for satisfaction and success in life. The aim of this study is to determine the relationships and differences between emotional intelligence, life satisfaction and socio-demographic variables. This study was conducted with the relational screening method, which is one of the quantitative research methods. The sample of the study consisted of Turkish-speaking adults ($n=175$) aged between 18-70 ($\text{mean}=26.26\pm10.51$). Demographic information form, Riverside Life Satisfaction Scale and Emotional Intelligence Trait Scale-Short Form were used to collect data. As a result of the normality analysis, it was determined that the data showed a normal distribution. The participants' emotional intelligence score average was calculated as 4.05 ± 0.64 , and the life satisfaction score average was calculated as 4.10 ± 1.27 . In this study, it was determined that there was no relationship between emotional intelligence and life satisfaction. When examined in terms of socio-demographic variables, it was determined that the life satisfaction and emotional intelligence score averages did not differ according to gender, employment status and relationship status. On the other hand, it was found that the participants' life satisfaction and emotional intelligence score averages differed significantly according to socio-economic level. Accordingly, it was determined that the emotional intelligence score averages of individuals who stated that their socio-economic level was normal and not good were significantly lower than those who stated that it was very good. When the results were evaluated in terms of life satisfaction score averages, it was determined that the life satisfaction score averages of individuals who stated that their socio-economic level was normal and not good were significantly lower than those who stated that it was good and very good. The findings of the study were discussed within the scope of the relevant literature and suggestions were included in the suggestion section.

Keywords: Emotional Intelligence, Life Satisfaction, Quantitative Research, Scale

Giriş

Duygusal zekâ ve yaşam doyumu günümüzün önemli konuları arasında yer almaktadır. Bireyin yaşamında duyguları işlemesi ve kullanmasının farklılık gösterdiği belirtilmektedir. Duygusal zekâ yaşamda doyum ve başarı için gereklilik arz etmektedir.

Yaşam doyumu ile ilgili farklı tanımlar bulunmaktadır. Yaşam doyumu bireyin bir şeyden beklentisi sonucu elde ettiği ile arzusunu karşılaştırması sonucu duyduğu haz, mutluluktur

(Neugarten, 1961). Bireyin yaşamı karşısında hissettiği pozitif duygusal tepkiler, yaşamdan memnuniyet derecesi (Recepoglu, 2013) olarak tanımlanmıştır. Duygusal zekâ ile ilgili yapılan tanımlamalara bakıldığında, duygusal zekâ duyguları değerlendirip ifade etme, duyguları düzenleyerek duyguları kullanabilme gibi boyutları kapsadığı ve kişinin kendisiyle ve insanlarla arasındaki ilişkiyi ifade ettiği belirtilmiştir (Deniz, Özer ve Işık, 2013). Bir diğer tanımda ise duygusal zekâ bireyin kendi duygularını ve diğer insanların duygularını doğru anlaması, değerlendirmesi ve yönlendirip davranışa dönüştürmesi olarak açıklanmıştır (Bakan ve Güler, 2017).

Yapılmış olan çalışmaların sonuçları incelendiğinde yaşam doyumu ile duygusal zekânın pozitif yönde ilişkili yapılar olduğu belirtilmiştir (Bakan ve Güler, 2017; Cenkseven-Önder ve Yalnızca-Yıldırım, 2020). Duygusal zekânın yaşam doyumu üzerindeki etkisini inceleyen çalışmaların yapılmasının alana sağlayacağı katkılar (Cenkseven-Önder ve Yalnızca-Yıldırım, 2020) bu çalışmanın itici gücü olmuştur. Bilişsel zekânın yanında duygusal zekânın gelişimi bireysel ve toplumsal anlamda önemli görülmekte ve bu konuda daha çok çalışmaya ihtiyaç olduğu belirtilmektedir (Bakan ve Güler, 2017). Pozitif psikoloji yaklaşımına atıf yapılan bir başka çalışmada, yaşamın önemli dönemlerinden biri olarak görülen üniversite döneminde karşılaşılan birçok durum ve problemle başa çıkabilmede önemli görülen duygusal zekânın bu süreci başarılı bir şekilde yürütmede ve nihayetinde yaşam doyumunun yükseltilmesi açısından önem taşıdığı belirtilmiştir (Akdeniz Öksüz ve Yayıcı, 2024). Yaşam doyumu açısından önem arz eden ve erken yaşlardan itibaren geliştirilmesi gerekli görülen duygusal zekâ bireyin çevresine uyumunda, karşılaştığı zorluklar ile baş edebilmesinde etkilidir (Kartol vd., 2024) ve bu konu ile ilgili farklı kültürlerde ve örneklemelerde daha fazla çalışmaya ihtiyaç bulunmaktadır. Bireylerin ruh sağlığını geliştirmek açısından katkı sağlayacak duygusal zeka ile yaşam doyumu arasındaki ilişkiyi ve bu ilişkiye aracılık eden diğer değişkenleri araştıran çalışmaların önemli olduğu belirtilmiştir (Kartol vd., 2024; Fernandes vd., 2024). Bu çalışmanın duygusal zekâ ile yaşam doyumunu Kuzey Kıbrıs örneğinde incelemesi açısından literatüre katkı sağlayacağı düşünülmektedir.

Bu çalışmanın amacı duygusal zekânın yaşam doyumu üzerindeki etkisini tespit etmektir. Bu amaçla aşağıdaki araştırma sorularına cevap aranmıştır:

1. Demografik değişkenlere göre duygusal zekâ farklılaşmakta mıdır?
2. Demografik değişkenlere göre yaşam doyumu farklılaşmakta mıdır?
3. Duygusal zekâ ile yaşam doyumu arasında ilişki var mıdır?
4. Duygusal zekâ yaşam doyumunu anlamlı düzeyde yordamakta mıdır?

Yöntem

Bu çalışma nicel araştırma modellerinden ilişkisel tarama modeli ile yürütülmüştür. Bu bölümde çalışmanın katılımcıları, kullanılan ölçüm araçları ve veri analizi ile ilgili bilgiler sunulmuştur.

Katılımcılar

Çalışmanın örneklemini 18-70 yaş arası (ort.=26,26±10,51) Türkçe konuşan yetişkin bireyler oluşturmuştur (n=175). Çalışmanın örneklemini kolay ulaşılabilir örnekleme yöntemi ile oluşturulmuştur. Tablo 1, katılımcıların sosyo-demografik bilgilerini özetlemektedir.

Tablo 1: Katılımcıların Sosyo-Demografik Özellikleri

Değişkenler	N	%
Cinsiyet		
Kadın	104	59,4
Erkek	71	40,6
Çalışma durumu		
Çalışıyor	64	36,6
Çalışmıyor	111	63,4
Sosyo-ekonomik düzey		
İyi değil	20	11,4
Normal	88	50,3
İyi	53	30,3
Çok iyi	14	8
İlişki durumu		
İlişkisi var	94	53,7
İlişkisi yok	81	46,3
Toplam	175	100

Katılımcıların %59,4'ü (n=104) kadındır, %63,4'ü (n=111) çalışmamakta, %50,3'ü (n=88) sosyo-ekonomik durumunu normal olarak belirtmiştir ve %53,7'si (n=53) bir ilişkisi olduğunu ifade etmiştir.

Veri Toplama Araçları

Demografik Bilgi Formu: Katılımcıların demografik bilgilerini toplayabilmek amacıyla 5 sorudan oluşmaktadır. Bu sorular yaş, cinsiyet, çalışma durumu, sosyo-ekonomik düzey ve ilişki durumunu sorgulamaktadır.

Riverside Yaşam Doyumu Ölçeği: Margolis vd. (2018) tarafından geliştirilmiştir. Üçü tersten puanlanan (2, 4, 6) toplamda 6 maddesi bulunmaktadır. Yedili likert tipi bir ölçektir. Yüksek puanlar yaşam doyumu düzeyindeki artışı göstermektedir. Cronbach Alpha katsayısı .78 olarak hesaplanmıştır. Türkçe geçerlik ve güvenirlik çalışması Alıcı ve Seçim (2020) tarafından yapılmış ve Cronbach Alpha katsayısı .78, testi yarılama yönteminde iki yarı test arasında elde edilen korelasyon katsayısı .77 olarak hesaplanmıştır. Bu çalışma kapsamında ise ölçeğin

güvenirlik katsayısı .73 olarak hesaplanmıştır. Bu değerin kabul edilebilir aralıkta olduğu değerlendirilmiştir (Hair et. al., 2010; Konting et. al., 2009).

Duygusal Zekâ Özelliği Ölçeği-Kısa Formu (DZÖÖ-KF): Petrides ve Furnham (2000a, 2001) tarafından geliştirilmiştir. Türkçe geçerlik ve güvenirlik çalışması Deniz, Özer ve Işık (2013) tarafından gerçekleştirilmiştir. 20 maddeli ve dört boyutlu bir ölçektir. İç tutarlık katsayısı ölçeğin geneli için .81, iyi oluş, özkontrol, duygusallık ve sosyallik boyutları için sırasıyla .72, .70, .66 ve .70, test-tekrar test güvenirlik katsayısı ise .86 olarak rapor edilmiştir. Bu çalışma kapsamında ise ölçeğin güvenirlik katsayısı .63 olarak hesaplanmıştır. Bu değerin kabul edilebilir aralıkta olduğu değerlendirilmiştir (Hair et. al., 2010; Konting et. al., 2009).

Veri Analizi

Toplanan verilerin analizinde SPSS 25.0 kullanılmıştır. Öncelikle normallik analizi yapılmış, sonrasında betimsel istatistiklere gidilmiştir. Korelasyon ve varyans analizlerinin ardından yordayıcı istatistiklere başvurulmuştur.

Bulgular

Bu bölümde toplanan veriler üzerinde yapılan istatistiki analizler sonucunda elde edilen çalışmanın sonuçları sunulmuştur.

Tablo 2: Katılımcıların Cinsiyetlerine Göre Duygusal Zekâ Ölçeği Puan Ortalamaları

Ölçekler	N	$\bar{X}$	Ss	Min.	Max.	α	Skewness	Kurtosis
DZÖÖ-KF	175	4,04	,64	1,60	6,20	,626	-,078	1,65
RYDÖ	175	4,10	1,27	1,17	6,67	,734	-,081	-,497

Çalışmada kullanılan ölçeklerin puan ortalamaları, standart sapmaları, ölçek puanları (min. ve max.), çarpıklık, basıklık katsayıları ve alfa değerleri hesaplanarak Tablo 2’de sunulmuştur. Yapılan değerlendirmede genel olarak verilerin normal dağılım gösterdiği yönünde değerlendirme yapılmıştır (Tabachnick ve Fidell, 2013). Bu bağlamda toplanan veriler üzerinde parametrik istatistiki yöntemlerin kullanılmasına karar verilmiştir. Ölçeklerin güvenirlik değerleri değerlendirildiğinde kabul edilebilir aralıkta olduğu tespit edilmiştir (Hair vd., 2010; Konting vd., 2009).

Tablo 3: Katılımcıların Cinsiyetlerine Göre Duygusal Zekâ Ölçeği Puan Ortalamaları

Değişkenler	N	$\bar{X}$	Ss	Sd	t	p
Cinsiyet						
Kadın	104	4,02	,62	173	-,556	,579
Erkek	71	4,08	,68			
Çalışma durumu						
Çalışıyor	64	3,96	,59	173	-1,376	,171
Çalışmıyor	111	4,09	,67			

İlişki durumu						
İlişkisi var	94	4,06	,65	173	,380	,704
İlişkisi yok	81	4,02	,63			

Cinsiyete göre duygusal zekâ puan ortalamalarının farklılaşmadığı tespit edilmiştir ($p>.05$). Çalışma durumuna göre duygusal zekâ puan ortalamalarının farklılaşmadığı tespit edilmiştir ($p>.05$). İlişki durumuna göre duygusal zekâ puan ortalamalarının farklılaşmadığı tespit edilmiştir ($p>.05$).

Tablo 4: Katılımcıların Cinsiyetlerine Göre Yaşam Doyumu Ölçeği Puan Ortalamaları

Değişkenler	N	$\bar{X}$	Ss	Sd	t	p
Cinsiyet						
Kadın	104	4,07	1,31	173	,480	,632
Erkek	71	4,16	1,20			
Çalışma durumu						
Çalışıyor	64	4,29	1,19	173	1,52	,132
Çalışmıyor	111	3,99	1,30			
İlişki durumu						
İlişkisi var	94	4,20	1,29	173	1,13	,262
İlişkisi yok	81	3,99	1,24			

Cinsiyete göre yaşam doyumu puan ortalamalarının farklılaşmadığı tespit edilmiştir ($p>.05$). Çalışma durumuna göre yaşam doyumu puan ortalamalarının farklılaşmadığı tespit edilmiştir ($p>.05$). İlişki durumuna göre yaşam doyumu puan ortalamalarının farklılaşmadığı tespit edilmiştir ($p>.05$).

Tablo 5: Katılımcıların Sosyo-Ekonomik Düzeylerine Göre Duygusal Zekâ Ölçeği ve Yaşam Doyumu Ölçeği Puan Ortalamaları

	Sosyo-Ekonomik Düzey	N	$\bar{X}$	Ss	Varyans Kaynağı	Kareler Top.	Sd	Kareler Ort.	F	p	Fark
Duygusal Zekâ	İyi değil	20	3,82	,95	Grup arası	3, 855	3	1,285	3,234	0,024	4>1
	Normal	88	4,01	,57	Grup içi	67,946	171	,397			4>2
	İyi	53	4,07	,56	Toplam	71,801	174				
	Çok iyi	14	4,48	,71							
Yaşam Doyumu	İyi değil	20	3,18	1,31	Grup arası	47,470	3	15,823	11,665	0,00	3>1
	Normal	88	3,87	,98	Grup içi	231,950	171	1,356			4>1
	İyi	53	4,59	1,37	Toplam	279,420	174				3>2
	Çok iyi	14	5,06	1,20							

Sosyo-ekonomik düzeye göre yaşam doyumu ve duygusal zekâ puan ortalamalarının

farklılaştığı tespit edilmiştir ($p<.05$). Buna göre, sosyo-ekonomik düzeyini normal düzeyde olduğunu ve iyi olmadığını belirten bireylerin duygusal zekâ puan ortalamalarının çok iyi olduğunu belirtenlerden anlamlı düzeyde daha düşük olduğu saptanmıştır. Sonuçlar yaşam doyumu puan ortalamaları açısından değerlendirildiğinde, sosyo-ekonomik düzeyini normal düzeyde olduğunu ve iyi olmadığını belirten bireylerin yaşam doyumu puan ortalamalarının iyi ve çok iyi olduğunu belirtenlerden anlamlı düzeyde daha düşük olduğu saptanmıştır.

Tablo 6: Ölçek Puanları Arasındaki Pearson Korelasyon Katsayıları

DZÖÖ-KF		
RYDÖ	r	,080
	p	,291
	N	175

Duygusal Zekâ Özelliği Ölçeği-Kısa Formu (DZÖÖ-KF) ile Riverside Yaşam Doyumu Ölçeği (RYDÖ) arasındaki ilişki Pearson Korelasyon katsayısı ile hesaplanmıştır. Yapılan değerlendirmede duygusal zekâ ile yaşam doyumu arasında anlamlı yönde bir ilişki bulunmamıştır ($p>.05$).

Tartışma ve Sonuç

Bu çalışmada cinsiyete göre duygusal zekâ puan ortalamalarının farklılaşmamakta olduğu görülmüştür. Çalışma sonuçlarımızla benzer şekilde Akdeniz Öksüz ve Yayıcı (2024) ve Yolaşğmazoğlu (2024) yaptıkları çalışmada duygusal zekâ puanının cinsiyete göre farklılaşmadığını saptamışlardır. Buna karşın, Bakan ve Güler (2017) duygusal zekâ puan ortalamalarının cinsiyete göre farklılaştığını, erkeklerin duygusal zekâ puan ortalamalarının anlamlı olarak daha yüksek olduğu tespit edilmiştir. Yıldız (2016) ve Başaran (2020) tarafından yapılan çalışmalarda kadınların duygusal zekâ puan ortalamalarının erkeklere göre anlamlı olarak daha yüksek olduğu bulunmuştur. Literatür incelendiğinde, bu çalışma bulgularını destekleyen ve desteklemeyen sonuçlar olduğu görülmüştür. Bu çalışmada cinsiyete göre duygusal zekâ puanının farklılaşmaması, duygusal zekâ açısından kadın ve erkeklerin benzer özellikler sergilediği şeklinde değerlendirilebilir. Bu çalışmada, çalışma durumuna göre duygusal zekâ puan ortalamasının farklılaşmamakta olduğu saptanmıştır. Çalıştığı kurum türü ve meslekte çalışma süresine göre duygusal zekâ puanlarını inceleyen Yolaşğmazoğlu (2024), çalışılan kurum türüne (kamu, özel, kendi işi) göre katılımcıların duygusal zekâ puan ortalamasının farklılaşmadığını buna karşın meslekte çalışma süresi arttıkça duygusal zekâ puan ortalamasının arttığını tespit etmiştir. Literatür incelendiğinde duygusal zekâ ile çalışma

durumunu inceleyen kısıtlı sayıda çalışmaya rastlanmıştır. Çalışmamızın bulguları değerlendirildiğinde bu örneklem grubunda çalışma durumunun duygusal zekâ puanlarında farklılığa yol açmadığı, farklı parametrelerin değerlendirilebileceği düşünülmektedir. Bu çalışmada ilişki durumuna göre duygusal zekâ puan ortalamasının farklılaşmamakta olduğu görülmüştür. Buna karşın Paşayığıt vd. (2023) yaptıkları çalışmada duygusal zekâ puan ortalamalarını medeni durum açısından incelemişler ve bekâr katılımcıların duygusal zekâ puan ortalamalarının anlamlı olarak daha yüksek olduğunu tespit etmişlerdir. Yolasıǧmazoǧlu (2024) ise yaptığı çalışmada bekâr katılımcıların duygusal zekâ puanlarının anlamlı olarak daha düşük olduğunu saptamıştır. Literatür incelendiğinde medeni durum açısından duygusal zeka değerlendirmesi yapıldığı, bu çalışma sonuçlarının da örneklem özelliklerine bağılı olarak farklılık göstermiş olduğu ve duygusal zekanın ilişki durumu açısından farklılaşmadığı görülmüştür. Bu çalışmada, sosyo-ekonomik düzeye göre duygusal zekâ puan ortalamasının farklılaşmakta olduğu saptanmıştır. Buna göre, sosyo-ekonomik düzeyinin normal düzeyde olduğunu ve iyi olmadığını belirten bireylerin duygusal zekâ puan ortalamalarının çok iyi olduğunu belirtenlerden anlamlı düzeyde daha düşük olduğu saptanmıştır. Yolasıǧmazoǧlu (2024) ise yaptığı çalışmada, sosyo-ekonomik düzey arttıkça duygusal zekâ ortalama puanının arttığını saptamıştır. Buna karşın Akdeniz Öksüz ve Yayıcı (2024) duygusal zekâ puan ortalamalarının sosyo-ekonomik düzey değişkenine göre farklılaşmadığını tespit etmişlerdir. Başaran (2020) ise duygusal zekâ puan ortalamasının gelir durumuna göre farklılaşmadığını bulmuştur. Çalışmamız bulgularının literatür ile paralellik gösterdiği tespit edilmiştir.

Bu çalışmada, cinsiyete göre yaşam doyumu puan ortalamalarının farklılaşmamakta olduğu tespit edilmiştir. Çalışmamızın bulgularıyla paralel şekilde Bakan ve Güler (2017) ve Başaran (2020) yaşam doyumu puan ortalamalarının cinsiyet açısından farklılaşmadığı tespit edilmiştir. Buna karşın yapılan bir diğerk çalışmada yaşam doyumunun cinsiyete göre farklılaştığı, yaşam doyumunun kadın katılımcılarda anlamlı olarak daha yüksek olduğu tespit edilmiştir (Akdeniz Öksüz ve Yayıcı, 2024; Yolasıǧmazoǧlu, 2024). Benzer şekilde, Yıldız (2016) tarafından yapılan çalışmada kadınların yaşam doyumu puan ortalamalarının erkek katılımcılara göre anlamlı olarak daha yüksek olduğu bulunmuştur. Literatürde çalışmamız sonuçlarını destekleyen ve desteklemeyen sonuçlar olduğu görülmüştür. Bu çalışmada çalışma durumuna göre yaşam doyumu puan ortalamalarının farklılaşmamakta olduğu bulunmuştur. Yolasıǧmazoǧlu (2024) ise kendi işinde çalışan bireylerin yaşam doyumu puan ortalamasının anlamlı olarak daha yüksek olduğunu bununla birlikte meslekte çalışma süresi yükseldikçe yaşam doyumu puan ortalamasının yükseldiği tespit etmiştir. Literatür incelendiğinde yaşam doyumunun çalışılan kurum türü ve çalışma süresi açısından incelendiği görülmüştür. Bu

çalışmada ilişki durumuna göre yaşam doyumu puan ortalamasının farklılaşmamakta olduğu bulunmuştur. Paşayığı vd. (2023) yaptıkları çalışmada yaşam doyumu puan ortalamalarını medeni durum açısından incelemişler ve evli katılımcıların yaşam doyumu puan ortalamalarının anlamlı olarak daha yüksek olduğu tespit edilmiştir. Yolasıǧmazoğlu (2024) yaptığı çalışmada, bekâr katılımcıların yaşam doyumu puan ortalamasının anlamlı olarak daha düşük olduğunu saptamıştır. Literatüre bakıldığında, yaşam doyumunun medeni durum açısından incelendiği tespit edilmiştir. Bu çalışmada sosyo-ekonomik düzeye göre yaşam doyumu puan ortalamalarının farklılaşmakta olduğu bulunmuştur. Buna göre, sosyo-ekonomik düzeyini normal düzeyde olduğunu ve iyi olmadığını belirten bireylerin yaşam doyumu puan ortalamalarının iyi ve çok iyi olduğunu belirtenlerden anlamlı düzeyde daha düşük olduğu saptanmıştır. Benzer şekilde Akdeniz Öksüz ve Yayı (2024) tarafından yapılan çalışmada da yaşam doyumu puan ortalamalarının sosyo-ekonomik düzeye göre farklılaştığı, sosyo-ekonomik düzey yükseldikçe yaşam doyumunun da yükseldiği saptanmıştır. Yolasıǧmazoğlu (2024) ve Başaran (2020) gelir düzeyi yükseldikçe yaşam doyumu puan ortalamasının yükseldiğini tespit etmiştir. Bu çalışma bulgularının literatürü destekler nitelikte olduğu saptanmıştır.

Bu çalışmada duygusal zekâ ile yaşam doyumu arasında anlamlı yönde bir ilişki olmadığı tespit edilmiştir. Bakan ve Güler (2017) yaptıkları çalışmada yaşam doyumunun duygusal zekâ düzeyinden etkilendiğini bulmuştur. Benzer şekilde, Keskin vd. (2020) yaptıkları çalışmada duygusal zekâ ile yaşam doyumu arasında pozitif yönde düşük düzeyde bir ilişki olduğunu tespit etmişlerdir. Paşayığı vd. (2023) ve Başaran (2020) yaptıkları bir çalışmada duygusal zekâ ile yaşam doyumu arasında pozitif yönde ve düşük düzeyde bir ilişki olduğunu bulmuşlardır. Benzer şekilde, yapılan diğer çalışmalarda duygusal zekâ ile yaşam doyumu arasında pozitif yönde orta düzeyde bir ilişki bulunmuştur (Ekşi vd., 2020; Yıldız, 2016). Gül (2020) ise duygusal zeka ile yaşam doyumu arasında pozitif yönde güçlü bir korelasyon olduğunu tespit etmiştir. Bu çalışma bulgusunun literatür yönünde olmadığı görülmüş ve bu örneklem grubunda duygusal zeka ile yaşam doyumunun ilişkisiz olduğu görülmüştür.

Sonuç olarak, bu çalışma sonucunda duygusal zekâ ve yaşam doyumunun ilişkili olmadığı, cinsiyet, ilişki durumu ve çalışma durumuna göre duygusal zekâ ve yaşam doyumu puan ortalamalarının farklılaşmadığı saptanmıştır. Buna karşın yaşam doyumu ve yaşam doyumu puan ortalamalarının sosyo-ekonomik düzey açısından farklılaştığı, bir diğer deyişle sosyo-ekonomik düzeyi yükseldikçe duygusal zekâ ve yaşam doyumu puan ortalamalarının yükseldiği tespit edilmiştir.

Bu çalışma veri toplanan örneklem grubu, çalışılan değişkenler ve kullanılan ölçeklerden elde

edilen bilgiler ile sınırlıdır. Yaşam doyumu açısından katkısı olan duyguları düzenleyebilme günümüzün önemli becerileri arasında yer almaktadır. Bu kapsamda daha erken yaşlardan itibaren ve özellikle okullarda verilecek eğitimler ve atölye çalışmaları ile yaşam doyumunu ve duygusal zekâ becerilerini arttırmaya yönelik bireylerin duygusal zekâ becerileri geliştirilebilir. Farkındalık sağlamak ve bilgi vermek amacıyla seminerler düzenlenebilir. Bununla birlikte, örneğin takım sporları yapan bireylerin duygusal zekâ ve dolayısıyla yaşam doyumu düzeylerinin yüksek olması (Fernandes vd., 2024) duygusal zeka ve yaşam doyumunu etkileyen farklı değişkenler olduğunu göstermektedir, gelecek çalışmalarda bu gibi konulara yer verilmesi yaşam doyumunu etkileyen faktörlerin daha kapsamlı değerlendirilmesi ve ortaya çıkarılması yaşamın her alanına katkı sunması (Liu vd., 2025) açısından önerilmektedir.

İki Kere Farklı Olan Bir Çocuğun Akademik Hayatının İncelenmesi: Bir Örnek Olay Çalışması

Erhan Alabay

Sağlık Bilimleri Üniversitesi, erhan.alabay@sbu.edu.tr, 0000-0003-4025-2352, TÜRKİYE

Özet

Bu çalışmanın amacı hem özel yetenekli hem de dikkat eksikliği ve hiperaktivite bozukluğu olan (iki kere farklı) 11 yaşındaki bir erkek çocuğunun okul hayatının derinlemesine incelenmesidir. Çalışma nitel araştırma yöntemlerinden örnek olay (vaka) modeli ile tasarlanmıştır. Araştırma kapsamında 11 yaşındaki erkek çocuk ve annesi ile görüşmeler gerçekleştirilmiştir. Araştırmada araştırmacı tarafından hazırlanmış yarı yapılandırılmış görüşme formu ve cümle tamamlama testi kullanılmıştır. Araştırmada verilerin analizinde içerik analizi tekniğinden yararlanılmıştır. Araştırmanın sonuçlarına göre, iki kere farklı olan çocuğun özel yeteneği, dikkat eksikliği ve hiperaktivite engeli nedeniyle bastırılmış gibi görünmektedir. Özellikle annenin çözüm önerileri geliştirirken özel yetenek yerine daha çok engel durumuna odaklandığı sonucuna varılmıştır. Çocuğun, okuldaki arkadaşlarına yönelik algısının olumlu olduğu ancak dersler, öğretmenler ve sınavlara karşı olumsuz bir algıya sahip olduğu tespit edilmiştir.

Anahtar Kelimeler: Özel Yetenek, İki Kere Farklılık, Okul Hayatı, Örnek Olay.

An Examination of Academic Life of a Twice- Exceptional Child: A Case Study

Abstract

The aim of this study is to examine in depth the school life of an 11-year-old boy with both giftedness and attention deficit hyperactivity disorder (twice-exceptional). The study was designed with the case study model, one of the qualitative research methods. Within the scope of the study, interviews were conducted with the 11-year-old boy and his mother. A semi-structured interview form prepared by the researcher and a sentence completion test were used in the study. Content analysis technique was used to analyze the data. According to the results of the study, the special ability of the twice-different child seems to be suppressed due to attention deficit and hyperactivity disability. It was concluded that especially the mother focused more on the disability rather than the special ability when developing solutions. It was

found that the child had a positive perception of his/her friends at school, but a negative perception of lessons, teachers and exams.

Keywords: Gifted, Twice-Exceptional, School Life, Case Study.

Giriş

İki kere farklı olan çocuklar, özellikle matematik, fen, teknoloji, sosyal bilimler, görsel sanatlar, sahne sanatları, müzik gibi çeşitli alanlarda bir veya birden fazla alanda yüksek başarı ve üretkenlik düzeyine sahipken, aynı zamanda ulusal ya da uluslararası tanı kriterlerine göre bir veya birden fazla engellilik durumunun da gözlemlenebildiği çocuklardır. Örneğin, bir çocuğun zeka testlerinden aldığı puanlarla olağanüstü başarı göstermesi (üstün zekâlılık) ile aynı zamanda özel eğitim ihtiyacına sahip olması (örneğin, öğrenme güçlükleri, dikkat eksikliği, otizm gibi) durumu, bu çocuğu "iki kere farklı" yapan bir örnektir. Yani, çocuğun hem özel bir yeteneğe sahip olması hem de belirli bir alanda zorluk yaşaması durumu olarak ifade edilebilir (Coleman vd., 2005; Gierczyk ve Hornby, 2021). İki Kez Farklı Öğrenciler Ulusal Komisyonu (National Commission on Twice-Exceptional Students - NCTS) (2020) iki kez farklılığı "...bir veya daha fazla alanda yüksek başarı veya yaratıcı veya üretkenlik elde etme yeteneğine sahip olan ve aynı zamanda federal veya eyalet kriterlerine göre tanımlanmış bir veya daha fazla engel gösteren öğrencilerdir." şeklinde tanımlamıştır. "İki kere farklı" terimi, ilk kez 1923'te ortaya çıkmış olup, Hollingworth'un özel yetenekli çocuklar ve özel öğrenme güçlükleri arasındaki ilişkiyi incelediği araştırmasında bu ilişkinin kurulabileceğini belirlemesiyle tanımlanmıştır. Hollingworth'un Özel Yetenekliler adlı kitabında geçen bu kavramda iki kere farklı öğrencilerin bazı durumlarda öğrenmede güçlük çekebileceğinin altını çizmiştir. Daha sonra özellikle Asperger sendromu yaşayan çocuklarda özel yetenek olasılığının yüksek olduğu gözlemlenmiştir. Bu nedenle yapılan araştırmalar, "iki kere farklı" terimini literatüre kazandırmıştır. Bu bağlamda, öncelikle Hollingworth'un çalışmalarının çerçevesinde özel yetenekli çocuklar ile özel öğrenme güçlüğü yaşayan çocuklar arasındaki bağlantının keşfedildiği belirtilmelidir. Ardından, özellikle Asperger sendromu olan çocuklarda özel yetenek olasılığının yüksek olduğuna dair gözlemler ve yapılan araştırmalarla bu kavramın literatüre kazandırılması açıklanmalıdır. Bu noktada, "iki kere farklı" kavramının, çocukların hem özel yeteneklere sahip olma potansiyeli hem de belirli bir alanda zorluk yaşama durumu olarak ifade edilen önemli bir terim olduğu vurgulanmalıdır (Baldwin vd., 2015; Şentürk vd., 2022).

Klingner' a (2022) göre iki kere farklı olan çocukların karşılaştıkları tipik engel tanılarını özgül öğrenme güçlüğü, dikkat eksikliği/hiperaktivite bozukluğu, karşıt olma / karşı

gelme bozukluğu, yaygın anksiyete bozukluğu ve otizm spektrum bozukluğu olarak sıralamıştır.

Şekil 1: Klingner'a (2022) Göre İki Kere Farklı Olan Çocukların Tipik Çeşitliliği

İki kere farklı özel yetenekli çocukların farklı engel gruplarına sahip olabileceğine dair birçok çalışma mevcuttur (Foley Nicpon vd., 2011; Reis vd., 2014). Ancak, yapılan incelemeler sonucunda, bu çocukların net bir oranının belirlenmiş verilere sahip olmadığı gözlemlenmektedir. Özellikle bu belirsizlikte, özel yetenekli çocukların sahip olduğu özel yetenek ya da engel durumunun diğer özellikleri tarafından maskeleyen etkisi göstermesi önemli bir etken olarak karşımıza çıkmaktadır. Buna rağmen, bazı çalışmalara göre okul çağındaki çocukların %7'ye kadarının iki kere farklı olduğu öne sürülmektedir. Diğer taraftan, engelli çocukların %5-6'sının iki kere farklı çocuk olabileceği tahmin edilmektedir (Holmgren vd., 2023). Amerika Birleşik Devletleri'nde iki kere farklı olan çocukların genel yaygınlığı hala belirsizdir. Ancak, yapılan tahmini çalışmalara göre ABD'de bu çocukların sayısının 300.000 ile 360.000 arasında değiştiği öne sürülmektedir (LeBeau vd., 2022). Türkiye'de ise bu oranları belirlemeye yönelik bir araştırmaya rastlanmamıştır.

İki kere farklı olan çocukların her bir engel grubuna göre belirli net oranlar olmasa da, bu özellikteki öğrencilerin genel olarak özel desteklere ihtiyaç duydukları bilinen önemli durumlardan biridir. Eğer iki kere farklı olan öğrenciler belirlenmez ve gerekli önlem ve destek programları uygulanmaz ise öğrenciler okul hayatlarında problemlerle karşılaşabilmektedir. İki kere farklılığı olan öğrenciler okullarda uygulanan eğitim programlarında başarılı olabilmeleri için hem akademik ilerlemenin izlenmesi hem de eğitimsel ve sosyal anlamda yaşadıkları eksikliklerin tespit edilip bu eksiklikler doğrultusunda gerekli destek hizmetlerinin sunulması önerilmektedir. Bu şekilde doğru koşullar sağlanırsa engellilik durumu özel yeteneği

maskeleyemez ve daha başarılı bir akademik süreç geçirebilir. Fakat doğru tespitler ve destekler sunulamaz ise engellilik durumu özel yeteneği maskeleyebilir ve akademik anlamda başarısızlıkla karşılaşılabilir (Ronksley-Pavia vd., 2019; Bannister-Tyrrell vd., 2018). Moon ve Reis'e (2004) göre belirlenmemiş ve desteklenmemiş iki kere farklı öğrenciler öğrenilmiş çaresizlik, hayal kırıklıkları, düşük motivasyon, mükemmeliyetçilik, düşük öz saygı ve duygusal ve sosyal davranışsal sorunlar yaşayabilmektedir.

İki kere farklı olan grupta gözlemlenebilecek engel gruplarından birisi dikkat eksikliği ve hiperaktivite bozukluğu (DEHB)'dur. Bu çocuklar hem özel yeteneklere sahip hem de DEHB tanısı almış olan bireylerdir ve genellikle akademik alanda konulara dikkatlerini odaklama konusunda zorluk yaşayabilirler. Özellikle sınıflarda bir konudan diğerine geçişte güçlük çekebilirler; örneğin, bir dersin bitiminden hemen sonra diğer bir derse odaklanmakta zorlanabilirler. Ayrıca, ders sırasında zamanında olmayan hareketlerde bulunma, ders rutinlerine uymakta sıkıntı yaşama, öğretmenin ya da akranların isteklerine direnme, okul içi kurallara uymama, uyum gösterememe veya inatçılık gibi davranışlar sergileyebilirler. Aynı zamanda, çalışan belleği, analitik ve sistematik düşünme becerilerini tam olarak kullanmada zorlanabilirler (Kaplan Sayı, 2018; Kargı ve Akman, 2003). Antshel vd. (2007), özel yeteneklere sahip ve DEHB tanısı alan çocukların akademik zorluklarla karşılaşabileceğini ve sınıf içinde rahatsız edici davranışlar sergileyebileceğini belirtmiştir. Moon vd. (2001) tarafından yapılan bir çalışmada, özel yeteneklere sahip ve DEHB tanılı çocukların sınıf içinde grup çalışması, akran etkileşimi ve uzun vadeli proje yürütme süreçlerinde zorluklarla karşılaşma risklerinin daha yüksek olduğu vurgulanmıştır.

Yukarıda belirtilen zorluklarla başa çıkabilmek için özel yetenekli ve DEHB (Dikkat Eksikliği ve Hiperaktivite Bozukluğu) olan çocuklar için farklı müdahale programlarının geliştirilmesi ve uygulanması önerilmektedir. Neihart'a (2008) göre, bu çocuklara yönelik psiko-eğitimsel müdahalelerin etkin olabileceğini savunmuştur. Bu müdahale programlarının, DEHB ve özel yeteneklerin sosyal, duygusal, bilişsel ve nöropsikolojik yönlerini ele alması önemlidir. Psiko-eğitimsel müdahale programlarının hazırlanmasında dikkate alınması gereken önemli unsurlardan biri, her öğrencinin bireysel ihtiyaçlarına uygun olarak düzenlenmesidir. Neihart, her bir öğrencinin yetenek düzeyi, ilgi alanları, öğrenme tarzları, bilişsel işlem becerileri ve motivasyon profillerinin belirlenmesinin önemli olduğunu vurgulamıştır. Bu bilgiler, öğrencinin bireysel profiline uygun bir müdahale programının oluşturulmasına yardımcı olacaktır. Her öğrencinin farklı özelliklere sahip olduğu göz önüne alındığında, her bir müdahale programının öğrencinin özel durumuna uygun olarak tasarlanması gerekmektedir.

Bu programlar, öğrencilerin güçlü yanlarına odaklanarak onların potansiyellerini en üst düzeye çıkarmayı hedeflemelidir. Öğrencinin bireysel özelliklerini dikkate alan, esnek ve kişiselleştirilmiş müdahale stratejileri, başarı şansını artırabilir ve öğrencinin öğrenme deneyimini olumlu yönde etkileyebilir (Hinshaw, 2006; Pfeiffer, 2015).

Bu çalışmada, iki kere farklı olan bir çocuğun akademik hayatının annesi ve çocuğun kendisi gözünden değerlendirilmesi amaçlanmıştır. Bu amaç doğrultusunda şu alt araştırma sorularına cevaplar aranmıştır: (a) İki kere farklı olan çocuğun tanı süreci nasıl gerçekleşmiştir? (b) İki kere farklı olan çocuğun annesinin çocuğundaki özel yeteneği fark etme durumu nasıldır? (c) Annenin iki kere farklı olan çocuğunun tanısına dair yaklaşımı nasıldır? (d) İki kere farklı olan çocuğun öğretmenlerinden anneye gelen değerlendirmeler nasıldır? (e) İki kere farklı olan çocuğun annesine okul hakkındaki değerlendirmeleri nasıldır? (f) Anne iki kere farklı olan çocuğa akademik başarısını arttırmak için nasıl desteklerde bulunmaktadır? (g) Çocuğun akademik hayatındaki öğelere dair algıları nasıldır?

Yöntem

Araştırmanın bu bölümünde araştırmanın modeline, katılımcılarına, veri toplama araçlarına ve veri analizi süreçlerine yer verilmiştir.

Araştırmanın Modeli

Araştırma, nitel araştırma yöntemi kullanılarak gerçekleştirilmiştir. Nitel araştırma, araştırmanın amacına odaklanarak derinlemesine incelemeler gerçekleştiren, gözlem, görüşme ve doküman analizi gibi yöntemleri kullanarak sorgulayıcı ve yorumlayıcı bir bakış açısıyla sonuçlara ulaşmayı amaçlayan bir araştırma modelidir (Creswell, 2002; Klenke, 2016). Bu çalışmada, nitel araştırma yöntemlerinden biri olan örnek olay (vaka) modeli tercih edilmiştir. Örnek olay (vaka) modeli, özel bir durumu detaylı bir şekilde incelemek amacıyla kullanılmaktadır. Bu çalışmada, dikkat eksikliği ve hiperaktivite bozukluğu ile birlikte yaygın anksiyete bozukluğu tanısı almış iki farklı dönemde değerlendirilen bir çocuğun akademik yaşamı incelenmektedir. Bu nedenle, örnek olay (vaka) modeli, özel yetenekleriyle birlikte dikkat eksikliği, hiperaktivite ve yaygın anksiyete bozukluğu tanıları alan bir çocuğun akademik hayatının detaylı bir şekilde analiz edilmesi için tercih edilmiştir.

Katılımcılar

Bu çalışmada iki kere farklı olan çocuktan ve annesinden veriler görüşme tekniği kullanılarak alınmıştır. Bu nedenle çalışmada iki katılımcı mevcuttur. Hem anne hem de

çocuk için detaylı bilgiler aşağıda sunulmuştur. Aşağıdaki bilgilerde kişilerin gerçek isimleri kullanılmamış olup, katılımcıların istedikleri kod isimleri kullanılmıştır.

Çocuk: Cem, 8 Kasım 2012 tarihinde doğmuş olan bir erkek çocuktur. Erken doğum geçmişine dair herhangi bir öykü bulunmamaktadır. Doğum ağırlığı 3,150 gramdır. Doğum sonrasında sarılık rahatsızlığıyla karşılaşması üzerine hemen mavi ışın tedavisi almıştır. Doğumdan hemen sonra ortaya çıkan erken gaz sancıları, Cem'in sürekli ağlamasına neden olmuştur. 5,5 aylıkken sünnnet edilirken aşırı hareketlilik ve ağlama davranışlarının belirgin olduğu ifade edilmiştir. Cem'in mizaç özellikleri ailesi tarafından zorlayıcı olarak tanımlanmaktadır. Bebeklik döneminde uyku problemleri yaşamış, uykuya dalmada zorlanmış ve sürekli bölünen bir uyku düzenine sahip olmuştur. Ayrıca duygularını ifade etmede sıkıntı yaşadığı ve kurallara uyup uymamada ve kurallara karşı gelmede sıkça zorluklar gösterdiği gözlemlenmiştir. Cem, 7 yaşındayken bir psikolog ve psikiyatrist ile görüşmüş ve WISC 4 zeka testi uygulanmıştır, bu test sonucunda 135 zeka puanına ulaşıldığı belirlenmiştir. Görüşme sırasında dikkat eksikliği, hiperaktivite ve kaygı problemi tanıları konulmuş; bu nedenle ilkökul 1. sınıftan itibaren dikkat eksikliği ve hiperaktivite bozukluğu için Concerta 36mg adlı ilacı almaktadır. Tanı öncesi ve sonrasında oyun terapisi ve teraplay yöntemleri gibi çeşitli terapilere başvurmuş olan Cem, şu anda psikolog desteği almadığını ifade etmektedir. 11 yaşındaki Cem, özel bir okulda 6. sınıfa devam etmekte olup hafta sonları futbol ve matematik alanlarında özel dersler almaktadır.

Anne: Nil Hanım, 41 yaşında bir akademisyen olup erken çocukluk alanında doktora derecesine sahiptir. Yaklaşık 18 yıldır akademik bir kariyere sahip olan Nil Hanım, İstanbul'da yaşamaktadır. İki erkek çocuğu bulunan Nil Hanım'ın çocukları sırasıyla 7 ve 11 yaşlarındadır. Bekar bir anne olarak, çocuklarına karşı ilgili ve sorumlu bir ebeveyn olduğunu belirtmektedir.

Veri Toplama Araçları

Araştırmada hem çocuk hem de anne için demografik bilgi formu, anne için yarı yapılandırılmış görüşme formu ve çocukla gerçekleştirilen cümle tamamlama testi kullanılmıştır. Bu veri toplama araçları aşağıda detaylandırılmıştır.

Demografik Bilgi Formu

Bu form, çocuk ve annenin demografik özelliklerini belirlemek amacıyla araştırmacı tarafından hazırlanmış olup, yaş, cinsiyet ve öğrenim durumu gibi kapalı uçlu sorulardan oluşmaktadır.

Yarı Yapılandırılmış Görüşme Formu (Anne Formu)

Bu form, araştırmacı tarafından hazırlanmıştır. Hazırlık sürecinde literatür taraması yapılmış ve sorular oluşturulduktan sonra, 2 çocuk gelişimi alanında uzman öğretim elemanına gönderilmiştir. Uzman görüşleri doğrultusunda toplam 6 soru belirlenmiştir. Bu sorular şu şekildedir: a. Bana çocuğunuz Cem’i doğum sürecinden bu zamana kadar kısaca anlatabilir misiniz? b. Çocuğunuz Cem’in tanı süreci nasıl gerçekleşti? Bana anlatabilir misiniz? c. Cem’in okul hayatını nasıl değerlendirirsiniz? d. Cem’in öğretmeni ya da öğretmenlerinden nasıl geri bildirimler alıyorsunuz? Bana anlatabilir misiniz? e. Cem size okulundan ya da okul hayatından nasıl bahsediyor? Anlatabilir misiniz? f. Cem’in akademik hayatında siz ailesi olarak nasıl destekliyorsunuz?

Cümle Tamamlama Testi (Çocuk Formu)

Bu test farklı cümle tamamlama testlerinden (Beier Cümle Tamamlama Testi ve Rotter Cümle Tamamlama Testi) yararlanılarak hazırlanmıştır. Testte toplamda 14 tane yarım bırakılan cümle bulunmaktadır. Bu yarım bırakılan cümleleri tamamlaması istenmiştir. Daha sonra cümlelerin tamamının anlamsal içeriği incelenmiştir. Bu cümleler olumlu, olumsuz ya da nötr şeklinde değerlendirilmiştir. Yarım bırakılan cümleler şu şekildedir:

Tablo 1: Cümle Tamamlama Testi Soruları

Sn.	İfadeler
1	Okulda
2	Dersler
3	Öğretmenlerim.....
4	Derslerden aldığım notlar
5	Ders kitaplarım
6	Sınavlar
7	Matematik dersleri
8	Okuldaki arkadaşlarım
9	Okulum bittiğinde
10	Öğretmenlerime göre ben
11	Okuldaki derslerim
12	Bana göre okul, ...
13	Sanatla ilgili derslerde
14	Büyüdüğüm zaman

Çocukla birebir yapılan görüşmede öncelikle testin nasıl yapılacağı kısaca anlatılmıştır. Cümle yarım verildiğinde ilk aklına gelen ve kendisini yansıtan bir cümle ile tamamlaması gerektiği sözel olarak belirtilmiştir. Başlamadan önce değerlendirmeye alınmayan iki deneme maddesi yapılmıştır. Deneme maddesi olarak çocuğa: “Annem” ve “ Evdeki kedim.....” yarım bırakılan cümleler sözel olarak söylenmiş ve bu cümleleri tamamlaması istenmiştir. Çocuğun test yönergesini anladığı varsayıldığında asıl maddelere geçilmiş ve verdiği cevaplar ses

kaydına alınmıştır. Yarım bırakılan cümleler için herhangi bir süre verilmemiştir. Düşünmek istediğinde çocuğa zaman tanınmıştır.

Verilerin Toplanması ve Analizi

Veri toplama sürecine geçilmeden önce, iki kere farklı çocuklar ve bu çocukların akademik hayatı ile ilgili ulusal ve uluslararası çalışmaları incelemek amacıyla literatür taraması yapılmıştır. Daha sonra, araştırmacı çevresinde bu konuda bir aileye ulaşmaya çaba göstermiştir. Araştırmacının sosyal çevresinde amacına uygun bir aileyi bulduktan sonra, çalışmanın amacı ebeveyne detaylı bir şekilde açıklanmış ve ebeveynin onayı alınmıştır. Ebeveyn onay verdiğinde hem aileden hem de çocuktan yazılı onam alınmıştır. Çalışma soruları belirlendikten sonra, ebeveyn ve çocuktan randevu alınmıştır. Randevu günü ve saati belirlendikten sonra, görüşmelerin daha rahat bir ortamda gerçekleşmesi için ailenin kendi evlerinde yapılması tercih edilmiştir. Görüşmeler tek bir gün içinde gerçekleştirilmiş, anne ile yapılan görüşme 43 dakika, çocuk ile yapılan görüşme ise 18 dakika sürmüştür. Görüşmeler, izinler doğrultusunda ses kaydına alınmış ve sonrasında transkript edilerek aileye tekrar gönderilmiştir. Aile, düzeltmek istediği ifadeleri belirtmiş ve görüşmeden çıkartılmasını istediği cümleleri belirlemiştir. Ardından, görüşmenin yazılı dokümanı son halini almıştır. Verilerin analizi kısmında, anne ile yapılan görüşmeler içerik analizi kullanılarak analiz edilmiştir. Çocuk ile yapılan cümle tamamlama testinin çözümlenmesinde ise betimsel analiz yöntemi kullanılmıştır.

Bulgular

Bulgular, iki ana başlık altında analiz edilmiştir. İlk başlık, anne ile gerçekleştirilen görüşme sonuçlarına odaklanarak elde edilen bulguları içermektedir. İkinci başlık ise çocuk ile gerçekleştirilen cümle tamamlama testinin sonuçlarına odaklanarak elde edilen bulguları içermektedir. Bu şekilde raporlama yapılarak, araştırmanın temel sonuçları iki önemli alt kategoriye ayrılarak sunulmuştur.

Anne ile Yapılan Görüşmeden Ortaya Çıkan Bulgular

Tanı Sürecine Dair Bulgular

Çocuğun tanı süreci, ilkokula başladığı dönemde ortaya çıkmıştır. Okul öncesi eğitim sürecinde herhangi bir problem yaşanmamış ya da aile ya da öğretmenleri tarafından fark edilmemiş olmasına rağmen, ilkokul birinci sınıfa başladığında özellikle öğretmenin ebeveynle gerçekleştirdiği görüşmeler sonucunda tanı sürecinin başladığı belirlenmiştir. Bu alandaki ilginç bir bulgu ise tanı sürecinin çocuğun hiperaktivite özelliğinden kaynaklandığıdır. Başka

bir deyişle, çocuğun özel yeteneğinin, aile ya da öğretmenler tarafından fark edilmeden önce, öncelikle hiperaktivite özelliğinden dolayı tanı sürecinin başladığı, annenin aşağıdaki ifadesinden de anlaşılmaktadır.

“Şöyle söyleyebilirim. Anaokuluna gittiği dönemde okuldan ve öğretmenlerden bir problem gelmiyordu. İlkokul birinci sınıfa başlayınca sınıf öğretmeni çocuğunuzla sınıfta çok problem yaşıyorum dedi. Hatta çocuğumun sınıfta hiç durmadığını, sürekli konuştuğunu, arkasına dönüyor arkadaşları ile konuştuğunu söyledi. Hatta oturduğu sandalyeyi ters çevirip üzerine oturduğunu ve araba gibi kullandığını öğretmeni bana iletliyordu. Hatta bu durumdan dolayı sadece öğretmenler değil arkadaşlarının da çok rahatsız olduğunu ve arkadaşlarının da Cem’i uyarak ders dinleyemediklerini söylüyorlarmış.”

Annenin yukarıda belirttiği ifadeden anlaşıldığı üzere, ilk tanı süreci dikkat eksikliği ve hiperaktivite ile başlamıştır. Bu durum, bir süre öğretmenle yapılan gözlemler sonucunda uyum sürecinden kaynaklanmadığına karar verilmiştir. Ardından, çocuk psikiyatristine başvurularak tanı süreci başlatılmıştır. Psikiyatrist tarafından, bir form verilmiş ve bu formun hem öğretmen hem de anne tarafından doldurulması istenmiştir. Ardından değerlendirmeler gerçekleştirilmiştir. Bu aşamada dikkat çeken bir diğer bulgu, psikiyatristin verdiği formun öğretmen ve anne tarafından verilen cevapların birbirinden farklı olmasıdır. Annenin bu durumu şu şekilde ifade etmektedir:

“Formlara baktı psikiyatrist ve biz de hep böyle olur dedi. Ebeveyn ile öğretmenin değerlendirilmesi hep çok farklı çıkar. Çünkü ev ortamı daha serbest bir ortamdır yani yapılandırılmamış bir ortamdır. Fakat okul ise yapılandırılmış bir ortamdır dedi. Daha sonra psikologdan randevu aldık ve bize WISC uygulandı ve sonucunu doktora gösterdi. Çocukla görüşmeler yaptı. Ardından benimle görüştü. Ve çocuğumda hem dikkat eksikliği ve hiperaktivite probleminin olduğunu hem de üstün zekaya sahip olduğunu söyledi.”

Çocuğunun ilerleyen süreçlerinde ise yapılan psikiyatrist görüşmelerinde çocukta kaygı probleminin de eşlik ettiği anne tarafından belirtilmiştir. Buradan da anlaşıldığı gibi çocuğunun iki kez farklı olduğu tespit edilmiştir.

Annenin Çocuğunun Özel Yeteneğini Fark Etmesine Dair Bulguları

Annesi, Cem’in okul öncesi dönemde dans konusunda özel bir yeteneğe sahip olduğunu ve özellikle başarılı bir Moonwalk yapabildiğini ifade etmiştir. Bu yeteneği fark eden anne,

Cem'i dans kursuna yazdırmış ve bu alanda eğitim alması ve yeteneğinin geliştirilmesi konusunda destek vermiştir. Ancak, Cem'in bu yeteneği nedeniyle diğer erkek çocuklarla arkadaş olmakta zorlanması ve diğer çocukların genellikle futbol oynamak isterken kendisinin dans kursuna gitmek istememesi üzerine, Cem futbol kursuna gitmek istediğini ifade etmiştir. Cem, diğer hemcinsi arkadaşları ile arkadaşlık kurabilmek için futbol oynamaya çabaladığını ancak futbolda başarılı olamayınca diğer erkek çocuklarının onunla dalga geçmesi nedeniyle daha fazla futbol kursuna gitmek istediğini belirtmiştir. Bu durumun dans yeteneğinin desteklenmemesine neden olmuştur. Bu duruma dair annenin görüşme ham verisi aşağıdadır:

“...sitedeki tüm erkek çocukları futbol oynuyordu. Cem’de futbol konusunda başarılı değildi yani oynayamıyordu. Dolayısıyla sitedeki erkek çocuklarının oyununa katılamıyordu. Sonra bana sitedeki tüm erkekler futbol oynuyor ben neden dans kursuna gidiyorum dedi. Bende futbola gideceğim ve dansı bırakacağını söyledi. Bende tamam o şekilde istiyorsan futbol kursuna git dedim.”

Yukarıdaki durumdan anlaşıldığı gibi Cem'in özel bir yeteneği olan dans, toplumun içindeki toplumsal cinsiyet kalıp yargılarından ve topluluğa kabul edilme / edilmeme durumundan dolayı desteklenememiştir. Cem, diğer erkek çocuklarla olan ilişkilerini arttırmak ve kabul görmek adına kendi tercihleri yerine toplumsal beklentilere uygun davranmaya çalışmıştır. Bu durum, toplumsal cinsiyet stereotiplerinin bireylerin özel yeteneklerini geliştirmelerini ve kendilerini ifade etmelerini engelleyebileceğini göstermektedir.

Annenin Tanılara Dair Yaklaşımına Dair Bulgular

Yapılan tanı sürecinden sonra annenin çocuğuyla başa çıkma sürecini incelediğimizde, annenin üstün zeka alanına odaklanmak yerine daha çok dikkat eksikliği, hiperaktivite ve kaygı problemleriyle ilgilenmeye ve bu konularda müdahalede bulunmaya yönelmiş olduğu anlaşılmaktadır. Çünkü anneye göre üstün zekaya yönelmek için uygun okulların veya müfredatların olmamasından dolayı daha çok engel durumlarına yöneldiği görülmektedir. Bu bulgu da bize annenin de özel yeteneği maskeleyiği söylenebilir. Bu durumla ilgili olarak anneden alınan ham veri aşağıda sunulmuştur.

“Beni çocuğumun üstün zekalı olan kısım değil daha çok dikkat eksikliği ve hiperaktivite bozukluğu beni tedirgin etti ve o alana dair müdahaleler üzerine

durdum. Çünkü sıradan bir okula gidiyor ve okul müfredatı da üstün yeteneklilere dair uygun değil. O nedenle üstün yeteneklilik kısmını açıkçası önemseyemedim.”

Bu yorumdan da anlaşıldığı gibi iki kere farklı olan çocukların nazı durumlarda özel yeteneđi bazı durumlarında ise engel durumları diđer özelliđi maskeleyebilmektedir. Bu aşamada annenin de müdahalelerinin daha çok engel durumuna yönelik olduđu ve özel yeteneđi destekleyici müdahalelerde bulunmadığı sonucuna ulaşılmıştır.

Öğretmeninden Anneye Gelen Yorumlar

Anne, öğretmenlerinden gelen çocuđu ile ilgili görüşlere dair sorulan soruda, zaman içinde öğretmenlerden gelen olumsuz yorumların azaldığını ifade etmektedir. Özellikle şu anda çocuğun ergenlik dönemine girmesi ve öğretmenlerin daha anlayışlı yaklaşımlarının, sorunun azalmasına katkı sağladığına dair bir görüş bildirmektedir. Anne, öğretmenlerden gelen yorumların genellikle çocuğun sevgi dolu olduđu, arkadaşları ile olumlu iletişim kurabildiğı, hatta öğretmenlerle yaşanan problemlerde çocuğun öğretmenlerinin gönlünü aldığını ve bu durumun problemin fazla büyümeden çözüldüğünü belirtmektedir. Fakat bazı öğretmenlerin Cem'in unutkan olduğuna dair anneye geri bildirim yaptığı görünmektedir. Bu duruma dair ham veri örneđi aşağıdadır:

“Okullarında bazı yabancı dil dersleri karma yapıyor ve başka sınıfta gerçekleşebiliyor. İtalyanca öğretmeni en son çocuğunuz kitaplarını getirmiyor ve unuttuğunu söylediğini belirtiyor. Ders başka bir sınıfta olunca dolabından kitaplarını almayı unuttuğunu söylüyor. Ben öğretmeni ile de bu durumu konuştum. Özellikle dikkat eksikliği ve hiperaktivitesinin olduğunu belirttim. Belki unutuyor ya da bunu bilinçli olarak yapıyor. Öğretmenlerden bu türlü şikayetler gelebiliyor.”

Annenin ifadesinden anlaşıldığı üzere, çocuğun dikkat eksikliğinden dolayı bazı ders kurallarını yerine getirmekte zorlandığı ve bu durumun öğretmenler tarafından olumsuz yorumlarla karşılandığı söylenebilir.

Çocuğun Anneye Okulla İlgili Yorumları

Cem'in annesi, okul ile ilgili konuşmalarında genel olarak oğlunun okulu sevdiğini ve bu konuda olumlu düşüncelere sahip olduğunu ifade etmektedir. Okuldaki arkadaşlarını sevdiğini ve bu ilişkileri olumlu bir şekilde değerlendirdiğini sıkça belirtmektedir. Ancak, özellikle bazı dersleri sevmediğini ve bu derslerin yazı yazdırmayan dersler olduğunu ifade

etmektedir. Matematik ve fen derslerinde başarılı olmadığı tespit edilmiştir. Annenin bununla ilgili ham verileri aşağıda verilmiştir:

“Örneğin en son matematik sınavından 15 soruda 2 doğru yapmıştı. Bende neden bu kadar çok yanlış yaptığını sordum. Çocuğum bana öğretmenim beni arka sıraya oturttu, tahtayı göremiyorum. Zaten bize yazı da yazdırmıyor diyor. Okul rehberlik birimi ile konuştum. Oturma konumunu desteklemelerini rica ettim. Kapıya veya pencereye yakın değil daha çok öğretmenle iletişim içine girebileceği ön ve orta sıralarda oturtturulmasını rica ettim. Fakat öğretmeni yerini değiştirmede”

Annenin ifadesinden anlaşıldığı üzere, iki kere farklı olan çocuklara uygulanacak olan akademik müdahalelerde bireysel özelliklerin ön planda olması ve bu bireysel farklılıklara göre sınıf içerisinde uyarlamalar yapılması gerektiği vurgulanmaktadır. Bu durum, çocuğun özel ihtiyaçlarına ve özelliklerine daha duyarlı bir eğitim sürecinin önemini ortaya koymaktadır. Öte yandan, annenin özellikle rehberlik biriminden talebinin onaylanmaması, iki kere farklı olan çocukların genelde yeterince bilinmediği ve bu özel durumlar için müdahalelerin özel okullarda da uygulanmadığı sonucunu çıkarmaktadır. Bu durum, bu tür çocukların eğitim ihtiyaçlarının genellikle anlaşılamadığını ve bu alanda daha fazla farkındalık ve desteklenmeye ihtiyaç duyulduğunu göstermektedir.

Annenin Çocuğunun Akademik Başarısını Arttırmak Amacıyla Gerçekleştirdiği Destekler

Cem’in hem özel yeteneği hem de DEHB ve kaygı problemi ile iki kere farklı olma durumuna dair annesi tarafından uygulanan bazı çabaların olduğu görülmektedir. Annenin çocuğu için gerçekleştirdiği destekler Şekil II’de sunulmuştur.

Şekil 2: Anne Tarafından Cem’e Sunulan Destekler

Nil hanımın oğlu Cem için sunulan destekler arasında DEHB için ilaç tedavisi, yılda bir kez çocuk psikiyatristi ile görüşme, kaygı problemi için psikolog desteği, çocuğun ilgi alanlarına yönlendirme, başarısız olduğu matematik ve fen gibi derslerden özel ders desteği bulunmaktadır. Bu destekler, Cem'in özel ihtiyaçlarına yönelik kapsamlı bir yaklaşımı içermektedir.

Çocuktan Elde Edilen Bulgular

Çocuğa verilen toplam 14 tane yarım bırakılmış ifadeye vermiş olduğu yanıtlar aşağıda sunulmuştur:

Tablo 1: Cümle Tamamlama Testi Soruları

Sn.	İfadeler	Çocuğun Verdiği Cevaplar
1	Okulda	...arkadaşlarımla olmaktan mutluyum.
2	Dersler	..in bazıları gerçekten çok zor olabiliyor.
3	Öğretmenlerim	...keşke biraz daha eğlenceli olsalardı. Çok kızıyorlar.
4	Derslerden aldığım notlar	...düştü.
5	Ders kitaplarım	...çok sıkıcı. Çok fazla konu var ve bazen anlamıyorum.
6	Sınavlar	...da başarılı olmak zorunda mıyım?
7	Matematik dersleri	...beni çok zorluyor. Hep yanlış yapıyorum ve bu sinir bozucu.
8	Okuldaki arkadaşlarım	...olmasaydı bence okul daha kötü bir yer olurdu.
9	Okulum bittiğinde	...iyi bir futbolcu olacağım.
10	Öğretmenlerime göre ben	...çok hareketliydim.
11	Okuldaki derslerim	...çok uzun sürüyor. Keşke kısa kısa olsa.
12	Bana göre okul,	...sadece teneffüsten oluşmalıydı.
13	Sanatla ilgili derslerde	...çok keyif alıyorum.
14	Büyüdüğüm zaman	...istediğim bir üniversitede gideceğim. Daha keyif aldığım derslerle ilgileneneceğim.

Tablo 1'de yapılan incelemede, toplam 14 ifadenin 9'unun olumsuz anlam içerdiği ve çocuğun bu ifadelere genellikle olumsuz yanıtlar verdiği gözlemlenmiştir. Özellikle genel bir değerlendirme yapıldığında, çocuğun akademik hayata yönelik olumsuz bir algıya sahip olduğu belirtilebilir. Tablodaki sorulara verilen yanıtlar detaylı bir şekilde incelendiğinde, okuldaki arkadaşlık ilişkilerinde herhangi bir sıkıntıya rastlanmadığı görülmüştür. Özellikle, verilen olumlu yanıtların çoğunlukla arkadaşlarıyla birlikte geçirilen süreci yansıtan cevaplar olduğu fark edilmiştir. Özellikle 1. ve 8. sorularda okuldaki arkadaşlarıyla birlikte olmaktan keyif aldığı açıkça belirtilmiştir. Hatta 12. soruda sadece teneffüs olmasını istemesi ve teneffüs aralarında da arkadaşlarıyla vakit geçirmesi, okul arkadaşlıklarının olumlu bir algıda olduğunu göstermektedir. Diğer taraftan çocuğun derslere, öğretmenlere, sınava ya da ders kitaplarına dair yanıtlarında olumsuz algı ortaya çıkmaktadır. Sadece çocuğa sunulan sanat derslerine karşı olumlu algıya rastlandığı görülmektedir. Özellikle dikkat çekici bir bulgu, çocuğun dikkat eksikliği ve hiperaktivite tanısının, çocuğun verdiği yanıtlara da yansımalarıdır. Örneğin,

öğretmenle ilgili verdiği yanıt, çocuğun bu tanıdan kaynaklanan hareketlilik durumunun sürekli olarak öğretmenler tarafından uyarıldığı mesajını düşündürtebilir.

Sonuç ve Tartışma

Bu araştırma, iki kere farklı özelliklere sahip bir çocuğun akademik yaşamını, annesi ve çocuğun kendisi tarafından değerlendirmeyi amaçlamaktadır. Bu çerçevede, anneden ve çocuktan elde edilen verilerin analizi sonucunda, annenin özellikle çocuğun özel yeteneklerine odaklanmak yerine, engel durumuna daha fazla önem verdiği gözlemlenmiştir. Annenin, çocuğunun bu engelle başa çıkabilmesi için etkili yöntemleri bulmak amacıyla psikolog ve psikiyatrist desteğine başvurduğu belirlenmiştir. Aynı zamanda, annenin çocuğunun akademik başarıda zorlandığı derslerde ek ders aldırıldığı, okul rehberlik servisi ve öğretmenlerle düzenli iletişim kurduğu tespit edilmiştir. Bu durum, özellikle annenin çocuk eğitimi konusundaki yüksek eğitim düzeyi ve bu alanda akademisyen olarak çalışması nedeniyle, ebeveyn müdahalelerini daha etkin hale getirmiş olabilir. Bu noktada, literatür incelendiğinde, iki kere farklı özelliklere sahip çocukların ebeveynlerinin, çocuklarının özel yetenekleri ve engel durumları nedeniyle benzersiz zorluklarla karşılaşabileceği görülmektedir. Özellikle iki kere özel olan çocukların potansiyellerinin desteklenmesi önemlidir. Bu aşamada Neumeister (2023) tarafından yapılan araştırmada da aile, öğretmen ve toplumun bir arada çalışması ve gerekli müdahalelerin birlikte uygulanması gerektiğinin altını çizmiştir. Bu arada bu özellikte olan öğrencilerin sadece akademik başarı haricinde sosyal ve duygusal anlamda da desteklenmesi gerektiğini belirtmiştir.

Bu çalışmada iki kere farklı özelliklere sahip çocukların, özellikle annenin bekar bir ebeveyn olması ve çocuk sayısının fazla olması gibi faktörlerle ev ortamında gereken müdahalelere yeterince zaman ayıramama riskiyle karşı karşıya kaldıkları görülmektedir. Bu durumda, annenin destekleri genellikle dışarıdan uzman kişilerden gelmektedir. Trail (2010), bu tür öğrenciler için hem okulda hem de evde besleyici bir ortam sağlamanın, öğrencilerin sadece akademik başarılarını değil, aynı zamanda sosyal ve duygusal gelişimlerini olumlu yönde etkileyebileceğine dikkat çekmektedir. Eğer bu besleyici ortamlar oluşturulamazsa, öğrencilerin yüksek performans sergileme potansiyellerinin zorlanabileceği ve hatta sosyal duygusal sorunlarla karşılaşabileceği öne sürülmüştür. Bu bağlamda hem okul hem de ev ortamında destekleyici bir atmosferin sağlanması, çocukların özel yeteneklerini en üst düzeye çıkarmalarına yardımcı olabilir. Bu noktada, ebeveynlerin ve çocuğun kendisinin, uzmanlar ve öğretmenlerle iş birliği içinde çalışarak bu destek ortamını oluşturması önemli bir faktördür. Bu

çaba, çocuğun sadece akademik başarısını değil, aynı zamanda genel refahını da olumlu yönde etkileyebilir.

Annenin, özellikle çocuğun ilgi duyduğu veya sevdiği alanlara destek sağladığı gözlemlenmektedir. Örneğin, çocuğun futbola olan ilgisini fark edip bu alanda destek olması, olumlu bir davranış olarak değerlendirilebilir. Bu yaklaşım, çocuğun özel yeteneklerini destekleyerek onun gelişimine katkı sağlamayı amaçlamaktadır. Baum vd. (2014) ile Yssel vd. (2010) tarafından yapılan çalışmalarda, iki kere farklı öğrencilerin öğretmenler tarafından güçlü yönlerinin ortaya çıkarılmasının önemine vurgu yapılmıştır. Bu güçlü yönlerin belirlenmesi ve bu alanlara yönelik destek ve başa çıkma stratejilerinin sunulması, öğrencilerin özel yeteneklerini daha etkili bir şekilde ortaya koymalarına yardımcı olabilir. Bu sayede, öğrencilerin akademik başarılarının artabileceği ifade edilmiştir. Çalışma sonucunda şu önerilerde bulunulabilir:

❖ İki kere farklı çocuğa sahip olan ebeveynler, çocuklarının özel yeteneklerini ve engel durumlarını iyi tanımalı ve anlamalıdır. Sadece engel durumlarına değil, aynı zamanda özel yeteneklerine de odaklanmalı ve bu alanları desteklemelidirler.

❖ Bu çalışmada yüksek öğrenim düzeyine sahip ebeveynlerle çalışılmıştır. Ancak, orta ve alt öğrenim düzeyine sahip ebeveynlerin de olduğu düşünülerek, bu konuda daha fazla bilgi ebeveynlere ve öğretmenlere sunulmalıdır.

❖ İki kere farklılığı anlamada uzmanlaşmış profesyonellerin yetiştirilmesine öncelik verilmelidir.

❖ İki kere farklılık gösteren çocuklar için okulda ve evde destekleyici ortamlar düzenlenmelidir.

❖ İki kere farklı çocuğa sahip ebeveynlere odaklanan organizasyonların sayısı artırılmalı, hatta mümkünse çevrimiçi topluluklarla çalışmalar gerçekleştirilmeli veya uzmanlar tarafından düzenlenen konferanslar ve atölyeler düzenlenmelidir.

Temel Yeterlilik Testi (TYT) Yer Alan Biyoloji Bölümüne Ait Soruların Değerlendirilmesi (2020- 2024)

Yağmur Suzan Sönmez

Girne Amerikan Üniversitesi, Eğitim Fakültesi, K.K.T.C
suzansonmez@gau.edu.tr, Orcid No: 0009-0009-5417-4245

Özet

Üniversite giriş sınavları Türkiye’de yılda bir kez yapılmaktadır. Bu sınav sonucuna göre öğrenciler okuyacakları programlara yerleştirilmektedir. Sınav, temel yeterlilik testi (TYT), alan yeterlilik testleri (AYT) ve yabancı dil testi (YDT) olmak üzere üç aşamada gerçekleştirilmektedir. TYT sınavı diğer iki sınava girebilmenin ön koşuludur. TYT testinde fen, matematik, sosyal bilimler ve Türkçe olmak üzere 120 soru vardır. TYT’nin fen bölümüne ait kısım 20 sorudan oluşmakta olup 6 sorusu da biyoloji alanına aittir. Biyoloji gibi önemli bir dersin sorularının değerlendirilmesi, programla uygunluğunun belirlenmesi ve buna yönelik yapılmış çalışmaların değerlendirilmesi alana katkı sağlayacaktır. Bu çalışmanın amacı 2020-2024 yılları arasında üniversite giriş sınavının ilk basamağı olan temel yeterlilik testinde çıkmış olan biyoloji sorularının Bloom’un sınıflandırılması düzeyine göre değerlendirmek, soruların ortaöğretim biyoloji öğretim programına uygunluğunu belirlemek ve bu alana yönelik yapılmış çalışmaları değerlendirmektir. Bu çalışma için bilimsel çalışmalarda kullanılan doküman analizi tekniği kullanılmıştır. Bu amaç kapsamında son beş yıllık süreçte sorulan 30 biyoloji sorusu değerlendirmeye alınmıştır. Milli Eğitim Bakanlığı’nın 2018 ve 2024 yıllarına ait biyoloji öğretim programı incelenmiştir. YÖK TEZ veri tabanından ulaşımı sağlanan alana yönelik yapılmış tezler incelenmiştir. Çalışma süreci sona erdiğinde testte yer alan soruların her yıl aynı düzeyde sorulduğu ve bu düzeylerin alt düzeyde olduğu (anlama ve kavramsal), üst düzey düşünme biçimine yönelik soruların olmadığı tespit edilmiştir. Ortaöğretim biyoloji öğretim programında yer alan kazanımlarla testte yer alan soruların uyumu açısından yapılan değerlendirmede ise ortaöğretim biyoloji öğretim programında yer alan kazanımlarla testte yer alan soruların paralel olduğu belirlenmiştir. Üniversite sınavında yer alan biyoloji sorularının değerlendirilmesine yönelik yapılan çalışmalara bakıldığında ise az sayıda çalışmanın yapıldığı anlaşılmıştır. Öneri olarak: temel yeterlilik testinde yer alan biyoloji soruların sayısı artırılmalıdır. Testte Bloom’un sınıflandırmasının her düzeyine uygun olacak şekilde sorulara yer verilmelidir. Biyoloji sorularının değerlendirilmesine yönelik daha fazla akademik çalışma yapılmalıdır.

Anahtar Kelimeler: Temel Yeterlilik Testi, Biyoloji Soruları, Biyoloji Öğretim Programı, Bloom Sınıflandırması.

Evaluation of Biology Questions in the Basic Proficiency Test (TYT) (2020-2024)

Abstract

University entrance exams are held once a year in turkey. based on the results of this exam, students are placed into the programs they will study. The exam consists of three stages: the basic proficiency test (TYT), field proficiency tests (AYT), and the foreign language test (YDT). the tyt exam is a prerequisite for taking the other two exams. the tyt test consists of 120 questions covering science, mathematics, social sciences, and turkish. the science section of tyt includes 20 questions, six of which belong to the field of biology. evaluating the questions of an important subject like biology, determining their alignment with the curriculum and assessing the studies conducted in this field will contribute to the area. The aim of this study is to evaluate the biology questions in the first stage of the university entrance exam, the basic proficiency test, between 2020 and 2024 based on Bloom's taxonomy, determine their compatibility with the secondary school biology curriculum and assess the studies conducted in this field. for this study, the document analysis technique, which is commonly used in scientific research, was employed. within this scope, 30 biology questions asked in the last five years were analyzed. The 2018 and 2024 biology curricula of the ministry of national education were examined. additionally, theses related to the field and accessed from the council of higher education (YÖK) thesis database were reviewed. at the end of the study, it was determined that the questions in the test were asked at the same level each year and that these levels were lower-order thinking skills (understanding and conceptual). It was also found that there were no questions targeting higher-order thinking skills. in the evaluation of the alignment between the learning outcomes in the secondary school biology curriculum and the questions in the test, it was determined that the test questions were parallel to the curriculum outcomes. when examining studies related to the evaluation of biology questions in the university entrance exam, it was observed that only a few studies had been conducted. recommendations: the number of biology questions in the basic proficiency test should be increased.the test should include questions covering all levels of bloom's taxonomy. more academic studies should be conducted on the evaluation of biology questions.

Keywords: Basic Proficiency Test, Biology Questions, Biology Curriculum, Bloom's Taxonomy.

Giriş

Eğitim, bireyi terbiye etme işidir. Eğitim bireyin toplum içinde yaşamı için gerekli olan beceri, yetenek ve bilginin kişiye kazandırılmasıdır (TDK Sözlüğü, 2025). Eğitim, kişinin kendi hayatı yolu ile davranışlarını değiştirmesidir. Eğitim, formal veya informal olabilir. Formal eğitim, yaygın ve örgün eğitim olarak ayrılır. Yaygın eğitim, örgün eğitimimi desteklemek amacı ile ortaya çıkmıştır. Örgün eğitim ise yaş sınırlaması olan, planlı yapılan, okullarda gerçekleşen eğitimidir (Bilgi, 2025). Eğitim insana kendinde doğuştan var olan ve gizli potansiyel olarak görülen yeteneklerin ortaya çıkmasına neden olur. İnsanlar, eğitim aldıkları süre zarfında kendi yeteneklerini de göstermek için fırsatların var olup olmadıklarına bakarlar. Formal denilen resmi eğitim sürecinin her kademesinde kişi tüm yönleri ile gelişim içindedir. Bu yönler bilişsel, psikomotor ve duyuşsal olabileceği sanatsalda olabilir. Bilişsel yani zihne yönelik eğitim yapılması kişinin genel yeteneklerini artırır. Bilişsel yönelik eğitim aynı zaman da insanların mevcut durumu kavramasına ve bilgiyi öğrenmesine katkı sağlar (Sapancı, 2010). Eğitimin ana amacı bireyi yaşadığı çevre ile uyumlu bir birey olarak eğitmektir. Eğitim insanlara değerler öğretmek milli birliğin oluşturmalarını sağlar. İyi bir eğitim olan ülkeler, kalkınmış ülkeler statüsüne çıkabilmektedirler (Altıok, 2006). Türk Milli Eğitim Temel Kanunu'nda (1739 sayılı kanun, 1973 tarihli) Türk milli eğitimine ait hedefler ve ilkeler yer almaktadır. Genel hedeflerde: Vatana ve millete bağlı, Atatürk ilke ve inkılaplarını benimsemiş, ruh, beden ve zihin olarak gelişmiş, ilgi ve yeteneklerine uygun bir mesleği kazanmış bireyler yetiştirmek vardır. Özel hedeflerde ise, okulların amaçları vardır. Kanunların ikinci kısmında yer alan eğitimin temel ilkelerinde ise 14 adet ilkeye yer verildiği görülmektedir. Bu ilkeler sırası ile şu şekildedir. Genellik ve eşitlik, ferdin ve toplumun ihtiyaçları, yöneltme, eğitim hakkı, fırsat ve imkân eşitliği, süreklilik, Atatürk İnkılap ve ilkeleri ve Atatürk milliyetçiliği, demokrasi eğitimi, laiklik, bilimsellik, planlılık, karma eğitim, eğitim kampüsleri ve okul ile ailenin iş birliği, her yerde eğitim (METK, 2025). Eğitim aslında insanın doğu ile başlayıp ölene kadar devam eden bir sürecini belirten bir kavramdır. Eğitim işi en başta aile ve çevrede olurken sonrasında da formal olan okullarda bir müfredat dahilinde yapılmaktadır. Okullarda müfredatın takip edilmesi ile yapılan planlı eğitime öğretim denmektedir. Öğrenme kavramı ise öğretme kavramı ile oldukça yakın bir ilişki içindedir. Okullarda yapılan öğretme işi öğrenci üzerinde davranış değişikliği yapması beklenir. Öğrenci de meydana gelen davranış değişimi öğrenme olarak tarif edilebilir. Öğrenme ya okullarda gibi planlı süreçler ile kazanılabilir ya da gelişigüzel olarak bilinen rastgelede olabilir (Aykaç, 2018).

Bloom Taksonomisi

Taksonomi, Fransız bir sözcük olan *taxonomie* sözcüğünden dilimize girmiştir. *Taxonomie* sözcüğünün sınıflandırma anlamı vardır (Türk Dil Kurumu Sözlüğü, 2025). Taksonomi, eğitimde ulaşılması planlanan hedeflerin belirli bir sıra içinde sıralanması demektir. Örneğin hedeflerin basitten zora, somuttan soyuta, bilinenden bilinmeyene doğru sıralanması gibi. Hedeflerin aşamalı bir şekilde, ön koşul niteliğinde sıralanması olayıdır (Özkol, 2025). Taksonomi sözcüğü daha önce bitki ve hayvanların kategorisel şekilde sıralanması olarak ifade ediliyor olmasına rağmen, 1956 yılında Bloom ve arkadaşlarının eğitim bilimleri ile alakalı yaptığı sınıflandırmada da taksonomi kelimesi kullanılmıştır. Böylece taksonomi ayrı bir alanda ve başka bir anlamda kullanılmaya başlanmıştır (Göktepeoğlu, 2025).

Bloom Taksonomisi ise, öğrenme veya eğitime ilişkin hedeflerin sınıflandırıldığı bir taksonomidir. Bu sınıflandırma 1956 yılında Bloom tarafından oluşturulmuştur. Bloom, öğrenmeye ilişkin hedefleri tek boyutta ve altı aşamadan oluşan bir sistematığın içine koymuştur. Bu hedef sıralaması alttan üste doğru sıralandığında, bilgi seviyesi ile başlayıp, kavrama, uygulama, analiz, sentez ile devam edip değerlendirme ile bitmektedir. Bloom'un sistematığında hedeflerin sıralamasında ön koşullu bir hiyerarşik bir durum vardır. Alt basamaktaki nitelikleri kazanmayanların üstteki seviyelere çıkması mümkün değildir (Ergüleç, 2024). Bloom'un aşamalı olarak hedefleri sıralaması hedeflere ulaşıp ulaşılmadığını belirlemede oldukça kolaylık sağlar. Ayrıca hedefler arasındaki tutarlılık ve ders malzemelerinin oluşturulup, değerlendirilmesine de katkı sağlar (Açar, 2024). Hedeflerin alanları ise üç tane olarak verilmektedir. Bunlar, devinışsel, duyuşsal ve bilişsel alanlardır. Bilişsel alan ilk hedef alanı olarak verilmiş olup 1956 yılında ortaya çıkmıştır. Bu alanın oluşturucusu Bloom'dur. Diğer iki alan olan duyuşsal ve psikomotor hedeflerin taksonomisini de Krathwohl (Duyuşsal) ve Grobman (psikomotor) oluşturmuştur (Kanber, 2024).

Bloom'un sistematığı ve sistematik basamaklarının açıklamaları aşağıda verilmiştir.

Tablo 1. Bloom Sistematığının İlk Oluşturulmuş Haline İlişkin Basamak Düzeyleri ve Açıklamaları Akdal, 2024)

	Basamak	Basamağa ilişkin açıklama
	Bilgi	Burada bilgiler hatırlanır, ezberlenir, tanınır.
	Kavrama	Burada kişi, bilgiyi kendine göre yorumlar, özetler, gruplar, grafiğe döker. Kişi bilgiyi anlamış ve özümsemiştir.
Alt Düzey Basamak	Uygulama	Kişi bilgiyi değiştirir, yeniden oluşturur. Öğrenilen bilgi uygulamada da kullanılır. Problem çözme, hesaplama, pratik yapma bu basamakta vardır.
	Analiz	Bu basamakta kişi bilgileri bütünden parçalara ayırır. Bilgileri parçalar, aralarındaki ilişkileri ortaya koyar ve analiz

Üst düzey Basamak	Sentez Değerlendirme	eder. Olaylar veya durumlar arasındaki benzerlik ve farklılıkları ortaya koyar. Parçaları bir araya getirip orijinal bir bütünlük oluşturmak, meydana getirmek gibi süreçleri ifade eder. En son basamaktır. Eleştirme, değerlendirme (karar verme), sorgulama, kritiğini yapma gibi üst düzey bir hedef alanıdır.

Tablo 1.'de Bloom sistematığının klasik olarak bilinen ilk hali ve açıklamalarına yer verilmiştir. Alt düzeyde 3 ve üst düzeyde 3 olmak üzere 6 seviye olduğu görülmektedir. Bilgi, Kavrama ve uygulama alt basamak olarak görülürken, analiz, sentez ve değerlendirme seviyeleri üst düzey olarak kabul görmektedir.

Bloom'un Yenilenmiş Taksonomisi

Bloom'un 1956 yılında yapmış olduğu bilişsel taksonomi yaklaşık 39 yıl sonra öğrencileri olan Krathwohl ve Anderson tarafından tekrar yapılandırılmıştır. Yenilenmiş olan taksonomide ilk halinde yapılmamış olan iki boyut eklenmiştir. Bunlar: bilişsel süreç ve bilgi boyutlarıdır. Bilgi boyutunda, kazanım olarak bilinen hedeflerin ihtivasına yer verilirken; bilişsel süreç olarak adlandırılan boyutunda ise hedef veya kazanımların nasıl elde edildiği bilgisi vardır. Bundan dolayı öğrencilerin bilgisi değerlendirildiğinde söz konusu iki boyunda sürecin içine dahil edilmesi yenilenmiş taksonomi ile mümkün olmaktadır (Ünsal, 2024).

Tablo 2. Yenilenmiş Bloom Taksonomisindeki Boyutlar ve Boyutların İçeriği (Elhakan, 2024).

Bilgi	Bilişsel süreç
Olgusal (terim, kavramlar vb. bilgisi)	Hatırlama (bilginin geri getirilerek, anımsanmanın sağlanması)
Kavramsal (genelleme, modelleme, ilke ve teorilerin bilgisi)	Anlama (öteleme, yorum yapma, sonuç çıkarma, sınıflama, örnek verme vb.)
İşlemsel (teknik kullanma becerisi, yöntem bilgisi vb.)	Uygulama (yapmak, oluşturmak, problemi çözmek)
Biliş Ötesi (bireyin kendine ilişkin bilgisi)	Çözümleme (parçalamak, ayırtırmak, analiz etmek, irdelemek)
	Değerlendirme (karar vermek, denetlemek, kritik etmek, eleştirmek)
	Yaratma (ürün ortaya koymak, orjinallik, oluşturma, birleştirme)

Tablo 2'de yenilenmiş Bloom Taksonomisine yer verilmiştir. Tablo 2'de yenilenen sınıflandırmanın 2 boyut içerdiği görülmektedir. Birinci boyutu bilgi ögesini oluşturmaktadır. Bilgi ögesinde bilgini ne olduğuna cevap veriliyor. Bilgi ögesinde bilgi olgusal, kavramsal, işlemsel, biliş üstü olarak 4 türe ayrılmaktadır. İkinci boyutta ise bilişsel süreçler yer almaktadır. Bu ögede

bilgilerin türlerine göre nasıl işlendiğinin bilgisi verilmektedir. Bilişsel boyutta 6 katman vardır. Her katman arasında bir sıralılık olduğu görülmektedir. Bilişsel süreç sistematüğinde en altta hatırlama seviyesi varken, en üstte yaratma seviyesi vardır.

Anderson ve Krathwohl'un ortaya koyduğu yeni versiyon (2001) özellikle temel eğitim ve liseler seviyesinde hedeflere ulaşmak için önerilmektedir. Eski taksonominin basamakları isim olarak verilirken, yeni versiyonda basamaklar fiiller ile ifade edilmiştir. Eski sistematiğe basamakların üstün körü geçildiği görüşü hakimdir. Özellikle en alt basamağın oldukça hafif geçildiği, üst düzey basamakların ise yeterince ele alınmadığı kabulü olmuştur. Bundan dolayı Anderson ve Krathwohl'un oluşturduğu sistematiğe hatırlama basamağı detaylandırılmıştır. Değerlendirme ve yaratma basamağı yer değiştirmiştir. (Çolak, 2024).

Bloom'un sistematüğü ve sistematik basamaklarının açıklamaları aşağıda verilmiştir.

Tablo 3. Yenilenmiş ve İlk Ortaya Çıkan Bloom Sistematiğinin Karşılaştırılması (Sayılır, 2023).

Eski versiyon	Bilgi	Kavrama	Uygulama	Analiz	Sentez	Değerlendirme
Yeni versiyon	Hatırlama	Anlama	Uygulama	Çözümleme	Değerlendirme	Yaratma

Tablo 3'te Bloom sistematiğinin iki farklı versiyonuna ait basamaklar verilmiştir. Her iki şekilde de altı tane basamak bulunmaktadır. Ancak sözcük olarak farklı ifadeler kullanılmıştır. Örneğin, eskideki bilgi yenide hatırlama olmuştur. Kavrama basamağı yenisinde anlama olmuştur. Analiz, Çözümleme olmuştur. Son olarak, sentezin yerini yenisinde değerlendirme alırken, değerlendirmenin yerini yeni şekilde yaratma almıştır.

Temel Yeterlilik Sınavı

Türkiye'de üniversite okumak için girilmesi gereken sınav YKS olarak kısaltılan Yüksek öğretim kurumlarına giriş sınavıdır. YKS, 3 oturumdan oluşmaktadır. Bu oturumlar sırasıyla: Temel Yeterlilik Testi (TYT), Alan Yeterlilik Testleri (AYT) ve Dil Testi (YDT) olarak verilebilir. TYT, diğer iki sınava girmek için tüm öğrencilerin katılması zorunlu olan ilk oturumdur. Sınav 165 dakika sürmektedir. Birinci oturum olan TYT kapsamında fen (20 soru), matematik (40 soru), sosyal (20 soru) ve Türkçe (40 soru) alanından sorular yer almaktadır. Fen testinde fizik (7 soru), kimya (7 soru) ve biyoloji (6 soru) alanına ait sorular sorulmaktadır.

Fen testinde temel kavramlar ve bunları uygulamaya koyma yeterliliğini ölçmeye yönelik sorular yer almaktadır (YKS Klavuzu, 2025).

Ölçme ve Değerlendirme

Ölçme işi hem günlük hayatta hem de eğitimde oldukça önemli bir yere sahiptir. İnsanlar çevrelerinde gördükleri olayları, durumları, nesneleri gözlemleyip, gözlem sonuçlarını sayılarla veya sembollerle ifade etmektedirler. Buna ölçme denir. Ölçme eyleminde nitelikler anlamaya ve ne kadar? Sorusuna cevap aranmaya çalışılır. Ölçülen özellikler arasında boy, kilo, zekâ, başarı, davranış vb. nitelikler sıralanabilir. İnsanlar ölçme eylemi sonrasında kararlar verirler. Bu karar verme işine de değerlendirme denir (Bayrak, 2024). Yani ölçme kişilerin uygun araç veya gereçlerle gözlemlenmesi ve elde edilen verilerin sembol kullanılarak belirtilmesidir. Değerlendirme ise ölçümlerden elde edilen veri veya sonuçlardan bir yargıya varmadır. Geleneksel değerlendirme yöntemleri kullanımları oldukça yaygın olan ve hemen hemen tüm kesimce bilinen kağıt kalem testi olarak ta bilinen yöntemlerdir. Alternatif olarak bilinen yöntemler ise geleneksel yöntemlerin içine dahil edilmeyen tüm yöntemlerdir (Söylemez, 2022). Geleneksel değerlendirme yöntemleri olarak doğru yanlış soruları, kısa cevaplı sorular, boşluk doldurmalı sorular, eşleştirmeli sorular, çoktan seçmeli sorular, uzun cevaplı sorular olarak ifade edilebilir. Çağdaş yaklaşım olarak kabul edilen, alternatif ölçme ve değerlendirme yaklaşımları olarak, rubrik veya dereceli puanlama anahtarı, kavram karikatürleri, öz değerlendirme, yapılandırılmış grid, portfolya veya ürün dosyası, kontrol listeleri, tanılayıcı dallanmış ağaç, performans değerlendirme, kavram haritası, akran ve grup değerlendirme, V diagramı, gözlemler vd. verilebilir (Aktaş, 2024). Geleneksel yöntemlerin ölçme ve değerlendirmede kullanılmasının bazı yararları vardır. Bu yararlar (Atasoy, 2022):

- Rahat, kolay ve ekonomiktir.
- Aynı anda çok sayıdaki öğrenciyi ölçmeye ve değerlendirmeye olanak sağlar.
- Özellikle merkezi sınavlarda standartlaşmış ham puanların kıyaslanmasına olanak verir.
- Özellikle öğrencilerin ölçülmek istenen özel alana ilişkin bilgilerini ortaya koyar.

Ölçme ve değerlendirme okuryazarlığı kavramı da ölçme ve değerlendirmenin iyi yapılmasında oldukça önem taşır. Özellikle öğretmenlerin okuryazarlığı çok önemlidir. Öğretmenin ölçme ve değerlendirme okur yazarı olması sadece öğrenci başarısının olumlu değerlendirmesini sağlamaz aynı zamanda eğitimin topyekûn kalitesini de artırır (Aylu, 2024).

Ortaöğretim Biyoloji Dersi Öğretim Programı

2024 yılında yayınlanmış olan biyoloji öğretim programlarında ana temalar ve ana temalara ilişkin kazanım sayıları aşağıdaki tabloda verilmiştir (müfredat.meb.gov.tr, 2025).

Tablo 4. Biyoloji Dersine İlişkin Sınıf Seviyesine Yönelik Ders Saati, Tema ve Çıktılarının Bilgisi (müfredat.meb.gov.tr, 2025).

Sınıf	Ders saati sayısı	Tema	Öğrenme çıktısı sayısı
12. sınıf	4	Üreme	12
12. sınıf	4	Gen	10
11. sınıf	4	Tepki	12
11. sınıf	4	Homeostazi	10
10. sınıf	2	Enerji	10
10. sınıf	2	Ekoloji	9
9. sınıf	2	Yaşam	7
9. sınıf	2	Organizasyon	8

Tablo 4’te sınıf düzeylerine ilişkin ders saati, tema ve öğrenme çıktılarının sayısına ilişkin bilgi verilmektedir. Tabloya göre 9. ve 10. Sınıfta 2 saat biyoloji dersi varken, 11. ve 12. Sınıfta 4 saat biyoloji dersi vardır. Alt sınıflarda biyoloji ders saatlerinin üst sınıflarla kıyaslandığında daha az saat biyoloji dersi aldıkları görülmektedir. Bu saatlerle paralel olarak öğrenme çıktısı sayısı da sınıf düzeyine göre farklılaşmaktadır. 9. Sınıfta 15, 10. Sınıfta 19, 11. ve 12.sınıfta 22 öğrenme çıktısının olduğu görülmektedir. İçerik olarak değerlendirildiğinde ise 12. Sınıfta üreme ve gen teması, 11. Sınıfta tepki ve homeostazi teması, 10. Sınıfta enerji ve ekoloji teması, 9.sınıfta ise yaşam ve organizasyon teması olduğu görülmektedir.

Üniversiteye Öğrenci Alımlarında Diğer Ülkelerin Sistemlerinin Değerlendirilmesi

Çin Devletinin Üniversite Giriş Sınavı ‘Gaokao’ Örneği

Türkiye’de yapılan YKS ile oldukça benzer olan Çin Devleti’nin yaptığı bir sınavdır. Gaokao adı verilen bu sınav her yıl haziran ayında yapılmaktadır. Sınava üniversite okumak isteyen herkes katılmak zorundadır. Çin’de üniversite okumanın şartı Gaokao sınavına girmektir. Yaş sınırlaması yoktur. Sınava yaklaşık 10 milyon öğrenci girmekte ve 9 saat kadar sürmektedir. Sınav 3 kısımdan oluşmaktadır. Birinci kısım herkesin yapmak durumunda olduğu testtir. Bu testte matematik, Çin dili ve yabancı dil alanına ilişkin sorular yer almaktadır. Sınavın ikinci kısmı sosyal bilimler diğeri ise doğa bilimleri alanlarıdır. Öğrenciler okuyacakları alana göre 2. veya 3. Alandan tercih yapabilirler. Sosyal bilimler kısmında coğrafya, tarih ve siyaset

konularında sorular sorulurken: doğa bilimleri kısmından fizik, biyoloji ve kimya konularından sorular sorulmaktadır (Wikipedia, 2025). Gaokao sınavı, 1977 yılından beri yapılmaktadır. Sınav ülkede oldukça zor ve kazanılması gereken bir sınav olarak görülmektedir. Bundan dolayı öğrenciler yoğun bir baskı ve stres altındadır (Pires, 2019). Gaokao sınavında, 40 ile 50 arasında soru sorulmaktadır. Sorular, genellikle ekoloji, biyoteknoloji, evrim, kalıtım, ekosistem, hücrenin yapısı ve fonksiyonları, insan fizyolojisi, makromoleküller, sağlık, moleküler biyoloji, üreme, gelişme, verilerin yorumlanması konuları hakkındır. Sorular çoktan seçmeli denilen test olabileceği gibi klasik olarak bilinen yazılı tarzı sorularda olabilir. (Testmocs, 2025).

Güney Kore Devlet Sınavı: CSAT

Her yıl kasım ayı içinde Güney Kore’li öğrenciler yaklaşık 8 saat süren bir sınava giriyorlar. Bu sınava CSAT deniyor. Bu yıl yaklaşık 600 bin kişi sınava girmiştir. Sınav oldukça zor ve streslidir. Sınav günü neredeyse tüm hayat duruyor. CSAT sınavı Kore’li çocuklar için bir hayat kalım meselesidir (Moon, 2025). Sınavda Kore dili, matematik, İngiliz dili, Kore tarihi ve yabancı dil testi, fen testi, sosyal testi yer almaktadır (Vikipedia, 2025).

Japonya – National Center Test

NCT, Japonya’da üniversite okumak için girilen sınavın adıdır. Sınav, ocak ayı içinde yapılmaktadır. Sınav 2 gün sürmektedir. Birinci gün, tarih, coğrafya, vatandaşlık ve edebiyat sorularının sorulduğu testler uygulanmaktadır. İkinci gün ise fen (fizik, yerbilimleri, kimya, biyoloji) ve matematik testlerinin olduğu sınav yapılmaktadır (Vikipedia, 2025).

Singapur Üniversite Giriş Sınavı

Singapur’da herhangi resmi bir üniversite sınavı gibi bir sınav yapılmamaktadır. Bunun yerine öğrencilerin geçmiş akademik başarıları değerlendirilir. Öğrenci Singapur vatandaşı ve 12 yıllık eğitimini tamamladıysa eski karneleri ile beraber üniversitelere bireysel başvuru yapabilmektedir (Office of Admissions, 2025).

PİSA Sınavlarında Türkiye’nin Durumu

PİSA, fen, matematik ve okuma alanındaki becerileri ortaya çıkaran bir testtir. Türkiye’de 2003 yılı itibari ile sınava girmektedir. Sınav 15 yaş grubunda olan öğrencilere uygulanmaktadır. Sınav her yıl değil, üç yılda bir yapılmaktadır. 2022 yılında yapılan PİSA sınavına 7250 öğrenci Türkiye’den katılmıştır. 2022 yılından 2012 yılına doğru geriye gidilirse Türkiye’nin

matematik ve fen testinde puanlarının sürekli artışı ancak okuma alanında herhangi bir ilerleme kaydetmediği ortaya konmuştur. PISA 2022 durumu 81 ülke bazında değerlendirildiğinde matematikte 39. Sırada, fende 34. Sırada ve okuma ile ilgili sınavlarda 36. Sırada olduğu görülmektedir (Türkiye Raporu, 2022).

Şema 1: PISA Sınavlarında Türkiye'nin Durumunu (Türkiye Raporu, 2022).

Şema 1. incelendiğinde 2022 PISA sınavlarında matematik, fen ve okuma alanında ilk üçe giren hep aynı ülkeler olmaktadır. Bu ülkeler sırasıyla Singapur, Japonya ve Güney Kore'dir (Türkiye Raporu, 2022).

Üniversite Sınavında Yer Alan Biyoloji Sorularına İlişkin Yapılmış Tez Çalışmaları

Manyas (2023) yaptığı tez çalışmasında 2012 yılından 2022 yılına (10 yıllık) kadar süreçte üniversite sınavında yer alan biyoloji sorularının Bloom sistematğine göre değerlendirmesini yapmıştır. Çalışmada doküman analizi olarak bilinen yöntem kullanılmıştır. Bu amaç için sınavda çıkmış olan 345 soruyu incelemiştir. Öncelikle soruların sınıflar düzeylerindeki konu dağılımına bakmış, programdaki yerini incelemiştir. Sonrasında tüm soruları teker teker Bloom sistematğinde hangi seviyede olduğunu belirlemiştir. Bunu yaparken de alan uzmanlarının fikrini almıştır. Çalışma sonunda sınavda yer alan soruların genellikle alt düzey denilen anlama da yoğunlaştığı üst düzey düşünme becerilerini ölçmeye yönelik soruların çok olmadığı sonucunu bildirmiştir. Çıkan soruların konu dağılımına bakıldığında üniversite sınavının ilk basacağı olan temel yeterlilik testinde hemen hemen her yıl konuların homojen olarak dağıldığı, ancak ikinci sınav olan alan yeterlilik testinde bu bunun farklılaştığı tespit edilmiştir. Alan yeterlilik testi kısmında soruların üniteler bazında dağılımının oldukça heterojen olmasına rağmen insan fizyolojisi ünitesinden yoğun soru sorulduğu tespit edilmiştir (Manyas, 2023).

Sülün (2002) yaptığı doktora tez çalışmasında üniversite sınavında yer alan biyoloji sorularının biyoloji programları ile olan paralelliğinin ve öğrencilerin biyoloji sorularına doğru cevap verememe sorununun nedenini incelemiştir. Bu çalışma için sınavlarda çıkmış biyoloji soruları konu, düzeye yıllara göre incelenmiştir. Türkiye’de uygulanan biyoloji programı başka memleketlerde uygulanan programlarla karşılaştırılmıştır. Biyoloji programı ile üniversitede çıkan biyoloji sorularının arasındaki ilişkiyi görmek amacıyla öğrenci ve öğretmenlerden (790 kişi) anketler aracılığı ile bilgi toplanmıştır. Çalışma bittiğinde ise programla sınavda çıkan soruların paralellik taşıdığı tespit edilmiştir. Anketlerden elde edilen görüşler değerlendirildiğinde öğretmen ve öğrencilerin sınava farklı anlamlar yükledikleri tespit edilmiştir (Sülün, 2002).

Akbulut (2001) yaptığı tez çalışmasında iki aşamalı bir çalışma yapmıştır. Çalışmanın birinci aşamasında dönemin biyoloji öğretmenliği müfredatı ile lise biyoloji müfredatını karşılaştırmıştır. İkinci aşamasında ise biyoloji öğretmenliği programı ile üniversite sınavında çıkan sınav sorularının paralelliğine bakılmıştır. Müfredat karşılaştırmasında bazı konularda içeriklerin benzer olduğu ancak bazı konularda benzerliğin olmadığı bilgisi verilmiştir. Üreme, çoğalma, hücre, ekoloji, sınıflandırma, yaşamın nasıl başladığı, dokular, lisede olan ayrıca biyoloji öğretmenliğinde detaylıca yer alan konular arasındadır. Ancak biyoteknoloji, sistemler ve genetik konusunda programlar arasında konuların verildiği içerik olarak birtakım farklılıklar

vardır. Özellikle lise programında yer alan bazı deneylerin biyoloji öğretmenliği programında yer almadığı bilgisine ulaşılmıştır. Üniversite sınavında sorulan biyoloji sorularına bakıldığında ise özellikle sistemler konusunda yoğunlaştığı bilgisi verilmiştir (Akbulut, 2001).

Parlak (2007) yaptığı tez çalışmasında üniversite sınavında yer alan soruların hangi konulardan sorulduğunu incelenmiştir. Üniversite sınavında sorulan biyoloji sorularının biyoloji müfredatında olup olmadığı değerlendirilmiştir. Ayrıca üniversitede sorulan sorulara öğrencilerin cevap verme konusunda zorlanmalarının sebebi araştırılmıştır. Bu amaç doğrultusunda 2000 yılından 2006 yılına kadar üniversite sınavında yer alan biyoloji soruları araştırmaya dahil edilmiştir. Öğrencilerin üniversite sınavında başarısızlık sebeplerini öğrenmek içinde araştırmacının uyguladığı anketler sonucunda bilgiler toplanmıştır. Örneklem olarak seçilen öğretmen (28 kişi) ve öğrencilerden (445 kişi) görüş alınmıştır. Çalışma sonunda ise sınavda yer alan biyoloji sorularının müfredat konularından yazıldığı belirlenmiştir. Anketlerden elde edilen görüşler değerlendirildiğinde ise öğrencilerin biyoloji dersinin kolay anlaşılır olmadığı görüşüne hâkim oldukları ortaya çıkmıştır (Parlak, 2007).

Köksal (2002) yaptığı tez çalışmasında 1998 yılından 2001 yılına kadar üniversite imtihanında sorulan biyoloji sınav sorularını değerlendirmiştir. Değerlendirme sürecinde çıkan soruların hangi konulardan sorulduğu (biyoloji öğretmenliği alanında uzman olan kişilere danışılmış), hangi bilişsel süreçleri ölçmeye yönelik olduğu (deneysel yöntemle belirlenmeye çalışılmış) ve öğrencilerin kız ya da erkek oluşlarının başarıyı nasıl etkilediği (bunun içinde kız ve erkek öğrenciler ayrı ayrı gruplandırılmış) üzerinde durulmuştur. Çalışma sonuçlandığında başarının kız ve erkekler arasında farklılaştığı, bilişsel süreçler olarak bakıldığında ise beklenen durumla benzer olduğu sonucuna erişilmiştir (Köksal, 2002).

Ozbay (2006) yaptığı tez çalışmasında bir devlet üniversitesinde eğitim fakültesinde okuyan öğrencilerin üniversite sınavında çıkan biyoloji sorulara verdikleri yanıtlara bakarak değerlendirme yapılmıştır. Bu çalışma için bir devlet üniversitesinin eğitim fakültesinde okumaya başlayan 1. Sınıf öğrencileri örneklem olarak seçilmiştir. 1999 yılı ile 2004 yılları arasında (5 yıllık) çıkan biyoloji soruları öğretmen olacak öğrencilere sorulmuştur. Bunun içinde 25 sorudan oluşan başarı ölçeği uygulanmıştır. 25 sorunun tamamı üniversitede çıkan sorulardan oluşmaktadır. Çalışma sonunda üniversite sınav sonuçları, okunulan alan, kardeşlerinin sayısı ve maddi durum gibi değişkenlere göre başarının farklılaştığı sonucuna varılmıştır. Ancak cinsiyet, geline yerleşim yeri ve okudukları lise vb. değişkenlere göre başarıları arasında bir fark görülememiştir (Ozbay, 2006).

Tosun (2005) yılında yaptığı tez çalışmasında üniversitede biyoloji alanında çıkan kavramların öğretiminde bazı materyaller geliştirilmiştir (Tosun, 2005).

Koyuncu (2011) yaptığı tez çalışmasında üniversite sınavlarında çıkan biyoloji sorularının güvenilirlik düzeylerini belirlemeye çalışmıştır. 2006 yılından başlayarak 2007 ve 2008 yılına ait biyoloji soruları incelenmeye alınmıştır. Çalışma bittiğinde ise soruların temel düzeyde bilgileri ortaya çıkarmaya yönelik olduğu, üst düzey düşünmeyle alakalı bir sorunun sorulmadığı anlaşılmıştır. Kızların biyoloji doğru sayıları, erkek öğrencilerden yüksektir. Ayrıca yaşlar arasında farklılıklar bulunmuştur. Yaşları daha genç olanların yaşları daha büyük olanlara göre sorulara doğru cevap verme oranı daha düşük çıkmıştır. Kimya sorularına doğru cevap verenlerin biyoloji sorularına da doğru cevap verdikleri belirlenmiştir. İncelenen üç yılda da testlerin yapı geçerliliği düşük olarak ortaya çıkmıştır. Ayrıca testteki sorular arasında iç tutarlılığının oldukça düşük seviyede olduğu anlaşılmıştır (Koyuncu, 2011).

Sesli (2007) yaptığı tez çalışmasında okullarda görevli biyoloji öğretmenlerinin yaptıkları klasik sınavlarda sorulan sorular ile üniversite sınavında sorulan biyoloji sorularının karşılaştırılması Bloom'un basamakları açısından yapılmıştır. Çalışma için 1997 yılından 2006 yılına kadar üniversite sınavında sorulan biyoloji soruları değerlendirmeye alınmıştır. Bu çalışmanın yapılması için doküman yöntemi tercih edilmiştir. Çalışma iki aşamalıdır. Birinci aşamasını soru karşılaştırması oluştururken, ikinci aşamasını öğretmen görüşlerinin toplanması oluşturmaktadır. Birinci aşamada üniversite sınavında sorulmuş olan 124 biyoloji sorusu ile öğretmenlerin klasik sınavlarından alınmış olan 4659 biyoloji sorusu Bloom'un basamaklarına göre karşılaştırılmıştır. İkinci aşamaya gelindiğinde ise 10 tane 34 farklı kurumda görev yapan biyoloji öğretmenlerine sorular hakkındaki düşünceleri sorulmuştur. Araştırma bittiğinde ise klasik sınavların sorularının okul türüne göre Bloom basamağındaki sıralamasının da değiştiği belirlenmiştir. Örneğin, meslek lisesi öğrencilerine en alt basamak olan bilgi seviyesindeki sorular soruluyorken, fen liselerine ise Bloom'un en üstü olmayan ama ortalarda yer alan uygulama düzeyinde sorular sorulmuştur. Üniversite sorularının ise genelde Bloom basamaklarından uygulama noktasında olduğu belirlenmiştir. Ayrıca öğretmenlerin meslek lisesi ve genel liselerde sorulan biyoloji sorularının üniversite sınavı soruları ile benzerlik göstermemesine rağmen fen ve Anadolu liseleri ile biraz daha fazla benzerlik gösterdiği belirlenmiştir (Sesli, 2007).

Yöntem

Çalışmanın Örnekleme ve Modeli

Bu araştırma da bilimsel çalışmalarda kullanılan nitel çalışmalardan biri olarak bilinen doküman analizi tekniği kullanılmıştır. Çalışmada üniversite sınavının ilk kısmı olan temel yeterlilik bölümünde beş yılı içeren 2020- 2024 yılları arasında sorulmuş olan 30 biyoloji sorusu incelenmeye alınmış, soruların yenilenmiş biyoloji müfredatı ile uyumu ve Bloom'un hedefleri sıraladığı sistematığe göre değerlendirilmesi yapılmıştır. Son beş yıla ait olan temel yeterlilik testi sorularına erişim için ÖSYM'nin resmi sayfası olan osym.gov.tr adresinde yer alan sınavlar kısmı kullanılmıştır. Yenilenmiş biyoloji dersi öğretim programına (2024) Milli Eğitim Bakanlığı'nın Talim ve Terbiye Kurulu müfredat.gov.tr sitesinden erişim sağlanmıştır. Veri analizi yapmadan önce TYT biyoloji soruları (30 soru) ve Bloom'un hedef düzeyleri bilir kişi olarak 4 biyoloji öğretmeni ile görüşülerek fikirleri alınmıştır. Alana ilişkin yapılmış tez çalışmalara ise YÖK TEZ ana sayfası olan tez.yok.gov.tr sitesinden erişilmiştir.

Araştırmanın Problemi ve Alt Problemleri

Bu çalışmada amaç, 2020 yılından 2024 yıllarına kadar üniversite sınavlarının birinci oturumu olan temel yeterlilik sınavında sorulan biyoloji sorularının Bloom'un sınıflandırmasına göre hangi düzeyde olduğunu belirlemektir. Bu amaç kapsamında şu problem ve alt problemlere cevap aranmaya çalışılmıştır.

Ana Problem

2020 yılından 2024 yıllarına kadar üniversite sınavlarının birinci oturumu olan temel yeterlilik sınavında sorulan biyoloji sorularının Bloom'un sınıflandırmasına göre hangi düzeydedir.

Alt Problemler

TYT biyoloji soruları biyoloji öğretim programındaki hangi konularla ilgilidir?

TYT biyoloji sorularının Bloom taksonomisindeki yeri nedir?

Araştırma ile ilgili Sınırlılıklar

Çalışma 2020 ile 2024 yıllarını içeren 5 yıl ile sınırlıdır.

Çalışma TYT kapsamında sorulmuş olan biyoloji soruları ile sınırlıdır.

Araştırmanın Sayıtları

Bu çalışmada ele alınan 30 biyoloji sorusunun Bloom taksonomisine göre sınıflandırılmasının

genel olarak üniversite sınavının ilk kısmında sorulan soruların düzeyleri hakkında fikir vereceği varsayımı üzerinden yapılmıştır.

Verilerin Değerlendirilmesi

Verilerin değerlendirilmesi aşamasında 4 biyoloji öğretmeni ile görüşülerek fikirleri alınmıştır. Frekans grafiklerinin oluşturulmasında EXCEL Microsoft Office programı kullanılmıştır.

Etik Kurul Onayı

Bu makale çalışması sadece dokümanlar üzerinde incelemeler yapılarak gerçekleşmiştir. Canlı bir varlık üzerinde bir araştırma olmadığından dolayı etik kurul onayına gerek duyulmamıştır.

Bulgular

Çalışmanın bu kısmında Temel Yeterlilik Sınavı'nda yer alan biyoloji soruları Bloom'un hedef düzeylerine göre olan sınıflandırılmasına yönelik elde edilen bulgulara yer verilecektir.

Tablo 5. 2020- 2024 Yılları Arasında TYT Sınavında Yer Alan Biyoloji Sorularının Konu Dağılımı

Yıl	Konu Dağılımı
2024	Hücre (Çekirdek) , Organik Bileşik (Polimer), Canlılarda Sınıflama , Eşeysiz Üreme, X'e Bağlı Kalıtım, Besin Ağı
2023	Hücre (Koful), Organik Bileşik (Nişasta, Selüloz, Kitin), Canlılarda Sınıflama (Bakteri, Protista), Hücre Bölünmesi, Kalıtım, Besin Ağı.
2022	Hücre (Bitki Ve Hayvan Karşılaştırma), Hücre (Karaciğer), Mantar Canlı Sınıflaması, Bölünme (Bitki Hücreleri), X'e Bağlı Kalıtım, Ekosistem (Sürdürülebilirlik).
2021	Hücre (Hücre Zarı), Organik Bileşik (Trigliserit), Canlı Sınıflandırması, Mayoz Bölünme, X'e Bağlı Kalıtım, Besin Ağı.
2020	Hücre (Bitki Ve Hayvan Karşılaştırma), Organik Bileşikler (DNA), Canlı Sınıflandırması, Kalıtım, X'e Bağlı Kalıtım, Biyoçeşitlilik.

Tablo 5'te 2020 yılından 2024 yılına kadar 5 yıllık sınav sürecinde TYT biyoloji ile alakalı soruların konu dağılımları gösterilmektedir. Hücre, organik bileşik, besin ağı, taksonomi, X'e bağlı kalıtım, ekosistem gibi temaların her yıl sınavda olan konular arasında olduğu görülmektedir.

Temel Yeterlilik Sınavında Yer Alan Biyoloji Sorularına İlişkin Bulgular

Bu kısımda 2020- 2024 yılları arasında TYT sınavında yer alan biyoloji sorularının Bloom'un hedef düzeylerine göre yapılan sınıflandırılmasına ilişkin elde edilen bulgulara yer verilmiştir.

Tablo 6. 2020- 2024 Yılları Arasında TYT Sınavında Yer Alan Biyoloji Sorularının Bloom'un Hedef Düzeylerine Göre Dahil Olduğu Düzeyler

Yıl	Soru Sırası	Bilgi	Bilişsel Süreç
2024 TYT Soruları	15. Soru	Kavrama	Anlama
	16. Soru	Olgusal	Hatırlama
	17. Soru	Olgusal	Hatırlama
	18. Soru	Kavrama	Anlama
	19. Soru	İşlemsel	Uygulama
	20. Soru	İşlemsel	Uygulama
2023 TYT Soruları	15. Soru	Olgusal	Hatırlama
	16. Soru	Kavrama	Anlama
	17. Soru	Kavrama	Anlama
	18. Soru	İşlemsel	Uygulama
	19. Soru	İşlemsel	Uygulama
	20. Soru	Kavrama	Uygulama
2022 TYT Soruları	15. Soru	Kavramsal	Anlama
	16. Soru	Kavramsal	Anlama
	17. Soru	Kavramsal	Anlama
	18. Soru	Kavrama	Uygulama
	19. Soru	İşlemsel	Uygulama
	20. Soru	Kavramsal	Anlama
2021 TYT Soruları	15. Soru	Olgusal	Hatırlama
	16. Soru	Olgusal	Hatırlama
	17. Soru	Kavrama	Anlama
	18. Soru	İşlemsel	analiz
	19. Soru	İşlemsel	Uygulama
	20. Soru	Kavrama	Uygulama
2020 TYT Soruları	15. Soru	Kavrama	Anlama
	16. Soru	Olgusal	Hatırlama
	17. Soru	Olgusal	Hatırlama
	18. Soru	İşlemsel	Analiz
	19. Soru	İşlemsel	Uygulama
	20. Soru	Kavrama	Anlama

Tablo 6.'da 2020 yılında 2024 yılına kadar ki TYT biyoloji sorularının Bloom açısından hangi düzeye ait olduğu konusunda bilgi verilmiştir. Tablo 6'da en fazla anlama- hatırlama, sonra

uygulama, çok azda analiz seviyesinde soru sorulduğu görülmektedir. Yaratma ve değerlendirme basamağında herhangi bir soru yer almadığı görülmektedir.

Grafik. 1: Bloom'un Taksonomisi Sınıflandırmasına Göre Sorulan Biyoloji Sorularının Sayısı

Grafik 1.'de TYT sınavında yer alan biyoloji sorularının sayısına bakıldığında olgusal-hatırlama seviyesinde 7 soru, kavrama- anlama seviyesinde 10 soru, işlemsel- uygulama seviyesinde 6 soru, kavrama- uygulama seviyesinde 5 soru, işlemsel- analiz seviyesinde 2 soru sorulduğu görülmektedir. En fazla sorunun kavrama- anlama seviyesinde sorulduğu (10 soru), en az sorunun da işlemsel- analiz seviyesinde (2 soru) sorulduğu görülmektedir.

Biyoloji Sorularının Öğretim Programlarında Yer Alan Konularına Göre Dağılımı

Tablo 7. TYT Biyoloji Sorularının Öğretim Programlarında Yer Alan Konularına Göre Dağılımı (2020- 2024).

Yıl	Soru Sırası	Sınıf Düzeyi	Konu
2024 TYT Soruları	15. Soru	9	Hücre ve organeller- çekirdek
	16. Soru	9	Organik bileşikler
	17. Soru	9	Canlıların sınıflandırılması
	18. Soru	12	Üreme- eşeysiz üreme
	19. Soru	12	Gen- hemofili
	20. Soru	10	Ekoloji- besin Ağı

	20. Soru	9	Canlıların sınıflandırılması- biyoçeşitlilik

Tablo 7’de 2020 yılından 2024 yılına kadar TYT biyoloji sorularının hangi sınıf konularından seçildiğinin bilgisi verilmektedir. Tablo 7’de biyoloji sorularının 9. 10. ve 12. Sınıf temalarından seçildiği ve hemen hemen aynı konu etrafında homojen dağılım gösterecek şekilde konuların yer aldığı görülmektedir. Hücre, sınıflandırma, organik bileşikler 9. Sınıfın temaları iken, kalıtım ve üreme 12. Sınıf teması, çevre ile ilgili olan ekoloji 10. Sınıf temaları arasındadır. Tablo dikkatle incelendiğinde 11. Sınıfa ait temalara ilişkin bir örnek soru yer almadığı görülmektedir.

Grafik 2. Yıllara Göre Sınıf Düzeyinde Sorulan Biyoloji Soru Sayısı Dağılımı

Grafik 2’de yıllara göre sınıf düzeyinde sorulan biyoloji soru sayısı dağılımı verilmektedir. Grafikte 2024 yılında 9. Sınıfta 3 soru, 10 sınıfta 1 soru, 12. Sınıfta 2 soru sorulduğu; 2023 yılında 9. Sınıfta 3 soru, 10 sınıfta 1 soru, 12. Sınıfta 2 soru sorulduğu; 2022 yılında 9. Sınıfta 3 soru, 10 sınıfta 1 soru, 12. Sınıfta 2 soru sorulduğu; 2021 yılında 9. Sınıfta 2 soru, 10 sınıfta 2 soru, 12. Sınıfta 2 soru sorulduğu; 2020 yılında 9. Sınıfta 4 soru, 12. Sınıfta 2 soru sorulduğu görülmektedir.

Grafik 3. Sınıf Düzeyine Göre Sorulan Biyoloji Soru Sayısı

Grafik 3’te sınıf düzeyine göre sorulan biyoloji soru sayısı verilmektedir. Grafikte 9. Sınıftan

15 soru, 10. Sınıftan 5 soru, 11. Sınıfta 0 soru, 12. Sınıftan ise 10 soru sorulduğu görülmektedir. En fazla sorunun 9. Sınıftan sorulduğunu (15 soru), 11. Sınıftan ise (0 soru) hiç soru sorulmadığı görülmektedir.

Grafik 4. Yıllara Göre Biyoloji Soruları Konu Dağılımı

Grafik 4'te TYT sınavında sorulan biyoloji sorularının hangi konularla ilişkili olduğu verilmektedir. Grafikte hücre ve organelleri ile alakalı 6 soru, organik bileşiklerle alakalı 4 soru, canlıların sınıflandırması ile ilgili 4 soru, üreme ile ilgili 4 soru, gen ile ilgili 6 soru ve ekoloji ile ilgili 6 soru sorulduğu görülmektedir.

Tartışma, Sonuç ve Öneriler

Bu bölümde Bloom taksonomisine göre biyoloji sorularının değerlendirilmesinden elde edilen sonuçlara, biyoloji sorularının hangi konu ve sınıf düzeyinde olduğuna ilişkin sonuçlara ve tüm bu sonuçların literatürde rastlanmış çalışmaların sonuçları ile karşılaştırıldığı tartışma ve en sonda ise sonuçlardan yola çıkılarak önerilere yer verilmiştir.

Bulgulardan yola çıkarak elde edilen sonuçlar ve ona ilişkin literatür sonuçları aşağıda maddeler halinde sunulmuştur.

- 2020- 2024 yılları arasında sorulan biyoloji sorularının hücre ve organelleri, organik bileşikler, canlıların sınıflandırması, üreme, gen ve ekoloji olmak üzere 6 konu etrafında toplandığı görülmektedir. Her yıl aynı konulardan aynı ağırlıkta soru sorulduğu

görülmektedir.

- TYT sınavında her yıl 6 tane biyoloji sorusu sorulmaktadır.
- Gaokao sınavında 40 ile 50 arasında soru sorulmaktadır. Soruların geneli anlama, uygulama ve analiz basamağında iken alt (bilgi seviyesi) ve üst düzeyde de sorulara (yaratma ve değerlendirme basamağı) yer verilmektedir.
- TYT biyoloji sorularının 9., 10. ve 12. Sınıf konularından olduğu belirlenmiştir. 11. Sınıftan hiçbir konuya rastlanmamıştır. Soru sayısı yoğunluğu açısından değerlendirildiğinde en fazla sorunun 9. Sınıf konuları ile alakalı olduğu, ardından 12. Sınıf konularından soru olduğu en az sorunun ise 10. Sınıftan sorulduğu belirlenmiştir. Bu sınıf düzeyindeki soru dağılımının yıllar içinde neredeyse homojen olarak devam ettiği belirlenmiştir.
- Soruların Bloom taksonomisine göre seviyeleri belirlendiğinde ise kavrama ve anlama düzeyinde en fazla sorunun yer aldığı (10 soru), işlemsel analiz düzeyinde ise en az düzeyde soru olduğu (2 soru) görülmektedir. Genel olarak soruların alt düzey düşünme becerisini ölçmeye yönelik olduğu, üst düzey düşünmeyi ölçmeye yönelik soruların olmadığı belirlenmiştir. Bu sonuç, Elhakan (2024) ve Manyas (2022) çalışmalarının sonuçları ile paralellik göstermektedir. Manyas (2022), 2012 yılından 2022 yılına kadar (10 yıllık süre) yapılmış üniversite sınavlarında çıkmış biyoloji sorularının Bloom sistematığına göre değerlendirmesini yapmıştır. Manyas (2022) yaptığı çalışmanın sonunda biyoloji sorularının oldukça homojen olarak hazırlandığını ve alt seviyeye ait sorulardan oluştuğunu, üst seviye olarak bilinen basamaklardan hiçbir soruya rastlanmadığını belirtmiştir (Manyas, 2022). Elhakan, 2022 ile 2023 tarihinde yapılan TYT sınavlarında sorulan fizik sorularının alt düzey olduğu, üst düzey soru olarak değerlendirilen yaratma, değerlendirme vb. seviyesinde soru sorulmadığını belirtmiştir (Elhakan, 2024). Çolak (2024) yaptığı çalışmada liseye girmek için yapılan sınavın matematik sorularının Bloom açısından değerlendirilmesi yapmıştır. Kala (2015) yaptığı tez çalışmasında kamu personeli sınavında biyoloji alan testinde yer alan soruları Bloom sistematığı açısından ele almıştır. Çalışmada soruların kavramsal ve bilgi seviyesinde olduğu, üst düzey soruların yer almadığı sonucuna varılmıştır. Ancak soruların heterojen dağılım gösterdiği tespit edilmiştir (Kala, 2015). Erman (2008) yaptığı tez çalışmasında OKS sınavında çıkmış olan tarih sorularını Bloom sistematığı açısından değerlendirmiştir. Çalışma sonunda OKS tarih sorularının alt düzey bilgileri ölçmeye yönelik olduğu (kavrama seviyesinde soruların yoğunlaştığı ve çok az analiz seviyesinde soruların olduğu) ve üst düzey bilgileri ölçecek soruların olmadığı

yönündedir. Konu dağılımının da yıllar açısından homojen olarak dağılım gösterdiği belirlenmiştir (Erman, 2008). Çalışmanın sonucu ile benzer sonuçları olmayan araştırmalarda mevcuttur. Çolak, 2017 ve 2018 yılları sorularını incelediğinde matematik soruların işlemsel ve uygulama basamağında olduğunu ve soru dağılımlarının oldukça heterojen dağıldığını belirtmiştir (Çolak, 2024).

Sonuç, bulgular ve literatürün değerlendirilmesi sonrasında öneri olarak sunulacaklar:

- Bu çalışma gibi yıllara göre soruların incelenmesi çalışmalarına devam edilmelidir.
- Bu konuya ilişkin yapılmış tez sayılarının az olması sebebiyle biyoloji eğitimi anabilim dallarının soru incelenmesine yönelik tez çalışmalarının yapılmasına destek olunmalıdır.
- TYT biyoloji soruları biyoloji gibi zengin bir alan için oldukça sınırlı bir sayıdadır. Soru sayısının artırılması önerilebilir. Soru sayısının artırılması üst düzey sorulara da yer verilmesine olanak sağlayacaktır.
- Bu alana ilişkin yapılmış sınırlı sayıdaki çalışma genellikle programla soru düzeylerinin karşılaştırılmasına yöneliktir. Bu çalışmaların ders kitaplarına da yönelik yapılması uygun olabilir.
- TYT sınavında biyoloji öğretim programındaki tüm temalara yer verilmesi sınavın kapsam geçerliliğini artıracaktır.

Cyberbullying and Positive Existence: Healthy Identity Construction and Resistance Strategies in the Digital World

Eda SEZERER ALBAYRAK

KTO Karatay University, eda.albayrak@karatay.edu.tr, 0000-0002-2195-0772, TURKEY

Abstract

Cyberbullying has become one of the most prevalent and dangerous social problems of the digital age. With the proliferation of the internet, social media platforms and digital games, online bullying has become a serious threat to the psychological health of individuals. Cyberbullying can often be carried out more easily and effectively due to anonymity and easy access. This leads to deep psychological damage, emotional and social isolation for victims. Positive existence is an important concept for individuals to express themselves in a healthy way, to establish balance in their social relationships and to continue their personal development. Positive existence is necessary for self-actualization, feeling valued and strengthening social bonds. However, cyberbullying poses a threat to this healthy development. The negative interactions that individuals face in the digital world affect not only their personal identities but also their participation in social life. In this context, positive presence strategies play a critical role in developing resilience against cyberbullying. Elements such as education, empathy, digital awareness and social support systems can help individuals feel valued and safe in the digital world. For an effective solution against the effects of cyberbullying, it is necessary to adopt a positive existence approach at the societal level and build healthy identities in the digital world. This study emphasizes the importance of positive existence strategies in combating cyberbullying.

Keywords: Cyberbullying, positive existence, digital identity, digital platforms

Siber Zorbalık ve Pozitif Varoluş: Dijital Dünyada Sağlıklı Kimlik İnşası ve Direniş Stratejileri

Özet

Siber zorbalık, dijital çağın en yaygın ve tehlikeli sosyal sorunlarından biri haline geldi. İnternetin, sosyal medya platformlarının ve dijital oyunların yaygınlaşmasıyla birlikte çevrimiçi zorbalık, bireylerin psikolojik sağlığı için ciddi bir tehdit haline gelmiştir. Siber zorbalık, anonimlik ve kolay erişim nedeniyle genellikle daha kolay ve etkili bir şekilde gerçekleştirilebilmektedir. Bu da mağdurlar için derin psikolojik hasara, duygusal ve sosyal izolasyona yol açmaktadır. Bireyler siber zorbalık nedeniyle kendilerini yalnız, değersiz ya da

korkmuş hissetmekte, bu da öz saygılarını ve psikolojik iyilik hallerini ciddi şekilde zedelemektedir. Pozitif varoluş, bireylerin kendilerini sağlıklı bir şekilde ifade edebilmeleri, sosyal ilişkilerinde denge kurabilmeleri ve kişisel gelişimlerini sürdürebilmeleri için önemli bir kavramdır. Pozitif varoluş, kendini gerçekleştirme, değerli hissetme ve sosyal bağların güçlenmesi için gereklidir. Ancak siber zorbalık bu sağlıklı gelişim için bir tehdit oluşturmaktadır. Bireylerin dijital dünyada karşılaştıkları olumsuz etkileşimler sadece kişisel kimliklerini değil, sosyal hayata katılımlarını da etkiliyor. Bu bağlamda siber zorbalığa karşı direnç geliştirmede pozitif varoluş stratejileri kritik rol oynuyor. Eğitim, empati, dijital farkındalık ve sosyal destek sistemleri gibi unsurlar bireylerin dijital dünyada kendilerini değerli ve güvende hissetmelerine yardımcı olabilir. Siber zorbalığın etkilerine karşı etkili bir çözüm için toplumsal düzeyde pozitif varoluş yaklaşımının benimsenmesi ve dijital dünyada sağlıklı kimliklerin inşa edilmesi gerekmektedir. Bu çalışma, siber zorbalıkla mücadelede olumlu varoluş stratejilerinin önemini vurgulamaktadır.

Anahtar Kelimeler: Siber zorbalık, pozitif varoluş, dijital kimlik, dijital platformlar

Introduction

In the digital age, cyberbullying has become a major social problem affecting young people worldwide. Cyberbullying is defined as the deliberate and persistent harassment of individuals through electronic means and takes many forms, such as threatening messages, social exclusion and impersonation. Such actions can leave deep psychological scars on victims (Falla et al., 2023) (Bauman & Newman, 2013). The fact that social media platforms are increasingly intertwined with daily life has created a playground for young expressions as well as a site for harmful behaviours. Traditional definitions of bullying have evolved and a more nuanced understanding is needed to understand how digital interactions contribute to psychological trauma, emotional distress and social isolation (Topçu & Erdur-Baker, 2012). Research shows that cyberbullying is not only an extension of traditional bullying, but also has its own characteristics and consequences. For example, victims often feel powerless and worthless, and many resort to passive coping strategies following online aggressions (Völlink et al., 2012). Although these coping strategies are common, they are often inadequate to address the root of the problem and lead to prolonged emotional suffering, exacerbating mental health problems (Niu et al., 2020). A large literature on cyberbullying has emerged in recent years. The diversity of the issues focussed on, the theoretical differences in the handling of the relationship between technology and society, and the fact that the subject is not an area of interest only to academics lead to the emergence of very different approaches. Categorising the

studies, Pimienta states that three different perspectives dominate the field. These are: Technology-based approaches: This approach focuses on the means rather than the consequences of use. Regulations to be made in the public and private spheres, cyber surveillance and prevention of cyberbullying are the main issues addressed. Content and practice-based approaches: Pedagogical strategies to be developed by parents and teachers for the prevention of cyberbullying constitute the content of these approaches. Paradigm Shift: This approach tries to analyse which forms of social relations have been transformed to affect cyberbullying based on the research on the subject. In this approach, it evaluates what capacities the technological tool creates in the process of organising society, the cultural background of users in cyberbullying cases and the interaction of subjects depending on historical-social processes (Torres et al., 2016).

Furthermore, recent research reveals the role of lack of empathy on behaviours linked to cyberbullying. Understanding how empathy functions offers important clues not only on victimisation in the context of cyberbullying, but also in understanding behaviours such as bullying. For example, Falla et al. reported that cyberbullying leads to decreased empathy and moral indifference strategies, suggesting that developing empathy can reduce aggressive online behaviours (Falla et al., 2023). This highlights the need for the cultural diffusion of empathic responses and prosocial behaviours. Given the complexity of cyberbullying, it has become more important than ever to explore effective prevention and intervention approaches. By focusing on building individuals' resilience, self-esteem and emotional intelligence, positive presence strategies can help young people cope more effectively with the consequences of cyberbullying. Research suggests that young people with higher self-esteem are less depressed when faced with victimisation (Chen & Zhu, 2021; Niu et al., 2020). It is seen that the first two perspectives are predominant in the studies on cyberbullying, and the social-cultural processes and structural causes that produce violence are addressed very limitedly. The fact that the studies on the subject are mostly descriptive studies and the lack of a theoretical framework emerges as an important deficiency (Barlett, Gentile et al., 2013, p.301). It is seen that few studies are based on social information processing, social cognitive and general violence model (Kowalski et al., 2014, p. 1110). Cyberbullying is generally studied on variables such as personality traits, increased use of technology, gender and age. Children and young people being cyberbullies, victims or bully-victims. As studies have shown, cyberbullying practices are related to these variables, but the fact that cyberbullying practices are encountered worldwide is an important indicator that the issue has important social causes. The quality of the current education system

that prevents creativity, suppresses consciousness and hinders the development of critical thinking (İnal, 1992, p. 799) also determines the communication process between children and young people. The communication environment is becoming instrumentalised; a real communication in which the parties can be free, conscious and equal is not possible (Oskay, 2016, p.111). In this study, it will be explored the applicability of positive presence strategies with the phenomenon of cyberbullying, highlight the link between these two domains, and aim to offer actionable insights, such as educational interventions, community engagement, and empathy building, to help young people overcome the challenges of their digital interactions.

Digital Age and Cyberbullying

Technology is changing education globally. Networking and wireless communication break down barriers and provide students with virtual access to endless information and resources. Technology has expanded the parameters of traditional bullying within school boundaries and spread the problem to the limitless cyber world (Diamanduros, Downs and Jenkins, 2008, p. 693). Rapidly developing technology constantly offers new and different communication opportunities and each new communication technology brings with it some problematic behaviours. Developing new technology has increased the use of tools such as the internet and mobile phones in schools; however, this situation brings with it the problematic behaviours of these tools. It has also led to problems such as its use. Another concept that accompanies internet addiction and that should be emphasised in individuals who are described as addicted is the concept of cyber (virtual) bullying. When the definition of the concept of cyberbullying is examined, it is generally expressed as behaving deliberately, repetitively and maliciously by an individual or group with the aim of harming other individuals through information and communication technologies (Patchin & Hinduja, 2006). ‘Cyberbullying is defined as ‘actions that involve the use of information and communication technologies such as electronic mail, mobile phones, pagers, short message services and websites by an individual or a group in order to cause harm; deliberately, repetitively and supporting hostile behaviours’ (Arıcak, 2009; Baker & Kavşut, 2007). According to Hinduja and Patchin (2015), in order for a behaviour to be defined as cyberbullying; the behaviour must be planned and intentional, repeated, that is, it must be continuous, it must harm the person and information and communication technologies must be used. When the definition of the concept of cyberbullying is examined, it is generally expressed as behaving deliberately, repetitively and maliciously by an individual or group with the aim of harming other individuals through information and communication technologies (Belsey, 2008; Patchin & Hinduja, 2006). Cyberbullying is

defined as the malicious and repetitive use of information and communication technologies by an individual or group to harm other individuals. Cyberbullying is the use of digital technology to send disturbing messages to other individuals or to commit social aggression. Cyberbullying is seen as a form of bullying through electronic communication tools and is characterised as a form of social aggression. Cyberbullying is a form of bullying through electronic tools such as mobile phones, web logs, websites, chat rooms. According to another definition, cyberbullying is defined as the use of information and communication technologies such as e-mail, mobile phone, instant messaging, chatrooms, blogs, text messages, slandering people on the website or organising a survey to slander people, by a person or group of people with the intention of harming others, deliberately, reproducibly, showing hostile behaviours (Belsey, 2008).

It is possible to see cyberbullying in different ways as individuals can be ‘cyberbully’ by exhibiting cyberbullying behaviour against others, ‘cyber victim’ by being exposed to this kind of individual, and ‘witness’ by watching the action from outside (Kavuk et al., 2018).

Researchers have different views in explaining the relationship between traditional and cyberbullying. There are those who state that cyberbullying ensures the continuity of traditional peer bullying, as well as those who suggest that it is a different phenomenon from traditional bullying.

Li (2008) argues that there are some differences between traditional and cyberbullying. He states these differences as follows;

- traditional bullying is direct and visible, whereas cyberbullying is anonymous
- traditional bullying usually takes place at a specific time and place, whereas cyberbullying can happen anytime and anywhere
- cyberbullying can spread faster and wider than traditional bullying
- in traditional bullying, the victim is more likely to be an acquaintance, whereas in cyberbullying, the victim may be a stranger
- In cyberbullying, it is possible to record and store photos, videos and messages. In addition to these differences, it is possible to say that the repetition and continuity of the behaviour and the lack of control of the cyber environment (Hinduja and Patchin, 2015; Pekşen Süslü, 2016 Dikmen & Tuncer, 2017).

At this point, it would not be wrong to say that cyberbullying can be more harmful than traditional bullying.

Although cyberbullying involves the use of information and communication technologies, it can be encountered not only in a single method but also in different ways. Willard (2007) categorised cyberbullying behaviours into seven categories according to the content of the actions: flaming, disclosure, online harassment, cyberstalking, denigration, impersonation, outing and exclusion.

Exclusion: It includes the exclusion of the individual from the online group or the expulsion of the individual from the online group he/she is in by using various means. Examples of this are being unfriended on social media accounts or after defeating someone in an online game, the friends of the defeated person restrict the activities of the defeated person in the game and prevent him/her from participating in the game (Willard, 2007).

Disclosure (outing): It is defined as sending a picture, a video, a confidential information belonging to the victim, the content of a personal interview conducted by the victim to other people or sharing it in public virtual environments, which is perceived as personal by the victim or may cause embarrassment (Kowalski et al., 2008).

Cyberstalking (cyberstalking): Repeated, excessive harassment and slander intended to create threat or fear. Although the border between online harassment and cyber harassment is not very clear, it can be considered as a more serious type of online harassment. In cyber harassment, being exposed to constant threats and aggression causes security concerns in the victim (Kowalski et al., 2012; Willard, 2007).

Slander, defamation (denigration): Slander is defined as making insulting, cruel and untrue rumours in a virtual environment to defame someone (Willard, 2007).

Impersonation: Impersonation is defined as breaking the password of an individual's account and entering his/her account and sending messages that will cause him/her distress and make him/her feel bad (Kowalski et al., 2012; Willard, 2007).

Flaming: It is the use of expressions of anger, hostility, threats and insults between at least two people in an online environment. Flaming usually occurs in public environments such as chat rooms, discussion pages, e-games (Willard, 2007).

Online harassment (online harassment): It is the continuous exposure of the individual to offensive, humiliating and insulting messages. Online harassment differs from teasing/harassment in the sense that online harassment is more prolonged and online harassment is often unilateral, whereas in teasing/harassment there is reciprocity (Kowalski et al., 2012; Walker, 2009; Willard, 2007; Pekşen Süslü, 2016).

In parallel with the developments in the field of information and communication technologies, new concepts related to cyberbullying types have been added to the literature. Examples of these are; 'sexting (online sharing of obscene photos)', 'griefing (online gamebreaking)' and 'trolling (online provocation)'.

Sexting (online sharing of sexually explicit photographs), sexually explicit content without the consent of the individual is defined as the sharing of photographs in a virtual environment. Griefing involves the deliberate harassment of other players in online games. The purpose of online gamebreaking is not to play or win the game, but to constantly disturb other players during the game (Kowalski et al., 2008). Trolling (online provocation), in addition to sending provocative messages that aim to insult and provoke, aims to divert people from the purpose of the group they belong to or the purpose of the discussion carried out in the environment (Herring et al., 2002). The fact that cyberbullying can be seen in so many ways, anytime and anywhere makes it easier to be of a quality that can be applied. It is thought that the types of bullying may change and/or increase with the development of technology.

Causes and Effects of Cyberbullying

When the researches are analysed, it is seen that cyberbullying. It is shown that there are different factors that cause them to exhibit their behaviours. Research on the causes of antisocial behaviour on the Internet leads to the general conclusion that the lack of specific social cues and accountability on the Internet limits people and removes the boundaries that lead them to behave normally.

In addition, anonymity and anonymity on the Internet are the most commonly used concepts to explain antisocial behaviour (Douglas, 2008, p. 209). According to Willard (2002), individuals who commit cyberbullying acts think that they will not be caught because they can be anonymous in virtual environments and can easily hide their identities, and thus they carry out bullying behaviours. They believe that such behaviours are natural and not wrong because they do not cause any physical harm to the victims and others are also cyberbullying.

In addition to the reasons mentioned in relation to cyberbullying, according to Eroğlu's (2014) study, it is possible to state that problematic internet use carries a risk in terms of cyber victimisation. Problematic internet use is considered as a negative result caused by cognitive and behavioural factors that are not seen as addiction. During individuals' use of the internet as a means of social interaction and mood regulation, it can cause lack of self-control, problematic internet use and many negative consequences (Caplan, 2010; Uzun & Ünal, 2018). In addition,

pressure and competition on social media increase adolescents' desire to express themselves more and to be accepted, leading to relational conflicts. A large part of cyberbullying is caused by psychological factors such as competition and jealousy in social media (Çoban & Önder, 2021). While the high level of interactions on online platforms encourages individuals to pursue their social status and their desire to be accepted, it also leads to an increase in hostile behaviours in this process.

One of the most important issues in getting rid of internet addiction is communication. Because when children or young people cannot find environments where they can establish adequate and healthy communication, they may try to fulfil this need over the internet. At the point of communication, especially the effect of family relations and parental attitudes comes to the fore as it is the first, closest and longest lasting social communication environment in the life of the individual. As a result of the correct communication provided at first hand, problems and possible conflicts are prevented. Again, having communication problems in the opposite direction causes the person to close to his/her inner world and to turn to different ways of communication by pushing himself/herself into the virtual internet world. Adolescence is the period in which conflicts or confrontations within the family are the most common (Aydın, 2005). It is noteworthy that another factor that may cause cyberbullying is peer influence, and it is known that peer influence has an important place in the lives of adolescents. Adolescents observe the behaviours of their peers, take them as models and need their approval. As long as they are approved by their friends, bullies continue and even increase their actions, and other students who are affected by the power and status obtained by bullies may also show bullying behaviour in order to be on the same side with bullies (Salmivalli, 2010).

Cyberbullying behaviours are also related to psychological problems experienced by individuals. Studies have revealed that adolescents with anxiety, depression and self-esteem problems are more likely to be cyberbullies or victims (Demircan et al., 2022). In this context, bullies often try to compensate for their own insecurities and fears of exclusion by harming others (Kavuk & Keser, 2015). Relational bullying, i.e. condescending and exclusionary behaviours applied in order to maintain social hierarchy within groups of friends, is directly related to cyberbullying in adolescents. Most of the time, bullies tend to take advantage of others' weaknesses based on their social acceptance and relationship power (Haylı & Çırak, 2023). Thus, such psychological dynamics play a critical role in understanding the complex nature of cyberbullying. Bullying behaviours are often associated with individuals feeling excluded, insecure and emotionally weak. Such individuals may try to fill the void they feel

inside themselves by harming others. Exclusion and ridicule, especially in social media, create a mutual domino effect. Individuals who have developed empathy have the ability to understand and respect the feelings of others. However, individuals who lack empathy are not in a position to think or feel the consequences of harming others. This situation allows an increase in cyberbullying behaviours (Boyar & Arslantaş, 2024).

Cyberbullying is defined as intentional and repetitive negative behaviours towards individuals that occur through the internet and social media platforms. This phenomenon has become a major social problem, especially among young people (Ybarra & Mitchell, 2004). The consequences of cyberbullying lead to deep and negative effects on individuals' psychological, social and academic lives.

The psychological consequences of cyberbullying create a heavy burden on the victims. Mental health problems such as anxiety and depression are frequently seen in individuals exposed to cyberbullying (Smith et al., 2008). This situation may cause individuals to feel insecure in social environments. At the same time, individuals may develop low self-esteem by feeling worthless, inadequate and excluded (Öven et al., 2024). Low self-esteem not only weakens individuals' social relationships but also negatively affects their overall quality of life.

The effects of cyberbullying in academic terms are also noteworthy. It has been observed that students who are bullied experience decreases in school continuity and course success (Dursun et al., 2020). Individuals who experience loss of motivation have difficulty in focusing on their lessons and often have increased absenteeism rates (Taştan, 2017). This situation may negatively affect not only their current educational life but also their future career goals. Therefore, it becomes a situation that threatens the sustainability of the education system.

In social life, the effects of cyberbullying lead to an increase in the feeling of loneliness by distancing individuals from their social environment (Alanoğlu & Karabatak, 2020). Individuals may prefer to feel insecure in social environments due to their negative experiences. As a result, while friendship relationships weaken, the situation of being excluded by peers is frequently experienced (Demiral, 2024). Such changes in the circle of friends feed insecurity and fear of exclusion in social interactions.

The effects on family structures are also a noteworthy issue. Cyberbullying victims may have difficulty in expressing their difficulties to their families (Ybarra & Mitchell, 2004). This situation causes miscommunication and support mechanisms to be inactive within the family. When families do not recognise the difficulties faced by their children, victims may be even

more isolated in coping with this situation (Smith et al., 2008). Feelings of fear and insecurity negatively affect the dynamics within the family and create miscommunication.

In the long run, cyberbullying may affect individuals' attitudes towards technology and social media use. Individuals who experience bullying may develop a fear and distrust towards the internet and social platforms in the future (Kowalski & Limber, 2007). This may negatively affect their social lives and daily activities and weaken their ability to establish healthy social relationships.

As a result, cyberbullying has a complex and negative impact on individuals' psychological health, social life and academic achievements (Tan & Şenkal, 2024). In order to prevent these negative experiences of individuals, strengthening family dynamics and raising social awareness gain great importance in addition to education (Öven et al., 2024). Therefore, combating cyberbullying is a critical necessity for both the healthy development of individuals and the general well-being of society (Demiral, 2024).

Prevalence of Cyberbullying

The spread of cyberbullying has attracted more and more attention in recent years with research and statistics. Developing technology and the widespread use of the internet have contributed to the increase in cyberbullying among young people. For example, in a study conducted in 2023, it was stated that the rate of those exposed to cyberbullying in the society varied between 6.0% and 46.3% (Lee et al., 2023). Especially during the COVID-19 pandemic, when the use of the internet for educational purposes increased, a significant increase in cyberbullying cases was observed (Kunwar et al., 2024), Huang et al., 2023). Studies show that the prevalence rate of cyberbullying among young people aged 15-21 is around 40%. However, studies conducted in different geographical regions also reflect the prevalence of cyberbullying. For example, in a study in Nepal, the prevalence of cyberbullying among college students was 22% (Kunwar et al., 2024), while in a study conducted in Japan, this rate was as high as 50% (Zhu et al., 2021).

In particular, a meta-analysis reported that cyberbullying victimisation among children and young people worldwide ranged from 14% to 57% (Lee et al., 2023). In addition, new research has revealed that women are more likely to be victims of cyberbullying than men (Alsawalqa, 2021). For example, in a study conducted in New Zealand, it was reported that 14.9% of the participants were cyberbullied (Wang et al., 2019).

Cyberbullying has become even more prevalent in school settings. In a study conducted among middle and high school students, it was found that 45.1% of students had been victims of cyberbullying at least once in the last 12 months (Lân et al., 2020). In addition, in a study conducted with teachers, it was stated that 52% of educators working in schools in Gaziantep province had concerns about cyberbullying and needed awareness-raising trainings to prevent this problem (Çakır & Kaygısız, 2020).

Problematic internet use, social media addiction and the quality of interpersonal interactions are also frequently emphasised among the factors that contribute to cyberbullying. According to the results of data analysis, high problematic internet use increases the likelihood of young people being exposed to cyberbullying (Korkmaz & Mehmedoğlu, 2018). Likewise, a decrease in social interactions in the internet environment may increase bullying behaviours by negatively affecting young people's social skills.

As a result, the spread of cyberbullying spreads over a wide range both temporally and geographically and affects different segments of society as a social problem. This situation creates serious negative effects on individuals' mental health and shows that education, awareness and support mechanisms should be strengthened to combat cyberbullying.

Positive Existence and Positive Youth Development

Positive existence means focusing on positive emotions and experiences in one's life. This concept is a theory developed to increase individuals' overall life satisfaction, protect mental health and promote well-being. Studies in the field of positive psychology emphasise the importance of developing positive existence in relation to concepts such as happiness, life satisfaction and subjective well-being (Dilmaç & Yılmaz, 2019)

Positive existence is an approach designed to help individuals develop themselves independently of their weaknesses by focusing on their strengths. For example, there is a significant positive relationship between psychological resilience and happiness, which enables individuals to cope better with the difficulties they face and increases their overall happiness levels (Aydın, 2018). Research shows that positive personality traits such as responsibility and self-discipline increase individuals' happiness levels (Öztürk, 2016).

In addition, positive existence also refers to how individuals can be affected by environmental factors. For example, individuals' body perception is directly related to how they define themselves as a being. A positive body perception can help individuals develop a positive perspective on their lives and protect their mental health (Arslan, 2020). The relationship

between mood states and body perception can significantly affect individuals' general well-being and strengthen their positive sense of existence.

In addition, social support systems and individuals' relationships with their environment are also among the supporters of positive existence. Research shows that healthy social connections increase individuals' happiness by reducing their stress levels. It is also emphasised that social exclusion threatens the individual's need for meaningful existence and thus may reduce happiness (Işık & Çelik, 2020).

With the positive psychology perspective gaining strength, psychology has aimed to help people live a more positive life with what they have rather than dwelling on what they do not have. Because the positive youth development perspective is a relatively new concept, it is important to provide definitions of youth development. Positive youth development perspectives are important for young people's healthy has the potential and capacity for development. Positive youth development has emerged from different perspectives such as relational development systems theory and bioecological systems theory.

Also, positive youth development The use of personal and environmental resources to support the healthy development of young people interaction (Martin-Barrado and Gomez-Baya, 2024).

The positive youth development approach also has a preventive perspective. According to this perspective, if the positive aspects of young people are strengthened even when they are exposed to negative life events, negative life events can be prevented from causing problems for young people (Damon, 2004).

Similarly, Benson and Scales (2009) stated that positive youth development is a useful approach to prevent or reduce risky situations such as alcohol and drug use, cyberbullying, aggression, and violence. Holsen et al. (2017) stated that positive youth development is different from traditional problem and deficit oriented approaches to youth.

They also stated that positive youth development is a process that builds on the strengths that young people should have and prepares them with pathways to success. Catalano and others (2004) argue that positive youth development is the development of positive traits that cause young people to acquire negative traits. more than the correction of factors. Looking at the explanations for positive youth development, it can be seen that this perspective is based on positive psychology.

This is because positive psychology argues that individuals have positive emotions, strength of character, virtue, cognitive and emotional strengths, and that psychology can reveal these strengths (Seligman et al., 2005).

Positive existence is also associated with the positive effects of physical activity and healthy lifestyle on self-perception. Research shows that there is a strong link between the enjoyment of regular physical activity and happiness (Peker et al., 2023). Individuals' positive attitudes towards their physical health stand out as a factor that increases their general mood and life satisfaction.

The increasing interest in positive youth development has led to an increase in research in this field. The increasing number of researches has led to the emergence of different models of positive youth development. The explanations used by different models of positive youth development to explain the concept of positive youth development have many commonalities. For example, the theories of positive youth development emphasize the importance of the individual's personal characteristics and the context in which he/she lives emphasizes the importance of interaction. Today, positive youth development approaches include the 4-H model, 4C, 5-C, 6C and 7C. models, Catalano's 18 positive theories of youth development and Benson's 40 domains of development theory can be treated as.

One of the most important positive youth development models is the 4-H model. The 4-H model emerged as a result of Lerner et al.'s (2000) theoretical underpinnings of the positive youth development perspective and the subsequent efforts to measure and empirically validate this theory. The 4-H model is named after the initials of the English words Head, Heart, Hand and Health. These four concepts constitute the main life skills of the 4-H model. The 4-H model is a model that focuses on the strengths and potentials of young people. It is based on the assumption that life skills need to be taught in order for young people to demonstrate these strengths and potentials. According to this model, when a young person has life skills, they are able to showcase their strengths or potential (4-H Organization, 2021). One of the most important positive youth development models is the 4-H model. The 4-H model is named after the initials of the English words Head, Heart, Hand and Health. These four concepts constitute the main life skills of the 4-H model. The 4-H model is a model that focuses on the strengths and potentials of young people. It is based on the assumption that life skills need to be taught in order for young people to demonstrate these strengths and potentials. According to this model, when a young person has life skills, they are able to showcase their strengths or potential (4-H Organization, 2021).

Positive Existence, Positive Youth Development and Preventing Cyberbullying

The relationship between positive existence and cyberbullying is an important issue in terms of individuals' psychological health and social interactions. Positive existence is built on finding meaning and value in one's life, self-development and building positive relationships. However, cyberbullying has a profoundly negative impact on individuals, threatening their experience of positive existence. Emotional problems such as low self-esteem, anxiety and depression may increase in individuals exposed to cyberbullying (Efe et al., 2022) (Çakır & Kaygısız, 2020). In this context, various solutions can be developed to increase positive existence and prevent the negative effects of cyberbullying. First, education and awareness efforts play a critical role in cyberbullying prevention. Raising awareness about cyberbullying provides an effective strategy for both victims and potential bullies. Educational programs should guide young people to become healthy and responsible digital citizens (Erdoğan, 2021). In such programs, information about the consequences of cyberbullying should be provided and interpersonal communication skills should be improved. Activities that aim to increase young people's ability to empathize can be effective in reducing cyberbullying (Feyzioğlu et al., 2020). In addition, organizing social activities that encourage socializing and developing positive relationships can also increase individuals' positive experiences of existence (Kavuk & Keser, 2015).

A second solution is to build a strong support network. The positive youth development perspective has been integrated into the education system of some countries. One of the countries that has successfully used this perspective and developed educational programs is the USA. In the USA, there is an organization called YOUTH, which consists of representatives from various federal agencies and plans youth research. Youth (2023) explains positive youth development as a result of positive experiences, positive relationships and positive environments. This organization also states that positive youth development can be achieved through family support, positive peer groups, personal strengths of the individual, positive influence of the school and support of the community. According to the positive youth development perspective, it is important for adolescents to receive support from family members and adults around them to reveal their positive and strong sides (Benson & Scales, 2009).

Tirrell et al. (2020) explained the positive youth development approach from a broad perspective. In this context, they stated that positive youth development should have features such as establishing positive adult-youth relationships, gaining various life skills and

contributing to school and community activities. These characteristics listed by the researchers about positive youth development exemplify the multidimensional structure of the positive youth development perspective. Positive youth development does not only mean that a young person has positive characteristics. A young person with positive youth development will also be protected from negative characteristics. For example, research has found that various elements of positive youth development are negatively associated with depression (Gomez-Baya, 2022) and risky behaviors such as cyberbullying, alcohol use, substance use, violence and suicide attempts (Manrique-Millones, 2021). These research results show that positive youth development also has a preventive role. The theories that enable this perspective to emerge are needs to be examined. The concept of positive youth development is included in many theories, practices and intervention programs. In this respect, it can be said that the concept of positive youth development has a solid foundation for both theory and practice.

Conclusion

Examining the relationships between cyberbullying and positive existence and positive youth development allows for the development of effective strategies in this regard. Positive existence includes the processes of finding meaning in young people's lives, self-actualization and building healthy relationships, and these positive developments have the potential to reduce the effects of cyberbullying. Research reveals that young people's access to positive experiences and the creation of supportive environments through social media and other digital platforms have significant effects on their mental health. For example, the inclusion of positive content on social media can provide young people with inspiring and positive emotions, thus increasing self-esteem (Vaingankar et al., 2021).

Empathy training and the development of social skills play a critical role in the prevention of cyberbullying. It is also possible to mention the social and psychological benefits of young people taking part in sports activities; these activities can reduce social isolation and increase self-esteem by making individuals feel valuable (Eime et al., 2013). Thus, under a positive youth development approach, young people's emotional and social skills can be improved and their ability to cope with cyberbullying can be increased. In addition, the support provided by families and communities is an important factor in the positive development of young people, and increasing this support can be an important strategy in combating cyberbullying (Alexandrova-Karamanova, 2022).

Moreover, social and emotional learning programs implemented in education systems can increase young people's self-efficacy and strengthen their psychological resilience. School-

based approaches require a coordinated effort to improve young people's psychological health, and community-supported practices are vital in this context (Jenkins et al., 2023). When all these elements come together, the negative effects of cyberbullying can be mitigated and contribute to the positive existence of young people.

In conclusion, there is a strong relationship between positive well-being and positive youth development. In order to support young people's mental health and prevent cyberbullying, multifaceted strategies such as education, social activities and family support need to be adopted. In this context, steps to be taken at both individual and societal levels will contribute to the healthy development of young people and help them to maintain a more positive orientation in their future social interactions.
